This preoccupation with financial matters was apparent throughout the internal organization of Algeria under the Turks. All commissions and offices involving the collection of taxes, dues, imposts or fines were farmed out by the State for sums payable, according to circumstances, in one or more annual instalments. Such a system gave rise to a host of abuses and led to exploitation of the people on such a scale as to render any attempt at winning their sympathies impossible. Moreover, Turkish ascendancy existed more in theory than in fact, and in their garrison-towns in the interior of the country (Bijāya, Bordj Lehaou, Constantine, Medea, Miliana, Māṣūna, Mascara, Tiemcen) the Anatolian yoldaş had often the appearance of troops under siege. In order to maintain their own position, the Turks were obliged to inflame tribal rivalries; the maḏār tribes, when they espoused the Turkish cause, secured not only various financial immunities but also the right to oppress subject tribes (ra’ādīs) and to exterminate rebel tribes. At the same time, the Turks established military colonies (zumal) on all the main communication routes. Thus the Kabylian massif was ringed with posts responsible for ensuring the free passage of troops. Finally the Turks endeavoured to conciliate the religious orders. But they were not entirely successful, and the revolts which broke out at the beginning of the 19th century in the province of Oran and in the Bābūr Kabylia were the work of the powerful Darḵāwa order encouraged and supported by the Sharifs of Fez.

The Turks had no thought of improving the territories they conquered. The future of Algeria, they considered, did not lie in its hinterland. The city of Algiers had come by sea, and they continued to look seawards, and Mediterranean piracy provided the major part of their revenue. The 17th century was the golden age of privateering. In Algiers, about 1650, there were nearly 35,000 captives in the city prisons. Spain made several unavailing attempts to capture Algiers (1541, 1567, 1775). But thereafter French and British naval demonstrations checked the Algerian mariners’ piratical career, and their power declined. Their crews became less audacious. Only one ra’as, Ḥamīdī, deserves mention in the 18th century for the temerity of his exploits. After the middle of the century Algiers, impoverished and shorn of its former importance, suffered a decline in population, a decline hastened by famine and plague. In 1816, after the Congress of Vienna, when Lord Exmouth or the Dutch admiral Van der Capellen, the representatives of Europe, arrived to bombard the town, there were only 1,200 slaves in the prisons. On the eve of the French invasion, Algiers, which had at one time had 100,000 inhabitants, had been reduced to barely 40,000.

The Tuareg, a Negroid people of nomadic origin from the desert of Niger (compare the name of "Tuareg" with the Arabic descriptor "tā’arug), have been prominent in the life of this region for centuries. As early as the 12th century the name appeared in the traditions of the Arabs and Berbers under the form of the Tuareg, who were a powerful tribe living in the vicinity of the city of Timbuktu. The Tuareg have long been known for their strong resistance to European penetration, and their independence has continued to the present day.
first time with the frontiers drawn on the map of Barbary as we know it to-day. Moreover, the fusion between the Arab and Berber elements of the population had become more complete. Algeria entered on its career as an entity, and Algiers attained the status of a capital. 

(5) After 1830.

Following a dispute concerning the supply of wheat, the dey of Algiers Husayn insulted Deval, the French Consul. The Government of Charles X instructed the fleet to blockade the old pirate stronghold. In 1830, influenced by considerations of internal policy, Polignac, the chief minister, decided, despite British objections, to send an expeditionary force to Algiers. The dey surrendered on 5th July and embarked with the majority of his janissaries. France, which did not aim at permanent occupation, entered into negotiation with the other powers. At first the July Monarchy was perplexed by the “embarrassing legacy” of the previous regime. It decided to begin with to confine itself to a limited and temporary occupation. It was not until 1834 that a Governor-General was appointed following the report of an “African Commission”. Until 1841 the French occupation, frowned on by the Chambers, was limited to possession of the principal ports and their environs.

Meanwhile, the situation had changed in the interior. The Turks, the bul-gâhist, and the former makhzen were harassed by the Arabs, and various native states came into being. The bey of Constantine, Ahmad, consolidated his power within his province. In the west, after a period of anarchy, the people accepted or were subjected to the rule of the marabout ‘Abd al-Kâdir [q.v.], who was conspicuous for his bravery, his diplomacy and his organizing ability. French policy vacillated between organizing ability. French policy vacillated between collaboration with the former makhzen and dealings with the new Arab chiefs. But although ‘Abd al-Kâdir twice agreed to sign treaties which strengthened his position, Ahmad refused, and repulsed a French army before Constantine in 1836. The following year a new expedition captured the town, and France decided to effect a definitive occupation of the eastern province. In 1839 ‘Abd al-Kâdir declared war on France. The conduct of operations during Marshal Valée’s governorship was apathe-

tropical foodstuffs; but the crop which succeeded best was corn, the colonists' crop until about 1881. An economic crisis and the increasing claims of the colonists, who were handicapped by the limited scope of their concessions and who wished to acquire land made available through the establishment of cantonments, led the Government to renew the policy of assimilation. From 1853-60, the country was governed from Paris by a Ministry for Algeria and the Colonies, entrusted at first to Prince Napoleon, and then to the Comte de Chassé, later to Marshal Baudouin. The disorder of the administration forced Napoléon III to restore military government under Marshal Pélissier and, after the latter's death in 1864, under Marshal Mac-Mahon. During this period, despite opposition from the colonists, the Emperor tried to make Algeria an "Arab Kingdom". He protected the tribal collective lands by the senatus consultum of 1863; by that of 1865, Muslims were allowed to adopt French nationality.

In 1870 the colonists expelled the imperial agents and set up the revolutionary government of the "commune" of Algiers. The Government headed by Thiers decided on the establishment of a civil administration. From that time, although the first two governors, Admiral de Guéydon and General Chabrier, came from the armed forces, the civil administration increased steadily in extent and the "Arab bureaus" gave way to "mixed communes".

Complete administrative and financial autonomy was achieved in 1900. The powers of the Governor General were increased, and the budget was henceforth voted by the "Délégations financières", a body representing the various economic interests in the country. Algeria was empowered to raise loans in order to improve its industrial plant, ports, roads, railways, dams etc. An era of prosperity was inaugurated. More varied types of crops were grown, and over an ever-increasing area. European colonization was stimulated; the outlay necessitated by increasingly scientific agricultural methods gave it a capitalist character unknown before the large-scale cultivation of the grape and of citrus fruits. New mines of iron, zinc and phosphates were developed. The native population increased as the result of a high birth-rate coupled with a decreased mortality rate, and the product of more hygienic methods. The economic achievement was very considerable, but social policy continued to be paternal in spirit.

Algeria played a prominent part in the 1939-45 war. After the Anglo-American landings in 1944, a French liberation force was organized there which took part in driving the Germans and Italians out of Tunisia, and participated in the Italian campaign and in the fighting in France. In recognition of the services rendered by Muslims during this common effort, the political régime was improved by the creation of an Algerian Assembly, elected by universal suffrage and consisting of two houses, European and Muslim, with equal rights. The work of economic development was resumed on a more generous scale; a comprehensive scheme for the education of Muslims was drawn up, and an era of social reform was ushered in.

(M. Emerit)

(iii) Population.

Demography. The total population of Algeria, according to the census of 31 Oct. 1948, is 8,681,785, which represents a large increase as compared with previous censuses. It comprises 7,721,678 Muslims and 960,107 non-Muslims; the latter include 876,686 French and 45,516 other Europeans, of whom 1/4 are Spanish. More than 75% of the Europeans live in the cities. In the country they are found chiefly in the Tell, especially in the wine-growing and market-gardening districts. In the department of Oran most of the French are of Spanish origin.

The majority of the Muslims live in the rural areas, and the movement to the towns is a recent phenomenon: 1/5 of them now live in them. They form the majority everywhere except in Algiers and Oran. The population of the largest towns (1948) is as follows:

There are five other cities of from 50,000 to 100,000 inhabitants: Tlemcen, Philippeville, Sidi-bel-Abbes, Mostaganem, and Sétif, all situated in the Tell. The distribution of the population in the administrative districts and its density per sq. km. are as follows:

</table>

The most populous regions are those of the Tell Atlas where the density per sq. km. generally exceeds 30 and sometimes 60 (Trarà, the Algiers district, the Kabylias); it reaches 114 in the purely rural and mountainous arrondissement of Tizi Ouzou, but drops to between 10 and 30 on the high plains of Constantine (except in the NW) and in the Awrâs and the Hoëna, to less than 10 on the steppes, and less than 1 in the desert.

Ethnography. The Muslim peoples of Algeria, the Berbers [q.v.], have an obscure origin. Of white race, they are, and apparently have been since remote antiquity, of various physical types. The influx of foreigners has not been on a large scale in the course of the centuries, except for that of the Arabs (i.e., Muslims from the East) in certain
regions, and of Mediterranean elements in the cities, where the most recent arrivals are the Andalus (Muslims returning from Spain), Turks and Europeans. But although most of the population calls itself Arab because it speaks Arabic, although the descendants of Turks who married Algerian women call themselves hul-oghlu (kouloughli), although the older citizens, of considerably mixed origin, pride themselves in the term hadar while others boast of being “Andalus”, the bulk of the population has changed little, anthropologically, and has remained Berber. In the Saharan oases the coloured Harratin (see Hartani) cultivate the soil, and the coloured races of the Sudan were for long sold as slaves (‘abid) in the towns. In practice, the terms “Arabs” and “Berbers” are used for Arabic-speaking and Berber-speakers.

49% of Algerian Muslims still speak Berber; they are chiefly the Shamiyya (Chaouia), who spill over extensively from the Ahras, and the Kabyles (kabili) west of Djedjelli; there are also the Beni Menasser of the mountains between Tenes and Cherchell, and small groups in the Mitidjian Atlas, the Wanghars (Ouarsenis), the Tlemcen Mountains and, in the South, the mountains of the Ksour. In the Sahara Berber is spoken by the Tuareg (q.v.), by the Maabbites (q.v.) and some Ksourianis (villagers) of the Saoura, Gourara, Warga and the Wad Righ (Oued Righ). The Berber dialects, which vary from district to district, do not constitute a literary language; Berber is not written, and its literature is transmitted orally. From the 11th century onwards, Arabic was propagated far more by the nomads than by the towns. The sedentary Arab dialects are localised in the cities, in eastern Kabylie and the Tlemcen; everywhere else Berber was pushed back by the bedoun dialects.

The Arabs, who have thus furnished 71% of Algerians with dialects derived from their language, have gradually converted them all to Islam (except for 130,000 Jews, at the present day). Virtually the only rite practised in Algeria is the Malikite; there are a few followers of the Hanafi rite among people of Turkish descent in Algiers and Tlemcen. The Maabbites, Ibadji (Khadrjiite) heretics, form a separate community.

Of the fundamental practices of Islam, which are the same everywhere, the five daily prayers are regularly performed in Algeria only by a minority of the population; the pilgrimage to Mecca, to which the majority pass as natives of the country. They all transmit the baraka to their descendants, if any. But many marabouts have never existed, and their cult is proof of the persistence of pre-Islamic nature cults involving trees, springs, rocks, and mountains (for instance Lalla Khadjiga at the highest point of the Djurdjura). The marabout cult has sometimes gained non-Muslim adherents. Pre-Islamic practices survive in various rites involving magic and sorcery; in the belief in the evil eye, and in sundry agricultural rites. All the non-orthodox popular practices are still widespread in certain country districts, especially among the women.

Islam, in Algeria as elsewhere, has permeated social life. Although the life of the Kabyles in the West, and of the inhabitants of the Ahras and of the Tuareg of the Sahara, remains faithful to customs which owe nothing to Muslim law, the private life of the majority of native Algerians is regulated by this law, especially as regards the law of succession, which, in detail, is extremely complex, and personal status. Polygamy, although of course authorized, is in fact not prevalent, particularly in the towns. Malikite law does not forbid child marriage, and the young girls’ consent to their own marriage, which is arranged by their father, is not required (the right of djabir); women can be repudiated by their husbands without any formality or indemnity, a practice which encourages “successive polygamy”. Agrarian law in Algeria has undergone a radical transformation through the influence of French law.

Ways of life. Social life and economic activity are bound up with the way of life of the various elements of the population.

The tribes of the steppes and the desert, consisting of shepherds who breed sheep, goats, camels and horses, are still more or less nomadic. Omitting the Tuareg and the Sha’dda who are pure Saharans [see al-Ša‘râ], only those tribes will be mentioned which roam between the desert and Algeria proper. Some still spend the summer in the Tell. The Arbâ (Laârba) of the Laârba region, and the Said Atba of the Warga neighbourhood are almost solely pastoral in their way of life, and spend the summer in the Serson and on the southern slopes of the Wanghars. The nomads of the Touggourt Territory, owners of palm-trees and with fewer flocks, spend the summer in the high plains of Constantine; they include the Ouled Djedi and Bouazid of the Oued Djedi, the Arab Sherka (Cheraga), the Amûr and Ouled Sidi Salah of the dependency of Biskra and the Arab Gheraba and the Ouled Moulet of the dependency of Touggourt. Other tribes, which live in the valleys of the Sahara, cultivate a certain amount of grain and grazing the pasturages, spend the summer with their flocks in the Saharan Atlas; for instance the Awlîd Sidi Shâykh, the Awlîd Naîl of the south and the Nememcha in the east.
The steppes are the province of the semi-nomads who, for 6-8 months of the year, remain close to their barley and wheat fields and their winter pasture grounds. The ʿAmūr and the Awdād Nall of the north use the pasture grounds of the southern valleys of the Saharan Atlas and the folds of the high steppes, and spend the summer in the Atlas. The semi-nomads of the high steppes, cultivators of grain crops and collectors of alfalfa, spend the summer with their flocks on the southern slopes of the Tell Atlas. The Hamlian, to the west, are former camel nomads. The tribes of the Ḥodna have no alfalfa and in the summer migrate with their flocks and as labourers to the high plains of Constantine.

The breeding of the horse, formerly used in battle, is on the decline; so also is that of the camel, the beast of burden and trade, owing to the competition of rail and road. Sheep breeding, which flourished between 1880 and 1920, is giving way to the cultivation of cereals. The collective ownership of agricultural land is developing into family ownership and even into private ownership; the tents, made of camel hair, goat's hair and wool, formerly grouped in great dawars, are dwindling; they are only used as temporary dwellings by the semi-nomads, who spend the winter in huts or houses. The economic and social unit, which among the nomads is the tribe or a subdivision of the tribe, is a smaller subdivision or the patriarchal family among the semi-nomads.

In the principal mountain massifs the inhabitants often still retain their Berber dialects and customs; but their way of life depends on local conditions. The Awrâs is the stronghold of the Shâwiyya, who are both agriculturalists and breeders of sheep and goats. Their terraced fields, usually irrigated, support cereals and, depending on the altitude, date-palms, figs, apricots and nuts. Although principally village dwellers, they undertake a winter migration, and to some extent follow a semi-nomadic existence, in the direction of the plains of the north and south; they spend the summer on the upland pasture grounds with the exclusively pastoral people. Their lofty villages, surmounted by fortified granaries (see agadir), are still under the effective authority of gjemâyas. Among the Kabyles, only those of the west (Djerjura, Soumman, Bâbûr, Guergour) have retained their traditional dialects and customs. Their terraced fields chiefly support olive and fig trees; they lack cereals and livestock. For want of space they are emigrating in increasing numbers, principally to the towns of Algeria and to France.

The village (taddari), whether its quarters (kharrubâ) are combined, separate or scattered, forms the economic, social and political unit: the gjemâya officially maintains its traditional authority in Kabylia of the Djerjura. The Kabyles of the east are no less essentially Berber-speaking but of the non-Kabyle neighbours of the Bône region, they live in large clearings where they cultivate barley, sorghum and a few fruit trees; they breed cattle and sheep etc., and work in the forests, mainly stripping cork. Their neighbours have huts made with branches; they live in houses grouped in hamlets and are emigrating in large numbers. In western Algeria the way of life of the Beji Menâsher (Berber-speaking) and of the Trара (Arabicized) recalls that of the Kabyles of the west. The inhabitants of the high valleys of the Wangâhrs and the Oran plateaus, once almost all semi-nomads, now have no more than a few tents.

The fertile plains and hills of the Tell, formerly coveted and menaced by both nomads and mountain dwellers, and only insufficiently exploited by people living in huts and tented camps, gained a livelihood from the cultivation of cereals and extensive stock-breeding, have greatly changed in appearance. In the areas of dense colonization, some of the former jelâbîs have become agricultural labourers while others have profited by the examples before their eyes. The local populations everywhere, whose numbers have greatly increased, have considerably extended the area devoted to the cultivation of cereals, at the expense of rearing of livestock. The old semi-nomad tribes of the high plains of Constantine are now bound to the soil. Tribal connections are forgotten; society is crumbling, but private ownership of property often still remains vested in the family. French schooling, military service, and emigration—usually temporary—to the towns or to France accentuates individualism and family autonomy.

Individualism is getting the upper hand in the cities, without causing loss of solidarity between men of the same origin. The partly-Turkish bourgeoisie of the ancient cities of Algeria (Algeriers, Constantine and Tlemcen) has been to a large extent regenerated by people of rural origin; artisans have gradually disappeared. Both old and new towns now have a prosperous or rich bourgeoisie of landed proprietors and a few business men, members of the liberal professions and various employees, and a large proletariat, burdened with an excessive number of rural immigrants with no manual skill and potentially only mediocre labourers.

**Economy.** The native elements remain the dominant factor in the Algerian economy. They cultivate nearly 1/3 of the grain lands, growing almost entirely barley and wheat, and nearly 2/5 of the bearing olive trees and of land devoted to pulses and tobacco. They own more than 96% of the date palms and nearly all the fig trees. They own 95% of the sheep and goats. The colonists, on the other hand, cultivate the vine almost exclusively, and are almost alone in growing early vegetables and citrus fruits. A fundamental problem is how to increase the volume, still very low, of the native output as a whole, and to improve the quality of livestock. Some Algerians have been trained in fishing by Frenchmen of Spanish or Italian origin. The native peoples provide only the labour force and fill a few lower grades in the mines (iron and phosphates, especially lead and zinc), but they are employed in large numbers in the transport services. Industry, still underdeveloped despite recent efforts, finds in them an ample source of labour, but few skilled craftsmen or specialists. Short-term emigration to the industrial cities and to dockyards in France assures an abundant flow of money into the country.

(iv) INSTITUTIONS.

Algeria is part of the French Union as defined by the constitution of 27 October 1946. In it Algeria holds a peculiar position, which was defined by the law of 20 September 1947 entitled 'the Algerian Statute'. At the head of Algeria, there is a Governor with wide powers. The inhabitants are represented by an elective Algerian assembly which not only has financial powers, as had the "Délégations financières" which it replaces, but also a part in the initiation and adaptation to the country of the laws, the principal legislative body being the French Parliament.

Personal status had previously been defined by the law of 7 May 1946, an entirely new law which bears the name of its author, Lamine-Gueye, and which proclaimed the equality of the inhabitants of the country: "all subjects of French nationality of the departments of Algeria enjoy, without distinction of birth, race, language or religion, the rights attaching to the status of French citizens and are subject to the same obligations". But since alongside the Europeans, who are mainly French, lives a large Muslim majority, whose private life is largely regulated by Muslim law, it is laid down that "citizens who do not possess French civil status keep their personal status as long as they have not renounced it". The citizens of French status are French citizens by birth, Algerian-born Jews, who have been citizens since the Crémieux decree of 24 October 1970, a few Muslims who have applied for French civil status and 2/5 of elected Muslims. All citizens are eligible without distinction for election to one or other college.

The Judicial System. The judicial system is similar to that of the Metropolis. The peoples of Algeria are represented in the Parliament of the Metropolis by 30 deputies in the National Assembly (15 per College), by 14 Councillors of the Republic (7 per College), and by 12 elected persons in the Assembly of the French Union, 6 of these being elected by the Algerian Assembly and 6 by the general councils.

Administrative organisation. The three departments (Algiers, Constantine and Oran), whose prefects have wider jurisdiction than in the metropolis, are divided into arrondissements (7, 7 and 6). Their general councils are made up of 3/5 of citizens of French status and 2/5 of elected Muslims. The communes are large and varied in character. Where the non-Muslim French are found in sufficient numbers, they are Communes de plein exercice (with full powers) in which both Colleges are represented (3/5 and 2/5); dependent on the mayor, where needed, are the kâ'ids (caïds) of the dousars (sections of communes), subdivisions which have their own elected representatives, the djemâ'a (djêmâ). The "mixed Communes", destined eventually to disappear, are headed by officials of the Algerian civil service. These preside over the municipal committee which consists of elected members, the kâ'ids, and the presidents of the djemâ'a of the various dousars. In those areas with native populations which have reached a sufficient stage of development there have recently been set up "municipal centres" which, under the control of a civil servant, are undergoing their apprenticeship to public life.

The increase in the size of the departments has gradually pushed back towards the Sahara the former military districts, which have become the Southern Territories. Covering an enormous area, two of them encroaching on the Saharan Atlas and the high steppes of the west, the four Territories have as their centres Colomb-Béchar, Laghaout (Lagwî), Tougourt and Ouargla (Wargla). They are under the direct authority of the Governor General, acting in the capacity of a prefect; the military commanders who are subordinate to him have the administrative powers of a sub-prefect. The Territories used to be divided into dependencies (annexes) which have become the basis of the present communes: 10 mixed communes under civil administrators, and 9 "native communes" under officers for Saharan affairs or administrators. The kâ'ids of the dousars are subordinate to them, and members of the djemâ'a are elected or nominated. The Algerian Statute provides for the gradual conversion of the Southern Territories into civil districts.

The Judicial System. The judicial system is closely modelled on that of the Metropolis. Algiers is the seat of a Court of Appeal; there are 17 assize courts (with French and Muslim jurors) and 79 courts of first instance. Questions concerning the personal status and the inheritance of French Muslims are dealt with by the kâ'ids of the 84 principal mahkamas (mahâkâmah) and by the bašîk dâsil (bachadel) of the 23 dependencies. But their jurisdiction is always optional, and the interested parties can refer to the
justices of the peace, judges of common law in Muslim matters who apply the provisions of Muslim law, or to the French judicial authorities and to French law. The Kabyles of the west, the majority of whom have preserved their own customs, do not have ḏādis. [Cf. also ʿĀdnah.]

**(v)** Languages.

(i) The Arab dialects of Algeria.

The territory forming the present Algeria was arabised during two distinct periods, in common with North Africa in general. The first period commenced with the Muslim invasions at the end of the 1st/7th century. Although not important from the point of view of their ethnic contribution, these invasions had a considerable military, political, religious, and therefore linguistic, effect. They affected primarily the urban centres. The conquering Arabs established garrisons there, distributing units of the eastern diwān throughout the countries which they wished to control and administer. Just as Idrisid Fez and Aghlabid al-ʿĀrāwān arabised the rural and mountain regions around them, so Tlemcen and Constantine, in Algeria, caused the regions which lay between them and the sea, namely Trâra and eastern Kabylia, to forsake the native idiom and adopt the language of the conquerors. Later, the Shiʿite propaganda, by directly linking the Berber tribes to the Shiʿa movement, very probably played a part in imposing Arabic on certain peoples in the north of the department of Constantine. The arabisation of this first period is responsible for the Arabic spoken in the old centres and in the adjacent mountainous regions; thus its various forms can be called “pre-Hilāl dialects”.

The invasion of the Banī Ḥilāl, the Sulaym and the Maʾṣīḥ inaugurated the second period of arabisation. It began halfway through the 4th/10th century, unleashing the turbulent throng of Bedouin tribes against “perfidious Magrib”. This time the ethnic contribution was important. The movement of populations which was brought about by the invasion of these new-comers threw Barbary into a ferment, and resulted in the widespread diffusion of the language which they brought with them. Not merely small districts but vast areas abandoned Berber for Arabic; at first, no doubt, it was the steppes and high plains devoted “to the pastoral life, where the nomads felt at home; then, as a result of alliances which were offered to them or which they imposed, vast settled regions of the Tell and even of the Sahel. Important transfers of populations continued to take place up to the end of the 8th/14th century; for example the establishment of the Ḥilāl Dawkīda in northern Constantine province, and of the Maʾṣīḥ Ṣubayd Allāh and the Ḥilāl Zughba b. ʿĀmir between Tlemcen and the sea. Through contact with the Bedouin Arabs or under their tutelage, entire Berber tribes, sharing a common mode of existence with the Bedouin, turned to Arabic; for example the Sadwīkh of western Constantine province and sections of the Ṣanāʿa of northern Oran. Arabisation has continued until our own times, penetrating the mountain massifs and ancient Saharan centres which remained the strongholds of Berberism. An unpublished work of al-Ṣabbāgh on the life of the great saint of the Chelif, Sidi Ahmad b. ʿĪṣaṣ, gives us an idea of the linguistic state of this region in the 10th/16th century, and quotes phrases in lugha sanāʾiyā. Berber was still spoken in the Chelif at that period, but now Arabic alone is spoken, except in the mountain massifs of the Bani Menāsēr and Wanghārs which skirt the region. One is tempted to consider that the propagation of the conquerors’ language was particularly encouraged by the Turks between the 9th/15th and the 13th/19th centuries. In the northern regions which they endeavoured to control, they executed large transfers of rural and Bedouin groups, on a scale surpassing that of the dynasties which preceded them in central Magrib.

The upheaval of populations in the course of centuries has been so great that linguistics cannot provide any ethnic criteria. It is doubtless permissible to conjecture that the groups which have remained Berber-speaking include a large proportion of elements of Berber origin, but nothing enables us to assess the proportion of the elements of Arab origin among the Arab-speaking populations. It is most likely that the latter are largely composed of arabised Berbers. No shibboleth, or linguistic criterion, enables us to establish the ethnic origin of the various groups; no dialectal indication, as far as we know, makes it possible to identify the Berber groups converted to Arabic such as the Ulhāṣa, the Huwārā, the Sindjās, the ʿAdjis, the Luwwūṭa or the Kutāma, etc.

As regards the Arabic dialects introduced by the invasions of the 5th/6th/11th-12th centuries, it is generally considered that the territory of the Sulaym was definitely to the east, and that of the Maʾṣīḥ more to the west. The territory of the Hilāl cannot be defined exactly; it was certainly centrally situated, but probably encroached on the territories to the east and west. The dialectal variations of the language which they spoke or which they disseminated are known as “Bedouin dialects”.

(A) Pre-Hilāl dialects. Included in this category are village (or mountain) dialects, and urban dialects (Jewish and Muslim).

(a) Village dialects. These are represented by two groups which have been clearly identified but have not been the subject of equal study; namely, Oran dialects, and Constantine dialects. The former embrace the mountain massif of the Trāra, which extends from the udāf of Moghniyya (Marnia) as far as the sea, and is bounded approximately by the course of the Tafna to the east. Nadrūma (Nédroma) is the urban centre. This area belongs to the Ulhāṣa and the Kūmiyya, and is crossed by the routes connecting Tlemcen with the ports of Huṣayn and Arāghkūn (Rachgoun). Its arabisation dates probably from the Idrisid era. The second group corresponds to eastern Kabylia, and is completely mountainous, having the form of a triangle whose apexes are Dijīdji, Mila and Collo. Historically, the region represents the seaward expansion of Constantine and Mila, which were Arab garrison towns in the Aghlabid period. This is the former Kutāma country, the centre of the Fāṭimid movement.

These dialects are characterised phonetically as follows: uvular ū is changed into velar ū, e.g. kalb for kalb “heart”; ū is pronounced as a palatal,
and often, with a marked degree of palatalisation, ky, or as an affricate, ksh, tsh, or as a fricative, ts, in Oran and Tlemcen, a change which leads to confusion with the fricatives sh and s and the sibilants i (H) and s; and finally, certain elements of vocabulary have survived, such as words of Berber forms with the prefix a- (not taking the Arabic definite article), or of the form i...i, most of them associated with rural life (dwellings, domestic life, domestic utensils, country life, agricultural implements, animals, plants, etc.).

These two types of village dialects unquestionably possess considerable points of difference; but they have certain features in common with the dialect of the Moroccan Dibāla to the west. The Oran group is nearer to the Moroccan group than to the Constante. To the ears of townsmen, and with even more reason to those of the Bedouin, the speech of the Dibāla, the Trara, and the rural Djijellians sounds like a foreign tongue, whose sounds, syntax and vocabulary seem to them alien to Arabic. It is, however, Arabic, and even Arabic of an ancient stock, as is witnessed by certain archaisms, such as the preservation of the old monoliteral fa “mouth” in the Nderoma district, and of the final iyēya among the rural Djijellians; but at the same time it is an Arabic in which appears the Berber method of presenting ideas, and through which the substratum of Berber vocabulary often emerges; an Arabic, finally, which, retaining the marks of the bilingualism which preceded the supersession of Berber by Arabic, is still handled by those, whose ancestors had adopted it, with a beginner’s clumsiness.

(b) Urban dialects. These do not form a homogeneous group, and the listing and description of these dialects is far from complete. They are divided into two classes—Jewish and Muslim.

Jewish dialects. The North African Jews are almost entirely city-dwellers in Algeria. Apart from the semi-nomadic group of the Balbésiya in the Souk-Ahras region, now dispersed, they all live in towns. Only those Jewish communities with a very pronounced Berber element—because of their populousness and strong social cohesion, constitute societies distinct from and virtually alien to the Muslim majority around them, possess any special form of Arabic; for instance the communities of Oran, Tlemcen, Mihama, Médea, Algiers and Constantine. Although the Jewish dialects differ from one city to another, they share certain common characteristics.

The phonetic system is rather changed in these dialects, especially as spoken by women: loss of the interdental th, dh, dh, which revert to t, d, q; the unvoiced dental t becomes the affricate ts, in Oran and Tlemcen, a change which leads to confusion with the fricatives sh and s and the sibilants i (H) and s;
the excessive rolling of $r$, very noticeable in Algiers; a general inability correctly to pronounce back consonants; thus, $k$, glottal check, for $k$, in Algiers, and, in Tlemcen or Oran (as in Jewish Fes), $k$ for $h$, and a for $h$; the muting of the aspirate, especially in Algiers; the decay of the short vowels, in which has forms analogous to, if not identical with, those in Cherchell dialect. In the and and 3rd person pronominal affix of the 3rd person sing, masc., after a consonant.

The morphological forms contain both similar and dissimilar elements. Among the former should be noted reconstruction of defective verbs, for instance of $khdâ"$to take" and of $hla"to eat"; the general use of the plural quadriliteral form $snâdhâ"coffers" and the diminutive $mîlêk"small key", and of the triliteral diminutive $tïzelf"small child"; the frequent use (except at Constantine, Mila, Philippeville) of a sort of curious adjectival diminutive $kîbîr"somewhat large" from $khîr, kîbîl"blackish" from $khîl, already vouched for in al-Andalus; the pronunciation $u$ or $o$ of the pronominal affix of the 3rd person sing, masc., after a consonant. The feminine $ah$ is peculiar to Cherchell; elsewhere it is invariably $ha$, for the 3rd person pronoun.

In other cases, the townspeople have borrowed the language of the neighbouring Bedouin collective, or sedentary Bedouin, groups; for instance, in Tlemcen, Ténès, Blida, Miliana, Médéa, Mila, Philippeville, and Constantine. Although, on the whole, the language of these old centres has remained almost completely dominant: for instance, in Oran, or sedentary Bedouin, groups; for instance, in Oran, Mostaganem, Mascara, Mazouna, and Bône (and similarly, in the extreme east of the Maghrib, at Tripoli and Benghâzî). The case of Algiers and its environs, and that of Bougie, are more complex. Algiers and the Fahs form a melting-pot for urban elements, for old-established rural sedentary population, for newly-arrived rural elements, and for Bedouin who, after a period of acclimatization in the Chélif and the Mitidja, flock to a city life which, although of a proletarian nature, attracts them; Kabylie, moreover, disposes its emigrants there in an unending stream. The Kabylie element, indeed, has so far taken possession of Bougie as to render this ancient capital and mediaeval centre of Arab culture, a Berber-speaking city.

Phonetically, the urban Muslim dialects have on the whole the same characteristics as those of the village dialects and the Jewish dialects. Only the ancients in Ténès, Cherchell, Dellys and Constantine have preserved the interdental. In Médéa, Blida and Algiers both the fricative and the occlusive pronunciation are heard together. $T$ is everywhere converted to the affricate $ts$. The voiced sibilant is variously pronounced: $ji$, with an initial dental, in Tlemcen, Ténès, Cherchell, Médéa, Blida, Algiers, Dellys, Mila, and Constantine: elsewhere as $l$. The exaggerated rolling of $r$ could be said to be a typically urban "articulatory disease": it is, presence in the Jewish dialects has already been noted: it is conspicuous in Constantine, Dídjlî, Cherchell, Tlemcen and Nédrôma (and similarly at Tunis and Fes.) The change of $k$ to $q$, a simple glottal check, exists at Tlemcen; at Dídjlî, a back $k$ is substituted for it; but in all the other towns, it remains $k$. Ibn Khaldîn based the essential difference between the dialects of the sedentary peoples and the dialects of the Bedouin of the Maghrib on the contrast between the intellectual or religious life. It is, alternately, the language of these old centres has remained unstable, and does not lend itself to early extinction, if, indeed, it has not already disappeared. The old cities everywhere bear the marks of the external influences to which the languages have been subjected in the course of centuries, and to which they are still subject; that of the rural populations and that of the Bedouin. The Bedouin dialects, as preserved in the cases of Nédrôma, Dídjlî and Collo, where the dialect tends to conform to that of the surrounding villages. In other cases, the townspeople have borrowed the language of the neighbouring Bedouin collective, or sedentary Bedouin, groups; for instance, in Tlemcen, Ténès, Blida, Miliana, Médéa, Mila, Philippeville, and Constantine. Although, on the whole, the language of these old centres has remained urban, there are others where the Bedouin dialect is almost completely dominant: for instance, in Oran, Mostaganem, Mascara, Mazouna, and Bône (and similarly, in the extreme east of the Maghrib, at Tripoli and Benghâzî). The case of Algiers and its environs, and that of Bougie, are more complex.
fossilized in songs, proverbs, and a few ready-made expressions.

(B) Bedouin dialects. In so far as they are known (and knowledge of them is only approximate and incomplete), the Bedouin dialects of Algeria present the appearance of a composite and heterogeneous mass. The isoglosses which some have attempted to trace form a complex picture; the interpretation of this picture, if it seeks to take an overall view, ignores the diversity of the material and glosses over numerous contradictions.

The following are the identifying marks of a Bedouin dialect. (a) Phonetic. A fairly general retention of the interdentals $th, dh, gh$; an occlusive pronunciation of the unvoiced dental $t$, except in certain oasis dialects in which it is affricated (as at Beni Abbès in southern Oran, or Touggourt in southern Constantine); the voicing of the back velar, $g$, only appearing in loan words and especially in the vocabulary of law and religion; an occasional preservation of short vowels, often complicated by a change in quality attributable to the influence of adjacent consonants or, sometimes, to that of stress.

(b) Morphological. A certain conservatism which preserves in the verbal and nominal forms traces of the ancient tongue; differentiation of gender in the second person singular of verbs and of the independent pronoun: $ghaburi "thou (m.) hast struck"$, $ghabibi "thou (f.) hast struck"$, eni "thou (m.)", eni "thou (f.)"; a fairly widespread use of the dual, going beyond the limited use for nouns of measure and nouns denoting parts of the body which occur in pairs. (c) In syntax and vocabulary. A restricted use of the indefinite article $a$, the use of the undefined noun often being sufficient to indicate a state of indefiniteness; the frequent expression of the possessive relationship by the old method of direct connexion; the use of a vocabulary more exclusively Arabic than that of the sedentary populations.

This group of characteristic forms constitutes a common basis of the Bedouin dialects. They possess other peculiarities, but either they do not all possess them or they are not alone in possessing them: for instance the preservation of the diphthongs ey, ow or their contraction to $i, o$, the sedentary dialects usually resolving them fully, to $i, u$: the use of the form $id$, not yedd "hand", and of the preposition $mid$ (not $madi$) "of", to the exclusion of $ad$, $di$, $dydi$; the use of the plural form $mdid$ (not $mdidi$) "coffers" and of the diminutive $mfitch$ (not $mfitch$) "small key", for quadrilateralers, and of the diminutives $ufeyl, tful$, $tfil$ (not $feyeyel"small child" for trilliterals with a short vowel; the existence of a plural form for trilliterals with a doubled medial consonant and short vowel, $gherref$ from $gherref"old, tough"$, and of a plural $mid$a from $mid"five"$, e.g. $mghabbna$b from $mgb"deceived, afflicted"$; the preservation, in the numerals from 11-19, of the $' of 'ashar, e.g. $khmista'ash"fifteen"$ (especially in southern Oran), the sedentary dialects habitually having $khmista'sh$ etc.

In order to attempt a provisional draft classification of the Bedouin group, only a limited number of those dialectal features which most prominently are possessed distinctive will be selected, some phonetic, other morphological (but not distinctions of vocabulary, an enumeration of which would lead us too far afield):

(i) The pronunciation of the voiced sibilant: $j$ is the pronunciation of the Bedouin dialects of eastern Algeria. The line of demarcation $j/l$ passes
to the east of Philippeville, Constantine and Ouled Rahmoun, curves south of Barika, keeps to the south of Hodna and veering north, reaches the neighbourhood of Mansoura des Bibans. It is also identical with that of the high plains and the Saharan regions of the centre and west of Algeria: the line of demarcation $\text{dj}$/$\text{t}$ passes north of Aln Bessem in the direction of Champlain, leaves Médéa, the Djerbel and the Ouarsenis to the south and, at the altitude of Teniet el-Hadd, crosses the Sersou, proceeds to the south of Trézel and north of Frenda and Saidâ, and swings north towards Mercier-Lacombe, Saint Denis du Sig and the approaches of Tlemcen. $\text{Dj}$ therefore represents the pronunciation of the regions of Constantine, Saint Arnaud, Sétil, Bord Bou Arreridj, Barika, Miscia and the Hodna; of the Algerian Sahel, Mitidja, the valley of the Chelif, Dahra, the plateau of Mostaganem, the mountains of Mascara and the plain of Macta; constituting a more northerly Bedouin group.

(2) The change of the velar fricative $\text{gh}$ to the occlusive back velar $\text{k}$. This characterises the Saharan Bedouin dialects (with the exception of certain oasis dialects), but also extends over a considerable area to the north towards the high Algerian plains: the line of demarcation $\text{gh}$/$\text{k}$ commences south of Aln Sefra, passes to the east of Mecheria, turns back towards the Kherider, follows the Chergui chott, leaves Trézel to the west, crosses the Sersou, passes to the south of Teniet el-Hadd, Berrouaghia and Aln Bessem, passes over the Hodna at the altitude of Msla, skirts Barika, El Kantaara and Biskra, and plunges southwards, leaving Mrâla, Djemaa and Touggourt to the East.

The pronunciation $\text{ak}$ after a consonant of the 3rd person sing. masc. personal affix. This is characteristic of the Bedouin dialects of (i) Oran. The line of demarcation $\text{ak}$/$\text{u}$ commences at Mostaganem, goes down towards Uzès-le-Duc, leaves Tiaret and Trézel to the east, follows the eastern prong of the Chergui chott, and passes approximately half-way between Géryville and Aflou: the Ouled Sidi Cheikh use $\text{ak}$, but the Doum Menia and the sedentary peoples of the Saoura use $\text{u}$; the Bedouin outskirts of Tlemcen and the region which lies towards Aln Temouchent and Oran also uses $\text{ak}$. (ii) Eastern Constantine, comprising: to the north, the inhabitants of mountains of the Cello region, which are a continuation of the Kroumirs and Mogods of Tunisia; to the south, the nomads of the east Sahara and of the Saharan zone which skirts southern Tunisia (the $\text{ak}$ frequently being curtailed to $\text{a}$); this form is found among a considerable proportion of the Bedouin of Tunisia, and throughout Libya; all the rest of Algeria, both north and south, uses the forms $\text{u}$, $\text{o}$.

(4) The structure of the 3rd person feminine of the perfect of sound verbs, when followed by a personal affix with an initial vowel, e.g. $\text{gharbet} + \text{â} + \text{k} “she has struck thee”: (i) $\text{gharbet}$ is the pronunciation of northern-eastern Constantine, as far as a line which starts to the east of Philippeville, reaches Jammepas and the Khroub, turns eastwards, touches Chateau-dun-du-Rumel, and proceeds in the direction of Périgotville; of the region situated to the south of this line, namely the high plains of Sétil as far as Bordj Bou Arreridj, and also of the eastern Sahara as far as the outskirts of Biskra and Touggourt; of the Algerian Tell where the voiced bilabial is pronounced as $\text{dj}$; and finally of north and west Oran, following a line which passes south of Ammi-Moussa, swings southwards between Tiaret and Frenda, follows the Chergui chott and again swerves south, leaving Mechéría and Ain Sefra to the east: (ii) $\text{gharbethek}$ is the pronunciation of the Constantine region, of Ferdjoua, and of the environs of Fedj-Mzaâa as far as Guerroug; (iii) $\text{gharbethek}$ (with the stress on the first syllable) extends south of a line joining Bordj-Bou-Arreridj and Colbert throughout the Hodna, south-west Constantine and the central Sahara; it is the pronunciation of all the Algerian nomads (including Teniet el-Hadd) who pronounce the voiced bilabial as $\text{f}$; and it is also the pronunciation which prevails in eastern and southern Oran.

(5) The syllabic structure of the imperfect of sound verbs, first form, in the plural: $\text{yedhharb} + \text{u} “they have struck”; and that of the triliteral noun $\text{ja’alat}$ (with a suffix commencing with a vowel): $\text{ra’bat} + \text{i} “my neck”; (i) $\text{yedhharbu}$, $\text{rabebti}$ (with the stress on the first syllable) is found throughout the Constantine region except in El-Kantara, on the high Algerian plains and in the whole of the east, central and west Sahara; the dialects of the south-east have a clearly-defined tendency to prolongate the vowel receiving the stress; (ii) $\text{yedhharbu}$, $\text{rabebti}$, with doubling of the medial and stress of the second syllable, is prevalent in El-Kantara and the region of Philippeville; these are the forms in use in the north of Algeria, wherever the voiceless bilabial is pronounced, including Teniet el-Hadd; they are also used throughout north and west Oran; the dividing-line $\text{yedhharboul}$ $\text{yedhharbou}$ passes between Tiaret and El-Ousseukh, follows the northern edge of the Chergui chott, and swings south, leaving Mechéría to the west and Ain Sefra to the east.

(6) The conjugation of defective verbs (imperfect and imperfect a): $\text{masl}$ and $\text{yemsl}$ “to go” and $\text{msd}$ and $\text{yensd}$ “to forget”: (i) northern Constantine, from the Tunisian frontier as far as a line which drops rapidly from Bône towards Ain Beïda, and the eastern Sahara as far as Sidi Okba and El-Oued, use the forms $\text{masl} (\text{masl}) - \text{mshd} - \text{mshu} - \text{yensd} - \text{yensu}$; $\text{msd} (\text{msf}) - \text{nset} - \text{nsu} - \text{yensd} - \text{yensu}$; (ii) central Constantine, from the northern boundary delineated above as far as the outskirts of Biskra and M'doukal, along a line which follows the Hodna depression and rises again towards Mansoura des Bibans as far as Kabylia, has forms which are completely resolved: $\text{masl} (\text{masl}) - \text{mshd} - \text{mshu} - \text{yensd} - \text{yensu}$; $\text{msd} - \text{nset} - \text{nsu} - \text{yensd} - \text{yensu}$, analogous to those of the sedentary dialects; (iii) throughout Bedouin Algeria, from the Sahara to the sea, and in a large part of Oran, bounded on the east by a line which, starting from the outskirts of Oran itself, passes to the south of Saint Denis-du-Sig and to the north of Cacherou, leaves Frenda to the east and proceeds southwards, passing between Aflou and Géryville, the conjugation of verbs with imperfect $\text{i}$ and imperfect $\text{a}$ is characterised by a peculiar usage: $\text{yemsl} - \text{yemshu}$ on the one hand, $\text{yensd} - \text{yensu}$ on the other; this usage is found again in western Oran, from a line running east of Tlemcen, passing east of the Homeyan, and curving westwards north of Ain Sefra; (iv) central Oran, comprising the regions of Aln Temouchent, Sidi bel-Abbès, Mascara, Saidâ, Mechéna, Géryville, Ain Sefra and Ouled Sidi Sheikh, has the forms $\text{yemshu}$, $\text{ensu}$, $\text{yensu}$.

By drawing up a table of all the different characteristics, there emerge, despite the overlapping and contradictions which blur the boundaries and split up geographical areas, four, or perhaps five distinct basic groups: (i) The Bedouin dialects of eastern Constantine, the region of La Calle and Souf (Cantineau’s group
(i) The Bedouin dialects of central and western Oran (Cantineau's group D): the pronunciations are ِ, ُ, ُك, ِك, ُة, َة, ًة, ُة, ِة, ُة, ُه. Diphthongs are either correctly preserved ِء, ُء, or reduced to ِء, ُء.

(ii) The Bedouin dialects of central and Saharan Algeria (Cantineau's group A): the pronunciations are ِ, ُ, ُك, ِك, ُة, َة, ًة, ُة, ِة, ُه. Diphthongs are either correctly preserved or reduced to ِء, ُء.

(iii) The Bedouin dialects of the Tell and of the Algerian-Oran Sahel (Cantineau's group B): the pronunciations are ِ, ُ, ُك, ِك, ُة, َة, ًة, ُة, ِة, ُه. Diphthongs are sometimes preserved or reduced to ِء, ُء, and final ِء is pronounced ِء.

(iv) The Bedouin dialects of the high plains of Constantine, covering the north of Hodna and the belt which extends roughly from Bordj Bou Arreridj to the valley of the Seybouse, occupies an intermediary position between groups i, iii and iv, and the sedentary dialects (Cantineau's group c): the pronunciations are ِ, ُ, ُك, ِك, ُة, َة, ًة, ُة, ِة, ُه. Diphthongs are reduced to ِء, ُء, and the conjugation of the defective verb is completely restored, as in the urban and village dialects; these dialects can be regarded as a complementary group, if not as an independent one: they are the dialects of the old Zrīd state of the Kal'a, a centre of sedentary peoples buried beneath the mass of the Bedouin.

(v) The dialects of the high plains of Constantine, covering the north of Hodna and the belt which extends roughly from Bordj Bou Arreridj to the valley of the Seybouse, occupies an intermediary position between groups i, iii and iv, and the sedentary dialects (Cantineau's group c): the pronunciations are ِ, ُ, ُك, ِك, ُة, َة, ًة, ُة, ِة, ُه. Diphthongs are reduced to ِء, ُء, and the conjugation of the defective verb is completely restored, as in the urban and village dialects; these dialects can be regarded as a complementary group, if not as an independent one: they are the dialects of the old Zrīd state of the Kal'a, a centre of sedentary peoples buried beneath the mass of the Bedouin.

It cannot be pretended that any interpretation of this classification can be other than a hazardous and debatable undertaking. Having due regard to the delicacy of the task, it may be hazarded that group i is connected with the Tunisian group which W. Marçais considers Sulaymite; following him let us call it group S. Group ii is probably an extension of the eastern Moroccan group, which G. S. Colin considers Māṣkilīan; let us call it group M. Group iii comprises the most truly Sahara Bedouin elements, at once the most imposing and the most united, including the Chaamba, the LARBAA, the Ouled Naïl, the Arab Cherra; the dialectal area of these nomads extends over a wide area of the north—more to the east than to the west—covering the nomad's pasture grounds and the grazing lands of the high plains. The northern part of their domain forms a large zone of transition shared with group iv. They are grouped in the valley of the Chelif, and stretch as far as the environs of Relizane and Mostaganem in the west, and into Mittidja and as far as Kabylie in the east. Let us call group iii H* and group iv H** conjecturing a vast implantation there of Hilālī Arabic, the Arab element (perhaps that of the Athbedj and the Zoghba) intermixed with a Zenata element. The proportion of Arabicised Berbers is doubtless more considerable in the north of the high plains and along the Tell Atlas. Group v, an extremely complex group, is inserted like a wedge between the still Berber-speaking groups of Kabylie and the Chaouia region; it to is perhaps consonant with an implantation of Hilālī Arabic (Riyah?) in the formerly 'Adīsia and Kutama territories; let us call it H*.

We do not profess to define the precise disposition of the zones of transition between the various groups, or to determine the possible preponderance in them of one type of dialect as opposed to another. It is, however, suggested that group H* succeeded, in the course of centuries, in spreading further afield, to the detriment of groups H and H**, as a result of the political superiority enjoyed by those forming that group: it was a case of warlike pastoral nomads, imbued with the spirit of conquest, confronting people who were at the same time small agriculturalists and semi-nomadic, semi-settled. In the same way group H* must have imposed strongly on the territories of the settled regions of western Constantine: hence the presence of sedentary dialectal forms emerging from the superimposed Bedouin dialect as surviving witnesses to a group of dialects which have been superseded. On the other hands, more recently we see that not only is Bedouin linguistic expansion being checked, owing to the decline of the pastoral life, to its geographical limitation and even, at many points, to its disappearance, but that the sedentary dialectal elements are gaining ground, especially in the northern areas.

Although any forecast must be risky, one is inclined to believe that the social changes whose effects are daily experienced by the Arabic-speaking peoples of Algeria can divert the spoken idiom into new channels. In the land in which they live, the towns, few in number, enclosed with walls whose gates were closed at nightfall, have remained, for thousands of years, alien intruders in a rural and pastoral, composite and inorganic world. The towns of modern Algeria, whether legacies of the past or recent creations, some of them populous centres, all of them centres of economic activity, exercise a magnetic influence on many a district of the former Regency, even the most distant, to which they represent labour markets and a source of livelihood; and, one might add, melting-pots in which is being produced a know of Algerian Arabic which is capable of causing the extinction of the old regional dialects.

(2) The Berber dialects [see BERBER].

ALGIERS [see AL-BAZA'IR].

ALGOL [see WUDU'M].

ALGOMAIZA [see WUDU'M].

ALGORITHMUS is the old name for the process of reckoning with Arabic numerals. In mediaeval treatises the word is spelt in various ways: e.g. Algorithmus, Alcoharrismus, Alkauresmus, etc., corruptions of the nisba of the oldest known writer on Arabic arithmetic: Muhammed b. Mūsā al-Kurānimī [q.v.]. His book was translated into Latin in the 12th century by an unknown author, and the only known copy at Cambridge has been edited by B. Boncompagni (Trattati d'aritmetica i, Rome 1857). It opens with the words: "dixit Algorithmi", the word is here correctly given in the form of an Arabic nisba, i.e. as a proper name; it is strange that it should afterwards have come to mean the new process of reckoning with Arabic figures, as contrasted...
with the system of counting by the Greco-Roman abacus. Of the numerous attempts to explain the word it is enough to mention a derivation from a philosopher Algis, and a supposed origin from the Arabic article al combined with the Greek ἀριθμός, hence the form "Algarithmus". The right explanation was given by M. Reinaud in his Mémoire sur l'Inde, 303-4, in the year 1849, before the Cambridge manuscript had been edited, but the false acceptance prevailed, and Algorithm (or Algorism) is still used in the sense of "system of numeration, arithmetic". (H. Suter)

ALHABOR [see NUDIUM].

ALHAIOIT [see NUDIUM].

ALHAMMA [see AL-HAMMA].

ALHAMBRA [see GHANATTA].

ALHUCEMAS [see AL-KHUZAMA].

'ĀLI, Muştafa b. Ahmad b. 'Abd al-Mawlaw Čelebi, one of the most outstanding representatives of Turkish literature of the 16th century. Born at Gallipoli in 948/1541, from the age of 10 he studied under Surūrī, great expert in Arabic language and literature, and then under the Arab poet Muḥyī 'l-Dīn. In 965/1557 he presented to the heir-apparent Selīm his work entitled Miḥr u-Māh, a step which determined his future career (see Dozy, Cat. cod. or. bibl. Acad. Lüg. Batavae, ii, 128). He became a member of the circle of his fellow-citizen Muştafa, tutor to the prince, and was for a long time attached to this important figure as a private secretary. Selīm II, on his accession, confirmed him in this post, and about the same time he made the acquaintance of Nīshānjī, great expert in Persian language and literature, and then under the Arab poet Muḥyī 'l-Dīn. In 976/1568 he accompanied Muḥammad to Egypt, but this visit was abruptly terminated by the latter's dismissal. In 1570, Muştafa was placed in command of the army charged with the conquest of Cyprus, and 'Āli, as his secretary, witnessed the achievements of the Ottoman fleet and army. During the following years he lived in Rumelia, and in 980/1572 he compiled the Ḥefṣ Muḏāji or Ḥefṣ Dāsun (MS Lāleli, Istanbul, no. 15114; printed edition in the collections of the İhdād) in which he described, in a pompous style, the end of the reign of Suleymān the Magnificent and the accession of Selīm II. About the same time he compiled a collection of poetry in Turkish, consisting mainly of kaside and ghazals. He also produced a Persian diwan (see Flügel, Die arab., pers., und türk. Hss. der K.K. Hofbibl. zu Wien, i, 651).

'Āli is, however, only ranked as a second-rate poet, as his poetry shows little feeling or sensibility. In 1577, he was again Muştafa's secretary when the latter was placed in command of an expedition to Persia; he was the author of numerous victory proclamations sent from the Caucasus. He took advantage of his stay in those areas to collect a mass of information on the customs and legends of the populations of the Caucasus, and especially those of Glān, Şhrwān and Georgia. After the dismissal of Muştafa, 'Āli returned to Istanbul; the sudden death of his protector placed him in a difficult position, but did not interfere with his literary activity. He dedicated to the Sultan his Mir'at al-'Amālīm which gives an account of the miracles of the Creation and the Prophets (MSS: Istanbul Universities Kütüphanesi, nos. 17399-96; Esad Efendi Kütüphanesi, no. 2407; cf. Flügel, loc. cit., ii, 94; Pertsch, Vers. d.türk. Hss....zu Berlin, nos. 36, 558). Soon afterwards he completed the Nusrānamē, which deals with the expedition to Iran (Esad Ef. Kütüph., no. 2433; Rieu, Cat. of the Turk. MSS, 386).

In 995/1586 he compiled the Manadīš-i Humer-worān, in which he collected important material on some hundreds of calligraphists, miniaturists, illuminators and bookbinders (see Flügel, loc. cit., ii, 386; edited by İmranlı Məhməd Kemal, Istanbul 1926). The Zuwdāt al-Tawārīkh, the Turkish translation of an Arabic work, dates from the same period (Flügel, ibid., ii, 90; Ist. Univ. Kütüph., nos. 2378-2386). Interested in mysticism and pantheism, he gave in the Hilyat al-ridżāl (Rieu, loc. cit., p. 19; Pertsch, Die türk. Hss....zu Gotha, 75; Ist. Univ. Kütüph., nos. 1329, 404) detailed information on the saints, their hierarchy and their influence; he also composed a diwan entitled Lā'ihāti al-Ḥabībīh (Rieu, loc. cit., 261; Ist. Univ. Kütüph., nos. 651, 1963). Appointed hālib of the Janissaries, then defter emini, he applied himself to tracing the course of history down to his own times; he wished, however, to produce his work at Cairo, but the greatest book centre of the Muslim world was no longer in Meḥmed III who, on his accession, accorded him privileged treatment, appointed him defterdar of Egypt, but the hostility of certain wāris caused him to lose this post. From 1000-1007/1592-9 he wrote his great work, Kunh al-Akbār, in four parts (printed at Istanbul between 1277/1661 and 1285/1669 in 5 vols., covering the period up to the reign of Meḥmed II; no printed edition of the remaining period of 150 years exists). In the first part, he recounts the ancient legends concerning the prophets; in the second, he treats of Muhammad and Islam. He was so convinced of the important role played by his nation in the development of Islam that he entitled the third part "The Turko-Tatar chapter". The fourth part is devoted to the formation of the states and to Ottoman history. A geographical dictionary is appended to the work. The Kunh al-Akbār is among the most important Ottoman historical works. Although the information given by 'Āli on the pre-Islamic period is of no great value, on the subject of Ottoman history, especially on the 16th century, he is extremely valuable. His passion for truth even leads him to criticise the actions of certain sultans, and in general he speaks favourably of non-Muslims. His style, poetical to begin with, becomes more simple as he proceeds.

Later he wrote a historical summary of the Muslim World, entitled Fusul al-Ḥall wa l-'Ādāt Uṣūl al-Khaḍār wa l-Nakāh, which is one of the most popular works in Turkish (see, e.g., the MS in Nuruosmaniye Kütüph., no. 3399). As a reward for his literary activities he was appointed pashā of Djiđda; in 1008/1600 he wrote his last work, Ḥalāl al-K gating min al-Ḳadāt al-Tāhir (MS: Esad Ef. Kütüph., no. 2407; Cairo, Bibli. Khdīvī, Cat. des ouvr. turcs, 197), a short but significant work. He died the same year.

'Āli is a particularly attractive character: although, in the circles in which he moved, violence and intrigue seem to have the rule, he showed himself always to be loyal, kind and upright. His integrity and seriousness explain why he failed to win the goodwill of the rough and unpolished men of that period; even the Grand Vizier Siyyawush Pasha, a remarkable man, viewed him with contempt. On the other hand, every writer of the period was his friend.
Bibliography: His life and works have been described by J. von Hammer-Purgstall, Gesch. d. osman. Reiches, iv, 308, 561 ff.; idem, Gesch. d. osman. Dichtkunst, iii, 115 ff.; by Mehmde Tahir b. Rifa‘at, Muzerrih-i‘packages (‘Ali we-Kabib Celebi’i‘n terazim-i Hâlleri, Salonica 1322/1906; and by Ibnu-lmâmî Muhammed Kemâl, ‘Ali b. ‘Abd Allah b. ‘Abd al-Malik. His position was complicated by a year of his birth. His mother was called Zur a bint c but there are also other statements concerning the capital by the caliph al-Walid I. He went to live in Aâl Attâr to great distinction. He was assassinated; the same night in which the caliph C. died his post; and the Abbasids. According to Muslim biographical sources, 302/914 and 37/657, when he was already sixty years old. Whether he was the second after Khadija, or the third after Khadija and Abû Bakr, was much disputed between Shi’ites and Sunnis. He was at that time aged 10 or 11 at most, and Muhammad had taken him into his own household to relieve the boy’s father Abû Tâlib, who had fallen into poverty. One narrative, which is open to criticism on several counts, represents ‘Ali as having occupied the Prophet’s bed on the night when the latter left Mecca for Medina, so that the conspirators, on entering the house in order to kill Muhammad, were surprised to discover his young cousin sleeping there. After restoring to their owners the objects which Muhammad was holding on trust, ‘Ali rejoined the Prophet at Kûthâ. Some months later, he married Muhammad’s daughter Fatima [q.v.], and of their marriage were born al-Hasan and al-Hasayn [q.v.]. During the lifetime of Fâtima ‘Ali took no other wife.

Military exploits. In Muhammad’s lifetime ‘Ali took part in almost all the expeditions, often as standard-bearer, twice only as commander (at Fadak in 6/628, and in al-Yaman in 10/632). He always displayed a courage, which later on became legendary; at Badr he killed a large number of Kurayshites; at Khaybar he used a heavy door as a shield, and the victory of the Muslims over the Jews was due to his ardour; at Únayn (8/630) he was one of those who stoutly defended the Prophet. After the Prophet’s death, he took no part in any military expedition, for reasons unknown. ‘Ali is said to have prevented the Kurayshites from going out to the provinces, but ‘Ughmân renounced his claim and some obstacles were placed in their movements. It is possible that ‘Ali himself had no wish to absent himself from Medina; perhaps it was simply his state of health which kept him from fighting, although several feats are attributed to him at the battles of the “Camel” and Shirin, in 36/656 and 37/657, when he already was sixty years old. In addition, ‘Ali performed several other functions for the Prophet. He was one of his secretaries, and on occasion was charged with missions which might be called diplomatic; on two occasions he was deputed to destroy idols. He executed with his own hand enemies condemned to death by the Prophet, and with al-Zubayr supervised the massacre of the Banî Kurayya (5/627). In 9/631 he read to the assembled pilgrims at Mina the first seven verses of the sûra Bârdâ (ix).

Dispute with Abû Bakr. During the election of Abû Bakr [q.v.] as Muhammad’s successor, ‘Ali, with Tahtâ, al-Zubayr, and several other Companions, remained apart in the Prophet’s house to watch over his body and prepared for its burial. Although solicited to do so by al-‘Abbâs and also, it is said, by Abû Sufyan, he made no effort to keep the control of the Community in the hands of the Hâshimites. When those persons who had at first abstained from recognizing Abû Bakr gradually accepted his election, ‘Ali maintained his refusal for six months. His position was complicated by a...
question of inheritance; Fātimah had asserted a claim to the lands held by her father, which Abū Bakr firmly rejected on the ground of Muḥammad's, saying that "Prophets have no heirs". Whether ʿAbd Allāh really hoped to succeed Muḥammad is doubtful. The Arabs as a rule chose as their chiefs men of mature age (in 11/633 ʿAbd Allāh was a little over thirty) and showed no inclination to legitimism. The Shīʿites, by inventing or interpreting in the light of their beliefs certain words said to have used by Muḥammad concerning ʿAbd Allāh (see Wensinck, Handboek, s.v. ʿAbd Allāh), have always maintained that the Prophet intended to transmit the succession to his son-in-law and cousin, but it is certain, in any case, that in his last illness he did not express this desire.

Relations with ʿUmar. According to the Muslim authors, ʿAbd Allāh was a valued counsellor of the caliphs who preceded him; but although it is probable that he was asked for advice on legal matters in view of his excellent knowledge of the Kurʾān and the sunna, it is doubtful whether his advice was accepted by ʿUmar on political questions. In regard to the famous ḍiwdn, at least, ʿAbd Allāh held a view entirely opposed to that of the caliph, for on being questioned on this subject by ʿUmar he recommended the distribution of the entire revenue without holding anything in reserve (al-Ḥalālḥuri, ap. Caracci, Annali, A.H., 40, § 175). During the lifetime of ʿUmar (and of ʿUṯmān), ʿAbd Allāh held no office, either military or political, except the lieutenantcy of Medina during ʿUmar's journey to Palestine and Syria (al-Ṭabarī, i, 2404, 2522); for this reason he alone was absent from the meeting at Ḏābiyya [q.v.] at which the military commanders and leading personages convoked by ʿUmar gave approval to measures of the greatest importance on the regulation of the conquests and the ḍiwdn. Further evidence of ʿAbd Allāh's lack of complete agreement with the policies of Abū Bakr and ʿUmar is contained in the received tradition relating to the ghūrā [see ʿUṯmān b. ʿAffān], according to which ʿAbd Allāh, on being asked by ʿAbd al-Raḥmān b. Ṭalḥa whether he engaged himself to follow, together with the Kurʾān and the sunna, the work (jīb, šīra) of the preceding caliphs, gave an evasive answer.

The Opposition to ʿUṯmān. During the caliphate of ʿUṯmān, ʿAbd Allāh, with other Companions (notably Ṭalḥa and al-Zubayr), frequently accused him of deviating from the Kurʾān and the sunna of Muḥammad, particularly in the application of the ḥudud [see al-nuṣrūs]. ʿAbd Allāh insisted upon the duty of applying the divine Law; he was among those who demanded that the legal punishment for drinking should be inflicted on al-Walīd b. Ṭalḥa, viceroy of Kūfah, and in some accounts is said to have carried out the whipping with his own hand. With ʿAbd al-Raḥmān b. Ṭalḥa he reproached ʿUṯmān with introducing bīda, such as making four rakʿas at ʿArafāt and Mīnā in place of two (cf. Wensinck, Handboek, s.v. ʿAbd Allāh). But on political questions also he ranged himself with ʿUṯmān's opponents and was recognized by them as their chief, or one of their chiefs, at least morally. E.g. (1) when Abū Dharr al-Ḡifārī [q.v.], who preached against the misdeeds of the powerful, was exiled from Medina, ʿAbd Allāh with his sons went to salute him on his departure in spite of ʿUṯmān's prohibition, and provoked thereby a violent dispute with ʿUṯmān. (2) When the rebels who came from Egypt to Medina opened negotiations with ʿUṯmān, ʿAbd Allāh was their intermediary, or one of their intermediaries (see e.g. al-Ṭabarī, i, 2969). (3) When they returned later on to Medina and besieged "the House," the asked ʿAbd Allāh to put himself at their head (idem, i, 2965); although he refused by his attitude he encouraged the rebels during the siege, and there are reasons for suspecting him to have been in agreement with them in demanding the caliph's abdication, at the same time that any participation by him in the bloody conclusion of the conflict is to be excluded. (4) After his election as caliph, his partisans included those persons who are known to have been hostile to the government on economic questions, such as al-Achṣār [q.v.], Ibn al-Kawwāl, Saʿāda and others (al-Masʿūdī, iv, 261; al-Ṭabarī, i, 2916, 2908, etc.). His own programme in face of the various financial demands put forward by the mukhāṭṭatā (division of the surplus of the revenues, distribution of the domanial lands, etc.) is not known. It is recorded only that on becoming caliph he distributed the entire sums which he found in the baʿṭ al-māl of Medina, Baṣra and Kūfah, and the whole of the provisions collected in the baʿṭ al-ṣām (cf. also Annali, 40 A.H., §§ 276-80), an action which is to be regarded not simply as a demagogic gesture but as the consequence of the view that he had previously expressed to ʿUmar. He is said also to have wished to distribute the Sawād (i.e. the domanial lands in al-ʿIrāq), but to have refrained through fear of legal disputes (al-Ḥalālḥuri, Futūḥ, 265 f.).

Apart from this, there is no statement which authorizes us to regard him as an extremist; on the contrary, he was hostile to the Sabaʾiyya, the followers of ʿAbd Allāh b. Sabaʾ [q.v.], and when they exalted him beyond measure he rid himself of them; he tried to cut himself loose from the muḥājarin, the besiegers of "the House" (of ʿUṯmān) and their adherents, as soon as circumstances allowed him to do so (al-Ṭabarī, i, 3165-3, 3182). By his extreme attachment to Islam ʿAbd Allāh was driven to attain an absolute superiority in merit to priority of conversion and to services rendered to Islam in its early days, over other claims such as nobility of birth and political or administrative ability. In his conflict with the government he continually appealed to the duty of applying the Kurʾān and following the sunna of the Prophet, which in his view were being neglected. Whether by this policy, or because, aiming to defend the right of the Ḥashimiyya house to the caliphate, he was bound to oppose the principle which extended this right to the whole of Muḥammad's tribe, he set the Kurayḥ against him, although himself of Kurayḥ; in return he had the support of most of the Anṣār, of the other non-Kurayḥite Arabs who had been amongst the Old Believers, of the mukhāṭṭatā in the provinces, and the depressed classes in general (Adhānī, xi, 31).

Election of ʿAbd Allāh and early measures. When ʿUṯmān was killed the Umayyads fled from Medina and the opposition remained masters of the situation. Since ʿAbd Allāh had respect, he was invited to succeed to the caliphate. The traditions on the manner and circumstances of his election (the most commonly accepted date is 18 Dhu 'l-Hijjah 35/17 June 656) are contradictory in regard to his willingness to accept it. His partisans on the other hand were ready to employ violence against those who refused to recognize him (including Ṭalḥa and al-Zubayr); nevertheless there were some who would not yield and who left Medina, e.g. ʿAbd Allāh b. ʿUmar, Saʿd b. Abī Waḳḳās, al-Mughira b. Shuʾba, Muḥammad b. Maslama al-Anṣārī, Uṣāma b. Zayd.
Muʿawiya was therefore able to maintain that the election was invalid because made by a minority; to this ʿAll replied that the election of the caliph was a right of those persons (Anṣār, Muhādjīrūn, or Badr-combatants) who were present in Medina at the relevant time. What is certain is that ʿAll allowed himself to be nominated also by the rebels who had ʿUthmān’s blood on their hands. This was an error, in that it exposed him to accusations of complicity in their crime, although some traditions represent him as vainly endeavouring to rid himself of the most factious of his partisans. In spite of counsels by Ibn ʿAbbas to go slowly, ʿAll at once took some of the measures demanded by the opposition from ʿUthmān: he removed the governors appointed by the latter and wherever possible replaced them by governors of his own party, and satisfied the populace by distributions of money, made with a laudable equity. The report of ʿUthmān’s murder and of ʿAll’s protection of those guilty of it had in the meantime provoked strong reactions in Mecca, Syria and Egypt. Muʿawiya, governor of Syria and cousin of ʿUthmān, accused ʿAll of complicity with the murderers and refused to pay homage to him. ʿAll hastily collected troops to force him to obedience, but another serious rebellion compelled him to delay action in Syria, while Muʿawiya for his part maintained a prudent waiting policy.

Rebellion of ʿĀisha, Ṭabla and al-Zubayr. Although ʿĀisha had supported the opposition against ʿUthmān, she had gone on pilgrimage to Mecca in the siege of “the House”. On her way back she learned of the events in Medina, and in consternation, especially at the news of ʿAll’s election, returned to Mecca and engaged in active propaganda against the new caliph. Four months later she was joined by Ṭabla and al-Zubayr, and shortly afterwards ʿAll learned that all three, with several hundred troops, were marching to al-ʾIrāk by sidetracks. He immediately set out in pursuit, but could not overtake them. The rebels expected to find in al-ʾIrāk the forces and the resources which they needed. ʿAll was absolutely compelled to prevent them from seizing this province, since Syria obeyed only Muʿawiya, Egypt was in anarchy, and the loss of al-ʾIrāk would have involved also the loss of the eastern provinces dependent on it.

The three insurgents proclaimed that the ḥudud must be re-established for all, and that a “reform” (ṭilāḥ) must be put into effect (al-Ṭabarī, i, 3093, 3131, 3132). Since these influential leaders were in part responsible for the fate of ʿUthmān, the reasons for their rising to demand vengeance for his murder, and the meaning which they attached to ṭilāḥ, are obscure. Social and economic motives, inspired by fear of the possible influence of the extremists on ʿAll, seem to provide a more convincing explanation than personal feelings for their action, and especially for the effect which it produced. The moderates amongst those opposed to ʿUthmān had no doubt desired a change of policy, but not one so radical as that now foreshadowed.

While the insurgents occupied Baṣra, and there massacred many of the nafṣār, ʿAll sent his supporters to Ḵufa to invite its population to take its part, and when he had collected an adequate force he marched towards Baṣra. Since both parties aimed at a peaceful settlement of the dispute, an agreement was negotiated, according to which ʿAll should disarm himself from his nafṣār (while guaranteeing their lives), but this was not the conclusion of the affair which the extremists of his party meant to reach. A brawl provoked by them developed into a battle, which became famous in Muslim annals as the “Battle of the Camel” (15 Rashīdūn 1136/9 Dec.-656) [see al-Dāmāl], and in which Ṭalḥa b. ʿAbd al-Zubayr lost their lives, while ʿĀisha was peremptorily ordered by ʿAll to return to Medina under escort.

Conflict with Muʿawiya. Following on this success, ʿAll had hopes of regaining the allegiance of the governor of Syria by opening negotiations with him, but in vain. Muʿawiya demanded the surrender of the murderers of ʿUthmān in virtue of a verse of the Kurʾān (xvii, 33), which forbids the slaying of any person save for just cause (ṭilāḥ bī ʾ-ḥakk), at the same time according the right of vengeance in the case of anyone slain unjustly (maṣūmatum) to his wali, i.e. his near relative. Muʿawiya maintained that ʿUthmān had been killed unjustly; consequently, he proposed to exercise the right accorded by God. In the meantime, he would hold to his refusal to pay homage to ʿAll. The sources pass vaguely over the thesis maintained by ʿAll in rejecting Muʿawiya’s demand, except for the explicit statement in the Waḥṣat Šīfīn of Naṣr b. Muẓāḥim al-Minkarl (570): since ʿUthmān was killed by the people, who were outraged by his arbitrary actions, the murderers should not be liable to the lex talionis. In reality the struggle had much deeper causes; what was at issue was the pre-eminence of Syria or of al-ʾIrāk, and probably also two different conceptions of the policy to be followed in the government of the Muslim State.

ʿAll, finding that Muʿawiya was not to be won over, passed to the offensive; the two armies, each some tens of thousands strong, faced one another on the plain of ʿSiffin [q.v.]. After some skirmishing, interrupted by a truce in Muḥarram 37/June-July 657 and some parleys, battle was joined; there was a week of battles between horsemen and foot-soldiers, followed by a violent conflict (the “night of clamour”, Ṭayvat al-ḥarīm, 10 Ṣafar 37/28 July 657). Muʿawiya’s star seemed to be sinking, when ʿAmr b. al-ʾĀṣ advised him to have his soldiers hoist copies of the Kurʾān on their lances. This gesture, famous in Muslim history, did not imply surrender; by this means Muʿawiya invited the combatants to resolve the question by consultation of the Kurʾān. Weary of fighting—the number of the killed is swollen in the sources to 70,000 or even more—the two armies laid down their arms. ʿAll was forced by his partisans to submit the difference to arbitration, as proposed by Muʿawiya, and further to choose the arbitrator for his side from among the “neutrals”.

So sure were his followers that they were in the right! In these decisions the ʿursāḥ [q.v.], of whom many were in his army (though they were represented in Muʿawiya’s army also), played a large part.

Appointment and task of the arbitrators (taṣḥīḥ). A convention was drawn up at ʿSiffin itself (Ṣafar 37/657), by the terms of which the two arbitrators, Abū Mūsā al-ʾAshʿārī [q.v.] for ʿAll and ʿAmr b. al-ʾĀṣ [q.v.] for Muʿawiya, would announce their decision at a place halfway between Syria and al-ʾIrāk in the presence of witnesses chosen by themselves; the date fixed for the meeting was Ramaḍān, but the arbitrators might advance it or postpone it until the end of the year 37. In the two versions of the convention which have come down to us the points to be examined by the arbitrators are not defined; all that is said is that they were to consult the Kurʾān from the first to the last and, in default of clear indications in the sacred Book, the sunna of the Prophet, excluding what
might give rise to divergences. L. Veccia Vaglieri (see the art. cited in the Bibliography) has shown that their task was to determine whether the acts of which 'Uqayr was accused were major or minor, and in consequence the arbitrators must have reached an agreement, possibly adding some counsels in which he alluded to his preference for the son of 'Umar; cAmr in his opinion — for many sincere believers, of well-known piety, had fallen on the field—had very grievous consequences for him; the defections, which had already begun, increased, and he was forced to return to Kufa and to give up the campaign against Mu'awiyah.

Protests against the arbitration. While awaiting the verdict, the armies returned to their bases. But already at Siffin certain individuals had protested against recourse to arbitration with the cry lā ḫaḏmū sīla līlāh, literally “No decision save God’s”. The phrase implied that it was absolutely improper to appeal to men for a decision since, for the case in dispute, there existed a divine ordinance in the Kur'anic verse xlix, 8/9: “If two parties of the believers fight with one another, make peace between them, but if one rebels (baghāt) against the other, then fight against one that which rebels (al-lāt tabghāl), until it returns to obedience to God...”. In fighting against his opponents 4All had appealed to this verse, since in his view the “rebellious party” had been, firstly, that of 4Abī Ṭālib, Ṭaba and al-Zubayr, and now that of Mu'awiyah. The dissidents maintained, very logically, that it was his duty to continue to fight against Mu'awiyah, as no new fact had intervened to alter the situation.

During the return to Kufa, those had first raised the cry lā ḫaḏmū sīla līlāh (hence called al-muhak-kīma al-ṣūdā; or al-sīla) persuaded many other partisans of 4All that the arbitration was a sin against God, by substituting the judgment of men for His prescription. A group of some thousands proclaimed their repentance and stopped at Ḥarūrāt, near Kufa (whence their name of Ḥarrūrites [q.v.]). The caliph, on a personal visit to their camp, succeeded in reconciling the dissidents, all or in part, evidently by making concessions to them. After his return to Kufa, however, he denied the memory the reports which asserted his intention of infringing the convention of Siffin. When it was learned that he had sent Abu Musa to the meeting with cAmr, the escort and his cousin Ibn al-Ṭahāf, was the first to arrive at the meeting-place of the arbitrators (Ramāḍān 38/17 July 658). It was a massacre rather than a battle, and it seems that 4All was the first to regret it. This action, condemned by contemporary opinion,—for many sincere believers, of well-known piety, had fallen on the field—had very grievous consequences for him; the defections, which had already begun, increased, and he was forced to return to Kufa and to give up the campaign against Mu'awiyah.

Battle of al-Nahrawān. 4All first tried to re-enlist the Khawārijites in his forces by a declaration that he would take the field again against Mu'awiyah. But without effect. The dissidents demanded that he should confess himself guilty of an act of impiety (kufr), which he indignantly refused to do. After promising the amān to those who should submit—and there were some—he attacked the rebels (9 Ṣafar 38/17 July 658). It was a massacre rather than a battle, and it seems that 4All was the first to regret it. This action, condemned by contemporary opinion,—for many sincere believers, of well-known piety, had fallen on the field—had very grievous consequences for him; the defections, which had already begun, increased, and he was forced to return to Kufa and to give up the campaign against Mu'awiyah.

Conference of Aḍhrūh. The situation was completely changed after these events. Henceforward the opposing parties were no longer a caliph and a rebel governor, but two rivals for the supreme office in the State. While Mu'awiyah had gained ground, 4All was struggling in a morass of difficulties: he had been disqualified in the eyes of the Muslim community by the verdict of the arbitrators, and he had lost many of his supporters by his refusal to submit to their decision after consenting to the tākhīm, by the massacre of the Khawārijites, and in general by his vacillating policy. This was the position when the arbitrators and many eminent persons (with the exclusion of 4All and also, it would seem, of his representatives) met at Aḍhrūh in Sha'ban 38/January 659. In this conference the meetings attended only by the arbitrators and certain personages must be distinguished from the final plenary session. In the former the verdict of the arbitrators was promulgated (several sources assert that Abū Mūsā recognized that 'Uqayr had been killed unjustly), and the selection of a new caliph was discussed. The information given in the sources is rather discordant, except as regards the final scene. It can be gathered that 4Amr maintained the cause of Mu'awiyah against Abū Mūsā's preference for 4Abū Allāh b. ʿUmar, who for his part refused to stand for election in default of unanimity; Abū Mūsā then proposed, and 4Amr agreed, to declare both 4All and Mu'awiyah deposed and to remit the choice to a committee. In the public discourses that followed, Abū Mūsā observed this decision, possibly adding some counsels in which he alluded to his preference for the son of ʿUmar; ʿAmr in his
turn declared 'Ali deposed and confirmed Mu'awiya. Several modern historians have adjudged this scene entirely improbable, but the negative attitude towards traditions which are nevertheless explicit and fairly concordant on this point is due to an inadequate appreciation of the preceding events explained above. In the light of these the final scene at Aджр can readily be accepted. The unexpected declaration of 'Amr seems to have been a strictly personal proposal on his part, which, as a man charged with great responsibility, he believed himself entitled, if not in duty bound, to advance. But this declaration, which obviously contravened the agreement previously reached (since Abû Mūsā reacted to it with indignation), was generally judged in later times as a treacherous trick, and was certainly a disloyal act. It is worthy or notice that even in the plenary assembly no voice was raised on behalf of 'Ali; the clash which followed 'Amr's declaration was a reaction against the Umayyads, not in favour of 'Ali. In any case the conference had entirely negative results, for the participants separated without taking any decision on the caliphate.

Last years, death and burial of 'Ali. 'Ali continued to be regarded as caliph by his partisans, though their numbers were daily diminishing, and Mu'awiya by his. In 39/660 the situation was still uncertain. 'Ali, confined to Kufa, remained passive even when Mu'awiya made small expeditions into the heart of al-'Irāk and of Arabia. In Khurāsān and the East Arab rule was thrown off (see 'ABD AL-RAHMĀN B. SAMURA), but a rising in Fārs was skillfully put down by Zi'yād b. Abīmm [q.v.], as governor for 'Ali. In 40/661 'Ali enjoyed no authority in the two Holy Cities, and could not stop an attack by Mu'awiya on al-Yaman. Finally, a Khāridjīte, 'Abd al-Rahmān b. Mūldām al-Murādī [see IBN MÜLĐAM], in revenge for the men slain at al-Nahrāwān, struck 'Ali with a poisoned sword before the door of the mosque of Kufa. He died about two days later, being then 62 or 63 years of age. A questionable tradition asserts that Ibn Mūldam was only one of a group of fanatics who plotted to rid Islam of the three persons regarded as responsible for the civil war, and that Mu'awiya and 'Amr were to have been assassinated at the same time. 'Ali's burial place was kept secret, evidently for fear lest his body should be exhumed and profaned. It was not until the time of Hārūn al-Raṣīlīd that it was announced that his tomb had been identified at a spot some miles from Kufa, where a sanctuary subsequently arose; a town, al-Nadjaf [q.v.], grew up there, surrounded by an immense cemetery, due to the aspiration of pious Shi'ites to be buried in the vicinity of their Imāms.

Personal details. In person, 'Ali is represented as baird, affected by ophthalmia, stout, short-legged and broad-shouldered, with a hairly body and a long white beard covering his chest. In manner he was rough and brusque, apt to give offence and unsociable. He had two nicknames: Ḥaydara, "lion", and Abū Turāb, "dustman", a name probably given to him contemptuously by his enemies, but which was afterwards interpreted as an honorific by inventors of episodes (see Nöthke in ZDMG, 1896, 30). He had fourteen sons and nineteen daughters by nine wives and several concubines; of his sons, only three, al-Husayn, al-Hassan, and Mu'awiya, played a historical role, and five in all left descendants. He was reputed to have a profound knowledge of the Kur'ān, of which he was one of the best "readers" (Suyūṭī, Itkān [Sprenger], 169, 171; the statement that he compiled a recension is to be rejected: Gesch. des Qor., ii, 8-12). Many political discourses, sermons, letters and wise sayings (hitāk) have been ascribed to him; these can be read in Nahdi al-Balāgka, a collection of the 5th/11th century, which includes here and there old historical texts and passages of adāb [see 'AL-QARFR AL-RAd]. On the diwān (in which some poems are perhaps authentic) and the prose works attributed to him, see Brockelmann, i, 43 f., ii, 73 f. His gifts as an orator were doubtless remarkable, but the same cannot be said of his poetic art (H. Lammens, A propos de 'Ali ibn Abī Tālib, Études sur le siècle des Omeyyades, 1930, 1-11).

The personality of 'Ali is difficult to define, since the historian finds no sure guide either in his actions or his discourses, or in the data supplied by the sources. His own will was paralysed or modified by events and the constraint of his partisans. His discourses are obscure in form, and it is not easy to distinguish the genuine from the forged. Since the conflicts in which he was involved were perpetuated for centuries, the sources are sometimes tendentious, and, though less idealizing or hostile than has been asserted, more often reticent. The hostile judgment of Lammens (especially in Fātimā and Mu'awīdā 1896) sometimes obtimes by enforcing the texts, is to be rejected. The milder presentation of Caetani which, while exposing the weaknesses of 'Ali, gives due weight to the pressure of circumstances upon him, remains vague in its general lines. Neither Lammens nor Caetani has brought out the religiosity of 'Ali and its reflections in his policy. There is an abundance of notices on his austerity, his rigorous observance of religious rites, his detachment from worldly goods, his scruples in regard to booty and retaliation; and there is no reason to suppose all these details invented or exaggerated, since all his actions were dominated by this religious spirit. Without attempting to decide whether his devotion to Islam was always wholly unmixed with other motives, this aspect of his personality cannot be disregarded for the understanding that it affords of his psychology. He engaged in warfare against "erring" Muslims as a matter of duty, in order "to sustain the Faith and to make the right way (al-hudūd) triumphant" (al-Balādhuri in Caet., 40 A.H., § 235, d, etc.). After his victory at "the Camel", he tried to relieve the distresses of the vanquished by preventing the enslavement of their women and children, in face of the protests of a group of his partisans; when battles ended, he showed his grief, wept for the dead, and even prayed over his enemies. Even the apparent ambiguity of his attitude towards the Ḥarrūrites can be explained by his fear of disobeying God; though persuaded by them that the arbitration was a sin, he recognized also that to infringe the convention of Ṣifin was equally a sin, and in this painful dilemma chose to allow the arbitration to proceed. Obedience to the divine Law was the keynote of his conduct, but his ideas were governed by an excessive rigorism, and it was perhaps for this reason that his enemies described him as mahdūd, "narrow-minded". Imprisoned in his strict conformism, he could not adapt himself to the necessities of a situation which was very different from that of Muhammad's time, and he lacked the political flexibility which was, on the other hand, the pre-eminent qualities of Mu'awiya. His programme, rather than uncertain, was utopian;
probably he himself discovered the impossibility of realizing it when the power came into his hands, and this may have contributed, along with the external events, to his discouragement in his last years. Caetani observed that the half-divine aureole which soon encircled the figure of 'Ali was derived not only from his relationship with the Prophet, but also from the personal impression which he left on his contemporaries; but he did not indicate the qualities which gave rise to the legend. If it is recognized that his was a profoundly religious spirit, and that he supported by his authority a programme of social and economic reforms, at the same time placing them on a religious basis, this question also may find its solution. [For Shi'ite doctrines and legends concerning 'Ali see Shi'ah.]

Bibliography: The basic historical sources, with many additional texts adab, hadith and other works, are translated or summarized in Caetani, Annali (of which vols. ix and x [1926] are devoted to the caliphate of 'Ali). Further materials in Nasr b. Muzāhim al-Minkārī, Wāqātā, Edin, ‘Abd al-Salām Muhammad Ḥārūn, Cairo 1936 (the lit. ed. Tehran 1931 and abridged ed. Bayrūt 1940 are much inferior), and Muḥibb al-Dīn al-Ṭabarī, al-Riḍāy an-Nalīla fi Manāhī al-‘Āqara, Cairo 1237, ii, 153-249. Studies: A. Müller, Der Islam Morgen- und Abendland, Berlin 1889, i, 308-34; J. Wellhausen, Die religiös-politischen Oppositionsarten in, Berlin 1901 (A. K. G. W. Göttingen); Ši‘a. Arabic Reich, Berlin 1902, 25-71; id. Skizzen u. Vorarbeiten, vii, Berlin 1899, 113-146; H. Lammens, Études sur le Régne du calife omayyade Moawya 1er, Paris 1908, index; id. Adhīrū in EI; G. Levi della Vida, Il Califato di ‘Ali secondo il Ricetto e il Risveglio, ALI, Cairo 1954 (ed. Khalil Mardam Beg, Damascus 1949). It shows him to have been a gifted poet, whose verse is above all the simple expression of his own emotions, whether in praise or satire, in patient acceptance of adversity or reckless adventure. It is noteworthy also as displaying the attitudes of the Khurāṣānian Arab supporters of the ‘Abbāṣid caliphate in opposition to Shi‘īte and other unorthodox views. He was in friendly relations with Abū Tammām [q.v.], who made him the subject of two poems, but was on the contrary coarsely satirized by al-Buhturī, (Istanbul 1300, ii, 99, 107) for his hostility to 'Ali b. Abī Talib.

'Ali b. 'Isā b. Dā‘ūd b. al-Dīrārākh, ‘Abbāṣid vizier, b. 243/859 into a family of Persian origin settled at Dayr Ḧumā on the Tigris below Baghdad, who had probably turned Christian before their adoption of Islam. Many of his relatives, including his father and grandfather, were officials in the ‘Abbāsid administration, and he himself seems to have received his first secretarial employment at the age of nineteen or twenty. In 278/892, on the formation of the diwan al-dār by Ahmad b. al-Furat, both ‘Ali and his uncle Muḥammad b. Dā‘ūd were employed in that department as secretaries under Ahmad’s brother ‘Ali, and some seven years later, when independent departments for the Western and Eastern provinces were created, ‘Ali b. ‘Isā and his uncle were appointed to manage them respectively. During the later years of al-Mu’tadid’s caliphate, a feud developed between members of the family of al-Dīrārākh and the brothers Ahmad and ‘Ali b. al-Furat, and this came to a head on the death of al-Muktafi in 295/908, when, after the latter’s brother al-Muṭṭadid had succeeded as caliph largely owing to the exertions of Ibn al-Furat, the Banū ‘Dīrārākh engineered a conspiracy to depose him in favour of ‘Abd Allāh b. al-Muṭṭaz [q.v.]. ‘Ali b. ‘Isā was given control of the diwan in the short-lived government of Ibn al-Muṭṭaz and was consequently fined and banished to Mecca on the restoration of al-Muṭṭadid.

In Mecca, during the first vizirate of Ibn al-Furat, ‘Ali was kept under surveillance until Ibn al-Furat’s fall in 299/912. In 300/913 he was recalled at the suggestion of the general Muḥnis [q.v.], to succeed al-Khākānī as vizier. His first term in office lasted exactly four years, and was marked by strenuous efforts on his part to rehabilitate the state finances. Although he succeeded in augmenting the revenues, his reduction of expenditure earned him the dislike of the court, including the irresponsible and extravagant caliph. During his first year as
Ali B. Isa

Ali, who displayed much interest in the defence of his capital, was again exiled, this time to his native Dayr Kunnah, though he was soon allowed to return to the capital. During the reign of al-Kahir he held a minor fiscal office for some months; and after the accession of al-Radi he was once more arrested, fined, and momentarily exiled to al-Safiya (near Dayr Kunnah), at the instance of Ibn Mulkia, who, however, at the end of 323/935, was obliged to enlist his help in negotiating peace with al-Hasan b. Abi 'l-Haydâr the Hamdânid. Afterwards Nâsir al-Dawla, with whom Ali had been accused of intriguing.

In the summer of 325/936, Ali, having as usual declined the vizierate for himself, acted as general assistant to his brother Abû al-Rahmân for three months. In 328/940, on the accession of al-Muttaqî, he was against appointed to deal with Masûlîm, and after a few months he again acted as assistant to Abû al-Rahmân, though for little more than a week. These were his last employments; and apart from expressing the view, which was acted on, that the Christian relic known as the "Image of Edessa" should be handed over to the Byzantines in exchange for undertaking to refrain from attacking that city in 332/944, he played no further part in public affairs. Six months after the arrival of the Buwayhid Mu'tizz al-Dawla in Baghdad, he died at the age of eighty-nine (29 Dhu 'l-Hijjah 334/1 Aug. 946). Comparatively little is known of Ali's private life. He had two sons, probably the "Image of Edessa". Ibn Khîrîhûm, who became secretary to the caliph al-Mu'tazz in 347/958-9 and died in 350/961; and 'Isâ, b. 302/914-5, who likewise became secretary to al-Târîkh, earned some repute as a traditionist and student of the "Greek" sciences, and died in 391/1001. Ali's ascetic tendencies in religion seem to have been intensised by an attraction to sufism. He is known to have been a friend of the sîwî al-Shîbîlî, and his dealings with al-Hârîri, whom the latter also the philosopher al-Râzi addressed a medical treatise to Ali, who displayed much interest in the improvement of public health, himself founding a hospital in the Karbiyya quarter of the capital. Other foundations of his were at least one mosque on his private estates, a well (called after him al-Djarrâhiyya) at Mecca, and another well and an aqueduct at Sanâa. He was also the author of three, possibly four, books, none of which appear to be extant.

Bowen, The Life and Times of 'Ali ibn 'Isa, Cambridge 1928 (where other references are given).

'Ali b. 'Isa was the best known oculist (kaWdl) of the Arabs. His work, the Tadhkira al-Kahhhânîn, deserves the greater claim to our attention from the point of view of the history of civilization in that it is the oldest Arabic work on ophthalmology, that is complete and survives in the original. The name of the author is also recorded in the inverted form: 'Isa b. Al. All Preference is to be given to the first form as follows from a reference in Ibn Abi Usaibi'a (Uyân al-Acbâb, i, 240) and from quotations in later authors as al-Ghâfikî, Khallasa b. Abî 'l-Mâjahân, and 'Alâ al-Din. The uncertainty as to the form of the name is due to confusion with the court physician of the Caliph al-Mutawakkil, 'Isa b. Al, who lived some 150 years earlier (Fihrist, i, 297, 19; Ibn Abl Usaibi'a, Fihrist, Paris 1903). That the great importance of the Tadhkira in the history of medicine has been entirely unrecognized is due to the barbarous character of the Latin translation and the fact that whole sentences are frequently omitted therein. So the continuity is destroyed and the sense made unrecognizable.

A German translation of the Manual for oculists based on the Arabic manuscripts is contained in vol. i of Die arabischen Augenkrankheiten nach den Quellen bearbeitet by J. Hirschberg, J. Lippert and E. Mittwoch, Leipzig 1904.

'Ali b. Mahdi [see Mahdis].

'Ali b. Maymond [see 'Ali Khân].

'Ali b. Maymun b. Abî Bakr al-Idrîsî al-Mâjahînis, a Moroccan mystic of Berber origin, born about 854/1450. In his youth he is said to have been the amir of a kabâla of the Banû Râshid in the Djabal Chumâra, but he has relinquished that position because he was unable to enforce among his people the prohibition on wine-drinking. In 901/1495-6 he left Fez, visited Damascus, Mecca, Aleppo, and Brusa, and finally settled at Damascus where he died in 917/1511. His mysticism was of a moderate character; in his Bayân Ghurbat al-Ïslâm bi-Wâsâ'it Şinâjy al-Mutaafa'kha, wa 'l-Mutaafa'kha min Abî Misr wa 'l-Shâm wa-mâ yâlikh min Bîladh al-Âlam, he inveighed against the religious and social abuses which he had noticed in the East (cf. Goldziher, in ZDMG, 1874, 293 ff.). He wrote this work at an advanced age (he commenced it on 19 Muharram 916). On his mystical writings, among which an apology for Ibn 'Arabi calls for special comment, see Brockelmann, II, 124; S II, 152. See also Tash-kopru-zade, al-Shakîbî al-Nâfinîyya (in the margin of Ibn Khallîkân, Bûlûk 1299), i, 540. (C. Brockelmann)

'Ali b. Muhammad [see Sulayhid].

'Ali b. Muhammad al-Zandji, known as Shâhīb al-Zandî, was the leader of the Zandî [q.v., the rebel negro slaves who for fifteen years (255-270/ 888-83) terrorised southern 'Irâk and the adjoining territories. He was born in Warzanin, a village near Rây, and is said by some authorities to have been of Arab origin, being descended from 'Abd al-Kays on his father's side and from Asad on his mother's. His name is generally given as 'Ali b. Muhammad b. 'Abd al-Râhîm. According to Ibn al-Djawzl (al-Muntazam, Hyderabad 1357, v, 2, 69) his real name was

The comprehensiveness of his work laid the foundation of his fame [cf. 'Amâr]; it has been considerably used by later Arab oculists—until the present day—both for the practical and theoretical portions (Ibn al-Kifti, i.e.: "the physicians of this branch work at all times in accordance with this") and has frequently been quoted whole chapters at a time. A commentary on it, written by Dâniyâl b. Shâ'îya, is mentioned by Khâlifa b. Abî 'l-Mâjahân [q.v.] in the introduction to his ophthalmological work. This commentary is not preserved; on the other hand a large number of manuscripts of the Tadhkira itself have come down to us. Even in the Middle Ages it was translated into Hebrew and twice into Latin (Tractus de oculis Jesu b. Halî, Venice 1497, 1499, 1500; edited once more by Fiansier with a second translation, made from the Hebrew version, under the title Epistolâ Iesu filii Haly de cognitioine infirmitatum ocularorum sive Memoriale oculariorum quod compilavit Ali b. Issa, Paris 1903). That the importance of the Tadhkira in the practice of this science". He mentions the work of Hunyad together with Galen as his principal sources. In addition he cites the Tadhkira the Alexandrians, Dioscorides, Hippocrates, Oribasius and Paulus.

'Ali b. Muhammad [see Sulayhid].

'Ali b. Muhammad al-Zandji, known as Šâhīb al-Zandî, was the leader of the Zandî [q.v., the rebel negro slaves who for fifteen years (255-270/ 888-83) terrorised southern 'Irâk and the adjoining territories. He was born in Warzanin, a village near Rây, and is said by some authorities to have been of Arab origin, being descended from 'Abd al-Kays on his father's side and from Asad on his mother's. His name is generally given as 'Ali b. Muhammad b. 'Abd al-Râhîm. According to Ibn al-Djawzl (al-Muntazam, Hyderabad 1357, v, 2, 69) his real name was
Bihbudh. Al-Birowni (Chronology, 332; translation, 330) states that he was known as Al-Buru'î (the veiled one). He himself claimed to be an ‘Aliid, and gave his pedigree as ‘Ali b. Muhammad b. Ahmad b. 'Isa b. Zayd b. ‘Ali b. Husayn b. ‘Ali b. Abi Tâlib (al-Birowni, loc. cit.; al-Masûdî, Murûdî, viii, 31; al-Tabari, iii, 1742- who gives a slightly different pedigree. On an ‘Aliid of this name, whose father died in prison under Al-Mu'tasîn, see al-Masûdî, Murûdî, vii, 404 and Abu 'l-Faradî al-I'shâhî, Mahdî al-Tâlibîyyun, Cairo 1949, 672 and 689). After a first attempt to win support in Bahrayn, where he is said to have had family connexions, he sought to exploit the disturbed state of Basra in order to establish himself there. He failed, however, and only escaped imprisonment by fleeing to Baghdâd. Not long afterwards new disturbances in Basra favoured his return. This time he sought for support among the negro slaves working in gangs on the salt-flats east of Basra. After a period of preparation he openly declared himself on 26 Ramadan 255/5 September 869. Though claiming to be an ‘Aliid, and using the title of Mahdî, he did not adopt the Shi‘ite doctrine, but instead professed the equalitarian creed of the Khâridjîtes. After a long period of military successes, including the temporary capture of Zubûl, Abûa, and Wâsî, the Zandî armies were at last overcome by a major expeditionary force mounted by the regent Muwaffak, and besieged in their capital al-Mukhtara. The Zandî leader refused the offer of a free pardon and a state pension, and after the final assault on 2 Safar 270/11 August 883, his head was taken on a pole to Baghdad.

Bibliography: The fullest account is that of Tabari, iii, 1742-1787; 1835-2109). Further details will also be found in Masûdî, Murûdî, viii, as well as in Ya'qubî, Hamza Isfahânî etc. For studies on the Zandî revolt see T. Noelleke, Sketches from Eastern History, London-Edinburgh 1892, 146-175; Faysal al-Sâmîr, Thawrat al-Zandi, Baghdâd 1954; and ‘Abd al-Azîz al-Dîrî, Darâyat fi 'l-'Usra al-'Abhâsîyya al-Ma'âshîyya, Baghdâd 1949, 75-106. On the case a few decades earlier at the Sinhâdî courts of the Zîrîds of Irîkîya and al-Andalus, mainly the work of the royal princesses (ummâkhîdî), with the aid of their immediate kin and mawdûlî, in favour of their own sons.

‘Yûsûf b. Tâshûfî had seen this danger so clearly that he was careful not to designate as his successor one of his sons by a Sinhâdî woman, but not even the eldest son, Abu’l-Tâhir Tamîm, offspring of his marriage at Aghmât to the influential Irîkîyan Zaynab, who predeceased him by ten years. His choice fell on ‘Ali, born at Cetua of his union with a Christian captive from Spain, in 477/1084, two years before the battle of al-Zallaka. This young man of 23 years was enthroned without opposition at Marrakûsh on the death of his father, i. Mubarram 500/2 September 1106, with the apparently disinterested support of his elder brother Tamîm. But he was obliged immediately to bring to his senses a son of his brother Abû Bakr b. ‘Yûsûf, Ya'bîya, who was in command at Fez and who submitted without delay. Relying on the judgement of his Andalusian advisers, who had belonged to his father’s entourage, ‘Ali embarked on a policy of the pendulum which he was obliged to follow throughout his reign, namely, constantly to move, like pawns on a chessboard, the majority of the Almoravid amirs, including his brother, who held provincial governorships in the chief towns of Maghrib and Andalusia. The Almoravid governors received threatening letters of recall to the ruler’s side, were dismissed or restored to favour, and were in addition assisted in their duties by administrative inspectors (mâghrib) and secretaries of chancery, who were almost all Andalusians; such is the record of the greater part of the annals of his reign. It will not be recalled here in detail, but this...
lack of continuity in the tenure of the important military and regional commands already shows that the structure inherited by 'Ali b. Yusuf from his father was not resting securely on its foundations.

On the other hand, the fortunes of war for long smiled on the Almoravid sovereign in his djihād expeditions against the Christians of Spain, led by himself or by one of his generals. The aged Alfonso VI had never abandoned the hope of revenging his defeat at al-Zallākī; but he suffered a further humiliation in Shawwāl 507/1110, when Tamīm, the elder brother of 'Ali, defeated under the walls of the fortress of Uclés (Uklidi) the Castilian troops of Count García Ordoñez, accompanied by the infant Sancho, the son of Alfonso VI and Mora Zaida, the step-daughter of al-Mu'tamid b. ʿAbdād. The Christian general and the infant were overtaken and killed a few days later at Belinchón, not far from Uclés. Alfonso VI, aged and broken by this blow, had nothing to wait for but death, which overtook him barely a year later, on 30 June 1109. The throne of Castille was occupied until 1126 by his daughter Urraca. Meanwhile, the young kingdom of Portugal was becoming organised, and, in Aragon, Alfonso the Warrior aimed at the capture of Saragossa, which the Almoravids had finally taken from the Ḥūrids in 505/1110; Alfonso added it to his own dominions nine years later, in 512/1120.

All the chroniclers mention the four successive crossings of 'Ali b. Yusuf to al-Andalus; the first voyage, in the year of his accession, took him no further than Algeciras; the second was a djihād expedition in the summer of 503/1109, which led to the temporary occupation of Talavera, on the Tagus; the third, also inspired by the motive of holy war, was marked by a resounding success—the capture of Cóimbra in 518/1127, after a siege of twenty days. On his fourth crossing, in 515/1122, 'Ali b. Yusuf did not go beyond Cordova. But the operations of the Almoravid generals against Spanish Christendom continued without respite, both in Aragon and in New Castille. One of the last notable victories of the reign was that of Fraga, in the region of Lérida: this town, besieged by Alfonso the Warrior, was relieved by the Almoravid general Yahyā b. 'Ali b. Ghāniya, who inflicted a crushing defeat on the King of Aragon, 23 Ramaḍān 528/17 July 1134.

'All b. Yusuf, despite some undeniably good qualities, was far from possessing the stature of his father Yusuf b. Tashufīn. Although he spent the greater part of his reign in Morocco itself, he seems to have devoted his special attention to Spain and to have reserved the majority of his military forces for the djihād against Christendom, only retaining, for the security of his capital and to guard the Moroccan mountain region, light forces, mainly composed of Christian mercenaries, under the command of the celebrated Catalan Reverster (al-Rubertiay). This policy brought about the downfall of his kingdom. From the moment when the history of the reign of 'Ali b. Yusuf became identical with that of the return of Ibn Tūmarī [q.v.] to Morocco, the preaching of tawḥīd and the first military ventures of the Almohad chiefs, the game was lost, in default of strong and immediate measures against the rebel movement. 'Ali b. Yusuf was gradually forced to face the facts: he had been unable adequately to strengthen the structure bequeathed to him by his father, and had allowed ever larger cracks to appear in it. Soon it collapsed, but the son of Yusuf b. Tashufīn was not himself present at this dramatic climax; he died on 8 Raʾyāb 537/13 January 1143, exactly five years before the capture of Marrakush by 'Abd al-Muʾmin, leaving his son Tashufīn to succeed him on his tottering throne.

Despite these ultimate misfortunes, the reign of 'Ali b. Yusuf must be considered one of the most brilliant periods in the history of the Muslim West. The pro-Almohad historians (followed by Dozy) have tried in vain to disparage the Almoravids; to-day it must be admitted that the first third of the 6th/12th century coincided with a positive renaissance of Spanish civilisation, both in al-Andalus and the Maghrib. The sovereign's literary circle was of the same quality as during the era of the tawāṣīf. Cordova once more became the intellectual and social capital of the kingdom. Ibn Kuzmān gives us an attractive picture of it in his rażājas, and at Sevilla, the muḥallās ʿAbdād gives us information on the urban economy and the part played in it by the representatives of Almoravid authority.

At the same time, however, the hand of Mālikism in its most intransigent form continued to retard the wheels of society. The fakhrās, almost all of whom were natives of al-Andalus, were in a dominating position both at Marrakush and at Cordova. They promulgated autos-da-fé, and burned the ḳulūd of al-Ghazzālī in the parvis of the great mosque of Cordova as early as 503/1109. Thus they aimed at the laxity of morals and against innovations, in the knowledge that the sovereign would lend them an attentive ear. But the other Almoravid nobles and their wives paid no heed to their sermons. A steadily widening rift developed between the Lamtūnī aristocracy and the population of the towns. 'Ali b. Yusuf did not possess the necessary energy to seal it up in time.

Bibliographie: Of the Arabic sources, the most important (Naṣm al-Dżumàn by Ibn al-Kaṣṭān and Bayān by Ibn ʿIḥārī) still unpublished are to be published by E. Lévi-Provençal, Documents inédits d'histoire almorfide; see also the same, Documents inédits d'histoire almohade, Paris 1928, index. For details of the other sources, belonging to later historiography, and assessed at the beginning of the article (ʿAbd al-Wāḥīd al-Marrākushī, al-Hulal al-Mawṣūḥyya, Ibn Khalīdūn, Ibn Khalīkān, Ibn al-Khaṭīb, Ibn al-ʿAṭfīr, al-Nūwārizī, al-Nāṣirī, etc.), see the bibliography of the article al-Murābitūn. Cf. also the short work, now out-of-date, of F. Codera, Desaparición y desaparición de los Almorávides en España, Saragossa 1899; E. Lévi-Provençal, Réflexions sur l'empire almorfide au début du XIIe siècle, Islam d'Occident, i, Paris 1948, 239-56. (E. Lévi-Provençal)

ʿALI b. ʿĀLĪH [see WĀṢĪ ʿALĪS].

ʿALI AKBAR KHĪṬĀṬI, author of a description of China in Persian (Ḵhānān-nāma), which was finished in 922/1516, and originally intended for the sultan Selim, but later dedicated to Suleymān. The book is not a travel-book, but a systematic description in twenty chapters, based partly on observations by the author himself, partly on information collected by him in China. The work was translated into Turkish in the reign of Murād III, probably in 990/1582 (lith. Istanbul 1790/1854); the translation served as the basis for the studies of Fleischer and Zenker.

de Chatay-name, Mélanges Orientaux, Paris 1883, 31 ff.; F. Kahle, Eine islamische Quelle über Chihàl, in: Arch, 1934, 91-110; IA, s.v. (by A. Zeki Velidi Togan).

'ALI AMIR, Turkish historian, b. in 1274/1857 at Diyar Bakr, d. at Istanbul 23 December 1923 (1342). An official of the financial administration, he was primarily interested in the history of the Ottoman Empire, and he took up the challenge of different towns to transcribe Arabic and Turkish inscriptions, to study local history and above all to seek out old documents and historical and poetical manuscripts. In this way he built up a library of unpublished and rare manuscripts, which later enriched the National Library of Istanbul. He published the review Ta'rikh ve-Edebiyyatî, edited the Dîvân Lugâtl al-Turk of Mahmûd Kâshgarî, and was a member of various learned societies. He wrote historical and literary works, and is principally known as an editor of texts. He also helped to classify the archives of the Sublime Porte at Istanbul, and gave his name to one of the catalogues: 'Ali Emiri tasnîfî.

'ALI 'AZIZ EFENDI, GIRIDLÎ, Turkish diplomat and writer, d. 19 Dümâdâ 1 1213/29 Oct. 1798. He was born in Crete, where his father Tâbândji Mehmed Emendi was defterdar. Son of a wealthy father, he lived a carefree life until circumstances constrained him to enter the service of the state (muhasar of Chios, ca. 1792-93 in Belgrad). In 1211/1796-97, he was appointed ambassador to Prussia, arrived in Berlin early in June, 1797, and died there in the following year. Of his achievements as a diplomat little is known; he owes his fame to his writings. 'Ali Efendi, who knew Persian, French, and even some German, is an interesting forerunner of the 19th century Turkish movement of Westernization and self-interpretation. In his treatise Wûridâî (unpublished, MSS in Istanbul Universite Kütûphanesi, nos. T 3383, T 3470, T 1698, and Millet Kütûphanesi, 'Ali Emiri, Şer'îyye 154/123) 'Ali Efendi defends the irrationalism of mystic religiousness (be himself was the disciple of a certain Sheykh Kerim İbrahim of Abana near Sinob) with arguments tinged with 18th century rationalism. He accepts the validation of the God-searching soul between faith and scepticism, and offers the story of his own salvation, modestly admitting its inapplicability to others. An exposé of the ideas of mysticism, and, especially, of the superhuman powers of the sheikh, is also found in 'Ali Efendi's famous book of fairy tales, the Muhâyîyâât-i Lehadî-i İlâhî (written in 1211/1797-98, printed in Istanbul, 1268, 1284, 1290), based mainly on Petis de la Croix's Les Mille et un jours (first printed in 1710-12), but handling its material freely and adding many new stories of various character. This book, which was very popular in the 19th century, may be regarded as the first modern educational novel in Turkish; beside fantastic tales, it contains also stories depicting life in 18th century Istanbul with charming realism. 'Ali Efendi has also left poems, mostly in the Sufi tradition. Finally, he is supposed to have written a (now lost) opus containing his discussions with European philosophers.

Tietze, 'Asîs efendî Muhsâyîlî, Oriens, 1948, 248-329 (containing the translation of one of the tales); E. J. Gibb, The Story of Jawâd, a romance by 'Ali 'Asîs Efendî the Cretan, Glasgow 1884 (translation of the second of the three parts of Muhsâyyîlî). (A. Tietze)

**ALI BABA** [see ALF LAYLA WA-LAYLA].

'ALİ BEY, a Caucasian by birth, was for nearly 20 years the chief personage in Egypt. He had been brought there at an early age, and had been offered as a gift to İbrahim Kanğhâdî, who was the real master of the country from 1156 to 1243. Before his death, the latter conferred on 'Ali the rank of bey, and made him a member of that curious council of 'Powers', whose turbulent authority grew in proportion as the Pasha nominated by the Porte became a shadowy and passive spectator. This Ottoman governor, in order to survive, concerned himself with preserving an apparent neutrality in face of the sanguinary conflicts between the bays, a neutrality which he had to maintain in order to hasten to the aid of the victor.

'Ali distinguished himself at the beginning of his career by the successful defense of a pilgrim caravan against Arab tribes. Appointed bey, he was plunged into an atmosphere of intrigue; each character in the drama was obliged to have recourse to murder, and was himself shadowed by assassins. At first, 'Ali Bey maintained an attitude of prudent watchfulness, confining his activities to enriching himself by every means, and was thus able to collect a substantial number of mamlûk. This policy bore fruit when, from the year 1177/1763, his peers recognised him as their leader. In the course of the following year he conferred the rank of bey on his mamlûk Muhammad Abu 'l-Dâhâb [q.v.], the man who was destined to overthrow him. This rise to power, not achieved without setbacks and disputes, was abruptly checked: 'Ali Bey, forced to take refuge in Syria, established relations with Umar al-Zâhir, the ruler of Acre. Through the good offices of the latter, 'Ali Bey returned to Egypt, with the support of the Porte, and again assumed his prerogatives as shâykh al-balâl.

Two years later, 'Ali Bey had to flee again, but he returned to the capital at the head of an armed force in 1181/1767. A new Ottoman governor was obliged to confirm 'Ali Bey as shâykh al-balâl; however, alarmed by the latter's independent attitude, he tried to provoke a rising against him. It was a failure, and the Pasha was forced to resign (1182/1768). From then on, 'Ali Bey did not trouble to conceal his ambitious designs, and he refused to tolerate the presence of an officer who had any influence. He showed his hostility to the Porte and reduced the number of his Janissaries. Nevertheless he did not throw off the mask completely, and did not refuse the Sultan's request to send a contingent for the war against Russia. He was then denounced at the Porte as a traitor, and accused of having mobilised these troops to aid the Russians: a firman was issued at Constantinople condemning him to death.

Informed of this, 'Ali Bey replied with an arrogant declaration of independence. From then on, 'Ali Bey became entangled in a diabolical web and was
forced to keep his forces in the field without respite. First, he subdued the Arab tribes of Upper Egypt, and intervened at Mecca to install there a pretender to the sarkfate who had sought his protection. The expedition was under the command of his right hand man, Muhammed Bey Abu l-Dhabab.

Conscious of his power, 'Ali Bey struck coinage in his own name: the coins still bore the sultan's name, but the initials of the master of Egypt were inserted under a date which no longer represented the date of the sultan's accession.

He then proceeded to invade Syria with a huge army, again under the command of Muhammad Bey Abu l-Dhabab. Negotiations with the Russians were set on foot but there was no time for them to yield results. The whole of Syria was speedily conquered, but events took an unexpected turn when Muhammed Bey Abu l-Dhabab, after his victorious entry into Damascus, led his army back to Egypt to seize possession of it from his master. 'Ali Bey decided to flee from Cairo in Muharram 86/April 1772, and took refuge once more with the Paşa of Acre. He set about raising another army, with the help of some Russian equipment, and, after a series of successful skirmishes, confronted his rival at Śalihiyya, in the eastern part of the Delta. His army was defeated, and 'Ali Bey himself was severely wounded on the field of battle, died a few days later, 15 Safar 1287; 8 May 1773.

It is difficult accurately to assess the autonomy of 'Ali Bey. As already noticed, the form of his coins was unusual, although 'Ali Bey had declared that the Ottomans had seized control of the country by force, aided by the treachery of the population. A document dated at the beginning of 1285 A.H., shortly before his final departure from Cairo, supplies evidence that he had not dared to proclaim himself officially sovereign of Egypt. It consists of a long inscription carved on the drum of the cupola of the tomb of al-Shāfi'i; it makes no reference to the Ottoman Power, but does not mention 'Ali Bey either, merely stating that the order to restore this tomb was given by the "powerful master of Egypt, who has increased the prestige of this country by his authority".

From a perusal of al-Djabarti, one gets the impression that 'Ali Bey was in many respects a repulsive character, but the morals of the time and the environment must be taken into consideration, and one could express agreement with a contemporary judgment: "He was an extraordinary man, who only lacked a different education and a larger stage to have astonished the world".

'ALI BEY [see *Ali*].

'ALI ILĀHI ["deifiers of *Ali"], a vague and popular designation of sects connected with, and issued from, Shīʿa extremism (ghulāt, [g.w.]). In Persia and Kurdistan it covers chiefly the Aḥl-i Ḥāk (g.w.) and Kuzz-bāsh (g.w.), but may occasionally refer to such smaller communities as Shāri, Shabbak (g.w.) etc. (Ed.)

'ALI KHĀN B. AHMAD B. MUHAMMAD MAṢĪM B. ṢADR AL-DĪN AL-ḤASAYN AL-MADANI, author of biographical works and a book of travels, b. 15 Dhu 'l-Mi‘ād 1105/12 August 1624 in Medina; he was a descendant of Ghiyāth al-Dīn al-Shīrāzī. His father was since 1053/1644 in the service of the prince Ṣahāḥshīrāh; Abū al-Hāl b. Muḥammar Kutb Shāh. 'Ali joined him in Ḥaydarābād in 1068/1657. His father died in 1083/1672, a year after the death...
of his patron, Sháhinnáh 'Abd Alláh, and 'Alí himself incurred the displeasure of the ruler, Abu 'I-l-Fárid. He succeeded, however, in escaping to the court of Awrangžeb, who made him káhàn and disnéân at Burhánpur. He went on the pilgrimage, and visited Bághdád, Náqjaf and Karbálá. In Shíráz he taught at the Mánsúriyyá madrasá and died in that town in 1127/1705 or 1120/1708.

In 1704/1663 he wrote a description of his journey from Mecca to Haydarábád, entitled Sultán al-'Árif; see Úsán al-Aárif. He is best known for his work on the poets of the 11th century A. H., which he wrote in 1082/1671 as a supplement to al-Kháfiqí's Ráykháná: Sulá'áf at-Áṣr fí Muhásíín A'sán at-Áṣr, Caire 1324, 1334. As a supplement to his commentary on his own BÁdííyyá he gives biographies of writers on rhetoric, and also wrote, in addition to various treatises and poems, a biographical collection of Imámí Shí'ís.

'ÁlI KÁHÁN [see mahríd 'álI káhÁn].

'ÁlI KÚCCC [see begtqendgin].

'ÁlI b. Múmmád al-KÁSHDI, 'ÁlI 'aLí Dín, astronomer and mathematician, b. in Sámarqánd, d. in Istanbul, on 5 Shádán 879/19 Dec. 1474. He received his surname from his father, who served as the falconer (báshdÁ) of Ullóg Beg. He studied mathematics and astronomy in his native city under the amír Ullóg Beg [q.v.], who was at the same time an able astronomer, and KÁddÁ-zádÁ-rÝmÝf, one of the rectors of the celebrated madrása in Sámarqánd which was especially favoured by the amír. All al-KÁshdí succeeded KÁddÁ-zádÁ as director of the renowned observatory of Sámarqánd, and took part in the compilation of the Zidí KúrkÁnti, the principal author of which was the amír himself (cf. its preface).

'Alí al-KÁshdí is said to have left secretly for Kámn, in order to perfect himself in his studies, and on his return to have presented his patron with his Hál Aghálá al-Kámar.

After the murder of Ullóg Beg, 'Alí al-KÁshdí, left Sámarqánd and stayed in Tabárz with the Kák Koyyúnlu ruler Úzná Hásan. He was sent by this ruler on an embassy to the Úttamán sultan Múmmád II; he went back to Tabárz to accomplish his political mission, but subsequently returned to 'Istádb to establish himself there definitely. He was appointed as professor of sciences in the madrása and greatly influenced the development of the sciences in Túrkey.

He composed in Kámn a commentary, dedicated to Abú Sa'íd Khánt, on Nafr al-Dín Tátrysí's Tádríd al-Kádat; he also wrote on grammar and rhetoric. His main works are the Risálá fí l'-Hay'á, Risálá fí l'-Hísáb, and a commentary on Ullóg Beg's Zidí. (The Risálá al-Fáthiyá and the Risálá Múmmádáyya are Arabic translations of the Risálá fí l'-Hay'á and l'-Hísáb.)

(A. Adman Adývar)

'ÁlI MARDÁN, honorific title given to 'Alí b. Abí Tálib by the Shi'ítès, being an abbreviation of 'Alí khÁnt mardÁn, "All, King of mankind."

'ÁlI MARDÁN, a Kháldí adventurer who acquired power in Bengal, centring upon the capital of Lákhanawádti, in the first decade of the 7th/13th century. Appointed to the iqÁd of Nárán-go-e by Malik Ightíyár al-Dín Muhammad Bákhítihár Káshdí, he took advantage of the latter's defeat by the Hindu Rai of Kámrúp, says Mináhádí al-Síráj, to murder his master at Diwkók on a sick bed. This occurred in 605/1205-6. 'Alí Mardán, however, was later imprisoned by Muhammad Sháhán, putting him in the charge of the kósáw of Nárán-go-e. 'Alí Mardán, in collusion with the kósáw, managed to escape to the court of Kútth al-Dín Aybak and accompanied him to Gháznín where he became a captive of Tádí al-Dín Yildúd when the latter recaptured Gháznín from Kútth al-Dín Aybak (605/1208-9). After about a year 'Alí Mardán escaped and presented himself again before Aybak at Lahore. He was treated with favour and was assigned the territory of Lákhanawádti. According to the Tábáábá-í Násírî, 'Alí Mardán proceeded to Diwkók, assumed power there and brought the whole of Lákhanawádti under his sway. On the death of Kútth al-Dín Aybak in 607/1210, 'Alí Mardán had the khúdá read in his own name and was styled Súltán 'ÁlÁ dí-Dín. He brought the Kháldí nobles of Lákhanawádti under control and overawed his neighbouring Hindu chiefs. His overbearing beha- viour caused discontent among the Kháldí nobles and under the leadership of Malik Húsáyín al-Dín 'Iwáž, they conspired against him and slew him. 'Alí Mardán ruled for something over two years, the probable date of his death being 610/1213.

Bibliography: Mináhádí al-Síráj, Tábáábá-í Násírî, trans. Raverty, i, 572-80; Sir Jadunáth Sárkar (ed.), History of Bengal, ii, Dacca 1948; Cambridge History of India, iii, 397 ff. (P. Hardy)

'ÁlI MARDÁN KÁHÁN, a Bákhítiyárd chief who rose to prominence in the troubled period following the assassination of Nádír Sháh in 1747. In 1163/1750 he captured Isfáhán, and, in conjuction with Kárín Khánt Zán'd [q.v.], placed Ismá'íl, a grandson of Sháh Súltán Húsáyín, on the throne. 'Alí Mardán's oppressive measures led to an open breach with Kárín Khánt, who, fearing for his life, attacked and defeated him. 'Alí Mardán Khánt fled, and was subsequently assassinated by Muhammad Khánt who, according to Mirzá Sádík, the author of the Tárríkht-i Gúth-gádá, was a relative of Kárín Khánt. This 'Alí Mardán Khánt is not to be confused with his contemporaries and namesakes (a) the wáli of Lúritsánt, a Fáyíl Lúr who was wounded at Gúlhábád in 1722 and later vainly endeavoured to relieve Isfáhán, and (b) 'Alí Mardán Khánt Shámlú, whom Nádír Sháh sent as ambassador to Delhi and Con- stantinople.

Bibliography: Mirzá Sádík, Tárríkht-i Gúth-gádá (quoted by Malcolm, History of Persia, London 1815, ii, 116-8); Rúdá Kúús Khánt Hidáyá, Rawdat al-Sá'dáyyí Násírî, Teheran 1268/5, ix, 7-9; Hammer-Purgstall, iv, 477, 478 (this authority's reference to 'Alí Mardán's earlier career, iv, 278 is inaccurate); O. Mann (ed.), Muṣáníl ed-Táríkht-i ba'ándárisf, 7, 8. (L. Lockhart)
ALI MUHAMMAD SHIRAZI [see nābīl].

ALI PASA ARABAZI, Ottoman Grand Vizier. Born at Okhri between 1670 and 1672, died at Rhodes 16 Shab'Dan 1104/21 April 1693. At first smām to various eminent people, then kethbūdā, he became agha of the Janissaries in 1101/1689, and later wazir and kābīm-mabām of the imperial stirrup. Through the support of the kābīm l-'asker Yahyā Efendi and the Shaykh al-Islām Fīdāl, he succeeded Köprülūzade Mustafā Pasha, killed at Szląskamen as Grand Vizier, on 6 Dhu l-Hijja 1102/30 August 1691. Showing no desire to place himself at the head of the army against the Austrians, 'Ali Pasha succeeded in disarming his opponents either by bribery or by dismissal. As a result of this policy he incurred the hostility of the sultan, who eventually dismissed him (28 March 1692), and replaced him by Ḥādiqī 'Ali Pasha. 'Ali Pasha Arabāzī was exiled to Rhodes, but as he represented a possible source of trouble and conspiracy, his enemies obtained his death warrant, and shortly afterwards he was executed at Rhodes. His cognomen is derived from the fact that he sent a ox-cart.

Bibliography: Rāshid, Ta'rikh, II, 166 ff.; Oghmān-zade Tābīb, Ḥadīth al-Wustāra, 178 ff.; Findikli Mehmed Agha, SulāHAND-i Tarikh, ii, 596-614; IA, s.v. (by Resad Ekrem Koşu).

ALI PASHA CANDARLI-ZADE (d. 1407), son of Candarli Khall Khayr al-Din Pasha, was, like his father, kābīm, then kābīm l-'asker, and finally Grand Vizier, and also combined the functions of wazir, that is to say head of the administration and finance, and of army commander, perhaps after the death of his father in 1387. After having directed a campaign in Anatolia against the Karamānīd 'Ali Bey, he conducted the skilful operations in Bulgaria which led to the capture of several fortresses (Pravad, Tırnova, Shehirköyü etc.) before the battle of Kostova (20 June 1389), in which he played a decisive part. Murād I was killed in the battle, and was succeeded by Yeziye Bāyazīd I, who appointed 'Ali Pasha Grand Vizier. 'Ali Pasha accompanied the Sultan in the campaigns in Greece and Bosnia, and played an important part at the siege of Constantinople, commenced in 1391, but abandoned as the result of the invasion of eastern Anatolia by Timūr. After the battle of Ankara (1402) in which Bāyazīd I was taken prisoner, 'Ali Pasha saved the heir apparent Sulayman and took him first to Brusa and then to Adrianople. Up to the time of his death in Radjab 809 (January 1407), 'Ali Pasha remained Grand Vizier to Sulaymān Čelebi, and his skilful diplomacy secured for the latter mastery over the Ottoman territory from Anqāra to the Aegean Sea; deprived of his wazir, Sulaymān Čelebi succumbed to the attacks of Mehmed Čelebi, later Mehmed I (1410). 'Ali Pasha Candarli-zade, like his father, made a contribution to the organisation of the Ottoman administration, notably by codifying the functions of the kādīs, by creating the corps of the ict-oglaṁ—pages from whom numerous imperial officials were recruited, and by making the wazirs persons of influence and respect. The chroniclers have criticised his predilection for the pleasures of life—a taste which he communicated to Bāyazīd I, and which they state that he was not loved either by the people or by government personnel. 'Ali Pasha was buried at İznik (Nicaea) in his father's tomb. At Brusa, a quarter, a mosque and a convent bear his name.

Bibliography: Rāshid, Ta'rikh, II, 166 ff.; Oghmān-zade Tābīb, Ḥadīth al-Wustāra, ii, 101; Taşyār-zade 'Ata, Encyclop. Ta'rikh, 1, 160 ff., and 285, ii, 76-83; Rāshid, Ta'rikh, passim; A. N. Kurat, İnce Krallar Kari (etc.), index; idem, Prut Seferi ve Barış, index; Hammer-Purgstall, vii, 116 ff.; IA, s.v. (by R. E. Koçu).

(Al W. Bowen)

'ALI PASHA DÂMAD — 'ALI PASHA HAKİM-OGHLU 395

'ALI PASHA DÂMAD (1667-1716), Ottoman Grand Vizier. Born at Solôz near Nicaea in 1679/1687, he entered the Seraglio of Ahmed II, and filled successively the posts of hâkîb, rikâbîdâr, châbadâr and rûkâbîdâr; he exercised great influence over Sultan Ahmed III, who came to the throne in 1703, and who made him waṣâr and gave him his daughter Fâtimâ in marriage (Rabî' I 1128/May 1710); he had a hand in the appointment and dismissal of waṣâris, including Köprüülü-zâde Nu'mân Pasha and Bâltadji Mehmed Pasha. The Grand Vizier Khodja 'Ibrâhîm Pasha was condemned to death for attempting to assassinate Dâmâd 'Ali Pasha, and the latter then became Grand Vizier (Rabî' II 1128/4 April 1713). One of his first acts was to sign with Russia the peace of Adrianopol, which fixed the frontier between the two countries between the Samara and the Orel (5 June 1713). Wishing to erase the treaty of Karlovitz, he undertook the Morean campaign, for which the motive was the attacks by Venetians and Montenegrins against Turkish vessels; in 1715, Dâmâd 'Ali Pasha occupied Napoli de Romania, Argos, Coron, Modon, Malvasia, and, in Crete, La Suda and Spîna Longa. At the same time he had to suppress the revolts of 'Othmân-oghlu Naṣîr Pasha in Syria, of the bandit 'Abbâs in Anatolia, and of Kaytâs Bey in Egypt.

In 1716, he initiated an expedition against Corfu, but Venice and Austria concluded an offensive and defensive alliance which forced him to send his troops to Belgrade. The Austrian army, led by Prince Eugène, met the Ottomans at Peterwardein on 16 Shâbân 1128/5 August 1716; Dâmâd 'Ali Pasha was mortally wounded by a bullet in the forehead during the battle, when the Turkish troops had already begun to retreat. He was buried in the garden of the mosque of Sulaymân I at Belgrade; 70 years later, when he captured this town, the Austrian general Landon transferred the tomb to 70 years later, when he captured this town, the Austrian general Landon transferred the tomb to 70 years later, when he captured this town, the Austrian general Landon transferred the tomb to 70 years later, when he captured this town, the Austrian general Landon transferred the tomb to

Dâmâd 'Ali Pasha was at once a fine military leader and a great statesman; he displayed a shrewdness and a great interest in science and poetry. He reopened the garden of the mosque of Sulaymân I at Belgrade; 70 years later, when he captured this town, the Austrian general Landon transferred the tomb to 70 years later, when he captured this town, the Austrian general Landon transferred the tomb to 70 years later, when he captured this town, the Austrian general Landon transferred the tomb to 70 years later, when he captured this town, the Austrian general Landon transferred the tomb to

'ALI PASHA HAKİM-OGHLU, Grand Vizier under the Ottoman sultans Mahmûd I and 'Othmân III. His father, Nûh Efendi, the physician of Mustafâ II, was a Venetian renegade. 'Ali Pasha was born on 15 Shâbân 1100/June 1689; brought up in the seraglio, he held various administrative posts at Istanbul, and then in the provinces; in 1724 he was appointed governor of Adana and subdued the tribes of Cilicia; in 1725 he became governor of Aleppo, and in the same year distinguished himself at the siege and capture of Tabriz. Appointed waṣâr in 1725, he was successively beylerbeysi of Anatolia, ser 'asker of the East, governor of Siwâs, and governor of Diyarbakir. In 1730, again ser 'asker of the East, he defeated Shoâh Tahmâsp III at Kurîdîn (13 Rabî' I 1144/15 September 1731), and captured Hamadân, Urmiya and Tabriz. He became Grand Vizier soon after the peace called after Ahmed Pasha, 15 Ramadân 1144/12 March 1732. His first term of office as waṣâr was marked by wise administration and currency reform. In the field of foreign affairs, the Marquis de Villeneuve, the French ambassador, urged the Grand Vizier to conclude an alliance with France against Austria, but the conditions put forward by 'Ali Pasha (and suggested by Ahmed Pasha Bonneval) prevented the conclusion of the treaty. Dismissed on the resumption of hostilities with Persia (22 Safar 1148/14 July 1733) 'Ali Pasha was exiled to Mytilène, then appointed governor of Bosnia, where he held the Austrians in check for three years, successfully defended Trawnik, and, on 4 August 1737, defeated Marshal Hildburghausen near Banjaluka. In 1740 he was sent to Egypt, where he suppressed a mamlûk revolt; in 1741 he was made beylerbeysi of Anatolia, and on 15 Safar 1155/21 April 1742 he became Grand Vizier for the second time. The following year he was dismissed for wishing to lead in person the eastern expedition against Nâdir Shoâh of Persia. On 24 Ramadan 1155/April 1745, he was nominated commander-in-chief of the eastern army, but in the meantime peace was signed with Nâdir Shoâh (1746). Governor of Bosnia, then of Trebizond, he was made Grand Vizier by 'Othmân III on his accession 4 Dînumâd I 1168/16 February.

'ALI PASHA HAKİM-OGHLU, Grand Vizier under the Ottoman sultans Mahmûd I and 'Othmân III. His father, Nûh Efendi, the physician of Mustafâ II, was a Venetian renegade. 'Ali Pasha was born on 15 Shâbân 1100/June 1689; brought up in the seraglio, he held various administrative posts at Istanbul, and then in the provinces; in 1724 he was appointed governor of Adana and subdued the tribes of Cilicia; in 1725 he became governor of Aleppo, and in the same year distinguished himself at the siege and capture of Tabriz. Appointed waṣâr in 1725, he was successively beylerbeysi of Anatolia, ser 'asker of the East, governor of Siwâs, and governor of Diyarbakir. In 1730, again ser 'asker of the East, he defeated Shoâh Tahmâsp III at Kurîdîn (13 Rabî' I 1144/15 September 1731), and captured Hamadân, Urmiya and Tabriz. He became Grand Vizier soon after the peace called after Ahmed Pasha, 15 Ramadân 1144/12 March 1732. His first term of office as waṣâr was marked by wise administration and currency reform. In the field of foreign affairs, the Marquis de Villeneuve, the French ambassador, urged the Grand Vizier to conclude an alliance with France against Austria, but the conditions put forward by 'Ali Pasha (and suggested by Ahmed Pasha Bonneval) prevented the conclusion of the treaty. Dismissed on the resumption of hostilities with Persia (22 Safar 1148/14 July 1733) 'Ali Pasha was exiled to Mytilène, then appointed governor of Bosnia, where he held the Austrians in check for three years, successfully defended Trawnik, and, on 4 August 1737, defeated Marshal Hildburghausen near Banjaluka. In 1740 he was sent to Egypt, where he suppressed a mamlûk revolt; in 1741 he was made beylerbeysi of Anatolia, and on 15 Safar 1155/21 April 1742 he became Grand Vizier for the second time. The following year he was dismissed for wishing to lead in person the eastern expedition against Nâdir Shoâh of Persia. On 24 Ramadan 1155/April 1745, he was nominated commander-in-chief of the eastern army, but in the meantime peace was signed with Nâdir Shoâh (1746). Governor of Bosnia, then of Trebizond, he was made Grand Vizier by 'Othmân III on his accession 4 Dînumâd I 1168/16 February.

1755; this third term of office as Grand Vizier only lasted 53 days; the slihdar Blykill ʿAli Ağha succeeded in securing his dismissal and his exile to Cyprus; but in the course of the year he was appointed Governor of Egypt, and in 1756 beylerbeysi of Anatolia. Recalled in 1757, he retired to Kütahya, where he died 9 Dhu '1 Hidjdja 1171/14 August 1758. He was buried in the tomb adjoining the mosque which he was responsible for building at Istanbul (1753-4). He was reputed to be a learned, shrewd and liberal man, but quick-tempered and extremely severe in his dealings with officials guilty of extortion.

(by Reşd Ekrem Koç). (R. Mantran)

ʿALI PASHA KHÂDÌM, Ottoman Grand Vizier. At first ab aghaš, then beylerbeysi of Karâmân and subsequently of Rumelia, he distinguished himself in the course of a campaign in Wallachia (1485); waṣrî in 1486, he defeated the Mamûlâks of Egypt at the battle of Aţâbîyûrû in Cilicia (1492), took the fortresses of Coron and Modon (1500), and was appointed Grand Vizier the following year in the course of securing his dismissal and his exile to Cyprus; but in the course of the year he was appointed beylerbeysi of Anatolia; in 1503, he again became Grand Vizier in 1506 and remained in office until his death. He strove to secure the succession of the şâh-zâde Ahmed, second son of Sultan Bâyâzîd II, against the şâh-zâde Korkût, whom he defeated in 914/1508; he also defeated prince Selîm, who had rebelled against his father, at Çorlu (1521). He died when waging the revolt of Kara Blykill-ghullû, at Gökyay, between Siwâs and Kayseri (1515): he was the first Grand Vizier to die on the field of battle; his death shattered the hopes of the şâh-zâde Ahmed. A skilful and upright statesman, esteemed by Sultan Bayazîd II and by the people, ʿAli Pasha was in addition the patron of men of letters and of science, notably of the poet Mesihi and the historian İdris Bulâtî. He built at Istanbul the mosque known as ʿAtîk ʿAli Pasha (1496), together with the adjoining medresse, school and ʿimâret; he was also responsible for a hammarâni at Karâgûmrûk and a mosque at Yassiforen, and it was he who converted the monastery church of Saint Savior in Chora into a mosque, known as Kırîyye Dîmûs. (K. Vollers)

ʿALI PASHA MUBâRÂK, Egyptian statesman, born in Istanbul in February 1815, his father being a shopkeeper of the Egyptian Market. At the age of fourteen he obtained his first government post in the secretariat of the Imperial divân and, whether because of his short stature, or of his ability, acquired the nickname ʿAlî. In 1835, having already learnt some French, he was appointed to the translation department of the divân, and three years later was sent with a mission, first to Vienna, where he remained some eighteen months, and then, in 1837, to St. Petersburg. On his return he was appointed Interpreter to the divân; in the following year he accompanied Mustafa Reşhd Pasha [q.v.] to London as Counsellor, on the latter’s appointment as Ambassador; and in 1839, on the accession of ʿAbd al-Medīd, they returned together to Istanbul.

In 1840, ʿAlî first deputed for the Counsellor to the Ministry of Foreign affairs and then replaced him. In 1843 he was appointed Ambassador in London. Returning in 1844, he was made a member of the meğlis-i владî; and in 1845 he deputized for Şekîb Efendi, the Minister of Foreign Affairs, until his replacement by Reşhd Pasha.
During Reshid Pasha's tenure of the Ministry of Foreign Affairs, Ali, who then again became Counselor of that department, was also appointed bowlıkh of the divan; and when in 1846 Reshid was made Grand Vizier for the first time, Ali replaced him as Foreign Minister. In April 1848, after Ali had raised to the rank of vizier, both Reshid and he were simultaneously dismissed, but were restored four months later and remained in office until 1849, when, on Reshid's again being dismissed, Ali succeeded him as Grand Vizier, with Fu'ad Pasha as Minister of Foreign Affairs.

His first Grand Vizierate, however, lasted only two months; and it was not until November 1854, after the outbreak of the Crimean War, when Reshid again became Grand Vizier, that Ali returned to high office, as Foreign Minister. In the interval he had been appointed first mali of Izmir (January-July 1853) and then mali of Khidawendigâr (April-November 1854), also assuming whilst in the latter post, the presidency of the newly formed High Council of the Tanzimât (q.v.). He continued to hold this position while Foreign Minister, as which, in March 1853, at the conclusion of the war, he was appointed a delegate to the preliminary peace conference in Vienna. The same, in the same year, on Reshid's resigning the Grand Vizierate, Ali again replaced him in that office, so that it fell to him in February 1856 to draw up and promulgate the famous bhall-i hümâyûn of that year and in the following month to sign the Treaty of Paris as first Ottoman delegate. Within the next two years, however, the disputes of the western Powers over the affairs of the Principalities led first to Ali's resignation and replacement by Reshid Pashâ in November 1856 and then, in August 1857, to Reshid's dismissal and replacement by Muṣṭafâ Nâ'îl Pasha, with Ali as Foreign Minister. Ali retained this post under Reshid during the latter's last tenure of the Grand Vizierate, and on Reshid's death in January 1858, replaced him in that office for the third time.

In 1859, Ali was again dismissed for having suggested a cut in palace expenditure as one remedy for the financial crisis that then faced the Ottoman government. But after deputizing first for the Grand Vizier Khbrisl Mehêmed Emin Pashâ during the latter's tour of Rumelia in the summer of 1860 and then for Fu'ad Pashâ as Foreign Minister during his absence in Syria, in July 1861, Ali was once more first appointed Foreign Minister himself and then, after the accession of Abd al-'Azîz, Grand Vizier for the fourth time. Two months later, in November 1861, although the new sultan, finding him too deliberate in action, dismissed him in favour of Fu'ad, Ali returned to the Ministry of Foreign Affairs. Moreover he continued in that office under successive Grand Viziers until February 1867, when, on the resignation of Müterdjîm Rûshdî Pashâ, he took his place. On this occasion he remained Grand Vizier (it was his fifth term) for as long as four years, until his death.

Ali was more or less self-educated, poverty having obliged him, in order that he might earn his living, to forgo the receipt of an âdâlet from the Bûnûm medresê, where he began the study of Arabic, later continued with Ahmed Djewdet Pashâ (q.v.). But he was of a high natural intelligence; though shy and reserved, he was notably witty; he acquired a mastery of French; and from the date of the Paris peace conference he enjoyed a European reputation as an outstanding diplomatist of perfect manners and rare integrity. Among his countrymen he became unpopular. He was in fact secretive, solemn, and overbearing, and was regarded as vindictive. During his final Grand Vizirate 'Abd al-'Azîz would have been glad to get rid of him, but recognized Ali's standing in Europe to be such that he could not afford to; and Ali profited by this security to insist on his correct treatment by the sultan, on his right to have all governmental matters of importance to be referred to him, and on the immunity of ministers and officials from banishment (in the bad old way) except after due trial.

Both Ali and Fu'ad owed all their official training and advancement to Reshid Pasha. But when in 1852 Ali took Reshid's place as Grand Vizier, the latter was hurt; and from that time on a coolness, which was exacerbated by calumniators, and even a certain rivalry, developed between Ali and Fu'ad on the one hand and Reshid on the other, although Ali was not thereby prevented from serving under Reshid on two further occasions. All three were regarded as pillars of the Tanzimat movement. But whereas it was in part Reshid's object to educate the Ottoman public in self-government, Ali was of an authoritarian temperament and after Reshid's death, it was bent rather on the firm establishment of the rule of law and the consequent limitation on the sultans' autocracy. The maintenance of the Empire now depending on the goodwill of the Powers, it was above all his constant concern to forestall their complaints and intervention. But by devoting too little attention to the internal reforms by the promise of which their favour had been gained, he contributed to its decline. However, in 1868, during his last Grand Vizierate, the meğlis-i mali was replaced by a Council of State (shûrd-yi devlet) on the one hand and a High Court of Justice (divân-l ahhâm-l 'adliyye) on the other, with the aim of separating the judicial from the executive powers of the government; soon after an Imperial School (medrese-i sulûdi) was opened in the Ghala'ta Sarayi, where the instruction, on European lines, was in French and the pupils were non-Muslim as well as Muslim; and in 1869 a Ministry of the Interior was created. During the same period education was also promoted by an increase in the number of the Rûshdiyye schools; the army and navy were overhauled; the fleet was enlarged; and an agreement was concluded for the construction of railways in Rumelî.

Ali's most notable actions at this time were his agreement to the evacuation of the Serbian fortresses by Ottoman troops (1876); his visit to Crete curing the insurrection, as a result of which he formulated the nisâm-nâme under which it was governed for the next thirty years (1868); his success in causing the Powers to oblige the Greek government to desist from aiding the Greek rebels; his restraint of the Khidîw Ismâ'îl from exercising powers beyond those already conceded to him; and his opposition to the formation of the Bulgarian Exarchate, which was consequently delayed till 1870, and to the absorption by Rome of the Armenian Catholic Church.

Owing to his lack of interest in the movement for an Ottoman constitution, Ali was savagely attacked during the last years of his life by its most ardent advocates, the refugee Yeni Ofhamallar (Jeunes Turcs), most of whom, however, recognized after his death, that they had done him an injustice; and he was further successively distress by the death in 1869 of Fu'ad Pasha, after which he made himself responsible for the Ministry of Foreign Affairs as
well as the Grand Vizierate; by the defeat in 1870 of France, on whom he had long particularly lent; and by the consequent denunciation by Russia of the Black-Sea clauses of the Treaty of Paris. Exhausted by overwork and these calamities, he fell sick in the summer of 1871, and died after a three months' illness on 7th September, aged fifty-six, at his seaside villa at Bebek on the Bosphorus.

ʿALÎ PASHA RIŻWÂN BEGOWÎC [see RIŻWÂN BEGOWÎC]

ʿALÎ PASHA SEMIZ, Ottoman Grand Vizier. Born at Brazza in Herzegovina, he was carried off at an early age during a deşwîrmîhı operation to be brought up at Istanbul; in 953/1546 he became âgha of the Janissaries, and later beylerbeyî of Rumelia. Appointed governor of Egypt in 1549, he took part in the Suliyanî Pera campaign, and succeeded Rûstûm Pasha as Grand Vizier in Shawwâl 968/July 1561, a post which he held until his death in Dhu-ʿl-Kaʿda 972/June 1565. Immediately after his appointment, he negotiated with the Austrian ambassador Busbecq a peace treaty which was signed at Prague 1 June 1562. But the peace policy of ʿAlî Pasha was wrecked by the new Emperor Maximilian II; on the death of the Grand Vizier, Sultan Süleyman I had to undertake a fresh campaign against Austria. An intelligent and shrewd man, ʿAlî Pasha was famous for his corpulence (hence his cognomen Semiz, "the fat") and his wit.

Bibliography: Müşafa Selânikî, Taʿrih, 7-11, İbnîlîmîn Pecêwî, Taʿrih, i, 24; ʿOṯămîn-žade Taʾbî, Ḥadîkat al-Wusârâ, 31 ff.; J. von Hammer, Histoire de l’Empire Ottoman, vi, 86 ff., 146 ff., 199, 208; IA, s.v. (by Tayyîb Gökblîgîn).

ʿALÎ PASHA ŞURMELI, Ottoman Grand Vizier. Born in Dimetoka, he entered the financial administration and was eventually appointed defîrîdâr in 1688; he was dismissed the following year, but in 1703/1692 was again defîrîdâr and wâzîr. Successively governor of Cyprus and Tripoli in Syria, he became Grand Vizier on 16 Radjab 1105/13 March 1694 in the place of Bozokuł Müşafa Pasha, and conducted the Hungarian campaign, during which he unsuccessfully besieged Peterwardein. Sultan Müşafa II, on his accession, retained ʿAlî Pasha in his post, but forced him to undertake a new campaign against Hungary; a revolt of the Janissaries led to his dismissal on 18 Ramâdân 1106/22 April 1695; condemned at first to exile, ʿAlî Pasha was later executed on 4 Shawwâl 1106/May 1695. He instituted the practice whereby the Council of Ministers met four days a week, and changed the Egyptian crown lands, let at fixed perpetual rents, into fiefs on a wardein. Sultan Mustafa II, on his accession, was unable to do so finally before 1802. In the meantime, after the transference of the Ionian Islands and the "four districts" of Preveze (Prevesa), Parga, Voniĉî (Vonitsa) and Butrinto from Venetian to French sovereignty by the Treaty of Campo Formio in 1797, ʿAlî Pasha not only sent a contingent to assist the conquest by Russo-Ottoman forces of Corfu, but also occupied Butrinto and, after several successes against the French, took possession of Preveze and Voniĉî as well. By the settlement of 1802 the "four districts" were to be incorporated in the sandjaţ of Yanya. But it was not until 1819 that the incorporation of Parga, after various vicissitudes, was in fact effected.

In April 1802 ʿAlî Pasha was appointed wâli of Rumelia. The Albanian irregulars employed to suppress the brigandage and revolts that were again rife in the province at this time had themselves mutinied at Edirne; and it was thought that ʿAlî Pasha was alone capable of pacifying them and overcoming the general disorder. However, his success in inducing many of the outlaws to return to their homes so far provoked the hostility of the many Rumelian aṣârî whose interest it was to resist any thorough pacification, that in 1803 his appointment was revoked. He was then given the sandjaţ of Tirhala in addition to Yanya; but it was sought to counterbalance his influence in Albania
by replacing him in Rumelia by Ibrahim Pasha, the *mutasarrif* of Iškodaa (Scutari), whose authority among the Ghegs of the north was little less than *Ali's own among the Turks of the south.

After the resumption of the European war in 1803 close relations were established between *Ali and the French, who supplied him with weapons, munitions, and even gunners. But after Tilsit in 1807, when the Ionian Islands were relinquished by Russia to the French, the latter then proposed regaining the “four districts”, occupied Parga, and, inciting a revolt of the Greeks of Tirhala against *Ali's authority, which, however, was suppressed by his son Mūkhār.

In 1810, after first marrying two of his sons and a nephew to daughters of the *mutasarrif* of Avalonya, and then contriving that the latter should be attacked in his capital, *Ali Pasha* was able to appropriate this *sandjak* as well, under the pretext of flying to the relief of a relative. Mūkhār II was enraged by this episode, but powerless to refuse the appointment of Mūkhār Pasha to Avalonya in place of the dispossessed governor. No less unwelcome to the Porte were *Ali’s acquisition of Ergiri (Argyrocastron) in the following year, and still more his invasion of the Gheg country, where, after overcoming some local resistance, he was able to add the possessions of Tirana and Pekin (Pekinje) and the *sandjak* of Okhri and Elbashā to his dominions.

In the face of repeated protests from Istanbul *Ali Pasha* sought to excite this high-handed conduct, and in the war with Russia resumed in 1809 sent a considerable force to the sultan's aid under the command of Mūkhār and Well Pasha. He also assisted the British forces in their occupation of the Ionian Islands; and in view of these services and his advanced age no attempt was made by the Porte to unseat him before 1820. Then, however, owing in the first place to his falling out with the all-powerful nīgānī Hālet Efendi, and the latter's wish to divert Mūkhūd from his intention of abolishing the Janissaries; in the second place to the intrigues of certain Phanariot Greeks, who saw that he constituted an obstacle to the already projected insurrection in the Morea; and finally to the attempted assassination, contrived by *Ali Pasha, of Pashō Ismā'il Bey, a former kāhhya of Well Pasha in Istanbul, in April 1820 he was dismissed from his Wardenship of the Passes and ordered to withdraw his troops from all regions outside the *sandjak* of Yanya, while Well Pasha was deprived of his governorship of Tirhala. Since there was little doubt that force would be needed to secure his obedience, all the governors of adjacent provinces had previously been warned to hold themselves in readiness to apply it; Khūrshād Ahmed Pasha, recently made governor of the Morea, was appointed to command all the troops engaged in operations against him; and a flotilla was ordered to the Albanian coast. *Ali Pasha* responded by concluding an agreement for mutual aid with the Greek rebel leaders and seeking to provoke revolts also in the Aegean islands, Serbia, and the Principalities; on which the Porte in turn deprived him of his vizzirate, dismissed him from Yanya, and ordered him and his whole family to reside at Tepedelen.

*Ali Pasha* was in fact deprived of all his acquisitions except Yanya itself, in the well stocked citadel of which he was then besieged, while three of his sons and a grandson, the governors of districts formerly in his control, surrendered. Owing to his provocation of a mutiny by the Albanians of the besieging force, a rising of the Suliotes, and the outbreak of the Greek revolt, it was not until the siege had continued for two years that *Ali Pasha* could be induced to give in. He then did so on condition that his life should be spared, retiring with a few supporters to a neighbouring monastery. But Khūrshād Pasha's guarantee was repudiated by Hālet Efendi, whose purposes it suited that the trouble at Yanya should continue. *Ali Pasha*, on learning that his execution had been ordered, decided to fight. He was accordingly attacked and died from a shot wound on 24 January 1822.

Tepedelenli *Ali Pasha* attained some celebrity in Europe owing to his being visited by various writers, notably Lord Byron, and to his efforts to enlist help from both the French and the British in the prosecution of his ambitions. He was brave, bold, and clever, but treacherous and wholly self-seeking. Having acquired great riches, he maintained a semi-royal state, surrounded by a strange entourage of European officers, Greek doctors, poets, *derwishes*, astrologers, and the leaders of brigand bands. Of all the contemporary Muslim rebels against the Ottoman power he contrived to do it most harm, by facilitating the beginning of the Greek revolt.

By the Caliph's order, green flags and green uniforms replaced the Abbasid black all over the empire. It is unlikely that the green colour was at this early date specifically associated with the house of 'Ali, and the precise significance of the change of colour is uncertain (cf. Weil, ii, 216, n. 3; Gabrieli, 37 n. 4).

The full text of the document of appointment is preserved (al-Kalâkshârî, Şubûh, ix, 362-6; Ibn al-Diâwâlî, Mirâtî, Paris Ms. Ar. 5903, f. 149 r-151 r; translation in Gabrieli 38-45). It shows that al-Ma'mûn carefully avoided the larger question of principle as between the claims of the houses of 'Abbas and of 'Ali, and simply appointed 'Ali al-Ri'dâ as the person best fitted by his personal qualities—that is to say, on Sunnî rather than Shî'î grounds. Nor does the document make any allusion to the delicate question of the succession after 'Ali al-Ri'dâ.

The appointment aroused vigorous and conflicting reactions. The various 'Abbâsîd governors, with the exception of 'Ismâ'îl b. Dî̄fârî in Bâṣra, Loyally carried out their orders, and exacted the oath of allegiance to the new heir. The Shî'îs were of course jubilant, though by no means won over by the appointment of a competitor to the house of 'Abbas, who wrote out inscriptions for some of the great mosques of Isfâhân (Masdjid-i Shâh, Masdi'dî-i Luft Allâh) as well as for the dome over the tomb of the shrine of 'Ali al-Ri'dâ and the shrine of Khâ'îdja Râbi' in Mâshhâd. He was also appreciated as a copyist of manuscripts, several of which in his handwriting are still preserved. Some miniatures are also attributed to him, but he is not to be confounded with Ri'dâ-i 'Abbâsî [q.v.].

'Ali Shér Kâ'nî [see Kâ'nî].

'Allî Shîr Navî [see NAVî].

'Ali Tegîn [see KARAKHANIDS].
their descendants that the loyalties of the different groups of the Shi’i (q.v.) were given. The claims made by the Shi’a on behalf of the ‘Alids were broadly of two kinds. For the extremist Shi’a the ‘Alid Imams were the spiritual as well as the religious and political heirs of the Prophet, whose spiritual inspiration they retained or resumed. For the moderate Shi’a they were the legitimate heirs of the Prophet as heads of the Umma of Islam, with a better claim to the succession than that of the reigning Caliphs, whom the Shi’a regarded as usurpers. The early ‘Alids, with the possible exception of Muhammad b. al-Hanaﬁyya and the more probable exception of his son Abû Hâshim, seem consistently to have refused to have any dealings with the extremists, or countenanced their ideas (e.g. A. Chântel, vii, 24 and viii, 33). On the other hand they seem to have acquiesced—if somewhat passively—in the political claims made on their behalf by the moderate Shi’a. The numerous traditions in which ‘Alids reject and denounce the claims of their own supporters (e.g. Ibn Sa’d, v, 77, 158, 235, 238) are almost certainly due to Sunni propaganda, and a more accurate reflection of the political views and claims of the house of ‘Ali will be found in the letter written by the ‘Alid pretender Muhammad b. ‘Abd Allah (q.v.) to the Caliph Mu’tasim in 145/762 (al-Tabari, iii, 209 ff.), and in the verses of such pro-‘Alid poets as Kumayt and Kûhâyir. Muhammad’s letter is also interesting in that the writer claims pure Arab descent on both sides, without admixture of foreign or slave blood—thus accepting the aristocratic Umayyad principle of succession, (which had excluded sons of slave mothers like Maslama) and rejecting the Islamic rule followed by the Husaynids (several of whose Imams had slave mothers), and, later, by the ‘Abbasids. In the early period the claims of the ‘Alids were based on descent from ‘Ali the Prophet’s kinsman rather than from Fâṭima his daughter, since according to the ideas of the time kinship with the Prophet in the male line was more important than descent from him in the female line. (Thus in the revealing speech attributed to ‘Ali at Siffin, he speaks of himself only as “cousin of the Prophet”, Murâdi, iv, 355). Claims based on kinship could thus be advanced on behalf of descendants of ‘Ali by wives other than Fâtimah, and even of collateral descendants of Abû Tâlib (see AH. AL-BAYY). Only after the usurpation of ‘Alid claims by their ‘Abbasid cousins was stress laid on direct descent from the Prophet via Fâtimah. In the development of this new claim, the sixth Imam Dja’far al-Sâdiq seems to have played a role of some importance.

After the abortive rising of al-Hasayn and the massacre of Karbalâ in 61/680, when most of the ‘Alids were killed, the ‘Alid pretenders remained politically inactive, giving recognition and sometimes even help to the ruling house (examples in al-Tabari, ii, 3, 409, 420, 1338; al-Ya’qûbî, ii, 298 ff.; Ibn Sa’d, v, 83, 159; Buhl, 269). They preferred to reside in Mecca or Medina, far from the main political centres, and while maintaining their claims did little to advance them. Such action as they took may be qualified as litigious rather than rebellious, concerned with their estates rather than their political rights (cf. I. Hrbek, Muhammad’s Nachlass und die ‘Aiden, Arch. Or., 1950, 43-9). In the tradition this passivity is naturally given a religious colouring, and appears as the prototype of the characteristic Shi’a practice of tabiyya (q.v.).

Towards the middle of the 8th century growing discontent brought new opportunities to the ‘Alids. In ca. 122/740 Zayd b. ‘Ali b. Husayn (q.v.) led the first ‘Alid bid for power since Karbalâ. After his death, closely followed by that of his son Yahyâ (q.v.) in ca. 125/743-4, the ‘Alid bolt was shot, and both the cause and the opportunity were taken over by the ‘Abbasids. The first major expression of ‘Alid anger and disappointment at the ‘Abbasid victory was the revolt of the ‘Hasanid brothers Muhammad and Ibrahim b. ‘Abd Allah (q.v.), in Medina and Bâṣra respectively. Both movements were choked in blood, and the Caliph Ma’tûr adopted a policy of violent repression towards the ‘Alids, great numbers of whom were arrested and put to death (cf. al-Tabari, iii, 445-6; Murâdi, vii, 404; Makâtib, 178 ff.). Al-Mahdî dealt more kindly with the ‘Alids, as part of a general policy of appeasement, but when this failed to gain ‘Alid good will, it was abandoned by al-Hâdî, whose harsh actions drove the ‘Alids to open revolt. The rising of Husayn b. ‘Ali (q.v.), known as Shâhîb Fakhkh (after the place of his death), in 156/776 was soon suppressed, (Tabari, iii, 551-9; Makâtib, 431 ff.), but ‘Idrîs (q.v.), a brother of the ill-fated Muhammad b. ‘Abd Allâh, escaped to Morocco where he founded the first ‘Alid dynasty. Hârîn al-Rabbage eased the severities of al-Hâdî, but after the revolt of Yahyâ b. ‘Abd Allah (q.v.) in 176/792, when the suspension of the ‘Alids and, the Husaynid Mûsâ al-Kâzîm (q.v.) died in prison. Meanwhile, in 175/792, some Zahyids (of the line of Zayd b. ‘Hasan) took refuge in Daylam, where in 250/864 they were able to establish the first of a series of local dynasties. Al-Ma’mûn on his accession faced the pro-‘Alid revolts of Abu l-Sâ’îrya (q.v.) in association with the ‘Hasanid Muhammad b. Ibrahim, called Ibn Tabatâba (q.v.) in Mesopotamia in 195/814, and of Muhammad b. Dja’far (q.v.) known as Mûshâm Muhammad al-Dibâdî, in Mecca in 200/815-6. His subsequent nomination of the Husaynid ‘Ali al-Ridâ (q.v.) as his heir and his adoption of a pro-‘Alid policy brought some alleviation, but did not save him from a further ‘Alid rising, that of ‘Abd al-Rahmân b. Ahmad in the Yemen in 207/822-3. Under al-Ma’mûn’s successors relations between ‘Abbasids and ‘Alids again deteriorated, reaching their lowest point with the insults and persecutions of al-Mutawakkil. Al-Muntasîr is reported to have treated the ‘Alids with consideration, but the revolts continued. Most of them were suppressed, some few resulted in the appearance of local dynasties of ‘Alid stock, in such remote places as Morocco, Yemen, and the Caspian provinces of Persia.

Most of the rebels and pretenders of the early ‘Abbasid period came from the line of al-Hasan, that of al-Hasayn preferring a life of tranquil piety. It was however the latter that came to have the greatest influence. After the death in 148/765 of Dja’far al-Sâdiq (q.v.), the sixth Imam in the line of al-Hasan, the succession was disputed between his sons Ismâm al-Mûsâ al-Kâzîm (q.v.) and ‘Ismâm al-Mûsâ al-‘Abd (q.v.), whose claims were accepted by the sect known as Ismâ‘iliyya (q.v.), sired a line of Imams from whom came the Fâtimid Caliphs (some authorities however doubt the authenticity of their pedigree). Mûsâ’s line ended with the disappearance of the 12th Imam, known as Muhammad al-Mahdî ca. 260/875-4. After this the aspirations of their followers (see ITHNA ‘ASHARIYYA) became eschatological rather than political, since they could offer assurance to the ‘Abbasid Caliphate, which was therefore accepted even by Shi’ite dynasties such as the Bûyids.
Many dynasties claimed to be of ʿAlid descent. They may be grouped as follows:

1) Ḥasanids: a) N.W. Africa—Idrāsids [q.v.], Sulaymānids [q.v.], ʿSharifs (Šaʿlīds [q.v.], Fillāḥs, (see ʿALAWIDS)).
   b) Yemen—Sulaymānids, Banū ʿUkhraydīr, Rasids [q.v.].
   c) Mecca—Sulaymānids, Banū ʿUkhraydīr, Banū Fuyālata, Banū Ḥātāda (see Makkah).
   d) N. Persia—Zaydids, ʿAlīds.
   e) Ghānā—Banū ʿṢallīh [q.v.].
   f) ʿAṣmū— Ḥasanids.
   g) Cordova and Malaga—Ḥammūdids [q.v.].

2) ʿUsaynids: a) Ifriqiya and Egypt—Fatimids [q.v.]
   b) Yemen—Sulaymānids, Banū ʿUkhraydīr, Rasids [q.v.].

3) Unknown: a) Idrīsīya and Egypt—Fāṭimids [q.v.].
   b) Medina—Banū Muhannā [q.v.].

ALIGARH, town (27° 3′ N., 78° 4′ E.) and district in the Meerut (MIRAT) division of Uttar Pradesh (formerly the United Provinces). In 1941 the district had 1,372,641 inhabitants (86,381 Muslims) and the town 1,32,655 (52,712 Muslims). The town was at first called Koil (KOL) and the citadel, built in 1548, was named Aligarh (high fort) when Nadīl Khuṭān restored it in 1776; previously it had been called Ramgarh, occasionally Sābtgarh after one Sābit Khuṭān or Muhannā.

Koil, which was certainly an old town, was captured towards the end of the 12th century by Kūth al-Dīn Aybēg and was usually subject to Delhi, being a fief of Balban’s eldest son c. 1270. It was ruled from Dijawnpur in 1393 and was independent for a time from 1447. In 1785 Mahtrattas of the Scindia family captured it but were driven out by Lord Lake in 1803. It was often described by Muslim writers, e.g. Ibn Baṭṭūṭa (iv, 6).

Modern Aligarh owes its place to its university. In 1872 (Sir) Sayyid Ahmad ʿAlīn [q.v.] began to collect funds, some Hindus contributing, for a boys’ school to be run more or less on English lines. In 1875 the high school was raised to a second grade college. The institution then became a school and the Muhammadan Anglo-Oriental College. Sir Sayyid kept the management in his own hands during his lifetime and had excellent helpers in the first principals, Th. Beck and (Sir) Theodore Morison. Finance was a trouble and there was opposition to this breach with traditional Muslim education. Entrance to the college was never restricted to Muslims and the language of instruction was English except in religious subjects. After the founder’s death the management was put in the hands of Muslim trustees. In 1904 332 boys were in the school, 26 students in the college and 36 students of law; of the total 76 were Hindus. In 1909 there were eight teachers of European origin and for some years the professor of Arabic was an European. Later the number of teachers who were not Indians was much reduced. In 1920 the college was created a university and an intermediate college was established for the first two years of the university course, following the recommendations of the Calcutta Commission. At the same time the non-cooperation movement caused trouble, resulting in the foundation of the National University; this was active for two years or so and existed in name for some time longer. Aligarh University continued to develop; in 1929 teachers of Yûnânl (Unani) medicine appeared on the staff, in 1932 the intermediate college was absorbed in the university and new laboratories opened; in 1934 a college of Yûnânl medicine was started and in 1938 an institute of technology and electrical engineering and a Yûnânl hospital were opened. Women were admitted to some degrees in the same year and later further concessions were made to them. In 1945 an agricultural college was opened and in 1947 the staff is found grouped in four faculties, arts, science, engineering and technology, and theology. The separation of Pakistan from India caused a great upheaval and many of the staff left but their places were filled, the university survived and still flourishes. Aligarh has always upheld the Muslim ideal of opening the road to education to the needy; it is to be feared that the pursuit of this ideal may clash with the purpose of a university. In the year 1946-7 there were 3806 students of whom 775 were graduates and 501 first degrees were given in the faculties of arts, science, commerce and engineering; in the following year the numbers were 4285, 1786 and 365.

ALIM, see ʿULAMA‘.

ALIMA, in the Egyptian dialect of Arabic ʿAlime, ʿAlima, plural ʿawalim, literally “a learned,
expert woman”, the name of a class of Egyptian female singers forming a sort of guild, according to the sources of the 16th and 19th centuries. They were engaged to perform in harems at celebrations of marriages or births, during Ramadán and on other occasions. Their art included the improvisation of poems of the mawal [q.v.] type, singing and dancing. They withdrew from Cairo during the French expedition. Well-informed travellers were careful to distinguish them from the ghawazi (sing. ghaziyya) who sang and danced primarily in the streets, making a speciality of lascivious dances and often becoming prostitutes (the most accurate descriptions are those of Savary, *Lettres sur l'Égypte*, Paris 1786, i, 149 ff., and Villoteau, *Description de l'Égypte*, Paris 1826, xiv, 169-82; useful information is contained in Sonnini, *Voyage dans la haute et basse Égypte*, Paris, year vii, ii 572 ff.; Chabrol in *Descr. de l'Égypte*, Paris 1826, xviii, i, 173 ff., 212 ff., 330; Lane, *Modern Egyptians*, London 1836-7, i, 226, 267; ii, 65 ff., 270 ff., Laerty-Hadji (Baron Taylor), *L'Égypte*, Paris 1856, 263-5. The Arabic word as recorded by the travellers appears in French, from the time of Savary (loc. cit.; cf. *Journal encyclopédique*, 1787, ii, 519 ff.), in the form aïmès, later aïmed, and in English (first recorded in 1814 by Byron, *Corson*, ii, 8) as alma or aïmeh. But Baedeker, *Egyptien*, Leipzig 1877, i, 25-6 states that aïwālim of the better class only survived in the harems of the most eminent houses; a debased type was frequently to be seen in the streets accompanied by one or two, usually blind, musicians. Travellers regularly confused the 'almas with the ghawāzī, who were however expelled from Cairo to Upper Egypt in 1834 by Muḥammad 'Aīl. All the latter were found in large numbers at Kena, Esna, Lukxor (Baedeker, *Egyptien*, Leipzig 1891, ii, 81 ff., 258). Flaubert in 1850 associated with them there, and refers to them as aïmès (Voy. en Orientis, Paris 1949, 63 ff.). Most of the aïwālim and ghawāzī held an annual reunion at Ṭantā on the occasion of the mawādir of Sīdī Ṭabdīl al-Badawl (Baedeker, loc. cit., i, 25, 245; cf., referring to the year 1865, A. Rhone, *L'Égypte à petites journées*, Paris 1877, 172-8, and as late as 1933, the parade of prostitutes, in J. W. McPherson, *The Moulids of Egypt*, Cairo 1941, 286.

**Bibliography:**

**ALINDJĀK or ALINDJA** (in Armenian Erniql), a district of the province Sjunik, now ruins within the Naghchėwan territory of the Azerbayčanian Soviet Socialist Republic. The river Alindja flows into the Araxes near Old Djiuva. The ancient fortress of Alindja stood some 20 km. above its estuary on the right bank of the river, on the top of an extremely steep mountain (near the village Khānāqā). The fortress played a considerable role at the Timūrid and Turkmân period.

**ALISA** (or ALYSA) b. Uγṣṭūr (or Yaghtūr), the biblical prophet Elisha. The Koran mentions him twice (vi, 86 and xxviii, 46, second Meccan period) together with other apostles of Allāh, without special comment. The Arabs have considered the first syllable as the article (discussion of variant readings in al-Ṭabari, *Ṭafsīr*, vii, 156 ff.). Muslim tradition identifies Alīsa with the son of the widow who sustained Elijah during the famine (1 Kings xvii, 9 ff.). This son, a paralytic, was cured by Ilyās (Elijah) and became his disciple, his companion and, eventually, his successor. Because of his parentage, some authors call him Ibn al-'Arūsī (son of the old woman), but others, including al-Ṭabari (loc. cit. and Annālīs, i, 535) give this sobriquet to Ḥazīf (Eskele). In traditional Muslim chronology, Alīsa is placed much earlier in date than Tālūṭ (Saul), and it is he who is said to have been evoked by the witch of Endor. His identification with one of the guardians of the Ark of the Covenant is a further detail derived from the history of Samuel. Some identify him with al-Khādīr [q.v.], or even with Dhu 'l-Kifl [q.v.], who is generally regarded as his successor.

(M. Seligsohn-G. Vajda)

**ALJAMIA**, Spanish transcription of the Arabic al-’adamiyya ("non-Arabic"), a term used by the Muslims of al-Andalus to denote the Romance dialects of their neighbours in the north of the Iberian peninsula—dialects soon coloured with Arabisms which, for the most part, were introduced from the 9th century by Mozarab emigrants who had settled in the Christian countries neighbouring the kingdom of Cordova. The Romance language, the use of which in al-Andalus by all classes of society, especially by the rural classes, alongside Spanish Arabic, has been established, was also called al-’adamiyya. It was only in the latter Middle Ages that the Spanish equivalent of this term, aljamià, acquired the particular meaning which is attributed to it to-day, namely: a Hispanic Romance language (Portuguese, Galician, Castilian, Aragonese or Catalan, depending on the district) written, not in Latin, but in Arabic characters. The literature in aljamià which has been preserved is therefore termed aljamiada.

This aljamiada literature, of which there exists a number of manuscripts, has been the subject of numerous studies in Spain itself, especially towards the end of the 19th century. It comprises in general works of a religious or legal nature in addition to poetical compositions, usually didactic in tone, and a few works of fiction in prose. In considering this literature, a distinction must be made between the works written in Spain itself, before the expulsion of the Moors by Philip III in 1609, and those, more numerous, written after that date, in particular by the Moorish communities established in Tunisia [see moriscos]. In the first group, the most important work, which apparently dates back to the 14th century, is the anonymous "Poem of Yüsuf"; R. Menéndez Pidal, who has edited and commented on this poem (*Poema de Yüsuf: materiales para su estudio*, in *Revista de Archivos, Bibliotecas y Museos*, VIII, Madrid 1902; new edition, Granada 1952), thinks it is the work of an Aragonese Morisco. It consists of a version in Spanish verse of Kūrān, xii (Sānār Yāsīm), embellished with elements borrowed from the Muslim "legends of the prophets". In the second group, the poetical compositions of another Aragonese Morisco, Muḥammad Rabaḍān, a native of Rueda de Jalón, deserve special mention; composed about 1603, they consist of strophic poems which narrate,
following in general Abu ’l-Hasan al-Basri, the various episodes of the sira of the Prophet. About the same period (beginning of the 17th century), an account of a pilgrimage to Arabia was composed, also in rhymed strophes, by a Morisco known as Albichite (al-
bdigd) of Puey Monzón. An anti-Christian polemical poem composed in 1627 by Juan Pérez, a Morisco from Alcalá de Henares, who had emigrated to Tunisia, and whose original name was Ibrahim Taybili, must also be mentioned.

Dating from the same period are the Muslim apologetics written in aljamiado, for instance that composed in 1615 by ’Abd al-Karim b. ’Ali Pérez. To this literature also belong some novelistic prose narratives concerning the Prophet or one of his Companions (for instance Tamlmites whom the Ghassanid king, al-Harith b. Djabala (ca. 529-569), had taken prisoner. Arab tradition connects Alkama with Imru’ al-Kays (d. ca. 540), with whom he is supposed to have fought and won a literary contest as a result of which Imru’ al-Kays divorced and Alkama married the umri Djundab. The style of their work would bear out the suggestion of some artistic association such as the anecdote implies. The oft-remarked similarities between ’Alkama, 1 (Ahlwardt), and Imru’ al-Kays, 4 (Ahlwardt), indicate a certain confusion of the two literary personalities on the part of the rubā‘. Already Ahlwardt, Bemerkungen, 68 ff., noted that in all likelihood ’Alkama’s is the older ode. ’Alkama shares with Imru’ al-Kays a predilection for the longer and more tranquil meters. Stylistic and thematic kinship justifies the grouping of the two poets together as representatives of a distinct “school”.

A certain enrichment of the techniques of description may possibly be traced to ’Alkama. The poems Ahlwardt, 8 and 12, are spurious, so the chronological conclusions which Nöldeke (Die Ghassanischen Fürsten aus dem Hause Gafna’s Abb. Akad. d. Wissensch. Berlin 1887, 36) and, following him, Breckelmann (1, 48) have based on them must be dismissed. The Arab critics include ’Alkama among the fuḥal or powerful poets (literally “stallions”).

Bibliography: The Diwan of ’Alkama was first published, together with a German translation, by A. Socin, Leipzig 1867, then the text alone, by Ahlwardt in the edition mentioned above; text with commentary by al-Ammar al-Shantamari, by Mohammed Ben Chenbeh (Algers 1925); further references: Aghaham, vii, 127-8; xxii, 171-5; de Slane, Le Diwan d’Amro ’l-Kais, Paris 1837, 80; Causin de Perceval, Essai sur l’histoire des Arabes, ii, 314; G. E. von Grunebaum, in Orientalia, 1939, 328-45. (G. E. von Grunebaum)

’ALKAMA B. ’ABADA AL-TAMIMI, surnamed al-Fahl, early Arab poet, was active in the first half of the 6th century. His poetry relates to the combats which took place between the Lakhmids and the Ghassanids; as the spokesman of his tribe he is reported to have obtained, by reciting a baṣīda (no. 2, ed. W. Ahlwardt, The Diwan of the six ancient Arabic poets, London 1890), the release of his brother Sāhi and the other Tamlmites whom the Ghassanid king, al-Hārīb b. Djabala (ca. 529-569), had taken prisoner. Arab tradition connects ’Alkama with Imru’ al-Kays (d. ca. 540), with whom he is supposed to have fought and won a literary contest as a result of which Imru’ al-Kays divorced and ’Alkama married the umri Djundab. The style of their work would bear out the suggestion of some artistic association such as the anecdote implies. The oft-remarked similarities between ’Alkama, 1 (Ahlwardt), and Imru’ al-Kays, 4 (Ahlwardt), indicate a certain confusion of the two literary personalities on the part of the rubā‘. Already Ahlwardt, Bemerkungen, 68 ff., noted that in all likelihood ’Alkama’s is the older ode. ’Alkama shares with Imru’ al-Kays a predilection for the longer and more tranquil meters. Stylistic and thematic kinship justifies the grouping of the two poets together as representatives of a distinct “school”. A certain enrichment of the techniques of description may possibly be traced to ’Alkama. The poems Ahlwardt, 8 and 12, are spurious, so the chronological conclusions which Nöldeke (Die Ghassanischen Fürsten aus dem Hause Gafna’s Abb. Akad. d. Wissensch. Berlin 1887, 36) and, following him, Breckelmann (1, 48) have based on them must be dismissed. The Arab critics include ’Alkama among the fuḥal or powerful poets (literally “stallions”).

AL-CALKAMI — ALLAH

varied from period to period throughout medieval and modern times: the western branch has finally been dominant, and the eastern merely a controlled canal, since the early 20th century; but al-

ALKAMMI, see AL-HINNA"

ALKANNA, see AL-HINNA"

ALKAS MIRZA (or ALKAS, ALKASP), second son of Shâh Isma'il I of the Safawi dynasty, and younger brother of Shâh Tahmâsp I. Born Tabriz 921/1515-6, he fought a successful action at Astarâbâd against the Uzbegs in 939/1532-3. In 945/1538-9 he subdued Shîrvân, and was made governor of that province by Tahmâsp. He rebelled soon afterwards, but was granted a conditional pardon through the intercession of his mother Khan Begl Khanum. At the instance of Tahmâsp, he fought an inconclusive campaign against the Circassians, but again rebelled, minting his own coinage and including his name in the khwba. In 953/1546-7 Tahmâsp launched his second Georgian expedition, and from Gandra dispatched 5000 men against Alkas. Alkas, worsted in several engagements, fled to Constantinople via the Kipîsk plain and the Crimean (954/1547-8).

He incited Sulaymân I to send another expedition against Persia, and in 955/1548-9 he was sent ahead of the main Ottoman army which advanced on Tabriz via Siwâs and Erzerum. The success of Tahmâsp's policy of laying waste the countryside obliged Sulaymân to retire from Tabriz after only five days. Alkas accompanied Sulaymân at the capture of the fortress of Wan, and interceded for the garrison. But he had fallen in Sulaymân's estimation because his presence in Persia had not evoked the support promised, and Sulaymân willingly agreed that Alkas should leave Bagdad and raid Persia with a force of irregulars (he refused to allow him any Janissaries). Alkas marched to Hamadân, where he destroyed the palace of his brother Bahârîm and captured his son Badi-al-Zamân Mirzá, and thence to Kum, Kâshân and Isfâhân. Then, instead of complying with Sulaymân's order to join him, he went on to Shohtâr, and sent a conciliatory letter to Tahmâsp. (Dhâ'l-Hidâdîa 955/January 1549). Proceeding towards Bagdad, he was opposed by Muhammad Pasha, Governor of Bagdad, and fled to Ardalan, where he was handed over to Tahmâsp by Surkhâb Beg, the ruler of Ardalan, on condition that his life was spared. According to Tahmâsp's own account, Alkas was imprisoned at Alamût, where he was killed a few days later, ostensibly as the result of a private feud, but probably with Tahmâsp's connivance.

ALLAH, God the Unique one, the Creator and Lord of the Judgment, polarizes the thought of Islam; He is the sole reason for its existence.

Allah was known to the pre-Islamic Arabs; he was one of the Meccan deities, possibly the supreme deity and certainly a creator-god (cf. Kur'ân, xiii, 16; xix, 61, 63; xxi, 25; xxviii, 38; xlii, 87). He was already known, by antonomasia, as the God, al-Ilâh (the most likely etymology; another suggestion is the Aramaic Alâhâ).—For Allah before Islam, as shown by archaeological sources and the Kur'ân, see lah.

But the vague notion of supreme (not sole) divinity, which Allâh seems to have connoted in Meccan religion, was to become both universal and transcendental; it was to be turned, by the Kur'anic preaching, into the affirmation of the Living God, the Exalted One.

I. ALLAH IN THE KUR'ÂN.

A Muslim tradition tells us that sûra xcvi was the first to "come down" to the Prophet Muhammad; so the mission entrusted to him was from the first the preaching of the Word of Allah ("Preach!"); xcvi, 1 and 3). Allâh, as is said to Muhammad in this first sûra, is thy Lord (rabbuka, xcvi, 1), Creator of man, the Very Generous, "Who teaches man that which he knew not" (xcvi, 3). The great Kur'anic leit-motiv, bismillâh al-Rahmân al-Rahîm, "in the name of God, the merciful Benefactor" (cf. R. Blachère's translation), opens the announcement of the imparted message and is repeated at the head of each sûra. It may be that it contains a reference to the Rahmân of pre-Islamic south Arabia, and that Rahmân should be taken as a divine proper name. The fact remains that the root RHM came to connote, in the course of the Islamic centuries, precisely the concept of benefaction, of clemency, of mercy, and that the expression rahmân Allâh, "God's mercy," was to become, in the spiritual writers, as it were an evocation of the mysterious profundities of divinity in its relations with man.—Hence, from the beginning of Muhammad's preaching, the affirmation of God, Allâh, as benefactor, creator, bountiful, imparting instruction to men through a messenger, of whom He was, in a special way, the Lord.

(A) The great themes.

From a historical point of view, we shall accept the distinctions generally admitted to exist (with some differences as to detail, see Nödeke, Grimmel, Blachère) between the three Meccan periods and the Medinan period, distinctions which roughly agree with some Muslim traditions (cf. Kur'ân). But although these various periods give us a multiplicity of perspectives and new flashes of illumination, there is strictly speaking no progressive revelation of Allâh. The Qur'ân is not a theological exposition of the existence, nature and attributes of God. Muslim faith has always regarded the text of the Qur'ân as God's Word made manifest to man, in which God says what He wishes about Himself. God is "the benefactor Who teaches the Preaching" (iv, 1-2), which is addressed to "the pious who believe in the Mystery (akbat)" (ii, 2-3).

God remains mysterious, unapproachable (xlii, 50-51). He is declared in His transcendent perfections and in His dealings with the world; and every action of the Almighty (af'dluha ta'dlu) is the restatement of the inscrutable mystery, for "the sight cannot perceive Him, while He can perceive the sight" (vi, 103).

Without a risk of breaking the very rhythm of sûras and verses, it is not easy to pick out, still less easy to classify, the themes concerning God. Three seem to us to predominate, but they must be taken as a whole.
1. God of creation, judgment and retribution. He is the "creator (khdlik) of all things" (xiii, 16). He is the absolute originator (kun) of all things, by His command (amr) and His will (fradar). The oldest sūras proclaim God's unlimited sovereignty (rubābiyya) over His creation, particularly His human creation, and His attributes of sovereign judge and king (mālik). The final challenge is given to minds and hearts by the news of the Judgment (yaum al-din; see all sūra lxvi) and the imminence of the Hour (lxxi, 56-57; lxv, 1, etc.), which is known to God alone (e.g. lxxix, 42-44; xlii, 85). The manner of this preaching may vary, but never its essential contents. For variations of theme relate less to God in Himself than to relations between God and the community of believers, depending on obstacles encountered or successive organisations. Thus, for example, the dichotomy of the Elect and the Damned (lxxxiv) at the end of the first Meccan period, and the Medinan leit-motiv of the "hypocrites" (munāfikûn) "whom God will mock" (ii, 15).—The Meccan sūras of the first two periods stress the eschatological advent of the Hour; in them, God appears essentially as the sovereign judge, by means of the rhythm and rapping-out of asseverations. At Medina the same mystery is as it were recalled; presented to the heart's recollection (dhikr), as a witness to the eschatological value of daily life itself, urging the Muslim, whether he be "believer" or "hypocrite", to be constantly mindful of the Hour, in his every action; therefore urging the "hypocrite" to the "return", to conversion.

The same variations and resumptions of a single theme recur in the presentation of the divine management of human history. The Medinese sūras relate in minute detail the story of Adam, proceed to the history of the prophets, from Noah to Jesus, and state what God's will is of the community of believers. But there it appears as a sequence of discontinuous interventions of the immutable decree (badr) of God, which, as the Meccan preaching had already said, encompasses all things, both in and out of time. For God is "the King of life and death" (xlv, 16); a theme constantly reverted to later, e.g. xv, 23; li, 258, etc.). From the very first sūras Noah is evoked (lxxi, 52), and Abraham and Moses (lxxx, 19; lxxi, 36-37), and the tribes of Thamūd (xci, 12 and 14; liii, 51, etc.). In the second Meccan period, God's plans for the Nations, for Thamūd and 'Ad, are mingled with intimations of the Judgment (cf. lxxix and lxxx); to the second and third Meccan periods belong the most fully developed accounts of the history of the prophets. Mixed with the theme of the judgment of peoples, that of the judgment of every individual human being is constantly stated.

2. God, Unique and One in Himself. In all of the earliest sūras, God is ūnā'ī Lord. Subsequently He is called Creator, Benefactor, Help, Judge. He is the Most High (lxxx, 1). He is given these names by virtue of those attributes of His godhead which have some connection with man. The particular attribute of His godhead in which the faith of Islam was to have its focus is first stated: the answer to man's errors and impieties: God the One.

Sūra lii, 39 and 43, contains a condemnation of the Meccans who have been accustomed to ascribe partners and daughters to Allah. For Allah is wūhīd, sole divinity. "Your God is One" (xxxvii, 4), the believers are told. The assertion is constantly repeated throughout the Book, constantly restated in the Medinan period (e.g. li, 126). It is the very core of the preaching concerning God: "It has been revealed to me only that your God is One God", Muhammad says again and again (e.g. xli, 6, etc.).

But in a verse of the first Meccan period is found what is perhaps a stronger affirmation that Allah is One in Himself. In relation to man, sole divinity, wūhīd; in Himself, One in His nature of deity, abīd (cxii, 1).—Sole and One, the two Names come together in the Unity, the launāk, and its absolute transcendence. Such is the meaning of the "witness" of Islam, the shahīdā. As early as that 73rd sūra, which, according to the traditions, gave rise to the conversion of Űmar, the assertion appears: "There is no divinity—save Him (humūn)" (lxix, 9). The second Meccan period proclaims: innā yuallāh-āli āl ibn Ma'dīn (xxvii, 4), that is, "I, I am God—there is no divinity save Me" (xx, 14), and that the mystery of this divine "I" is the Real (khākh, xx, 114; xviii, 44).—Lastly, the short sūra cxii, of uncertain date (referred to some in the Medinan period), is known as the sūra of Unity (launāk) par excellence: God Alone, the Master, not begetting and not begotten; without equal: an assertion of the unity of the divine nature as such, its intrinsic mystery unfathomed (cf. xcviii, 91).

3. God omnipotent and merciful. The twofold aspect of the mystery of God in relation to His creation: Lord of the worlds (lxxxiv, 29; a very frequent expression) in His unquestioned omnipotence and His forgiving benevolence, is found in all periods of the Qur'ān alike, with varying shades of expression and emphasis. The quality of omnipotence is the first enunciated. He is "the Lord of Easts and Wests" (lx, 49; cf. lix, 9); but it is precisely this which encourages the believer to see in Him a protector, a surety (wakil, xlii, 39 and 43), and that the mystery of this divine "I" is the Real (khākh, xx, 114; xviii, 44).—Lastly, the short sūra cxii, of uncertain date (referred to some in the Medinan period), is known as the sūra of Unity (launāk) par excellence: God Alone, the Master, not begetting and not begotten; without equal: an assertion of the unity of the divine nature as such, its intrinsic mystery unfathomed (cf. xcviii, 91).

The quality of omnipotence is the first enunciated. He is "the Lord of Easts and Wests" (lx, 49; cf. lix, 9); but it is precisely this which encourages the believer to see in Him a protector, a surety (wakil, xlii, 39 and 43), and that the mystery of this divine "I" is the Real (khākh, xx, 114; xviii, 44).—Lastly, the short sūra cxii, of uncertain date (referred to some in the Medinan period), is known as the sūra of Unity (launāk) par excellence: God Alone, the Master, not begetting and not begotten; without equal: an assertion of the unity of the divine nature as such, its intrinsic mystery unfathomed (cf. xcviii, 91).

(B) The Signs and Names of Allah.

Thus God, through His prophets, is continually revealing to man the unexpressed mystery of His
ineffability, in which man is asked to believe, and His explicit sovereignty over all creation, and the transcendental perfections by which it is made known. For He is at the same time “the First and the Last, the Manifest (āhir) and the Hidden (bātim)” (lvii 3).

In the first place, man, since he has received a revelation about them, must be able to recognize the “signs of the universe”, which are “signs of God” (dīwān Allāh). So wonderful indeed are the “unfailing” (lākum, 3-4) order and harmony of the world, that man is in danger of worshipping them. But he must recognize that there is nothing imperishable in this order and harmony. As happened to the prophet Ibrāhīm (Abraham); man’s reason, guided by God, must grasp, in the perishable and the mutable, the incontrovertible evidence for the necessary and transcendent existence of the Creator. “To reflect!”, “to reason about the signs of the universe”, is therefore a religious duty for man’s reason, imposed on it by the Qur’ān (ii, 118, 164; iii, 90; vi, 99; xii, 2-3; xxiv, 43-54, etc.). The Qur’ān also teaches it that God alone abides. “All perishes, save His Face” (xxviii, 88; cf. xxxix, 68; lv, 26-27, etc.). At the declared eschatological Hour, God, creator and therefore master of life and death, will annihilate all things, subsequently re-creating everything at the great Gathering (kāsr, i, 44; lix, 2). The wonderful order and harmony of the present cosmos are presented as an invitation to prostrate oneself before the Power Which creates and annihilates (xxxi, 15; xli, 37).

God’s perfections, which cause His transcendence to blaze forth in relation to this order of the world, are the same as those which God reveals. They are essentially the Names (āsma’), which He gives to Himself. “He has the most beautiful Names” (vii, 180; xvi, 110; xx, 8). Muslim piety has carefully picked out from the text of the Qur’ān, supplemented by tradition, the 99 “most beautiful Names” and has never ceased to memorize them and meditate on them. Without wishing to give here an exhaustive analysis of them (see complete list under AL-ĀSMA’), we may say that the following are the main themes which emerge (we shall confine ourselves to a single reference for each, generally the oldest):

God is One and Unique (cf. above), the Living, the Self-subsisting (al-bayy al-bayyûm, xx, 111), the Real, the Truth (al-ḥādî, xx, 114, frequent), the Sublime (al-qāsim, lix, 33, frequent), the High and Great (al-a‘āl al-khâlî, xxxi, 30), Light and “Light on Light” (nûr, nûr al-nâr, xxiv, 35), the Sage (al-hakîm, lxvi, 30, frequent), the Omnipotent (al-tasîn, lxxv, 8, frequent; kâdir, lxvii, 1, frequent), absolute Creator (bâ‘âdî, vi, 101), creating the world (khâlik, xi, 62), Who does not cease to create (khâlik, xxxvi, 81), Who is unlike all creation (“Naught is like unto Him” laya ha-mîglihî gâyî, xlii, 11), the Hearing, the Cleartighted, the Omniscient (al-sami‘, al-bâṣir, al-‘alim, e.g. xlii, 11-12, frequent), the Witness (gâhid, lxxv, 9, frequent), the Bountiful (al-wahâb, li, 58), the Benefactor (al-raḥmân, lxxvi, 37, very frequent), the Surety (al-mahîl, xiv, 19), the Protector (al-mukhlî, lxxiii, 9, frequent), the Generous (al-hartîm, lxxiv, 49), the Merciful (al-raḥîm, lii, 26, very frequent), the Forgiver (gâhûr, lxvi, 20, frequent) Who is everforgiving (gâhûr, xx, 64), the Compassionate (al-ra’îm, lii, 36), the Benevolent (al-naddî, lxxv, 14), the “Best of Judges” (khây al-ḥâkimîn, x, 109), Who punishes in all strictness and rewards in all fairness and forbearance.

A good many of these terms occur again and again. Stress may be laid on one or other of them, now in the Meccan period, now in the Medinan, but nearly all are at least recalled in sūras of both periods. Often the text proceeds by fulgurating affirmations, “with no hollow”, “facing” the believer, like God Himself (sama‘, cxii, 2); often too by allusive parables, which insist and “prove” by the literal veracity with which their parabolic mode of expression is then invested. A single example: the divine omniscience extends to the smallest action of the smallest created thing. These are the words employed: “No leaf falls but He knows it; there is no seed in the darkesses of the earth, no green shoot or dry but it is inscribed in the perspicuous Book” (vi, 59). Or again: “No female conceives or brings forth without His knowledge” (xxxiv, 11). The mind is thus powerfully disposed to recognize the full presence of God in every human deed, in every act of the human heart. He is the creator of every act, whatever it be (xxxvii, 96); He is, in a special way, close to the man He has created (cf. xxxiv, 50); He knows “that which his soul suggests to him”; He is “closer to him than his jugular vein” (i, 16).

(C) Two groups of verses.

Some remarks on two groups of verses which, in the course of the centuries, were to give rise to numerous controversies:

1. Retribution and the divine decree. God’s sovereign omnipotence becomes explicit in His wishes for the world. It is affirmed in His efficacious decree (bâ‘âd), and man, like all creatures, belongs to Him. But at the same time it is affirmed as the omnipotence of the just Judge. The equitable Rewarder, and man must know that every one of his acts will carry its own weight,—of recompense for the good, of punishment for the bad (e.g. ii, 286).

It has been too often and too readily stated that the Qur’ān contains a mass of “contradictory” verses. The truth is that there is no contradiction at all, but contrasted and complementary affirmations, with the aim of producing the required attitude towards God in the heart of man.

The divine omnipotence is indeed monolithic. “God has no account to render”, as Muslim tradition repeatedly says. But here we must be careful of the Qur’ānic manner of preaching. The Qur’ān poses neither the theological problem of predestination (it does not pose any problem), nor the philosophical problem of the nature of human freedom: it evokes the mystery of the relations between creature and Creator. Nor does it pose the problem of the nature of evil. “It is God Who has created you and all that you have done” (xxxvii, 96), an affirmation frequently applied later to every human act. Nevertheless, “every good which comes to you comes from God, every ill which comes to you comes from yourself” (iv, 79). There is nothing here to demand an acceptance of the positive nature of evil.

The verses of the Qur’ān tirelessly proclaim that nothing escapes God, His will and His power, and equally that God is the Bringer of retribution. In a way, the idea of retribution is even dominant. Reward is promised to the just, and punishment to “him who turns away” (cxii, 16). The damned are those “who refuse the help” of God (evil, 2). —In his Index, R. Blaché, (iii, 122) notices between two and three hundred passages which promise retribution in the measure of one’s works. On the Day of Judgment, every soul will be judged
by what it has acquired (xl, 17): "whoever has done
an atom's weight of good shall see it; whoever has
done an atom's weight of evil shall see it" (xxix, 7-8).

The necessity of "doing good", of "ordering what is
right" (al-amr bi 'l-ma'ruf) and "forbidding what is
wrong" (al-nahy 'an al-munkar) is one of the first
commands; the very first, one might say, since the pre-
eminently good act is the declaration of faith in the
One, the sincere sifam. This command is not
addressed only to each man, but, in precise terms, to
the community of believers as such (iii, 104, 110, etc.).

On the temporal plane of the fulfilment of the divine
decrees in the contingent world, man is recompensed
according to his works and his deserts.

But on the intemporal plane of the immutable
decrees, a shift of perspective occurs. Nothing can
have any effect on God's Will (islam) or on His Command (amr). The elect are the chosen of God.

"He bestows His favour on whomsoever He wishes" (iii, 73-74; v, 54; vii, 21; xiii, 41); it is He "Who
brings low and raises up" (iii, 25). And the great
guaranty: "He turns astray whom He wishes, and
guides whom He wishes" (xiv, 4; xvi, 93; xxxv, 8;
vi, 39, 125)—and He whom God sends astray can
have neither surety nor guide (xvii, 97; xviii, 17;
xxxix, 29, 37; vii, 186; xiii, 33). Twice there occurs
this image of specifically Semitic construction, so
close to Isaiah vi, 9-10: "We have placed veils over
their hearts, that they may not understand, and a
dullness into their ears" (Kur'ân, xviii, 57); and "he
whom God, knowingly, has sent astray, whose
hearing and whose heart He has sealed, and on
whose eyes He has set a blindfold..." (xiv, 23).

The first of these two texts (xviii, 57) in fact throws into sharp relief which
seals hearing and heart, and the wrongness of the
one who has turned away from the signs of the Lord.
The second (xiv, 23), closes with a summons to
reform. Verse xiv, 19, states that the wrongdoers are
left to themselves ("they have no patrons but
themselves"), while God is the patron of the right-
teous: thus according with iv, 79, quoted above.

The responsibility of man, the omnipotence and
the peremptory decrees of God: these two lines of
thought combine in the ultimate affirmation of the
Judgment. This way of access to the mystery was
one which presented itself most forcefully to Muslim
speculation in later ages.

2. Anthropomorphic verses. The other group of
verses is one whose picturesque style, if taken
absolutely literally, would seem to ascribe human
attributes or acts to God. These are the mutagâbih,
"ambiguous", verses, as distinct from the mukham
verses, whose sense is clearly established.—Thus:
God dwells on His throne (xx, 5; lvii, 4, etc.); He
comes" (movement in place, lxxxix, 22); the hand of
God (xlvii, 10; li, 47); His face (e.g. iv, 27); His
eyes (xi, 37; lii, 48; liv, 14) etc. Our reason for noting
these texts is that they were later the object of
exegetical and theological dispute.

(D) Conclusion.

The Kur'ânic preaching about God is entirely
centred on its affirmations of Oneness and Unity,
of transcendence and subsistence, of absolute per-
fections. The forbidding inaccessibility of the divine
nature is resolutely maintained; God, omniscient and
"near", can be known only by His Word, by the
Names, the attributes and acts of His paramount
Sovereignty, which He Himself reveals.

It is indeed in His Sovereignty over every creature
that Allâh is manifested. The attributes of omni-
science and omnipotence relate to God's outward-
directed knowledge and power. The declaration of
Oneness pertains to the oneness of the divine nature,
the godhead as such. God in Himself remains the
unexpressed mystery, shayb.

For Islam, the name Allâh is indeed, as Macdonald
said (EI), the proper name of God; in that it
expresses the sole and incomunicable godhead.

Ought one to describe the God of this preaching as
a personal God? This question has no place among
the problems of Muslim theologians. It is weightily
posed by the speculations of western students of
Islam (cf. Macdonald's article, quoted above, in
which he speaks of the "overwhelming personality"
of Allâh): God, personal because living, creating,
acting on the world, speaking to men. But never
can Islam say that Allâh is shakk or shakhs. They
shrink from the assertion made by western scholars;
indeed, they take positive exception to it. There is
a twofold misunderstanding here. (a) Vocabulary.
Shakhs has not undergone, in philosophical Arabic,
the same shift as the Greek sotótauç or the Latin
persona. Shakhs always connotes the individual
silhouette. There is no better term for the concept of
"person"; moreover, it is well suited to the created
person, but suggests a limiting individualization.

(b) The very concept as applied to God: generally, the
Muslim will feel loth to tramnel with it the inacces-
sibility of the divine nature.

But the misunderstanding disappears if we make
it plain that "personal God" implies, in the Indo-
European languages, an absolute perfection: God,
subsisting in Himself, incomunicable in His purpose
of godhead. God, personal because perfect and the
source of perfection, infinitely distinct from every
creature, and the object of faith and worship. Now
this is precisely what the Kur'ân teaches. If it leaves
God's inmost Life in its own mystery, it is so as to
insist on the Word communicated to man through the
prophets, and on the inner attitude demanded of the
believer.—God, sovereign Judge, just and terrible
gubhrâr, lix, 23), is also, by the same token,
protecting, beneficent, merciful. Faced with the incom-
nunicable mystery, the Kur'ân demands of the
believer, in respect of Allâh, reverent fear (tafâwu,
ix, 109) and, at the same time, piety (birr), the act
of which is the same as the act of reverent fear (ii,
189), gratitude (gãdhr; in the verbal form: "you may
perchance be grateful!", as the Book often says,
especially in the Medinan period), confidence
(faâvakul; frequently in the verbal form: "have
confidence in God!", e.g. iv, 81).

The "God-fearing" of the Kur'ân bow down before
the inscrutable omnipotence. For the damned
alone, i.e., "those who have rebelled" (lxxix, 37),
this fear becomes dread of punishment (cf. lxxv
25). The chosen "those who believe in the Mystery,
perform the prayer, and give [in alms] of their goods"
(ii, 3), those "who seek after His face", to use the
beautiful expression so often employed (e.g. xclii, 20);
find in Him their protector (wâklil) and guide (hidâli);
they find with Him the supreme Refuge (ma'râb, e.g.
iii, 14; lxviii, 39).

II. THE DEVELOPMENT IN TRADITION AND KALâm.

*In section iii we shall sketch the most notable
attitudes of the Muslim schools to what we are
now to call the "Mystery of God", in order to
prepare ourselves to the body of problems and the axiology of Sunnite theology.

The traditional science which deals with divine
matters is the 'ilm al-kalâm or 'ilm al-tawfyld,
roughly "theology" or "defensive apology" (see below}
for certain criticisms raised in Islam against its legitimacy. We shall take it in its established form, assuming a knowledge of its historical origins, the influences it underwent, the formation of the various schools (see KALÂM). A reminder: 1) under the Umayyads: the Murji’ites, Kadaries, Diabârites; 2) the Mu’tazilites, originally political (1st/7th century), then doctrinal (2nd/3rd/-8th/-9th centuries), who triumphed under Mamun but were subsequently regarded as “heterodox” for centuries; 3) from the 4th/10th century onward, the official Ash’arites and Hanafite-Muturidite lines.—

The conclusions vary with the diverse attitudes towards the relation of reason (‘âbî) and the Law (âshâ), or of reason (‘âbî) and tradition (naštî, tâkhîdî), or of rational (‘âbî) and authoritarian (samâ’î) proofs.

The šûm al-kalâm came to sustain itself by means of two other “religious sciences”: 1) the science of hadîth provided texts regarded as authoritative proofs, which took up one theme or another of the Kur’ânic teaching, in a picturesque, even mythical, manner (cf. the six “authentic” collections, saštî, particularly the khuds al-tauhîdî of Bukhârî’s corpus). Numerous traditions relate, on the one hand, to God’s mercy and forgiveness (e.g. “My mercy outweighs My wrath or takes precedence of it”, Bukhârî, Taftazân, 169, 173); on the other hand, to His absolute kingship (“I am the King; where are the kings of the earth?”, id., 167, 181); on the one hand, to human responsibility (texts in Bukhârî or Muslim, chap. Kadar), on the other hand, to the preordaining decree (e.g. these oft-quoted hadîths: “All the hearts of mankind are like one single heart between two of the fingers of the Merciful”, and: “Praise for heaven, and I care not; those for hell, and I care not”). Many hadîths had great influence on the formation of current notions and the popular attitude concerning God.

2) The science of tafsîr, or exegetic interpretation, played a leading part in the use and understanding of those Kur’ânic verses which speak of God, particularly the anthropomorphic passages.

Hadîth and tafsîr were employed in various ways by the schools of kalâm.

If we refer to the problems of the kalâm (which is, in its essentials, of Mu’tazilite origin), we find two great principles directly concerning God: 1) the principle of tawbîh or divine unity; 2) the principle of ‘âdl, of the justice of God in connection with the requisit of human actions. As against the “free-thinkers” of their day, the Mu’tazilites had presented themselves as “the people of unity and justice”, ahd al-tauhîd wa l-‘âdl. These problems continued to inspire later schools. Only their titles changed. The great classic manuals of the Ash’arites and Mâturidites (e.g. Šârîf al-Mawdûfî of Dîrîjânî, Muhâdîdî of Taftazânî, etc.) called the first principle mawjûd Allâh wa mîfâdhuhu (“the existence and attributes of God”), and the second afîlahu ta’allâ (“the actions of the Exalted One”). Here are the main questions raised in connection with both.

(A) Ta’wbîh.

1. The Existence of God (wujûd Allâh).

All schools agree in quoting those Kur’ânic verses (cf. above) which bid the reason to “reflect on the signs of the universe”, and to rise thereby to the affirmation of the Creator. But: (a) according to the Mu’tazilites, there is involved in this an obligation inherent in the nature of reason, prior to the promulgation of the Law; (b) according to the Mâturidites, reason should, by rights, have been able to arrive to the knowledge of its Creator, but was actually brought to it by the promulgation of the Law; (c) for the Ash’arites, the employment of the reason and of reasoning in order to rise to God is a purely legal (revealed) obligation. Cf. al-Dîrîjânî, Šârîf al-Mawdûfî, Cairo 1345/1907, i, 251 ff. In other words: if the Law had not laid down the obligation, human reason could never have attained to the existence of God (cf. al-Qâzîzî, al-Îlîkhîdî, Cairo, n.d., 77-8). The affirmation of the existence of God, for the Ash’arite school as a whole, is therefore the result of a rational (‘âbî) argument, prescribed by an argument of authority (here, šârîf).

Whatever the nature of this obligation, the schools are as one with regard to the rational argument itself. What is involved is a proof of the existence of God a novitate mundi, linked with the entirely contingent and perishable character of the world, as the Kur’ân teaches and reason can convince itself. For the kalâm, the temporal beginning and end of the world are demonstrable truths. There is then an inference (istidâl) which proceeds, with no universal middle term, from this utter inadequacy of the created to the necessary (wujûdî) existence of the Creator. Who alone exists from all eternity and alone is self-subsisting (truths taught by the Kur’ân and also accessible to the reason, ʿâbîyyât). This inference, in the early days of the kalâm (Mu’tazilites as well as Ash’arites) was set out as a piece of reasoning in two terms. Among the later mutakallimûn, more directly imbued with the Aristotelian logic, it frequently took the shape of a syllogistic deduction (both forms are found in al-Dîrîjânî). The argument is given in all the manuals as a “decisive” (ka’fî) proof. Only rarely, under influences proceeding from the falsafa, does it take the form of the proof a contingentia mundi in the strict sense. The world is mukâdîth, and in the treatises of kalâm this term stays very close to its etymological sense of “begun” in time (see the works of Wensinck and S. de Beaurecueil, cited in the bibliography, on the proofs of the existence of God).

2. The Attributes of God (ṣifât Allâh).

(a) Relations between essence and attributes. This was one of the most controversial topics. Some old traditionists held fast to the letter of the texts and set themselves against all research that might be called rational. Their opponents, exaggerating the rigidity of the position they were attacking, called them mujâfassins ("corporalists", who give bodily attributes to God), or again, contemptuously, baskhwyya. They accused them of tâkhîb: comparing God to the created.

In their anxiety to purify the concept of tawbîh, the Mu’tazilites extolled, on the contrary, tansîh, "withdrawal", the via remotionis which they applied with extreme rigour: one must deny God every created thing, as the Kur’ân commands. The Djahmites, disciples of the Diabârite Dîjâm b. Safwân, had practically denied the existence of the attributes, God being known only as an inscrutable omnipotence. The Mu’tazilite tansîh, on the other hand, took the theistic standpoint of a ruling God. They recognized the divine attributes of knowledge, power, speech, etc., but asserted that they were "identical with the essence", a distinction which was, for them, hardly more than nominal.

The "orthodox" schools likewise practised tansîh, i.e., they denied God any resemblance to anything:
He is neither body nor substance (dsnhar, in the sense of bounded substance) nor accidents, nor is He localized, etc. (It must be noted that the Karrâmites had recognized God as substance, by which they understood self-existent).—The Aṣḥarite reform, in the name of the “golden mean”, held itself equally aloof from the Muʿtazilite tendency to prove everything rationally, and from the literalism of the madhâessima. This was the famous principle bllk hayy wa lâ tasakhk, “without ‘how’ or comparison”. It accused the Muʿtazilite tansik of amounting to the same as tafsîl, diverting the attributes of all reality and making of God no more than an empty concept. The Aṣḥarites, for their part, while recognizing the entire reality of the attributes, since the Kurâns informs us of them, yet affirmed that this reality can in no way compromise the perfect divine Unity. Simultaneously opposing Muʿtazilites and halâshî, and following al-Ghazzâlî, they later arrived at this approximation: “the attributes subsist in the divine essence; they are not God and are nothing other than He”.

A kindred solution was advanced by certain Aṣḥarites who remained faithful to the conceptualist theory of “modes” (aḥwâl) of the Muʿtazilite Abû al-Hâmid al-Qûrânî e.g. al-Djuwaylî (8th/14th century): on this point the so-called “modern” school (6th/12th-13th century) of FâhÎr al-Dîn al-Râzî, Djurjânî, etc. was at variance with him. The “mode” (bîl) is an attribute which is attached to an existing thing but is itself qualified neither by existence nor non-existence: that is how the relation between the divine essence and the attributes is to be understood.

This difficult theological problem was served by a philosophical instrument which put on striving to improve itself, and making progress, though not without occasionally stumbling. Thus, at the beginning of the Ḥanafite-Mâturîdite line, we find in the Fîkh Akbar II (text of the time of Aṣḥarî, that God is a “thing” (dâyî). Much though this statement might later be ridiculed by some of the muštaḥallîmus, influenced by Greek thought, as used by the ancients it is clearly to be taken in the sense of “existing reality”: “Allâh is thing, not as other things but in the sense of positive existence” (Fîkh Akbar II, Art. 4; cf. Wensinck, Musulîm Creed, Cambridge 1935, 190). It was in this same sense that the term “body” or “bodily substance” (dsâm) was used in speaking of God; this practice of certain Karrâmites and Ḥanbalites was noted by Macdonald (EI).

The Mâturîdites on the whole preferred not to distinguish God’s attributes from Himself but to say: “God is knowing and has a knowledge which is attributed to Him in the sense of eternity”, etc., thus laying stress on the divine Names (the Knowing, Willing, Powerful, Speaking, etc.).

(b) List of attributes. The guiding principle was to affirm no attribute not expressly indicated in the Kurâns: the principle of tâsafîl, “leaving it to God” to elucidate through scripture. The majority of the doctors of halâm, however, considered that it was not being false to the text to pass from the present participle, for example, to the noun, in accordance with the laws of language. Thus there evolved, in the course of the centuries, a list of attributes, enumerated in no particular order, to begin with (so in the Ibâns of al-Aṣḥârî, and then, especially from al-Djuwaylî (8th/14th century): on this order adopted, indeed the appellations themselves, vary with the different schools (cf. Şîfa). To adhere to one commonly-held view, we offer the following list: (1) attribute of essence (sîfât al-dhâli), existence: in the case of God, not distinguished from essence; (2) “essential” (dhâli or naṣîf) attributes, which sometimes divided into (a)’negative’ attributes which emphasize the divine transcendence: eternity (hidâm), permanence (bâkî), dissimilarity to the created (al-mukhâala li l-lahwadîl), self-subistence (ïyâm bi l-naṣîf)—and (b) maʿâni attributes, “adding a concept to the essence”: power (kudr), knowledge (‘ilm), life (hayâ), speech (halâm), hearing (sam), sight (bâs), perception (irdrâ: some denied that this was an attribute); (3) attributes of “qualification” (maʿnawiyya), the maʿâni attributes taken verbally: having power, willing, knowing . . .; (4) attributes of action (sîfât al-aẓâl), designating not an intrinsic quality but a “possibility” of God, which God may or may not do: visibility (ruʿyat Allâh), creation (qalb), actual creation of the contingent world (the Mâturîdite tawwâbin), command (amr), decree and predetermination (kadar and baqâ), whose relations with the divine knowledge and will vary according to the school, consent (ridâ: especially in Mâturîdism), etc.

The Aṣḥarîtes and Mâturîdites agree in taking the maʿâni attributes as eternal, even if their object is contingent; against the Muʿtazilites who maintained, for example (school of Başra), that God has a “contingent” knowledge, with a beginning, of free human acts. On the other hand, Aṣḥarîtes and Mâturîdites diverge over the “eternal” or “begun” character of the attributes of action: the Mâturîdites generally regard them as eternal.

All but four of the attributes depend on the ʿâkhîyya: they are taught by the Kurâns but human reason can “prove” them. The other four, visibility, speech, hearing and sight (“perception” is sometimes included), depend on the samʿiyyya and are knowable only because they have been revealed.

(c) Two controversial attributes. The “vision of God” (attribute of visibility) and Speech were hotly debated.

The vision of God (ruʿyat Allâh) is understood as being through the eyesight, bi l-ʿaṣbâr. The pious traditionists accepted it absolutely, interpreting in this sense Kurâns, lxxv, 22-23, and numerous ḥadîths. The Muʿtazilites denied it no less absolutely, interpreting the Kurânsic text by a philological tâsafîl (cf. below). Aṣḥarîtes and Ḥanafite-Mâturîdites upheld the vision of God, but emphasizing the bllk hayy: every man will see God with his eyesight on the Day of Judgment, the elect will see Him (transiently) in Paradise,—but they will not see Him as one sees an object spatially situated and limited, and it is impossible to specify the manner of this vision (Ibâns, Cairo 1348 h., 14, Fîkh Akbar II, 17).

The “traditional” (samʾ) attribute of Speech is of major importance, since by means of it God manifests Himself to men. The Muʿtazilites, precisely because of this manifesting in time, made of it a contingent “created” Speech (whence the thesis of the created, mâḥkâh, Kurâns). The Kurâns is the Speech of God, but the latter is contingent. The Aṣḥarîtes, taking up that great affirmation which had earned Ibn Ḥanbal imprisonment and flogging, saw in it essential (naṣîf) Speech, subsisting by the very existence of God. Hence the thesis of the “uncreated Kurâns” (gâyîr mâḥkâh, Ibâns, 20-22). But the school distinguished between those who maintained, and its “created” expression: the Book and its recitation by human lips. In the 8/14th century, Ibn Taymiyya, meditating on and reviving the faith of the “pious ancients” (salaf), found Muʿtazilites and Aṣḥarîtes equally
wanting: he reaffirmed the essential Speech of God, which expresses Him and subsists in Him, and declared that this Speech, in its mystery, is Torah, Gospel, Qur'an (Falsūd, Cairo 1329 b., v. 265-7).

The veneration of the Qur'ānic text, coupled with the inscrutable mystery of the One God, soon confronted Muslims thought with the case of the "ambiguous" anthropomorphic (mutazāhībī) verses, which apparently likened God to the created. Are they to be accepted in pure faith, or should they be interpreted (ta'wil) by exegesis (tafsīr)?

(a) The ancient traditionists took these verses at their face value. But it would be idle to bring against them an unqualified accusation of "corporate realism", as their opponents did. The Ashʿarīites themselves declared valid the attitude of the "ancients" who, eschewing all taʿwil or interpretation, took refuge in the taṣīfī or committal to God. God sits on His Throne (istiwāʿ), descends towards the earth, has eyes, has a hand, because the text says so. But no one knows the acceptation given by God to these terms: this attitude was attributed to Mālik b. Anas in particular. It is hardly necessary to add that an attitude like this became "corporate" only insofar as it tried to conceptualize itself and to justify itself discursively, but not insofar as it interiorized itself in adherence to faith.

(b) But the Muʿtazilites, for their part, wished to justify dialectically the Muslim notion of God, in face of the Greek-inspired "God of the philosophers". On the one hand the emphasis placed on the Oneness of God, on the other their confidence in the rational criterion (miẓān ʿaḥāl), led the Muʿtazilites to an extreme use of taʿwil. Their representative in taṣīfī was al-Zamakhshāri, who adopted for his own purposes the philological method of al-Ṭabarī. In this way "shining countenances, looking at their Lord" became, as al-Djubbātī suggested, "beautiful countenances, aspiring to the bounty of their Lord": the vision of God could be denied because He is so obliged, but because He does it. For them, the anthropomorphic (madjādā) metaphor, which act efficaciously on their effects, causes (aṣbāb) which act efficaciously on their effects, and there is a good and an evil (literally beautiful, ugly, ḥasan, ḥabīb) in the nature of things, prior to the elucidation brought by the revealed Law (sharīʿ).

God is bound to do the best (aṣlāb). He does not want evil and does not order it; His will (irḍā) and His command (amr) are identical. Evil is created by man, just as he creates the moral denominations of his acts, since he creates (khalika) all his actions, good and bad.—The two Muʿtazilite groups, of Baṣra and Kūfah, parted company over the concept of the "best" which God always accomplishes, and over its extension.

2. The Ashʿarite school revolted against this attempt at "justifying" God. God "does not come within the grasp of the intellect". He is the just Judge because He does what He wishes. "No obligation for God". What He does is the best, not because He is so obliged, but because He does it. Moral good and evil have no existence prior to the positive divine Law. "If God were to reverse the decision, and to declare good (ḥasan) what He has declared bad (ḥabīb), and bad what He has declared good, there would be no impediment" (al-Djurjānī, Sharḥ al-Mawākiḥī, viii, 182).—Al-Ghazzālī and al-Rāzī, it is true, recognize a "rational" (šakīl) meaning in the "beautiful good" and the "ugly-evil": only on the plane of being, for al-Rāzī (Makāṣṣal, Cairo n.d., 147; Ksāb al-ʿArbaʿīn, Cairo 1335 b., 249); on the plane of the sensible qualities inherent in things, for al-Ghazzālī (Iʿtiṣād, Cairo n.d., 67).

And God, as the Qurʾān says, "guides whom He wishes, turns astray whom He wishes". Everything is fixed by His predetermination (kādir), according to His eternal Will (irḍā), encompassing in its generality the totality of things,—while His decree (kādir), existentialized by His command (amr), is
an “attribute of contingent action”, particularizing in time that which are “begun”, as they pass from non-being to being. As al-Djurjani says (Ta’rīfāt, ed. Flügel, 1845, 181), “kadar is the relation of the essential Will to things in their individual realization”; and again: “Kadar: the passing of possible from non-being into being, one by one, in conformity with kada”. Kada is of the order of pre-foreknowing (azal). Kadar depends on the present order of things (ibid.). It follows that one must distinguish between irdanu and amr; it is the latter which is directly linked with man’s obedience. God wishes the imperity of the infidel and creates it in him, yet commands him to believe.

For man’s “free” action, his iktisāb, is only a special case of more general principles. God is the creator of human acts, whatever they be. The text “God is creator of all that you do” is interpreted in the sense of a creation ex nihilo. True, man has a feeling of his own responsibility. This means that God sets down to his merit or demerit the actions he performs, as the Kur’ān expressly states, and that he rewards or punishes him, as promised. Man receives the “acquisition”, the attribution of his acts (kasb, iktisāb: cf. Kur’ān, ii, 281; lii, 21, etc.). At the end of the last century, Bāḏūrī found this formula necessary: “man is a bound-being, in the shape of a free being” (Hābikya ‘ala ‘l-Dīwānhara, Cairo 1352/1934, 62). On the empirical level, man must therefore continue to act as though he were free. But he must know that everything comes to him from God. If he acts well, it is because God in His Mercy has so decreed; if he acts badly, it is because God has so willed in His justice.

This negation of ontological liberty accords with the negation of the efficacy of the second causes (asbāb): as against the “reprehensible innovation” (bid’a) of the Mu’tazilite thesis (efficacy of the asbāb, according to a “power” created by God), and against the absolute determinism of the causes (“cause” here rendered by ‘ilā) taught in the falsafa, a thesis tainted with kufr (impiety). (Cf. al-Sanūsī, Muḥaddidīn, Algiers 1908, 108-109; al-Bāḏūrī, op. cit., 50.)—For the Ash‘arites, there is nothing efficacious about the second causes, because there is no conservation in being, on the part of God. There are discontinuous series of instantaneous creations, temporal existentializations of the eternal kada. At every instant (masbī), God creates and re-creates the world and the imperfectly whole, extrinsically unified, which is man, and every act of man. The world of “free” acts, as well as the cosmos in its entirety, is a discontinuous sequence of inscrutable divine decrees. The “causes” are but the channels, the tokens, of this divine Will, and the “laws” are a “custom of God” (sunnat Allāh; the expression is still found in Muhammad “Abduh, Risdlat al-Tawfaq, Cairo 1355, 7). It is a custom which God can always modify. For example, when He decides to give proof, by miracles (muṣṣalāt), of the mission of His prophets.

For most of the Ash‘arites, though by no means all, there is an atomistic cosmology corresponding to the discontinuous view of things. Everything is but a concourse of atoms (muhhā, bāharr), connected, disconnected, reunited, by divine decree. If it is true that al-Bāḵūli (4th/10th century) declared atomism to be “coessential” (Masqīgīn) with the Kur’ānic dogmas, it would, in our opinion, be going too far to see in this the pre-eminent characteristic aspect of Ash‘arism, still more of all “orthodox” Muslim theology. This physico-theological atomism is actually of Mu’tazilite origin (Abu ‘l-Hādiyyah; cf. studies by Horten and S. Fines), and matched well then with the ιδρος, the “power” which man was recognized as having over his acts. An impressive line of Ash‘arites, al-Bāḵūli (11th), al-Djurjānī (with some modifications), the “frozen conservatism” of such men as al-Sanūsī, al-Lākānī and al-Bāḏūrī, remained faithful to the occasionalist atomism as being the most favoured explanation of the divine omnipotence over the world. But another line, influenced to some small extent by the disputed theses of the falsafa, passed over it in silence (al-Ḡizzālī, Faḵhr al-Dīn al-Rāzī) or greatly modified it (al-Ǧāhristānī), although still affirming the usual theses on God’s kada and kadar and the simple human iktisāb.

3. Some Māturidites (Abū Ḥafṣ al-Nasafī, al-Tafṣārī) were atomists. But we wish to lay particular emphasis on the more directly psychological aspect in which the Ḥanafite-Māturidite school as a whole regarded the relations between the divine decree and human freedom. From the first, kada and kada were no longer related to the divine Will, but to the divine Knowledge—and, counter to the Ash‘arites, it was kada that was to be eternal, while kada was connected with existentialization in time. Kadar was therefore an eternal foreknowledge whereby God knows, from all eternity, the beautiful (good), ugly (bad) or harmful qualities of His creatures, while kada was God’s existentialization of these same things, created with wisdom and perfection (cf. ‘Abd al-Raḥīm b. ‘All, Naṣm al-Farā'id, 2nd ed., Cairo n.d., 28-30; and al-Bāḏūrī, Dīwānhara, 66).

For the majority of the Māturidites, there exists in things a “rational” (beautiful) and a “natural” (ugly), on the plane of being, not directly on the moral plane (a thesis already noted in connection with the Ash‘arite al-Rāzī). On the moral plane, it is God Who directly creates the basis (asl) of man’s “free” actions, but it is man’s power which makes their qualification (ṣifā) good or bad. (It should be noted that al-Rāzī, Kāhāh al-Arbaʿ, 227, and al-Djurjānī, Sharḥ al-Musabī, viii, 147, ascribes this thesis, whose tenor is Māturidite, to al-Bāḵūli, although all that happens is willed by God; but only the good depends on His consent (ridā). God is not bound, just as the Muṭāzilites say; His action is not just because He wishes it, as the Ash‘arites say: He is above all justice by reason of His knowledge and wisdom. He is unable not to be just.

4. We have no need to follow here the abundant efforts of the doctors of the kalām to strengthen their arguments and to resolve the objections that were constantly cropping up. Those who were not satisfied with the Ash‘arite theory of kasb, of acts imposed from outside, undertook more recondite analyses: thus we have the theory (common to Ash‘arites and Māturidites) of istifā'a (g.v.) or “capacity” [for an act], created by God previously or simultaneously (cf. al-Diwaynī, Irshād, ed. Luciani, 1938, 122/1938, 225/201; al-Djurjānī, Ta’rīfāt, 18, etc.); the theory of tawwīḍ or tawallud (g.v.), which explains the “generation” of the transitive act by the divine occasionalism; and the theory of tawfīk (g.v.) or “facilitation” of acts, especially of good acts, faith and obedience, which is created in man by the divine favour (lutf), and its (positive) opposite, khiddīlān or divine “abandonment” (“creation in man of the power to disobey”), according to a definition by the Māturidite al-Taftāzānī, Maṣbāḥāt, Istanbul ed., 188), etc.
We can see that these efforts of minute analysis, applied to problems of great complexity, may well have looked like disheartening intellectual games, to those who wished to remain true to the sense of mystery of the “pious ancestors,” and who refused to “prove dogma” (cf. al-Djurjānī, Shahr al-Mawābī, I, 34-35) as the later Aṣḥā’:arites aspired to doing. The kalām had its greatest opponents (apart from the jāla’i’i opposition) in the Ḥanbalite and Zāhīrite systems of thought, which were wedded to tradition and mistrustful of the use of reason in matters of faith. Al-Ghazzālī too was very severe with the kalām, on occasion. Yet it is sometimes among these opponents that we find the most pertinent bases of analysis of the relations between the free act and the divine omnipotence.

Thus Ibn Ḥazm (4th/10th-11th century) the Zāhīrite, who denied any criteriological capacity to the reason (one can speak of Ibn Ḥazm’s “nominalism”, but it is a nominalism centred on the effective value of language and its internal laws), and who meant to hold fast to the precise declarations of the scriptures: he rejected the Aṣḥā’ite kābīb, since the texts, he said (Fisāq, Cairo 1347 h., iii, 48) allow neither a “creation” by man of his acts (Mu’tazilīte) nor an “acquisition” conferred by God (Aṣḥā’ite); but his whole refutation, highly discursive, of the opposing theories (id., 51-54) is pertinently developed; while a valuable personal solution is outlined in connection with šiti’ā’i (id., 21-26 and 31).

Al-Ghazzālī, not indeed the Ghazzālī of the Iḥṣā’i, who confines himself to presenting or rather to improving the theses of the Aṣḥā’ites, minimizing, moreover, the scope of the kalām (7-8), but the al-Ghazzālī of the Tahdhīḥ and, above all, of the Iḥyā’ (Cairo 1352/1933, iv, 219) carries out an extremely shrewd psychological analysis on the subject of “choice” and the relations of intellect and will in the free act. He defends an irrational concept of freedom and maintains that God alone, Who acts without motive (gḥayr gharād) is totally free, with a freedom conceived as a free human choice raised to the power of infinity. What the muṭakāhlīmūn called kābīb is an “intermediate stage” (Iḥyā’, iv, 220) which is not at all a participation in the divine freedom. Man acts of necessity, in the sense that everything which happens in him comes not from him but from Another; he acts by free choice, in the sense that he is the place (makhall) of the free act, which operates inevitably in him after the decision of the intellect, this last being only a matter of form. And al-Ghazzālī propounds this formula, which it would be well not to interpret loosely: “Man is forced into free choice” (ibīd.).

This concern with analysis was to dwindle to vanishing point in the later manuals, which, from the 15th century onward, hardly did more than repeat the formulas of the past. At the end of the 19th century, Muhammad ʿAbdūh, wishing to free himself from the dialectic of the kalām, confined himself to saying: “As for seeking further, for wishing to reconcile God’s omniscience and will, which are proved [by the Kurʾān and rational arguments], with the free activity of man, which is shown to us by the evidence [sensory, psychological]; that means seeking to penetrate the secrets of the divine decree. We are forbidden to plunge into this abyss and to concern ourselves with that which reason is scarcely capable of attaining” (Risālāt al-Taḥkīd, 61).

III. VARIOUS MUSLIM ATTITUDES TO GOD.

Some pointers, chosen from the most characteristic:

1. Ismā‘īlī Theology. There is much that could be said about the “schismatic” theologies, of Ḥanbālī Islam on the one hand, of Ṣī‘īte on the other. We shall confine ourselves to the Ismā‘īlī system, which had so many cultural contacts with the Sunnite majority. Integrated in it there is a twofold line of influence: Mu’tazilīte (which continued to act on the Ṣī‘a after the condemnation of the Mu’tazilītes in the time of Mutawakkil and Neoplatonist (consequently, a certain influence from falsafa).

We know hardly anything of the very first phase of development or of its efforts to fix in an original direction such Muslim notions as ān, ṣad, etc. Not until Abu ʿAbd Allāh al-Nasafi (4th/10th century) do we find these primitive conceptions given a new setting in a largely Neoplatonist, emanationist system. Speculation was pursued, and enriched by various trends, with Abu Ḥātim al-Rāzī, Abū Yaʿkūb al-Sījistānī, Nāṣr-i Khusrav, al-Kirmānī (in whom S.M. Stern has found a probable influence of Fārābī: theory of the ten Intellects). Through the Ikhwān al-Ṣafā’, Ismā‘īlism was to influence many falsafa and even Sunnite theologians, up to the time of the conflict waged by Nasr al-Dīn al-Tūsī in favour of Ibn Sīnā.

The emphasis is on the inscrutable mystery of God. A whole “negative theology” developed. No name or attribute can be attached to God in His essence. The perfect ta’wīd does not even attribute existence (Persian: kāsīl) to Him, and the Kurʾānic Names signify only those who bear thought from Him (cf. Idrīs al-Karsi, 8/14th century). The Command (amr), the Speech or Word (kalimāt), the Act of Creation (ibād), the Absolute Knowledge (ʿim makhd) are hypostatized. God is neither eternal nor existing at present. What is eternal is His Command and His Speech; what exists at present is the creation, which emanated from Him at His Command (cf. al-Makrīzī, Khatīb, i, 355, quoted by G. Vajda, Judā b. Nissim ibn Malka, Parts 1954, iii, chap. 1). God remains, absolutely, the Unknowable (Nāṣir-i Khusrav). The tashbīh-taʿlīl dilemma is absorbed into a via negationis, which refers the affirmation of the attributes to the Word or the Command, or to the First or Universal Intellect.—Al-Kirmānī identifies the First Intellect with the Word, and makes the ibād (Act of Creation) one of its attributes.

The emanationist system of al-Nasafi and his successors set up, in fact, the intermediary of the Universal Intellect, from which the world is produced by way of successive emanations. The echoes are heard in the Fusūṣ fi l-ʾilmāma (which, after the researches of S. Pines, REI, 1951, 121-124, is to be ascribed not to al-Farābī but to Ibn Sīnā), and as far as al-Ghazzālī: the muṣājāt of the Mīkhāl al-ʿAnwār.

Ismā‘īlī religious feeling attached itself to a group of Gnostic hypostases. The Will (irāda), Volition (mashā’s) and Command (amr) are sometimes “spiritual grades” above the First Intellect; most often, Will, Command and Speech are identified with one another, and the Universal or First Intellect is itself, as the “manifestation” of God, unknowable and ineffable, operated by His Command. These speculations were rooted in an allegorical tawwīl (“hidden”, bātin, meaning of Kurʾānic verses) and throw readily on Iranian myths. They were later interiorized by certain Ṣī‘īte, and even Sunnite, Sufis.
2. **Falsafa.** It was in falsafa that the term **falsifa** (taken up by kalām) gained currency as denoting the whole mass of questions concerning God. The body of problems was no longer that of the kalām. It came from Greece, particularly from Aristotle, but was pervaded, at least in eastern falsafa (especially al-Fārābī, Ibn Sīnā) by a considerable Neoplatonic inspiration (the pseudo-Theology of Aristotle). Kurānī influence had some effect on this body of problems (e.g. the problem of the divine knowledge of individuals), but the Kurān had ceased to be the chief source. We do not therefore need to set out the questions in detail, as we did in the case of the kalām. We shall note merely that Ibn Sīnā demonstrates the existence of God by the **proof a contingentia mundi** in the strict sense (not overlooking the proof by the "idea of being", Ibrāhīm, ed. Forget, 146). The more flexible philosophic instrument of the falsafa enabled them to affirm the attributes, distinct from the divine essence, by a simple, reasonable (maṣūḥ) distinction but with a basis in reality. The Greek contribution led to an emphasis on the necessary acts of the divine essence. God is the **Faith which thinks itself** (cf. Aristotle), He is the supreme Good (cf. Plato), which necessarily loves itself. He is the Intelligence, exercising intellect on itself; He is Love and the object of love for Himself: **'aša', 'āšā, maṣā', 'išā', 'išāh', maṣēḥ** (cf. Nadjāt, Cairo 1357/1938, 243, 245; corresponding passages of the Shī'ah, etc.). We should mention here an esoteric trend, still imperfectly known, which seems to take up several themes of the Ismā'īlī via negation (intermediaries: Ibrāhīm al-Ṣaḥāfī, al-Tawhīdī; and, at an earlier date, the Ismā'īlī tendency, pointed out by S. Pines, of certain recensions of the *Theology of Aristotle*; see REI, 1956, 7 ff.). The falsafa do not provide us with treatises on **'adl or af'īlu ta'ālā**. Contrary to the kalām, they affirm (and set out to prove) the production of the world by way of necessary and deliberate emanation (cf. Ismā'īlīsm), and its temporal eternity: world without beginning or end, "possible" (mumkin) in itself, necessary by Another (ab alio); contingent in the order of essence, determined in the order of existence. Providence (ِṣī'ā) is the law of emanation itself, necessarily willed by the eternal thought of God.

The second causes cannot fail to act on their effects. There is no longer any problem of human freedom as against divine omnipotence (cf. Nadjāt, 302).

Whatever solution may be adopted as regards the personal survival of the soul, the Active Intellect (šāhī fa'āl) appears as an intermediary between God and man, both in the order of knowledge and in the order of emanation. There is a hierarchy of discrete intellects, up to the First Caused; embracing these, there is the Universal Intellect. For Ibn Sīnā, there is a corresponding hierarchy of Souls, rejected by Ibn Rushd; the latter seems to have been the only one of the falsāsfa to come back, by way of philosophy, to the divine knowledge of the individual in its very individuality, so forcefully taught by the Kurān. What is at stake is the whole attitude of faith with regard to God. Certainly the falsāsfa were Muslims and remained Muslims. But even though their theses might be amended, and reconciled with the affirmations of the Kurān, the God they proclaim is exactly the God attained through reason, and, at the highest, through the flash of intellectual intuition. They set out to prove (their notion of prophecy comes into it: a simple privileged moment of the universal determinism) that the divine reason and the God of the Kurān coincide in every respect. But it is not a question of a verity of faith corroborating reason on its own plane. They treat philosophy on the one hand, the Law on the other, as two sources of equal value; the point at issue is to show that they agree. They attain this end with the help of a rational ta'wil, philosophical and at the same time allegorical. God is, first and foremost, the necessary Being, al-adl al-ma'ārif al-ifṣāfī. The God of the great falsāsfa is a lofty concept of Being, necessary and perfect, supreme Intelligence and supreme Love, producing the world by a mode of necessary and deliberate emanation: in short, an object not so much of faith as of philosophic experience and rich intellectual intuition. The seriousness with which they pursued their researches and reasonings (notwithstanding certain setbacks) led to the integration of real riches into Muslim culture; their analyses sometimes influenced religious thought itself. But here we find ourselves on a different plane from the inscrutable mystery of the Living God, which the Kurān presents for the adoration of the faithful.

3. **Kalām.** We return now to the schools of Sunnite kalām. The falsāsfa no doubt despised the dialectic of the *mutakallimān*, those people "who have broken the religious Law into pieces", as Ibn Rushd put it (*Fasl al-Mafyil*, ed. and tr. Gauthier, Algiers 1942, 29). Their subtleties and debates are often confused, their philosophic arguments questionable. But when they thus set out to defend the dogmas against "those who doubt", it is certainly the God of faith that is involved. The Mu'tazilites, just as much as the Ash'arites, are "men of religion and philosophers second" (Almād Aslām, *Dkāt al-Islām*, Cairo 1362/1943, iii, 204).

The inner attitudes of the two kalām's were nevertheless different. True, the Mu'tazilites took as their starting-point the Kurān and the sovereign Justice of Allāh. But their idea of 'ašā as a criterion of the Law, and later the impact of the "foreign sciences", led them to fix the sum total of faith on an idea of God as being "justified" in the eyes of human reason. They meant to serve and to purify the affirmation of the transcendent Existence, but their drastic tanbih reached the pitch of attenuating the very notion of divine attributes; the Ash'arites were not wrong in accusing them of that. Thereafter the mystery of the divine Oneness, the ta'wil, is as it were encircled by a human concept; expressed negatively, no doubt, but directly attainable on a discursive level. We find something corresponding to this in tasawwuf, in the experience of Dīnaydī. In correlation, and, at the same time, as a counter-part, the 'adl, the divine Justice, was in a way "humanized"; there was a touch of the idea of a just human judge, raised to the power of infinity. In its origins, the Ash'arite reaction was by no means a pure renunciation on the part of the faithful of every elaboration of the data of faith. The "divine version" of al-Ash'ārī was presented as a return to the inner attitude of the "ancients" and a profession of loyalty to Ibn Ḥanbal (*Ibīna*, 9). Yet the Ash'arites accepted the challenge to dialectical combat. This led them far afield; it led them to refine unceasingly, but also to complicate unceasingly, a body of problems which never came to an end, as a result of the multiplicity of objections and the rise of opposing schools. Amid the welter of arguments, it sometimes
becomes difficult to trace that complete resignation, in the nakedness of faith, to the One God, Creator and Judge, which we find in the strata of the Qur'an. The negation of human freedom in its ontological reality turned many lines of thought towards a divine voluntarism, conceptualized as such. This became still more marked after the 13th century, when the Ash'arite (or Maturidite) halām, instead of regenerating itself to keep pace with its contemporary opponents, as its primarily apologetic function would seem to demand, congealed in rather stereotypical manuals. This risk of sclerosis was no doubt one of the main considerations leading to the semi-agnosticism of Muhammad 'Abduh.

There, we believe, lies the explanation of the half-contempt for the halām (a half-contempt which sometimes grows to violent opposition), which is shown alike by the successors of the “pious ancients”, notably represented by the Hanbalite trend, and the mystics of the tasawwuf.

A. The tasawwuf. We cannot hope to analyse here the theological bases of the diverse Shi'a schools or attitudes, with all their fine distinctions (for the first centuries, see L. Massinon, Passion d'al-Ijallādī, Paris 1922, and Lexique technique, 2nd ed. Paris 1954). The important thing to note is that we are no longer dealing with a rational endeavour towards the necessary Being, as in falsafa, nor, as in halām, with a discursive endeavour to find “decisive” or formal arguments for the Qur'ānic doctrine about God. What is involved here is a spiritual experience, a life with God, soon to be understood as an experience of oneness, an inner realization of the ṣuḥūd.

There were some Şūfiş (al-Hallādī, al-Tirmidhī) who rethought for themselves the dogmatic bases of their era; some (Hasan al-Baṣrī) who could, by stretching a point, be called “semi-Mu'tazilī” (Ibn Karrām) who gave their name to a theological school; some were linked to the Ḥanbalite way of thought; there were many Shi'ite Şūfiş; and there were many Sunnite Şūfiş who in no way challenged the regular conclusions of the Ash'arite halām (al-Makḳī, the al-Ghazzālī of the Ḥiyād, many Ṣaḥḥālis, etc.). Finally, a great many, especially from the 7th/13th and 8th/14th centuries onward, permitted themselves to be influenced by an existential monism of Neoplatonic tendencies.—From the point of view which concerns us, we shall confine ourselves to picking out two main lines of Şūfism, according to a distinction insisted on by L. Massinon:

(a) wahdat al-ṣuḥūd, the oneness of Witness, of which al-Hallādī was the exponent. It seems also to have inspired every mystic of Ḥanbalite influence. The union with God is achieved in God’s bearing witness to Himself and to His mystery of Unity, in the mystic’s heart. The divine transcendence and its absolute Oneness in relation to all creation remain the central object of the act of faith. But the meeting with God is brought about by love (“in His Essence, love, ʿāshā, is the Essence of the essence”, said Hallādī); by love, the dialogue is established between the faithful heart and God, until the supreme “I”, which consummates the dialogue in unity, without destroying it. It is well known how much the official Iṣlām of the 3rd/9th century opposed this union of love (which claimed the support of Kūrān, il., 29 and v. 59), this oneness of the Witness in the duality of natures.

Two intermediate stages. The al-Ghazzālī of the Ḥiyād (13th century), who gave the tasawwuf citizen-rights among the recognized religious sciences: uniting, not without some eclecticism, the dogmatic values of developed Ash'arism and the spiritual values of the love of God (ma'āshā), of dependence and trust (tasawwul), and the diverse ascetic mistic virtues. Another and more important intermediate stage is that of the ṣuḥrah movement and its emanationism, which is by no means purely monist.

The great figure of the master of the ṣuḥrah, al-Suhrawardī of Aleppo (6th/12th century), so well studied by H. Corbin, illustrates a quest for unity which leads to identity in the order of knowledge; but the outer garb of Iranian myth permits him, on a plane of lofty poetic intuition, to leave the Witness its transcendence.

(b) wahdat al-wujūd, the oneness of Existence.—This came to dominate later Şūfism, since Ibn ʿArabī (6th/12th-7th/13th century). Ibn Taymiyya saw (and condemned in it the influence of Ibn Sinā) (discrimination to modify and to complete, not to reject). One may say that the Ghazzālī of the minor works of the last period, so deeply imbued with falsafa, even with Ṣaḥḥālīs, was the forerunner of it. In it, the Neoplatonic monism of the pseudo-Theology of Aristotle meets the Ash'arite tendency which, the better to affirm the One God, denied the creature all real ontological density. In contrast with God, “sole Being and sole Agent”, the created world is but impermanence. The illusory empirical existence, says the mystic, must obliterate itself (jānā) in the only Existence which subsists (bakā), that of God. Interpreting Qurān, xvii, 83, the Şūfī partisans of the monism of the Being said that the human spirit, the rūḥ, is a direct emanation from the divine Command (amr), and is therefore an emanation from God Himself. Cf. already the Ghazzālīan text (inscription discussed by W. Montgomery Watt, Authenticity of works attributed to al-Ghazzālī, JRS 1954, 1 and 2) the Kitāb Lādunisyya (Cairo 175/ 1934, 19). Following some quite different references, we have here something like an echo of the “trace of the One in us” of Plotinus, even indeed—all question of historical channels aside—of the Indian “Thou art That”. The supreme mystical experience is then an experience of unity (ittihād), understood as identification. It readily justifies its chosen course by an allegorical and gnostic tasāwīl of the scriptural texts.

The wahdat al-wujūd, for reasons partly doctrinal, partly historical, never aroused among the jubahā and the mutakalliminūn the opposition encountered in the 3rd/9th century by the wahdat al-ṣuḥūd. One cannot however forget how powerfully the latter might lead the tawakkul—the total dependence of the believer upon God, sovereign Judge and sovereign Unity—to spiritual experience in the strict sense of the term.

5) The “pious ancients”. The adherence to faith of many Şūfiş of the first centuries was in complete accordance with that of the “pious ancients”. In the first centuries, Şūfī and traditionist circles often overlapped.—There was no question of a school, in spite of the fact that these people frequently set themselves in the Ḥanbalite tradition; it was a question of an inner attitude. This reference to the “ancients” (ṣalaf) must be understood as a choice, much more than a chronological distinction: we find it as much in the 14th century, with Ibn Taymiyya, as at the beginning of the hijri era; we find it again, systematized and with a predominantly anti-Şūfī note, among the Wahhābīs and neo-Wahhābīs, among the modern Salafīyya and their contemporary disciples (including, in some measure, the Ikhwan al-Muslihim).
This tendency raised itself many a time against the quibbles and subtleties of the kaldm, against an excessive confidence in rational or dialectical proofs. In his Dhamma al-Kalâm, al-Anṣārī claimed that the Muslim the right not to seek for explanation (tafsīr) of the divine attributes, not to proceed down the “blind alley” of the Āshʿarītes, glossing texts and distinguishing between the attribute and its ḥaqīqah, its “mode of being” (cf. quotation from al-Anṣārī in Ibn Taymiyya, Futūḥāt, v, 473-78). The very personality of the mystic al-Anṣārī would suffice to show us that a tendency that is truly loyal to Western “pious ancients” has no grounds for condemning tasawwuf wholesale, as it often does nowadays; too easily confusing the waṣūfāt al-ghuḍūl with the waṣūfāt al-ruḍūḍ, and the latter with the deviations of the “brotherhoods”.

What remains affirmed is the faith in God Most High. Who speaks to men by His prophets and apostles, revealing no more of Himself than the “most beautiful Names” whereby He indicates and summarizes the name Allah. —No enumeration is needed here. In every age there have been “free-thinkers”, “doubters and deniers”. In every age, intellectual researches on the ilāhīyyāt, and the discursive expression of them, have abounded in Islam. Contemporary thought seems harried on all sides by the diverse trends of the modern philosophies, as it was formerly by Greek or Iranian thought. It may be that a new kalâm will be called into being, a new “defensive apologetics”, that will carry out an extensive re-examination of the questions and problems of its treatises on waṣūfāt Allāh and al-riḍāwīn at-tawās, in the varying light of the idealism, pragmatism, dialectical atheism or existentialism of the moment. But maybe it will be able to avoid the mishaps that befell the ancient kalâm only by going beyond the “contradictory” appearances of the problems posed,—by a vital recourse to God, One, Living, Master of the worlds and of the retribution of mankind, Allāh al-ʿākīd, al-ḥāgy, māliḥ al-ʿislāmīn, māliḥ yawm al-dīn, whereby many sincere believers and “bearers of the Kurʿān” have always endeavoured to live.

ALLĀH AKBARR [see TAKBĪR].

ALLĀHĀBĀD (ILAHĀBĀD), an important town in the State of Uttar Pradesh and the seat of the State High Court, is situated on the confluence of the rivers Ganga and Yamuna. Population in 1951: 2,048,250, including 12.8 % Muslims.

History: One of the most ancient towns in India, it was known as Prayāg and regarded as sacred by the Hindus. When the Ḡūrūd Turks occupied Banaras in 1194, the town came under the Sultanate of Delhi, but presumably continued under the administration of autonomous Hindu rajdās, the nearest important military centre of the Sultanate being located at Karā [q.v.] about 45 miles to the west. With the overthrow of the independent Shāhī Kingdom of Ḍīwānpūr in the 16th century and the subsequent rise of the Afghan, the usefulness of the ferry across Prayāg to Dīhāt began to be appreciated. In June 1567, Akbar crossed the Gangā at Prayāg after defeating Kāḥ-i Zamān, the rebel Governor of Ḍīwānpur. In 1574, hā again passed through the town on his way to Bengal. Realising its strategic importance he decided to make it a military centre. From this small township, it became a big city and was given by Abūkār the name of Ilahābād (being changed to Ilahābād through popular usage). In 1579-80, Akbar reorganised the administrative divisions of the empire, it became the capital of the sība (province) of the name, thus...
superseding both Karā and Djawnpūr in importance. Most of the Indian writers and European travellers visiting India during the 17th and 18th centuries testify to its importance. In 1736 the Mahrattās conquered it. After 1750 it changed hands several times, till the British garrisoned the citadel in 1798 and the town in 1801.

Monuments: The citadel built by Akbar (with Asōka's pillar and its famous inscription), and the Khusraw Bāgh, with the tombs of Prince Khusraw, his mother and his sister, are the chief monuments of the Mughal period.

(Ñurul Ḥasan)

Allāhummā is an old Arabic formula of invocation: “Allāhū,” for which also Lahlūmā is found (cf. Nöldeke, Zur Grammatik d. class. Arab., 6). Whether, as Wellhausen supposes in his Reste arabischen Heidentums, 224, it was originally meant for the god Allāh, higher than and different from the old Arabian gods, is rather doubtful, because every god might be invoked as “the God” (just as “the Lord”). It was used in praying, offering, concluding a treaty and blessing or cursing (see Goldz. Ahhandlungen z. arab. Philol., i, 35 ff.; cf. also the expression Allāhūmā hāyyīt = may God good may it do you, al-Akhtal iii, 7). The phrase bi'smika 'l-lahlūmā, said to have been introduced by Umayya b. Abī l-Salt (according to a statement in Abūnā, iii, 187) and used as an introduction in written treaties, has been replaced by others by Muḥammad as being a heathen expression (Ibn Ḥishām, i, 747; Wellhausen, Skizzen u. Vorarb., iv, 104, 128). The simple Allāhummā (Lahlūmā), on the other hand, was retained as inoffensive (e.g. Kur'ān, iii, 26; xxxix, 46; subhānaka ‘l-lahlūmā, x, 10), and in the same way allāhummā na'am = “certainly!”, being in fact the answer on being conjured to tell the truth (al-Ṭabarī, i, 1723). For the peculiar formula allāhummā minkā wa-islāyka (or lāhā) used at the family-offering, cf. Goldz. in ZDMG, 1894, 95 f. (Fr. Bühler)

Al-'Amlākī, name of a wādī in Lower Nubia between the Nile and the shore of the Red Sea, 62 miles south of Aswān.

In the Middle Ages, this small valley resembled a large populous and flourishing town, because it was a gold mining area, using black slave labour. “The nuggets of gold”, wrote al-Ya'qūbī, “appear in the form of sulphide of arsenic, and are made into bars”. Al-Iдрīsī gives more curious information. The prospectors, he tells us, took up their positions at night in order to see the gold dust glistening in the darkness and to mark the sites so that they could be recognised the next day. The prospectors then proceeded to collect and transport the auriferous sand and to wash it in tubs of water to extract the metal, which was then blended with mercury and smelted.

These gold mines, exploited in early times, were abandoned at the end of the Middle Ages. The old workings can still be seen. Gold mining has recently been resumed in the area (Umm Gharayāt).

(G. Wiet)
ALMALIGH — ALP 419

17 f.: Almalech). In 1339 some Franciscan friars were murdered in the town (cf. A. van den Wyngaert, Sinica Franciscana, i, 510-1; G. Golubovich, Biblioteca Bio-Bibliografica, ii, 72, iv, 244-8, 310-1). Here was the seat of a Roman Catholic missionary bishop and, probably, of the Nestorian metropolitan (cf. Bretschneider, Med. Res., 38; Barthold, Oeckter semirayyeh, Vyerniy 1898, 64-7; V. Rondalez, in Neue Zeitschrift für Missionswissenschaft, 1951, 1-17; S. Dauviller, in Mêlanges F. Cavallera, Toulouse 1948, 305-7).

Like the towns on the Ču (q.v.), the Talas and elsewhere, Almaligh was completely ruined by the constant wars and other fighting in the 8th-14th century (cf. Bâbur, ed. Beveridge, i; Mîrzâ Muhàammad Haydar, Ta’rîkh-i Raqîdi, tr. E. D. Ross, 364). Muhammad Haydar mentions the ruins of the town with the tomb of Tughluq Timur Khân (d. 764/1358-68); cf. Dugès (these ruins (at present called Alimt) lie between the Khorgos, the boundary river between the Soviet Union and China and the village of Mazâr and have been fully described by N. Pantusov, Kaukhanshiny Shornok, Moscow 1910, 161 ff. Inscriptions from graves of Nestorian Christians have also been found there (see especially P. Kokovtsov, in Zap., xvi, 190 ff.).

A. N. Bernstem (Pamyatniki stariny almaatinskoy oblasti po materialam ekskpeditsii 1939 g., Issvestiya Akad. Nauk Kazakh. SSR, Archel. series, i, Alma Ata 1948, 79-91) identifies Almaligh with a town (also called Alimtu = Chinese Al-i-tu) near the modern Alma Ata; but in reality this is another, different town having the same name (as an apppellative, “apple town”); it is mentioned in 1390 in connection with Timûr’s campaign against Mughulistan (Yazdi, Zhâfarnâmeh, i, 466 ff.; cf. F. Pètis de la Croix, Histoire de Timur-bes, ii, 66 ff.).

(W. Barthold-[B. Spuler and O. Pritsaak])

ALMANAC [see ANWA; TA’RÍKH].

ALMANZOR [see AL-MÚNASÀR]. ALMÁS—frequently regarded as a noun defined by the article (al-más; correctly al-Álmáš according to Ibn al-Álhir) in LA, viii, 97: ‗the belongs to the root as in Ilyás), a corrupt form from the Greek ἀδέξας (i.e., ἀδέλατη βι-αραβίyya)—the diamond. According to the pseudo-Aristotelian Kułhâl al-Álhir which, on the basis of cognate Greek sources, agrees in the main with the statements of Pliny, the diamond cuts every solid except lead, by which it is itself destroyed. On the frontier of Khurásán is a deep valley in which the diamonds lie guarded by poisonous snakes whose looks alone are enough to kill. Alexander the Great procured some of them by a trick: he had mirrors made in the service of the Kings of Aragon and Castille, who cut to pieces the French army of Philip III the Bold during his campaign of 1285 at Roussillon, and who later, under the name of the Grande Compagnie Catalane, made daring raids in the Eastern Mediterranean.

ALMOHÁD [see AL-MUWARIDHÁN].

ALMORAVÍD [see AL-MURÀBITÓN].

ALMUÑECÁR [see AL-MUNÁKKA].

ALP (t.), ‗hero‘, a figure which played a great role in the warlike ancient Turkish society; synonyms: bâbur (bâdhár [q.v.], bûhmen, čapar [q.q.v.]). (Turkish heroic tradition survived in an Islamized form and appears in Anatolia in the stories of Dede Korkud [q.v.] as well as in the poetry of ʿAshık Paşâ and the history of Yazildağolu; cf. Fuad Köprüülü, Bibli.). The word alp, used since ancient times among the various Turkish peoples either as an element in compound proper names or as a title, occurs frequently in proper names also of the Islamic period (cf. the various persons called Alp Tigin, the Saljûk amirs Alp Kusur, Alp Argu, Alp Arslan). Another form is Alp (cf. the Artukids Nadîm al-Dîn ‘All Alp, ‘Imâd al-Dîn Alp); the word alpagh (yalpagh, diamond heavier than i mîthkâl. The sources differ widely about the places where diamonds are found.

—Al-Tîfâgh and al-Kawzmí relate that the pieces obtained through smashing the stone are all triangular (observation of the octagonal fissure?), and the former also says that the diamond attracts little feathers.—It is generally mentioned as being used for cutting and piercing other stones. Aristotle is said to have used it for destroying stones in the bladder. The powder of it must not touch the teeth; applied externally it is a good cure for colic and stomach-ache.

ALMEE [see ʿALIMA].

ALMÉRIA [see AL-MARIVYYA].

ALMICANTARAT [see MUŠANTARÂT].

ALMODOVAR [see AL-MUDAWWAR].

ALMOGÁVARES, or Almugávares, a name, apparently derived from the Arabic al-mughâwir “one who makes hostile incursions”, which was given at the end of the Middle Ages to certain contingents of mercenaries levied from among the mountaineers of Aragon, a tough, sober but disciplined race. Zurita (Anales, iv, 24) gives a picturesque description of them. These were the troops, fighting on foot, in the service of the Kings of Aragon and Castile, who cut to pieces the French army of Philip III the Bold during his campaign of 1285 at Roussillon, and who later, under the name of the Grande Compagnie Catalane, made daring raids in the Eastern Mediterranean.

The word alp, used since ancient times among the various Turkish peoples either as an element in compound proper names or as a title, occurs frequently in proper names also of the Islamic period (cf. the various persons called Alp Tigin, the Saljûk amirs Alp Kusur, Alp Argu, Alp Arslan). Another form is Alp (cf. the Artukids Nadîm al-Dîn ‘All Alp, ‘Imâd al-Dîn Alp); the word alpagh (yalpagh,
As a title, alp was used by Seldjûk amirs, and together with other old Turkish titles such as ḥan, ḥūlūk, ḥilj, was adopted by the states which succeeded the Seldjûk empire. Alp alone is found in an inscription of Ak Sunḳur of Aleppo; in the inscriptions of the Syrian and Mesopotamian ala[beg]s and of the Artuks occur the titles alp ḥūlūk, alp Ḥan ḥūlūk, alp ḥāšâ (cf. RCEA, nos. 2745, 3021, 3072, 3085, 3111-2, 3122, 3146; Van Berchem, Amida, 76, 92, 104, 120, 122; idem, *Arabishe Inschriften aus Armenien und Diyarbekr*, Berlin 1910, 148 ff.; Ibn al-Kalânisî, ed. Amedroz, 284; alp ḥāšâ as title of Zengi; and the dedication of a translation of Dioscorides, in MS Maghdad, Cat. no. 27, to a prince with the title of alp Ḥan ḥūlūk).

**ALP ARSLAN** 'Apud al-Dawla Abû Shuṭaḥ' Muḥammad b. Dâʿûd Ḥāriʾbîg, celebrated Seldjûk sultan, the second of the dynasty (455/1065-463/1073). Born probably in 421/1030, at an early age he led the armies of his father Ghârîb, and brought Pars firmly under his control by suppressing Fâḍlîyâ, who had come to terms with Kawurt. The latter was allowed to retain Kirmân, as a subordinate. A demonstration of force in Karakânîd territory and up to the Caspian (457/1065) reinforced his authority which his father, and previously exercised there. As regards the Ghâzinawids, he kept the peace concluded during the last years of Ḥârıʾbîg’s rule.

His fame in the eyes of posterity rests on his activities on the western front. Like his predecessor Ṭūḥrîbîg and his successor Mâlîkshāh, he had the ambition to march on Egypt to destroy the stronghold of Fâṭîmîd heresy. But he realised the necessity of maintaining his ascendency over the Turkmans, who constituted the military strength of the dynasty, and who were primarily interested in the richly-rewarding campaigns of a holy war (*ghâsa*) on the Christian territories beyond ʿĀdhârâyân, where they where concentrated. Shortly after his accession, therefore, Alp Arslan conducted a series of campaigns against the Byzantines and their Armenian and Geor- gian neighbours, while independent bands of Turkmans raided more deeply into their territories; these campaigns also had the effect of increasing his prestige in certain autochthonous Muslim circles.

In 456/1064 he captured Anf and ʿArsîn, and extracted a pledge of submission from the tiny Georgian kingdom. A further expedition against Georgia, in which the Shâfdâdîd prince of Arrân took part, became necessary in 460/1068. The main advantages accruing from the security of the ʿĀdhârâyân frontiers was ensured, and that the Turkmans had free access to the pasture lands on the Ars. It is difficult to assess what extent the peregrinations of the Turkmans, who simultaneously penetrated to the heart of Byzantine Asia Minor and permeated Muslim Diyar Bâkr and Diyar Mudar, were directed by Alp Arslan; the Turkmans opened the way for him, but withdrew after having gained their booty. Moreover, their activities provoked a Byzantine counterattack against the Syrian and Armenian borders of the Muslim world (1068-9), following which terms were negotiated between the two empires.

Alp Arslan then considered himself sufficiently secure against the Byzantines to listen to an appeal from rebels in Egypt and to undertake the Fâṭîmîd expedition to support orthodoxy and the caliph. He occupied en route Arjûtsh and Manziktîr held by the Byzantines, attacked Edessa, and pushed on without delay to secure the submission of the Mirdâsîd Mâhmûd at Aleppo, who attempted to save himself by a last-minute recognition of the ʿAbhâsîd Caliphate. The sultan’s intention was to advance into Southern Syria, where various Turko- man groups had preceded him, when he heard that the Byzantine Emperor Romanus Diogenes, at the head of a formidable force, was threatening his rear in Armenia, and he had to return with all possible speed. He nevertheless succeeded in regrouping sufficient forces to give battle to the Byzantine army at Mankirt in Dhu ’l-Kaʿda 461/August 1071. The diversity of the Byzantine forces in both their composition and morale, combined with their lack of manoeuvrability, made them no match for the agile Turks who, though far fewer in number, were inspired by the fervour of holy war. By evening, the Byzantine army had been annihilated and, for the first time in history, a Byzantine Emperor was taken prisoner by a Muslim ruler. Alp Arslan’s object was not to destroy the Byzantine empire; he contented himself with frontier adjustments, promises of tribute, and an alliance—a settlement which the downfall of Romanus Diogenes rendered impermanent. In fact, however, the battle...
of Mantzikert laid open Asia Minor to Turkish conquest. In later years there was no princely family in Asia Minor but wished to boast an ancestor present on that glorious day.

Alp Arslan himself met an unworthy end not long after his triumph. At the other extremity of his empire, relations with the Karakhanids, despite marriage alliances, were again strained. At the beginning of 455/1072 he invaded their territory. In the course of a quarrel with a prisoner, the latter mortally wounded him. He died in the prime of life, at the end of Rabī‘ I/beginning of January 1073. He had nominated his son Malikshāh his heir.

In the eyes of orthodox Muslims, Alp Arslan was a leader of men and a commander capable of enforcing strict discipline, generous, just, devout, with an aversion for informers. Christians, remembering massacres such as that at Ānī, ascribed to him a reputation for brutality, in contrast to his son Malikshāh, who was regarded by them in a more favourable light. Space does not permit here an account of his administration, which was essentially the achievement of his vizier Niẓām al-Mulk and which is discussed in the article on the latter and in the general article on the Saljuqids. To Alp Arslan belongs the credit for singling out the Khurasanlūs, the principalities, such as those of the Ṭūrḳ, which is discussed in the article on the latter and in the light of the knowledge and advice” of Alp Takīn. In order to remove him from the capital, the sovereign invested him (Dhu ‘l-Hijjah 349/Jan.–Feb. 961) with the post of Governor of Khurasan, the highest military office, and Pensioned from this post by Mansūr b. Nūḥ, of whose elevation to the throne he had disapproved, Alp Takīn withdrew to Balkh; in Rabī‘ I, 351/April-May 962 he defeated an army sent against him by the Sāmānid ruler, and retired to Ghazna where, after overthrowing the local dynasty, he set up an independent empire. The records disagree as to the date of his death; according to some, he died before 352/963. His learned son Abū ʿĪsāh b. ʿĪsāhīn (whom see Ibn Ḥawkāl, 13, 14) could only maintain his position, in face of a revolt by the former ruler of Ghazna, with Sāmānid aid. Thus the Ghaznavid kingdom only existed at first as a Sāmānid vassal state. Abū ʿĪsāh died childless, and the leaders of the army, on which the new state was based, selected as his successor first the commander of guard Būlāb Tākin (Tīqīn) (355-647/966-747), who left a reputation for integrity, and then Pirī Tākin (Tīqīn). During the latter’s reign a final revolt by the supporters of the former dynasty was crushed. But the victor, Subūk Tākin, the son-in-law and former chief officer of Alp Takīn, was raised to power by the troops (Shābān 356/April 977), and became the founder of the Ghaznavid (g.r.) dynasty.

Bibliography: A concise but comprehensive history of Alp Takīn and his immediate successors, with references to all the sources, is contained in Muhammad Nāzīm, The life and times of Sultan Māḥmūd of Ghazna, Cambridge 1931, ch. i. The chief sources are Gardīzī, Zayn al-ʿĀkhbār, ed. Muhammad Nāzīm, Berlin 1929, and Tabātabā’ī Nāṣīrī, Niẓām al-Mulk’s account in the Siyāṣat-nāma (Schefer), 95-101, is an idealized version designed to place Alp Takīn and Subūk Takīn in a more favourable light. On the effect on the frontiers of Sīstān of the foundation of the new kingdom of Ghazna, see now, in addition to Muhammad Nāzīm’s sources, the anonymous Tarīkh-i Sīstān published by Bahār al-Tahbīn 1314, 326 ff. (W. BARTHOLOD-CL. CAHEN)

ALPAMİŞH. One of the most famous Turkish epics (dastān) of Central Asia, inspired by two classical themes, (1) the quest for the betrothed and the rivalry of the suitors; (2) the return of the husband on the day of his wife’s remarriage (theme of the
return of Ulysses). The Özbek hero Alpamış of the Kungrat tribe repairs to Kalmık territory in search of his fiancée and cousin Barcin. Alpamış triumphs over his Kalmık rivals, marries Barcin and brings her back to his tribe. The second part is the account of a further expedition on the part of Alpamış to Kalmık territory to rescue his wife’s father. Alpamış is captured and held prisoner for seven years by the Kalmık Khan, and is finally aided to escape by the Khan’s daughter; he returns to his native land the very day on which his wife is about to marry—against her will—the son of a slave who has usurped his authority. Alpamış kills the usurper and regains his position as head of the tribe.

It is difficult to determine accurately the date of the composition of Alpamış, although it cannot be before the beginning of the 16th century, or later than the end of the 17th. In the dastın, the Kungrat tribe lives a nomadic existence around Lake Baysun north of Tirmız (now the Surğhan Darya district of southern Özbekistán). The Kungrat only moved into this area with the armies of Shaybání Khan, about 1500. Moreover, in the three versions, Özbek, Kazak, and Karakalpak, Alpamış and the Kungrat are called Özbek, which postulates an origin later than the Shaybání conquests. On the other hand, the main theme of the epic, the struggle of the Muslim Turkish nomads against the ‘infidel’ Kalmiks, places it between the 16th and the 17th centuries, the period when the Kalmiks of the Oyrat Empire were making a series of bloody raids in Central Asia.

Zirmuskin and Zarilov believe that they can detect, beneath the existing versions of Alpamış, an older version, now lost, dating back to the 11th-12th century, a period when the ancestor of the Kungrat were nomads near the Aral Sea (analogy with the Oghuz poem Bamsi-Bayrek) or to still earlier times when they dwelt in the fringes of the Altai (analogy with the Mongol poem Khan Kharakutu).

All the Central Asian versions of Alpamış are in verse, the prose passages serving only to mark the divisions between the various episodes of the poem. The versification is simplified. The repetition of the same rhyme divides the verses into stanzas of different length (2, 4, and 7 verses). This simple poetic form is perfectly suited to the way in which the poem is transmitted, whether recited by a bakhši (“bard”), or chanted by a gāḏir (“minstrel”) with accompaniment on the kobus (two-string violin).

Several versions of Alpamış exist: Özbek, Kazak, and Karakalpak, which correspond fairly closely to one another, but have occasional but obvious differences of detail. The best and the most popular is the Özbek version of the bakhši Fādil (Fazyl) Yuldash (born in 1873 at Kloblaj Laky in the district of Bulungur near Samarkand), the text of which was published for the first time by Ḥāmid ‘Alimджan at Tashkent in 1939, in a slightly abridged form, under the title “Yuldash oghyi Fazyl: Alpamış”. The first part of this work in an abridged form has been translated into Russian verse by V. V. Deržavin and A. S. Kočetov, and the second, in extenso, by L. M. Pen’kovskiy. These two translations, based on ‘Alimджan’s text and with a preface by V. M. Zirmuskin, were published at Tashkent in 1944 under the title: “Fazyl Yuldash: Alpamış”. Finally, in 1949, L. N. Pen’kovskiy published at Tashkent the first complete translation of the Yuldash version, with the title Alpamış, uzbekski epos. There are other Özbek versions, by other bakhšis, which are still unpublished, and which differ in certain details.

The Kazak version (2nd part only) was published by Shayh ul-Islamov at Kazan in 1896, and the complete text was edited by Aimbet ul Kally Tashkent in 1922, and re-edited some years later at Alma-Ata in 1933. It appears under the title Alpamys Batyr in the anthology Batyrlar Zhyry, Alma-Ata 1939, 249-96.

The Karakalpak version (1st part only, with Russian translation) is based on the text of Diya Murad Bek Muhammedov, bakhši of Torńi (A. Divaev, Alpamys-Batyr, Ethnograficheskie materialy, fasc. vii in Shornik materialov diya statistik Syr-Daryinskoy oblasti, ix, Tashkent 1901). The complete Karakalpak version was published in Moscow in 1937 and again in 1941 at Törńi and Tashkent, under the title “Aimbet ul Kally: Alpamys.”

In addition there exist two prose versions, Bashkir and Altai, which are radically different from the central Asian versions. The Bashkir version, Alpamys kem Bärşyn Kk’ylyau, was published by N. Dimytriev, with Russian translation by A. G. Bessonov, in Bashkirskie Narodnye Skazki, fasc. 19, Ufa 1941.

The text of the apparently earlier Altai version Alyp-Manash, established by N. U. Ulagashev, appears in Altay Bulay (the Oyrat national epic), published by A. Koptelev, Novoshirsk 1941, 79-126.

The longest version, that of Fazyl Yuldash, comprises 14,000 stanzas; the Kazak and Karakalpak versions are shorter and comprise 2,500 and 3,000 stanzas respectively.

ALPHABET [see AL-HIDAJ, HURUJ] ALPHARES [see BANUS, BAYARRAT] ALPUENTE [see AL-BUNT] ALPUJARRAS [see AL-BUSJARRAT] ALRUCCABA [see RUKRA] ALSH, now Eloche, a small town in the Spanish Levant (Sharh al-Andalus) 12 m. S-W of Alicante, noted for its palm groves, which still exist to-day, and which were described by Muslim authors such as Ibn Sa’īd and al-Kawzānī.

(E. LÉVI-PROVENCAL)

ALTAI, mighty, ca. 1000 miles long mountain system in eastern Central Asia, stretching from the Saïan Sea in the southwest to the upper Selenga and the upper Orkhon, with the sources of the Ob‘, the Irtilsh and the Yenisei. Here, and in the adjacent country to the north-east as far as the present-day Mongolia, was the oldest home of the Turks and the Mongols and their ancestors. The Turks had here for a long time after their “refuge” in the Ötiikan mountains, the oldest Turkish designation for the southern Altai, as it appears in the inscriptions of the Orkhon, is Altın-yıla (“gold mountains”), in Chinese Kin-shan (same meaning). The name of Ektag, however, mentioned by the Greeks (probably Ak Tagh, “white mountain”), seems to refer to the Tien-shan (E. Chavannes, Documents sur les Tou-kieu occidentaux, 236 f.). It is uncertain whether the modern name, which appears for the first time in the Kalmuck period, is connected with the Mongol ailaan, “gold”; the local population explains it by a false etymology as aili ayt, “six month”.

Documents sur les Tou-kieu occidentaux, (A. Benning and H. Carrère d’Encausse)}
ALTIAINANS is the name of a Turkish tribe in the Altai mountains, partly professing, more or less nominally, Orthodox Christianity, partly Shamanistic; though Islam is not to be found amongst them, they had some contact, though possibly not an immediate one, with Islamic civilization (as attested by loan words such as kuday, "God"); daykan, "the devil". (Cf. for them G. Teich and H. Rébel, Völker... der UdSSR, Leipzig 1943, 28-43, 137 f., 142; W. Radloff, Proben aus der Volkskultur der türkischen Stämme Südsibiriens, i; Aeus Sibirien, ii, 350 ff.; Bol'shaya Sovetskaya Entsklopediya, 441 f.);

The name Altaias has been substituted since about 1874, and more especially in the 20th century, following a proposal of M. A. Castrén, for the term Turanian (q.e.v.), coined by F. Max Müller, as the designation of the assumption community of the Turkish-Mongolian peoples; the even wider concept of Ural-Altaianas comprises also the Samoyeds, Finno-Ugrians and Tunguses. (Cf. e.g. Ural-Altaiische Jahrbiicher, Wiesbaden, since 1952; J. Benzing, Einführung in das Studium der altasiatischen Philologie und der Turkologie, Wiesbaden 1953; with bibliography; W. K. Matthews, Languages of the URSRS, Cambridge 1951). These peoples, however, with the exception of the Turks (q.e.v.), are not touched by Islam.

ALTAIR (see ALTINSH)

ALTAMISH (see ALTAMIISH)

'ALTTH, or AL'TTH, town, to the north of Baghda'd, between 'Ukbara and Sámara, on the eastern bank of the old course of the Tigris. As the course of the Tigris has changed (cf. INGAU), 'Altth is today on the western bank, on al-Shattaya. The extensive ruins of the town are known as 'Alth up to the present day; they lie about 4½ m. N.W. of the modern town of Balad. The town is already mentioned by Ptolemy (v. 20) under the name of Altina. According to the medieval geographers the northern limit of the Sawad or al-Irak was formed by 'Altth on the eastern, Harrba on the western side of the Tigris. The town was a waqf for the benefit of the descendants of 'Ali b. Abi Talib (Yakuti) and some d.linguished traditionists of the 6th and 7th centuries A. H. came from it. A stone dam was built over the Tigris near 'Altth, but no trace of it remains. Near 'Altth lay the convent called Dayr al-'Altth or Dayr al-Adhār, described, among others, by the poet Dji'dhia al-Barmaki.

ALTITI (see SIRKH)

ALTIN (7.), Gold, also used of gold coins. The word is often met with in Turkish proper names of persons and places, e.g. Altin Köprü, Altincah (Altuncah). See also SIRKH.
ALTIN (ALTİN) KÖPRİ, a town of ırak, built picturesquely on a small rocky island in the Lesser Zab river (45° 8’ E., 35° 42’ N.)—and in modern times overflowing on to both banks—serves as a nahiya headquarters in the kadı of Kirkük in the ieva (province) of that name, formerly in the waliyyat of Mosul. The Zab here forms the boundary between Kirkük and the Irbil ieva. Known locally in Arabic simply as al-Kantara, the Turkish name (“Golden Bridge”) is variably explained; some believe it to commemorate a Turkish or Kurdish lady of that name, others that it refers to the rich caravans-tolls of earlier days, since the place lies on the agelong Baghlu-Mosul highway; while others understand it as an abbreviation of Altın-Sü-Köprü, or the “Bridge of the Altın-Sü”. But it is at least equally probable that the river name (now rarely used) itself merely reflects the town name.

The place, no more than an obscure and unrecorded village in medieval times, gained importance in and since the 17th/18th century, after the erection of the two bridges by (it is said) Sultan Murad IV and a period of settled administration. It was visited and has been described by many European travellers, and, now reckoned as healthy as well as highly picturesque, has in late years been greatly improved in cleanliness, amenities, and communications. The famous stone-built bridges, of which the southern contained an almost impracticably high central arch, were destroyed by the Turks in 1918 and later replaced by modern steel structures. The Kirkük-Irbil branch of ırak Railways crosses the Zab immediately upstream.

The inhabitants of Altın Köprü, some 3500, are mixed Kurdish, Turkoman and Arab; this applies also to the thirty villages within the nahiya. Many of the latter lie within the area of the rich and extensive Kirkük oilfield (discovered in 1935/1939, and in full development since 1935/1939); oilfield operations give employment to many of the inhabitants. Their other main occupations are those of agriculture (partly rain-fed, partly aided by modern-type irrigation), of services and supplies connected with road transport, of the characteristic kelek (skin-supported raft) traffic on the Zab, and of wholesale and retail trade.

ALTİN ORDÜ, modern Turkish imitatin of the Russian term “Zolotaya Ordja”, “Golden Horde” [see above].

ALTINTASH (also ALTINTASH, local pronunciation ALTINTES), village in Anatolia, 39° 5’ N, 30° 10’ E, and a nahiya in the vilayet and the kadı of Kutahya (though the capital of the nahiya is not in the village, but in the village of Kürkçüyö, a little to the west), on the small stream in the area of the sources of the Porsuk, somewhat to the west of the Ayfın Kara Hisr—Kütahya road. The village contains a kadı decorated in the 19th century and a modern mosque incorporating older fragments. It stands on the site of an older and larger mosque, the building inscription of which (by the Rûm Sâlîk âlî sân, al-Dîn Kaykâbid) is said to be in the museum of Ağ Sêhir. The inscription which is now above the porch refers to the building of a bridge and bears the date of 666/1267-8; the place has two small old bridges.

In the neighbouring Çakarsaz (called by the inhabitants Çakarsaz) there is an early Ottoman khan (three naves with five girders) with a remarkable porch, into which there are also built antique fragments. Altintast was a stage on the highway from Brusa (and Usküdar) via Kütahya to Ayfın Kara Hisar and Konya, forming the stage probably together with Çakarsaz.

Bibliography: Cf. Huart, Konıa, Paris 1867, 57, 254; 4 All Dowrûd, Memlûk-i 4 Âlîmisûzâne, Ta’riski ve-Dîkâtî, Aq Sêhir, 45; Fr. Taeschner, Das anatolische Wegennetz, Leipzig 1924-6, ii, index. (Fr. TAESCHNER)

ALTINTÅŞ AL-HADJÅ, Abu Sa’ ün (his alleged second name Hârûn which occurs in a single passage of Ibn al-Ahâlî, ix, 394, is probably due to an error of the author or of a抄yist), Turkish slave, later general of the Ghaznavid Sebûk Teğn and his two successors and governor of Khårizm. Already under Sebûk Teğn he attained the highest rank in the bodyguard, that of a “great hâyûd”; under Mahmûd he commanded the right wing in the great battle against the Karâlahânids (22 Rabi’ II 398/4 Jan. 1008, and in 401/1010-1) he is mentioned as governor of Harrât. After the conquest of Khårizm in 408/1017 he was appointed governor of the province with the title of Khårizmshâh and maintained himself in this office until his death in 423/1032. Altintåş seems to have administered the advanced border-province with energy and foresight and to have effectively fought it against the neighbouring Turkish tribes. As, however, by this means he established his own rule even more than that of the sultans, his measures were always regarded with suspicion both by Mahmûd and Mas’ûd, and it is said that both of them made attempts to remove the troublesome governor by treachery. In the spring of 423/1032 Altintåş undertook, by order of the sultan Mas’ûd a campaign against “All Teğn (ci. Karâlahân) and received a mortal wound in the battle of Dabûsîya. He was succeeded as governor by his son Hârûn, but Mas’ûd bestowed the title of Khårizmshâh on his own son Sa’ ün and Hârûn administered the country only as Sa’ ün’s representative. In Ramadan 449/August 1004 Hârûn proclaimed himself independent, but was killed the very next year at the instigation of the Ghaznavids. His brother and successor İsmail Khandan ruled the country till 453/1041, when he was ousted, by order of the Ghaznavids, by Şâh Malik, the prince of DIAND. Thus the dynasty founded by Altintåş came to an end.

Cf. also the anecdotes, which are probably derived from the lost portions of Bayhaqî’s great work, in Nişâm al-Mulk, Sêyidâ-nâma (Schefer), 206
"ALÜCK [see al-ŻUQQ].

AL-ÂLIŞI, name of a family which included a large number of savants of Baghdad in the 19th and both centuries. The name is derived from Alûs, a place situated on the west bank of the Euphrates, between Abû Kamâl and Ramâdî; according to family tradition, the ancestors of the Âlûs (whose descent is traced back to al-Âsâs and al-Âsâsan) fled there to escape from the Mongol conqueror Hûlâdî; their descendants only returned to Baghdad in the 11th/12th century. Among the numerous representatives of this family who have added lustre to the cultural and political history of Iraq are:

(1) ʿÂBD AL-LÂH SHÂH AL-DÎN, forefather of the family (d. 1246/1830).

(2) ʿABDULLAH ʿABDALLAH AL-DÎN (1217-70/1802-54), son of the preceding; he was muftî of Baghdad for several years, but was also an outstanding professor, thinker and polemist. Among his numerous works are: Fikrîyâ, a treatise on the Kurân, Bûlûk 1301-70/1883-92, 9 vols.; commentaries on grammar and prosody and attempts at makâmât; his doctrinal arguments are contained in al-Risâlât al-Lâmîyya (ed. 1301/1883) and al-Âgiwîdâ al-Ârâbiyya ʿan al-Âsâs al-Ârâniyya (Istanbul 1317). The account of his voyage to Istanbul in 1267-81/1851-2, after his dismissal from his post as muftî, provided the material for there comments on grammar and prosody and attempts at makâmât; his doctrinal arguments are contained in al-Risâlât al-Lâmîyya (ed. 1301/1883) and al-Âgiwîdâ al-Ârâbiyya ʿan al-Âsâs al-Ârâniyya (Istanbul 1317).

(3) ʿÂBD AL-RÂHMAN, brother of the preceding, (d. 1284/1867); a muftî at Baghdad, he was called "the Ibn al-Dîwân of his age and the Ibn Nubâta of his generation".

(4) ʿÂBD AL-ḤAMîD, brother of the preceding, (1232-1324/1816-2006); professor and waṣîf, author of some verse and a Najâr al-Laʿâlî ʿalâ Naṣr al-Mâmîlî.

(5) ʿÂBD ALLAH BÂHÂ AL-DÎN, elder brother of (2) (1248-91/1442-95); Bûsî of Basra, author of a small treatise on grammar, two texts on logic and a commentary on a treatise on mysticism.

(6) ʿÂBD AL-BÂKî SÂD AL-DÎN, brother of the preceding (1250-93/1834-76); Bûsî of Kirkûk in 1292/1875; he wrote mainly commentaries on or adaptations of manuals on grammar or scansion, and a guide to the pilgrimage, Awdâl Manâhîd ilâ Maʿrîjat Mandâš al-Nâdîrî (Ith, Cairo 1277).

(7) MUHAMMAD EIBA AL-DÎN ABU ʿALÂ BÂRÂKÂRÊT, brother of the preceding (1252-1317/1836-97), professor and waṣîf; a defence of Ibn Taymiyya, Dîdîlî ʿalâ Aynîyâ ilâ ʿalâ Muḥâšâma bayn al-Ahmâdîn, which caused a great sensation. He wrote two other polemical works, al-Dîmâdî al-Ârâbî (against the Christians), and Shahâsâ al-Nûmânî fî Ruṣâ al-Nâdûs al-Sulaâyîn; his sermons and exhortations were collected in his Khâtât al-Mawlî, a work of great length which exists in several editions.

(8) MUHAMMAD HÂMÎD, brother of the preceding (1262/1846-1290/1873-4).

(9) ÂHMAD SHÂHî, brother of the preceding (1264/1848-1330/1911-2), Bûsî of Basra.

(10) MUHAMMAD SHUKRI, known also as MUHAMMAD AL-DîN-ZÂDÎ, son of (9) (27 December 1273/14 May 1857); Shawkâl 1324/1867; the best known of his family, a fact which is partly due to the zeal of Muhammad Bahâdî al-Âthârî in publishing his works. He wrote some 50 works on history, fikrî, biography, lexicography, rhetoric and dogmatic controversy; on history, the most noteworthy are the Bulûg al-Ârâb â Maʿrîjat Ahsâl al-Ârâb (printed in 1313/1896), a history of the Arabs of the ghdâtîyya compiled in answer to a question raised at the Oriental Congress (1889), and Taʾrîkh Nadîjî (Cairo 1343); on biography, al-Misk al-Âdâfî (Baghdâd 1348/1930) on the savants of Baghdad in 12th-13th centuries; on dialectology, Awdâl al-Âwâmm fi Minâdît al-Sâlâm; on controversy, a series of violent polemics against Shiʿîsm, against the Rûfīyya Order, in support of the neo-Hanbalî law reform, etc., notably the Ghâyât al-Mâmâni, published under a pseudonym (Cairo 1327). He was one of the most vigorous representatives of modern Islam, striving by means of the written and spoken word and by his example to combat bidâʿa, and he may be regarded as one of the leaders of the Salafiyya movement. 

(11) ʿALLÂ AL-DÎN ʿÂLI, son of (7) (d. 1340/1921); a professor; his only work is a manual on grammar in verse; a collection of biographies is not completely

(12) MUHAMMAD DARWÎS, son of (9) (d. after 1340/1922); professor and preacher; he wrote several unpublished works.

ALWA, name of a Nubian people and kingdom. The kingdom was adjacent to that of Makurra (q.v.) a little below the confluence of the White Nile and the Atbara and stretched southwest well beyond the confluence of the White and Blue Nile; its capital was Sôba, near the modern Khatûm. The Christian kingdom preserved its independence even after the fall of the kingdom of the Makurra and only disappeared in the beginning of the 10th/16th century under the pressure of Arab tribes allied to the Fundjî. (See also NÛBA, and AL-ÂLN.)

ALWAH — CAMADIYA

ALWAND [see AK SOYUNLU],
ALWAND KCH or KUH-I ALWAND (£LWEND),

is an isolated mountain group lying to the south of Hamadhān, and rising to a height of 11,717 feet. To the north and north-east the Alwand Kuh drops steeply off to the plain; to the north-west it is united to the Kūh-i Dā'im al-Barf, a mountain-mass of almost equal height, which is joined to the Kūh-i Almu Kulakh by lower mountain-chains. The latter forms the north-western extremity of the entire Alwand system. The core of the real Alwand consists of granite, judging from the geological formation; only at the base is there to be found isolated red clay of salt formation. Wild rocky precipices, bare cliffs and gorges alternate with fertile mountain pasturages; up to nearly 7,500 feet the southern slopes are clad with groves of walnuts, mulberries and fruit trees. The Alwand Kuh is noted for its abundant water-supply. Mustawfi observes (Nuzhat al-Kulub, Bombay 1921, 153) that in addition to the spring which rises on the highest peak, no fewer than 42 streams flow from this central portion of the mountain chain, some of which are tributaries of the Tigris, others turning eastwards, flow to the interior of Iran. As the result of the plentiful irrigation by the Alwand streams the plain of Hamadhān has always been considered as the most highly favoured region of Iran. Hamadhān itself, the old Ekbatana, which is built in terraces along the foot of the mountain was a favourite summer residence for the Achaemenids kings on account of its cool, lofty position (1860 metres). Two cuneiform inscriptions dating from Darius I and Xerxes I still remain as vestiges of ancient Persian times at a place named Gangi Namah (= treasure-house) on the slope of the Alwand Kuh at a height of 7,000 feet.

Oriental writers relate many legends but few facts concerning the Alwand Kuh. (They mention a source on the summit of the mountain as one of the sources of paradise—probably following old beliefs concerning the locality; cf. Jackson, Persia Past and Present, 146, 170-3.) Al-Kazwim (682 = 1283) gives the best account; he names it Kuh Arwand. Yakut also uses the name Arwand, whereas other Arabian writers employ the later term Alwand (Mustawfi: Alwand Kuh). The Old Persian name Aruanda (Avesta and Pāzand: Arwand) appears in Greek writers (Polybios, Ptolemy, Diodorus) in the form Ὄρους. In Old Armenian the word is found as the name of persons in the form Erwand (Arwand); apart from occasional quotations in general works, in such special anthologies of the genre as Ibn Sa나ţ al-Mulk's Dār al-Tird (ed. Rikaby, nos. 1, 30, 34), Ibn Bughā'is 'U'dat al-Khāli, Ibn al-Khulj's Diayk al-Tawshi (ch. ii), and al-Ṣafādi's Tawshi (nos. 144, 164; for the last two, cf. S. M. Stern, in Arabic, 1955, 150 ff.). MSS of his muwashshah poetry, are to be found in London and Cairo (see Brockelmann, i, 320, 5 L 480), but he is mainly famous as one of the great masters of muwashshah poetry. His muwashshahs are preserved, apart from occasional quotations in general works, and containing classical poetry, are to be found in London and Cairo (see Brockelmann, ii, 392; H. Petermann, Bibliography: The Imperial Gazetted: The Rajputana Gazetted; Government of India Ministry of States, White Paper on Indian States, Delhi 1950.

( P. HARDY)

AMA [see 'ABD].

AL-ʿAMĀ AL-TUTIĪL, "the blind man of Tudela", ABO 'L-'ABBĀS (or ABU ḪABAR) AHMAD B. ʿABD ALLĀH B. HURAYSRA AL-TUTI (OR AL-KAYS), HISPANO-ARABIC POET, B. IN TUDELA, BUT BROUGHT UP IN SEVILLE; D. 525/1130-1. MSS of his diwān, containing classical poetry, are to be found in London and Cairo (see Brockelmann, i, 320, 5 L, 480), but he is mainly famous as one of the great masters of muwashshah poetry. His muwashshahs are preserved, apart from occasional quotations in general works, and containing classical poetry, are to be found in London and Cairo (see Brockelmann, ii, 392; H. Petermann, Poësie andalouz, index, s.v. L'Aveugle de Tudèle.

(S. M. STERN)

'AMADIYA, a town in Kurdistan, at about 100 km. north of Mosul in the basin of the Gara river (a right tributary of the Great Zāb). The town stands on a hill and is dominated by the citadel carved out by the Alawīs.
AMÁDIYA — AMAL

ii/2, 114-5). Less probable is its attribution to the Buyid 'Imad al-Dawla (d. in 338/949, see Nuzhat al-Kalb, 105.) The original form of the name is, therefore, 'Amadiyya, but the modern pronunciation is 'Amadiya.

'Amadiya had Kurdish princes of the Bahdini family, originary of a place called Tārūn (cf. Hoffmann, Auszüge, 222) in the territory of the Shams al-Dīnān (Shamāndīn). Sharaf al-Dīn, 1, 106-15, traces their arrival back to circa 600/1203. In its heyday the principality comprised a number of adjoining territories ('Akr Shūk, Dahīk and even Zakho). The later Bahdini shifted between the Şafawids and the Ottomans and were finally incorporated by the latter, under whom 'Amadiya was reckoned now to the wilayat of Wān and now to that of Mawṣīl. Since the settlement of the Mosul question in 1926 'Amadiya has formed part of 'Īrāq.

Wilson, Mesopotamia 1917-20, London 1930, index.

AMAL (Ar.) 1. Amal, performance, action, is usually discussed by the speculative theologians and philosophers only in connection with belief (see ʿilm, Iman) or with ʿilm and nazar. From Hellenistic tradition was known the definition of philosophy as the "knowledge of the nature of things and the doing of good" (cf. Maṣāḥith, ed. van Vloten, 131 f.). Many Muslim thinkers have emphasised the necessity or at least the desirability of this combination (cf. Goldziher, Kitāb Maʿdīn al-ʿUlum, 54*-60*). But it is the intellectualism of the Greek philosophy, in ethics, only briefly mentioned and two theoretical, which are discussed more fully. The activity of the vegetable and animal soul is practical as is that of the soul of man, i.e. the reasoning soul, in so far as the latter chooses not only the useful but also the beautiful and prepares itself for the goals placed before it in this life. The theoretical faculties are of a higher rank. Beginning with sensual perception (animal soul) theoretical reason advances beyond the material world and rises to the intellectual sphere. Practical reason is only servile, theoretical however is independent (cf. al-Fārābī's Musteraṭṭa, [Arabic] ed. Dieterici, 47).

In conclusion it may be mentioned that the philosophers following Aristotle divided sciences into theoretical (nasāʿīyya) and practical (ʿamalīyya). The latter are ethics, economics and politics.

Bibliography: A. J. Wensinck, The Muslim Creed, Cambridge 1932, s. index, s.v. Works; and Tj. de Boer, Ethics and Morality (Muslim), in Hastings' Enc. of Religion and Ethics. (Tj. de Boer)

2. Amal (and the pl. aʿmāl), "that which is practised" and, following the usage of Kurʿān and ḥadīth, "the works". It is opposed complementarily to nazar [q.v.], speculative knowledge, and must be distinguished from fiʿli [q.v.] (pl. aṭfāl), acts. Amal signifies the moral action in its practical context and, secondarily, the practical domain of "acting". In the terminology of falsafa, al-ʿilm al-ʿamāli is practical knowledge, which comprises, according to the list given by Ibn Khuzami (Mafštīḥ al-ʿUlum), ethics, domestic economy and politics, thereby reproducing an Aristotelian distinction. This then is a notion which applies to the "foreign sciences". It was used and developed in falsafa, particularly in distinguishing the "practical" and the "theoretical intellect". Concurrently, the idea of ʿamal šāliḥ, a morally good action, synonymous with maʿrūf, became current in Islam. But the Risāla al-Laduniyya (a text usually attributed to al-Ghazzālī) introduced the distinction between speculative knowledge (here ʿilm) and practical knowledge (ʿamāl) as regards revealed knowledge (ʿilm šarīʿ) itself, and it is canon law (jihād) which is called an ʿamali science. When works on kalām consider the nature of faith (imān) and its relationships to Islam, the "external works" required by the Law are commonly termed ʿamāl. Ibn Ḥazm does the same. (Aṯfāl, on the other hand, is commonly used in order to describe the human acts when discussing the question of free will.) Al-Ghazzālī, especially in the Iḥyāʾ, when speaking of the faith, follows the usage of kalām with regard to the meaning of the term ʿamal and its plural ʿamāl. He considers as permissible the following definition: imān is equivalent to the sum of inward assent (Īsādīk), verbal confession (bāwl) and works (aʿmāl).

Bibliography: Mafštīḥ al-ʿUlum, Cairo 1342, 79) al-Risālah al-Laduniyya, Cairo 1355/1354, 31; Iḥyāʾ ʿUlum al-Dīn, Cairo 1353, 1, 103 ff.; see also the Fisal of Ibn Ḥazm and the treatises of kalām, chap. on al-ʿamāl waʿl-akīmām. (L. Gardet)

3. Amal, "judicial practice": The problem of "jurisprudence" as a source of law has arisen at every period and in every province of Islam. But Morocco has provided the best facilities for studying it, since the discovery there by L. Milliot in 1917 of an ʿamal which has regulative force. In Andalusia, despite controversy, there prevailed a tendency to require judges to follow "practica of Cordova". Jurisprudence entered into compendia of "formularies" (waṭḥāʾīk), "responsa" (fāṣāda) and even "regulations" (bawānim). Part of this material was incorporated in a late manual, the Ṭuḥfā of Ibn ʿAṣiṣ (d. 829/1426), which was destined to have
a great success in Morocco, where the evolution was
determined by local conditions.

At Fez, the jurisdiction of the kādīs was combined with
the action of municipal authorities, and had
to take into consideration special customs. The
resultant of this complicated procedure, once set
down in writing, was precisely the ʿamal, which
found a recognised place in the system from the
end of the 9th/10th century. A short guide to
procedure, the Lāmiyya of ʿAli al-Zābkhāk (d.
Shawwāl 1202/March 1907), expressed already
the technical aspect of the problem. Fikhl is above
all an “art” in the service of orthodoxy and of
urban economy. At the same time, it reflects the
difficulties met with in the existence of unusual
practices, or even what we should call customary
laws. Ahmad b. al-Kāfī (960 — Safar 1025/1522 —
Feb.-March 1612) expounds a Mālikī ʿamal. Al-
ʿArabī al-Fāṣī (6 Shawwāl 488 — 14 Rabīʿ II, 1052/ 14 Nov. 1558 — 12 July 1642) sanctions the
evidence of the kāfīf, “unsifted” witnesses, which emanates
neither from “virtuous men” [cf. adl] nor from professionals,
but from the “man in the street”, and relies therefore on the inherent integrity of the “group” (djamāʿa). This innovation, which was not
imbibed with conditions in rural areas, provoked controversy. Similarly the safīka which, by sanctioning the validity of a sale concluded by a joint
owner, demonstrated the solidarity of the rural family,
was the subject of a work by Māhmmād b. Ahmad Mayyāra (15 Ramaḍān 999 — 3 Dīnān dū, 1072/7 July 1561 — 24 January 1662).

In the second half of the 11th/17th century, ʿAbd al-Rahmān al-Fāṣī (17 Dīnān dū, 1040-16 Dīnān dū, 1171-21 Jan. 1662) collected
together several hundred rules in a mnemonic poem
called al-ʿAmal al-Fāṣī. This work, which acquired
at least three commentaries, has given its name to a
whole class of literature. There is also a “general
practice” (amāl mustāb), and especially a Southern practice which, being based on an irregular local system, has great documentary value. An important
part in its formulation was played by the kādī ʿAbbās al-Suktānī (d. 1662/1654) and by the jurists origi-
nating from the old intellectual centres in the Sūs
and influenced by the spiritual movement which developed round the ṣawwās, such as Dīlāʾ and particularly Tamgrūt.

Under the title of “opinions” (adjudīmāt), “judg-
ments” (ʿabbāmāt) or “precedents” (nawāsīr), each
doctor reproduced and, on occasion, revised the
contributions of his predecessors. The lack of criticism
of the sources, and the tendency to cover expedient
solutions by the cloak of doctrinal pretexts, make it
difficult to trace the evolution of ideas, as well as
of this voluminous branch of legal literature as a
whole. Nevertheless, European scholarship, justly
impressed by the continuity and by the practical
value of this literature, is inclined to regard it as
tending to the creation of a positive law. This thesis
has been propounded in a masterly fashion by
L. Milliot. On its part, Moroccan exegesis reduces
ʿamāl to a purely technical plane; when local
customs require it, the kādī has the right to prefer
the “isolated” or “anomalous” opinion (ddālah) to the
“predominant” opinion (mākhāl). This right, limited
by numerous conditions and differentiations, is therefore apt to produce only temporary and isolated solutions. In fact, ʿamāl is virtually a prag-
matic law. But it remains subject to doctrinal criticism which can at any moment revoke it. It is
nevertheless of considerable interest to historians,
to whom it offers factual information, too often
neglected by the chroniclers, and a many-sided
documentation on the development of Moroccan law.

Bibliography: Dogmatic theory of juris-
prudence: Karafī, al-Iḥām fi Tarnīs al-Fāṣī al-
ʾAmal al-Aḥām, 2nd question; Ibn Farhūn,
Tabṣira, Egypt, ed., 1302, i, 45-8. For the early
function of “practice”, and a comparison between
the attitudes of the various schools: J. Schacht,
The origins of Muhammadan jurisprudence, Oxford

trans. J. Berque, Essai sur la méthode juridique
maghrūbīne, 1944, 120 ff. For late attempts by the
Sultan Muhammad b. ʿAbd Allāh to systematize
legal practice: ʿAbbās b. Ibrāhīm, ʾIḥām, v. 1358,
123 ff. Main works on ʿamāl in the strict sense:
Zābkāk, Lāmiyya, with a commentary by ʿUmar
al-Fāṣī, lith., Fez 1306; trans. by Merad ben Ali,
with text, and preface by L. Milliot, Casablanca
1927; ʿAbd al-Rahmān b. ʿAbd al-جادīr al-
Fāṣī, Al-ʿAmal al-Fāṣī, with a commentary by
Sidjīlmāsī, lith. Fez, 2nd ed. n.d., and two other
editions in 1298 and 1317; Sidjīlmāsī Rībātī, al-
Tunis 1290. The most commonly used compendia
of jurisprudence are: in the North, the works of
Ahmad b. Yāḥyā al-Wangīṣī (d. 914/1509),
the compiler of a legal encyclopedia, the Mīsār;
Muḥammad called al-Kāṭīb al-Mīkānī (835-917)
1432-1522); ʿAll b. ʾAbān, din. 951/1545); Yāḥyā
al-Sarrāḏī (d. 1007/1598); ʿAbd al-Kādīr al-Fāṣī
1007-1091/1598-1680); Muḥammad Burdalla
(1042-1133/1632-1720); Muḥammad al-Madīqisī
(d. 1139/1726-7); ʿAbd b. ʾIsā al-Alāmī (12th/18th
century); al-Mahdī al-Wazzāmī (1666-1742/885-
1824), author of a new Mīsār. In the South;
the works of ʾIsā al-Suktānī; the “Pole” Muḥam-
mad b. ʾAbd al-Daʾrī (d. 1085/1674-5); ʿAbd al-
ʾAbbāsī (d. 1152-1739-40); Ahmad al-Rasmūkī
(d. 1133/1720-21).

The theory of ʿamāl as positive law was ex-
pounded for the first time by L. Milliot, Démom-
transmissions du havr, Paris 1918, 22-30, with
translation of a passage from Sidjīlmāsī’s com-
mentary on the ʿamāl, 109-17; idem, Recueil de
jurisprudence chrétienne, Paris 1920-23, 3 vol.,
in section iv of the Introduction; idem, La con-
ception de l’État et de l’ordre légal dans l’Islam,
Paris 1949, 644-47. The most recent summary of
L. Milliot’s ideas is contained in his preface to vol.
iv of Recueil de jurisprudence chrétienne,

For Moroccan doctrines on ʿamāl: Ahmad b.

wa ʾl-Malām ʾamman ʿalāʾ al-ʾAmal bi l-ʿaladīsī:
šāhīdīyān barām, n. p. 1308, 7-10, 17-20; Muḥam-
mad al-Hādījī, Al-Fīkhr al-Sāmī, iv, Fez, n.d
229 ff., trans. J. Berque, Essai, 126-29; also cf
ibid., 63 ff.). (J. Berque)
4. *Amal as a legal and economic term, denotes the labour, as opposed to capital; as such, it occurs in the discussion of a number of contracts, e.g. ḥajar (hire), mudarabah (or birad, sleeping partnership), muddābīt and mustārā (agricultural partnerships); [q.v.]. It also denotes the performance of an act or a duty (opp. nīyya, “intention”); hence Suyūtī’s [q.v.] *Amal al-Yawm wa’l-Layla (“Acts to be performed every day and night”); Brockelmann, II, 190, no. 113, and its Shi’ite counterpart, *Amal al-Yawm w’al-Layla w’al-Usbu’ w’al-Shuhur al-Sana (“Acts to be performed every day and night, week, month and year”) by Muhammad al-Isfahānī (Brockelmann, S.II, 795, no. 16), and the tradition al-‘amal bil-nīyyat, “acts are valid according to the intention” (cf. Goldziher, Vorlesungen, 45, Vorlesungen, 41). (Ed.)

AMALI [see TADRIS].

‘AMALIK (or ‘AMALKA), the Amalekites of the Bible. Not mentioned in the Kur‘an, this ancient people is connected by Muslim literary tradition to the genealogical table in Genesis x, either to Shem (through Lud-Lūwush or Arpakhshad), or to Ham. They take the place of the Philistines (the people of Dālīlit-Goliath) and of the Midianites (Balaam persuaded them to incite the Israelites to debauchery), and the Pharaohs are alleged to be of their race. On the other hand, in the mythical pre-Islamic history of Arabia and in the legendary cycle of the Yamamite migrations, they are listed among the first tribes speaking the Arabic tongue, with Tasm, Dżāsir and Thamūd. At the time of Hūd, they lived in the Ḥijāz, but the same prophet is supposed to have preached to them in Babel. Ishmael’s first wife, who was repudiated, was an Amalekite. Their moral corruption merited their destruction. The evil deeds of King ‘Amalik belong to the folklore concerning *jus primae noctis.* Joshua fought against them, and the establishment of Jewish tribes at Ṭāhirīb is said to be an unforeseen result of the war of extermination waged on them by Joshua’s order, but not fully carried out. David also made war on them. Reference is also made to an Amalekite settlement in the Yamâm. Even the confused memories of the Palmyrene empire of Odenathus and Zenobia have been associated with the Amalekites. Nöldeke has clearly shown that apart from the confused biblical references, there is no historical basis to these accounts.

Bibliography: Ibn Hishām, Sīra, (Wüstenfeld), 5; al-Tijān, Hyderabad, 137/1928, 29 ff.; 45 ff.; Tabarī, I, 213, 771, 1131; Aḥqāfī, iii, 12-3; xiii, 109; xix, 94; Malāʿūdī, Mūrūdī, ii, 293; ii, 91, 104, 270, 273 ff.; Kisāʿī (I. Eisenberg), 102, 144 ff., 241; Thālabī, *Ardīs al-Majdūlās*, Cairo 1370/1951, 62, 82. A useful résumé of most of legends is in Caussin’s *Documents sur la diplomatie musulmane*, Paris 1935, with bibliography. The relevant letters, whether genuine or not, from the Prophet, the first Caliphs and their commanders (cf. M. Hamidullah, *Documents sur la diplomatie musulmane*, Paris 1935, with bibliography) are almost exclusively concerned with the granting of permanent security, which is acquired either by conversion to Islam or by political submission to the Islamic state (cf. Aḥl al-Dhimma); at least one reference to safe conducts for foreign travellers exists (Ibn Sa’d, i/2, 37), but *amān* in its later technical meaning was not, as yet, distinguished from the general concept of dhimma. This distinction was made when the religious law of Islam was elaborated. *Amān*, in Islamic religious law, is a safe conduct or pledge of security by which a hārbi or "enemy alien", i.e. a non-Muslim belonging to the dīr al-harb [q.v.], becomes protected by the sanctions of the law in his life and property for a limited period. Every free Muslim, man or woman, who is of age, and according to most doctrines even a slave, is qualified to give a valid *amān*, either to an individual or to a restricted number of hārbis. The *imād* alone is qualified to give an *amān* to undetermined groups, such as the population of a whole city or territory, or to all traders. An *amān*, properly given, is valid whether the fundamental state of war exists between the Muslims and the community to which the hārbi in question belongs, or whether it has for the time being been suspended by treaty or truce. It can be given verbally in any language, or by an intelligible sign. The *musta’mīn* has the right to go, with his property, to his “place of safety”, where he is not exposed to immediate attacks by the Muslims, when his *amān* expires (or earlier), or at the latest one lunar month (according to the Shāhī’s: four months) after the grant of the *amān*, unless he prefers to stay in Islamic territory under the status of the aḥl al-dhimma. Diplomatic envos who are known or are taken to identify themselves as such, automatically enjoy *amān*; but that is not true of traders or of shipwrecked persons. During his stay in Islamic territory, the *musta’mīn* is, generally speaking, assimilated to the dhimmi as far as civil law is concerned; as regards criminal law, the doctrine hesitates, with many variants on details, between subjecting him to the *ḥadd* punishments applicable to the dhimmi or making him only civilly responsible; in any case, if the *musta’mīn* acts against the interest of the Muslims or otherwise misbehaves, the *imād* may terminate his *amān* and deport him to his “place of safety”. The corresponding safe conduct given by the hārbi to a Muslim in their territory, is not called *amān* but *iḍān* (permission).
In practice, letters of amān for individuals are attested from the late Umayyad period (104-108/723-726) onwards. The oldest grants of amān proper, given to whole groups for the purpose of travel or trade, are contained in the treaties between the Muslim administrators of Egypt and the Nubians and the Bedja, of 31/651-2 and 104-116/722-734 respectively. Formularies of a later period are found in al-Kalkashandi, Subh al-‘Aqd, xili, 321 ff. (summarized in Björkman, Beiträge zur Geschichte des Staatshaushaltes im islamischen Ägypten, Hamburg 1928, 170 f.). Al-Kalkashandi mentions, too, the issue of letters of amān by the Muslim political authorities to Muslims and gives examples, mostly from the later period. These are free pardons issued to rebels, and they are, strictly speaking, superfluous or even incompatible with religious law. They were, nevertheless, issued frequently, and the historians provide numerous examples of this kind of amān, which was on occasion unscrupulously broken, from the early ‘Abbāsid period onwards. The institution of the regular amān, on the other hand, made not only diplomatic relations (cf. M. Canard, Deux épisodes des relations diplomatiques arabes-byzantines au Xe siècle, in B Ét. Or., xili, 51-69) but trade between the Islamic and the Christian world down to the middle of the 6th/12th century possible, and letters of amān were regularly granted to traders and pilgrims. It has been suggested that the Islamic doctrine of amān was elaborated, on an old Arabian and Islamic basis, under the influence of the corresponding rules of Roman Byzantine law. From the end of the 6th/12th century onwards, coinciding with the increase in trade across the Mediterranean, the institution of amān was in practice superseded by state treaties between Christian and Islamic powers, which gave the strangers more security and rights. There are natural similarities in details, even the term amān is sometimes used in the Arabic versions of the treaties, and the Muslim scholars, when called upon to give fa’isās on questions arising out of them, naturally thought only in terms of amān (cf. A. S. Ahmad, An Unpublished X/11th Century Fa’isā, in Studien zur Geschichte und Kultur des Nahen und Fernen Ostens [P. Kahle Festschrift], Leiden 1935, 55-68). Nevertheless, these treaties, which later gave rise to the Capitulations (cf. imtīyāz), did not develop out of the Islamic concept of amān, but represent a type of treaty which had already come into being between the trading cities of Italy and the Byzantine Empire and the states of the Crusaders (cf. R. Brunschwig, La Berberie orientale sous les Hafsides, Paris 1966). The date of its composition is posterior to that of Bagh o-Bahār. He was stimulated to this literary activity by the Director of the Fort William College, Dr. J. B. Gilchrist (d. 1841). The writings of Mir Amān are generally reckoned among those early works which have powerfully contributed to the development of a simple, natural and direct style in Urdu literature.

Mir Amān occasionally wrote poetry under the poetical name of Luṭf; but he did not excel in it and his ghazals seem to have been lost.

AMĀN—AMĀNAT

AMĀN, MIR, (commonly spelt AMAN or AMANAT) (1790-1853), an Indian writer, born at Delhi, who was active at the beginning of the 19th century at the Fort William College, Calcutta. His fame as a graceful writer of Urdu prose rests almost entirely on Bagh o-Bahār, which is an adaptation of the story of the four Dervishes, entitled Ḫiṣṣa Čahār Dārvejeh in its Persian original. It was completed in 1217/1802; and thanks to its plain and perspicuous style, has been widely used as a text-book by Western students of Urdu, and has in consequence been repeatedly printed in India. It has also been translated into English by L. F. Smith under the title of The Tale of the Four Dervishes, Calcutta 1813.

Other translations are due to Duncan Forbes, Hollings and Eastwick. There is also a French translation by Garcin de Tassy, Le jardin et le printemps, poème hindoustani traduit en français, Paris 1878. Another less known work of Mir Amān is Gandh-i Ḥāzī, which is a free translation into Urdu of Aḥḫāb-i Muḥṣīnī, an ethical treatise by Ḥusayn Waṭīr Kāshīfī. The date of its composition is posterior to that of Bagh o-Bahār. He was stimulated to this literary activity by the Director of the Fort William College, Dr. J. B. Gilchrist (d. 1841). The writings of Mir Amān are generally reckoned among those early works which have powerfully contributed to the development of a simple, natural and direct style in Urdu literature.

Mir Amān occasionally wrote poetry under the poetical name of Luṭf; but he did not excel in it and his ghazals seem to have been lost.

AMĀN ALLĀH (see AFGHANISTAN).

AMĀNAT, the poetical name of SAVYID AĞGĀ ḤĀSAN (1231-75/1815-58), a poet of Muslim India, in whom the artificiality and conventionality of the Lucknow school of Urdu poetry reached its culminating point. He began by composing marihīyas or elegies on the tragic death of Ḥusayn the son of ‘All; but soon turned to the ghazal. His poetical compositions have been preserved in two collections, viz., Guldaštā-i Amānāt, compiled in 1264/1847, and his Dīwān, also known as Khāṭām-i Fāṣāhā, collected in 1278 A. H. and published for the first time at Lucknow in 1285 A. H. He also wrote two māshāhs, the second of which is longer (307 stanzas) and of a better literary quality. In the last days of his life, he became inordinately fond of composing

Das islamische Fremdenrecht, Hanover 1925 (supersedes the previous studies, but to be used with caution, cf. Bergsträsser, in Isl. xv, 311 ff.; contains extracts from Zaydl works); M. Hamdullah, Muslim Conduct of State, revised ed., Lahore 1945, 117 ff., 192 f., 200-3; N. Kruse, Islamische Völkerrechtslehre, Göttingen 1953 (not seen); M. Khadduri, War and Peace in the Law of Islam, Baltimore 1955, 162-169, 223 f., 243 f. (J. Schacht)
riddles and enigmas, which seem to have afforded him some sort of mental diversion. He is, however, chiefly remembered for his *Indar Sabhā*, a musical comedy, completed in 1270/1853 and published the next year, along with *Sharḥ Indar Sabhā*, lithographed on the margin. It took the Indian public by storm and became the prototype of many similar plays, written by various authors in subsequent years. In the *Sharḥ*, he reproduces the whole story and also describes the action scene by scene, for those unable to see the play on the stage.

**AMANUS [see ELMA DABHI].**

1. **AMĀRA** (47° 13' E, 32° 50' N), until 1333/1914 the capital of the Turkish sandjak of that name in southern Irāk, has been since 1340/1921 the headquarter town of a liwa of the Irāk kingdom, containing also the dependent saḥās of *All al-Charāb* and Kalva Šalīb. Pleasantly situated on the Tigris about thirty miles from the nearest Persian hills, and potentially rich from the great flood-canals, the abundant crops of rice and dates, and the sheep-breeding of its half marshy and half corn-land territory, ʿAmāra was founded only in 1279/1862 as a Turkish military post to control the ever warring Bānū Lām and Āl Bū Muḥammad tribes. It grew rapidly as a local market and entrepôt, as a centre for the civil administration, as a refuelling station for the river steamers, and as from 1308/1890 as a headquarters for administering the great estates acquired for Sultan ʿAbd al-Ḥamīd II. The town’s main population elements were, and are, Shiʿī and (fewer) Sunnī Muslim Arabs, with communities of Chaldæan Christians, of resident Lurs and Persians, of the “Sabaean” silversmiths, and, until 1370/1950, of Jews. Under the British occupation and Mandate (1333/1915 to 1351/1932) and the Irāk Government the town has expanded and acquired modern buildings, communications and public services; but the particularly difficult problems presented by this district in tribal administration and land-tenure remain largely unsolved.

**AMARKOT, town situated 25° 22' N and 69° 71' E, in the Tharparkar district of West Pakistan (population in 1951: 5,142, including 1,957 Muslims), was, according to tradition, founded by a branch of the Sūmara Rājpūts who embraced Islam during the reign of ʿAllāʾ al-Dīn Khālīdī (694/1294-716/1316). The Sūmras lost the town in 624/1226 to the Sūmras. In 843/1439 the Sodas again came into power. In 940/1532, Humāyūn, after his defeat by Šhr Shāh, sought refuge in Amarkot with the Sūd prince, variously named Bīr Sāl, Prasād or Parsīyā. Akbar was born in Amarkot on 5 Ṣadād 949/23 November 1542. In 999/1590, when ʿAbd al-Rahīm Khān Khān conquered Sind, Amarkot became part of the Mughal Empire, but in 1008/1699 Abu ’l-Kāsim Sūlān, an Afghan prince, displaced the Mughal commander. In 1140/1730 Nūr Muḥammad Kalhoz, the ruler of Sind, expelled the last Sodā chief and took possession of the town. In 1152/1739 Nādīr Shāh, on his way back to Persia after the sack of Delhi, forced Nūr Muḥammad into submission. Later one of the Kāhrās sold the fort to the chief of Djodhpur from whom it was captured by the Tālpūr in 1248/1831, after which it lost its strategic importance. It passed into British possession with the conquest of Sind in 1843. The old fort in which Akbar was born was demolished by Nūr Muhammad in 1746, and it was he who built the present fort. The birth-place of Akbar, about half-a-mile to the north-west of the town, is marked by a stone-slab erected in 1898.

**AL-‘AMASH, ABU MUHAMMAD SULAYMĀN B. MIHRĀN, traditionist and Kūfīn “reader”*. Born in 60/679-680, or 10 Muḥarram 61/10 October 878, of a Persian father, he lived at al-Kūfa and died probably in Rabi’ I 1/148/May 765. He received traditions from al-Zuhri and Anas b. Mālik, and his instructors in hirā’a, were: Ṣītabi, al-Najahi, Yabāy b. Waḥthāh, “Āṣim; Ḥamza was his disciple. His “reading”, which followed the tradition of Ibn Mas’ūd and Ubayy, appeared in the list of “the fourteen”.

A great admirer of ʿAli, he is supposed to have furnished the poet al-Sayyid al-Ḥimyari with the material for the eulogies which he composed in honour of that Caliph.

**AMASYA, town in northern Anatolia and capital of a wilāyet. It preserves the name of Amaseia, under which it was known in antiquity (for its ancient history see Paulus Wissowa, s.v.; F. Cumont, *Studia Pontica*, ii-iii; A. H. M. Jones, *Cities of the Eastern Provinces of the Roman Empire*, index). In 712 it was for a short time occupied by the Arabs (cf. Brooks, in *Journal of Hellenic Studies*, 1898, 193). In the 11th century Amasya came under the dominion of the Dānishmandids, and was annexed with the rest of their territories by the Rūm Sāljiḳ Kılıç Aarslan II. At the division of his kingdom among his sons (588/1339) Amasya fell to Nizām al-Dīn Arghūn Shāh (Ibn Bibi, ed. Houtsou, 5), but was seized by his brother Rukn al-Dīn Sultan. Subsequently it was under Mongol governors, though it came for some time into the hands of Tādż al-Dīn ALTINBAKH, the son of the last Sāljiḳ sultan, Mashūd II. In 742/1341 it was occupied by Ḥābil oglu, and
then passed under the rule of Eretna and his successors. The amir Hadjdii Shadgeldi seized Amasya from the Seljuk emir Eretna-oghlu (Aslarbhadj, Asam, Rasm, 100 ff., 137-40). Subsequently strike broke out between Shadgeldi and his confederate Malik Ahmad on the one side, and Kadjil Burshan al-Din on the other, for the possession of the town (ibidem, 225, 235 ff.). After Shadgeldi's death, his son Ahmad managed, with the help of the Ottoman sultan Bayezid I, to hold Amasya against Burshan al-Din; finally it fell into the hands of Bayezid. After the latter's capture by Tiazur, his son, Mehmed Celebi, succeeded in escaping to Amasya, from which town he started on his campaign against his brothers. Under Ottoman rule Amasya enjoyed the special favour of the ruling house. Bayezid II when crown-prince was the governor of the town; Sulayman I often stayed in it, and received there the Austrian ambassador, Busbecq. Amasya, which had been a cultural centre already in the Seljuk period, became one of the main seats of learning in Anatolia. In the 17th century it was described by Ewliya Celebi and Kadi Celebi. By the end of the 19th century Amasya, lying on the Samsun-Sivas-Kharput road, became an important centre of transit traffic; the Samsun-Sivas railway was completed in 1930. At the end of the 19th century the town had 25,000-30,000 inhabitants (some of them Armenians), in 1940 13,732 (500 non-Turks); the whole wilayet in 1950 had 163,494 inhabitants. Its economy is based on fruit, silk and textiles.

Amasya is situated on the main arm of the Yeshil Irmak (called Tozan or Tokat Suyu), above the confluence of the Tersakan Cay, 400 m. above sea-level, in a narrow and rocky gorge, running from east to west; the gorge widens above and below the town, where its renowned orchards are to be found.

The mountain on the right, southern, side of the river is called Farhād Dagh (local legend makes Farhad the founder of Amasya), while that on the opposite side contains the tombs of the kings of antiquity and the fortress. The most populous quarters and the greater part of the old buildings are in the southern side above and below the town, where its renowned orchards are to be found.

The mountain on the right, southern, side of the river is called Farhād Dagh (local legend makes Farhad the founder of Amasya), while that on the opposite side contains the tombs of the kings of antiquity and the fortress. The most populous quarters and the greater part of the old buildings are in the southern side above and below the town, where its renowned orchards are to be found.

The fortress, of Hellenistic origin, was restored in the Byzantine, Seljuk and Ottoman periods and is described by Ewliya Celebi; now it is in ruins. In the fortress are the ruins of a madrasa built by Kara Mehməd Agha (890/1485) and of a school added by his son Musufa Paşa (917/1511); also ruins of an imaret, a Kbalweh tekkiye and two baths. The mosque called Burmali Minare was originally a Sali- djik foundation; the inscription over the gate bears the name of Kaybhusar II and the date 634/44/ (223-47), but it was repeatedly restored and is now derelict. The same is true of the Gök Madrese, also belonging to the Seljuk period; it was built together with the adjoining türbe, by Sayf al-Din Turuntayy, governor of Amasya, in 666/1266-7. Of the Ottoman mosques, those of Bayezid Paşa (812/1412), of Yürük Paşa (834/1430), of Sultan Bayezid (891/1486), of Mehməd Paşa (891/1486), and the Pazar Djamal (unknown date) deserve mention. There are, furthermore, a lunatic asylum (905/1501), the Emirate of Pir Ilyas (815/1412), the madrasas of Kapı Agha (848/1448) and of Külüb Agha; the türbes of Kbalweh Ghazi (622/1225), of Turuntayy (677/1278), one attributed to Sultan Mas'in, those of Shadgeldi (783/1381), of „Sheh-žade", and of various Ottoman princes; finally the ruins of the palace built for some Ottoman princes (Beyler Saraylı). The monuments of the town have suffered from the earthquakes of 1825 and 1939.

AMAZIGH [see Berbers].

AMBAÌA, town in East Pandjāb, India, situated 30°21' N and 76°52' E, 125 miles from Delhi on the way to Sirhind. The town consists of the old town and the cantonments, four miles away. The population in 1951 was 146,726. Though the neighbourhood of Ambala played an important role in early Indian history, the town itself is first mentioned in the Safar-nâma-i Dāji Ḥasan (Bidjâwar 1909, 2 ff.), according to which it was occupied by the Muslims at the time of the second invasion of India by Mu'tazz al-Din b. Sâm in 587/ 1192. Itutmish (608/1211-56) reported that he had appointed a kadi here. In 781/1379 Piru Tughluk occupied the town together with Sâmanā and Shâhhâbâd. Bâbur camped here on his march to Panipat for the decisive battle of 933/1526. In 956/ 1545 Ambalâ was the scene of a severe engagement between the Niylâz insurgents from the Pandjâb and the Pathân troops under Islâm Shâh Sûr. During the Mughal period the town was a dependency of Sirhind and was a favourite camping ground of the Mughal sultans on their way to Lahore or Kashmir (the place of the camp is still known as Bâdshahi Bagh). It was also a centre of cultural activity. Two of its learned men (Abed al-Kâdir and Nûr Muham- mad) are mentioned in the Maktîbât of Ahmad Sirhindî (i, no. 284, ii, nos. 56, 63, 94, iii, no. 327). A number of madrasas flourished here in the days of Shâhjahân. Sâdîk Muṣṣâlîbî, the compiler of the Aâdâb-i Âlamgiri, a collection of Awrangzib's letters, was a native of Ambala. In 1122/1710 the town was captured by the Sikhs under Banda Bayrâgî. During the anarchy which followed the rout of the Marathas at the hands of Ahmad Shâh Durrânî in 1733/1734 and the infighting among the wards of the Mughal empire, it was occupied in 1763 by the Sikh adventurer Sangat Singh. On his death it passed into the hands of his brother-in-law, Dhyîân Singh, who leased it to Gurbakhsh Singh Kâba; on the latter's death in 1198/1783 his widow, Mâ'd Dayâ Kawr, succeeded him. She was ousted in 1808 by Randît Singh, but re-instated by the British a year later. On her death in 1825 the town was passed into the possession of the East India Company. During the Mutiny the town remained quiet. It took place in 1864 the "Ambala Trials", as an aftermath of the Ambeya campaign against the followers of Ahmad Brîwî. The town is a rail-head, an important military and air base, and has a busy grain market; it is famous for its "durries", or cotton carpets. It has a mosque of the Pathân period and some pillars erected by Shah Shâh Sûr; also the shrines of Haydar Shâh Lakbûkî and Sâtna Tawakkul Shâh, and the congregational mosque, an imitation of the Masjid al-Aksa, deserve mention.

**AMBON**, the central island of the South Moluccas, Indonesia. Nearly one half (ca. 25,000) of the population is Muslim, especially in the northern part. Already before the arrival of the Portuguese (1512 A.D.), Islam had been introduced in Hitu, a supply station for the East Javanese spice trade, and in some other villages; according to local tradition, this was done by chiefs who had traveled to East Java, Pasai and Mecca. After the turbulent times of the 16th and 17th centuries the Muslims have remained a stationary, neglected but prosperous community, where the original language and much of the old costumes are preserved.

(J. Noordanuy)

**AMBRA** [see 'ANBAR.]

**ÂMEDDÎ (†),** an official of the central administration of the Ottoman Empire; before the tanîmî, he was directly subordinate to the Reîlî-îl-Kûlâtî; he made copies of reports then by the latter, and also drafted reports on minor matters; in short, he performed all the clerical duties connected with the office of Reîlî-îl-Kûlâtî. Moreover, he was present at meetings between the Reîlî Efendî and ambassadors, and kept official minutes of the proceedings. He, like the Beyîkhî, held the title of Kûlâtî. The name and origin of this office derives from the Persian word amîd meaning "has come, has been obtained", an endorsement on documents acknowledging receipt of the dues payable to the Reîlî-îl-Kûlâtî by newly installed military personnel for their timârs and aîmets. The person making this endorsement was called the Amîdî, and the administrative bureau where the formalities connected with these documents were completed, Amîdî. The terms Amîdî Kûlâtî (secretary to the Amîdî), and Amîdî Kâlemî (the Amîdî department), were also used.

This office seems to have come into being later than the 17th century. After the tanîmî, the office of Amîdî increased in importance and was also known as Amîdî-i Dirân-i Hâmâyûn: its function was to make copies of the documents sent to the sadadet by other ministries and administrative departments which required the sanction of the Pâddâshâh, after resolutions of the Council of Ministers or the Sâdâr-i A'sam; in the case of documents which did not require this formality, its duty was to correct them, register them and send them to the Head Chamber.

---

**AMÉNOKAL,** the current spelling of the Berber ammâkhal, meaning "any political leader not subordinate to anyone else"; it is applied to foreign rulers, to highranking European leaders, and to the male members of certain noble families; in some regions of the Sahara, the title of ammâkhal is given to the chiefs of small tribal groups, but in the Ahaggar [q.v.], it is only conferred on the overlord of a confederation of noble or subject tribes. The ammâkhal must be selected from among the Ighagaran nobles, and his nomination is submitted for approval to an assembly of the nobles and the chiefs of the subject tribes; political succession is, in principle, established by the virtue of age or authority). Among the Touareg, it is only conferred on the overlord of a confederation of noble or subject tribes. The ammâkhal has a sign of rank a drum (*gëme, see Ch. de Foucauld, *Dict.,* iv, 1922-23), and receives tribute from subject tribal groups. His principal role was that of war leader, but in normal times, he applies the criminal law, settles disputes and concerns himself with relations with neighbouring tribes; he is always assisted by the assembly of notables which ratifies his decisions, and can dismiss him.

(Ch. Pellat)

**AMGHAR,** Berber word corresponding to the Arabic ghâyîkh [q.v.], and meaning "an elder (by virtue of age or authority)". Among the Touareg, it applies to chief of a tribal group who acts as an intermediary between the amnâkhal [q.v.] and his tribe (see Ch. de Foucauld, *Dict. touareg-français*, Paris 1952, ii, 1237; H. Lhote, *Les Touaregs du Hoggar*, Paris 1944, 157-8), or even to the chief of a confederation (cf. H. Bissuel, *Les Touaregs de l'Ouest Algiers 1888, 23). In Kabylia (see A. Hanoteau and L. Letourneau, *La Kabylie et les coutumes kabyles*, Paris 1893, li, 9) and among the Imazighan of Morocco (see G. Surdon, *Institutions et coutumes berbères du Maghreb*, Tangier-Fez 1938, 187-90), the amghar is both the president elected by the ghanda [q.v.] and its executive agent among the tribe or tribal groups which compose it. In the Shûb group in Morocco, the chief elected by the ghanda has the title of mûdîdâm (mukaddâm), and the amghar is more particularly the temporal ruler who owes his authority to force and not to regular election (R.
AMGHAR — AL-AMID1

(CH. Pellat)

`AMID [see diyâk bâk].

`AMID (Ar.), title of high officials of the Sâmâni-d-Ghaznavid administration, which the Saljûqids, the inceptors of their institutions and personnel, extended throughout their empire. The word, properly speaking, does not denote a function, but the rank of the class of officials from whom the civil governors, `âmil (as opposed to the military governors, sallâr, shîhâna), were recruited; thus Sîbî b. al-Djâzîl, Mirâd al-Zâmîn, MS Paris 1503, 193 v: “one of the `umâdât” is appointed governor; the same author, supplemented by Ibn al-Aghr, enables one to follow with considerable accuracy the career of the `umâdât of Baghâd at the time of the Great Saljûqids. Some people continued to be known by the title of `amîd after ceasing to be governor; for instance the `Amîd-Khûrûsân Muhammâd b. Mansûr al-Nasawi, a celebrated personage under the rule of the Great Saljûqids; and (according to Ibn Khallûk) the cultured wasir of the Bûyûds Ibn al-`Amîd derived his usual name from his father’s title.

On the other hand Barthold, Turnestan 229, has established that the title `amîd-al-mulk was held under the Sâmânis and Ghaznavids by the sâhib al-barîd; this is supported by various passages, also in the Damiyat al-Kâsir; it is possible that the great wasir of Tughîl-Beg, `Amîd al-Mulk al-Kundart, began his career in this way. Their former title of `amîd was perhaps also kept by wasirs; the famous Djâyâhî Âmîd al-Din in turn was a consequence in point (Ibn Faqîh, ed. Krâphkovsky, i93b).

Under the Bûyûds, the word `amîd is found in compound titles like `amîd al-dawla, `amîd al-dîn, `amîd al-dîyâd. In the 6th/12th century the title still sometimes occurs, even at Baghâd, but it was becoming a rarity at a period when the prerogatives of the civil authorities were being curtailed by the military governors. It does not occur under the Mongols.

It does not seem to have spread to other Muslim countries, which only possessed labâds with `îmâd, `umâda.

(C. Caen)

`AMID AL-DIN AL-ABZÂRî AL-ANÎSÂRÎ, Ashâd b. Naṣr, minister and poet, hailing from Abzâr, south of Shahrâz. He was in the service of Sa’îd b. Zangi, atâbeg of Fârs; was sent by his master as an ambassador to Muhammad Khâfirîmshâh, refused the offers which were made to him, succeeded Rukn al-Dîn Salâh Kîrmânî as minister and held his position until the death of Sa’îd. Sa’îd’s son and successor, Abû Bakr, had him arrested on the charge of having held a correspondence with the ruler of Khâfirîm and of having acted as a spy for him. He was imprisoned in the fortress of Ushkunîwân, near Baghdad, and died there at the end of five or six months (Djumâdî I or II 624/April June 1227, after having dictated to his son Tadj al-Dîn Muhammâd an Arabic poem of 111 verses (al-bâsîdîn al-Ushkunwânîyya) in which he deployed his misfortunes and which achieved celebrity as a collection of rhetorical figures.

Bibliography: Mîrkhânî, iv, 174 (= W. Morley, Hist. of the Thabeks, 28); Khânîmâmîr, ii, 4, 129; Wâsîf, 156; Cl. Huart, L’ode arabe d’Ockomad, Recue sémite, 1893; Brockelmann, I, 298, ii, 667, S I, 456. (Cl. Huart)

AL-ÂMIDI, Allî b. Abî Allî b. Muḥ. al-Tâghlîlî Sayf al-Dîn, Arab theologian, born at Âmîd in 551/1156-7; at first a Hanbalite, he later, at Baghâd, entered the ranks of the Shî’îs; he embarked on a study of philosophy which he continued in Syria, became a teacher at the madrasa of al-Kârâfa al-Sûghrâ adjoining the mausoleum of al-Shâfî in Cairo, and in 592/1195-6 became professor at the Djâmî al-Zâfîr. His intellectual powers and his knowledge of the “rational sciences” (sâhiyya) gave him a brilliant reputation, but caused him to be accused of heresy and to flee to Hamâ, where he placed himself at the service of the Ayûbîd sovereign al-Malik al-Manşûr (615/1218-9); on the death of the latter he was summoned to Damascus by al-Malik al-Mu’âzžam who conferred on him the chair of the madrasa al-Âzîzîyya (617 1220-1); he was dismissed from this post after 629/1229 by al-Malik al-Âghrîf for having taught philosophy. He died at Damascus in Šânîr 635/1233.

His numerous works relate to theology (Âkbâr al-Aḥkâr, in MS, a refutation of philosophers, Muṭâzîlites, Sabeans, Manîchêans); the sources of the law (Ikhâm al-Hukkâm fî Usûl al-Ahkâm, dedicated to al-Mu’aṣṣâm, Cairo 1347, summarized in the Munâkha al-Su‘âl, Cairo, n.d.); the art of controversy (Djâtal-Malik al-Mu’âzžam who conferred on him the chair of the madrasa al-Âzîzîyya (617 1220-1); he was dismissed from this post after 629/1229 by al-Malik al-Âghrîf for having taught philosophy. He died at Damascus in Šânîr 635/1233.

(D. Sourdel)

AL-ÂMIDI, Rukn al-Dîn Abû Ḥamîd Muḥammad b. Muḥ. al-Sâmâkandî, Hanâfî lawyer, d. on 9 Djumâdî II 615/3 Sept. 1218 in Baghâd. His chief merit lies in the art of dialectics, which he treated in his al-İrshåd and his al-Tarîkh al-Âmîdîyya fî l-.Dirâs wa’l-Djâdal (in MS).

His name is connected with the translation of an Indian work on Yoga, called Amîtal-kundå. Of this work there exists an Arabic translation, under the title of Mirzâl al-Mu’âzînî li-Dârâl al-Âlim al-İncînî, the various MSS of which offer a slightly divergent text. It was published on the basis of five MSS (which are not all those extant) by Yusuf Husain, in JA, 1928, 291 ff. Persian and Turkish versions also exist. (Cl. also M. de Guignes, in Mémoires de l’Academie des Inscriptions et Belles-Lettres, ancienne série, xxvi, 791; J. Gildemeister, Script. ar. de rebus indicis, i, 185; W. Pertsch, in Festgnschr. an Rohl, 1953, 169-12). In the preface a story is told of a certain Bâhûcârah Brahman Yogi, who came from Kamrûp (modern Assam) to Lakhâwî under the government of Allî b. Mârdân (ca. 605/1208) and was converted to Islam by Rukn al-Dîn al-Sâmâkandî; Rukn al-Dîn in his turn learned from him the practices of the Yoga, and according to the version in some of the MSS, translated the book into Persian and then into Arabic. The account, which is moreover coupled with another, different one, does not, however, throw full light on the true history of the translation of the work and more especially on al-Âmîdî’s share in it.

(S. M. Stern)

‘āmil (pl. ‘ammāl) signifies tax-collector, agent, prefect. As the verbal adjective corresponding to ‘amīl (see ‘amāl, section 1), ‘amīl denotes the Muslim who performs the works demanded by his faith, and is often used in conjunction with the term ‘ālim (pl. ‘ulāmā, [q.v.]) as an epithet of pious scholars. As a technical term, ‘amīl denotes (1) the active partner in a society of mudāraba [q.v. or bīrād; (2) the government agent or official, particularly the collector of taxes. In this last meaning, it occurs already in Kūf, ix, 60, though not yet as a technical term.

The Prophet appointed representatives among the tribes or in the areas under his authority in order to collect the sadāqāt [see zakāt] from Muslims and the tribute from non-Muslims; some of them had political and military duties (M. Hamidullah, Documents sur la diplomatie musulmane, Cairo 1941, 63, 212; al-Ṭabarī, Ann. i, 1759-1999-2008; Kattāni, al-Tarāʾib al-Idārīyya, i, 243; Abū Yusuf, Khārid, Būlāk 1302, 46 f.). The ‘āmil of Khaybar was sent to receive the Muslims' share of the crop (al-Kattāni, i, 245).

Under the Caliphs of Medina, ‘āmil generally meant a provincial governor or administrate (al-Ṭabarī, i, 2665 f., 2933 f., 2936, 2944; Hamidullah, 224). Among ‘Umar’s ‘ammāl in ‘Irīk are mentioned the governor, the kāfīl who was also the keeper of the provincial treasury, and two assessors of bārdāji (Abū Yusuf, 20 f.; al-Baladhūrī, Ann. i, 29). The commander of the fleet in Syria under ʿUthmān is called ‘āmil (al-Ṭabarī, i, 3058). The collectors of bārdāji and ḍiyās [q.v.] and administrative officers in the districts (kūra), whose main function was the collection of taxes, were also called ‘ummāl (al-Ṭabarī, i, 3058, 3082-3087; Abū Yusuf, 59).

In the Umayyad and the early ʿAbbāsid periods, ‘āmil continued to be used both of the higher and the lower ranks in the hierarchy of government officials. Under the Umayyads, ‘āmil could mean the governor of a province or his lieutenant (al-Ṭabarī, ii, 1491; al-Baladhūrī, v, 273; al-Kindī, Governors, 63, 65 f.). When finances were separated from other administrative matters, ‘āmil tended to be used more especially as the director of finances in the capital of a province, such as Egypt (al-Kindī, 72-75, 84), ‘Irīk (al-Ṭabarī, ii, 1305) or Khurāsān (al-Ṭabarī, ii, 1256, 1458). These ‘ummāl were appointed either by the governors or by the Caliph (al-Kindī, 70-75; al-Ṭabarī, ii, 1305, 1356). Tax collectors in the districts, too, were called ‘ummāl, as appears from the papyri (A. Grohmann, Arabische Papyri in der ägyptischen Bibliothek, i, 12 f., 121 f., 137). ‘Ummāl were in charge of the grave injustices committed by the ‘ummāl in Kūfa (al-Ṭabarī, ii, 1366). In Khurāsān, these ‘ummāl were usually non-Muslims (ibid. 1740), in other provinces they were recruited both from Muslims and non-Muslims (Zaki Hasan, Les Tulunides, 213, 248).

In Khurāsān, these ‘ummāl were usually non-Muslims (ibid. 1740), in other provinces they were recruited both from Muslims and non-Muslims (Zaki Hasan, Les Tulunides, 213, 248).

In Khurāsān, these ‘ummāl were usually non-Muslims (ibid. 1740), in other provinces they were recruited both from Muslims and non-Muslims (Zaki Hasan, Les Tulunides, 213, 248).

Under the early ʿAbbāsid, ‘āmil could still mean the governor of a province (al-Dījahshīyārī, Wusūrā, Cairo 1357, 134, 139, 151; al-Baladhūrī, v, 402). For Egypt, the ‘āmil bārdāji was usually appointed by the central government in Baghdād (al-Makrīzī, Khāliṣ, i, 15), though full powers were occasionally given to the governor (al-Kindī, 120, 125). More commonly, however, the term is used of tax collectors in the districts; we hear of an ‘āmil kūra (Rasā‘īl al-Butlāghā, ed. Kurd ‘Ali, iii, 403), of ‘ummāl al-Ṣawād (see sawād) (al-Dījahshīyārī, 134), of ‘ummāl bārdāji (ibid., 93, 233), of ‘ummāl of a governor and ‘ummāl of cities (al-Kindī, 194, 200; Rasā‘īl al-Būlāghā, iii, 86).

By the 4th (10th) century, ‘āmil had normally come to mean a finance officer. The ‘āmil of a province had beside him an ‘āmil (al-Ṣāḥī, Wusūrā, 156), and when the ‘āmil and the ‘āmil worked together, their power on the province was practically unlimited (Ibn al-Aḥšī, viii, 165 f.). The local ‘ummāl (‘āmil kūra, ‘āmil bārdāji, ‘āmil naḥṣiya) were responsible for encouraging agriculture, for keeping irrigation works in order, for collecting revenue, and for submitting balance sheets of their areas (al-Ṣāḥī, 71, 193, 313, 318; Miskawayh, Edīfis, i, 27 f., ii, 23; al-Ṣāḥī, Letters, ed. Arslan, 211)

There are also references to ‘ummāl appointed for specific duties, not all of them purely financial, such as the ‘āmil ma‘ṣūrin, in charge of the police (Miskawayh, i, 139; combined with bārdāji, ii, 29), the ‘āmil masāḥik, in charge of the fortified frontier posts (ii, 48), or the ‘āmil quitarghi, in charge of the financial administration (Kumān, Ta’rīkh, 149). Occasionally, a chief ‘āmil was represented at the seat of the central government by a nāṣib (Miskawayh, i, 324).

The full development of the system of ‘ummāl is presupposed by the writers on the constitutional law of Islam (al-akhām al-sulāmīyya), such as al-Māwardī and Abū Ya‘la. They distinguish ‘ummāl (governors) of provinces with full and with limited powers, and ‘ummāl appointed for specific duties. The ‘āmil of a province is appointed by the Caliph, by the wāṣir or by the governor, and the governor or the ‘āmil can appoint ‘ummāl for the districts.

The same system prevailed under the independent dynasties, with variations in details. Under the Tulūnids and the Khākhāwīs in Egypt, most of the tax collectors were Copts (Zaki Hasan, Les Tulunides, 213, 248; Kūshf, al-Takhīhid, 136 f.). Mention is made of the ‘āmil al-ma‘ṣūrīn, the chief of police (Ibn al-Dāya, al-Mukdār, ed. A. Amin and al-Dārim, 70 f.). The ‘ummāl of the Fāṭimid in Egypt were supervised by nazāris and muḥārīf (al-Makrīzī, Itīḥād, i, 139; Kūshf, iv, 77 f.). The same is true of the ‘ummāl of the Ayyūbīd (Ibn al-Mamātī, Kawkān al-Dawāsir, ed. Aḥṣī Suryāl ‘Aṭīyya, 303). Under the Mamlūks, the local ‘ummāl or ‘ummāl al-būlād were landlords of villages or local farmers (A. N. Poliak, Feudalism, 45 n. 1, 47 n. 1). For the Sāmānids, see Gardīzī, Zayn al-Ākhbār, Berlin 1951, 51; for the Ghzānawīs, Niẓām Arūdī, Cāhār Māhā, 48; for the Saʿdawīs, Nizām al-Dīn al-Ṣiyāsāt-nāma, 28; Balkh, Fārs-nāma, 122; for the Ilkhānids, the Dījahshīyārīs and the Ak Koyunlu, Dīwashīn, Ta‘rīkh-i Dījahshūvyā, ii, 33; V. Minorsky, in BSOAS, ix, 950; A. K. S. Lambton, Landlord and Peasant in Persia, 102 f.; for the Timūrids, Khāndīmir, Dastur, 179; for the Saʿdawīs, Minorsky, Ta‘ṣīkāt, vol. 756-764, 82a-b; Lambton, 116.

In Muslim India, ‘āmil at first denoted a governor in charge of the general administration, then came to mean a collector of taxes in a small district (Moreland, Agrarian System of India, 270; Lybyer, Ottoman Government, 294).

The Ottomans used ‘āmil of a tax farmer; later, the term was little used, except occasionally for a
subordinate tax collector in the provinces (Mantran and Sauvaget, *Règlements fiscaux ottomans* 20). Muslim North Africa and Spain continued the Umayyad usage, and *āmil* meant a governor or administrative officer, responsible for general administration and finance. This continued until the end of the Umayyad Caliphate (Ibn 'Idhārī, *al-Bayān al-Muqrib*, passim; E. Lévi-Provençal, *Histoire de l’Espagne musulmane*, i, 92).

**Bibliography:** the sources mentioned in the text, and Dozy, *Supplements*, s.v.; A. Max, *Renais-

**sance des Islams*; F. Köprülü, in *IA*, s.v. (particularly useful for the later period).

(A. A. Duri)

*ʿĀmil* (a.; pl. *ʿadmil*), derived from *ʿamil* (*fi* = to act upon), signifies as a grammatical term a regens, or to express it in the way of the Arabic grammarians a word, which, by the syntactical influence which it exercises on a word that follows, causes a grammatical alteration of the last syllable of the latter, i.e. a change of case or mood. Two kinds of regencia are distinguished, one which can be recognized externally (*laṣṭ*) and one which is only to be supposed logically, but which is not expressed (*maṇaʿ*).

The *ʿamil laṣṭ* again is of two kinds: (1) the case where it concerns a whole series of mutually dependent words, which can be treated analogously according to the same rule (as for example in the *ṣāf* construction); (2) the case in which each regens requires special treatment (e.g. *bi, lam*); these two sub-divisions are named *ʿamil ḫiyāṣ* and *ʿamil sanaʿ* respectively. It makes no difference whether the regens is expressed as in *bāma Zayd*, or whether it must be supplied grammatically from the sentence as a form of the verb, as in *Zayd fi l-ʿām*.

Indeed the absence of a regens is a very frequent occurrence in Arabic grammar (cp. al-Ẓamakhshari, *Mufassal*, index s.v. *īḍmār ʿāmil*). This case must be distinguished from the complete absence of the regens in the case of the *ʿamil maʿnaʿ*, for in this second kind it is impossible to supply the *ʿamil* grammatically, although it can be done logically; grammarians usually cite as an example the subject of the nominal sentence, whose *ʿamil* cannot possibly be supplied.

**Bibliography:** Sprenger, *Diet. of techn. terms*, 1045; Sprenger, *Kitāb al-Taḥrif*, 1045; Diurdianl, *Dīdima Zayd*, (ed. Erpenius); (G. Weil).

*ʿAML* (a.; pl. *ʿadmla*) is a very frequent term in the sources mentioned in the text, and Dozy, *Supplements*, s.v.; F. Kopprü, in *Fr. Ph.*, 301. According to Yakūt, iv, 291, they also occupied a part of the country of the *Ismaʿili*, a day’s journey to the S. of Aleppo, which he says was named after them *ʿĀmila Mountain*. This isolated reference (cf. *JA*, 1855, i, 48) is the more surprising in that the corresponding text of the *Marāṣīd* gives *ʿĀmira* instead of *ʿĀmila*. To avoid the difficulty, G. le Strange (*Palestine*, 75) supposed an emigration towards the N. during the crusades, but without giving references. The Arabic historians of this period are ignorant of this change of place, and continue to use the synonymy *ʿĀmila-Dīall* (*Re-

**cueil des historiens des croisades*, *Hist. or.*, ii, 88; cf. *Āmil* read *Dīall*; iii, 491, 543). The application to the *ʿĀmila* of the passage from the *Kūrān*, *xxxi*, 3, by the poet Dīzār is only a sneer of the Tamimite who was jealous of the favours enjoyed by Ibn al-Rūḥī. The Dīzāl *ʿĀmil*a in the Lebanon was, and is, an important Shīʿite centre, and several eminent Shīʿite authors bear the name *Isbu* ʿĀmilī. [For further details see *Mutawallī*.]

(H. Lammens-W. Caskel)

AL-ʿĀMILI, MUHAMMAD b. ḤUSAYN BAḤIʿ AL-Dīn, with the tāḥālāt of Bahāʾ, born 935/1547, died 1030/1621; author of several works in Arabic and Persian, on a variety of subjects. Originating from Dīzāl ʿĀmilī in Syria, he migrated to Persia, and eventually obtained an honoured place at the court of Shāh ʿAbbās. The best-known of his works is the anthology *al-Kaṣḥūl* ("the beggar’s bowl"), frequently printed in the East; he also wrote an exposition of Shīʿite fiqh (in Persian), under the title of *Dīyāmi*-i ʿAbbāsī, and was the author of various works on astronomy and mathematics. As a Persian poet, he distinguished himself by a *mathnawi* called *Nān u-Halawv* which, according to Ḥīth, formed a sort of introduction to the Matnawī of Dīzāl al-Dīn Rūmī. A second *mathnawi* entitled Shīr u-Shahrār, is less known.

AL-ʿĀMIL, AL-HURR [see al-Hurr al-ʿĀmilī].

*ʿĀmin*, "safe", "secure"; in this and the more frequent form *āmin* (rarely *āmin*, rejected by grammarians) it is used like *āmen* and (Syriac) *amin* with Jews and Christians as a confirmation or corroboration of prayers, in the meaning "answer Thou" or "so be it", see examples in al-Mubarrad, al-Kāmil, i, 577 note 6; Ibn al-Dizārī, *al-Nāṣr*, ii, Cairo 1345, 442 l., 447. Its efficacy is enhanced at especially pious prayers, e.g. those said at the Kaʿba or those said for the welfare of other Muslims, when also the angels are said to say *āmin*. Especially it is said after *sūra 1*, without being part of the *sūra*. According to a hadīth the prophet learned it from Gabriel when he ended that *sūra*, and Bilāl asked the prophet not to forestall him with it. According to another hadīth, *salāt* the *ismā* says it loudly or, according to others, faintly after the *fāṭihah*, and the congregation repeats it. It is called God’s seal (*lāba* or *ḥalām*) on the believers, because it prevents evil.

*zīher in *RSOI*, 1902, 207-9."
AMIN (Ar. pl. umand), “trustworthy, in whom one can place one's trust”, whence al-Amin, with the article, as an epithet of Muhammad in his youth. As a noun, it means “he to whom something is entrusted, overseer, administrator”: e.g. Amin al-Wahy, “he who is entrusted with the revelation”, i.e. the angel Gabriel. The word also frequently occurs in titles, e.g. Amin al-Dawla (e.g. Ibn al-Tilmidh others), Amin al-Din (e.g. Yūkī), Amin al-Mulk, Amin al-Saltana.

In addition to these general and undefined uses of the word amin, there are other more technical uses, of importance in the history of Muslim institutions. Thus amin is used to denote the holders of various positions “of trust”, particularly those whose functions entail economic or financial responsibility. In legal works the word denotes “legal representatives”; under the early 'Abbasids the amin al-ba'um was the officer in charge of the administration of the effects of orphan minors (Tyan, Organisation judiciaire, i, 384). In a wider connotation the word applied to treasurers, customs officers, stewards of estates etc. (see Ibn Mammātī, Kauwānīn al-Dawāwīn (Atiya), ch. 3, regarding Egypt, and for the West, Lévi-Provençal, Hist. de l'Espagne Musulmane, iii, 40; E. Le Tourneau, Fr. avant le Protectorat, index, and in particular 299 n. 3; etc.).

The most important technical meaning of the word amin is “head of a trade guild”. In this sense the word often has the plural aminīdī (Le Tourneau loc. cit.). But the use of the word amin in this sense seems to have been always limited to the various countries of the Muslim west; the east, in pre-Ottoman times, preferred in general the term 'arīf [q.v.], and, in modern times, has employed a variety of terms. For general information on the heads of trade guilds, and for the bibliography, see 'arīf, 'infi. For the Ottoman period, see EMIN. (CL. CAHEN)

AL-AMIN, MUHAMMAD, 'Abbāsīd Caliph, reigned 193/809-13. Born in Šawwāl 170/April 277, of Hārūn al-Rashīd and Zubaydā, niece of al-Manṣūr, he was thus of pure Hāshimite stock both on his father's and his mother's side; hence he was given priority in the order of succession over his brother 'Abd Allāh (the future al-Ma'mūn), who was born six months before him but of a slave mother. In fact, the first bay'a as heir to the throne was accorded to him by al-Rashīd in 175/792, when he was barely five years old, and it was not until 18/799 that al-Ma'mūn was designated second successor.

The whole question of the double succession was settled with due solemnity by al-Rashīd in 186/802, in the “Meccan documents”, designed to eliminate all uncertainty and all conflict between the two heirs: in the first of these documents, al-Amin acknowledged al-Ma'mūn's right of immediate succession to himself, and his virtually absolute sovereignty over the eastern half of the empire; in the second document, al-Ma'mūn took cognizance of these rights, and declared in his turn his loyalty and obedience to his brother as caliph, whether or not the latter had respected his obligations. The system of obligations and counter-obligations by these documents shows clearly that al-Rashīd recognized the delicacy of the situation created by the double nomination and by the latent conflict between the two brothers (prof-

ably different both in character and interests), and tried to preserve a precarious equilibrium between them by these juridical and religious formulas.

When al-Rashīd died at Tūs, on 3 Dhi-mādād II 193/24 March 809, al-Amin was recognized as caliph at Baghdād and throughout the empire, while al-Ma'mūn hastened to return to his fief of Khurāsān. The following year (194/810) al-Amin, by suddenly introducing the name of his own son Mūsā in the Friday Prayer after that of al-Ma'mūn, took a step which, without formally violating the Meccan agreement, revealed his intention of setting it aside, by placing alongside his brother a later successor who suited him better. There followed a brisk exchange of diplomatic correspondence between the two brothers (supported respectively by the wasīr al-Faḍl b. al-Rabī', and by the future wasīr al-Faḍl b. Sahīl), the text of which has been preserved by al-Ṭabarī, and which assumed the form of political manoeuvring or a “cold war” between Baghdād and Marw preceding the armed conflict. Al-Amin tried to entice his brother to Court, to persuade him to give up his right to the control of several important areas of Khurāsān, and to obtain his consent to a modification in the order of succession. The respectful and prudent, but firm, resistance of al-Ma'mūn induced him to precipitate matters and, at the beginning of 195/end of 810, he formally violated the Meccan documents and substituted the name of his own son for that of al-Ma'mūn (and of the third brother al-Kāsim, the future al-Mu'tasim), as direct heir to the throne. To smash the resistance of al-Ma'mūn, who was declared a rebel, 'Alī b. ʿĪsā b. Māḥān was despatched at the head of an army, an act which marked the commencement of open hostilities between ʿIrāq and Khurāsān (Dhu-mādād II 195/March 811).

The war was conducted for al-Ma'mūn by his redoubtable general Tāhir b. al-Ḥusayn (q.v.); in the first clash near al-Rayy, the latter defeated and killed 'Alī b. ʿĪsā, and then 'Abd al-Raḥmān b. Ḥanīfa al-Abnāwī who was sent against him with a second army. The whole province of al-Dībāl fell rapidly into the hands of the Khurasānī troops, against whom al-Amin vainly flung contingents levied from among the Syrian Arabs. The attempt to use this Arab element as a weapon against the Persian element, which supported al-Ma'mūn en bloc, failed completely, while in Syria grave disorders occurred, and in Baghdād itself, as the result of a coup effected by al-Ḥusayn b. 'Alī b. ʿĪsā, al-Amin was temporarily declared deposed and al-Ma'mūn was recognized as caliph; but the attempt failed (Radjab 196/March 812) and al-Amin, restored to the throne, had to face the Khurasānī armies which were then approaching the capital. Baghdād was invested in Dhu-l-Hidjād 196/August 812 by two corps under the command of Harhama b. A'yān and Tāhir, who had meanwhile completed the conquest of Khūzistān; throughout the remainder of the empire (ʿIrāq, Mesopotamia, Arabia) al-Amin's authority waned; he was declared deposed (makhluq) and replaced by his brother. Despite this, the desperate defence of the capital lasted for more than a year, during which there grouped themselves around the Caliph the most turbulent social elements of the empire (known as “the naked”, 'urdā), who in the course of bloody fighting barred the path of the besiegers. The position was not clarified until Muharram 199/September 813, when all resistance was overcome and al-Amin requested Harhama for a safe-conduct. But while he was making his way towards that former loyal general of his father, who had promised him his life, he was intercepted by Tāhir's men, who feared that their prey might escape, and was captured and put to death (night of 24 of 25 Muharram 199/24-5 September 813). It
appears that al-Ma'mun was not directly responsible for the murder of his brother which, however, was not unwelcome to him and which left him de facto the sole ruler of the empire.

The war between the two brothers has been viewed by some as an aspect of the conflict between Arabism and Iranism at the beginning of the 'Abbásid dynasty; in fact, it was primarily a dynastic dispute, although admittedly there were certain ethnic factors in the origin of the two rival brothers and in the deployment of the forces on which they relied for their support; but although Khuşášun and Persia in general supported the al-Ma'mün bloc, it cannot be asserted that al-Amin was the conscious champion of Arabism, or that the Arabs were solidly behind him. He had the superficiality and indolence of the hedonist, ignorant of the complexities of political intrigue, and was concerned solely to secure supreme power for himself and his descendants; the policy necessary for the achievement of this aim, conducted, incidentally, without much serious consideration, was less his own work than that of his minister and councillor al-Faḍl b. al-Rabīʿ [q.v.], who is depicted by the sources as his evil genius and who, in the hour of danger, abandoned him to his fate in order to secure a pardon for himself from the victor.

The loyalty and obstinate resistance of Baghdad during the siege was not due so much to legitimist and dynastic ideals as to the excessive liberality of the Caliph and to the belligerent instincts of the dregs of the city, who regarded the situation as an opportunity for licence and booty. Thus al-Amin had no one actually at his side except a small group of courtiers and poets, companions of his debauches, like Abu Nuwas, who remained faithfully at his side until the end and who sincerely lamented his death in his elegies. His memory, in Muslim historiography, is associated with that of the Umayyad Caliphs Yazid I and Walid II, who were also libertines and hedonists, but who possessed political and artistic abilities altogether lacking in the frivolous 'Abbásids. During the four years of his reign (or three years if the year of the siege is not counted), there is no outstanding administrative or political measure with the exception of the cold (and later hot) war designed to eliminate his brother who, far superior in intellect and political acumen, in the end justly supplanted him.

Bibliography: The chief source is Tabarî, iii, 600-974 (summarized in Ibn al-Aṣ̄ālîr, vi, 152-227; other sources are Ya'kūbî, ii, 493 ff., 524-38; Dinawarî, 388-96; Fragmenta Historiorum Arabiciorum (cor de Goeje), 320-344; Ibn al-Ṭiktakā, 291-97; more anecdotal, but valuable for the siege of Bagdad, Masʿūdī, Murūdī, vi, 415-87. Western works, apart from general histories of the caliphate, include F. Gabrieli, Documenti relativi al califfato di al-Amin e al-Ma'mun, in RSO, 1928, 341-97.

AMINA, a legendary wife of Solomon. He one day entrusted to her the ring, on which his dominion and his wisdom depended. She gave it to a demon who had assumed the form of Solomon, and it only returned to the king after many adventures.

Bibliography: Grünbaum, Neue Beiträge zur semitischen Sagenkunde, 222 fl.

ĀMİNA, Muḥammad's mother. Her father was Wahb b. 'Abd Manāf of the clan of Zuhra of the tribe of Kuryash, and her mother Barra biat 'Abd al-‘Uzza of the clan of 'Abd al-Dār. It is said that she was the ward of her uncle Wahb b. 'Abd Manāf, and that on the day he betrothed her to 'Abd Allāh b. 'Abd al-Muțṭalîb he also betrothed his own daughter Hāla to 'Abd al-Muṭṭalîb (Ibn Sa'd, i/1, 58). If this report is correct it may be an example of some forgotten marriage-custom. Āmina seems to have remained with her own family and to have been visited there by 'Abd Allāh, who is usually said to have died before Muhammad's birth. So long as Āmina lived, Muhammad was under her charge, and hence presumably lived with her family (except when sent to a wet-nurse in a nomadic tribe).

Āmina's death when Muḥammad was six is said to have taken place at al-Abwā', between Mecca and Medina, as she returned from a visit to Muḥammad's kinsmen there. Though this visit to Medina is mysterious, there are no strong reasons for rejecting the above details. The same is not true of the stories connected with her pregnancy, such as her alleged statement that she saw a light going from her, which lit up the palaces of Buṣra (Bostra) in Syria.

Bibliography: Ibn Hishām, 70, 100-2, 107; Ibn Sa'd, i/1, 60 f., 73 f.; Tabarî, i, 980, 1078-81; Caetani, Annali, i, 119 f., 150, 156 f.

AMIR, commander, governor, prince. The term seems to be basically Islamic (Naḳâḥid, 7, 964; Ibn Durayd, Djamhara, iii, 437. In the Kur'ān, only the expression ʿulāʿ-l-ʿamr is found (sūra iv, 59, 83), but amir occurs often in traditions (cf. Wensinck, Concordance, s.v.).

The sources for the early period frequently use the terms ʿamīl (q.v.) and amir as synonyms (cf. Hamidullah, Documents, 36, 38 and 59, 83). In the reports on the meeting of the sakīfa, amir is used for the head of the Muslim community (Tabarî I, 1840, 1841; Ibn Sa'd, II, 3, 126, 129). During the caliphate of Medina, the commanders of armies, and occasionally of divisions of an army were called amīrs (or amir al-dījāsh or amir al-dījand), and so were the governors who were initially the conquering generals (Tabarî, annales, I, 1884-5, 2013, 2054, 2532, 2503, 2566, 2634, 2637, 2645, 2662, 2775, 2864, 3057; Kindl, governors, 12, 13, 31, 32, 300, 302, 305; Hamidullah, 207, 257).

The Umayyads began to distinguish between administrative and financial duties. Yet during most of this period, amīrs had full powers, administrative and financial, and felt that their authority in their province was equal to that of the caliph (Tabarî, annales, II, 75; Kindl, governors, 35; Maṣfūdī, Murūdī, V, 308-312). The local population in the Eastern provinces saw the amir as a Katbūdad (Lord) (Tabarî, II, 1636) or Șāh (King) (Tabarî, II, 300).

The amir organizes the army and appoints ʿarīfs who keep the register of their units, maintain discipline, distribute pay and report incidents. He conducts expeditions personally or through his lieutenants, and concludes agreements. He leads prayers, builds mosques and sees to the establishment of Islam in conquered territories. The administration of justice is usually in his hands and, with a few exceptions, amīrs appoint ʿāljīs. The amir maintains peace and order through the prefect of police (ṣāḥib al-ṣarṭa) whom he appoints. He usually has a chamberlain (ḥādīb) and a bodyguard. He appoints a postmaster (ṣāḥib al-barīd) to report on his subordinates and generally on matters of interest. Representatives (ʿāmis or amirs) in
important sub-provinces are appointed with the approval of the Caliph and at times directly by him (Tabari, II, 1140, 1501, 1504).

The amir supervises the mint and strikes silver coins, usually with his name on them. Some amirs were famous for their good dirhams. But the type of currency, its weights and minting places are at times regulated by the caliph.

The amir with full powers is responsible for financial policy. He issues instructions about the time and methods of laying by taxes, the measures used and the amounts required. An amir could revise the system of taxation and revise the rates of pay of the troops. The amir pays his troops and officials, provides funds for public works such as the construction and repair of bridges, canals, roads, public buildings and fortresses, and sends the balance of the revenue to Damascus.

The powers of the amir are greatly reduced, however, when the caliph appoints an amil for the kharadji. Ibn al-Habbab, 'amil of Egypt under Higham, could even have the amir changed (Kindi, 72, 76; Ibn 'Abd al-Hakam, Futah misr, 178).

The amir takes the bay'a or oath of allegiance in his province for the caliph or to the heir designate. He may lead a delegation from his province to convince the caliph or to offer their homage. He tries to influence public opinion in his province through tribal chiefs, poets, quşas, or money and threats (Baladhuri, Ansab, IV/ii, 101, 116-7; Pedersen, in Milanges Goldschmer, I, 232).

When the amir leaves his province or capital, he appoints a khallifa to represent him (Kindi, 13, 35, 49, 62, 65; Tabari, II, 1140).

Amirs receive salaries and administrative allowances ('amadi). Some amirs looked for other sources of wealth such as trade, appropriation of part of the revenue, speculation on the sale of crops taken in taxation, and presents. Some amirs amassed great wealth, and the caliphs tried to bring them to account; this degenerated to a system of torturous investigation at the end of the appointment under the later Umayyads.

The caliph, especially in difficult times, takes the views of the Arabs of the province into consideration when appointing an amir (Baladhuri, Futah, 146; Diahshiyarl, 57). A new caliph usually appoints new amirs, especially in the later Umayyad period.

Umayyad administrative traditions were carried by the Abbasids, but were gradually modified by new tendencies. The Abbasids created a bureaucracy to replace the tribal aristocracy and centralized administration.

Amirs were frequently members of the 'Abbasid family, but generally they were members of the bureaucracy, and whereas they were generally Arabs under the Umayyads, many were now Persians and later Turks. The amirs played a prominent role and were expected to report regularly on the operations of the amirs and the affairs of the province. The Kādil, too, became practically independent of the amir since he was appointed directly by the caliph. The amir's term of office is generally short.

A new official, the sabih al-nazar fi 'l-mazdlim, is appointed to consider complaints about injustices of the government officials, including the amirs.

Most amirs in the early 'Abbásid period continued to be responsible both for civil and financial administration, but soon it becomes customary to appoint a finance officer ('amil) together with the amir (Kindi, 185, 192, 213).

The amir was primarily concerned with maintaining order and ensuring the collection of taxes. Amirs occasionally increased taxes, abolished them or exempted people from paying, arresting Local discontent with the amir, especially when it lead to trouble, was at times investigated and could lead to his dismissal (Diahshiyarl, 99-100; Kindi, 192; Tabari, III, 716-721).

New developments took place before the end of the first 'Abbásid period. Ma'mūn appointed his brother Abū Isbāk amir of Egypt, but he stayed at the capital and sent two representatives, one for kharadji and the other for saidli. Absentee amirs in Egypt followed until the rise of the Tūlūnids (Kindi, 185 ff.).

Another development was the appearance of amirs who, appointed by the caliph, were given a free hand in their province against payment of tribute. Such amirs established dynasties and limited their relations with the caliph to receiving his 'ahd (deed of appointment), reciting his name in the khubta and striking coins in his name. This was the case of the Aghlabids and the Tāhirids. Others shared with the caliph the attributes of sovereignty by adding their own names to his in the khubta and on gold coins, for instance the Tūlūnids, the Ikhshīdids, the Sāmānids and the Ḥamdānids.

To further notice the rise of amirs who conquered their territories by force and then sought the 'ahd of the caliph, in order to acquire a legitimate basis of their authority. Such were the Ṣaffārids and the Ghaznavids. These amirs were practically independent. The Buwayhids, amirs by conquest, went even further. They conquered Baghdad, usurped all authority from the caliph and made him their pensioner, appointed wazirs, and interfered with the succession to the caliphate. Only the fact that the Caliph was still considered the source of all political authority by the people prevented the Buwayhids from overthrowing the 'Abbásids and made them seek the 'ahd from them.

The Umayyads in Spain called themselves amiris until 'Abd al-Rahman al-Nāṣir assumed the title of caliph. Their governors and the governors of the Fātimids were called not amir but saud.

Al-Māwaridī (d. 422/1031) reflects the full development of the institution. After distinguishing amirs with full powers from amirs with limited powers, he deals with the amirate acquired by force (imrat al-istiḥāṣ); he admits this as lawful in order to avoid rebellion and division, on condition that the 'ahd given requires the amir to follow the sharī'a (cf. Gibb in Isl. Cult., 1937).

On the other hand, during the 4th/10th and 5th/11th centuries the traditional bureaucratic administration collapsed and was replaced by the rule of the military. This influenced the status of the amirate, and under the Sādīqah, the Ayyūbid and the Mamluks, the title was given to military officers of all ranks (also to the smaller Sādīq princes). Ibn Dīmā's (d. 733/1333) reflects this development when he states that in his days amirs were commanders who were given fiefs in order to maintain their troops, and that their primary duties were military (Isl. III, 367).

Bibliography: the main literary source for the ancient period is Tabari, 'Annals, supplemented by the other historians, in particular Baladhuri, Ibn 'Aṣk al-Hakam, Kindi Maktafi and Kalb'ashandi; the primary archaeological sources are the coins and (for Egypt under the Umayyads) the papyri. See also A. A. Dūrī, al-Nuzum al-islāmiyya, and the references given in the text. (A. A. Dūrī)
AL-AMIR BI-AHKAM ALLĀH ABU 'ĀLĪ AL-MANṢŪR, the tenth Fātimid caliph, b. 13 Muharram 490/31 Dec. 1096. He was proclaimed caliph as a mere child of five by the vizier al-Afdal on the death of his father al-Mu'tāsidī (14 Safar 490/8 Dec. 1096). For the next twenty years the government was in the hands of al-Afdal [q.v.]. In 515/1121 al-Afdal was assassinated by Nizārī emissaries, but the caliph was accused of complicity. Al-Ma'mūn b. al-Batā'īhī [q.v.] was made vizier, but was in his turn imprisoned on 4 Ramadan 519/1125 (and executed child of five by the vizier al-Afdal on the death of his father al-Afdal [q.v.]).

In 515/1121 al-Afdal's son (496/1102); Tādju al-Jalāl b. Nadjah b. Kanna [q.v.] was made vizier, but was in his turn imprisoned on 4 Ramadan 519/1125 (and executed child of five by the vizier al-Afdal on the death of his father al-Afdal [q.v.]).

The whole tribe is Muslim, though the purity of the belief and adherence to observances vary widely not only individually but among the sections. Their political unity is a tenous one, resting on a loose federation not infrequently threatened by secession. Tribal government is in the hands of a paramount chief (diqāl) and a council of headmen (šerfāf) elected by the different sections. Formerly elective, the chief's office became hereditary in 1829, and since 1897 separate chiefs, though close kin, have been ruling over the Eritrean and Sudanese branches of the tribe.

The relations of the tribe with neighbouring groups were, and still are, marked by frequent raids and blood feuds. Though internal conflicts were not infrequent they never followed class lines. The modern political and economic changes, however, which seriously weakened nabṭdb prestige, also caused the serfs to show signs of restiveness, visible in sporadic acts of lawlessness and ‘passive resistance’.

AMIR I. (al-Malik al-Ẓāhir Salāḥ al-Dīn) founded in Yemen the dynasty of the Banū Tābirī, after the fall of that of the Rasūlīd about the year 855/1451 in conjunction with his brother ʿAllī (al-Malik al-Mudjāḥid Shams al-Dīn). He lost his life during an unsuccessful attempt to capture the town of Sanjā in 870/1466. Bibliography: see the following art.
AMIR II. (b. 'Abd al-Wahhāb, al-Malik al-Ẓāhir Šašāl al-Dīn), was the last prince of the house of the Banū Tāhir; he ruled in Yemen 894/1488-923/1517. Already in 922/1516, the Egyptian admiral Ḥusayn occupied the capital of Yemen, Zabīd, because 'Āmīr refused to supply the fleet sent out against the Portuguese with provisions. Ḥusayn left his brother Barsbay behind in the city; and in the following year 'Āmīr, who had taken flight together with his brother 'Abd al-Malik, fell in a battle with Barsbay. As in the interval the Mamluk dynasty had been overthrown by Selīm, the Ottoman Sultan, Yemen also fell into the power of the Ottomans.

'ĀMIR B. 'ĀBD AL-KAYS (later 'ĀBD ALLAH B. 'ĀMIR B. 'ĀBD AL-KAYS) was the last prince of the house of the Banū Ḥāfiz; he ruled in Yemen 894/1488-923/1517. Already in 922/1516, the Egyptian admiral Ḥusayn occupied the capital of Yemen, Zabīd, where he died, presumably because he had been overthrown by Selīm, the Ottoman Sultan, who had taken flight together with his brother Barsbay. As in the interval the Mamluk dynasty had been overthrown by Selīm, the Ottoman Sultan, Yemen also fell into the power of the Ottomans.

The circulation of the coinage of 'Uthmān ibn Ṭāhir in the eastern region, until that peace was broken by 'Āmīr b. al-'Āshīr, is not only an eloquent man whose sayings have been preserved, but also a significant example, which includes him among the “eight” principal sukkād, still recognizes him as a forerunner and attributes to him a number of miracles.

Bibliography: Dāhīz, Bayān, index; Ibn Ḥatīyāb, 'Uyūn, i, 508, ii, 370, ili, 184; Balḳhī, Ḥāfiẓ, v, 47-8; Ibn Ǧābīl, Tahākī, vii, 73-80; Ṣaḥīḥ, ibn Abī Ḥārīm, index; Abū Nu'aym, Ḥiyā, ii, 87-95, no. 163; Ibn Ḥaḍār, Ḥiṣāba, no. 6284; Massignon, Essai, index; Pellant, Milieu baśrien, 96.

(Ch. Pellant)

'ĀMIR B. ŠAŠA'A, a large group of tribes in Western Central Arabia. It is mentioned first in a South Arabian inscription of Abraha in 547 or 544-45 (G. Ryckmans, No. 506, in Le Muséon, 1953; J. Ryckmans, ibid., 339-42; Caskel, Entdeckungen in Arabien, 1954, 27-31). Judging by that inscription and by the later area of the 'Āmīr, their original area began to the west of the Turaba oasis and extended towards the east, past Ranya, to the upland south of the Riyād-Mecca road. Here it ended at about the 44th degree of longitude, but the north-western borderline can not be ascertained. From this area the tribe of Kīlāb (b. Rabī' b. 'Āmīr) advanced to the north and northwest into that territory in which the Ḥimā Dariyya [q.v.] was later founded, and into the adjacent southern district as far as Siyy to the west; the tribe of Ka'b (b. Rabī' b. 'Āmīr) advanced to the east and northeast into the southern Tuwayk. Only in the Tuwayk (b. 'Āmīr never left their territory, Harrat Banī Hilāl = Harrat al-Nawāṣif. Earlier inhabitants of the Himā, such as a part of the Muḥārib, the Ghāni and the Numayr (who are counted among the 'Āmīr in later genealogies, cf. however 'Āmīr b. al-Tufayl, xii, 1) became more or less dependent on the Kīlāb, whilst the Ka'b assimilated the little-known inhabitants of the Tuwayk oases, and finally settled there themselves, particularly the sub-tribes of Dja'da and Ḥarīf. Of the sub-tribes of the Kīlāb, the Dja'd reached the centre of the Ḥimā and their old villages near Turaba, the 'Ābd Allāh along what is today known as 'Arq al-Subāy, the Abū Bakr migrated from the southern Himā in a south-easterly direction to Karīj = Karīj on the Riyād-Mecca road, and the 'Āmīr from the south-eastern Himā to Damīk, whence both turned to the southwest into the above mentioned upland. The sub-tribes of Ka'b also migrated between their old and their new areas: the Ḥushayr north of the Wādī Birk (= Birk)-Surra towards the road, the 'Ādīlān went there along that Wādī, the 'Ukayl migrated from the Wādī Dawāsir-Wādī Ḳanṣ northwards to the upland, but they also went south in the direction of Nadīrān. Thus the two areas of migration touched along a considerable stretch. This fact and also the fact their migrating areas were large, explains the remarkable solidarity of the Ka'b and the Kīlāb, while their internal unity, as usual, left much to be desired. The Kīlāb had the Rābāb and Tamīn as neighbours in the east, the Ṭaʾāsīd in the northeast and tribes of the Ghatafan in the north and northwest. There was a latent state of war with all these, whilst relationships with the Sulaym, and especially the Ḥawāzīn, in the southwest were amicable. To the south, Kīlāb and Ka'b had a feud with the tribes on the border, especially with the Ḥuḍayrī, but also with South Arabian tribes like the Murād, Ṣudā' and Dji'īf (of Sa'd al-ʾĀshīr) which had been bedouinized for some time and were pressing towards the north. They did, however, live in peace with the Bal-Ḥāriṯ b. Ka'b and their satellites Nāhī and Diʿār in the Nadīrān region, until that peace was broken by 'Āmīr b. al-Tufayl's marauding expeditions. Note worthy among the “days” of 'Āmīr are the battle of Shīb Djabala (on the eastern border of the Himā), where they repulsed an army of Asad, Dhuḥayn and Dārim-Tami in ca. 580.

The house of Dja'far (rather a family than a subtribe before the times of Islam) had some vague authority over the Kīlāb. It held this position thanks to a pact with the 'Āmīr b. 'Āmīr b. Rābī' according to the later genealogy a “brother” of the Kīlāb and Ka'b, without always being a match for the Abū Bakr, the strongest Kīlāb tribe.

The 'Āmīr, as Ḥums [q.v.], were on good terms with the inhabitants of Mecca. Nevertheless, the relations with the rising community of the Muslims in Medina were peaceful, since both were opposed to the Ghatafan. These relations were not seriously threatened—not even by the incident of Bi'r Maʿdīn until the prophet demanded not only the political, but also the religious, union of the tribes. In 629, a gang of marauding Muslims penetrated as far as Siyy; soon afterwards, the head of the older line of the Dja'far, ʿAlkama b. ʿUla'ba, embraced Islam. 'Āmīr b. al-Tufayl, however, his opponent, remained unregenerate. After Muhammad's victory over the Ḥawāzīn near Ḥusayn (8/630), the 'Āmīr effected their union without further friction. There was hardly any fighting against the 'Āmīr in the rigid

The part played in the wars of conquest by the 'Āmīr was not considerable. Yet the 'Ukayl reached Spain with the Syrian armies, and the Dja'da and Ḥushayr reached Persia with those of Ḳaṭa and Baṣra. Other groups followed after the conquests.
Some ‘Amīr settled in Northern Syria and others on the far side of the Euphrates. There they settled on the land, while those on this side at the Euphrates slowly reverted to a nomad existence. Here we meet the old units of ‘Amīr: Kilāb, Kūshayr, ‘Adlān, ‘Ukāyil, as well as Numayr. The Kilāb remained on the Syrian side. From them sprang the Mirdād dynasty. The Numayr and ‘Ukāyil, however, went over to the Dā’iṣ between 940 and 955. Some decades later, their leaders attained political power there. (cf. Numayr, ‘Ukāyil). There was little immediate change amongst those ‘Amīr who had stayed in Arabia. Through the establishment of the Ḥimā, the existing dissensions between the Dā’iṣ on the one side and the Dībāb and ‘Abbās b. Khubār on the other grew worse, while the ‘Ukāyil temporarily occupied areas near Bīja and Taḥlīḥ which had been left empty after emigration. Larger displacements did not occur until after the first ‘Abbāsids. The Kūshayr advanced into the steppes to the northwest until the Numayr stopped them. The Kilāb were also concerned, in the Central Arabian risings shortly before the middle of the 9th century (defeated 846). After the annihilation of the Numayr (847), the Kilāb began to advance from the west, and the ‘Ukāyil from the south, into areas which had been swamped by the former for so long. The expeditions of the East-Arabian Karmaṭians started a new wave of migrations: in the east, the Khafafda (q.v.)—‘Ukāyil and later the Muntasik (q.v.), reached ‘Irāk, the ‘Ukāyil in the west reached Palestine, and the Kilāb Transjordania. There were no important poets among the Kilāb before the last quarter of the 6th century (Labīb, ‘Amīr b. al-Tufayl); among the Ka’b until shortly before the hijra (al-Nābiḥa al-Dajā’il). Of the poets of early Islamic Ṭahār must be mentioned among the Kilāb, Ibn Mukbīl al-‘Adlānī and Muzāhīm al-‘Ukāyil among the Ka’b.

Bibliography: The Dīwāns of the poets mentioned above (cf. articles on each); Nahā’id Dā’iṣ wa’l-‘Arabād, ed. Bevan, passim; Wājdī, transl. Wellhausen, 308; Wellhausen, ‘Aṣrān, iv, 133, 142-6; the Arabic Geographers; Max Freiherr von Oppenheim, Die Beduinen, i, 58 f., 222-7, 281, ii, 174, ii, 12-8, 127-32, 208 ff. (cf. also Hilāl, Kūshayr, Numayr, ‘Ukāyil.)

‘ĀMĪR B. AL-TUFA’IY, ancient Arab hero and poet, sprung from the Mālik, the younger line of the Dā’iṣ b. Kilāb, belonging to ‘Amīr b. Ṣaṣa’a. In the nineties and the past the third part of the 7th century he took part in many marauding expeditions, sometimes leading his own men. After the death of his father, who appears to have fallen in the south fighting against the Khāṭḥam, he took over the conduct of the war until the loss of an eye at the battle of Fayf al-Rib (against the Khāṭḥam, ca. 614) rendered him unsuited for this post. In the beginning he suffered some setbacks, and he himself lost eight or nine of his relatives. In one battle other tribes of the ‘Amīr b. Ṣaṣa’a must have suffered grievously, for bitter reproaches were made to him from their side. The unfortunate result of Fayf al-Rib was not his fault; nevertheless the Dā’iṣ held him responsible for the loss of men and horses. It is possible that this dissension formed the basis for the legal contest, or the struggle for precedence, which broke out a short time after between ‘Amīr and the head of the older line, ‘Alkama b. ‘Ullāja. Though the arbiter gave no verdict, ‘Amīr recovered his good reputation through this suit; the poet al-Aṣqāḥ seems to have provided essential help in accomplishing this. After the death of his uncle ‘Amīr Abī Bara’ (ca. 456-55), he became, formally, the head of the Dā’iṣ, the mightiest Bedouin leader of Central Arabia, as before he had been the greatest warrior.

Legend connects ‘Amīr several times with the Prophet and depicts him as his bitterest Bedouin opponent. He is supposed to have attacked Muslim missionaries treacherously at Bīr Mā‘ānā and have organised a plot to assassinate the Prophet. This is true to the extent that he did not submit to the sovereignty of Medina and died a heathen, probably shortly before the taking of Mecca. The accusation of treachery goes back to an exchange of hidjāḍ between the poets of Medina and those of the Dā’iṣ (the verses of whom have been lost or suppressed). In this ‘Amīr was accused of occasioning the catastrophe of Mā‘ānā by breaking the covenant of protection. It is true that there was an engagement of protection entered into by his uncle, only that ‘Amīr could not fulfil it among the Sula’yim, who had killed the “holy band”, in reality a pillaging expedition; cf. Lyall, Dīwāns, 84-91.

The fragmentary impression left by the dīwān of ‘Amīr is caused not only by the unsatisfactory tradition. ‘Amīr appears really to have cultivated only the small forms of ṭakhir and hidjāḍ. In the case of no. 29 he created a perfect work of art through expansion of a framework which also occurs elsewhere; no. 11 is moving through its humanity, the complaint about the loss of his eye. In no. 16 he shows himself, uplifted by a recently won victory, equal to the hurtful scorn of al-Nābiḥa.

Bibliography: The Dīwāns of ‘Abīd Ibn al-Abrāq and ‘Amīr Ibn al-Tufayl, ed. Sir Charles Lyall, 1913; Aṣḥāb (Geyer), nos. 18, 19; Labīb (Brockelmann), nos. 45, 51; Mubṭadālīyyāt (Lyall), no. 5; Aḥān, xv, 50-4, 132; Ibn al-Aḥīr, 1, 481 f., 484 f.; Ibn ‘Abī Dābīb, ‘Īd, iii, ayyām, nos. 15, 16; Mubṭadālīyyāt, 50-4, 704 ff.; Nabhād (Bevan), 457-72 and index. (The prose texts have no independent historical value and can serve only in helping to understand the poems.)

W. CASKEL

AMIR AKHÚR, in Persian Mīr ‘Aḵūr, “high equerry”, one of the highest officials in the court of Oriental princes. Under the Mamluks the amīr ‘akhūr was the supervisor of the royal stables. He was generally an amīr of a thousand and had under his orders three amīrs of fourty. In the Circassian period he occupied the fourth place among the grand amīrs, cf. A. N. Poliak, Feudalism in Egypt, Syria, etc., London 1939, 30; D. Ayalon, Studies on the Structure of the Mamluk Army, BSOAS, 1954, 63, 68.

D. AYALON

AMIR ‘ALÍ, SAYYID (1849-1928), Indian jurist and writer, descended from a Shi‘ite family which had come from Khurāsān with Nādir Shāh and remained in India, finding service with successively the Mughal and Awadh courts and finally the East India Company. He was educated at the Muhsinīyya (“Hooghly”) College near Calcutta, where he learned Arabic and also came into close contact with the English and their literature, as well as studying their law (see his Memoirs, in J, 1931-2). He was once in England in 1869-73, being called to the Bar in 1873, and settled there permanently with his English wife (née Isabelle Ida Konstan) on retirement from the Bengal High Court in 1904. His activities were significant in many fields: as a professor of
Islamic Law, at the Bar, on the Bench, in social service, government administration, politics, and as a writer. Some of his works became, and have remained, standard authorities for Anglo-Mohammedan Law. In 1883 he became one of the three Indian members (and the only Muslim) on the Viceroy's Council, and in 1909 he was appointed the first Indian member of the Judicial Committee of the Privy Council in London. In the field of social service he sponsored a juvenile reformatory in Allahpur (Calcutta), and in London he was a protagonist in the British Red Crescent Society.

On the political front he founded in 1877 a "National Mahommedan [sic] Association", which presently was a nation-wide organization with 34 branches from Madras to Karachi; its programme was "primarily to promote good feeling and fellowship between the Indian races and creeds, at the same time to protect and safeguard Mahommedan interests and help their political training" (Memoirs, 1932, 10). Amir 'Ali sensed, expressed and fostered a nascent political self-consciousness in Indian Islam, disagreeing with the then conviction of Sir Sayyid Ahmad Khan as to the adequacy of modern (western) education for the Indian-Muslim community as a guarantee of its position in the country. After moving to England he was instrumental in setting up the London branch of the Muslim League (speech in IC, 1932, 335 fl.); his loyalty to and real affection for Britain led him, however, to resign in 1913 when the League joined with the Indian National Congress in talk of "Home Rule." He was involved in negotiations in London over the projects for political reforms in India. After the First World War he came into prominence as London champion of the khilafat movement; a letter to 'Ismet Pasha signed by him and the Aga Khan, being published in Istanbul before reaching the government in Ankara, roused strong opposition in Turkey, where the khilafat was presently abolished altogether.

It is, however, as a writer that his basic contribution was made. While a student at the Inner Temple, he wrote in answer to a western account of Islam a study of Muhammad's life and message, which was published in London (1873). This became the basis of a developing work which he subsequently kept revising and republishing throughout his life, under the eventual title of The Spirit of Islam (editions in 1891, 1922, 1953). This liberal modernist interpretation of Islam was favourably received and has remained influential in the West; its influence in the Muslim world, not least outside of India, has also been marked, and it has been translated into Turkish.

His other major book (apart from legal works), A Short History of the Saracens (London 1899; 10th repr. [revised] 1951; also in Urdu transl.), also contributed to a new attitude towards the Islamic past on the part of many, both western and Muslim. These two books, and the other smaller presentations on Islam which he preferred, were supplemented by a steady stream of articles, both in India and especially in Britain (chiefly in the Nineteenth Century), in which he pleaded the cause of Islam before the bar of world opinion. His historical significance lies in considerable part in his role in the creation of favourable appreciation of Islam in the West, and perhaps also in awakening or facilitating such a favourable appreciation of Islam among westernized Muslims.

AMIR DÄD, "amir of justice", minister of justice during the Seldjük rule, especially in Asia Minor; other amirs bore this name as a fixed title (cf. Ibn al-Aghrî, index s.v.).

AMIR AL-HÂDIDI, leader of the caravan of pilgrims to Mecca. In 9630, after which date non-Muslims were excluded from the hajj: the Prophet nominated Abû Bakr to conduct the pilgrimage and to prevent pagans from taking part in it. In 10/631 he presided over it himself. Thereafter this duty belonged directly to the caliphs, who either undertook it themselves or nominated an official to act in their place (e.g. the Governor of Mecca or Medina, a high official etc.). When the authority of the Caliph was disputed, there were sometimes several rival leaders of pilgrimages to the Holy Places (e.g. in 68/688 there were four, of whom one was 'Abd Allâh b. Zubayr). Great importance was attached to the function of presiding at the ceremonies, which entailed authority over all the assembled pilgrims (hajjda bi 'l-nâs). When this president came from the seat of the caliphate, the sources sometimes underlined his role as leader of a particular caravan, for example by calling him amir al-hajjida al-'Trâbi. Under the shadowy 'Abbâsid Caliphs of Cairo (after 660/1262) the office became secularized and nominations were made by the Mamlûk sultans. The amir al-hajjida al-Miṣrî, usually a commander of a thousand appointed annually, claimed pre-eminence at the Holy Places. The title of amir al-hajjida was sometimes used for the leaders of other caravans (Damascus, 'Irât). Each of these had absolute authority over his own pilgrims (supply organization, travel arrangements, protection of merchants, the sick and the poor, police duties, application of Kur'ânic penalties). He was assisted by a specialized staff, and took any measures necessary to avoid attack by Bedouin. The Mamlûk sultans of Cairo who used their amir al-hajjida to support their policy of establishing gradual control over the Hijâz, symbolized by the maḥmal [q.v.], and to distribute gifts or suwar [q.v.], the Ottoman sultans did the same after 923/1517, but their amir al-hajjida (Cairo, Damascus and, for a short period, Yemen), were appointed for a period of years until recalled. In Egypt under the Ottomans, up to the end of the 18th century, one of the principal beyûs held the post. The discharge of their duties necessitated heavy expenditure, a large part of which was met by the sultans; but as a result of the fact they received many gifts; that the effects of those who died on the way without heirs legally reverted to them, and that they carried on trade on their own account, the holders of this office could make a handsome profit. It was a great honour to be required to fill the post. Ibn Sa'dî, who ruled the Hijâz from 924-5, prohibited any practice which recalled former Egyptian or Ottoman control of the Holy Places. The military escorts and the maḥmal which formerly accompanied the amir al-hajjida could no longer appear in Sa'dî's Arabia. The amir al-hajjida had now only a diplomatic role, and he ministries of their respective countries dealt with the material organization of the pilgrimages. In 1954, Egypt abolished the title of amir al-hajjida, replacing it by ra'is ba'thâl al-hajjida (Head of the Pilgrimage Mission).
AMIR AL-HADJDJ — AMIR KHUSRAW

**Bibliography:** J. Jomier, *Le Mabmaï et la caravane égyptienne des pèlerins de La Mecque*, Cairo 1953 and references quoted. (J. Jomier)

**AMIR HAMZA** (see HAMZA b. 'ABD AL-MUTTAQ). 
**AL-AMIR AL-KABIR,** "great amir," title which had originally been granted in the Mamluk kingdom to all those who had seniority in service and in years. Consequently there was a whole group of amirs of which every individual was called al-amir al-kabir.

In the days of SHAYKHUDDIN AL-QUMARI (752/1352) the title became reserved for the commander-in-chief (adabak al-^asdr) of the kingdom. From that date onward it became the most common title of the commander-in-chief beside that of his rank.

**Bibliography:** M. van Berchem, *CIA, L’Egypte*, 276, 290, 452, 593; Makrizi, *Histoire des Sultans Mamlouks*, transl. Quatremeré, i, 3; Poliak and Ayalon, as quoted in AMIR AL-KHUSRAW (D. AYALON)

**AMIR KHAN,** 1768-1834, the famous Pathan predatory chief and associate of DIswant Rao Holkar, was born at Sambhal in the Muradabab district of Rohilkhand. As a young man he and his adherents were employed by various zamindars and Maratha officials as sikhinds for the collection of the revenues. He rapidly developed into a leader of banditti and as such was successively employed by the rulers of the Indore and Bhajpur. In 1798 he received the title of nawab from DIswant Rao Holkar. The following year he plundered Saugor and the surrounding country. In 1809, in combination with the Pindaris, he planned to attack Berar but his designs were frustrated by Lord Minto’s despatch of troops to that area. By the year 1810 the size of his army had increased to 8,000 infantry, 20,000 cavalry, and 200 guns. In the same year, realizing the strength of the British, he concluded a treaty with Lord Hastings, the governor-general, by which, provided he disbanded his army, he was guaranteed in the possession of his territories. He thus became the founder of the state of Tonk [q.v.] which, since 1948, has been merged into the Union of Rajasthán.

**AMIR KHUSRAW DILHAWI,** the great Indo-Persian poet, was born in 651/1253 at Patiyali in the district of Etah, Uttar Pradesh, India. His father, Sayif al-Din Mahmud, was a Turk who had entered India in the time of Sultan Shamsal-Din Iltutmish under whom he took service as an army officer. His mother was a daughter of ‘IMAD AL-Mulk, master master of the kingdom. Amir Khusraw, according to his own statements, early showed great promise as a poet. From the age of eight when his father died, Amir Khusraw was cared for by his maternal grandfather. After the latter's death, Amir Khusraw took service with ‘ALI AL-DIN KHYLLO KHAN, nephew of Sultan Balban and then with NAISR AL-DIN BUGHRA KHAN, son of the sultan, when he was appointed governor of Sämàn. After accompanying Bughra Khan to Bengal, Amir Khusraw returned to Dihli and accepted the patronage of the sultan’s eldest son, Muhammad KHAN Nizamuddin and accompanied him to Multan. In 689/1284 Muhammad was killed in battle with the Mongols and Amir Khusraw himself was captured only to escape soon after. He returned to Dihli and attached himself to Malik ‘ALI SARJANBASHI HATAM KHAN and went with him to Oude when Sultan Muizz al-Din Kaykubad went to meet his father Bughra Khan in 680/1281. Hatam Khan was appointed governor of Oude and Amir Khusraw remained with him for two years before seeking permission to return to Dihli, where he accepted the patronage of the Sultan.

In the reign of DJALAL AL-DIN KHALJI 689/1290-695/1295, Amir Khusraw was given a royal pension of twelve hundred tankahs annually and, according to Barni, was a great favourite of the Sultan. But on the murder of Djalal al-Din Khalji the poet transferred his allegiance to his assassin ‘ALI AL-DIN KHALJI who confirmed him in his pension but proved an exacting patron. ‘Ala al-Din Khalji’s reign, 695/1295 to 715/1315, saw Amir Khusraw’s most prolific period. Amir Khusraw also enjoyed favour under Sultans Kutb al-Din Mubarak Shah 716/1316-720/1320 and Ghiyath al-Din Tughluq, 720/1320-725/1325.

During his lifetime, Amir Khusraw became a disciple of the CISHTI saint NIJAM AL-DIN AWLĪYA of Ghiyathpur and when the poet died in 725/1325, a few months after the accession of Sultan Muhammad Tughluq, he was buried at the foot of Niżam al-Din Awlīya’s grave.

The following works of Amir Khusraw are extant.

(a) Five *disaans*, viz., (a) *Tuhfat al-Sighdr,* poems of adolescence collected about 671/1272; (b) *Wasaq al-Hayal,* poems of middle life collected originally about 683/1284; (c) *Ghurrat al-Kamal,* poems of maturity collected originally about 693/1293; (d) *Bahiyya Nahiyya,* collected about 716/1316; (e) *Nihayat al-Kamal,* collected about 725/1325.

(b) The *Khamsa,* viz., (a) *Malaʾ al-Anwar,* 668/1228; (b) *Shirin u-Khusraw,* 668/1228; (c) *A’ina-i Sinkandari,* 669/1229; (d) *Hashi Dihlī,* 701/1301; (e) *Madjnūn u-Laylá,* 698/1298.

(c) *The Qasaliyya,* or lyrical poems.

(d) The *Prose Works,* viz., (a) *Khaḍūn al-Fulūh,* the victories of Sultan ‘ALI AL-DIN KHALDI; (b) *Ajāl al-Fawā'id,* a collection of the sayings of Niżam al-Din Awlīya presented to the saint in 715/1315; (c) *Fājdārī Khusraw,* collected in 719/1320, specimens of elegant prose composition.

(e) The historical poems, viz., (a) *Kirān al-Sa’dāyin,* completed in 688/1289, a *malasnāi* on the meeting of Sultan Mu’izz al-Din Kaykubad and his father NAISR AL-DIN BUGHRA KHAN on the banks of the Sarjū in Oudh.; (b) *Miftah al-Fulūh,* a *malasnāi* on four victories of Djalal al-Din Firuz Khalji, completed in 690/1291 and forming part of the *Ghurrat al-Kamal.* (c) *Dwaqal Râni Khyr Khân or Ashikà,* a *malasnāi* completed in 715/1316 on the love story of KHYR KHAN, son of Sultan ‘ALI AL-DIN KHALDI, and Devaldi, the daughter of Râdja Karn of Nahrwâla, with a later continuation telling of KHYR KHAN’s estrangement from his father, his confinement in the fortress of Gwalior, his blinding and eventual murder at the instigation of Malik Kâfûr; (d) *Nuk Sipēr,* a *malasnāi* describing the glories of Sultan Kutb al-Din Mubarak Shah Khalji’s time, completed in 718/1221; (e) *Tughluq-nāma,* a *malasnāi* on the victory of Ghiyath al-Din Tughluq over Khusraw Khan in 720/1320.
Amir Khusraw and the History of his Times. The works of Amir Khusraw provide the fullest single expression extant of medieval Indo-Muslim civilization. They reveal, as perhaps does no other surviving body of Indo-Persian literature of the time, the religious, ethical, cultural and aesthetic ideas of courtly, educated and wealthy Indian Muslims of the 8th/14th and 9th/15th centuries.

Amir Khusraw was not an historian. No more in his "historical poems" than in his diwans and ghazals does he attempt a critical account of the human past. Amir Khusraw wrote to please his patrons by appealing to their imaginations, emotions and to their vanity as courtly educated Muslims. For Amir Khusraw the life of man in history is a pageant of stereotyped formal action by god-like sultans and great men, who personify Muslim ideals of conduct.

AMIR MADJILIS, master of audiences or ceremonies, one of the highest dignitaries of the Saidjiks of Asia Minor [see saJdik(6)]. In the Mamluk kingdom the amir madjilis had charge of the physicians, oculists and the like. The sources do not elucidate the connection between the rank of amir madjilis and this particular task, which seems to be of no special importance. Altho the rank of amir madjilis was in the early Mamluk period superior to that of amir silah [q.v.], neither of them was of great significance at that time. In the Circassian period the amir madjilis, though inferior to the amir silah, was third in importance amongst the highest amirs of the kingdom.

AMIR AL-MUMININ, "Commander of the Believers" (the translation "Prince of the Believers" is neither philologically nor historically correct), title adopted by 'Umar b. al-Khattab on his election as caliph. Amir, as a term designating a person invested with command (amir), and more especially military command, is in this general sense compounded with al-mum'inin to designate the leaders of various Muslim expeditions both in the lifetime of the Prophet and after, e.g. Sa'd b. Abi Waqas [q.v.], the commander of the Muslim army against the Persians at Kadsisiyah. Its adoption as a title by 'Umar may more probably, however, be connected with the Kur'anic verse "Obey God and obey the Apostle and those invested with command (ulam-ta'la) among your people" (iv, 58/62). From this time on until the end of the Caliphate as an institution, amir al-mum'inin was employed exclusively as the protocollar title of a caliph, and among the Sunnis its adoption by a ruler implied a claim to the office of caliph [see khilifa], whether in its universal significance (as by the Umayyads, 'Abbásids, and the Shi'ite Fātimids) or as implying independent Islamic authority (as by the Umayyads in al-Andalus from 1316/928 [see 'ABD AL-RAHMĀN I]), the Mu'minids in the Maghrib [see E. Lévi-Provençal, Trente-sept lettres officielles almohades, Hosp., 1941, 1 ff.], and several of the minor dynasties in al-Andalus before and after the Muwāḥḥid conquest). The Mu'minin caliphate was claimed from 650/1253 by the Ḥāḍid amirs of Ifriqiya, and was after the extinction of the 'Abbásid caliphate at Baghdaḍ in 656/1258 fleetingly recognized as the universal caliphate by the Mamλūk sultans of Egypt, until their establishment of the new line of 'Abbásid caliphs in Cairo [see 'Abbāsids]. In the Maghrib itself the Ḥāḍid claim was contested by the Marinids in Morocco, who also adopted the title of amir al-mum'inin in the 8th/14th century, and were followed by all the succeeding sultans in Morocco.

By the political jurists the title amir al-mum'inin was interpreted in a general sense, without special reference to command in the Holy War, except in so far as the proclamation of dīthād remained a prerogative of the caliphate. In other Muslim circles, however, especially among the Zaydis (see below), its association with active prosecution of the dīthād still survived. In this sense it was occasionally employed by the early Ottoman sultans (see H. A. R. Gibb, in Bibl.); but it was never formally adopted by their successors as implying a claim to the universal caliphate, even after the occupation of Egypt by Saлим I in 922/1517. In the same sense it was assumed by various leaders of Muslim armies in West Africa [see AHMAD AL-GRAVÉEN and AHMAD LOBBO], and is still employed as the style of their successors in N. Nigeria.

Among the Shi'a, the Imāmīs in general limit the title to 'Ali b. Abī Ṭālib exclusively; the Ismā'īlīs apply it to such of the Fātimid caliphs as each sect recognizes; while the Zaydis regard it as legitimately claimed by any 'Alīd who seeks to establish his claim by force of arms (hence its present use by the Imāms of al-Yaman). Among the Khawārīd the title was rarely used, except by the Rustamids [q.v.] of Tāhtar.

Very occasionally the term is applied in a figurative sense to outstanding scholars; e.g. the traditionalist Shu'ba b. al-Ḥaḍidādī is described as amir al-mum'inin fi 'l-i'rādiyya (Abū Nu'aym, Ḥilālat al-Awṣiyā', vii, 144), and the grammarian Abū Ḥaṭṭān al-Qarnāfī as amir al-mum'inin fi 'l-naḥw (Makkar, Analectes, 826).

AMIR AL-MUSLIMIN, i.e. lord of the Muslims, a title which the Almoravids first assumed, in contra-distinction to Amīr al-Mu'minin [q.v.]. The latter title was born by the independent dynasties; the Almoravids, however, recognized the supremacy of the 'Abbāsid and did not wish to arrogate to themselves this title of the Caliphs. So they established a kind of sub-caliphate with a title of their own. Afterwards the African and Spanish princes bore either the one or the other of these titles, according as they sought after the independent caliphate or recognized any supremacy.

AMIR SILĀH, grand master of the armour. In the Mamλūk kingdom he was in charge of the armour-bearers (silākhārīyya) and supervised the arsenal (silākhāna). It was his duty to bear the sultan's arms in public ceremonies and to convey them to him in battle and other occasions. In the early Mamλūk period the office of amir silāh was not
very high (cf. AMIR MADJLIS); under the Circassians it was the second office among the highest amirs of the kingdom. The amir silah had the right of sitting as the ra’ al-maysara in the sultan’s presence.

AMIR AL-UMARA, chief Emir, commander-in-chief of the army. As the name shows this dignity was originally confined to the military command. But the pretorians continued to become more powerful, and already the first bearer of the title, the eunuch Mūnis, soon became the real ruler, for it was to him that the weak and incapable Caliph al-Mu’tadid owed his rescue on the occasion of the conspiracy on behalf of ‘Abd Allāh b. al-Mu’tazz in 926 (908). After the appointment of Muḥammed b. Rā’Ik the governor of Wāsīt in 934 (Nov. 936) as Amir al-Umara by the Caliph al-Rā'id, this despotate ruler could not but hand over to him the entire civil authority, and his name was even mentioned in the public prayers together with that of the Caliph. So the Emirs became in reality virtual rulers, while the Caliphs sank more and more to mere shadows of their former power.

This title is very rarely met with in Mamlūk sources. According to one source it was synonymous with baklarbaki, a title given to the atābak al-asākir. It seems, however, that other amirs also bore the same title. Cf. D. Ayalon, in BSOAS, 1954, 59.

In Ottoman usage amir al-umard and its equivalent mir-i mirān are common synonyms for beylerbeyi (q.v.).

AMR AL-HANYYA [see MIRGHANIYYA].

‘AMIṣ (not Amīr, often implied in literature), territory of the ‘Amīr, a sub-tribe of the Djiṭa’da, forming one of the “nine cantons” of the Western Aden Protectorate, with some 27,000 inhabitants (Brit. Agency, 1946). The sultan (amir) resides at Deīl (Dhala), a small town on the south-eastern slope of Djabal Djiṭā, about 10 miles south of Kaṭaba and the border of Yaman. According to von Maltzan the name Djiṭā was applied not only to the country and the capital (Bilād Djiṭā) but also to the reigning sultan, a mamlāk of the Zaydī Imams of Yaman who had made himself independent and created fairly good order in the district. A treaty with the British was signed in 1904 and supplemented in 1944 by an adviser agreement with the Government of Aden, which gives instructions to the tribal guards of the amir. Deīl has a permanent military landing ground for aircraft. A sub-grade school has an average of 50 pupils.

‘AMIṣIDS, the descendants (and clients of al-Mansūr b. Aḥbār al-Malik) of Harūn ar-Raṣīl, founded the dynasty of the ‘Amīṣids in Valencia, where he ruled 212-53/1021-61. He was succeeded by his son ‘Abd al-Malik al-Muṣaffar (q.v.), 453-7/1061-5. After a ten years’ interval under al-Maḥmūd of Toledo, ‘Abd al-Malik’s brother, Aḥbār al-Maṭ‘ al-‘Azīz, ruled in Valencia 468-78/1075-83. In this last year the city was wrested from Aḥbār’s son, the ġāšī ‘Uqmān b. Aḥbār al-Bakr, and fell into the power of al-Kādir, who had been dethroned in Toledo. [For further details, see BALANSIYYA] — To the former clients of the house belong Muḥārak and Muṣaffar, who ruled Valencia for a short time from 401/1010-1 onwards, and Muṣaffar al-‘Amīrī (q.v.), who became the ruler of Denia and the Balearic Islands.

(AL-‘AMK, large alluvial plain of northern Syria, situated N-E of Antioch and framed in the tectonic depression which separates the Elma Dagh, or Amanus, from the Kurd Dagh, and which stretches as far as the lower spurs of the Taurus. With a mean elevation of 260 ft. above sea level, it is largely covered by a lake fringed with marshes, called Buḥayrat Yaghra ("the lake of Antioch") or Buḥayrat Yaghra, and in Turkish Aḵ Deniz; fed from the north by the ‘Aḏrīn (q.v.) and the Kara Su, streams which are violent when in spate, the lake discharges its waters in the direction of the Orontes which, before receiving this outlet, the Kutük ‘Aṣl, follows the depression without discharging its waters into it; it flows several metres above the depression and is separated from it by an alluvial or rocky shelf. The marsh, which varies in size in the same season, lends itself to the raising of buffalo and to fishing (eels and silurus; hence the alternative name Buḥayrat al-Sillawr, which appears in the "Casal Sellorie" of the Crusaders), while the perpetually flooded areas bordering the marsh are reserved for the extensive cultivation of cereals.

About the 9th century before Christ, Assyrian inscriptions point to a kingdom on the plain of Antioch, the lake being perhaps of less consequence than now, named ‘Unki; the toponym ‘amk, Semitic in origin and vouched for by the Aramaic stele of King Zakir, derives from a common noun which still has the meaning in Arabic of "depression", or more exactly, according to Ibn Khurraḏaḏbīh (97), "any prairie surrounded by mountains"; this explains the title ‘Amk, formerly given by historians to this country, as distinct from the ‘amk MarĪs, further north.

As a corridor region commanding the approaches to Antioch, the plain of the ‘Amk, under the name of Amyk’s Pedion, was the site of important battles in the Hellenistic era. After the Muslim conquest, it became part of the disputed zone between the Arabs and the Byzantines, to whom it was given by the treaty of 359/969. Guarded by various forts which cut it off from the Syrian hinterland (Artāb, ’Imm, Ḥārim, Ṭizin), it was, like Antioch, momentarily reoccupied by the Muslims; the latter had to cede it to the Crusaders, and it was only finally recovered by Nur al-Dīn in 1049 after the battle fought near Yaghra, a place situated north of the lake where the sultan Kayt-bay later camped during his famous tour of inspection of the Syrian territories. During the Mamlūk and Ottoman periods, the ‘Amk formed part of the province of Aleppo, and was crossed by the routes from Antioch to Aleppo (via Eṭṣur al-Ḥadīl, south of the lake) and from Antioch to Marās, and by the post road Ayas-Bağrās-Aleppo, which passed to the north of the lake after crossing the Amanus by the Baylān pass (see BAGRAS).

The numerous projects under the French mandate, designed to increase the value of the plain and to drain the lake, all failed to provide a satisfactory solution. The return to Turkey in 1939 of the sandījah of Alexandretta, which included the ‘Amk, deprived
the plain of its position as a corridor region, which was one of the main reasons for the interest displayed in it, and because it lies on a route between the ancient cities of Damascus and Bagdad. AL-AMMĀN wa-l-KHĀṢṢA [see al-Khāṣṣa].

'AMMĀN, capital of the Hashemite Kingdom of Jordan. Population (1953) approximately 108,000. It is now a small floating population, chiefly refugees from Palestine of about 30,000.

The site has been occupied since earliest prehistoric times. The Citadel Hill (Djabal al-Ḳal'a) is undoubtedly the site of the ancient city often referred to in the Old Testament as Rabbah Ammon. "Rabba of Ammon". Of this ancient city little now remains save some tombs on the hill sides, and a short stretch of Iron Age city wall, perhaps 9th. or 8th. century B.C. The early Israelites (c. 1300 B.C.) failed to secure control of either the city or the district until the determined assault of David during the 11th century B.C. During this attack occurred the episode of Uriah the Hittite, whose name was still traditionally associated with the site in the 10th century A.D. (al-Makdisī, 175). Under Solomon 'Ammān regained its independence. In common with the rest of the country it became a vassal of Assyria during the 8th. and 7th. centuries B.C., but maintained a precarious independence during the Babylonian period. When Ptolemy Philadelphus (285-227 B.C.) conquered the town he renamed it Philadelphia, by which name it was known in Roman and Byzantine times. The Seleucid King Antiochus III captured it about 218 B.C. In the first century B.C. 'Ammān joined the league of the Decapolis, and the Nabateans occupied the city for a short time, but were driven out by Herod the Great about 30 B.C. From him the Romans took over and rebuilt it on the standard Roman provincial plan, with theaters, temples, Forum, Nymphaeum and a main street with columns. Some of these monuments still exist. In Byzantine times 'Ammān was the seat of the Bishopric of Philadelphia and Petra, one of the sees of Palestine Tertia under Bosra. This title is still held by the Greek Catholic Bishop. (For details of ancient history, see Pauly-Wissowa, s.v. Philadelphia.)

Excavation on the Citadel on the site of the present Museum have shown that it was still flourishing when it was captured by the Arab general Yazīd b. Abī Sufyān in 14/635, almost immediately after the fall of Damascus, and on the Citadel at least there were some fine private houses of the Umayyad period. These are of some importance archaeologically, as only the palaces of the Ommayad Caliphs have so far been excavated, and they give us the first evidence of how the ordinary man lived in this period. There is also a square Dḥassānī or Umayyad building on the Citadel.

In common with the rest of Jordan, a decline apparently set in with the removal of the Caliphate from Damascus to Baghdād. Ibn al-'Adīm, writing in 292/903, mentions 'Ammān as belonging to Damascus. Al-Makdisī, writing some 80 years later (375/985) gives a rather full account of the city as it then was (175; quoted by Yākūt, iii, 760). Al-Makdisī puts the town in the district of Filastīn and calls it the capital of the Balka' district (156; cf. also 180, 184).

Yākūt, iii, 710, in 622/1225 refers to it as the city of Dākīyanus or the Emperor Decius, and connects the legend of Lot and his daughters with 'Ammān. He still calls it one of the fruitful towns of Filastīn and capital of the Balka'. But al-Dimāghṣī, 23 (writing about 699/1300), assigns it to the Kingdom of Karak and says that only ruins remain. Abu 'l-Fidā', 247, writing a mere 20 years later says "it is very ancient town, and was ruined before the days of Islam".

It is difficult to account for this sudden drop in the town's fortunes, for no historical or natural catastrophe has been recorded from this period. Thereafter writers are silent on the subject of 'Ammān, and when the first western travellers started to penetrate east of the Jordan in the early 19th century, it was no more than a very small village. In 1295/1878 a group of Circassians were settled there by the Turkish authorities, but it remained a mere handful of houses for many more years.

The first systematic exploration of the town and its environs was that made by Major Conder and his party in 1881, when the ruins of the mosque with a square minaret, perhaps the one mentioned by the al-Makdisī, were still standing. They were still there when the much fuller survey of Butler was carried out in 1907, but he considers the main wall to have been either Roman or Byzantine. Exactly when it was destroyed cannot be ascertained probably soon after the First World War.

In 1340/1921 'Abd Allāh b. al-Ḥusayn [q.v.] made it the capital of Transjordan, and it has grown steadily ever since. Its greatest period of prosperity came during and immediately after World War II since the end of which the city has increased in size at least 50%. It is now the capital and administrative centre for the Kingdom on both sides of the Jordan, and contains the Royal Palace, Houses of Parliament and head offices of all the Ministries. Some fine Government buildings, including a Museum, and Schools have been erected during the last few years, but in the early days of its growth many monuments of the past have disappeared.

mān, Cairo 1925. (G. Lamkenter Harding)

AMMAN, MIR [see AMAN, MIR]

'AMMAR, BANU, a family of kādās who
governed the principality of Tripoli (in Syria) for
forty years preceding the capture of the town by
the Crusaders in 502/1109.

The first ruler of the family, Amīn al-Dawla
Abū Ṭālib al-Ḥasan b. 'Ammār, who had been kādī of
the town, declared himself independent after the
defeat of the Fātimid governor, Muḥtār al-Dawla b.
Bazzāl in 462/1070. He made the town an
important intellectual centre and founded a
rich library.

On his death in 464/1072 his two nephews quar-
reled about the succession. Djalāl al-Mulk ʿAlī
b. Muḥammad succeeded in evicting his brother.
The authority of Djalāl al-Mulk must have been con-
siderable, as he maintained himself for almost
thirty years. In 473/1081 he took Djabala from the
Frankish chieftains. He manoeuvred as well as he
could between the Fātimids and the Saldjufcids, as Ibn
al-Kalanisi has pointed out: “The towns on the sea,
Tyre and Tripoli, were in the hands of their
authority of Djalāl al-Mulk must have been con-
sequently, when he decided to leave the town in
501, however, he decided to leave the town in
order to seek help against the Franks. The inhabi-
tants, however, faithful to the Fātimid dynasty,
called in the Egyptians, but in spite of the great
efforts made by the Fātimids, they tried to obtain the
good will of the Turks by diplomacy and presents”.

The last ruler, the Banū al-Mulk 'Ammār
(brother of the preceding), succeeded in 49/1099,
and for some years withstood the attacks of the
Crusader Raymund of St. Gilles and his successor.
In 501, however, he decided to leave the town in
order to seek help against the Franks. The inhabi-
tants, however, faithful to the Fātimid dynasty,
called in the Egyptians, but in spite of the great
efforts made by the Fātimids, they tried to obtain the
good will of the Turks by diplomacy and presents”.

A fragmentary inscription by Djalāl al-Mulk is
extant, in which his name figures alone. One can
therefore conclude that the Banū 'Ammār had
detached themselves from the Fātimids and that this
action drove them towards the caliphate of Baghdād;
they proceeded, however, with caution, as their
subjects showed 'Ālid sympathies.

'AMMAR, BANU (or Banū Thābit, dynasty
which ruled in Tripoli (of the West) 727/1327-
32/1400). Its founder, Thābit, a Syrian Jew;
his name, Thābit b. Ḫwāra Berber, died after a rule of
few months, and was succeeded by his son Muḥammad.
During the reign of Muḥammad's son, Thābit, the Genoese
surprised and plundered Tripoli (756/1355); Thābit
was killed by the neighbouring Arab chiefs with
whom he was seeking refuge. In 771/1370 or 772/1371
Abū Bakr b. Muḥammad expelled from Tripoli
the governor of the Banū Mulk of Kāthāb (Gabès),
Abū Bakr died in 792/1392 and was followed by his
nephew ʿAlī b. 'Ammār. In 800/1397-8 the Hāfṣid
Abū Fāris succeeded in arresting ʿAlī whom he
replaced by two members of the same family, Yaḥyā b. Abī Bakr and his brother ʿAbd al-Wāḥid.
On 6 Raqqā 803/31 May 1401 Abū Fāris captured
Tripoli, imprisoned the brothers and brought to an
end the dominion of the Banū Mulk.

'AMMAR, B. YASIR b. ʿAMIR b. MĀLIK, ABU`
'I-YAṣṢĀN, a Companion of the Prophet, later
a partisan of ʿAll. His father, a Mālīk of the Maḥāz-
ümite Abū Ḥujayfa, had married one of his
master's slaves, Sumayya, who was manumitted,
but Yāṣir and his family remained with Abū Ḥujayfa.
They were early converts to Islām, and
suffered severe tortures. 'Ammār is said eventually
to have emigrated to Abyssinia; after the hidjra he
returned to Medina. He took part in the early
campaigns, and fought at Badr, at Uhud, and, in
general, in all the battles of Muḥammad, who at the
time of the muḥākāt between the Muḥājidūn and the
Anṣār, paired him with Ḥujayfa b. al-Yamān. Under Abū Bakr, he lost an ear at the battle of
Yamānā; in 21/641 he was made governor of Kūfa
by ʿUmar; in this capacity he took part in the
conquest of Khūzistān. He was from the first a
partisan of ʿAll; from 35/656 onwards, ʿAlī placed
exceptional confidence in him. Later, when the Banū
al-Mulk, the Banū of the Camel (see al-Ḍjama), caused him
to rally the population of Kūfa to ʿAll, and he was one of those
who led the Prophet's widow ʿAisha prisoner to
Baṣra. He lost his life at Sīfīn (37/657) at an
extremely advanced age. Several centuries later, his
tomb near Sīfīn was still pointed out.

'Ammar was considered to have an excellent
knowledge of the Traditions of the Prophet, and in
addition owed his renown to his great piety and
to his devotion to Islām. Later, writers hostile to the
Umayyads did not fail to glorify him by inventing
hadīths in his favour, and by discovered in the
Kūrān allusions referring to him (i, 207; iii, 62; 1
vi, 52, 122; xvi, 43, 108, 111; xxviii, 4, 61; xxix,
132; a notable prophecy attributed to Muḥammad
concerns the death of 'Ammār at the hands of the
"rebel band", which he condemns to Hell.

'Ammar had a son, Muḥammad, also famous for
his knowledge of hadīths, and a daughter, Umm al-
Ḥakam.

tion), index. (H. Reckendorff *)

'AMMAR AL-MAWSILI, ABU`-KĀSIM 'AMMAR
B. ʿAll, one of the most famous, and certainly the
most original of Arab oculists. He lived first in
Irāk, then in Egypt; he travelled widely, as he
gained his knowledge of the Greek medical
literature and translated it into Arabic. He
visited Palestine and Egypt in the other, he practised his
profession and performed operations. His work on
ophthalmology was composed in Egypt, in the reign
of al-Hākim (996/1020); thus he was a contemporary

...
of the more famous, but less original, oculist 'Ammār b. 'Īsā (q.v.). If 'Ammār's Tadhkira b. 'Airs is overshadowed by the future emperor Leo the Isaurian. Leo subsequently made it a formidable stronghold, which successfully resisted al-Hasan b. Kahtaba in 46/666; it was occupied in 49/669 in the course of Yazël's expedition against Constantinople, but was retaken by Andreas, the general of Constans.

In 89/708, Maslama b. 'Abd al-Malik defeated a Byzantine army before Amorium. In 98/716, at the time of Maslama's expedition against Constantinople, it was besieged by one of his lieutenants, and relieved by the future emperor Leo the Isaurian. Leo subsequently made it a formidable stronghold, which successfully resisted al-Hasan b. Kahtaba in 162/779, in the reign of al-Mahdī, then in 181/997, in the reign of Harūn al-Raḥīf. It only fell in 223/838 to the powerful forces of al-Mu'taṣim, whose Turkish troops besieged it for twelve days, and who finally took it only as the result of treachery.

The capture of Amorium was the subject of a famous poem of Abū Tammām. Forty-two of the prisoners taken to Sāmarrā were executed there on 6 March 845. Their martyrdom is celebrated in the Acta XLII martyrum Amorrierum. The town destroyed by al-Mu'taṣim was rebuilt, but was again burnt down in 319/931 by Thāmil, amir of Tarūs. Thereafter it does not seem to have played any part in history, although in the 12th and 13th centuries it was still an important place, according to the geographers al-Iṣdrī and Ḥāmād Allāh Mustawfī.

(3. CANARD)

AMORIUM [see 'AMMARIYYA].

AMR, a term which occurs in many verses of the Qur'ān in the sense of command, viz. of God. (A paper by J. M. S. Baljon, The amr of god in the Koran, is to appear in Acta Orientalia.) These Kur'ānic passages formed the point of departure for the speculations of theologians and philosophers, in which the Muslim element is often so contaminated, with doctrines of Hellenistic origin, that it loses all character. Nevertheless, the term itself does not seem to have an exact parallel in the relevant Greek terminology, so that it seems that the various theological notions about the divine command were originally formed by Muslims.

This conclusion supports the hypothesis according to which the longer version of the *Theology of Aristotle*, the one which forms the basis of the Latin translation and of which the Arabic original has been discovered by Borisov, was elaborated in a

Encyclopædia of Islam
in the discourse of the representative of the Hanafiyya one finds notions current among the Isma'iliis, but put in a form which avoids giving offence to Sunni orthodoxy. In the Djami' al-Hikmatayn attributed to Nasir-i Khusraw (ed. Corbin, 254) the “world of the amr” is the Isma'ili hierarchy, while the “world of the khalq” is the physical world.

Another theme, often treated by the Shi'is, is the contradiction, assumed by some as possible, between the amr, God's command to perform an action, and the divine will which prevails it.

On the concept of al-amr bi 'l-ma'ruf wa 'l-nahy 'an al-munkar, see mu'tazila.

(S. Pines)

'AMR b. 'ADI b. NASR b. RABI', first Lakhmid King of al-Hira. His father was a famous Lakhmid poet. After a ruse (which frequently appears in Arab legend, cf. the story of 'Abbasa bint al-Mahdi) to win the hand of Rakash, sister of Djadhlma-Abrah, whose father he was, 'Amr, the offspring of this union, succeeded in winning the favour of Dadhima, but was then carried off by the giinn, was considered lost, and was finally restored to his uncle. After al-Zabbab (identified with Zenobia, queen of Palmyra) had seduced and killed Dadhima, 'Amr succeeded the latter on the Lakhmid throne and established his capital at al-Hira; then, with the aid of the sage Kusayr, he succeeded, by means of a stratagem related at length in the historical sources, in avenging his uncle's death and in killing al-Zabbab. Such is the account of the Arabic sources, and it is difficult to doubt the existence of 'Amr b. 'Adi, who lived in the 3rd century A.D. (Caussin de Perceval, Essai, ii, 35, gives the dates of his reigns as 268-88, but the historians credit him with a reign of 118 years); moreover, his name appears in the inscription of al-Namara. On the other hand, the fact that he is mentioned in the commentary on numerous proverbs proves that, as the historical reality of this personage and of the events involving Zenobia became blurred, legend made use of his name to fix the time of events displaced from their historical sequence, and of stories invented to explain proverbs which had become unintelligible; thus, in representing him as the conqueror of Zenobia, legend attributes to him the role played by Aurelian who, in 270-3, seized possession of the Kingdom of Palmyra.

'AMR b. AL-AHTAM (SINAN) b. SUMAYY al-KHAṣṣa, an eminent Talmudite famous for his poetic and oratorical talent, and also for his physical beauty which earned him the surname of al-Mukabhal (“anointed with collyrium”).
Born a few years before the *hijra*, he made his way to Medina in 9/630 with a delegation from his tribe; in 11/632, he was a follower of the prophetess Sādījī b. Ma`āsir *q.v.*, but he was converted to Islam and took part in the wars of conquest; he conveyed the news of the capture of Rāshāh to Umar in verse; he is said to have died in 57/676. His poems, some of which have come down to us, are superficially brilliant rather than profound; according to tradition his eloquence provoked the famous remark by the Prophet: *inna min al-baydn la-sihr*.

*Biography:* Ibn Kutayba, *Shīr*, 401-3; al-Mufaddal al-Dabbi, *Mu`addalihyyā* (Lyali), 245-54, 830-7; *A`ghānī*, iv, 8-10, xii, 44, xxı, 174; Balādhurī, *Fuwāḥ*, 387; Mubarrad, *Kāmil*, i, 476; Ṭabarī, i, 171-16, 1919; *Nahāsah* (Freitag), i, 723; Ibn al-Aṣḥāḥ, *Usād*, Cairo 1886, iv, 87 ff.; Ibn Ḥadījā, *Īṣābā*, no. 5770; Ibn Ṣubayr, *Ṣark* al-ʿUyān, Alexandria 1290, 77 ff.; Marzubānī, *Mu`ājam*, 262. (J. Wensinck-Ch. Pellat) ʿAMR B. AL-ʿĀṢ (al-ʿĀṣī) AL-SAMH, a contemporary of Muḥammad of Kurayshite birth. The part which he played in Islamic history begins with his conversion in the year 8/629-30. At that time he must already have been of middle age, for at his death which took place probably in 42/661 he was over ninety years old. He passed for one of the most wily politicians of his time, and we must endorse this verdict. The more clear-sighted inhabitants of Mekka already foresaw shortly after the unsuccessful siege of Medina that this fact was the turning-point in Muhammad's career. It is not strange therefore that men like Kālid b. al-Walīd, Uthmān b. Taḥla and ʿAmr b. al-ʿĀṣ went over to Islam even before the capture of Mecca. Not much importance is to be attached to the story of their conversion. That of ʿAmr is said to have taken place in Abyssinia under the influence of the Christian Negus! — Muḥammad at once made use of his newly-gained assistance: after a few small expeditions he sent ʿAmr to Ṣumān, where he entered into negotiations with the two brothers who ruled there, Dīṣyart and Ḍabbāb b. Diʿulanda, and they accepted Islam. He was not to see the Prophet again. The news of the latter's death reached him in ʿUmān, and he occasioned his return to Medina. But he did not remain there long. Probably in the year 12/633 Abū Bakr sent him with an army into Palestine. The accounts of the conquest of this country [see *Filastīn*] are known to be somewhat confused (cf. also Caetani, *Annali dell' Islam*, A. H. 12); but this is certain, that in this undertaking ʿAmr played a most prominent part. The subjection of the country west of the Jordan especially was his achievement, and he was also present at the battles of Ḍajdān and the Yarmūk as at the capture of Damascus.

Yet his real fame is due to his conquest of Egypt. According to some sources he betook himself there with his troops on his own responsibility. It is more probable, however, that Umar was informed of the matter (cf. Wellhausen, *Skizzen und Vorarbeiten*, vi, p. 93) or even that it was undertaken under his orders. It is certain that re-inforcements were soon sent out to him under al-Zubayr. For the history of the conquest cf. the article *Misr*; only the following need be mentioned here: In the summer of 19/640 the Greeks were defeated at Heliopolis. In 20/641 Babylon was occupied by the Arabs, in 21/642 Alexandria lay in their power [see *Mu`awwirs*]. But not only the conquest of Egypt was the work of the genius of ʿAmr; he also regulated the government of this country and the imposition of taxes. He founded Fustāṭ, which was later called Miṣr and in the 4th/10th century al-Ḥākima.

We can understand, that ʿAmr felt himself wronged, when the Caliph ʿUthmān recalled him in favour of Abī Allāh b. Saʿd, shortly after his accession to the throne. He retired into private life, occasionally giving utterance to his mortification. When circumstances became threatening for ʿUthmān, ʿAmr was wise enough not to commit himself as a partisan of his enemies; but he secretly incited ʿAlī, Ṭabla and al-Zubayr against him. From his estates of al-Sabʿ (Beer-Sheba) and Ḍajdān he awaited the development of events with the greatest anxiety. Yet it was not till after the Battle of the Camel (see *al-Djamal*), when only the two opponents ʿAlī and Muʿawiyah survived, that he once more came to the front, associating himself with Muʿawiyah. At the battle of Ṣiffin he commanded the Syrian cavalry. When the battle turned in favour of ʿAlī, he conceived the clever device of placing leaves of the Kurʾān on the lances. The ruse was successful and the battle remained undecided. A court of arbitration was agreed upon, which was to consist of Abū Mūsā ʿl-ʿAṣhrār and ʿAmr b. al-ʿĀṣ. Before the day appointed came, ʿAmr rendered Muʿawiyah the important service of occupying Egypt for him. It was an easy task to dispose of the youthful ʿAlīd governor, Muḥammad b. Abī Bakr: he defeated him (early in 30/650) and put him to death.

In the same year (40/659) ʿAmr proceeded to Adhurb [q.v.] to the court of arbitration (according to al-Ṭāʾīrīdī's chronology in Ṭabarī, i. 1407). Here again he gave a brilliant proof of his political talent. He succeeded in conducting matters so far that Abū Mūsā declared both ʿAlī and Muʿawiyah unworthy of the highest office. ʿAlī lost thereby his title of Caliph, Muʿawiyah however, who had only fought for "Uthmān's blood", lost nothing. Until his death [see above] ʿAmr remained Governor of Egypt. On 15 Ramaḍān 40/22 January 661 he escaped by mere chance assassination at the hands of Zādawayh, one of the three Khāridjites who are said to have chosen the three leaders, ʿAlī, Muʿawiyah, and ʿAmr, as the victims of their fanaticism. ʿAmr felt unwell on that day and left the leadership of the Ṣalātī to Khāridjī b. Ḥuḡḥāf. So the latter was mortally wounded. "I meant ʿAmr, but God meant Khāridjī", the assassin is reported to have said after accomplishing his deed.

HIND, son of the Lakhmid prince al-Mundhir and of the Kindite woman Ḥan; after the death of his father, he became "king" of al-Ḥira (554-570 A.D.). He was a warlike and cruel prince; the story of how he sent the poets al-Mulātamānis and Ṭarafa to the governor of Bāṣrayn with letters...
containing their own death warrants, is well-known. The severity of his character earned him the
name of an ancient idol (see Rothstein, Lahmiden, 46 ff.). He was assassinated while dining by the poet
Amr b. Kulghum [q.v.], because the latter's mother had been offended by the mother of 'Amr b. Hind.

**'AMR B. AL-LAYTH.** Persian general, brother and successor of Ya‘qub b. al-Layth [q.v.], the
founder of the Sa‘farid [q.v.] dynasty in Sindjast. Said to have been a mule-driver in his youth, and
later on a mason, he was associated with his brother's campaigns and in 259/873 captured for Ya‘qub the
Tahirid capital Naysabur. After Ya‘qub's defeat at Dayr al-‘Akul and subsequent death (Shawwal 265/
June 579), 'Amr was elected by the army as his successor. He made his submission to the caliph,
and was invested with the provinces of the former Tahirid principality in Eastern Persia and Sind,
together with Fars, and the command of the ghurja in Baghdād and Sāmarrā (Safar 266/Oct. 879). He
reoccupied Fars in 268/881-2, but obtained effective control of Khurāsān only in 268/883, after a long
struggle with Ahmad b. 'Abd Allāh al-Khudjistāni (d. 268/882) and Rāfi‘ b. Harthama. In the interval,
he was twice dismissed from the command of the ghurja and formally divested of his provinces (in
271/885, after a severe defeat by the caliph's forces under Ahmad b. 'Abd al-‘Aziz b. Abi Dulaf, and
again in 276/890), and also lost Fars in 274/887. Confirmed for the third time as governor of Khurāsān
and Sindjast in 279/893, he finally reestablished his control of the former in 285/896, after a transient
reoccupation by Rāfi‘ b. Harthama. Thereafter, at his own request (arising out of his ambition to
restore in his own favour the former Tahirid suzerainty over the Sāmānid family in Transoxiana)
he was granted the tawliya of Mā‘warid al-Nahr, in 285/898. His attempt to enforce his rights of
suzerainty was, however, cut short when in Rabi‘ II, 285/April 900 the Sāmānid Isma‘il [q.v.] defeated
his forces and captured him at Balkh. 'Amr was sent to Baghdād and after remaining in captivity there
for over a year was executed on 8 Di‘ama‘d I, 289/20 April 902. For his organization of government and
the general significance of his campaigns in the history of Persia, see the art. Sa‘faridūn.

schrift Nöldeke I, Giessen 1906, 177-191; B. Spuler, Iran in Früh-islamischer Zeit, Wiesbaden 1952, 69-81 and index. (W. Barthold *)

'AMR b. LUHAYY, the legendary founder of polytheism in Arabia and the ancestor of the Khuzâ'î (q.v.) at Mecca. The Ka'ba being, according to the Kur'ân (iii, 30), "the first sanctuary ap-

pointed for mankind", it was necessary to believe that polytheism was a later corruption. Neither the Djiyrum, Isâbîy's relatives, nor the Prophet's tribe, the Kuraysh, were likely to be responsible for it. So the blame was laid on 'Amr b. Luhyay, the leader of the Khuzâ'î, who was said to have expelled the Djiyrum from Mecca. He was said to have "changed the religion of Abraham" by introducing the idols either from Hit in Mesopotamia or from Ma'abh in the Balkâ and placing them around the Ka'ba. Others maintained that he fetched the five idols of Noah's contemporaries (mentioned in Kur'ân, lxxi, 23) from Djiyda and distributed them amongst the Arabs over whom by dint of his wealth and liberality he was believed to have an absolute command. He was also accused of setting free certain camels in honour of the idols, a superstition degenerated in Kur'ân, v, 103/2 as an invention of the unbelievers. He was made responsible for the divination by arrows, for the pagan fâhîya, in short for everything heathen. It was even told, that the Prophet had seen him in hell and that he closely resembled in appear-

ance his contemporaries (mentioned in Kur'ân, ixxi, 35; F. E. Bustânî, al-Ma'dîjîn al-Hadîthâ, i, Beirut 1946, 305-314; Dhâhib, Bayân wa Hâyawan, index; Ibn Kutayba, Shîr (de Goeje), 219-22; Buhtûrûf, Hamâsîn, index; Ibn Durayd, Ighîsîhâ, 245; Ibn Hisân, index; Aghânî, index (especially xiv, 25-41); Marzubânî, Mu'asâm, 208-9, Baghdâdî, Khîzânî, ii, 445; Âmîdî, Mu'hâfîzî, 130; Ibn Hâshîîr, Isâbîî, no. 5970; see also: C. A. Nallino, Letteratura (= Scrivuti, vi) 48 (Fr. Trans. 76-2); O. Rescher, Abriss, i, 117. (CH. PELLAT)

'AMR b. MAS'ÂDA b. SA'îd b. Ôôtî, secretary of al-Ma'mûn, was of Turkish origin, and was a relative of Îbrâhîm b. al-Abâs b. al-Šâîl (q.v.). His father had been secretary of chancellery under al-

Maşûrî. He himself served the Barnettides, and was later for many years one of al-Ma'mûn's chief assistants, in charge of the Chancellery and also of various financial posts which seem to have brought him substantial profits, but he never received the title of wârî. He accompanied the Caliph to Damascus and on his expedition into Byzantine territory, and died at Adana in 217/832. He was noted for his epistolary talent, and the Arab authors have preserved several specimens of his work.

Bibliography: Ibn Ta'tûrûf, index; Ya'kûbî, index, Tabarrî, index; Dhâhibîyâhî, Wusârâ; index and D. Sourdrel, in Millenages Massignon: Bayha'dî, Mâkûin, (Schwally), particularly 473-76; Masûdî, Tanbîh, 332; Aghânî, Tables: Tanbîhî, Farâ'dî, Cairo 1938, i, 74-5, 105, ii, 25-6, 38-45; Yâkût, Irshad, vi, 88-91; ibn Khallîkân, Cairo 1948, iii, 145-9, Mub. 'AMR b. SA'îD b. AL-ŠIS b. UMAYYAH AL-UMAWI, known as AL-ASHDÂK, Umayyad governor and general. Governor of Mecca when Yazdî b. Mu'âwiyah came to the throne (60/680), he was the same year appointed governor of Medina. On Yazdî's orders, he sent an army to Mecca to subdue the anti-

Caliph 'Abd Allâh b. al-Zubayr, and entrusted the command to a brother of the latter, 'Amr; but 'Amr was taken prisoner and, with his brother's consent, flogged to death by his personal enemies. At the end of the following year, al-Ashdâk was dismissed. Later he went with the Caliph Marwân on his Egyptian expedition and, when Musâ'îb b. al-Zubayr invaded Palestine in an attempt to reconquer Syria during the Caliph's absence, Marwân sent against him the Caliph, who forced him to withdraw. At the conference of the after the death of Yazdî, 'Amr had been mentioned as a possible eventual successor to Marwân; he was the Caliph's nephew through his mother, and was also related to him on his father's side; since he was also well liked in Syria, he could have become a source of danger; but when Marwân had consolidated his position, he enforced the Caliph in favour of his two sons 'Abd al-Malîk and 'Abd al-'Azîz. When 'Abd al-Malîk came to the throne, he entertained fears of 'Amr which were not entirely founded; in fact, in 69/698, when the Caliph undertook a campaign against 'Irâk, al-

Ashdâk took advantage of his absence to assert his longevity, place his death in the caliphate of Mu'âwiyah; but it is more likely that he lost his life either at al-Kâdisiyah or at the battle of Nihawand (21/641), as stated by the most reliable authorities. His poetry, devoted to fighting, seems to have been characterised by its brevity and clarity of expression, but only a few examples of it have come down to us.

Bibliography: Verses and appreciation can be found in: Abharyâs, Rawd al-Ahâb, 233; F. E. Bustânî, al-Ma'dîjîn al-Hadîthâ, i, Beirut 1946, 309-314; Dhâhib, Bayân wa Hâyawan, index; Ibn Kutayba, Shîr (de Goeje), 219-22; Buhtûrûf, Hamâsîn, index; Ibn Durayd, Ighîsîhâ, 245; Ibn Hisân, index; Aghânî, index (especially xiv, 25-41); Marzubânî, Mu'asâm, 208-9, Baghdadî, Khîzânî, ii, 445; Âmîdî, Mu'hâfîzî, 130; Ibn Hâshîîr, Isâbîî, no. 5970; see also: C. A. Nallino, Letteratura (= Scrivuti, vi) 48 (Fr. Trans. 76-2); O. Rescher, Abriss, i, 117. (CH. PELLAT)
right to the caliphate and to stir up a dangerous revolt at Damascus; Abd al-Malik had to return, and Amr only submitted after receiving a promise safeguarding his life and liberty. The Caliph, however, soon decided to remove this potential threat; he had Abd al-Malik brought to the palace where, according to tradition, he was killed by 'Abd al-Malik himself (70/689-90).

(K. V. Zettersten)

'AMR b. 'UBAYD b. BÂB, one of the first of the Mu'tazila, with the kunya, 'Abd Uthman. His grandfather Bâb was captured by Muslims at Kâbul. He himself was born at Baklî in 80/699 and was a masâelâ of a branch of Tamîm. His father apparently moved to Başra, and 'Amr seems for a time to have been a member of the school of al-Hasan al-Basri; though al-Djâhîz also speaks of him as a pupil of al-Faqî B. 'Isa al-Rakây. He also had some connexion with Yazîd III. He gained a great reputation as an ascetic, and was known at the court of al-Mansûr, to whom he apparently spoke fearlessly on religious and moral questions, while refusing all reward. For his strength of character al-Mansûr respected him highly, and on his death composed a eulogy of him in verse. He died in or about 144/761.

There is some obscurity about his precise relationship to Wââsîl b. 'Aqîa and their respective parts in founding the Mu'tazila. The story of how Wââsîl went apart (hâlam) from the circle of al-Hasan is also told of 'Amr both with al-Hasan and with his pupil Katâda; and the early writer Ibn Kutayba (d. about 270/884) knows of 'Amr but not of Wââsîl. Bishr b. al-Mu'tamir (d. 210/825) speaks of his own party as followers of 'Amr and some opponents as followers of Djahm (Intisâr, 134). 'Amr's views are usually said to be similar to Wââsîl's, apart from a slight difference in attitude towards the parties at the battle of the Camel; and Wââsîl had married 'Amr's sister. So there was doubtless some relation between them, but it is possible that 'Amr did more than Wââsîl, who died thirteen years earlier, to create the later Mu'tazila, especially as Abu 'l-Hudhayl al-'Allâl was 'Amr's pupil (Intisâr, 61).

AMRITSAR, capital of a district in the Pandjab (India). Pop. (1911). town 325,747, district 1,367,047, of whom 4,585 Muslims. The population of the Muslims in the district declined sharply after Partition. It was founded by the fourth guru of the Sikhs [q.v.], Râm Dás (1574-81), upon a site granted by the emperor Akbar, where he excavated the holy tank from which the town derives its name (amrita saras, "pool of immortality"); initially it was called guru ka chah or chah guru and Râmdâspura). The next guru, Arjuna (1581-1606) completed the Harmandir (in English, the "Golden Temple"), the chief worshipping place of the Sikhs. In 1762, Ahmad Shâh Durândî despoiled the temple and the tank, but it was quickly rebuilt by the Sikhs. With the establishment of independent Sikh power after 1764, the town has been important for its entrepôt trade.

'AMS (see masyarî)

ÂMU DARYA, the river Ouxus. Names. The river was known in antiquity as "Oxos" (also "Oxos", Latin Oxus); length 2494-2540 kms. The present Iranian designation is traceable to the town of Âmûl [q.v.], later Âmû, where the route from Kûrshân to Transoxania crossed the river as long ago as the early Islamic period. The Greek name is, according to W. Geiger and J. Markwart (Wehrot, 3, 89) derived from the Iranian root "to increase"; a derivation from the homonymous root meaning "to sprinkle" is also possible. (Cf. the name of the Wakhsh, a tribuary of the Âmû Darya). In Sâsânian times the river was called Weh-rûh or Beh-rûh (Markwart, Wehrot, 16, 35). The Arabs and Islamicised Persians for a long time called it, especially in learned works, Dây'bûn (used by Gardizi in the 11th century as an appellative for a river in general); this name derives from the Biblical Gilon, one of the rivers of Paradise. In Chinese it is known as Kui-shû, Wu-hu or Po-tsu. The region north of the Âmû Darya is called by the Muslims Mâ warâ' al-Nahr [q.v.], "land on the other side of the river", Transoxania.

The upper course of the river. The Âmû Darya rises from several rapid head-waters. The most southerly of these, the Pandji (rising from the Wakhshâb—in the Middle Ages Dijarâb, cf. Markwart, Wehrot, 52; Barthold, Turkestân, 65—and the Pâmir Darya), has its source in the Pâmir. After following initially a course from East to West, it turns North near Iğhâshâm and receives on the right (E.) the Ghûnd and the Ak Šû [q.v.], and flows from there once more westwards. There follow as tributaries on the right bank the Yağzûlâm and the Wanîbâ, and lastly the Kûlîb Darya. All these rivers as well as those to be named later are fed by several headwaters and tributaries.

The most important and highest tributary of the Pandji on the right bank is the Wakhshâb (also known as Kîlî Šû or Surkhâb), which is regarded as the upper course of the Âmû Darya in the Zafar-nâma of 'Ali Yazdi (1424-5, ed. M. Ilahdad, Calcutta 1885-8, i, 179 ff.). On the other hand the inhabitants of today, as well as the mediaeval geographers, consider the Pandji as the upper course proper; modern geography favours the Ak Šû.

The modern area of the Âmû Darya began to become known from the 19th century onwards (cf. the map in A. Schultz, Landeskundliche Forschungen im Pamir, Hamburg 1916, 24-5; details in Pamir). The Arabic geographers did not entirely grasp the true state of affairs; moreover, the inter-
interpretation of the names of the headwaters given by them is controversial. Al-Istakhrl, 296 (= Iba Hawkal (Kramers), 475), names five headwaters of the Amu Darya; the co-ordination of these names with the designations in use today proposed by W. Barthold, with which, in general, V. Minorsky associates himself, appears the most plausible: (See Barthold, Turkestan, 68 ff.; Minorsky, Huddid, 208, 366; different identifications were proposed by Marquart Zeitschr., 339, and Le Strange, 435). The area of confluence of these streams was known in the 13th century as Arban (in the Zafernama Arhang), in al-Biruni Hu(b)sara. Al-Makdisi, 22, counts as sixth headwater the Kawaqhiyin river. The Kukcha and the Kunduz river are other left-hand tributaries mentioned by the Arabs (al-Tabarí, ii, 1590; Ibn Khurramadibb, 331; Ibn al-Fakhr, 324, Ibn Rusta, 93; Minorsky Huddid, 353 f.). From the right enter the Kafirimahan (260 kms.; in the Middle Ages Rámídh, in Ibn Rusta, 93, Zámil, today the name of one of its headwaters) and the Surkhán (200 kms.; in the Middle Ages and in the 14th century Çağhán Rûdh). It is from the mouth of the Kafirimahan at Pandjab (Aywad of today; Barthold, Turkestan, 73) that some geographers consider the Oxus proper to begin. The last (right-hand) tributary before the mouth (1275 kms. distant) is the Surkhán Darya, as the Shrubad and Kálíf rivers do not, on normal circumstances reach the Amu Darya, and the Zarafshan [q.v.] too loses its waters and does not join the Oxus. Similarly numerous rivers on the left-hand side run out in the sand before reaching the Amu Darya. The (lower) Murgâb did not in Islamic times reach it; it remains doubtful how far Greek sources, which indicate that this did occur in their time, are correct (Ptolomy, vi, 10 [cf. Murgâb]; the Har Rûdh [q.v.], Aries, ran out in the sands of the Kara Küm (Strabo, xi, 58; Ptolomy, vi, 17, cf. Pauly-Wissowa, ii, 623 f.).

In the upper region of the Amu Darya lie the districts of Wâkhân (on the Pandij), then Badakhshân (on both sides) and Shughân with Shârân (Sharân) S. and E. of the junction of the Pandij with the upper Murgâb, further N. Darâwâz. Between the Amu Darya and the Wâkhân lies Ghutatalân. The Wâkhân flows through the Pâmîr region (the name Fâmîr occurs already in al-Ya`qûbî, al-Bulânî, 390 and al-Dimashki) and then touches Zaght (thus correctly in Gardîzî, ed. Nârimp, 35) and Kûmîd. Between the Wâkhân and Kafirimahan lay in medial times Wâsh-djûrûd (the Faydâbûd of today) and Kuvâdîjûn (the Kabûdiyân of today). The Surkhân valley contained the province of Câghânîyân (Arabic Saghânîyân). On the left bank lay, W. from Badakhshân, the province of Tacchâristân (approximately up to Balkh). At this point the Amu Darya enters the desert tract between the Kara Küm of the present day (on the left) and the Hulu Küm (on the right) which would have been impossible without irrigation from the Amu Darya, is a sure indication that in that time the Unguz cannot have been the sole lower course of the Amu Darya. Historical maps for the mediaeval period in Minorsky, Huddid, 335; Le Strange, maps ix and x; Atlas Istorii SSSR, i, Moscow 1949, 4, 12, 25; A. Herrmann, Atlas of China, Cambridge (Mass.) 1935, 24, 32, 49, 60; for later times cf. Atlas Istorii SSSR, ii, Moscow 1949, 15, 17 right bottom, 18; Burhân al-Dîn Khân Kushkeli, Kutanagan i Badakhshan, transl. from Persian into Russian by A. A. Semenov, Tahtsent 1926; A. Herrmann, Atlas of China, 66 (distribution of nationalities); Westermann's Atlas zur Weltgeschichte, iii, Brunswick 1953, 134, 135.

The following were places of particular importance on the Amu Darya in the Middle Ages: Tîrmîdî, Kâlîf, Zamm (Kârkî; left), opposite to which lies Akkahlîkah, Amul (Cardjûy; left), opposite to which is Firâbrû, finally various towns of Khârizim. [cf. the articles].

The water of the Amû Darya rises in its middle course, which is 3570-5700 ms. broad and 5-8 ft. deep, in April-May, and becomes low again in July. It frequently floods the areas on its banks, particularly to the right, hence from time to time a more luxuriant growth of bushes and vegetation is produced there. The river is in this neighbourhood not directly tapped for irrigation; nevertheless there ran along its left bank in the Middle Ages a strip used for agricultural purposes; from the 14th century on it apparently began to turn into a steppe (Barthold, Turkestan, 81 f.).

The lower course and its changes. From the middle course onwards, somewhat beyond Kâlîf, the course of the Amu Darya shifted in various directions in prehistoric or even in historical times. According to Ptolemy the course of the Amu Darya in the area between Kâlîf and Zamm (or Kârkî) turned in approximately a W. direction (as opposed to the NW direction of the present day) and ran into the region of the Kara Küm desert. Al-Birûnî too assumed such a course for the river in a previous epoch (cf. A. Z. V. Togan, Birûnî's Pictures). In actual fact it is possible to trace a former bed which branches off at Kârkî, goes between Repetek and Öt Hâşîqî and finds its continuation in the (former) Unguz river bed. Between 1928 and 1940 for instance the Amu Darya showed a tendency to flow S. in this vicinity, so that from the geological point of view a similar course is not out of the question. The theory of a bed in Unguz (in spite of the molluscs which al-Birûnî reports having found there) requires further geological research before further conclusions can be drawn from the extremely uncertain reports of the old geographers. Al-Birûnî's account is that the Amu Darya/Unguz flowed into a great desert lake but did not reach the Caspian. On the other hand Strabo (xi, 50) reports a discharge into the Caspian Sea. The culture of Khârizim, however, which has ten centuries' history behind it, and which would have been impossible without irrigation from the Amu Darya, is a sure indication that in that time the Unguz cannot have been the sole lower course of the Amû Darya.

Al-Birûnî supposes that as a result of obstructions of the riverbed, the Amû Darya later, instead of flowing into the Unguz, squeezed through the narrow river-gorge (360 m.) between the Düldül Atlâghân and the Tûye Moyun (at the present day Fitnyak, 384 kms. from its mouth) it is called Dâhân-i Shîr = Fân al-Asad, "lion's mouth"). But geological research here too indicates that this break-through must have come about already in prehistoric times. Below this pass there branch off the large side canals which render possible the oasis culture of Khârizim.
The Arabic geographers of the 10th century give Tahiriyya, S. of the river-gorge, as the southern limit of this area of irrigation. In the 11th century Dargarun, further NW (N. of the gorge) was generally regarded as the limit (Bayhakt, ed. Morley, 859). The S. boundary of the Khdnate of Khiva was first fixed further S. (S. of Pitnyak) after the Russian conquest of 1873.

Opposite the present-day Sadwar (three farsakhs on the other side of the gorge) there branch off to the right the Gawkh*ara, and after five more farsakhs the Kirya canal. They extended, respectively, N. to the Sultan Uways Daghli chain and E. from it to the same latitude and formed the basis of the rich cultural development during and preceding the Islamic era on the lower right bank of the Amu Darya N. of the present-day Dorkult (Turtkuli), the capital of the province of Karakalpakia. (Cf. Tolstov, in Bibl., and Kharizm).

Further NW and N. the main bed of the Amu Darya has repeatedly shifted in historical times and does so even at the present day. The question has been thoroughly debated whether the Amu Darya had in earlier times a different lower course. De Goeje quoted historical sources to the effect that the river has always in historical times emptied itself—albeit in separate main branches—into the Aral Sea. W. Barthold opposed this view and supposed that the Mongols by piercing a main dam with the object of conquering the town of (Old) Urgandj [v.u.] in 1221, diverted the river towards the W., so that it flowed into the depression and the sea and marsh tracts of the Sarf Kamiah and finally into the Caspian along the eastern edge of the Cina (Cink) ridge and further through the Ozyob (Russian Uzboj) until the end of the 16th century. Barthold quotes in support of his thesis statements by Hamd Allah Mustawfi (213 transl., 206; 117, transl. 170), Hafs-i Abr, (see W. Barthold, Aral, 44 f.), and Zahir al-Din Marashli. The latter (ed. B. Dorn, Mohammed. Sources etc., i. Petersburg 1850, 436, transl. 436) speaks of a fleet which travelled up on the Djayhun from the mouth of the Ozyob in the Caspian. Khvandamir (iii, 244 6) reports that the sultan Hsuyan Baykara travelled from Aghriqa (the Balkhun mountains) to Adjlak (now Aq Ka'a) and crossed the Amu Darya "after seven days". But most of this evidence is subject to doubt, and Khvandamir himself in his geographical appendix definitely makes the Amu Darya flow into the Aral Sea. Everything considered, the evidence adduced by de Goeje seems to have more weight than that relied on by Barthold.

Barthold's views, however, found widespread support among historians and Le Strange, A. Herrmann and A. Zeki Velidi Togan (Divran's Picture; recapitulated in IA, i, 423-6) contended that the Amu Darya flowed into the Caspian even at an earlier period.

Barthold, and following him Togan, viewed the 16th century as the time of the shifting back of the mouth of the Amu Darya to the Aral Sea. Both refer in this connection to the reports of the English traveller Anthony Jenkinson in 1538 (in R. Hakluyt, The Principal Navigations etc., i, London 1598, 449) and of the Ottoman traveller Saryj in 1550/52 (Barthold, Aral, 77; idem, Oroschema, 93) as well as to Abu 'l-Ghazl (b. 1603), who dates a shifting of the Amu Darya 30 years before his birth (thus ca. 1573). The Khvandamirian writer Ağli and the chronicle of Khiva by Mu'nis (19th century) place this event in the year 1578 (Barthold, Aral, 69-74).

Thus the discharge of the Amu Darya into the Aral Sea is unequivocally established for the period following the 16th century.

Although the question of the course of the lower Amu Darya seemed to be settled by the satisfaction of the historians by the theory that the Ozboy up till the 16th century formed the lower bed of the river (cf. A. Herrmann, Gibt es noch ein Oxus-Problem?, Petermanns Mitteilungen, 1930, 280 ff.), yet geographers and geologists have always rejected this view (see A. S. Ke's, I. P. Gerasimov and K. K. Markov, and S. P. Tolstov, in Bibliogr.). At the present state of geological research, it appears that a temporary diversion of the Amu Darya into the Sarf Kamiah has been established; on the other hand, the Ozboy was clearly not the river-bed of the Amu Darya on its way to the Caspian in historical times.

Shifting of the channels of the Amu Darya in the delta proper is not a matter of doubt either in historical times or at present. The early Islamic capital of Kharizm, Khv [v.u.] gradually decayed owing to shifting of the bed of the river. The interpretation of the reports of the 10th century geographers is, however, uncertain. They speak of a series of lakes (Khalidjan); according to Ibn Rusta, 92, these were on the edge of the Siyah Kuh (Cin), but according to al-Istakhri, 303, and Ibn Hawkal (Kramers), 480, on the Aral Sea; al-Makdisi, 288, 343 f., gives no details. (Cf. also Barthold, Turkestam, 152; idem, Oroshenie, 84; idem, Aral, 22). The town of (Old) Urgandj lay after the Mongol conquest 'on the right bank of the river' (i.e. the Darya'llik). The breaking off of the connection to the Sarf Kamiah in the 16th century may be accepted as a fact: possibly the resumed intensive irrigation took away the necessary water. At all events (Old) Urgandj lost its water-supply and was replaced by the towns of Wazir (since ca. 1450, ruined in the 17th century, ruins near the present day fortress of Dëw Ka'a) and (New) Urgandj. Finally the emergence of Khiva as capital of the province is to be attributed to these shifting. The delta "island" (Aral) now took on importance. From here a new system of canals going to the left was constructed in the 19th century, and (Old) Urgandj was once again enabled to regain some kind of existence.

For the settlement and the population in the area of the mouth of the Amu Darya, cf. ku'arizm, Khiva, Alan, Przhezhe, Oghuz, Turkmen, Uzbek, Karakalpak, Sart.

In the delta and in the lower reaches of the Amu Darya occurs a covering of ice, which on the average holds from the end of December to the end of March, and which caused astonishment to the Arab geographers and travellers (Ibn Bat'tUt, ii, 450 f., iii, i f.). It nearly cost Yaqut his life in 1219 during his flight from the Mongols. In particularly severe winters it is up to 21 in. thick. The upper reaches also frequently freeze over in the mountainous regions.

In recent times there have been various projects for the diversion of the Amu Darya into the Caspian. In 1716 Peter the Great commissioned Prince Alexander Beković-Cerkeskii (actually Dewlet Kizden Mirza, cf. Brockhaus-Efron, Entsiki, Sover, iii, 356 f.; Bol'shaya Sovetskaya Entsikl., iv, 406, with references) to investigate the possibilities of establishing a waterway almost right up to the frontiers of India. In 1873 the project was once more explored and pronounced basically feasible. It appeared that the way from Čardjuli through
the Unguz was the most suitable, since it would thus not be necessary to await the protracted
felling up of the Sarf Kambush depression (cf. A. I. Glučevskiy, "Propusk vod r. Amu-Dar'ı po staromu
genya ruslu v Kaspiyskom More, St. Petersburg 1893). After an extensive flood in 1952 the Soviet
Government is said to have tackled anew in 1953 the project for a diversion of the powerful and incal-
culable Amū Daryā through a part of the Ozboy.

The use of the column and the capital in Muslim
art, and in particular in religious architecture, is
connected with the adoption by the builders of
mosques of the oratory with multiple aisles and of
the court surrounded by galleries. The column,
like the lotus-bud capital of
Abbasid monuments of Samarra
century in the
end of 3rd/9th century)
in Persian, whose brick and tile architecture admits of
specialized variants, and predominates in western Islam. In the
Persia, whose brick and tile architecture admits of
capital is no longer slightly convex, and its diameter
is equal throughout its length, the plan being
is circular or polygonal. The capital assumes various
forms which can be classified in two main groups,
both perhaps derived from the Corinthian capital,
but each possessing a distinctly localized development and
decor.

The first group consists of capitals whose cam-
panula or lyre-shaped outline (Herzfeld) has perhaps
been contaminated by the lotus-bud capital of
ancient Egypt. This capital appears in the 3rd/9th
century in the Ābbāsid monuments of Sāmarrā
and Rāqākā (4). It passes, with many other elements,
into the Tūlūnīd architecture at Cairo
(end of 3rd/9th century) (B), and is preserved in Egypt under the Burdžī (C) and Circassian
(Mamlūk). The base has a similar, though inversely,
outline. This bell-shaped capital is also found in
Persia, whose brick and tile architecture admits of
few real columns. It crowns the small imitation
columns of the faience
mīNAMESPACE (E).

The general outline of the second group of capitals
is rather that of the Corinthian corbel; it appears as
a simplified form of the latter, by eliminating the
vigorous reliefs of the Corinthian column and its local
grooves, and predominates in western Islam. In the
3rd/9th century, al-Kayrawānī possessed small
capitals related to Coptic models, with four smooth
leaves joined at the bottom and curving inwards at
the point like a hook (F). From them derived, in
the same region, the Fatimid capitals of the 4th/10th and 5th/11th centuries, with a limb of flowing floral designs surmounting shafts decorated with whirls or inscriptions in scroll form (G), and, from the 7th/13th century onwards, the Tunisian capitals (H). About the same period, the monuments of the Umayyads of Spain were ornamented with capitals copied from the two classical models: Corinthian and Composite (I), rounded off, as in the Great Mosque at Cordova, or scored with deep grooves as at Madina al-Zahra (and half of the 4th/10th century). These were the prototypes of the many beautiful variants offered by the Aljaferia of Saragossa (5th/11th century) and the Almohad mosques of Tinmel (J) and Marrakush (6th/12th century). In the 7th/13th century there emerged the Hispano-Moresco capital with a cylindrical lower portion and a parallelipped upper portion (K), which is recognizably a development from the Corinthian corbel which is both logical and in harmony with the Islamic plastic ideal. Various types can be found in the mosques and madrasas of North Africa and in the Alhambra at Granada. The latter has also some capitals in the shape of stalactites, probably an imitation of Persian originals. (G. MARCAIS)

AMUL, name of two towns: (1) A town in the south-west corner of the east Mzarandarãn plain; it stands on the west bank of the Harhaz river, 12 miles south of the Caspian Sea, in the district which, according to the Classical writers, was the home of the Mdarpds (Amul may be the modern Persian form of the (hypothetical) Old Persian Amdarha). Ibn Islendiyãr (Ta’rîh-ê 1 Tabaristan, Teheran 194?: 62 f.) states that Amul was founded by Amulã, daughter of a Daylamite chief and wife of King Firuz of the Uzbegs. (A Relation of a Journey begun in 1610, London 1632, 106-7). In order to distinguish the town from Amul no. 2, definitions were sometimes added to the name, as Yâkût points out, and it was called either Amul Zamm (cf. e.g. al-Baladhuri, ed. de Goeje, 410 and 420), i.e. the Amul near Zamm (the modern Kerki, 125 miles to the south-east), or Amul Diayhûn, i.e. the Amul on the Diayhûn (Oxus), or Amul al-Sâhît, i.e. the Amul on the river. Yet another name of the town, which occurs already in the Middle Ages, is Amûyâ (cp. especially al-Baladhuri, 410; Yâkût, i, 365) or Amû (Yâkût, i, 70); this last is perhaps merely a dialectical form of Amul, from which the later medieval name of the Oxus, Amû Daryá (river of Amû) may have been derived (thus Barthold, cp. AMU DARYA); it seems more likely, however, that this Amûyâ may be derived from Amû, an ancient local name of the Oxus. The modern name, Çąrdjîǰ, “the four streams”, refers to the important ford over the Oxus near by. Çąrdjîǰ is now connected by rail with Marw and Krasnovodsk to the west, and with Bukhârâ, Samarkand and Tahkent to the north-east; the railway crosses the Oxus by a long bridge go the north-east of the town. Bibliography: Yâkût, i, 69, 70, 365; Le Strange, 403 f., 434; Marquart, Eranafir n. d. Geogr. d. Pseudo Moses-Xenarchus; Berlin 1901, 136, 311; id. Untersuchungen zur Gesch. von Eran, Leipzig 1895, ii, 57. (M. STRECK)

The town appears to have received its present name of Çąrdjîǰ in the time of the Timurids; in his account of the events of 903/1497-8, Bâbur (Bâbur-nâmâ, ed. Beveridge, f. 58) mentions the passage of the river at Çąrdjîǰ (Çąrdjîǰ gizân). In 910/1504 the fortress of Çąrdjîǰ in Muhammad Sâikh, Shâyâbânî-nâmâ (Melioranskij, 197; Çąrdjîǰ bâfast, in Barâk’s Persian Shâyâbânî-nâmâ, quoted by Samoilović, Zap. Vost. Old. Arkh. Obseč., xix, 173: Kaifa-yi Çâhâr-djîǰ) had to surrender to the Uzbegs.

During the period of Uzbeg domination, as in the Middle Ages, the most important passage of the
Oxus was at Čardjūy; boats were always kept in readiness for this purpose; bridges of boats were occasionally built for the passage of large armies, as, for example, for Nādir Shah's army in 1533/1740. Čardjūy, is, however as far as is known, nowhere mentioned in any authority as a large town in this period, still less as the residence of a prince or governor of importance. (Cf. Burnes, Travels, iii, 7 ff. [visited the town in 1832]; more reliable than J. Wolff, Narrative of a Mission to Bokhara, 1844, 162 ff.; Mushketow, Turkestan, St. Petersburg 1886, 606 ff. [visit of 1870]).

In 1884, the Turkmen of Marw had to submit to the Russians; the old caravan route was replaced by a railway which reached the Amū Daryā in 1886. The importance of Čardjūy, as a result, rapidly increased; the town, which was the residence of a bāq of Bukhāra, had before the Revolution about 15,000 inhabitants.

10 miles from Old Čardjūy near the Amū Daryā railway station, on ground ceded by the amir of Bukhāra to the Russian Government, a new town arose which was the seat of a Russian military commandant and which had a population in 1914 of 4,500. In 1907 a railway bridge was built across the Amū Daryā thus ensuring railway communication between Čardjūy-Bukhāra and Tāshkent.

Under the Soviet regime new Čardjūy has become an important administrative and, since 1924, an industrial centre. In 1926, its population increased to 13,959, of whom 8,069 were Russians, 846 Armenians, 525 Caucasians and only 458 Turkmen; in 1933 it rose to 14,500; the Turkmen always forming a small minority. In 1935 it was the second town of the Soviet Republic of Turkmenistān, and for a time (before 1930) there was a proposal to make it the capital of the Republic. Since 21 Nov. 1939 New Čardjūy has been the chief town of the oblast of the same name. It is a modern town designed on a rectilinear plan, and the town-planning scheme visualizes an eventual population of about 200,000. It is the home of numerous industries, and an important centre of communications—rail (Krasnovodsk-Tāshkent and Čardjūy-Kungrat lines); road (the Čardjūy-Khiwa motor road); and, river, the Amū Daryā being navigable from Termīndī to the Aral Sea.

Old Čardjūy (now Kaganovitschek) is now a small workers' town situated 5 miles from the outskirts of Čardjūy, and has retained its character as an ancient indigenous town. In 1931 its population was 2,042, mainly Turkmen of the Salor tribe, and Uzbek.

The district (oblast) of Čardjūy, created on 21 Nov. 1939, has a total area of 36,000 sq.m. and is situated in Eastern Turkmenistān. The oasis of Čardjūy, which stretches between the Amū Daryā and the Kara Kum desert, forms the centre of this district; it is a rich agricultural area (cultivation of silk, horticulture, cotton plantations, vine-growing, breeding of harabul sheep). (A. Beningisen).

AMULETS [see HAMA'IL].

'AMŪR (Djabal), a mountain massif in southern Algeria. The mountains of the 'Amūr, named after a section of the people who live there form part of the Saharan Atlas of Algeria, together with the mountains of the Ḫāsur and the Ouled Nail which form a continuation to the S-W and N-E. Nearly all over 3,900 ft., they rise slightly above the high steppes of Oran (3,275-3,900 ft.), and drop sharply down to the Saharan foothills (2,975-3,275 ft.).

Between the ranges, which run S-W to N-E, stretch large synclinal watercourses with flat lands, with the occasional contrast of deep valleys which form scarped plateaus such as that of El-Gā'dā. The altitude gives the region cold winters, temperate summers and a relatively heavy rainfall. Thus the mountains of the 'Amūr, are still covered with forests, especially in the north-western ranges (4,920-5,575 ft.) and on El-Gā'dā (3,950-4,590 ft.): these forests are mainly of juniper. Mediterranean flora mingles with that of the steppe, such as alfa, which prevails on the southern slopes.

Inhabited from very early times, as is witnessed by the rock carvings and graves scattered over the massif, the Djabal 'Amūr was for long ignored by the historians. The earliest inhabitants mentioned are the Rashīd Berbers who have given their name to the massif. They were to some extent superseded, in the course of the 8th/14th century, by the Arabised nomads of the Sahara, the Amūr, perhaps partly of Hilāli origin, who settled in this mountain massif. and the name Djabal 'Amūr was substituted for that of Djabal Rashīd.

Numerous traces of villages (ḥāsur) point to the early existence of agricultural life on a wider scale than to-day. The Djabal 'Amūr is primarily a pastoral mountain region; flocks of sheep and flocks of sheep and goats move from the north to the south of the massif and along its fringes, and the inhabitants live in tents often carried on the back of oxen. The 'Amūr make excellent knotted carpets. Afrou, the administrative and economic centre, has developed at the expense of the four surviving ḥāsur.

'AMWAŚ or 'AMWAŚ, the ancient Emmaus, still marked by a large village, was situated in the plain of Judæa at the foot of the mountains, some 19 miles from Jerusalem, and commanding one of the principal approach routes to the latter. The site of a victory won by Judas Maccabæus in 166 B.C., it was fortified by the Seleucid general in 160 B.C. and became under Caesar the chief tow of a topharchy, only to decline to the size of a small market-town after being burnt by Varus in 4 B.C. Its strategic importance, however, led to its being selected by Vespasian as the site of a fortified camp, and it had again grown to the size of a small city when it obtained from Elagabalus in 221 A.D. the title of Nicopolis, its Christian colony embellished it with a basilica which, as excavations have discovered, was rebuilt successively by the Byzantines and the Crusaders.

The conquest of the area by the Arabs, which according to the sources occurred in 8/633 after the victory of Aδiδαγαιν, or in 7/658 after that of the Yarmūk, marked its final decline; it was chiefly known as the source of the notorious "'Amwaś plague" which left its tragic record in contemporary annals and which claimed 25,000 victims including the famous chiefs Abû 'Ubayda, Mu'āsch b. Djabal and Yazīd b. Abī Sufyān. Its position as administrative capital was taken over by Ludd, and then by Ramla, founded in Umayyad times; the Arab geographers confined themselves to mentioning the small town, which played no part even during the period of the Crusades, when it experienced the same fortunes as Jerusalem down to the temporary
retrocession to the Franks under the treaty of Jaffa between al-Malik al-Kamil and Frederick II.

... the appearance of trans-desert steamer traffic, downstream only; and the traditional caravan-road from central ʻIrāk to northern Syria, passing through ʻAna—a main element in its early importance—is little used since the appearance of trans-desert motor traffic. The town is flanked to the west by the tribal area of the ʻAniza sections in the Syrian desert, and to the east by the Ṣhammar Djarba in the Djižāra, while the river banks are the area of the settled cultivating and sheep-breeding Dulaym. It is, under the ʻIrāk Government, the headquarters of a .badā group, and includes the additional nābiyās of al-Ḳā'im, Dju'bba, and Ḥadīthā. The townspeople, practically all Sunni Arabs—with small Jewish and for their weaving of cotton-cloth and woollen mats and cloaks: the men, whom lack of space for expansion forces largely to emigrate, are known for their skill as Euphrates boatmen, and in earlier times, of the Rhomaeans). The name, recorded in cuneiform inscriptions as Anat or Khanat, was identical with the Greek Ἄνατολι in Byzantine pronunciation; Anatolia, Asia Minor, the mountainous peninsula—including its base—proceeding from the southern part of the Asiatic continent towards Europe (Balkan peninsula)—known as Asia Minor (Μικρὰ Ἀσία) in antiquity—is situated between 36° and 45° N and 26° and 45° E. Together with the Balkan peninsula it has formed a bridge between Central Europe and Western Asia throughout its history. Arab geographers in the Middle Ages, and Turks until far into Ottoman times, called the country Bilād al-ṣūr (country of the Rhomaeans).

The name ʻAnatolh (rising of the sun) is used first and foremost as a geographical term by the Byzantines, as „Orient“ or „Orient“ to denote all that lies east of Constantinople, i.e. especially Asia Minor and Egypt. A prefecture „per Orientem“ (περὶ Ἑλλάδος ἐν τῇ Ἁπάντως Ἑλλάδος) appears, however, in the reorganization of the administration by Diocletian and Constantine as one of the four large sections of the empire; it consists of the five dioceses of Aegyptus, Orientis (Ἄνατολι in the stricter sense), Pontus, Asia, and Thracia, that is to say, the Middle East, Thrace, Egypt and Libya. The administrative term ʻAnatolh disappears with the introduction of the division into themes (at the beginning of the first half of the 7th century); the name ʻAnatolikŏn or θέμα τῶν Ἀνατολικῶν is now applied to the theme (administrative area) around Amorium and Iconium. This considerably smaller administrative unit is called al-Nāṭolūs, or some-
thing similar, (explained as al-mashrifc, "the east") by Ibn Khurradadhbih (107, transl. 79); al-Natollk (explained as al-mashrifci, "the eastern") by Kudama, (ed. de Goeje, 258, transl., 198); cf. H. Geler, Die Genesiss der byzantinischen Themen-Verfassung, Leip- 

The name of the theme Anatolikon disappears again with the Turkish conquest. The general geographical term Anadolu reappears however, and gradually becomes Anadolu with the Turks. To begin with, this meant only western Anatolia. The large Ottoman province (eyalel or wilãyet) of this name embraced the area of the former western Anatolian Turkish principalities (see next article). The term Anadolu as name of a province disappeared at the time of the reorganisation of the provinces during the tanzimdt (middle of the 19th century). From then on "Ana-
tolia", used geographically, came to mean the whole peninsula (roughly as far as the line Trebizond (Trab-
zon) Erzingjan-Bireddik-Alexandretta) which today forms the main part of the area of the Turkish republic. “Anadolu”, as it is used today in Turkish, is the whole Asiatic part of modern Turkey, including Mesopotamia: al-Djazlra (Diyarbakr), Kurdistán (Van and Bitlis), as well as to Armenia (Kars). It is in this sense that the term is used in the present article (the islands in the Aegean Sea are not taken into account). In 1950 the overall area of Turkey was stated to be 767,119 sq. km. Of these, Thrace has 23,453 sq. km. and Anatolia 743,654 sq. km. The number of inhabitants in the whole of Turkey was 20,934,670 in 1950; of these, 18,262,229 lived in the European part of Turkey, and 19,308,441 lived in Anatolia. [For pre-Turkish Anatolia, see RUM].

(F. Torschner)

(ii) PHYSICAL GEOGRAPHY

General survey of the nature of the country. Anatolia consists of a spacious high plateau, ringed by longitudinal and even higher mountain ranges to the north and south. The central plateau contains Central Anatolia. The northern part of this ring may best be collectively called the northern Anatolian border mountains; the southern section is formed by the Taurus system. Central Anatolia is ringed off by hills to the east and west as well, where the northern and southern ranges come into contact. Thus there is the mountainous ridge of western Anatolia, with the Aegean coastlands lying beyond it. In the east, there are the chains of mountains of the upper Euphrates region and—as a sort of outpost of Anatolia—the high plateau of Mount Ararat.

As might be expected from the geographical position, the winter temperatures along the coast of Anatolia are mild, ranging from an average of over 5° C. on the Black Sea coast to over 8° C. on the southern coast during January. A large part of the country lies within the reach of the system of low atmospheric pressure which moves from west to east and influences the weather in western and central Europe throughout the year. Hence humidity in Anatolia is comparatively high during the winter. In summer, the coastal areas become oppressively hot, with average temperatures for July and August of 22° in the north and over 27° in the south. Northern winds prevail and bring a dryness, typical of the Mediterranean climate, to the west and south coast in summer, whilst, coming from the sea, they bring rainfall even in summer to the northern coast.

On the south and west coast, natural vegetation is largely of the evergreen variety common in mediterra-
nean countries. In many places it has been made into arable land, whilst the rest has deteriorated into shrubs and sparse grazing ground. More luxuriant vegetation appears along the northern coast, which is more humid in the summer and where plants which need more water grow in woods, bushes and cultivated fields.

The border mountains naturally have colder—in parts extremely cold—winters, their summers are less hot, and the humidity is higher than along the coast. The sides of the mountains are naturally wooded. In the case of the western, southern, and eastern rims, these woods consist largely of “dry forest”, particularly oak and coniferous trees. Many of them had to be sacrificed in the drive for arable and grazing land. In the northern mountain chains nearer the coast, “damp forest” prevails, in which the beech and the pine play a large part in the higher regions. “Dry forest” replaces “damp forest” even in northern Anatolia on the inner mountain ranges, owing to the decreased humidity. “Damp forest” has great resilience and is therefore less threatened by human activity.

The central Anatolian plateau—ringed by its border mountains—is cold in winter, with average temperatures for January below freezing point, whilst it is very hot in the summer, the July/August average reaching 24° C. Since there is considerably less rainfall here than there is in the coastal areas and their mountains, it is a steppe. Despite erroneous information on some maps, there are no stretches of desert in central Anatolia. Even in the driest districts it is possible to grow barley and wheat without artificial irrigation, relying solely on natural rainfall, with moderate success.

There are steppes on the southern edge of the eastern Taurus where Anatolia and Mesopotamia meet. Although they are not much above sea level, they are a long way from the sea, and as a result winters are less mild and less humid than along the mediterranean coast, and summers very hot and dry.

The Northern Anatolian border mountains. The range of north Anatolian border mountains (often known as the Pontic Mountains in Europe) consists of comparatively straight parallel mountain ranges from 1200 m. to 1500 m. in height, often rising to over 2000 m. These are fairly broad and some have plateaux. To the east, in the so-called Zigana mountains (called after the Zigana pass south of Trabzon) there is a long stretch over 3000 m. in height, and here one finds alpine forma-
tions. The mountains are made up largely of slate, sandstone, marl, volcanic stone, and crystalline substances. In the west one can trace—through the mountains south of the Sea of Marmara—a relation to the inner Dinaric mountain ranges of the Balkan peninsula. In the east, the southern Caucasus mountains form the link with the northern Iranian mountain ranges.

On the plateaux of the naturally wooded northern Anatolian mountain ranges, especially in the middle part, woodland has been turned into arable land up to a height of 1500 m. Growing of grain and raising of sheep and goats (in the east also cattle) form its economic basis. The long spacious valleys between the ridges, where hot summers and the presence of water make agriculture possible, are the main areas of settlement. Of these the most important is the row of basins of Bolu-Gerede-Cerkesh-Ilgaz-Tosya
in the eastern part of the ancient Bithynia, the basin area of Safranbolu-Kastamonu-Boyabat, the centre of the ancient Paphlagonia, and, in the regions of the ancient Fontus, the basins on the upper Yeşil İrmak (Iris) around Amasya, Zile and Tokat, and in the east, the Kelkit-Coruh furrow which is over 500 km. long.

On the north coast, mountains rise steeply out of the Black Sea; there are few bays. The coastal strip is very narrow and much cut up by valleys; it is densely populated, especially in the east, and maize, beans, and particularly hazelnuts are grown around Giresun [q.v.] (Cerasus), Tarabzon [q.v.] (Trapezus, Trebizond, modern Trabzon), and Rize [q.v.]. The only larger flats are in the deltas of the rivers Yeşil İrmak [q.v.] (Iris) and the Kızılı İrmak [q.v.] (Halys), but these are partly swampy. The more fertile soil produces excellent tobacco. The peninsula of Kojdaeli [q.v.] and the Thracian peninsula are flat, and the plains of Adapazarı [q.v.] on the lower Sakarya (Sangarius) are very fertile.

A part from the Bosphorus, there is only one harbour which is protected against the north-western gales of the Black Sea, and that is Sinop [q.v.] which, however, because of its unfavourable hinterland, is at present of little importance. Samsun [q.v.] (Amisos) has the best access—both rail and road—to central Anatolia. The coal-mining and industrial areas of Zonguldak [q.v.] and Ereğli [q.v.] (Herculea Pontica) are now being greatly developed. In the past, the silver, lead, and copper mines in the Zigana mountains were of some importance (Gümüşhâne [q.v.], Murgul near Borçka, and others).

The subsidence of land which has created the Aegean between Anatolia and the Balkan peninsula, has also affected the northern Anatolian mountain ranges in the Marmara region. As a result, there are hilly districts and plains around the Sea of Marmara (the basin of which is only deep in parts). These have a very favourable mediterranean climate. Silkworm is cultivated near Bursa [q.v.] (Brusa), and wine produced around Tekir Dagh [q.v.] (Rodosto). Gowing to its unique geographical position, the city of Byzantium, Constantinople, Istanbul [q.v.] grew up and retained its importance for thousands of years. Situated on the bridge between Anatolia and the Balkan peninsula, the most important times of the city were naturally those in which it played the rôle of the natural capital of an empire stretching over both areas. Yet even today, it is Turkey's gate to the world and her principal import harbour. The Straits here are obviously not a borderline of continents or cultures. Such a boundary might rather be found in the sparsely populated steppes and heather regions in eastern Thrace.

The Taurus (Toros) System. On the whole, the Taurus system in southern Anatolia is considerably higher than the northern Anatolian border ranges. For long stretches, the mountain chains and broad waves of elevations rise to more than 2000 m. and at times to more than 3000 m. To the south-east of Lake Van (Wan) there are even heights up to 4176 m. in the ice-covered Dijilo Dagh. Limestone predominates in these mountains. The mountain ranges are often strongly bow-shaped, thereby making clear sections. To the west of the Gulf of Antalya (Adalia, Attalia) the mighty ranges of limestone mountains of the Western Taurus—the highest of which are sometimes referred to as Lycian Taurus—point outwards in a S and SW direction towards the sea and towards Rhodes, Crete and the outer fringes of the Dinaric Mountains of the Balkan peninsula. Between the Gulf of Antalya and the Adana plain stretches the mighty arc of the Central Taurus. The Cilician Taurus, which often occurs, refers to its better known eastern wing. The Taurus system continues in two parallel chains to the east of the Gulf of Alexandretta. An outer chain stretches from the Amanus Mountains to the chains south of Lake Van by way of the chains south of Malatya and south of the Murad River. An inner chain—the western section of which is sometimes called Anti-Taurus (a name given with little justification)—runs from the ridges of the upper Seyhan region north of Adana to the Urmiya area by way of the chains south of the upper Euphrates (Kara Su) and the upper Aras (Araxes). Between these two there are a number of basins, those of Elbistan, of Malatya, Elazığ (Elaziz, Kharput), of Çapakçur, Muş and Van. This whole mountain system is best called the Eastern Taurus. (In earlier works, nomenclature varied: in addition to Anti-Taurus, other names for parts of the system were employed, such as Armenian Taurus and Kurdish Taurus, without determining the precise use of each). The above-mentioned row of basins separates the chains of the inner from those of the outer Taurus. Thus, seen as a whole, the eastern Taurus system (with these two ranges) describes an arc towards the north, and its southern end merges into the southern Iranian border ranges.

There are considerable longitudinal basins between the mountain ranges in the Western and the western part of the Central Taurus. Several of them contain lakes, the famous lakes of the old districts of Pisidia and Isauria. These basins are the main centres of habitation. In some places there are valuable special cultures, as for instance near Isparta [q.v.] and Burdur [q.v.]. The limestone mountains are thinly populated because of the scarcity of water. Grazing ground of a poor quality—used by goats and sheep in summer—has largely replaced the former "dry forest". Habitation in the Central Taurus, which is really one large massif, is restricted to the few narrow valleys. Here, too, the higher ranges serve chiefly as grazing ground (payla) for sheep and goats in summer. The eastern Taurus, which, as we have seen, stretches out more broadly, has a larger area in its basins which could be inhabited, but at present they are only thinly populated. As far as rainfall—which decreases with the distance from the mountains—permits agriculture exclusively based on rain water, habitation is also possible in the as yet thinly populated southern foothills of the eastern Taurus. It is possible in the vicinity of the ancient centres of Diyarbakır (Diyarbakır, Amid), Urfa [see AL-RUHA] (Edessa), Gaziantep ('Aynţāb [q.v.]), Halab [q.v.] (Aleppo), but not much further to the south. The most propitious area of these eastern foothills is the Hatay [q.v.] in the west around Antakya [q.v.] (Antiokh), where the nearby Mediterranean makes the growing of citrus fruits and other Mediterranean crops possible.

On the whole, the coastal strip of the Taurus offers only a narrow stretch of alluvial land and few hills which invite habitation. These few make possible the cultivation of Mediterranean plants, and in parts of citrus plants. There is, however, danger from malaria. Generally we find limestone mountains (with little water) rising at a small distance from the sea. The only really large arable area is the Adana [q.v.] plain—in which also Türşu [q.v.] lies—the Cilician plain of antiquity, formed by deposits from the rivers Sayhān [q.v.] (Saros) and Diāyān [q.v.] (Pyramos). In recent years cotton growing in this
area has increased considerably. The tufaceous limestone plain of Antalya [q.v.] with sheer drops to the sea, is less favourable; Anatolia's southern coast—in as much as it is a longitudinal one—has no protected landing places for larger ships. Iskandarûn [q.v.] (Alexandretta) and Mersin [q.v.] have some importance as harbours of the Adana plain and the Hatay and as the harbours for shipping the chromium ore of the eastern Taurus. This part is played more to the west by the small harbour of Fethiyye for the western Taurus.

Aegean Anatolia (Ege region), the area between the two bordering mountain systems show less relief. There are several distinguishable units. In the west, there is Aegean Anatolia, in modern Turkish called the “Ege region”, between the southern Taurus in the south, which corresponds roughly to the area of Ionian colonisation of the ancient Greeks. Here the broad valleys of the Bakır Cay (Calcus), Gediz (Hermus), the greater and lesser Menderes (Kayster, Maeander), penetrate to a depth of 200 km. into the peninsula, in an area of crystalline rocks (called Lydian-Carian rock by Philippson) between the mountain peaks running from west to east at heights between 1000 m. and 2000 m. Thanks to these valleys, the mediterranean climate can penetrate deeply into the country. This area is densely populated. Tobacco, olives, figs, and grapes—largely dried for raisins—are grown here. More recently, cotton growing has gained some importance.

The coast, running at right angles to the mountain ranges, has many bays, coves and good natural harbours. The larger rivers, however, carry a great deal of sediment and gradually fill in the bays. Ephesus and Miletus, which were harbours in antiquity, are today several kilometres inland, and the otherwise excellent harbour of İzmir (Smyrna) is only saved from being filled up by diversion of the river Gediz Çay. İzmir [q.v.] is linked by railway to all the above mentioned valleys, and has thus become the economical centre of the region and the principal harbour for exporting the agricultural produce of Turkey. Bergama [q.v.] (Pergamum), Manisa [q.v.] (Magnesia), Tire [q.v.] Aydınlı [q.v.] (Güzel Hisar) and Denizli [q.v.] are local centres of this area.

The Western Anatolian Ridge. Where in the east the valleys of Aegean Anatolia come to an end, a huge ridge rises between the re-entrant angle of the Taurus system on the one hand, and the southern border chains of the sea of Marmara on the other hand, in the area around Afyun Kara Hisar-Kütahya-Uşak. This is formed by huge plateaux which reach a height of 1200 m. to 1500 m. Massive ranges rise above these which frequently exceed 2000 m. There is a gradual decline in height to 1100 m towards the northeast and the upper Sakarya (Sangarius). This large rise is the western Anatolian ridge. The plateaux consist largely of flat tertiary deposits of clay and sand which had once risen and were later cut into by the valleys we see today. They are steppes. Only the higher mountains reach the natural tree-line, but most of the woods have been cut down.

The growing of grain and the raising of sheep and goats form the livelihood of the scanty population. Several roads and railways lead to the inland plateau on the one hand and branch off near Afyun Kara Hisar [q.v.] (Afyonkarahisar) to the basins in the western Taurus, to the lowlands of the Ege region and to the Sea of Marmara on the other.

Central Anatolia. The inland plateau of central Anatolia comprises large stretches of flat country at a height of 800 m. to 1200 m. These were formed by recent sedimentation in the bottoms of the landlocked basins of Konya (Iconium), such as the Tuz Gölü (“salt lake”), a huge flat salt pan at a height of 900 m. often erroneously marked down as Tuz Gölü (“salt desert”) on our maps. They also exist on the upper Sakarya and in certain places on the Kızıl İrmak. There are also other broad plateaux of horizontal new tertiary deposits, and flat plains over creased subsoil.

Mountains of considerable height are, however, also found in central Anatolia. They rise from 500 m. to 1500 m. above the surrounding plateaux. There are some gigantic recent volcanoes which are, however, not active at present, such as the Erdjiyas Dagh [q.v.] (3916 m.), the Argeaus of antiquity, near Kayseri, and the Hasan Dagh (3256 m.) near Nigde.

The mountains are of vital importance to human existence. In dry central Anatolia, surrounded by high mountains, the lowest areas are the driest, while the high mountains catch the rain. Hence the most favourable regions for settlement are, on the one hand, on the highest plateaus, such as for instance in the area of the bend of the Kızıl İrmak, in the Cappadocia of antiquity, and on the other hand at the foot of the surrounding mountains, where fast rivulets come forth. Most of the important towns are in the latter of these two positions, such as Ankara [q.v.] (Ankya, Angora), Eski Shehir [q.v.], Konya [q.v.] (Iconium), Nigde [q.v.] Kayseri [q.v.] (Caesarea), and Sivas [q.v.] (Sebastia). All these have—or had—land that can easily be irrigated. There is little population in the steppes, where the basis of livelihood is the growing of wheat and barley and the raising of sheep and angora goats, although thanks to recent mechanisation the cultivated areas have been increased and improved; there is least of all in the particularly dry basin of the Tuz Gölü and of Konya, the Lycaonia of antiquity, with a great deal of “Artemisian steppe”.

Traffic is easier through the central plateau than through the mountainous borders. For this reason this plateau, which has always been the centre of Anatolia, has become even more important since the capital shifted to Ankara and the road and rail network of Turkey was extended.

The upper Euphrates area and the Ararat highlands. Geographically, the eastern limit of Anatolia is to be found on the upper Euphrates, where the mountain chains of the northern Anatolian border mountains and the eastern Taurus are joined by the rising of new mountains between the two systems. In this region of mighty chains of high mountains, where peaks generally exceed an altitude of 2500 m. (often 3000 m.), the scanty population is found only in the valleys, more especially in the longitudinal ones. Along these, too, run the roads from Anatolia to Erzincan [q.v.] and Erzurum [q.v.] (Erzerum) has always been to guard these roads.

The eastern Taurus on the one hand, and the northern Anatolian border mountains on the other, divide again east of the meridian of Erzurum, thus forming a highland which, at 1500 m. to 1700 m., is an even higher basin than that of Central Anatolia. There are considerable volcanic deposits of recent formation over a creased basis. Huge recent (at present inactive) volcanoes, such as Ararat ( Ağrı-dagh [q.v.]) (5172 m.), Alağöz Dagh (4094 m.),
Sthan Dagh (4434 m.) rise above the highlands, and in places, such as at lake Van, have led to a generation. The scanty population speaks either Turkish or Kurdish. Thus it seems appropriate to give this eastern border region of Turkey—which is actually outside the geographical Anatolia—the name of the Ararat Highlands. This name would be neutral, yet geographically characteristic.

(H. Louis)

(iii) Historical Geography of Turkish Anatolia

(1) The conquest of Anatolia by the Turks, first phase, and the state of the Saldı̈ık of Rûm.

The main part of Anatolia remained untouched by the conquests of the Muslim Arabs. The boundaries of the Byzantine empire remained: in the north-east, the Christian states of Armenia and Georgia; to the south of these, Kâlikâl (formerly Theodosiopolis, then Arran al-Rûm, Erzurum) and—at times—Kamalgh were the furthest outposts of the armies of the caliph; hence the Taurus, the "land of the passes" (bildûk al-dûrûb), formed the boundary as far as the Mediterranean. Though frequent raids into Byzantine territory were made, the Arabs never occupied the land. These border regions, comprising the outermost parts of Northern Encyclopaedia of Islam

Syria and Upper Mesopotamia, were the "military area of the protecting fortresses" (gûnd al-tawâṣûm, or simply al-tawâṣûm, [πτὶ]; Manbij or Antakya (Antioch) was the capital of this region, whilst the armed fortresses of the "Syrian marches" (thughûr al-Shâm) with Tarsûs as its centre, and the "Mesopotamian marches" (thughûr al-Diâstra) with Malatya (Melitene) as their centre, formed the outer border. In their changing fortunes of the war between Byzantines and Arabs, these border areas suffered greatly, but they remained, in the possession of the Arabs. Not until the conquests of the great emperors Nicephorus II Phocas (963-69), John Tzimiskes (969-76), and Basil II (976-1025) did these areas return to Byzantine ownership. At the time of the death of the last of these three, the whole of the territory of Turkey as we know it today, with the exception of Amida (Diyar Bakr) and its surroundings, was Byzantine (compare E. Honigmann, Die Ostgrenze des Byzantinischen Reiches von 363 bis 1071, Brussels 1935). Then, however, the rivalry between the military nobility and the nobility of civil servants began in Byzantium. These, particularly when the latter were in power, led to a weakening along the borders.

The Turkish conquerors of the house of Saldı̧ık found the Byzantine borders in past the Middle East, they sent their Turkish warriors against the frontier, in order to fight the holy war (djâhâd). They did, in fact, achieve several breaks through into Byzantine Anatolia (456/1064 conquest of Anî in the Byzantine-Armenian border area, laying waste Cilicia and storming Cæarea (Kayseriyya). After the death of emperor Constantine X Doukas, the death of the civilan nobility (May 1067), Romanus IV Diogenes, a member of the military nobility, was raised to the throne on the battlefield (1 Jan. 1068) because of the desperate position which had arisen. To begin with, he fought the Turks successfully, so that the Saldı̧ık sultan Alp Arslan was obliged to go against him in person. The numerically superior Byzantine army was routed by Alp Arslan near Manzikert (in the vicinity of Lake Van, (456/19 August 1071) because of lack of discipline among the mercenaries and treachery by the opponents of the emperor. The emperor was captured, but he was freed by the sultan after a lenient treaty had been concluded. The defeat, however, caused a revolution in Constantinople, which brought the opposing party to power. Romanus IV lost his throne and was blinded. He died soon afterwards (summer 1072).

With the fall of the Emperor Romanus, the treaties between him and Alp Arslan became void, and the Turks renewed the holy war against Byzantium. This was fought not by regular Saldı̧ık troops, but by individual leaders, the most successful of whom was Malik Dânîşshmand (q.v.) Ahmad Ghâzi who operated in north-eastern Anatolia. Bands of Turkish warriors roamed the countryside and interrupted communications between towns, paralysing Byzantine administration. Eventually the successor of Alp Arslan, sultan Malikşah (since 465/1072), despatched a member of the house of Saldı̧ık, Sulaymân b. Kûlûmûf, to lead the Turkish cavalry in Anatolia in the war being waged against Byzantium. His task was facilitated by the existing confusion over the succession to the throne in Byzantium. Emperor Michael VII Ducas and—after his abdication (1078)—Nicephorus III Botaniates, obtained Sulaymân's assistance to gain their aims. On their
part, they had to recognise his rights to those parts of the country which the Turks had occupied, and to hand over the recently conquered cities of Cysicus and Nicea (1087). Sulaymân established his headquarters in Nicea (Turkish İzîk). The Emperor Alexius I, who began his reign in 1081, confirmed Sulaymân’s rights to settle his Turkish troops in the occupied territory, whilst nominally retaining Byzantine suzerainty. In actual fact, Sulaymân ruled over practically the whole of Anatolia through his troops which roamed the country. Byzantine administration was virtually superseded.

After his successes in Anatolia, Sulaymân turned to the east, to extend his rule in this direction. He did succeed in capturing Antioch (Antakïya), which was still Byzantine, but met with heavy opposition from the Saldjûk amirs, especially from Tutush, the brother of Malikshâh, when advancing towards Aleppo. He was beaten and fell in battle (1086).

In the meantime, Turkish bands fighting the holy war in Dîjarbâyân had conquered the Christian kingdom of the Bagratids in Armenia (473/1080). Following this, the Bagratid Ruben and his faithful followers founded a new state in Cilicia, known as the kingdom of “Lesser Armenia”. It survived until the 14th century (1375) under his successors, the Rubëts. [See note.]

After the death of Sulaymân, Anatolia was left to its own devices for some time. Other Turkish leaders settled in the country together with their troops and founded dominions there: the aforementioned Malik Dânîshmand Ahmad Ghâzî in the north-east, with Sebastia (Sivas) as headquarters; the amîr Mengüçük [i.e. Ghâzî with Tepîrke (Divriği) and Erzûnku and in the west, in Smyrna, a certain amîr called Trchaxas by the Byzantines. Only after the death of sultan Malikshâh (1092) did his successor, Barkûkâr, permit the son of Sulaymân, Kûlîdî Arslân, to return to Anatolia, but he found it difficult to establish himself among the Turkish princes. Trchaxas, who was advancing against Constantinople by sea, was repelled with Byzantine aid.

At the beginning of the first crusade, the allied Byzantines and crusaders gained a victory over the Turks under Kûlîdî Arslân and Malik Dânîshmand (or his son, Ghâzî Gümüşteğin) near Nicea. The Turkish headquarters at Nicea was besieged and taken on 20 June 1097. On 1 July 1097, the victory of the crusaders near Dorylaeum, near the Eskîghîrî of today, decided the fate of western Anatolia and opened the way for the crusaders through the rest of the Turkish territories. They reached Antioch, which was taken after a long siege (3 June 1098). Here the principality of Antioch, the first crusader state, was founded under the suzerainty of Byzantium. The county of Edessa (today Urfa), in Mesopotamia, was founded in the same year. After these successes by the crusaders, the Emperor Alexius found little difficulty in driving the Turks from western Anatolia and in re-incorporating this area into the Byzantine empire. He also re-inforced the border—running straight through the middle of Anatolia—against the region remaining under Turkish occupation. This, for the time being, checked the Turkish conquests.

After this set-back, the area of Turkish conquest remained limited to central Anatolia for over a century. The whole of the west (roughly from Dorylaeum), and the Black Sea and Mediterranean coasts remained in Byzantine possession, Cilicia became the Kingdom of Lesser Armenia, and the regions of Antioch and Edessa formed the aforementioned crusader states. Amid (Dîyar Bakr) was the seat of the amîrâbât dynasty of the Artûkids [i.e.]. Later (1144), Edessa was conquered by the amîrâbât Zengî of Mosul; later still (1168), Antioch was taken by the Mamlûk sultan Baybars. Kûlîdî Arslân had to share the centre of the country, occupied by Turks, with Malik Dânîshmand, or his son, Mengüçük. The former retained the steppe in Central Anatolia, with Konya—the “Iconium of antiquity”—as his capital; the latter retained the mountainous north-east with Sivas and Erzûnku respectively. There was a heated quarrel over some places, especially Meliteme (Malatya), which Kûlîdî Arslân eventually managed to decide in his own favour (1104 or 1106). Kûlîdî Arslân failed, however, in his attempt to make conquests further to the east, in Mesopotamia (Mosul). He was beaten by the confederated Saldjûk amirs on the banks of the Khabûr, and died during the retreat (9 Shawwâl 500/3 June 1107). Concerning events at this period, see also Cl. Cahen, La première pénétration turque en Asie Mineure, Byzantium, 1946, 5-67.

Thus the Rûm Saldjûk state [see Saldjûk] or the Sultanate of Iconium, as the crusaders called it, was a rather limited territory in the poorest part of Anatolia. The Rûm Saldjûks under Mûsûd I retained this area and, having beaten the crusaders of the second crusade in the second battle near Dorylaeum (26 Oct. 1147), forced them to continue their way through Byzantine instead of Turkish territory. The Rûm Saldjûk state was considerably extended when Kûlîdî Arslân II succeeded in incorporating the Dânîshmandid state (1174), which he secured against the claims of the Byzantine Emperor Manuel I Comnenus by the victory in the Phrygian mountain passes, near Myrioecephalon (pass of Cardak, 17 Sept. 1176), in which he surrounded and routed the Byzantine army. The aged Sultan Kûlîdî Arslân II was involved in the disputes which arose after he had divided his land among his sons. Owing to this, the German Emperor Frederic Barbarossa was able to take the route through Turkish Anatolia even capture its capital Konya (18 May 1190), but this had no lasting consequences, particularly as the emperor himself was drowned not long afterwards (10 June 1190) in the river Saleph (Calycadnus in antiquity, Gök Massachusetts) today.

The crusaders of the so-called fourth crusade conquered Constantinople (1204) and erected a Latin Empire there, at the instigation of the Doge Enrico Dandolo of Venice; the Byzantines, under Theodore Lascaris, founded a Greek Counter-Empire in western Anatolia with Nicaea for its capital; and the brothers David and Alexis, of the imperial house of the Comneni, had, with the help of Queen Thamar of Georgia, formed the empire of the so-called “Great Comneni” in Trebizond. The Rûm Saldjûk sultan Ghiyath al-Dîn Kayhûsraw I, the youngest son of Kûlîdî Arslân II, succeeded in conquering Attalia (Adaliya, Antîliya), thereby gaining access to the Mediterranean for his kingdom (1207). He was not, however, successful in advancing further into western Anatolia. He was beaten by Theodor Laskaris near Hosas, in 1210, and fell in battle (possibly in single combat with his adversary). Theodor Laskaris and his successors protected the eastern border of their Nicaean empire with a strong system of fortifications which, for the time being, made it impossible for the Turks to advance in that region. In 1214, Kayhûsraw’s son and successor
al-Dīn Kayḳūbād, the brother and successor of Kayḳūwās, and the greatest of the Rūm Saldjūḳ sultans, extended the frontier of his empire on the medi-
terranean and took the fort of Galonoros (καλλον ἐρος), which he expanded into a sizable harbour town, to which he gave the name ‘Alīkīyā (now Alaya or Alanya), and where he had his winter residence. In the east, in upper Mesopotamia, he also won territory from the Artuḳids of Ṭūms and Ṭūn Kayḳūfā and forced them to recognise his supremacy. In 625/1228, he annexed the Mengūjik principality of Erzingān, and in the east he also made further conquests (Erzerum 1230, Akhlāt 1231, Kāhpū 1234). Under his rule, Rūm Saldjūḳ culture and power reached their peak. His son and successor Ghiyāṭ al-Dīn Kayḳūhsrwārī II (acc. 634/1237) succeeded in incorporating Āmid into his empire, and at that time the eastern borders of the Rūm Saldjūḳ kingdom were roughly those of Turkey today.

(2) The conquest of Anatolia, second phase, and the beginnings of the Ottoman Empire.

Two things in the middle of the 13th century brought about a change of conditions. The first of these was the Mongol invasion of the Middle East, which also affected Anatolia. Although the Rūm Saldjūḳ army was defeated by the Mongols under Baydu Ṣawī near Kūndū in eastern Anatolia (6 Muhārram 641/26 June 1243), there was no actual conquest of the Rūm Saldjūḳ Kingdom, but the Mongols advanced as far as Ākṣaīrya and did much plundering. The Kingdom grew more and more into the role of a vassal state of the Mongols, first of Bāṭū, the conqueror of eastern Europe, then of the Mongol rulers of Persia, the Ilḫānāns. A new stream of Turkmen came to Anatolia with the Mongols, partly as their followers, partly because they had been driven by them from their original homes. They increased the partly-nomad Turkmen element already present in Anatolia, and played an important part. Those of most immediate importance were the hordes led by Karaman [q.v.] b. Nūrā Sūfī (thus probably a member of a ḍawrūrī family). He founded a state on the border of Lycaonia and Cilicia around Ermenik (the ancient Germanicopolis) in the Taurus foothills. In 1227, Karaman’s son, Muḥammad Bēg, tried to gain the dominion over the Rūm Saldjūḳ kingdom by means of a pretender by name of Dīmīrī, and he conquered Κονδσ for his protection. But the town was re-taken by a Mongol retaliatory expedition, and Muḥammad Bēg had to retreat into the mountains with his Turkmen. Dīmīrī escaped to the north-west, but he was beaten by Saldjūḳ troops on the Šaḳaras (Muhārram 676/June 1277), taken prisoner, and executed.

The other important event was the reconquest of Constantinople by the Byzantines under the Emperor Michael VII Palaiologus and the restoration of the Byzantine Empire. The power of the empire was, however, past. The emperors of the house of Palaeologus were increasingly engaged in the Balkan peninsula, and they had to ward off the covetousness of the Latins. The remaining strength of the empire was taken up with this. The emperors were unable to devote the necessary attention to conditions in Anatolia, and allowed the defensive system—built up by the Lascarids—to fall into decay. This made it easy for the Turkmen hordes which, were pouring into Anatolia to pursue the holy war and to gain a hold on the western parts. These, with their greater fertility as compared with the inner region, had already tempted them. The Palaeologus were thus forced progressively to surrender their Anatolian territories, and the Turks, especially in the open country—met with hardly any resistance. By about 1300 most of western Anatolia was in Turkish hands, and there was now hardly a district in which there were no Turks among the non-Turkish inhabitants. Eventually, only a few fortresses (such as Prusa, Nikaeas and Nicomedias in Bithynia; Sardes, Philadelphia and Magnesia in Lydia) and some ports (such as Smyrna and Phocaea on the Aegean and Heraclia on the Black Sea) remained in Byzantine possession, as isolated Byzantine possessions in Turkish territory.

The Turkish hordes generally operated independently of each other under their leaders who founded principalities (amirates) in the conquered districts. We know little about their early history, although one gathers that there were quite a number of such small semi-nomadic states, of which some were of only ephemeral importance. By about 1300, a small number of principalities had emerged. The most powerful of these was, to begin with, Germiyan [q.v.] in Phrygia, with Kūṭāyā (the ancient Cotyaem) as its capital. According to al-ʿUmāri, the Turkish amirs of western Anatolia paid tribute to the Germiyan at some periods, and according to Ibn Bāṭīṭa they were feared by them. Temporarily they extended their power into central Anatolia, and Germiyan in 1300 as far as Ankara (according to an inscription). Incidentally, they do not seem to have been Turkmen originally, but possibly Yazīdī Kurds (compare Cahen, Notes sur l’histoire des Turcomans d’Asie Mineure au XIIIe siècle in JA, 1951, 335-54; concerning the origin of the Germiyan, especially 349 ff.). A whole circle of principalities grew up around Germiyan and some of the founders of these seem to have come from Germiyan. The second greatest of these western Anatolian principalities at that time, was Dīāndār [q.v.] in Paphlagonia, with Kastamonu (Castra Comneni, today Kastamonu) as its capital, and the harbour town of Sinob (Sinop, Sinope) also belonging to it. To the west of it, in northern Phrygia (around Eskişehir-Dorylaeum), was the principality of Oṭhūmān with Sūqūd as its centre. After the conquest of some fortresses there, it soon expanded as far as the Sea of Marmara. Still further west, in Mysia, was Karasla [q.v.] with Balikesi (Palaæocastro) and Berghama (Pergamum), which included the coastal area of the Sea of Marmara as far as the Hellespont (Dardanelles). Next to it, in the Aegean coastal region, were Sūarkanā [q.v.] in northern Lydia, with Māghnīsā (Magnesia, now Manisa); Ayδn [q.v.] in southern Lydia and the hinterland of Smyrna with Tīr; and Menteše [q.v.] in Caria, with Milas (Mylasa) and Muḥla. Lastly, in furthest south-western Anatolia, were Tekke [q.v.] in Lycia and Pamphylia with Adalā (Antalya), and Ḥamīd [q.v.] in Pisidia with Ḥarama. At about the same time, the Rūm Saldjūḳ state ceased to exist. For some time past, the importance of the reigning sultans had been replaced by that of the Mongol governors who resided in Sivas. After the death of ‘Alāʾ al-Dīn Kayḳūbād III (707/1307 or 708/1308), the last of the shadow sultans, the empire simply became a province of
the Mongol Ilkhan Empire of Persia. By exploiting
this condition, the Karamans [q.v.] tried to extend
their territory from their Taurus foothills; they
succeeded in conquering the town of Laranda (now
Karaman), which they made their capital. They did
not, however, succeed in taking Konya, as this was
held by the Ilkhan conqueror Cöpân and his son
Temürtaşh. The latter actually extended the domain
of the Ilkhan Empire by conquests in the west,
where he fought with the Turkish petty princes.
In the twenties, unrest in the Ilkhan Empire spread
to Anatolia (Temürtaşh fled to Egypt in 728/1328).
The conquered territories were lost, and the Karamans
succeeded in capturing Konya; but they kept
Laranda as their capital. During the course of the 14th
century, the Karamans extended their rule westwards
in southern Anatolia, and thereby came into contact with the Turkish states which were
developing in western Anatolia.

With the continuing decay of the Ilkhan Empire,
the Mongol governors declared themselves independent
as amirs (or sultans) of Rûm, and sought the
support of the Mamlûk sultans of Egypt. In 1325
the latter brought the kingdom of Lesser Armenia
to an end, and a Turkmen dynasty, named Râmânâ
[q.v.], founded a new state in its Cilician territory
soon afterwards, with Adana as capital, under
Egyptian supremacy. Another family of Turkmens,
the Dughâdhir (Arabicised as Dhu ‘l-Kadr [q.v.])
settled in the Eastern Taurus area including Elbistan,
also under Egyptian supremacy.

In the west, the principality of Ghâzî ‘Othmân,
and his descendants, the Ottomans [see ʿûthâmînî],
extended more and more at the expense of the remaining Byzantine territory. After northern
Phrygia and the territory as far as the Sea of
Marmara had become Ottoman, the towns of Prusa
(Brusa, Bursa, 6 April 1326), Nicaea (Iznik, 2 March
1331) and Nicomedia (İzomîk, now İzmit, 1337)
fell into the hands of Orkhan, the son of ‘Othmân.
Brusa became his capital. Turning quarrels over
the succession in the neighbouring principality of
Karaş to his advantage, Orkhan annexed its
territory (736/1336). Thus the whole southern coast
of the Sea of Marmara became Ottoman territory,
including the access to the Dardanelles. Acquisitions
in Anatolia—usually peaceful ones—coincided with
the conquests on the Balkan peninsula under Murâd I. Soon after his accession (761/1360), he
conquered Lika and obtained the nominal
sultanship of Rûm (Sivas)—but governed in actual
fact by the heads of the guilds forming the akâbi [q.v.]
union and practically independent. Some time later,
he obtained the principality of Hamûd (783/1381),
thereby extending Ottoman territory considerably
to the east and south. Murâd’s son and successor
Bây zd I simply annexed all Anatolian Turkmen
rulers—shortly after his accession (792/1389),
including Karaman and the territory of the Mongol
governors. This, however, resulted in an attack by
Ttmur, and Bây zd I was beaten in the battle near
Ankara (19 Dhu ‘l-Hijja 804/20 July 1402). Ttmur
reinstated the deposed Anatolian rulers, and, apart
from the original Ottoman territory, only the original
Mongol territory in the northeast of Anatolia
remained in Ottoman hands. From there, Mehemmed I
unified the empire once more, and under Murâd II
the western Anatolian principalties gradually merged
with the Ottoman Empire. The Ottomans’ only
remaining rival was Karaman. Murâd’s son, Me-
hemmed II, completed the rounding off of Ottoman
territory in Anatolia after having given it a natural
centre by conquering Constantinople (29 May 1453).
He put an end to the empire of Trebizond in 1461,
and to the principality of Karaman in 1469, incor-
porating both into the Ottoman Empire. The
attempt of the Turkmen ruler Üzün Hasan, of the
House of the Ak Köyunlu, to force Mehemmed to
cede the annexed provinces failed with the loss of the
battle of Terdžên (east of Erzindjan, 878/1473).
Ottoman rule in Anatolia was completed in the east
when Mehemmed’s grandson Selim I (921/1512)
incorporated the principality of Dughâdhir into the
empire and conquered Diyar Bakr, and when he
reduced the principality of Râmânâ into a tributary
province (in Cilicia) to vassalage and gained the allegiance of the Sunnite Kurdish chieftains. In the north-east,
his rule was further extended into the Caucasian
foothills by campaigns of the Ottoman Sultans and
their generals against Persia. These were generally
directed towards the north-east (Sülêymân, 940/1534,
955-56/1548-49, the sâr-kâsher Mustafa Pasha, 968/
1578, against Georgia, and Murâd IV, 1045/1634,
against Erivan). The whole of Anatolia henceforth
remained undisturbed in Ottoman possession and
has been taken over by the Turkish Republic in
our day.

The only change in more recent years has been the
transfer of the districts (sandjak) of Kars, Ardahân
and Batum which went to Russia in accordance
with the Berlin Treaty of 13 July 1878, which in
this respect confirmed the peace of San Stefano
(3 March 1878). But the peace of Brest-Litovsk
(3 March 1918) returned this territory to Turkey.

The earlier Ottoman organisation. The
Ottoman Empire extended so quickly that it soon
became necessary to divide it up into political
regions. In the beginning these were simply districts
of the feudal cavalry, “standards” (sandjak [q.v.]
or liwâ?) which were under a district commander of the “standard” (sandjak begi or mir-i liwâ?). Under
Orkhan, the second Ottoman ruler, there were
already four of these. (1) Sultan-üyülüs [q.v.] which
incorporated the original territory of the Ottomans
around Eskişehir and Sögi; (2) Khuritâmâş (eli)
“the ruler’s land”), administered by the ruler
himself, with Brusa and İzni; (3) Kökdâ-eli [q.v.]
the feudal tenure which Orkhan had bestowed upon
his general Akçe Ködia, the Bithynian peninsula
with İzni; and (4) Karasî-eli [q.v.] the former
principality of Karaf, with Balikesri and Berghama.
Under Murâd I, when the empire extended still
further after the conquests in the Balkan peninsula
and further regions of Anatolia, Ottoman territories
were united into one province on each side of the
strait (eyâlet, later wilâyet), each under a pašâ
with the title of beglerbegi (later wâli). Thus, to
begin with, there were two provinces, with the
names of Anatolia (Anatoli, later pronounced...
ANADOLU
469

Anadolu and Rumelia (Rum-eli). Each of these was subdivided into districts of the feudal militia (sandjak or eydlet). When the Turkish principalities in Anatolia became part of the Ottoman Empire, they were made into such sandjaks, but retained their original names. The gradual growth of the empire is thus shown in its political divisions. Later on, when the Ottomans penetrated further to the east, under Bayezid I and particularly under Mehmed II and Selim I, newly acquired areas no longer became sandjaks of the eydlet of Anadolu, but became provinces in their own right. Independent of this division into provinces and sandjaks was a separate division into judicial districts (kada), each of which was under a judge (kadi). Furthermore, there were domains (hukumet) ruled by local dynasties, direct vassals to the Sublime Porte. This whole system was finally fixed by the laws of Sultan Süleyman I (Kanuni). According to this, (cf. the printed edition of Kâtip Celebi, Dîthân-nûmâ; cf. also J. v. Hammer, Des osmanischen Reiches Staatsverfassung und Staatsverwaltung ii, 249 ff. and P. A. v. Tischendorf, Des Lehnsystems in den musulmischen Staaten, Leipzig 1872, 62 ff.), there are the eydlets in Anatolia: (1) Adana (601, also mentioned as sandjak of Aleppo); (2) Ankara, (3) Aydîn (Smyrna/Izmir); (4) Bithlis; (5) Diyar Bakr; (6) Erzerum; (7) the sandjaks of Marash and Urfa of the eydlet of Halab (Aleppo), as well as some kadaş; (8) some kadaş and nâîyes of the eydlet of Istanbul; (9) Kastamûnî; (10) Kudiâwendigâr (Brusa); (11) Konya; (12) Ma'mûret el-Azîz (Khârîût, since 1880); (13) Siwa; (16) Biga; (17) Izmîd. [Articles on each of the preceding.] This division was kept—with some alterations—until after the First World War.

Under the Turkish Republic, the eydlets were abolished, and sandjaks were raised to wildjâys. These were called iî in the course of the language reform. Their number varied. On 20 October 1935, there were only 57 wildjâys, at the end of 1935, a further 5 were formed (from the districts, kada, now îî, of the neighbouring wildjâys); in 1939, Hatay was added (ceded by the French mandate of Syria, see above) as the 63rd. (The 63 provinces of January 1st 1940 with their districts at that time are enumerated by G. Jäschke, Türkei, Berlin 1941, 22-4). In 1953 Uşak was added as the 64th eydlet. On January 4th 1954 the overall area of the Turkish state consisted of 64 provinces (of which only 4 are in the European part of Turkey, the other 60 in Anatolia) and 533 districts. Of the Anatolian provinces, however, Çanakkale is partly on European ground; the province of Istanbul, on the other hand, is mainly in Europe.

Geographically the provinces are grouped into the following 8 zones (bo'lge) (the names in the modern spelling): (1) the Black Sea Coast: the provinces of Trabzon, Ordu, Rize, Zonguldak, Giresun, Samsun, Sinob, Kastamonu, Bolu, Çoruh; (2) the coast of the Sea of Marmara and the Aegean Sea: the Asiatic parts of the provinces of Istanbul (districts Üsküdar, Kadiköy, Beykoz, Adalar, Kartal, Şile, Yahyalı) and Çanakkale (districts Çanakkale, Ayvakk, Biga, Bayramlı, Bozaada, Ezine, İzleği, Yenice), and the provinces İzmir, Kocaeli (İzmit), Aydın, Bafkisir, Bursa, Manisa, Muğla; (3) the Mediterranean coast, the provinces of Hatay (Iskenderun), Seyhan (Adana), Içel (Selefe), Antalya; (4) European Turkey: the European provinces of Istanbul, (districts Beyoğlu, Beşiktaş, Sarıyer, Fatih, Eyüp, Eminönü, Bakrköy, Çatalka, Silivri) and Çanakkale (districts Eceabat, Gelibolu, İrmiş), and the provinces Kırklareli, Tekirdağ, Edirne; (5) western Anatolia: the provinces of Denizli, Bilecik, Kütahya, Aykonarakhisar, Isparta, Burdur, Eskişehir—and since 1953—Uşak; (6) central Anatolia, the provinces Tokat, Çorum, Amasya, Kayseri, Malatya, Ankara, Çankiri, Yozgat, Sivas, Maraş, Niğde, Kirşehir, Konya; (7) south-eastern Anatolia: the provinces Gaziantep, Mardin, Urfa; (8) eastern Anatolia: the provinces Kars, Elazığ, Diyarbakr, Gümüşhane, Erzurum, Erzincan, Siirt, Bitlis, Tunceli, Ağrı Muş, Bingöl, Van, Hakkâr.

(4) Population.

Turks and non-Turks. At the time of the Turkish conquest of Anatolia, it had already been Hellenised. The Hellenisation of the various old-Anatolian peoples (begun in Greek and Roman times) was completed during the course of Christianisation. Now, remnants of the old peoples (for example the Lazes), remain only in the mountains, especially those near the Caucasus foothills. Such areas are at the same time refuges in which ancient
religious communities, such as the Paulicians, survived as sects. By the time the Turks came, Anatolia was, however, on the whole Greek speaking and mainly adhered to the Byzantine Orthodox Church. Only the Armenians in the east, who were Monophysites (Gregorians), remained ecclesiastically apart from the Greeks and were not Hellenised. Being merchants, Armenians had probably spread towards the west as far as the capital, even in pre-Turkish times.

A new central-Asiatic race with a new religion, Islam, came to Anatolia with the Turks. In the beginning it may well have been a minority, compared with the Greeks, but, since it consisted of the ruling classes in the Turkish occupied territories, it succeeded in spreading. The reason for this was probably that many members of the old population, who had lost contact with their spiritual centre in Constantinople, felt this spiritual isolation, turned to Islam and were thereby assimilated to the Turks. Initially, this process was a very slow one. In any case, at the time when Marco Polo travelled through Anatolia in 1272, the inhabitants do not appear to have been Turkicised (cf. E. Oberhummer, Die Türken und das Osmanische Reich, Leipzig-Berlin 1947, 42). On the other hand, the documents of the Patriarchate of Constantinople prove clearly, as A. Wächter, Übersicht über das Verfassungs-Recht des byzantinischen Reichs vom 13. bis zum 16. Jahrhundert, Leipzig 1903) shows, that, especially in the 14th century, when increased numbers of Turks occupied Anatolia, the Orthodox Christianity gradually receded, and with it the land gradually lost its Greek character. This may be due, on the one hand, to emigration from the Turkish occupied areas, but on the other hand also to assimilation to the Turk. Here one must distinguish, however, between the regions with long established Greek inhabitants, such as the western Anatolian coastal regions, which held on to Greek culture and Christianity with great tenacity (as also did those areas which had been under Greek rule for a long time, like Trebizond), and the central Anatolian regions with their only superficially Hellenised and Christianised population (especially in northeastern Anatolia, where the Persian Mongols, the Ilkhan—or, themselves had only taken to Islam since Ghazan—ruled for a time with the true ardour of renegades). Christianity in Anatolia was hard hit by Timur, who—as everywhere else he appeared—let the Christian population feel his hardness and cruelty with a special severity.

The position of the Christians improved when Mehmed II granted the Greek Orthodox Church a secure position in the Ottoman state for political reasons after the conquest of Constantinople, and made it into a pillar of his empire side by side with Sunni Islam. Thus the Christian communities, Greek (see KOM) as well as Armenian (see ARMAN) in Anatolia were freed from their spiritual isolation, and hold their own until this day. The so-called system of the millets (q.v.) according to which non-Muslim religious communities within the Ottoman Empire enjoyed considerable autonomy, saved these from further shrinking. In this manner, a modus vivendi evolved during the flowering of this empire which did justice to both Muslims and non-Muslims. In the 18th and 19th centuries, there was a positive revival of Anatolian Hellenism, and Armenians were still referred to as "The faithful people" (i.e. faithful to the state) (millet-i şâdîhâ) in the 19th century. On the whole, linguistic and religious areas were identical, except in central Anatolia (in Konya and Kayseri), where the Greeks adopted Turkish as the language of social intercourse and of the house (partly in Greek script), whilst the Armenians by and large accepted Turkish as the language of social intercourse (partly in Armenian script), whilst retaining Armenian—their ecclesiastical language—as the language spoken at home.

Apart from Turkish inhabitants, either city dwellers or peasants, there are—or were—nomad and semi-nomad elements as well as migrating shepherds in Anatolia, who belonged to Islam but were of differing languages and races: Turks, Kurds and Circassians. In the case of Turks (so-called Yürlük and Turkmen [q.v.]), their origin is debatable: they may be Turkmen who kept to their nomadic way of life, or remnants of races of varying origin which became Turkicised. By religion they are mostly 'Alawites, i.e. they confess to Shi'ism of some type or have at least Shi'ite leanings. The Kurds (q.v.) who are for the most part Sunni Muslims, have a closed area of settlement in the south-eastern provinces. The Circassians (Cerkes [q.v.]), lastly, had mostly immigrated from the Caucasus at the time when Russo-Christian rule spread over the Caucasus. Apart from these, one frequently meets returns Muslim emigrants (muhâ-la-di'ran) all over Turkey especially from the Balkan countries, who preferred to leave a country with a Christian government and to seek a new home in Turkey which belongs to the dâr al-islâm. Those people are, however, not nomads but are assimilated by the town or country area in which they settle.

The comparatively amicable relations between Muslims and non-Muslims deteriorated when the western powers began to meddle in the affairs of Turkey in the 19th century. On the grounds of the treaty of Kütük Kaynarjâ (1774), Russia claimed the protectorate over the Christian Orthodox inhabitants of Turkey, and awakened anti-Turkish feelings in them. Coming from western Europe, nationalism gained ground amongst the Christian part of the population. The Turkish reaction to this was a dislike for these Christians which soon became hatred. The Armenians felt this most strongly, since they, as neighbours of Russia, were particularly under the suspicion of being in Russian service. The insistence on effecting the reforms laid down in the Berlin Treaty (1878) led to bloody clashes with the Kurds in the years 1894-96. In the First World War, following an invasion by the Russian Caucasian army into the Van region, during which—according to Turkish opinion—the Armenian population behaved disloyally, the whole population was forcibly moved to Mesopotamia, and many of them perished. The remainder emigrated after the war. There was a war against the Greeks in 1919, when, supported by Great Britain, they occupied Smyrna and advanced as far as the Sakarya in 1921. The Turks under Mustafa Kemal Pasha beat the Greek army which retreated from Anatolia, and the greater part of the Greek population retreated with it. The remainder was exchanged by treaty (30 January 1923) for the Muslim inhabitants of Greece (with the exception of the Turks in western Thrace and the Greeks in Istanbul). Through this action Anatolia became a 90% Turkish and 99% Muslim country. With the exception of the Arabs living on the Syrian border, the small non-Turkish Muslim pockets will hardly be able to withstand Turkish influence indefinitely. One may also expect a gradual Turkicisation through military service and the influence of the schools among the Kurds, who have no cultural tradition of their own.
End of the 19th century. The statistics on p. 472 show the population of Anatolia during the last decade of the last century according to their religions, as given in the work of V. Cuinet (see Bibl.) on the basis of the imperial and provincial sanednames. As there was no official census in Turkey at that time, the numbers are largely based on estimates and only to a small extent on actual figures. Additional inaccuracies come from the fact that the principle on which these statistics were based was not consistent throughout the various wilayets. For some of them we have detailed figures (in certain cases, even separate data for men and women), in others only summary ones. Thus, for example, the fact that Shiites and Yazidis are mentioned separately only in some wilayets, does not necessarily mean that there were none in some others. The statistics may, nevertheless, serve to give at least a rough picture of the composition of the population of Anatolia before the First World War.

Abbreviations:

- w = wilayet, s = sandjak, k = kadâ, n = nahiye, i.s. = independent sandjak.

In the case of the administrative areas belonging to the wilayets of Istanbul and Halab (Aleppo), Ist. and Hal respectively is added in brackets.

The proportion prevailing there (1:4) might also prove right for the other wilayets.

Concerning the races, the statistics show clearly that at that time the Armenians (Gregorian, Catholic and Protestant Armenians together 1,142,775) were concentrated in some eastern wilayets (Erzurum, Bitlis and Sivas, to a lesser extent also in Van, Ma'muret al-Aziz, Diyâr Bakr and Adana), although even there they were a minority in comparison with the Muslim part of the population (Turks and Kurds). In the case of the Greeks, one must add to the Orthodox (1,042,612—25,890 Syrian Orthodox = 1,016,722 Greek Orthodox) the Uniates (16,811), who were included under Catholics in these statistics; their total was thus 1,033,533. They were concentrated in the districts belonging to the wilayet of Istanbul, and in the wilayets of Khuwâwendigâr, Aykdn (Izmir) and Trabzon, to a lesser extent in Sivas, Konya, and Adana. They, also, were a minority everywhere compared with the Muslims (and in Sivas and Adana also as compared with the Armenians). It is more difficult to arrive at the racial composition of those elements of the population which are described as Muslims, because the statistics generally give merely a total figure. Only for some eastern wilayets are the races for the Sunnite Muslims given as follows:

<table>
<thead>
<tr>
<th></th>
<th>Turks</th>
<th>Arabs</th>
<th>Circassians</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>w. Adana</td>
<td>93,200</td>
<td></td>
<td></td>
<td>27,500</td>
</tr>
<tr>
<td>w. Diyâr Bakr</td>
<td>310,644</td>
<td>54,650</td>
<td>—</td>
<td>365,294</td>
</tr>
<tr>
<td>Anat. districts of w. Halab</td>
<td>177,048</td>
<td>—</td>
<td>—</td>
<td>177,048</td>
</tr>
<tr>
<td>w. Ma'muret al-'Aziz</td>
<td>267,616</td>
<td>—</td>
<td>—</td>
<td>267,616</td>
</tr>
<tr>
<td>w. Van</td>
<td>30,500</td>
<td>—</td>
<td>—</td>
<td>30,500</td>

<tr>
<td></td>
<td>879,008</td>
<td>424,138</td>
<td>27,500</td>
<td>1,520,646</td>
</tr>
</tbody>
</table>

If one adds up the members of non-Islamic religions, then the composition of the population—according to religions—appears as follows for the time of Cuinet (actual figures and percentages):

<table>
<thead>
<tr>
<th></th>
<th>Muslims</th>
<th>Non-Muslims</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>9,696,714</td>
<td>5,577,745</td>
<td>15,274,459</td>
</tr>
<tr>
<td></td>
<td>78.9 %</td>
<td>21.1 %</td>
<td>100.00 %</td>
</tr>
</tbody>
</table>

Of the non-Muslims, 2,410,272 were Christians of various denominations.

These statistics show some peculiarities which need explanation. Particularly obvious is the high number of “Copts” (2,867), but only a very small number of these are actual Copts (i.e. Christian Egyptians); by Copts (Kitbîî), the Turks usually mean the non-Muslim gipsies. These “Copts” should therefore be added to the number of gipsies (2,867 + 37,752 = 40,619). The Column “foreigners” includes not only real “foreigners”, (edînebî) but also immigrated Ottoman citizens (yabandîl), whose home is not in the wilayet in question. The two categories are mentioned separately only for the wilayet of Erzurum (1,220 edînebî + 4,986 yabandîl = 6,206).

One can only surmise to which race the occasionally separately mentioned members of Muslim sects (usually Shiites) belonged (total number 533,677). In Van and Bitlis they are given as Yazidis (5,400 + 3,863 = 9,263), and in the case of Diyâr Bakr it is stated that the figure 6,000 for members of different sects also includes Yazidis. We may assume that these were on the whole Kurds. Of the others, by far the greater part probably consisted of Shiite Turks, in Arab areas probably also Naşrî Arabs. If one deducts the figures for Shiites and Yazidis as well as those of Arabs, Kurds and Circassians there remains the figure 8,537,863 for supposedly Sunnite Turks, which still contains small elements of Shiites, non-Turkish Sunnites, and also Lazis, and emigrants from former Ottoman provinces which had come under Christian rule (muhâddirîn). To the number of Arabs a considerable number of Christians of various denominations should be added as follows:

<table>
<thead>
<tr>
<th></th>
<th>Syrian Orthodox</th>
<th>Syrian United</th>
<th>Chal. United</th>
<th>United Maronites</th>
<th>Total</th>
</tr>

Chaldaeans have to be added to the Kurds. In these statistics, one may assume that the 2,675 Catholics not contained in the number of the Uniates were largely Latins, i.e. Occidentals (missionaries etc.) with or without Ottoman nationality, who had not been included under the heading "foreigners".

Thus, for the time of Cuinet we have roughly the following picture of the ethnic composition of Anatolia:

<table>
<thead>
<tr>
<th>Group</th>

The figures for several official censuses for the Turkish Republic are already available: namely, those of 1927, 1935, 1940, 1945, and 1950, but the last of these is given as only "provisional" (muvakkat). The particular figures can be found in the individual articles on the capitals of the various ilıı (wilayets) enumerated above, ch. 3, last paragraph.

The total for 1945 is 18,790,174 and 20,934,670 for 1950: 1,496,612 and 1,729,562 in European Turkey and Anatolia respectively in 1945; 1,598,255 and 19,336,475 in European Turkey and Anatolia respectively in 1950.

Definite figures for some towns exist for 1950. According to these, there are 5 towns of over 100,000 inhabitants: Istanbul (1,000,022), Ankara (286,781), Izmir (230,508), Adana (177,799), and Bursa (100,007); and the following 6 towns between 50,000 and 100,000 inhabitants: Eskisihir (88,459), Gaziantep (72,743), Kayseri (65,489), Konya (64,509), Erzurum (54,360), Silvas (32,269).

There are also figures for the distribution of the town and the country population for 1945 and 1950. The percentage rate, worked out for the purpose of this article, is:

<table>
<thead>
<tr>
<th>Year</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>1945</td>
<td>18,790,174 : 100.00%</td>
</tr>
<tr>
<td>1950</td>
<td>20,934,670 : 100.00%</td>
</tr>
</tbody>
</table>

At Turkey's overall area of 767,119 sq. km., this produces a density of population of 24.49 per sq. km. in 1945 and 27 in 1950. The official percentage of town and country population (both as a whole and according to individual wilayets) is only available for 1935. According to this, there were then 23.5% of the population in towns and 76.5% in the country. With these figures, one must bear in mind that according to the law of 1930, every place with a municipal government (beldeye teşkilatı) counts as a town. Such a body is to be set up both in all places of more than 2,000 inhabitants and also (irrespective of this minimum figure) in all 18,790,174 centres of which some have hardly 500 inhabitants. If judged by western standards, the proportion would alter in favour of the country population.

H. Louis, Die Bevölkerungsstatistik der Türkei, Berlin 1940, bases his work on the publication of the census in Turkey in 1935. It can be seen from the map that the three most densely populated areas in Anatolia are the following: 1) the western Anatolian coastal strips together with the river valleys, leading into the interior, especially that of the Maeander (Buyuk Menderes Cay), 2) the coastal area of the Black Sea, 3) Cilicia, the new sandıqah of Hatay, and the plain towards the Euphrates, which, geographically, belongs to northern Syria; compared with this, the centre with its steppes and the mountainous north-east show the lowest density of population. The distribution is caused by the nature of the country, and has probably always been roughly the same—at least since the Middle Ages—and should remain so at any rate in the near future. Figures for religious and linguistic divisions are only available for 1945 (21 Ekim 1945 Genel Nüfus Sayımı, Recensement général de la population du 21 Octobre 1945, Türkiye Nüfusu, Population de la Turquie, vol. 65, Ankara 1950). According to these, Turkey can be divided up linguistically as follows:

<table>

Of the non-Muslims there were:
These rough statistics, when compared with those at the end of the last century as given by Cuinet, clearly show an enormous change which was caused by the events during and shortly after the First World War.

More detailed information can be gained from the following division into both categories which is reproduced here in shortened form.

With regard to the totals of the division into languages, the following facts stand out from the figures given for individual wilayets, (the numbers are again given in round figures). The Arabic speaking people live together densely in the south-eastern wilayets, and form the large majority in the eastern speaking people live together densely in the south-eastern wilayets. The number of Jews under "other languages" includes the 10,866 who speak Judeo-Spanish. The Gipsies, who in Cuinet's statistics were given with the rather large figure of 40,000, have disappeared altogether from the new statistics. As they do not speak a different language from that of the people amongst whom they live, nor profess a different religion, one may assume that they are present, unrecognised, in the various groups of the statistics.

(5) Development of Communications.

Being a thinly populated peninsula with steppes in the centre and few usable harbours, Anatolia has little traffic. Long distance traffic from Istanbul to the east mostly tries to bypass Anatolia, preferring to the difficult overland roads the easier sea routes to Trabzon on the Black Sea, or to Ayas at the mouth of the Deyhân in the Middle Ages, to Payas in the Gulf of Issus under the Ottomans, and to Iskenderun (Alexandretta) in recent times. Throughout the ages the main caravan tracks led from these harbours to the interior of Asia. Traffic inside Anatolia was generally only of local importance. There were always through-roads, usually leading to or from Istanbul (which was regarded as the undisputed metropolis even at times when Anatolia did not regard it as its political capital).

Three types of such roads can be distinguished in Turkish times: (1) Military roads; (2) Caravan routes; (3) Postal routes. All three types follow the nature of the country and circumvent the interior steppes, passing through adjoining regions, but keeping to the inside of the border-mountains. They prefer the edges of the steppe where animals
can graze and where the towns are situated. The routes follow roughly the same lines, though they do not coincide altogether.

The main Military road (on which the armies of the sultans moved in the 16th and 17th centuries against Persia and Caucasia) described a large arc south of the central Anatolian steppe from Uskudar via Izmid, Eskişehir, Akshehir, to Koyna and from there via Ereğli, Niğde, Kayseri to Sivas, then via Erzincan and Erzurum to the east. When Selim I marched against Syria, he too went to Kayseri and only from there through the Anti-Taurus to Elbistan and Marash. The route from Ereğli through the Cilician Gate (Gülek Bogazı) to Adana and further into Syria was usually avoided, particularly for difficult transports, and especially because the Gülek Bogazı is easy to block. In 1638, for instance, Murad IV sent the artillery he needed for the capture of Bagdad by sea as far as Payas, only transporting it overland from there onwards with the aid of buffaloes. The northern Caravan route (to be mentioned below) was used for small detachments only. The reports of the Imperial armies often give the sites of the camps on the main Military road, but these are frequently at a considerable distance from the inhabited places along the route.

The most important of the Caravan routes is the one leading diagonally across from Uskudar via Gebze, then, after crossing the Gulf of Izmit from Dîl to Iznik, following roughly the Military route via Eskişehir to Koyna and Ereğli, then through the Cilician Gate (Gülek Bogazı) to Adana and thence to Syria or Mesopotamia. The route via Antakya to Syria is, at the same time, the route which two pilgrims took to Damascus and Medina, the holy places of Islam, and it is often mentioned in this capacity. There is also a northern caravan route of some importance which goes from Uskudar to Amasya via İzmit, Bolf and Tosya (or, bypassing Amasya, via Niğde), and thence to Erzincan and Erzerum and further to the east; alternately, from Amasya via Tokat, Sivas and Malatya to Diyarbakır and further to Mosul and Bagdad; from Uskudar onwards this route is called Bagdad Yolu. An older variant of this—used by Busbecq in 1555—follows the diagonal route as far as Eskişehir and then goes on to Amasya via Ankara. Lastly, the north-south route which bypasses the central Anatolian steppe to the east is of some importance. In Salgirk times, this route branched off at Koyna, the capital, and went right across the steppe, past the beautiful Sultan Khân and Aksaray to Kayseri and on to Sivas, where it connected with the northern route as well as with those leading to the east (Erzincan and Erzerum). In Karaman and Ottoman times it went from places at the foot of the Taurus, Laranda (Karaman), or Tivaktı (via Niğde) to Istanbul. In western Anatolia, only roads leading from Izmir seem to have had some local importance and little is reported of them.

Postal routes, like the caravan routes, were divided into three “arms” (kol, for this term, which is also used as a technical term in administrative language, cf. Redhouse, A Turkish and English Lexicon, 1942; H. W. Duda, Balkantürkische Studien, Vienna 1949, 58 ff, note 8). In the 17th century, according to the Dziânam-nâmâ, the middle one of these “arms” embraced the entire length of the diagonal route together with its offshoots as far as Damascus; the right one, the whole west Anatolian network, and the left, the northern caravan route with its extension as far as Bagdad. According to reports of postal routes in the 19th century, the diagonal route forms the right arm together with the western Anatolian network, the northern caravan route the central one, whilst the left one does not leave the central one until Tokat, whence it embraces the eastern network to Erzerum. (Concerning the development of road and route-nets in Anatolia prior to the 19th century, cf. F. Taeschner, Das Anatóliokos Wegenetz nach Osmanischen Quellen, Leipzig 1924; idem, Die Verkehrslage und das Wegenetz Anatoliens im Wandel der Zeiten, Petermanns Geographische Mitteilungen, 1926, 202-6).

The word “roads” can be applied to these routes only in a limited sense, as roads were not built with foundations; except where Roman roads could still be employed, they are simply much used and well-trodden tracks, along which caravanserais, wells, and bridges have been erected by benefactors for the comfort of the travellers.

This tripartite route-system has been gradually falling into disuse with the expansion of railways in the 19th and 20th centuries, though the railway follows roughly the track of the old routes—at least in the case of the diagonal road.

The building of railways naturally did not replace the building of roads, which also has been encouraged (to a certain extent) since the tansımâdî period. (For the means devised to finance the building of the roads: corvée and road-tax, “yol parası”, see G. Young, Corps de Droit Ottoman, IV, Oxford 1906, 245 ff., “Routes et Prestations”)

The history of railway building in Anatolia began with the granting of a concession to a British company for a railway from Smyrna (Izmir) to Aydın in 1856, and the line was opened 10 years later. In the last decades of the Ottoman Empire the following sections were opened in Anatolia:

1. British Company: Smyrna (Izmir) — Aydın 1866, — Dinar 1889 (with branchlines to Ödemiş, Tire, Söke, Denizli and Čivril); Egridir 1912;
3. Narrow Gauge Railway Mudanya-Brusa (Bursa) 1875, rebuilt by a Franco-Belgian Company in 1892 (not in use now);
4. German Company (since 1888) Anatolian Railway: Haydar Paşa — Izmit 1873 (with a branchline to Adapazar); Eskişehir — Ankara 1896, — Eskişehir — Afyon Karahisar (with a branchline from Alayunt to Kütahya) — Konya 1896; Bagdad Railway: Konya — Bulgurlu 1904; Toprakkale — İskenderun 1913; Bulgurol — Adana — Toprakkale — Alepp (Alepo) — Nusaybin 1918 (with a branchline to Mardin);

Thus the railways consisted—with the exception of the short stretches which linked Adana and Brusa with their harbours—on the one hand of a network based on Smyrna (Izmir) and opening up the rich agricultural districts of western Anatolia, on the other hand of a diagonal line, with a branch to Ankara, which linked the capital to the far-distant Arab provinces of Mesopotamia, Irak and Syria. Plans for a railway system in the Black Sea area and in north-eastern Anatolia broke down because of Russian opposition.

Existing railways were nationalised at the beginning of the Turkish Republic in 1920 (“Türkiye Cumhuriyeti Devlet Demiryolları”), and the system has since been extended and based on Ankara as
its centre. This extension began as early as 1922 with a narrow-gauge railway Ankara—Irmak—Yahsi Han 1925—Yenice and in the Kayseri direction 1925. This was later extended in wide gauge.

There are the following lines: (1) Ankara-Kayseri 1927—Sivas 1930—Erzincan 1938—Erzurum 1939—Horasan 1950—Sarıkamış under construction. Here it will link up with the broad gauge railways which the Russians built in 1896: Gümrük (Alexander-dorp, now Leninakan) via Kars to Sarıkamış. The line was continued in narrow gauge from there to Mamahattun via Erzerum during the First World War. (2) Ilica (in the Gulf of Edremit)—Edremit—Pamukluk (narrow gauge) 1924 (unused since 1953); (3) Fevzi paşa (on the Adana—Aleppo line)—Malatya 1931—Diyarbekir (Diyarbakır) 1935 (with a branchline to Elazığ)—Kurtalan 1944; (4) Samsun—Çarşamba (narrow gauge) 1926 (no longer in use); Samsun—Amasya—Sivas 1932; (5) Kütahya—Balikesir 1932; (6) Kayseri—Ulkışla (more specifically: Bogazköprü—Kardeşgedik) 1933 (since then through-trains to Syria and Iraq—The Taurus Express—go via Ankara and no longer via Konya); (7) Irmak—Fılyos 1935—Zonguldak 1937—Kozlu 1943—Eregli planned, under construction as far as Çamlı; (8) Afyon Karahisar—Karakuşu (near Dinar), Baladiz (near Eğirdir), and Bozanöi (also near Eğirdir)—İsparta 1936; (9) Çetinkaya (on the Sivas—Erzincan line)—Malatya 1937; (10) Elazığ—Geneç 1947—Muş under construction—Tavan (on Lake Van) planned; (11) Köprüağrı (near Fevzi paşa)—Maras 1948; (12) Narlı (near Fevzi paşa)—Gaziantep 1948—Karkamış formerly Djarabulus (on the Euphrates, on the border of former Syria) under construction. (Cf. G. Jäschke, Geschichte und Bedeutung der türkischen Eisenbahnen, Zeitschrift für Politik, 1942, 559—566; concerning the Bagdad railway in particular, cf. H. Bode, Der Kampf um die Bagdadbahn 1903—1914, Breslau 1941; R. Huber, Die Bagdadbahn, Berlin 1943).

The increased use of motor transport and the consequent decrease in rail transport, has already resulted in the closing of local lines (Mudanya—Brusa, Ilica—Edremit—Pamukluk) and threatens to outdo rail transport in Turkey. As a result there has been a fresh emphasis on road construction (Mukbil Gökdogan, Strassenbau und Verkehrspolitik in der Türkei, Stuttgart 1938). In recent years the road network in Turkey has been greatly expanded —partly with American aid—and there are now numerous bus lines (cf. R. W. Kerwin, The Turkish Roads Programme, The Middle East Journal, 1950).

Since the Anatolian rivers are not navigable, there is no real inland shipping (except in the case of the greater rivers just above their mouths, and the use of rafts of inflated skins (kelek) on the Tigris). Nor are there any artificial waterways. The project of linking the Sabandja lake with the Sakarya on the one side and the Gulf of Izmit on the other by canal has been considered twice (1999/1900—91 and 1964/1953), but on neither occasion did it get past the preliminary stages (see Sabandja).

Conditions for sea shipping are not very favourable either: the north and south coasts have few natural harbours, and the many bays along the west coast are of little use because the river estuaries are silted up by the rivers (cf. above, ii, "Anatolian conditions"). Apart from Smyrna (Izmir) and the most important harbour, there are a few—admittedly unimportant—harbours along the west coast, such as Foça (Selcuk). In ancient times and in the Middle Ages it was a considerable rival of the port of Smyrna, because it jutted further out into the sea), Bodrum (Halicarnassus), and Fethiye (Makri), which are only of importance for coastal shipping. In recent times only Smyrna has had any importance as an overseas harbour, though Foça also held a similar position in the Middle Ages.

Unlike the ports on the western coast which can be easily reached by the river valleys from the centre of Anatolia, the few ports on the north and south coasts are difficult to reach. On the north coast, Sinop (Sinope) rather inaccessible because of its mountainous hinterland—and Samsun (Suvor) (Amisos) are of some importance, particularly in the 19th century. On the south coast, the ports of Antalya (Mersin) (Adalya, the ancient Attalia and Satalia of the Crusaders) and Alanya (Alaçati) (AliKöyya, Galonoros in Byzantine times, the Candelor of the European merchants in the Middle Ages) have been of importance ever since the Middle Ages. More recently, the harbour of Mersina (now Mersin) has also been of importance since it was built in 1804. The only ports for landward goods which with traffic across the continent were actually those at the "base" of the Anatolian peninsula i.e. Tarabzun (Mersin) (Trebizond) on the Black Sea, and one on the Mediterranean (in the Middle Ages Ayas (Mersin), Laiazzo of the crusaders, Payas in Ottoman times, low Iskenderun, Alexandretta); caravans from Trebizond went to Adherence of Pergamum and Persia, and from the above-mentioned Mediterranean ports to northern Syria (Aleppo), Mezopotamia (Mosul) and Irāk (Baghdād).

(6) Economy.

Anatolia has always been an agricultural country and it has largely remained one in spite of the considerable incipient industrialisation. In the centre—wherever the land is fit for more than grazing—the main crop is grain, whilst fruit and vegetables are cultivated in the coastal areas and near rivers where gardens can be watered with the aid of waterwheels. Fruit-growing is characteristic particularly of the districts on the Black Sea (apples from Amasya are famous throughout the country, and Cerasus, now Giresun, is supposed to be the original home of the cherry), hazelnuts are grown in many areas. Along the Aegean Sea (with its Mediterranean vegetation) figs, olives, melons (watermelon, karpus and sweet melon, kavun), and mulberry trees and vines are grown. The woods in the Black Sea area (especially the "Wood Sea", ağat demisi, of former times near Sabandja) were extensive enough to meet not only the local demands for timber for building, wood for burning and charcoal but also part of the need of the capital, which got the remainder of its supply from woods on the European side.

The steppes in the centre of the country are most propitious for the raising of cattle. Various types of sheep and goats are found here, including Angora goats whose wool (çakmak) is in great demand (mohair). Anatolian horses have been famous since the Middle Ages. The "Aziziyev" stud farm in Phrygia used to supply from woods on the European side.
The silver mines of Gümüşhâne between Trabzon and Erzurum, and those of Gümüş
Hadidi Koy near Amasya, must be mentioned as the oldest; here, too, were the mints for silver coins.
Copper was found in Kure (between Inebolu and Kastamoun) and in Ergani Ma'den (near Diyarbakr).
Near Eskigehir is the only area in the world where “Meerschaum” is found. This was in great demand in
the 19th century for pipes (füle) and similar articles, but since “Meerschaum” is no longer in fashion now,
production is much reduced.

Arts and crafts have been playing a considerable part, especially ceramics (introduced from Persia as early as the Saljuk period). Magnificent examples of Rûm Saljuk ceramics are found especially in buildings in Konya. The golden age of Ottoman ceramics began when Selim I brought craftsmen back from Tabriz during his Persian campaign (1514), and settled them in Istanbul and Iznik. In the 16th
and 17th centuries, Iznik was the centre for the production of the classical Ottoman pottery with blue and green as the main colours, contrasting effectively with the interspersal bright “Bolus-red”.
The tiles produced in Iznik adorn mosques and turbes in Istanbul as well as the Topkapi Saray. Of vessels, the plates (known as “Rhodes plates” to the trade) are the best known and most exported product of the potteries. In later years (under Ahmed III) potteries were founded in the Tekfûr Saray in Istanbul and in Kütahya (concerning Turkish Fycence manufacture in Iznik and other places, cf. K. Otto-Dorn, Das islamische Iznik, Berlin 1941, 109 ff., and the list of sources by R. Anhegger, ibid, 165 ff.). [Cf. also ANADOLU 1939/36]

Besides pottery, textile goods form a characteristic part of Anatolia’s produce, particularly rugs. The Turks brought this skill from the east and developed it (mainly in Uşak, Kula, Gözde and others) partly in the Persian tradition, partly in a more popular style. The rugs best known in Europe are those made in the 19th century, which are loosely knotted, with long threads and known as “Smyrna” rugs after their harbour of export, although they were actually made in the Uşak area. The Anatolian silk industry was also of great renown; the centre for which was in Brusa. Its products, of which the broacades with inwoven gold and silver threads are of an especially high artistic quality, were chiefly woven for the court and for higher society. Concerning Turkish textile production cf. Tafrîm Öz, Türk Kumaş ve Kaftanlari, Istanbul 1946-57; idem, Turkish Textiles and Velvets, Ankara 1950. Lastly, coarser weaving (külim) of rugs and mats must be mentioned; such mats cover the mosque floors in winter. [Cf. also ANADOLU 1939/36]

Trades in towns were organised into guilds. These guilds (ciniyêt, from the singular ciniyét) which were “fraternities” somewhat similar in character to a darâigî order, maintained and guarded traditions, quality and integrity. In cases of accident, their members were protected against loss by the spirit of comradeship, and the resultant esprit de corps gave them a power to which—at times—even the government had to yield. The guilds were supervised by the clerk of the market (müstâbâci) who, in turn, was subordinate to the Kâdi—an institution belonging to the sharia. (Concerning Turkish guilds cf. Osman Nuri, Meşgül-i Ummâr-i Belediyeye, I, Istanbul 1922, chap. Eşnâf, 479-768; Taescher, Die Zünfte in der Türkei, Leipziger Vierteljahrschrift für Südosteuropa, 1941, 172-58; and ŞINF concerning economy in early Ottoman times in general, cf. Afez İnan, Aperçu général sur l’Histoire économique de l’Empire Turc-Ottoman, Istanbul 1941.)

The ancient guilds began to disintegrate in the 19th century when state reform (tanzimât) opened
the way to commercial reforms on western European lines and to a western legal code (partly by direct
adoption of European legal codes). Finally the guilds were formally dissolved on 13 Febr. 1325
M./26 Febr. 1910 (the Gediik on 16 Febr. 1328 M./
1 March 1913). Modern organisations (grouped into trade unions in 1943) took their place. Improvements
were made in agriculture, as for instance the irrigation to bring water to the Konya plain carried out
by the Bagdad Railway (1907-1913), and new cultivations (e.g. cotton in the Cilician plain) were introduced.

Attempts to bring Anatolia into line economically with European countries have been particularly marked since the foundation of the Turkish Republic. Cf. (amongst others): Orhan Conker and Emile Vitmeur, Redressement économique et industrialisation de la Nouvelle Turquie, Paris 1937; Ahmed Oguz, Die Wirtschaftslenkung in der Türkei, Berlin 1940; Schewket Raschid, Die türkische Landwirtschaft als Grundlage der türk. Volkswirtschaft, Berlin-Leipzig 1932; M. Thornburg, G. Spry, G. Soule, Economical Appraisal, New York 1945; The Economy of Turkey. An Analysis and Recommendations of a Development Program. Baltimore 1951.

Muhammad ‘Âçîkî’s Manâsîr al-‘Awi‘îmî (1066/ 1598) brings to an end the geographical literature of the mediaeval type. In the geographical section, he begins with a Turkish translation of what older authors—al-Idrisî, Abu ’l-Fidâ‘î and others—have said; in the case of places which he himself has visited, this is followed by an account of what he has seen. These reports, which are interspersed throughout the work, are of the greatest importance and would merit an edition, especially since they were used as a basis for later works.

Those original works by Ottoman writers which have survived are more revealing than any of the
Finally, the official handbooks (Dewlet-i 'Aliyye-i 'Osmâniyye Sâlînamesi) which are available for the 88 years from 1263 H/1847 to 1354 Mâliyye/1918 and the Sâlînames of that time, together with other sources, are exploited in the important work by V. Cuinet, La Turquie d’Asie, Paris i, ii, 1892, iii, iv, 1894. Under the Turkish Republic, a similar series was started (Turkiye Djihâdnâmâtyesi Dewlet Sâlînamesi), but only 5 volumes have appeared so far (i, 1926; ii, 1927; iii, 1928; iv, 1929; v, 1930), and they do not contain nearly as much material as the earlier salînames of Ottoman times.

Lastly, the lists of place-names may serve as sources for the most recent period, for instance: Son teşkilât-i mühimâyeye Köylerimizsin adları, Istanbul 1928; Iârâre Taksimât, 1942, Istanbul 1942; Tûrkiyeye De Meshkun Yeter Kılavuz, 2 vols., Ankara 1946 and 1950.

Key to the map of Anatolia in the 17th century.

This map is based on the Bevölkerungskarte der Türkei, : 4,000,000, by H. Louis, 1938. The entries are mainly taken from the Djihâdnâmâ of Kâthib Celâbi, and therefore reflect conditions in Anatolia in the 17th century. The map shows the approximate limits of the eyâlet (within the present-day boundary of Turkey) as red broken lines, and in some cases those of the liwâds (or sanâdik), as red dotted lines. It further shows the more important roads indicated by Kâthib Celâbi, Ewliya Celâbi and other sources, the main communication routes as double red lines, other routes as single red lines. The names of the towns (in red) and of mountain peaks (in black, with heights in metres) are abbreviated, and the following list explains these abbreviations; first comes the name as it appears in the Djihâdnâmâ and in the other sources of the 17th century, then, in brackets, the antique or Byzantine name (if known), the modern name (if different from the old one), the administrative district (except in the case of towns which have gained importance only later and therefore do not occur in the ancient sources; these have been put in brackets on the map), and finally the reference to the square of the map. The names of the capitals of eyâlets are printed in small capitals; those of the capitals of liwâds in italics. General abbreviations: B. = Büyük; Ç. = Çay; D. = Dağ; E. = Eyâlet; G. = Göllü; I. = İrmak; L. = Liwa; N. = Nehir, Neîni. For practical reasons, the transliteration has been based on modern Turkish orthography.

A D = Ağrı Dağı (Ararat: L 3)
A D = Adana (E. Adana: F 4)
A D = Adıcevar (E. Van: K 3)
A D = Adapazar (D 2)
A D = Amid (Diyarbakr) (Diyarbakr; E. Diyarbekr: J 4)
A E = Aksaray (E. Karaman: E 3)
A H = Ahiska (K 2)
A H = Ahat (E. Van: K 3)
A K = Antakya (Antiochia; L. Antakya: G 4)
A K = Afyon Karahisarlı (L. Karahisar-i Şâhîb: D 3)
A K = Aksaray (E. Karaman: E 3)
A L = Alanya (‘Alâ’ıya, Alan, Kaloneros; L. Içel: E 4)
A L = Alaş (Alaşehir) (Philadelphia; L. Aydîn: C 3)

The wealth of information may be expected from documents kept in Turkish archives, but research into these is only in its beginning (Omer Lutfi Barkan, Turkiyeye İmparatorluk devletlerinin nüfus ve arazi tahâleri ve Hakana mahsus defterler, Istanbul 1941, and XV ve XV linci asırıarda Osmanlı İmparatorluğunda sıraden ekonomisinin hukuki ve malî esasları, Kanuni, Istanbul 1943).

ANADOLU. In the time between the 15th and the 18th century, this was the name applied to the province (eylül) comprising the western half of Anatolia [cf. preceding article] and embracing largely the western Anatolian Turkish principalities. At the beginning, Ankara was the capital and the seat of the governor (beglerbegi), later it was Kütahya. The eylül of Anadolu contained the following military districts (sandik or isbu) which were partly former principalities (in the order given by Katib Celebi in Djihân-nûmâ): 1) Germiyân with Kütâhya as its capital; 2) Şarûkhan with Mëghnîs (now Manisa); 3) Aydın with Tire; 4) Menteşhe with Mughlla; 5) Tekke with Antalîya; 6) Hamîdî with Ibrâhîm; 7) Kârâbîşûlî with the capital of the same name (later Aliyân Kârâ Hâşar); 8) Sultan Üyûgî (often in the corrupted form of Sultan ʿOlı) with Eskişehir; 9) Ankara with the capital of the same name (also called Engûri); 10) Kânkûfî with the capital of the same name (now Çankırî); 11) Kastamonî with the capital of the same name (now Kastamonu); 12) Bolî with the capital of the same name (now Bolu); 13) Khudâwendîgîr with Brûsa (Bursa); 14) Kôşta-elli with İznikûmîd (later İzmîd, İmîdî). In addition there were the following sandik which were under the Kapudan Pasha: 1) ʿOlısî with Balîkşî; 2) Bîglî with the capital of the same name and Kâlî-e Sulṭânîye (or Canak Kâlîsî); 3) Şughîla with İzmîr. [Cf. individual articles on each of the preceding].

When other eylûls besides Anadolu were formed in the Asiatic part of Turkey, the term Anadolu was loosely applied to the whole Asiatic half of the empire, inasmuch as there was in addition to the "Military Judge" (fyddi 'asker, "Military Judge") of Anadolu, raised the sandik or isbu of Kûfûdawen, dissolved the excessively large eylül of Anadolu, raised the sandik of Kûfûdawen, Aydûn, Ankarâ and Kastamonî to the status of wilayets, and assigned the remaining of wilayets to these.

Bibliography: Katûb Celebi, Djihân-nûmâ, Istanbul 1145/1732, 630 ff. For further bibliography cf. ANADOLU, preceding article. (FA. TAESCHNER)
ANADOLU HISARI, a fortress (also known as Güzeldje Hisar, Yenidje, Yeni, or Akça Hisar) at the narrowest part of the Bosporus, built by Bayezid I in 797/1395 in order to cut off communications between Byzantium and the Black Sea (cf. Ağılıkpaşa-zâde, ed. Giese, Leipzig 1928, 61, 121, 131; Nefrî, ed. Taeschner, i, Leipzig 1951, 90; Bûhûât, Tarîh; Shâlah-zade, Ta'rikh, Istanbul 1298, 64; Sa'd al-Dîn, Tâdî al-Tawdîrikh, Istanbul 1279, i, 148; Mûneddîjim-bâshî, Şahîf al-İدبâr, Istanbul 1285, 310). Some improvements were made by Mehmed II during the erection of Rûmeli Hisarî [q.v.] in 856/1452 (hence he is wrongly named as the founder of Anadolu Hisarî cf. Kâtip Çelebi, Siyyihat-î-nâmî, i, 664). Anadolu Hisarî played an important role before the battle of Varna, during the passage of Murad I’s army from the Anatolian to the European shore (cf. Nefrî, loc. cit.; Sa’d al-Dîn, 379; Mûneddîjim-bâshî, 358; Lutfi Paşa, Tavârîkh-î Aî-i Ət’âmîn, Istanbul 1341, 117). After the conquest of Istanbul, the fortress lost its military importance, and when further changes in political power made it necessary to protect the Bosporus again, Murad IV built fortifications at Rûmeli Kavâglî and Anadolu Kavâglî in order to repel the incursions of the Cossacks. The fortress is described by Ewliya Çelebi (Siyyihat-î-nâmî, loc. cit.); after a long period of neglect, it was thoroughly restored in 1928. The sub-district called Anadolu Hisarî (already mentioned by Ewliya Çelebi), has about 5000 inhabitants (including Kanlıdja and Cubuku). The rivulets Göksu and Küfriük Su, known as the “Black Ear”, Persian čâhâr kulak, are found in much of the southern coast of Anatolia, 36° 6’ 18” N, 32° 3’ 2’’ E, capital of a kada in the wilayet of İçel, with 2734 inhabitants (1945; the kada has 23,725 inhabitants). It is situated in a plain formed by the mouth of a little river, ca. 5 km. from the promontory of Anamur Burnu which forms the southernmost point of Anatolia. The town is called in medieval portulans Stailmîrî, Stalemura, etc. On the coast, at the foot and on the slopes of the Anamur Burnu lie the extensive ruins of the late antique and early Christian town of Anemourium or Anemorium.

At the east end of the plain of Anamur, close to the shore, lies Ma’ṣûrîyê Karîsî, a well-preserved medieval fortress, which was made use of and repaired by the Ottomans; this is recorded by an inscription from 874/1469-70. Inside there is a small mosque.

'ANÂNIYYA, Jewish sect of the adepts of Anân b. David (c. 760 A.D.), rather incorrectly considered to be the founder of the Karaite schismatic faction; his schism was only one of many which affected Rabbinical Judaism during the 8th-9th centuries. The Muslim authors seem to have taken most of their information about 'Anân and his sect from Karaite sources, especially Kirkîsânî, but they have only used a small part of the mass of information supplied by him. The author of the al-Dâr wa ‘l-Târîkh represents 'Anân as a sort of Mu’tazilite, who professes the divine unity and justice and rejects anthropomorphism. The 'Anânîyya of Ibn Hazm are in fact the Karaites. Al-Birûnî is interested in their particular views regarding the calendar. Al-Shahrastânî, in addition to briefly mentioning their calendar and their prohibitions concerning food (M. Badran has rejected the correct reading into the footnote) comments on their favourable attitude to the person of Jesus. The later Muslim sources throw no fresh light on the subject. No Muslim author mentions the alleged meeting between 'Anân and Abû Ḥanîfa in the prisons of al-Manṣûr. Although hiyyâ is recognized as a source of the law both by the Karaites and by the Ḥanafîs, there is nothing to suggest that the latter influenced the former.

ANAPA, a former fortress on the Black Sea, situated on the Bugur river 40 km. S. W. of the Kuban estuary. Built by French engineers for Sultan 'Abd al-Hamid I in 1781, it was unsuccessfully attacked by the Russians in 1787 and 1790, but stormed by Gen. Gudovich in 1812. Returned to Turkey by the treaty of Yassy (1791), it was in 1808 taken by the Russians but returned to Turkey in 1812. In 1828 it was blockaded by Admiral Greig and Prince Menshikov and ceded to Russia by the treaty of Adrianople of 1829 (article 4). In 1846 a town was built at Anapa. During the Crimean war it was first blown up by the Russians, then reoccupied in 1856. In 1860 the inhabitants of Anapa were removed to Temrik. In recent decades Anapa was used as a beach and rest home for children. It was destroyed by enemy action in 1942-3, and is now restored.

Encyclopaedia of Islam 31
ANAPA — ANAZA

ANAS B. MALIK ABU RAMZA, one of the most prolific traditionists. After the hidjra his mother gave him to the prophet as servant; according to his own statement he was then ten years of age. He was present at Badr, but took no part in the battle, and is therefore not counted among the combattants. He remained in Muhammad's service up to the time of the Prophet's death; later he took part in the wars of conquest. He also played small parts in the civil wars. In the year 65/684 he officiated as imam of the salat at Basra on behalf of the rival caliph 'Abd Allah b. al-Zubayr. When 'Abd al-Rahman b. al-Ash 'ath revolted, al-Hajjaj charged Anas with being a partisan of the rebel just as he had formerly taken the part of the enemies of the Umayyads, 'Abd b. al-Zubayr; and although Anas was highly respected as a Companion of the Prophet, he was removed from his post as imam of the princes. Al-Dhahabi states that al-Bukhari alone, 70 in Muslim alone, and 128 are expanded by the early caliphs. It became the rule for the preacher to hold in his hand, or to lean upon, a staff (kadib), sword or bow when he ascends the pulpit at the Friday service. All these are symbols expressing the same idea as the 'anaza, essentially that of authority (cf. the spear of Murdock). Among the ancient Arab staff and pulpit were attributes of judge and orator.

The word survives as an architectural term in the Maghrib, where it signifies an external mihrab for those praying in the court of the mosque; see Kirtäs (Tornberg), 30, 31, 32, 37 (inscribed, dated 524 H.; cf. KCA, no. 3051); E. Pauty, in Hesp., 1923, 315-6. Bibliography: Bukhārī, i, 105-6; 536; 241; Ibni Sa'd, ii/1, 167 ff.; Samhûdi, Bâlûk, i, 267 = Wüstenfeld transl. 127-8; Wensinck, Handbouk, s.v. sutra; idem, Mohammed en de Joden te Medina, 141; Juydnoll, Handbook, 84, 87-8; Schwarlose, Waffen der alten Araber, Leipzig 1886, 212 ff.; G. C. Miles, Mihrâb und 'anasah, Archaeologica orientalia in memoriam Ernst Herzfeld, N.Y. 1932, 156-171 (early iconographical representation, full references).

(Ch. C. Miles)

'ANAZA, a very ancient, but still existing, Arab tribe. The classical genealogical scheme 'Anaza b. Rab'îa (Wüstenfeld, Tab. A 6) has in recent times changed in the same way as in the case of other tribes such as the Banû 'Ajîyya in Northern Hijâz and Wâ'il, the ancestor of the Bakr and Taghlib, is taken to be their tribal ancestor; in the most recent genealogies Kuraysh (apart above Wâ'il). Whether or not the Rab'îa groups are inter-related, as implied in the genealogy, they were in any case connected by neighbourly and other ties in their home, the Yamâmah. The 'Anaza were living in the Tuwayq to the south of the Wâdi Nisâ'h; there, in Haddâr, a remnant of them, the Banû Hizzân, remain to this day. Sections in al-Aflâj have disappeared and 'Anaza villages appear from the 9th to 10th years. The dates most frequently mentioned are 91-93/709-711.

Traditions attributed to Anas are found, collected together, in the Musnad of al-Ṭaylîsî (Haydarâbâd 1321, Nos. 1959-2150) and in the Musnad of Ahmad b. Ḥanbal (Cairo 1313, iii, 98-292). Al-Dhahabî states that al-Bukhari and Muslim record between them 278 traditions from Anas, of which 80 occur in al-Bukhari alone, 70 in Muslim alone, and 128 are common to both. It is not surprising that many traditions were attributed to the servant of the Prophet; but while they may contain some genuine material, it is likely that they are mainly attributions of a later age, so Anas should not be blamed for all the strange statements given currency on his authority.

ANATOLIA (see Anadolu).

ANATOMY (see taba'în).

'ANAZA, short spear or staff (LA, vii, 251), usually synonymous with ḥarbâ. In the Muslim ritual the 'anaza first appears in the year 2/652. When Muhammad first celebrated the 'id al-ASHBOARD, Bilâl carried a spear (reputedly the gift of al-Zubayr, who had received it from the Nâṣirah before him on his way to the musâlah [q.v.]; during the service this spear was planted in the ground and served as sura and bibâ [q.v.]. The same was done on the 'id al-a'râf. This custom or carrying a spear or staff on ceremonial occasions was observed and expanded by the early caliphs. It became the rule for the preacher to hold in his hand, or to lean upon, a staff (kadib), sword or bow when he ascends the pulpit at the Friday service. All these are symbols expressing the same idea as the 'anaza, essentially that of authority (cf. the spear of Murdock). Among the ancient Arab staff and pulpit were attributes of judge and orator.

The word survives as an architectural term in the Maghrib, where it signifies an external mihrab for those praying in the court of the mosque; see Kirtäs (Tornberg), 30, 31, 32, 37 (inscribed, dated 524 H.; cf. KCA, no. 3051); E. Pauty, in Hesp., 1923, 315-6. Bibliography: Bukhārī, i, 105-6; 536; 241; Ibni Sa'd, ii/1, 167 ff.; Samhûdi, Bâlûk, i, 267 = Wüstenfeld transl. 127-8; Wensinck, Handbouk, s.v. sutra; idem, Mohammed en de Joden te Medina, 141 ff.; Juydnoll, Handbook, 84, 87-8; Schwarlose, Waffen der alten Araber, Leipzig 1886, 212 ff.; G. C. Miles, Mihrâb und 'anazah, Archaeologica orientalia in memoriam Ernst Herzfeld, N.Y. 1932, 156-171 (early iconographical representation, full references).

(Ch. C. Miles)
where we find today the Wald Sulaymân, who are closely connected with them. The Wald 'All were to the west of Khaybar, and their close relatives, the Ĥesene, were most probably there too.

The new migration of the 'Anaza, the first stage of which lasts for over a century (ending with the arrival of the Dîjâls (Ruwał) in Syria in the second half of the 18th century), began before 1700. In 1703 there was a mass which turned in Ma'ân, in 1705 on the Euphrates. This migration achieved its aims because the power of the amirs of the Mawâl in the north of the Syrian desert had been waning since the end of the 17th century, and because the tribe of Ghazîyîya was about to vacate the hinterland of Karbalâ and go over the Euphrates. The second stage of immigration into Syria and Mesopotamia began about 1800 and was due to the Wahhâbî. The 'Anaza were partly on their side ('Amârât), and partly fled from their tax-collectors. In the 19th century the history of the 'Anaza is governed by their relations with the Turkish authorities and the house of Rasûlîd, the Shammar amirs of Hayîl. At the turn of the 20th century the Ruwâl and their hereditary šaykhs, the Šabîlân, play an important part (the oasis of Dîjâl was in the possession of the Šabîlân from 1900 to 1922). In the first World War, the 'Amârât joined the English after the fall of Baghdâd (11 March 17). The Ruwâl did not take part in allied operations until September 1918. Their šaykhs, al-Nûrî b. Šabîlân, entered Damascus with the British and Arab troops in October 1918. In the post-war troubles the 'Anaza frequently changed sides. The political reorganisation in the Middle East distributed the 'Anaza over Syria, 'Irâq, Transjordan and Saudi-Arabia. The Fadân, Šabîa and Ruwâl are regarded as Syrian, the 'Amârât (with the exception of those who stay permanently in the Nadîdî), are regarded as 'Irâkî citizens, although they periodically leave the territory of that state during their migrations.

There have always been two opposing groups within the 'Anaza: the Dânî Muslim (Ḥesene, Wald 'All, Dîjâl/Ruwâl) and the Bighr (Fadân, Šabîa and 'Amârât). The last flare-up of this old animosity was quelled by the French in 1929. The Shammar, especially since the 'Anaza's advance to the north, and the inhabitants of the Şâfâ and the Hawrân, particularly the Druze, are the hereditary enemies of the 'Anaza. This is the reason why the 'Anaza sided with the government in all Druze risings.

The 'Anaza's modern grazing areas are as follows. The Fadân: in summer the area east of Aleppo and Hamâ, especially to the east of the Euphrates; in winter the Syrian desert (al-Bighr-al-Şa'ara, at times as far as al-Rûdâh). The Šabîa: in summer to the east and northeast of Hamâ; in winter in the Syrian desert to the south of the Syria-'Irâk border. The 'Amârât: in summer in the Euphrates, southeast of the Khûbûr, mostly on 'Irâkî territory, in winter in the south-eastern Syrian desert (al-Wudîyân). The Ĥesene: in summer to the east of Hamâ; in winter in the Syrian desert close to the Syria-'Irâk border. The Wald 'All: in summer to the northeast of Damascus and in the Hawrân plain; in winter in the heart of the Syrian desert as far as Dîjâl and Taymân. Of the sections which remained in Arabia, the Fâd Khanârî and the Wald 'All (both Dânî Muslim) have their tents between the Harra of al-'Uwayrid and that of Khaybar; the Wald Sulaymân (Bighr) migrate between the Harra of Khaybar and the southern border of the Nufoûd as far as Bédâ Nashîl (to the southwest of Hayîl), where a budra settlement of the iḫšûn was founded in the twenties.

The northern 'Anaza are camel breeders. Sheep breeding is the main occupation of the Ĥesene and the Wald 'All (since 1900), and since 1920 the Fadân and Ruwâl have also increasingly taken to this. The Ĥesene and Wald 'All—also, more recently, the Šba'as—have for some time been farming the land. In former times the 'Anaza had a right to the harvest of Khaybar; the tribes living there have retained that right. In the Ottoman times the 'Anaza had a right to the jûrû, a payment for protecting the pilgrims' caravans in their area. If this was not, or only partly, paid, then they reimbursed themselves by plundering the ḥajj (as e.g. in 1700, 1703, 1757). A further source of income was the tolls raised from the caravans, and the ḥiżawâ (protection money) collected from the settled population. The more prominent families among whom the office of šaykhy is held, have considerable property in land, some of which dates back to donations of 'Abd al-Ḥamîd. In the Dîzârî this is partly cultivated, following American methods, in partnership with town-dwellers.

ANBADUKLIS, the Arabic form of the name of Empedocles (often corrupted into Abidûkîlîs, etc.). Some authentic information about his doctrines came down to us by way of such channels as the works of Aristotle, the doxography of Ps.-Plutarch (e.g. i. 3, cf. ed. Badawi; also quoted in Abû Sulaymân al-Mantrîlî, Şûrû al-ﾘşâma, introduction; al-Makdisi, al-Badî', i, 139, ii, 75), etc. The authentic Empedocles, however, plays no role in Islamic philosophy; on the other hand, his figure was appropriated by late Neoplatonic circles, and treatises in which Neoplatonic speculations were put into his mouth were translated into Arabic. The main representative of this literature is the Book of the Five Substances, the Arabic translation of which is lost, but parts of which are preserved in excerpts from a Hebrew translation made from the Arabic (see D. Kaufmann, Studien über Salomon b. Gabirol, Budapest 1899, 1 ff.). It seems that the quotations in Ps.-Magdûlî, Gâyat al-Ḥamîm, 243, 289, 293-4, are from some closely related source (289 = ed. Kaufmann, § 14). Various Neoplatonic ideas attributed to Empedocles in Ammonius, Avâl-Falâsîfâ (MS Aya Sofiya 2450: see fols. 1099 ff., 1309), in which Neoplatonic doctrines are distributed among a number of ancient Greek philosophers. This work, quoted in al-Bûrînî, India', 41-2, transl. 85 (the passage from Empedocles = MS Aya Sofiya, fol. 1309), was also the main source of al-Shahrastânî's account of the ancient philosophers and also of that of Empedocles (al-Mshâl, 230 ff.). In addition, however, al-Shahrastânî reproduces another text by "Empedocles" (262 l. 1-263 l. 18) from another source, "Shahrarâsî" in his Rawdat al-Afîrâf, though mainly basing himself on al-Shahrastânî and Ibn al-Kifîlî, also has some additional passages (extracts in Asîn Palacios).
According to Sa'id al-Andalusî Ibn Masarra was acquainted with books by Empedocles; for a discussion of his alleged indebtedness to Ps.-Empedoclean doctrines, see Ibn Masarra.

In the biographical literature Empedocles is counted as the first of the five great philosophers Empedocles, Pythagoras, Socrates, Plato, Aristotle) and is deemed to have been a contemporary of David and to have derived his philosophy from Lukmân; see al-'Amîrî, al-Abad al-`Amîdî, quoted in the Siyyân al-Ukma, introduction; Sa'id al-Andalusî, Ṭabâhât al-Umam, 21 (who follows al-`Amîrî or a common source); Ibn al-Kiftî, 15-6 and Ibn Abî Usayyîbî, i, 36-7 (both of whom follow Sa'id); al-Shahristânî, loc. cit. (who uses the Siyyân).

Bibliography: M. Steinschneider, Die arabischen Übersetzungen aus dem Griechischen, Philosophie, § 41 idem, Die hebräischen Übersetzungen, index; P. Kraus, Jâhir ibn Ḥayyân, ii, index; M. Asin Palacios, Ibn Masarra y su escuela, chs. iv-v (= Obras escogidas, i, 33 ff.); a monograph on the Ps.-Empedoclean writings is being prepared by S. M. Stern.

(ANBAR (A,), ambergris (ambre gris, ambra grisea, to distinguish it from ambre jaune = amber), a substance of sweet musk-like smell, easily fusible and burning with a bright flame; highly valued in the East as a perfume and as a medicine. It is found floating on the water in tropical seas, (spec. gravity 0.78-0.93), or on the shore, sometimes in large lumps. Ambergris probably is a morbid secretion of the gall-bladder of the sperm-whale in whose intestines it is found. Kazwîn mentions it amongst the oily minerals, together with mercury, sulphur, asphalt, mineral tar and naptha; it is one of the various commercial varieties and its addition to various marvellous theories of its origin, that it is secreted by an animal and found in the body of salt-water fish. There is, he says, no difference of opinion as to its originating in the sea; the 'sea of Zandî' especially (i.e. the part of the Indian Ocean stretching along the east coast of Africa) washes it ashore at certain times in big lumps, mostly of the size of a large bale (4-5 kg).—He states further, that it strengthens the brain, the senses and the heart in a wonderful way; it increases the mental activity, of its origin, of the various commercial varieties and their provenance in the Encyclopaedia of al-Nuwayrî who follows Aḥmad b. Abî Ya'qûbî (i.e. al-Ya'qûbî) and al-Husayn b. Yazîd al-Sirrî (i.e. Abû Zayîd al-Ḥasan al-Sirrî, the continuator of the Aḥkâm al-Ṣin wa l-Ḥind; both sources are known to him through the Dîjayb (or Tabîq) al-`Arûz wa Râbî’ al-Nâfâz by the Physician Muhammad b. Aḥmad al-Tamîlî (GAL, I, 237). There is an interesting reference to varieties called 'fish-ambergris' and 'beak-ambergris': the former also called 'swallowed ambergris' (al-mâbdî) is said to be got from the body of a large fish called bâl or 'anbar which swallows the ambergris floating on the sea and dies in consequence; the body is cast ashore and, bursting open, gives forth the ambergris which it contains. The 'beak-ambergris' (al-mândîḥîr) contains the claws and beak of a bird which alights on the lumps and being unable to get away perishes on them. This fable is obviously founded on the fact (pointed out by Dr. Swedlaur) that ambergris frequently contains the hard mandibles (beaks) of a cuttle-fish which serves as food to the spermwhale. Al-Dîmašqî specifies various kinds with regard to their commercial value.

ANBAR, BANU 'L- [see Tamâsî].

AL-ANBÂR, town on the left bank of the Euphrates, 43° 43' E, 33° 22.5' N. Arab geographers give the distance from Baghûd to al-ANBÂR on the mail route as twelve (Yâkût: ten) farsaqâ (cf. Streck, Babylonien, i, 8); as measured by Musîl (p. 248) it is 62 km. = 38 m.

Al-ANBÂR lies on the north-western projection of the Sawâd on a cultivable plain near the desert, near the first navigable canal from the Euphrates to the Tigris (the Nahr ʾĪsâ), and controlled an important crossing on the Euphrates (cf. Musîl, 267-9, 307; Le Strange, in JRAS, 1895, 66). The town is pre-Sâsânî. Mariqî identifies it with MŠYK or Maskin, but Arab authors (al-Bâlahîrî, 249-50; Ibn Kûrradâjibîh, 7; Kûdûmà, 235) distinguish between the two. The suggestion that al-ANBÂR is of Babylonian origin (Hilperek in Exploration in Jûl lands, Philadelphia 1903, 298) needs confirmation by excavations, though the head of an ancient canal and the remains of an ancient settlement (Tell Aswad, ca. 3000 B.C.) can be seen north of the plain.

Al-ANBÂR's strategic importance as the head of the irrigation system of the Sawâd and the western gate (from the side of the Roman Empire) to the capital led Shâpur I (241-72 A.D.) to rebuild it and turn it into a garrison town with a double line of fortifications and a Citadel. He named it Fârzâ Shâpur ("victorious Shâpur") to commemorate his victory over Gordian IV in 243 A.D. (Herzfeld, Samarra, 12; Mariqî, 47; cf. al-Mâkdisî, al-Bâdî, 94; Ḥamza, 49; al-Dinawarî, 51). Other authors erroneously referred the name to Shâpur II (al-Tabârî, i, 839; Yâkûtî, i, 367, ii, 919; Ḥamd Allâh Mustawfî, 37). The official name appears as Pîrîsorda in Ammianus Marcellinus, as Pîrîsorda in Zosimus; it is also used in Syriac and by the Jews. The Arabs retained the name Fârzâ Shâpur for the surrounding district (farsaq) belonging to the province (astâd) of al-ANBÂR (Le Strange, Lands, 50-60; Streck, i, 16, 19). The name is of Arabic origin (stomat = "granny" or "granny" in Persian) came into use by the 6th century A.D. and is due to the storehouses of the Citadel (Mariqî, 113-6; cf. al-Bâlahîrî, 296; Yâkûtî, i, 368, 749).

The town was an extensive and populous one, the second in its size in Babylonia, (Ammianus, xxiv, 2). It was the seat of a Jacobean and a Nestorian bishop (cf. I. Guidi, in ZDMG, xxxii, 433, and works on the Jewish centre (Musîl, 356; Mariqî, 114; Newman, Jews in Babylonia, 14). Its garrison was Persian, while its population contained an Arab element (al-Tabârî, i, 749, 2095). The tower played a considerable part in the Emperor Julian's campaign against Persia Al-ANBÂR was taken as early as 12/634 by Khâlid,
who expelled the Persian garrison and concluded a treaty with the inhabitants (al-Baladhurî, 245; al-Tabari, i, 2059; Musli, 293, 328-9). The third mosque in 1'irâk was built in al-Anbâr by Sa'd b. Abi Waqâkâs (al-Baladhurî, 289-90). When asked by Umar to found a garrison town (dâr khitâra) in 1'irâk, Sa'd first thought of al-Anbâr, but changed his mind because of the fever and the flees infecting the town (al-Dinawarî, 131; al-Tabari, i, 2360). Al-Hadjîdî cleared the channel of al-Anbâr (al-Baladhurî, 274-5, 333).

In 134/752 Abu 'l-'Abbas moved his seat to al-Anbâr and built a city at half a farsakh (ca. 2.5 km.) above the town for his Khurâsânî troops, with a great palace in the centre (al-Baladhurî 287; al-Dinawarî, 273; al-Tabari, iii, 80); he died and was buried there (al-'Â'aqibî, i, 434; al-Baladhurî, 283; cf. al-Mâkdisî, al-Bad'â', iv, 97). Al-Manṣîr resided in the town before the foundation of Baghdad (145/762). Al-Rashîd stayed twice (180/799 and 187/803) at al-Anbâr, the population of which partly consisted of descendants of the Khurâsânîs (al-Dinawarî 38; al-'Â'aqibî, i, 510; al-Tabari, iii, 678). Judging by its khâridjî, al-Anbâr was still prosperous in the early decades of the 3rd/9th century (Ibn Khurrâdâbîh, b. 42; Ku'dâma, 237). As the caliphate weakened, al-Anbâr was exposed to the raids of the beduins, who attacked the town in 269 and the district in 286 (al-Tabari, iii, 2048, 2189). Its capture and devastation by Abu Tâhir the Karmatian in 315/927 accelerated the process of decay (al-Mas'ûdî, Tanbîh, 382). In 319/931 the beduins caused much damage (al-Dînawarî 38; al-Ya'qîbî, 291). When al-Mu'izz li-Dîn Allâh ascended the kubâ', t.1, 2439-40), the population of which is visible at the north end of the ruins). In 320/932 al-Anbâr was surrounded by a wall of sun-dried bricks (part of which is visible at the north end of the ruins).

The ruins of al-Anbâr are situated five km. north-west of al-Fallûjû (cf. Musli, 296; Herzfeld, Samarra, 131). They extend from NW to SE and have a circumference of irregular shape of about six km. The ruins have kept the name Anbâr (cf. Musli, 174; Obermeyer, 219; Ward, in Hebrâica, ii, Chicago 1885, 83 ff.). The remains of a square fortified building, built of Parthian sun-dried bricks, are to be seen in the NE corner. The mosque lies ca. one km. SW from the former and belongs to early Islamic architecture: it is rectangular, with one line of columns on three sides and five lines on the side facing the kibla.

The Nahr al-Karma or al-Sâkliwiyâ, which leaves the Euphrates to the west of these ruins, cannot (at any rate in the earlier part of its course) be identical with the Nahr Tûa (see Herzfeld, 13; Le Strange, J.R.A.S., 1895, 70), as the latter was excavated under the 'Abbasids and branched off one farsakh below al-Anbâr. It is more probable that Nahr al-Sâkliwiyâ is identical with the pre-Islamic Nahr al-Rufayl, and flows partly in the bed of a ancient canal (cf. Musli, 268; Maricq, 116; Suhra, 123; map of the Iraqi Directorate of Survey, 1934, 1: 50,000). It seems that this canal lost its importance in Islamic times.

(M. Streck-[A. A. Durâ])

AL-ANBÂR, ABU BAKR MUHAMMAD B. AL-KÂSIM (properly IBN AL-ANBÂR), traditionist and philologist, son of Abû Muhammad (cf. AL-ANBÂR, ABU MUHAMMAD); b. ii Radiab 231/3 Jan. 850; d. Dhu 'l-Hijjah 328/940. He was a disciple of his father and of Thâlabi, lectured in his father's lifetime in the same mosque, and was famous for his phenomenal memory and his meticulousness.

The following of his works are extant: al-Addâd, ed. M. Th. Houtsma, Leiden 1881; al-Zâhir; al-Idâh fi 'l-Wâbî wa 'l-Îbîda'; on the passages in the Qur'an where 1â is written instead of 1â', probably an extract from al-Hâfiz fi Khdî Allâh; Mkhâsar âth Allâh fi Dhikr al-Alîhât; al-Mukhâskar wâ 'l-Mu'mannâth. His commentary on the Mu'sâllâkât (for MSS see Brockelmann, S I, 35) the following portions were published by O. Rescher: 'Tarâfa, Istanbul 1329/1911; 'Antaraa, in ARSO, iv-v; Zuhayr, in MO, 1913, 137-95. Ibn al-Ashîr in the preface to the Nikâyà mentions al-Anbâr's Kharib al-Hadiht among his sources.

Flügel, Die gramm. Schulen der Araber, 168-72; Brockelmann, 1, 122, S I, 182.

(M. Strecker*)

AL-ANBÂR, ABU 'IBN AL-RAHMÂN B. MUBâr B. ABâ Sâ'îD KÂMÎ AL-DîN (properly IBN AL-ANBÂR), Arabic philologist, b. Rabî II 513/July 1119, studied philology at the Nišâmiyâ in Badîd under al-Djavâlîfî and Ibn al-Shâgari and himself became a professor for this subject in the same madrasa; subsequently, however, he returned to public life in order to devote himself entirely to his studies and pious exercises. He died on 9 Shâbân 577/19 Dec. 1181. He wrote a biographical history of philology, from the beginning to his own time, under the title of Nûshtâ al-Allâhî fî Tabâbâ al-Usdâbî, lith. Cairo 1294. His easy manual of grammar, Asdr al-'Arâbîyya, has been edited by C. F. Seybold, Leiden 1886, his great collection of differences between the schools of Basra and Kûfâ, al-Mqâla fi Masâlî al-Khâmây bîn al-Nakâmîyân al-Bâsîrîyîn wa 'l-Kufîyîn by G. Weil, Leiden 1913. Other treatises by him are extant in MS. A dictionary by him, al-Zahîrî, is quoted by 'Abd al-Kâdir al-Baghdâdî, Khânûn al-Adâb, ii, 352; al-Wâbî wa 'l-Ibîda'; by al-Sûyûtî, Sharh Shawâhid al-Mughânî, 158.

AL-ANBARI, ABU MUHAMMAD AL-KASIM B. MUH. B. BASHSHAR, traditionist and philologist, d. 304/916 or 305/917. He wrote a commentary on the *Mufaddalyydt* which was revised by his son, Muhammad: *The Mufaddalyydt ... according to the recension and with the commentary of Abu M. al-Q.*

AL-ANDALUS, or AL-ANDALUS, geographical term which, in the Islamic world up to the end of the Middle Ages, denoted the Iberian peninsula, that is, modern Spain and Portugal. (i) Toponymic significance of the term Al-Andalus; (ii) Geographical survey; (iii) Outline of its historical geography; (iv) Population of Al-Andalus; (v) Development; (vi) Survey of the history of Al-Andalus; Appendix: The *Andalus* in North Africa; (vii) Islam in Al-Andalus; (viii) Andalusian literature and culture; (ix) Andalusian art; (x) Spanish Arabic.

(i) Toponymic significance of the term Al-Andalus

The name Al-Andalus is hypothetically connected with that of the Vandals (al-Andalish), who named Baetica "Vandalicia" when they crossed the Iberian Peninsula before their invasion of North Africa; al-Andalus is mentioned as early as 98/716 on a bilingual *dinâr*, the Latin inscription giving as its equivalent the term "Spania". The latter term, or its doublet "Hispania", were the only ones by the earliest Spanish Latin chroniclers to denote the Iberian Peninsula as a whole, that is, the two Spains, Christian and Muslim. On the other hand, the use of the term al-Andalus by Arab writers appears always to have been confined to Muslim Spain, whatever its territorial extent, which was progressively reduced in size by the Christian Reconquest (the Spanish equivalent "Reconquista" will always be used in this article). Even when Islamic power in the Peninsula was restricted to the tiny Nasrid principality of Granada, the term al-Andalus was used to denote the territory of this small Kingdom alone. On the other hand, there had been in existence for some time in the Muslim chroniclers the names (in Arabic form) of Ighbániya (Hispania, España) and the Christian principalities formed as a result of the Reconquista: Liyún (Leon), Kashtála or Kashtála (Castilla, Castile), Burtukál (Portugal), Aragón (Aragon), Nabárра (Navarre).

From the name al-Andalus—the form al-Andalus is sometimes found, especially in Ibn Kuzmán—derive the ethnic form andalusí and the collective form al-Andalusí. This term is retained in modern usage to denote the geographical area formed by the Sub-Mediterranean region (littoral zones and highlands) corresponding, from East to West, from the modern province of Almeria to that of Huelva, to the natural region of Andalusia (Spain, Andalucía), the inhabitants of which are called Andaluces (sing. Andaluz).

(ii) Geographical survey

1. Physical situation. S-W of Europe, the Iberian Peninsula forms a massive promontory almost pentagonal in shape, joined to the continent by the range of the Pyrenees, and washed on the remaining sides by the Atlantic and the Mediterranean. It is situated between 43° 27' 25" and 35° 59' 30" N, and 9° 30' and 3° 19' E. Its surface area is about 229,000 sq. m., modern Portugal constituting less than a fifth of this total (modern Spain has an area of 195,000 sq. m.). The situation of the peninsula at the western end of the Mediterranean basin, with a large Atlantic seaboard, explains many episodes in its history.
Cut off by the barrier of the Pyrenees from the rest of the continent of Europe, it is only separated from Africa by the narrow Straits of Gibraltar, bounded to the N. and S. by the bridgeheads of Tarifa and Ceuta. It has as a result acquired an insular character, which has for long isolated the Iberian bloc from trans-Pyrenean influences, while leaving it open from earliest times to Oriental influences via the classical Mediterranean approach route.

The Spanish Peninsula has one of the most broken terrains in Europe. A general examination of its structure reveals that it consists basically of a large central plateau which constitutes at least half of the total area, the Meseta, with a mean altitude of 1,965 ft., comprising the two Castiles, Old (Castilla la Vieja) and New (Castilla la Nueva), and the Estramadura. The Meseta is bounded by high mountain escarpments; to the North, the Cantabrian range; to the North-East and East, the range of the Iberian Mts.; to the South, the successive tiers of the Sierra Morena (Subbaetic range); to the West, the high table-lands of Galicia and Portugal. The plateau possesses three deep lateral depressions; those of the Ebro, the Guadalquivir and the lower Tagus. To the South, the upheaval of the ‘Penibaetic system’ has thrown up a mountain mass which comprises the greater part of Upper Andalusia and forms a confused series of ranges (Span. sierra, "saw"; Ar. al-shārār), of which the highest is the Sierra Nevada (highest point; the Mulhacén, 11,420 ft.).

As a result of this tortuous orographic formation, the mean ground elevation of the Peninsula is not less than 1,100 ft. The additional fact that the proportion of lowlands, of an altitude of less than 1,065 ft., is only 40%, shows the difficulties which have always been encountered, over the greater part of the country, in exploiting a soil which, because of the inadequate rainfall and the meagre supply from the rivers, is generally arid.

2. Climate.—The Peninsula has a dry, generally temperate, climate, despite extreme variations of temperature in the high regions, which escape the moderating influence of the Atlantic or the Mediterranean. Here the winters are severe and the summers torrid. The sub-littoral zones are an exception, especially the largely exposed depression of maritime Andalusia.

As regards rainfall, a distinction must be drawn between dry Spain and wet Spain. The latter comprises, starting from the western prong of the Pyrenees, the Basque country, the Cantabrian coast and nearly all modern Portugal. Dry Spain, which covers nearly 2/3 of the Peninsula, has an essentially erratic rainfall, varying from the annual average of 23 ins. to less than 15 ins. In many cases, the beneficial effects of the rain are nullified by evaporation, wherever it is not possible, as in the Levante (the region of Valencia and Murcia), to remedy this state of affairs by the irrigation of parched lands.

The North and North-West of the Peninsula, and in general all the Atlantic seaboard, enjoy, as a result of the humidity and prevalence of clouds which are features of the region, comparatively mild weather. Similarly, in the Mediterranean zone, from Catalonia and Levante to the Andalusian coast, the winters are mild, with a characteristically high sunshine record and clear, bright atmospheric conditions.

3. Hydrography. The physical formation and climate of the country, and the frequently impermeable nature of the soil, explain the Peninsula's water shortage and the irregularity of the supply from its rivers, which are nearly always dry during the dog-days, when evaporation is at its highest. These rivers have the same characteristics as North African wādīs; they are either almost completely dry, or else sudden spates transform them into torrents, with the disastrous concomitant effects of erosion and removal by alluvion.

The rivers which flow towards the north and west are in general coastal rivers of no great length, the chief one being the Miño (Portuguese Minho), which forms the northern frontier of Portugal and discharges its waters into the Atlantic. Three other rivers, which have an extremely irregular supply of water and which drain the waters of the Meseta, also flow towards the Atlantic; the Duero (Port. Douro), the Tagus (Span. Tajo, Port. Tejo), and the Guadiana, whose estuary forms the southern frontier between Spain and Portugal. The most important river of the Peninsula is the Guadalquivir which, rising in one of the mountain groups in the South-East of the Meseta, is swollen by several tributaries, the most important being the Genil, which issues from the Sierra Nevada and is fed in summer by the melting snows from that massif. The Guadalquivir is the only river in the Peninsula whose lower course is navigable (over the last 75 miles). Several wādīs of a torrential nature reach the Levantine coast; they issue from the edge of the Meseta and provide, by means of dams, rather uncertain reserves of water for irrigation. The chief of these are the Segura and the Jucar, to-day used for the improvement of the huerta of Valencia.

The Ebro, which rises in the Basque country, is fed by the southern slopes of the Pyrenees (Aragón, Segra) and, after a difficult course, during which the gentleness of the gradients gradually reduces the volume of its waters in its lower reaches, turns towards the Mediterranean, into which it discharges after crossing an alluvial delta of considerable size.

4. General characteristics. The subsoil of the Peninsula is especially rich in metalliferous strata: lead, silver, iron, copper, manganese, marble. It is also rich in the natural salts, saltpetre, magnesium and silicates. The vegetation varies completely between dry Spain and wet Spain. In the former, three types of vegetation, more often associated with the Mediterranean zone, predominate: the forests (non-deciduous trees, various kinds of pines and holm oaks or cork-trees), the foothills (Span. monte bajo), and the steppe (scrub, esparto). In wet Spain, on the other hand, the countryside is green all the year round, owing to the presence of forests and natural prairies.

As a result of this natural variety Spain is a country of the greatest possible contrast. It is a commonplace to state that it is frequently possible to pass almost without transition from a river valley (vega), with its luxuriant vegetation, to the steppe burnt by the sun and the wind.

(iii) Outline of the historical geography of al-Andalus

1. Descriptions of al-Andalus. The works of the Arab geographers, both eastern and western, which have come down to us constitute the essential part of our knowledge of al-Andalus in the Middle Ages, its development and the exploitation of its
natural resources. First, there are the Road Books (tnasdlik) published by De Goeje in BGA, which only devote a limited amount of space to Spain: the oldest, those of Ibn Khurradadhbih, al-Ya'ḳūbī, Ibn al-Fākh and Ibn Rusta, contain such brief descriptions that one assumes that up to the 4th/10th century al-Andalus was a province of Islam little known to the eastern world. From the time of the restoration of the Marwānid Caliphate at Cordova, the geographical documentation of al-Andalus becomes systematised, although still not elaborated in great detail. The expositions on al-Andalus by al-Ḳistakrī (d. 322/934) concern agriculture and commerce, and describe fourteen itineraries in the interior of the Peninsula. His contemporary Ibn Ḥawḳal had the advantage of having himself visited Spain and of having brought his documentation up to date by the interrogation of informants en route; the picture of al-Andalus revealed by the pen of this pro-Ραinterested writer, is too often partial, but it is nevertheless the first rational description, at once full and coherent, of the Cordovan Kingdom, which has come down to us. Equally worthy of attention is the account of the Palestinian al-Mukaddasī (end of 10th century) who, although he had not himself visited the Peninsula, makes important statements, apparently based on good authority, concerning in particular the intellectual life, the language, the metrology and the trade of the country.

From the time of the Caliphate, and in the centuries following, all the descriptions of al-Andalus, written primarily in the West, were indebted to the description which the celebrated Cordovan chronicler of oriental origin Ahmad al-Rāzī (d. 344/955) placed at the head of his great work, now lost, and which was used as a source for quotation, usually without acknowledgement, particularly by the compiler Yāḳūṭ in his Mu'tjam al-Bulūdān. The "Description" of al-Rāzī is only known to us in a Castilian version, published in 1854 by P. de Gayangos and derived from a Portuguese version executed about the beginning of the 14th century at the order of King Denis of Portugal (1279-1325); the author of the present article has translated it into French and attempted to reconstruct the original Arabic (in And., 1953, 51-108).

It is thus clear that the plan of the "Description" of Ahmad al-Rāzī, though on the whole only sketched in outline, has served as a framework for most later descriptions; among the latter pride of place must be given to the description of the Andalusian Abū 'Ubayd al-Bakrī (d. 487/1094), which unfortunately is lost, but which can be largely reconstructed from the notices on al-Andalus in the al-Rawd al-Miḥāṭir of the Maghribī compiler of the 7th/14th century Ibn 'Abd al-Mun'im al-Ḥimyarī, who has also made use of material from al-Sharīf al-Idrisī. To this list must be added, in addition to the collections of 'aḍāla'īyāt relative to al-Andalus contained in the works of al-Kazwīnī and al-Dīnāshkī, the notices, sometimes of considerable length, collected by the Maghribī al-Makkarī (17th century) in the first volume of his Naḥf al-Tīb.

On the geographical literature of al-Andalus, the most complete work, despite many inaccuracies, is that of J. Alemanny Bolufer, Le Geografie de la Península Ibérica en los escritoresárabes, Granada 1921 (extract from the Rev. del Centro de Est. hist. de Granada y su reino). Cf. also al-Idrīsī, Nazḥat al-Muḥāṭāt (Dozy and de Goeje, Description de l'Afrique et de l'Espagne, Leiden 1866, text 165-214, Fr. trans. 197-266); E. Lévi-Provençal, La Péninsule ibérique au moyen âge d'après le Kitāb al-Rawd al-miḥāṭir, Leiden 1938.

2. **Physical geography of al-Andalus** according to Muslim geographical tradition.—According to al-Rāzī, al-Andalus forms the extremity of the fourth climate towards the West. It is a country mainly watered by numerous rivers and sweet water springs. The geographers, after this declaration, usually launch into panegyrics and devote much space to laudes Hispaniae rather in the manner of Isidore of Seville.

Al-Andalus is triangular in shape. Each of the angles of this triangle corresponds to a place famous in the traditions of Hispanic legend. On the angle at the apex, in the South-West, rises the temple of Cadiz, Ṣanām Ṛādās (q.v.); the second angle is situated on the latitude of the Balearic islands between Narbonne and Bordeaux (sic); the third, in the North-West, corresponds to the Torre de Hercules, near Corunna. These ideas are also partly illustrated by the maps of the Road Books, Ibn Ḥawḳal and al-Idrīsī. Al-Rāzī has clearly grasped one of the characteristics of the physical structure of the Peninsula: in his opinion, a distinction must be made between western Spain and eastern Spain, taking into account the direction of the winds, the rainfall and the course of the rivers. In western Spain, the rivers flow towards the Atlantic and rain in brought by the westerly winds. In eastern Spain, the rivers flow towards the Mediterranean, and easterly winds prevail and the rivers flow eastwards.

Other landmarks are often given to mark some of the points of the "triangle" formed by al-Andalus: Cape St. Vincent, at the south-western extremity of Portugal, in Arabic the "Church of the Crow" (Kanīsat al-Qurūb); the Temple of Venus, at the opposite extremity, Haykal al-Zahrā (Port-Vendres).

On approaching al-Andalus from continental Europe, Gaul (خلاف) or the "Great Land" (al-Ārād al-Kabīrā), one must cross the range of the Pyrenees by one of the passes (abwāb) or "gates" (bādā'), in order to reach the land of the Gascons (البَغْشَكَنِيس), or that of the Franks (الإِفْرَانِدِي). From there, it is possible to reach the shores of the Atlantic, called the "Sea of Darkness" (Baḥr az-Zulūmāţ) or the "green sea" (al-Baḥr al-Ḥayyār) or the "Surrounding Sea" (al-Baḥr al-Muḥāṭir). In this dangerous ocean a number of intrepid mariners carried on coastal trade between the land of the Blacks or the "Great Sea" (al-Baḥr al-Kabīr), the "Middle Sea" (al-Baḥr al-Muṭawassīt) or even the "Tyrrenian Sea" (Bahr Ṭirān).

In the opinion of al-Rāzī, there are only three mountain ranges in Spain, which traverse the Peninsula from one sea to the other, and none of which is crossed by a river. The first of these ranges is the Sierra Morena, called Mountains of Cordova (Dībāl Kūrtūbā), which rises from the Mediterrenean coast of Levante and terminates in Algarve, on the Atlantic. The second is the Pyrenean range,
between Narbonne and Galicia. The third cuts Spain obliquely, from Tortosa to Lisbon. It corresponds to the transverse range called al-Shārār, according to al-Idrīsī. However, the geographer is obliged to mention in addition the Sierra Nevada (Djabal Shulayr, “Mons Solaris”) and the Serranía of Málaga (Djabal Rayyo) which extends as far as Algeciras.

The chief river of al-Andalus is the “Great River” (al-Wāḍī ʿl-Kabīr), Guadalquivir, also known as al-Nahr al-Aṣ zam and Nahr Kurtaba “River of Cordova”. It is sometimes referred to by its ancient name of Nahr Bīṭī (“Baetsi”). It is 370 miles in length. It is the river of Baetica, the richest part of the Peninsula, and waters Cordova and Seville. Its chief tributaries are the Genil (Wāḍī Sindjil or Shanil), which flows through Granada, Loja and Ecija; the Guadalquivir (Wāḍī Shīb); the Guadalmar (al-Wāḍī ʿl-ʿAmmar), thus named because of the reddish colour of its waters; and the Guadalbullón (Wāḍī Bullūn).

The Guadiana (Wāḍī Anā) has a total length of 330 miles and rises not far from the source of the Guadalquivir. It runs underground for part of its course, and re-emerges in the Calatava region. It discharges into the Atlantic at Oporto (Burtukal). Another important river, also flowing into the Atlantic, is the Miño (Portuguese Minho), Nahr Minyo, which crosses Galicia from East to West and is 300 miles long.

Of the rivers which flow towards the Mediterranean, al-Raṣī only mentions the Segura (Wāḍī Shaḵūra) which rises near the sources of the Guadalquivir and the Ebro (Río Ebro = Wāḍī Ibrū); the latter rises at Fontibre, in Upper Castile and eventually reaches the sea not far from Tortosa, a distance of 204 miles. The Ebro has numerous tributaries, including the Rio Gallego (Nahr Djullik), which comes down from the mountains of Cerdagne (Djibāl al-Sirṭāniyin).

3. Urban toponymy and territorial divisions of al-Andalus. Al-Andalus is notable, at all periods of its Muslim history, for the number of its urban centres, and provides a contrast with the relative poverty of North Africa, as regards population centres of equal importance. Nearly all the towns of Roman Spain survived the Arab invasion and continued to prosper. On the other hand, the new towns founded by the conquerors were not numerous and were almost always built for strategic reasons or as coastal bases intended to neutralise the aggressive ambitions of the Fāṭimids in the western Mediterranean, or else assumed a diminutive form, as Toldūm, Toledo becoming Toletula/Tulayṭūla. Certain place-names of historical interest had their origin in pons, Ocelli becoming Madinat Sālim/ Medinaceli, which gave rise to the mythical existence of a pseudo-founder named Sālim. Towns with a descriptive Arabic name were the exception: e.g. the “Green Island”, al-Ḍajāza al-Khādīr (Algeciras). Some places bore the name of the Arab or Berber tribe which had populated them after the conquest: Balīy (Poley), Ǧaḥfīk north of Cordova, Miknas (Mequinenza) in Aragon. In Levante, as evidence of a more profound Arab influence, many place-names were the names of “stages” coupled with an Arab forename: e.g. Manzīrī ʿAṭī (Mislata) and Manzīr Māṣ (Masana), in the suburbs of Valencia. Many place-names of the Valencia region were formed like names of tribes, with Bēni plus the name of the eponymous ancestor (see Lévi-Provençal, Hist. Esp. mus., iii, 326-8).

At the time when Ahmad al-Rażī wrote his description of al-Andalus, Muslim Spain was already separated from Christian Spain by a boundary line, a sort of no man’s land, flanked along its periphery by three Marches (thughūr): al-aʿdā, al-aṭwāt, al-adnā. Already many regions of the Peninsula, long since evacuated under the pressure of the first manifestations of the Reconquista, had been finally deserted by al-Andalus; the Hispanic March in the East, the Basque country in the centre, the Cantabrian coast in the West. Famous expeditions led against Santiago de Compostela (Shant al-Makīn) by the ‘Amīr al-Mansūr was no more than a spectacular raid without lasting effect. During the period of the Caliphathe, therefore, Islam definitively lost part of Spain and did not seek to recover it. The provincial organisation of al-Andalus, however, remained unchanged.

This organisation dated from the 8th century, and was therefore prior to the Marwānid restoration. It was based on the provincial districts (kūrā), which had a chief town, a governor and a garrison. The lists of kūrās under the Caliphate differ widely; al-Mukaddasī gives an incomplete list of only 18 names. Yākūt enumerates 41, a figure approached by al-Rażī, who describes successively 37. Later, al-Idrīsī introduced a division not into kūrās, but into “climes” (iklim), with no administrative significance and putting forward many names which must be firmly rejected as apocryphal. By utilising the information given by al-Rażī, who follows a concentric order round the capital, and al-Bakrī, the principal features of each of the main kūrās of the provincial organisation under the Caliphate can easily be determined. The kūrās usually had the same name as their chief town, apart from a few exceptions noted below: the most important kūrā was that of Cordova, bounded to the north by that of the Fāh al-Ballūt (Llano de los Pedroches, “plateau of the oaks”), whose chief place was Ǧaḥfīk (doubtless the modern Belalcázar: cf. F. Hernández, in And., 1944, 71-109). On the other side of the fluvial plain of Cordova (al-Kanbānīya, modern la Campina), to the south of the Guadalquivir, lay the small kūrās of Cabra (Kabra) and Ecija (Istidīja). Further west were the rich districts of Carmona (Karmūnā), Sevilla (Iṣbīliya) and Niebla (Labla). The kūra of Oscoño (Ukhsīnūba), with Silves (Ṣībī) as its chief town, corresponded to Algarve (Gharb al-Andalūs, i.e., the southern border of modern Portugal on the Atlantic. North of this district lay that of Beja (Bādja). The southernmost part of al-Andalus was divided into four kūrās: Meron (Mawrūr), Sidona (Ṣadḥūna), chief town Calsena (Kalṣānā), Algeciras and Taracarona (Ṭakurunna), chief town Ronda (Runda). Further east, the kūra of Málaga (Mālaḵa), which was called Rayyo, had as its first chief town Archidona (Urjūṣhūna); it was adjacent to the kūra of Elvira (Ilibra, formerly Iliberris), a
little to the west of modern Granada (Gharnata). The kura of Elvira adjoined those of Jaén (Diawyn) and Pechina (Badjia), the chief town of which was transferred to Almeria under Al-Hakam II.

The Levante seaboard (Shark al-Andalus) on the Mediterranean was divided from South to North into three large kūras: Tudmir, the old kingdom of prince Theodemir the Goth, with Murcia as its chief town, Játiva (Shatiba) and Valencia (Balansiya), which extended as far as the delta of the Ebro. Inland, beyond the region of Toledo constituted a kūra, extended eastwards by the kūra of Santaver (Shantabariyya), with Ucles (Uklidî) as its chief town. It is probable that, under the Caliphate, the Balearic Islands (al-Djazzâ'ir al-Sharkiyya) constituted a separate provincial district. In the western half of al-Andalus, the same applied to regions which had been pacified, such as Merida (Mârida), Badajoz (Batallyaw), Santarem (Shentarîn), Lisbon (al-Ushbûna) and perhaps Cóimbra (Kûlumriyya).

Nine of these kūras, called mudjannada, still enjoyed under the Caliphate a privileged position, because their territories had been granted as fiefs in 125/742 by the Governor Abu l-Khattâr al-Kalbi to the Syrian gjund brought to Spain by the general Babshir b. Bizir [q.v.]: these were the districts of Elvira, fief of the Dâmascus gjund; Rayyo, fief of the al-Urdunn gjund; Sidona, fief of the Filaštîn gjund; Niebla and Seville, fief of the Hîms gjund; Jaén, fief of the Kinnasrin gjund; Beja, Ocosoba, and also Murcia, fief of the gjund of Egypt.

A certain number of outlying districts are mentionned by al-Râzî in the territory of the Upper Marches: Taragona (Tarakkâña), adjacent to Lerida (Lârida); Barbàntânia (Boltaâña), with its stronghold of Barbastro (Barbâstro); Huesca (Wâshka); Tudela (Tuflîa), with the fortified towns of Tarazona (Tarasûna); Arnedo (Arnât); Calahorra (Kalahurra); and Najera (Nâdjîr). Bibliography: Lévi-Provençal, La "Description de l'Espagne" d'Ahmad al-Razi, in And., xxviii, 1953, passim Histo. Esp. mus., iii, chap. vii (4) and xii. See also separate articles on the various towns.

(iv) Population of al-Andalus.

The complete absence of reliable statistics, and, the silence of the geographers, precludes any computation, even a relative one, of the size of the population of al-Andalus at the period of its greatest geographical expansion, i.e., at the end of the 10th century. If one agrees with the conjectural estimate that the population was about ten millions during the Visigoth period on the eve of the Conquest, it must, in view of the small number of Muslim emigrants of other races, have remained roughly the same, with probably a higher proportion of urban dwellers and villagers than rural elements. On the other hand, more weight can be attached to the hypothesis that the distribution of the population over the various regions of the Peninsula was always dictated by physical environment, and that the density of the population in any particular area depended on the altitude and the nature of the country, the climate, the fertility of the soil and the possibility of irrigating it. It is not going too far to conjecture that those regions of al-Andalus which to-day have the smallest numbers of inhabitants already displayed the same characteristic at the time of the Caliphate of Cordova.

Among the components of the Muslim population of al-Andalus, a distinction must be drawn between the mass of neo-Muslims, i.e., Spaniards who became Muslims after the Conquest as the result of more or less spontaneous conversions, and the elements of other races. Among the latter, who settled in the country in the wake of successive, though numerically small, waves of immigrants, the Berber element seems to have been the most important; the Berbers do not seem to have come from all parts of Barbary, but from the regions of the Maghrib nearest to al-Andalus, the Moroccan Djaibal and Rif. These Berbers, who came from the other side of the Straits of Gibraltar, when political or economic circumstances did not force them to return with all speed to their country of origin, were thrust back towards the uplands by the Arab emigrants who formed the aristocracy so that the latter might enjoy exclusive rights over the most fertile tracts of Andalusian soil. From certain information given by authors such as Ibn Hazm, in particular in his Djamâhara, it might be supposed that the Berber colonies only occupied in a sporadic fashion certain territories of the coastal zone, and that they were obliged to settle in the Meseta. Once they were established, presumably these Berbers of al-Andalus rapidly became arabicised, even to the extent of ceasing to use their original dialects. It was not until the end of the 10th century that the influx of further contingents, justified by the large-scale recruitment of Berber mercenaries in central and eastern Maghrib, introduced into al-Andalus a mass of North Africans, who precipitated the ruin of the structure of the Caliphate and congregated in ethnic groups, which formed the following century the Berber i'âla opposed to the Andalusian i'âla.

The Arab element in al-Andalus was never more than a minority. The majority entered the country either at the time of the Conquest or in the course of the following years, and were later reinforced by contingents of Syrian gjundis and by the emigrants who flocked from Asia at the time of the Marwând restoration in Spain. The Arabs originally probably only numbered a few thousand before inter-marriage with the native women and the system of wa'âlî produced an impressive number of people who, rightly or wrongly, claimed an Arab origin. At all events, it is a fact that the Arabs represented an especially turbulent and aggressive element in the early centuries of the history of al-Andalus, and that although they despised work on the land, they nevertheless retained for themselves the best land, and left to crop-sharing colonists the task of farming the land and paying them their due share of the crops.

A third alien element in Andalusian society, which should be alluded to here although it formed only a relatively small proportion of the population, was the Negroes and Slavs. The Negroes ('abdî) of the Sudan, brought to Spain by traders specialising in the slave trade, eventually not only constituted a steadily increasing guard of mercenaries, but intermixed with the rest of the urban populations as the result of the marriage of Negro women, who were specially prized, and sought after also for their domestic virtues. The Slavs (Šâglîba [q.v.]), on the other hand, who were the product of captures in continental Europe from Germany to the Slav countries, or were captured in the course of raids on the borders of al-Andalus, eventually, during the second period of the Caliphate, constituted, especially at Cordova, a numerous and active group which weighed heavily in the economy of the Cordovan
state and contributed in no small measure to its rapid collapse.

The Berber, Arab and other Muslim foreign elements, important though they were, were numerically far inferior to the much more important group of the Spanish neo-Muslims, who were known in al-Andalus by the generic terms muslīma or, more especially, muwāllad. These were Spaniards who, during or after the Conquest, had adopted Islam in order to enjoy a better personal status than that of dhīmmī. The complete and rapid arabisation of all these converts to Islam, to which in the vast majority of cases they displayed a deep and sincere attachment, is a remarkable phenomenon. In a short time the muwāllads became assimilated into Muslim society and enabled the rulers of the country, by the rational use of their services, to make good the lack of emigrants of old Muslim stock. Many muwāllads, soon fused in the melting-pot of Andalusian society, lost even the memory of their Spanish (Iberian or Gothic) origin, although they often bore Romance names. The co-existence within Islam of elements of population of such diverse origin, led to their gradual fusion, a process which was aided by the adoption of an identical way and rhythm of life, and by the bilingualism which, at least in everyday life, placed Spanish Arabic and the Romance tongue (al-adjamiyya) on the same footing.

The Muslim population of al-Andalus, which was so composite in origin, but which gradually became relatively homogeneous, was divided in the 10th century into a certain number of social classes, in the same way as the rest of the Islamic world, ḥāsya and ʿāmma. The former comprised the great noble families who were often hereditary grantees, while the middle class, composed of merchants and small land owners, soon became a sort of urban bourgeoisie, though without charters or immunities. In contrast, the plebs or ʿāmma, in the towns and particularly in the country, constituted an obscure mass subjected to severe vexation by authority. As there is virtually no information on the agrarian law which was in force in al-Andalus, one is compelled to postulate the existence, undoubtedly necessary, of a rural proletariat, composed of day-labourers tied to the soil and leading a particularly wretched existence, mostly unable to escape their servile condition.

The tributaries (muḥādīdūn) in Andalusian society formed an important part of the population and comprised both Christians and Jews. The former, usually grouped under the general name of Mozarabs, all belonged to that part of the Spanish population which, at the time of the Conquest, had refused to renounce its faith in order to adopt that of the conquerors. In the large towns at least, notably in Cordova, Seville and Toledo, the Mozarab communities were organised under the protection and control of the Muslim central authority, with a leader responsible to that authority, the comes (kāmis), sometimes also called defensor or protector. He exercised over his community the powers of a police magistrate, and had the duty and responsibility of collecting the taxes; he was assisted by a special judge, censor or ḥāds ʿl-adjam, who settled disputes between the Mozarabs. The territory of al-Andalus, up to the end of the 11th century, remained divided into the same ecclesiastical districts as at the time of the Visigoths, namely, three metropolitan provinces (Toledo, Lusitania and Baetica), each with an archiepiscopal and several dioceses. The details have been preserved for us by al-Bakrī in what he calls “Constantine’s partition”. The names have been preserved of some very rare church dignitaries of al-Andalus under the Caliphate. The Mozarab community about which we possess the most information, though not numerically the most important, is that of Cordova.

We have even less information as to the numbers and activities of the Jewish communities in the towns of al-Andalus, each of which had a Jewish quarter (ḥarār or madīnāt al-Yād, Juderia). At the same time, in the 11th century, and especially in the Zirid Kingdom of Granada, the part played by Jewish excise officials and treasurers, the importance of the Banu ʿl-Naghrillā family, the pogrom unleashed in Granada following the murder of the Crown Prince Buluggūn b. Bādis b. Ḥabūs b. Zirī, and the importance accorded in the economy of the small state of Granada to the large Jewish community which formed the bulk of the population in the town of Lucena (al-Yussāna), give rise to the belief that the Jews of al-Andalus, at all stages of the Reconquest, in the service of Muslims or Christians, played an active part in the country as counsellors and ambassadors, and that they controlled the main commercial channels between al-Andalus and continental Europe on the one hand, and the Muslim East on the other. In this connection, much may be expected from the study of the documents obtained in particular from the Geniza of Cairo.

(v) THE DEVELOPMENT OF AL-ANDALUS

It is primarily the geographers who have given us more or less detailed information on the manner in which the soil of al-Andalus was cultivated and its vegetable and mineral resources exploited. We also possess a fairly extensive technical literature, formed by agronomic works of various periods, notably those of al-Ṭīhanī, Ibn Wāfīd, Ibn Baṣṣāl, Ibn Luyūn and Ibn al-ʿAwwām. Mention must also be made of the “Cordovan Calendar of the year 961”, published in 1873 by Dozy, at the same time as a definitely later version, and attributed to the Cordovan chronicler ʿArbīl b. Saʿīd (q.v.). Unfortunately, this technical literature gives us practically no information on the methods of cultivation and on contracts of lease, questions on which certain juridical works give us information which is too vague for complete reliance to be placed on it.

1. Agriculture. As to-day in Spain, there was a distinction between dry land (Span. seco = Ar. baṭl) and irrigated land (Span. regadio = Ar. sabī), the former being reserved for the cultivation of cereals. Owing to the poor quality of the soil and unfavourable climatic conditions, the cultivation of cereals was quite inadequate to provide the population with wheat and other bread grains; consequently al-Andalus, at certain periods of famine, had to rely on imports of North African wheat. Some varieties of Andalusian wheat (Toledo) were especi-
ally renowned. Millers used either horse-driven mills (tātiuna) or water-mills (rafya).

Vast stretches of country, especially in Andalusia and the Aljaferia region, were covered with olive-trees, and the olive oil industry was always extremely active there. Extraction methods were primitive, but the quantities of oil produced were sometimes in excess of local needs, and the surplus was exported to the rest of the Islamic world.

The cultivation of the vine, like other forms of dry cultivation, seems to have been extensively practised. Raisins were used for cooking, and above all the consumption of wine was virtually tolerated and its sale regulated.

It was, however, in the sphere of crops needing suitable irrigation that the Andalusians soon achieved an unchallenged supremacy, although it is not possible to attribute to them the invention of the system of irrigation which they used, in particular in the East of al-Andalus, and which still exists without substantial modification. The simplest form of irrigation was that practised with the aid of a network of irrigation channels (sāḥiya, Span. acequia) which criss-crossed the littoral plains of the Murcia and Valencia regions, and in which the flow of water depended entirely on differences of level. Water rights were fixed by custom according to a code, patriarchal in character, which is also still in use to-day. On the higher ground and in the valleys of rivers such as the Guadiana, Tagus and Ebro, irrigation could only be carried on with the aid of pumping machines, named, according to their type and function, ma'awira (Span. and Fr. noria) or sāniya (Span. aceña). This irrigation was used for the cultivation of vegetables and trees. The geographers vie with one another in their praises of the fruits of al-Andalus: cherries, apples and pears, almonds and pomegranates, and above all figs, of which numerous varieties were known in Spain. In some unusually sheltered coastal strips it was possible to grow crops of a sub-tropical nature: sugar-cane, bananas. The palm-groves of Elche (Alsh [q.v.]) were one of the sights of the country. Finally, the cultivation of aromatic herbs and plants used for making cologne was also carried on on a considerable scale; saffron, safflower, cumin, coriander, madder and henna, on the one hand, flax and cotton on the other. Silk cultivation flourished, mainly between Granada and the Mediterranean.

The geographers, in their descriptions, have devoted little space to the rearing of saddle- and draught-animals or animals for meat. Horses were bred in the grass-lands of the lower Guadalquivir, and Andalusian mules were already celebrated by the time of Ibn Hawkal. Cattle, sheep and goats were reared everywhere, making use of the meagre pasture available. Apiculture, for the production of honey, was also practised.

The forest region of al-Andalus was exploited for the needs of the towns, notably charcoal. Pines, numerously on the edge of the Meseta, were felled for use as joists or ships' masts. The great steppe-like expanses of the south-east furnished an abundance of dwarf palms and esparto, used in basket-making and domestic purposes.

2. Mineral exploitation. The richness of the subsoil of al-Andalus justified mineral exploitation from earliest times, and the process continued during the Muslim era. Apart from gold, extracted from the gold-bearing sand of certain rivers, veins of silver and iron were mined north of Cordova, and deposits of cinnabar were exploited at Almaden and Ovejo. Copper was produced from pyrite mines of the Huelva region. Alum, sulphate of iron, lead and galena were also extracted. Muslim Spain was also renowned for its marble and precious stones. Like the Romans before them, the Andalusians made use of many thermal springs, nearly all of which still retain their old name of Alhama (Ar. al-hdamma).

The exploitation of the rock-salt mines and the salt-deposits on the coast at Cadiz, Almeria and Alicante was a flourishing industry. Fishing was carried on, especially with string-nets and tunny-nets (Ar. al-madrab): sardines and tunny were caught in large quantities.

Bibliography: The preceding is developed at length in Lévi-Provençal, Hist. Esp. mus., iii, 233-98; see also idem, Esp. mus. Xth siècle, 157-94. Cf., for the period 11th to 13th century, C. E. Dubler, Über das Wirtschaftsleben auf der iberischen Halbinsel vom XI. zum XIII. Jahrhundert, Geneva-Zürich 1943; A. Carbonel T.-F., La mineria y la metalurgia entre los Musulmanes en España, Cordova 1929.

(vi) General survey of the history of al-Andalus

It is only possible to give here a brief outline of the development of the history of al-Andalus during the seven centuries of Muslim occupation of the Iberian Peninsula. For greater clarity, this outline will be divided into a number of chronological compartments, which will allow the presentation of a chronologically connected account without the necessity in most cases of going into events in greater detail.

1. The conquest of al-Andalus.
2. The history of al-Andalus up to the Marwânid restoration.
3. The Marwânid Kingdom of Cordova.
4. The Caliphate and the 'Amirid dictatorship.
5. The collapse of the Marwânid Caliphate and the partition of the Kingdom of al-Andalus.
6. The Kingdoms of the 'Abasas up to the battle of al-Zâlâka.
7. Spain under the Almoravids.
8. Spain under the Almohads and the progress of the Reconquista.

1. The conquest of al-Andalus. Of all the conquests undertaken by the Arabs in the first century of Islam, the conquest of al-Andalus is most remarkable for the speed and despatch with which it was accomplished. The accounts which have reached us of successive stages culminating in the extension of Muslim power over the whole of the Iberian Peninsula are particularly brief and unreliable; legend rapidly obscured historical reality with a veil which is nearly always impene- trable. It is clear that at the opportune moment the Arabs profited by the decayed state of the Visigoth Kingdom of Spain to turn their attention to it, and that they had the effective co-operation of many of the Spaniards themselves, desirous of throwing off a yoke which had become insupportable to them, to aid them in conquering it. The opportunity was tempting, at a moment when Arab power had just established itself firmly in North Morocco, and when the post of Governor of Ifrikiya and the Maghrib was in the hands of Mūsâ b. Nuṣayr [q.v.]. To the latter, and to his lieutenant, the ma'wâl.
Tārik b. Ziyād [q.v.], belonged the glory of the conquest of al-Andalus.

It seems certain that Musa b. Nusayr himself took the decision to try to occupy new territories on the other side of the Straits of Gibraltar before referring the matter to the Caliph at Damascus; Mūsā took this step as a result of promises of support which he had received from the exarch of the town of Septem (Ceuta), which had remained a Byzantine possession despite the recent fall of Carthage into Muslim hands. This dignitary, Count Julian, facilitated the first Muslim landing, which was merely a raid led by the Berber officer Tārif on the island of Tarifa ([Dżazrat Tārif]) in Ramadān 91/July 710. The success of Tārif’s raid encouraged Tārik, the lieutenant of Mūsā b. Nusayr, to place on a war footing an assault force of 7,000 men, which, with the aid of Count Julian’s flotilla, established itself on Andalusian soil in the neighbourhood of Gibraltar ([Dżabal Tank]) in Rajdāb or Shab‘ān 92 April-May 711.

The decisive battle between the Muslim assault force and the regular troops of the Visigoth king, Roderic, which occurred a few weeks later, on 28 Ramadān 92/19 July 711, at Wādī Lago (Rio Barbate), ended in disaster for the Visigoths, who wavered and fled, while Tārik decided to advance further. The cities of the Gothic kingdom fell one after another: Cordova was taken by the freedman Mughīth at the beginning of 93/Oct. 711 and Toledo fell without resistance. Mūsā b. Nusayr, anxious not to leave to Tārik alone all the prestige of the conquest, entered Spain shortly afterwards, in another as rulers of the newly-conquered territory which a number of governors succeeded one 2. Ayyūb b. Habib al-Lakhmī (97/716), for six months.

5. ʿAmbasa b. ʿSuḥaym al-Kalbī (102-107/721-726).

6. ʿUḍhra b. ʿAbd Allāh al-Fihrī (107/726).

8. ʿUḍhayfa b. ʿAbd Allāh b. al-Kālsī (110/728).

15. ʿAbd al-Malik b. ʿAbd Allāh al-Kaṭān (for the second time) to 123/741.

20. Yūṣuf b. ʿAbd al-Rahmān al-Fihrī (129/746-130/756), one of the proclamation of ʿAbd al-Rahmān III.

Bibliography: (For 1 and 2): Sources and bibliography listed in detail in Lévi-Provençal, Hist. Esp. mus., i, p. 8, note 2, Ibid., 1-89, contains a detailed account of the conquest and the period of the governors. Cf. also Dozy, Recherches, i, 1-83; E. Saavedra, Estudio sobre la invasión de los árabes en España, Madrid 1892.

3. The Marwânīd Kingdom of Cordova. (138-300/756-912). The circumstances attending the arrival in Spain of the Marwânīd pretender ʿAbd al-Rahmān b. Muḥāwiya, which enabled him to rally to his cause a large number of clients and partisans of his family and eventually defeated the governor Yūsuf b. ʿAbd al-Rahmān al-Fihrī near Cordova, where he was proclaimed amir of al-Andalus on 20 Dhul-Hijja 138/15 May 756, are narrated in the article on this prince (see ʿAbd al-Rahmān I).

List of amirs of al-Andalus up to the proclamation of ʿAbd al-Rahmān III

2. Hīshām I b. ʿAbd al-Rahmān I, born 139/757, amir 172/288 to his death, 3 Safar 180/17 April 796.

4. ʿAbd al-Rahmān II b. al-Ḥakam I, born 176/792, amir 206/822 to his death, 3 Rabī' II 238/22 September 852.

7. ʿAbd Allāh b. Muḥammad I, brother of the latter, born 229/844, amir from 275/888 to his death, 1 Rabī' I 300/16 Oct. 912.

Among the noteworthy features of this period of the Marwânī amirate of al-Andalus, which lasted more than a century and a half, are the introduction
of the Mālikī madhhab into Spain during the peaceful reign of Hishām I, and the efforts of the amirs throughout almost the entire period to deal with the revolts instigated in the Marches by the Berbers, the Arabs and the muwallads, and to wage a holy war on the frontiers of the Kingdom. The attempts made against al-Ḥakam I (in particular the famous "revolt of the Suburb") on several occasions placed him in a dangerous position. Moreover the Reconquista, as a result of the aggressive spirit of the first Asturio-Leonese princes and the Franks of the Spanish March, gradually gained ground (final recapture of Barcelona).

The internal crisis was relieved for a time by ʿAbd al-Ḥaḥān II [q.v.], who fought simultaneously against the Franks, the Gascons and the Banū Kasi [q.v.] of the Ebro valley, crushed the Mozarab revolt at Córdova [850-9], and threw back into the sea the Norsemen (Urdummiṭiyān or Madāṣiḥ) who had landed on the coast of Seville. This great ruler, who broke with the "Syrian tradition" introduced into Spain by his great-grandfather ʿAbd al-Ḥaḥān I, organized the state of the Ābbāsid model.

His work was continued by his son Muhammad I. At the end of whose reign, however, occurred the recorded insurrection of ʿAbd al-Ḥaḥān b. Marwān b. al-Djilïlī [q.v.] and the rising of the whole of southern Andalusia under ʿUmar b. Ḥāṣūn [q.v.], whose revolt continued during the following reigns; further, during the reign of the amir ʿAbd Allāh, serious fighting broke out between Arabs and muwallads in the Elvira and Seville regions.

His reign of fifty years represented not only the high-water mark of Marwānī rule in the Peninsula, but also the most flourishing period in the Muslim history of al-Andalus. On the death of ʿAbd al-Ḥaḥān, 22 Ramadān 350/4 November 961, he was succeeded by his son al-Ḥaḥān II, who was already nearly fifty years old, and who reigned until his own death on 3 Safar 366/8 October 976. The latter's reign was also a successful and prosperous one. Cordova, in the words of the Saxon poetess Hroswitha, was the "ornament of the world", and at the same time, under the stimulus of a prince like al-Ḥaḥān II, who was a man of letters and a bibliophile, one of the most active centres of philological, literary and juridical culture in the entire Muslim world at that time, Christian Spain requested his arbitration, and the Reconquista seemed finally to be checked.

When he died, al-Ḥaḥān II only left as his successor a young son unfit to rule, Highām II, born in 354/965 of the union of the Caliph with the Gascon umm walad ʿubb. Once the palace intrigues were frustrated, the way was clear for a man of ambition and energy, who soon seized the reins of power and directed the destinies of the Caliphate with a dictatorial hand: the celebrated "major-domo" Muḥammad b. Abī Ṭājir, the future al-Ḥaṣān [q.v.]. The stages in the brilliant career of Ibn Abī Ṭājir, who speedily led him to the highest honours, will not be recounted in detail here. But this highly-talented politician showed himself also to be a general and a strategist who was both able and successful in his undertakings. He mounted successive attacks in the dīnāʾīd against the Christian kingdoms to the North, inflicted on them severe defeats and even succeeded in capturing and destroying the famous sanctuary of Saint James of Compostela (Santiago, Ṣaṅṭ Ṭābūb) in the course of his campaign of 387/997 against Galicia. Al-Ḥaṣān died at Medina (Medina Sahīlī) on his return from a final campaign to North Castle, on 27 Ramadan, 399/9 August 1002. He left Muslim Spain intact and, following ʿAbd al-Ḥaḥān III and al-Ḥaḥān II, had even been able to extend Andalusian political influence over the whole of western Barbary.

One of al-Ḥaṣān's most skilful achievements was to respect throughout his life the external trappings of the Caliphate and to keep intact certain of its prerogatives on behalf of his nominal master Highām II. The latter bequeathed the same powers of "major-domo" or hāḏīb to the favourite son of al-Ḥaṣān, ʿAbd al-Ḥaṭīm, who succeeded his father and adopted the honorific surname of al-Muẓaffār. He remained in power until his death in 399/1008 see ʿAbd al-Ḥalīm b. Abī Ṭājir for the details of the history of his "septem". On 22 Ramādān 399/22 March 999, the Caliph al-Ḥaṭīm b. Abī Ṭājir and his replacement by his brother ʿAbd al-Ḥaḥān ushered in a period of disastrous disorders in the Spanish Caliphate which soon brought about its downfall.

5. The collapse of the Marwānī Caliphate and the partition of the Kingdom of al-Andalus. The military policy of al-Ḥaṭīm had resulted in the introduction into Muslim Spain of a large number of mercenaries of North African Berber origin who, after his death and that of his successor, formed a centre of agitation against the Andalusians themselves and against the powerful Slav bloc. The train was fired by the insane desire of ʿAbd al-Ḥaḥān Sanchuelo to have himself designated heir-presumptive to the throne by the Caliph Highām II (Rabiʿ I 399/November 1008). This designation was extremely badly-received at Cordova and, following a plot against him, the ʿAmīrīd hāḏīb was executed by the supporters of the Marwānī pretender Muḥammad b. Ḥišām b. ʿAbd al-Ḥaṭīm b. ʿAbd al-Ḥaṭīm near Cordova on 3 Raḍāb 399/3 March 1009 (see ʿAbd al-Ḥaṭīm b. Abī Ṭājir, Amīr)

From then on, the Kingdom of Cordova went through a period which was fatal to its destinies; pretenders and counter-pretenders, supported by the Berbers or by the enemies of the Berbers, hastened the ultimate downfall of the Caliphate.

List of the last Caliphs of Cordova

Hamudid Caliphs

The Andalusian, Slav and Berber "factions" (†adayiwa, pl. †anawid) did not wait for the collapse of the Cordovan caliphate before splitting up the territory of al-Andalus into a multitude of small states, most of which had only an ephemeral existence and among which emerged only a few large political blocs, the Kingdoms of the Abbadids of Seville, the Almohads of Badajoz, the Zirids of Granada, the Hudhul-NuNids of Toledo and the Hudids of Saragossa.

Bibliography: Lévi-Provençal, Hist. Esp. mus., ii, 291-341 (and bibliography quoted on p. 291, note 1); and see HAMMUDIDS. For 3-5 see UMAYYADS.

6. The Kingdoms of the †adayiwa up to the battle of al-Zallaka. The history of Spain in the 11th century is characterized by the vigorous efforts of the Reconquista, stimulated by energetic and enterprising Christian monarchs who were more and more conscious of the necessity of re-establishing national unity at the expense of Islam. The internal history of the Kingdoms created by the dismemberment of the Spanish Caliphate is particularly dull and devoid of interest. As portrayed by the chroniclers, it presents a picture of constant turmoil—oppressing interests, rivalries and perpetual disputes, through which it is not always possible to trace a guiding thread. The ethnic groups, to which belonged the dynasties which outlived those which were rapidly absorbed by their more powerful rivals, joined issue with one another. Andalusians fought against Berbers, and Slavs fought against both. Before long there was no hope of restoring the Caliphate, and the increasing weakness of each of these states only whetted the appetite of the Christian monarchs, who levied heavy tribute from them: this policy was followed particularly by King Alfonso VI, who succeeded, by skilful diplomacy, in effecting the peaceful occupation of Toledo (1085) and in making himself the arbiter in disputes between the muluk al-tawdi'if.

The danger became so great that, whether they wished to or not, the muluk al-tawdi'if were forced to seek help from the Almoravids. The turning point came with the intervention of North African troops led by the amir Yusuf b. Tashhufin, who defeated the forces of Alfonso VI at Saragossa (al-Zallaka [q.v.]) on 22 Rajab 479/2 November 1086. This victory was not followed up, and Yusuf b. Tashhufin, soon wearying of the spectacle of the disunion of the Andalusian kings and their compromises with the Christian monarch, dethroned them one after the other and simply annexed the greater part of al-Andalus to his dominions. From that moment, Muslim Spain was only the vassal of the Magrib.

Bibliography: See the usually accurate lists given by A. Prieto y Vives, Los Reyes de Taifas: estudio historico-numismático de los Musulmanes españoles en el siglo V de la heégira (XI de J. C.), Madrid 1926. See also Dozy, Hist. Mus. Esp., vol. iii; A. Gonzales Palencia, Hist. de la Esp. mus., 54-69; and Abbaiids, Aftaisids, Almoravids, Almohads, Andalusi, Timurids, etc.; for a list of the dynasties of the †anawid cf. Muluk al-tawdi'if.

7. Al-Andalus under the Almoravids. The Almoravid occupation of Muslim Spain was completed by the recapture of Valencia (495/1102), which had fallen into the hands of the Cid Campeador Rodrigo Diaz in 478/1085, and by the surrender of the Hûdî capital of Saragossa on the death of al-Musta’in (503/1108). Al-Andalus then experienced, despite the domination of society by the jâhîlds, several decades of prosperity, marked by the indisputable successes of Almoravid arms (victory of Uclés in 502/1108) which, however, were unable to recapture Toledo. Saragossa itself fell in 512/1118 into the hands of Alfonso the Warrior. Christian pressure on al-Andalus increased, and achieved the greater success because the son and successor of Yusuf b. Tashhufin, ’Ali, threatened in Morocco itself by the Almohads, soon became incapable of offering serious resistance to the manifestations of revolt which were appearing on all sides. The time was ripe for another change of masters in al-Andalus. [See Al-Murabitûn.]

8. Al-Andalus under the Almohads, and the progress of the Reconquista. After a period of thirty years, in the middle of the 12th century, during which certain movements took shape to weave a new pattern of “Kingdoms of †anawid”, al-Andalus submitted to the authority of the Mu’mînîn dynasty of Morocco. The Almohads maintained for nearly a century an increasingly precarious grasp on those parts of the Peninsula which still belonged to Islam. The Reconquista won back more territory each year. In Catalonia, Ramón Berenguer IV occupied successively Tortosa and Lerida, but the chief architect of the Reconquista was King Alfonso VIII of Castile (1158-1214), who gained possession of Silves, Evora, and Cuenca. The Muslim victory at Alarcos (al-Arâk), won by the Almohad Caliph Abu Yusuf Ya’kub, 8 Shawwâl 591/18 July 1195, had no lasting effect. Less than fifteen years later, the Christian coalition, comprising troops from Castile, Leon, Navarre and Aragon, inflicted a crushing defeat on the Muslims at Las Navas de Tolosa (al-Lahabo), 15 Safar 609/17 July 1212, which was followed by the fall of Ubeda and Baena. The capture of Cordova occurred less than a quarter of a century later, followed by the capture of Valencia by Jacques I of Aragon (636/1238) and of Seville by Ferdinand III (646/1248).

Bibliography: See al-Árak, al-’Ibâb, Ishbi-Iviya, Balânsiya, Kurštûba, Mu’mînînids.

9. The Nasrid Kingdom of Granada and the conclusion of the Reconquista. For a further two and a half centuries the “Kingdom of Granada”, despite successive amputations, continued to be the only territory on the Iberian Peninsula still under the authority of a Muslim ruler; bounded by the Mediterranean from Gibraltar to Almeria, this kingdom did not extend inland beyond the mountain massifs of the Sierra of Ronda and the Sierra d’Elvira. The ancestor and founder of the Nasrid dynasty (or Banu ‘l-Ahmar), Muhammad I al-Ghalib biMullah, took possession of Granada in 635/1237-8 and organized the fortress called al-Hamrá, the Alhambra, as a royal palace; at the same time, he agreed to become the tribute-paying vassal of the King of Castile, Ferdinand I, and then of his successor Alfonso X. Henceforth the policy of kings of Granada was to try to achieve a precarious balance in their alliances concluded either with the Christians, or with the Mârînids of Morocco, who intervened militarily on Andalusian territory and occupied certain points such as Tarifa. Moroccan co-operation was gradually proved to be illusory:
the sultan Abu '1-Hasan suffered a grave defeat on the Río Salado (741/1340). Granada still retained some of the prestige of a capital by virtue of its monasteries and literary gatherings, in which men like Lisán al-Din b. al-Khāṭirī were conspicuous. In the following century, with the advent of the Catholic Kings, Ferdinand of Aragon and Isabella of Castile, the Christian offensive became co-ordinated and was conducted on a wider scale. Loja fell in 1486, Vélez-Malaga, Malaga and Almería the following year, Baza in 1489, and Granada eventually surrendered to the Catholic monarchs on 2 Rabī‘ I 897/January 1492.

**Appendix: the “Andalus” in North Africa**

As a generic term al-Andalus is especially well known in the North African context where it denotes that element of the Islamic population which derives its origins from Spain. Generally speaking, the Andalusian element only appears in relief from about the end of the 15th century, but here we have to do with nothing more than the culmination of a long historical trend.

In the course of Hispano-Islamic history emigration to the Maghrib not infrequently served the inhabitants of al-Andalus as a means of escape from internal crisis. Andalusian commercial and external interests also played a great part in bringing Hispano-Islamic elements to the littoral of the Western and Central Maghrib.

From about the middle of the 12th century, when Muslim disasters in Western Andalusia sent a stream of emigrants to Kāṣr al-Kutāma (al-Kāṣr al-Kabīr), the advance of the Reconquista was to prove an increasingly important, though by no means the sole cause of emigration to North Africa. With the protracted disintegration of Islamic Spain emigration progressed sporadically until the 15th century when the critical events which foreshadowed the fall of Granada marked the beginning of what was to prove a veritable diaspora, of which North Africa and Morocco gained the most appreciable effects. By the end of the 16th century the number of Andalusian expatriates on Maghribi soil was such that they could be accounted an important minority of its population.

The advent of the 17th century brought new developments and it is not long before we see the outcome of the general expulsion of the Moriscos. From their ports of disembarkation large numbers are said to have made for Fez and Tlemcen, from where others succeeded in joining their compatriots at Algiers, and in Tunisia, where a policy of immigration was actively encouraged by Ummān Dāy, the influx was considerable.

The Andalusians thus established in 17th century Tunisia a fairly detailed picture can be drawn. Their case is somewhat different from that of their 13th century precursors who are best known for their great political role in the Ḥafṣid state. Appearing as a highly organised and exclusive community under a supreme head (gāyybh al-Andalus), they seem in their village communities to have enjoyed certain legal rights together with a large measure of independence in local government. The monopoly of a highly successful and well organised ḍā’īyya industry enabled them so to modify the economic system that the amin al-shawwāṣa became de jure amin of commerce, presiding over a commercial tribunal to which all corporations were subject and whose members were, with only two exceptions, recruited from the Andalusian gāyybhā. In the agricultural field Andalusian skill, fostered by the enlightened Ummān Dāy, was turned to the exploitation of the fertile north, where the Moriscos ably applied their knowledge of irrigation and the techniques of husbandry to arboriculture and market gardening. During the 16th and 17th centuries the introduction and traffic of raw silk as well as the manufacture of stuffs, fabrics and embroidered goods were great specialities of the exiles. At Algiers, for instance, the silk industry was very much in their hands and contributed much to the wealth of the city. Much, on the other hand, that they might have contributed to the Maghrib was lost. In Morocco, for instance, the Shā'īds sought mainly to exploit them as a military force. For the rest, their occupation with piracy, and the slave trade must have accounted for the disappearance of traditional skills. Their traces, however, still survive in many spheres and many North Africans proudly proclaim their Andalusian origin which is in many cases apparent from their patronymics.

(vii) ISLAM IN AL-ANDALUS

Al-Andalus was always a stronghold of Malikism and a centre of orthodoxy from the beginning of the 9th century, when the madhab of Medina was adopted and supplanted that of al-Awza'i. During the Marwânid period, as the new madhab had the official support of the rulers of the country, there was no possibility of the implantation of other rites, and all Khârijî or Shi'i tendencies were suppressed in their early stages; the Andalusians could only direct their legal and theological activity towards the elaboration of manuals of ji'ah, and to a permanent attachment to the method of tabâa. In the 3rd-4th/9th-10th centuries, however, there is apparent an infiltration, admittedly slight, of the Shafi'i and Zahirî schools, the latter represented in Spain by the bard Mundhir b. Sa'id al-Ballî (d. 335/946) until it found its "standard-bearer" in the person of the famous Ibn Ḥazm [q.v.]. Similarly, there is apparent at certain periods a certain spread of Mu'tazilism, which corresponded to a revival of ascetic tendencies, whose principal representative was the Cordovan philosopher Ibn Masarra [q.v.] (d. 319/931).

The representatives of Andalusian Malikism whose names and sometimes works have come down to us are legion. Nearly all of them have received biographical notices in the collections printed in the Bibliotheca arabico-hispana. After the fall of the Caliphate, jurisprudence was held in even greater esteem than before, and the social class of the faqih frequently formed the most influential and active section of the population, especially under the Almoravides. From a doctrinal point of view, al-Andalus was scarcely affected by Almohad propaganda, and Malikism reigned supreme up to the end.

(vii) ANDALUSIAN LITERATURE AND CULTURE

See 'Arabiyaa, B, Appendix.

(ix) ANDALUSIAN ART

The Iberian Peninsula, by virtue of its geographical position, which encloses the western end of the Mediterranean, and by reason of its predominantly Mediterranean characteristics, has been since ancient times an area favourable to the germination of Oriental influences. Possession of a common religion and a common language, the two factors, says Sarton, which constitute the strongest bond between peoples, strengthened relations between the two regions, relations which benefited also by the religious obligation of the pilgrimage to Mecca. Artistic trends and forms reached the Iberian Peninsula from the Orient over a period of eight centuries; some of these were developed to a greater degree and extent than in their country of origin. In Hispanic art there are echoes of the art of Byzantium and its cultural zones, of Syria, Mesopotamia, Persia, Egypt and Irîfiyya. In Syria as on Iberian soil, the art of the Middle Ages was modelled on the pattern of the art of Imperial Rome. The coincidence of certain forms in the works of these two countries points sometimes to their common origin and not to a direct relationship between the two. But, whereas in the eastern Mediterranean, civilisation developed without interruption from the first centuries of the Christian era and during the first centuries of Islam, the Iberian Peninsula, and the West as a whole, experienced grave crises and a considerable decline in its standard of civilisation.

We do not know many details of the transition from Visigothic Spain, whose lack of homogeneity and decadence are shown by its feeble resistance to the invaders, to Spain under Islamic domination. In the artistic sphere, works and remains of this obscure period and of the subsequent Islamic periods are lacking, with the result that in many cases the gaps must be filled by guesswork.

The art of al-Andalus developed with an original and distinctive character of its own. During the period of contact with the Orient, between the 2nd/8th and 9th/15th centuries, certain monuments of incomparable beauty, perfection and originality, such as have been preserved in no other Muslim country, were built there: the mosque at Cordova, unique both for its complex and skilful construction and for the richness of its decoration; the palaces of Madinat al-Zahra', whose art and magnificence have never been surpassed; the Aljaferia of Saragossa, a palace of extraordinary originality and decorative profusion, the reconstruction of which is being undertaken at the present time; the Giralda tower, a monumental minaret which is one of the most beautiful in the Islamic world; and, finally, a huge palace, the Alhambra of Granada, wonderfully preserved despite its extreme fragility, in which architecture and the natural beauties of water and vegetation have combined to create one of the most inspiring scenes in the world.

Architecture

Umayyads. In default of older buildings, the study of Islamic architecture in al-Andalus must start from the oldest part of the Cordova mosque, built by 'Abd al-Rahmân I between 166 and 170/784-6, i.e. three-quarters of a century after the invasion and conquest of the Peninsula. By the time of the death of this amir, only the finishing touches remained, and these were executed by his son Hishâm (172-180/788-96).

This early oratory occupies the N.-W. portion of the building, which is still preserved to-day. The mosque is rectangular, with stone walls, divided into eleven aisles running North to South, perpendicular to the kibla wall, the central aisle being larger than the others. The aisles are separated by marble columns deriving from Roman or Visigothic buildings. On the capitals rest square impost blocks, which in their turn carry rectangular stone piers, the overhang being supported transversely by means of corbels and terminating above in an impost. The piers are linked longitudinally by two ranges of arches; the lower arches, horseshoe-shaped, are suspended and support nothing; above, a second range consisting of semi-circular arches, springs from the impost and supports the walls. By this method of construction it was possible to erect a huge building on slender columns, making the maximum use of the interior space and, for the faithful, ensuring a good view of the imâm leading the prayer. Owing to the fact that the width of the supports was
increased in proportion to their height, it was possible to support the roofs and to place rain-water gutters in the thickness of the walls.

The method of construction with double superimposed arches, which gives the Cordova mosque an original beauty and a unique character in mediaeval architecture, is not found in any other mosque. In the other hypostyle mosques, the arches separating the aisles are supported by means of wooden beams which give them the appearance of temporary constructions. It is astonishing to find in Cordova in the second half of the 8th century such a perfect structure, in view of the apparent lack of architectural ability which is suggested by the use of columns originating from earlier buildings.

Repeated attempts have been made to establish the origin of these forms. The system of double arches could be inspired by Roman architectural works, for example aqueducts. Stone was used as constructional material in Syrian architecture, but also in Visigothic architecture in Spain. The arrangement of the ashlar alternately as stretchers or as piers is frequently found in Roman buildings of the East and the West, which have inherited it from Greek buildings. Visigothic architecture made more general the use of the horseshoe arch, specimens of which are found in Roman and eastern Islamic architecture, although fewer than in the Peninsula. The alternate use of stone and brick in the voussoirs of the arches was frequent in Roman architecture, from which it passed into Byzantine architecture.

The originality of the mosque of 'Abd al-Rahmân I resides in the plan and general arrangement of the building, with its numerous parallel aisles, the central aisle being larger, as in the eastern mosques, and perhaps also in the wall buttresses and probably in the stepped crenellations which crown them.

The growth of the population of Cordova, in the reign of 'Abd al-Rahmân II (206-38/822-52), necessitated the enlargement of the mosque. By demolishing the mihrâb and piercing the kibla wall, the aisles were extended southwards. The portion added follows the lines of the earlier work, but, among a larger number of capitals originating from earlier buildings, there are eleven which were finely cut for the purpose and were inspired by classical models, and four, from the mihrâb, which were later transferred to that of al-Hakâm II. The latter are not inferior to the finest Roman capitals, and are evidence of the existence of a workshop of selected artisans. These works were commenced in 218/833; the first prayer before the new mihrâb took place in 234/848, but the work was incomplete at the death of 'Abd al-Rahmân II. His son and successor Muhammad I completed them in 241/951, a date which appears in an inscription on the St. Stephen door, whose bevelled decorations, inspired without doubt by Roman mosaic motifs, are of the Byzantine type of Roman architecture.

'Abd al-Rahmân III (300-50/912-61), left in the Great Mosque a memorial of his long and glorious reign, by constructing in 340/951 a new and monumental minaret, of square section like the Syrian minarets.

In 326/936, 'Abd al-Rahmân III, proclaimed caliph, began the construction of the royal city of Madinat al-Zahrâ', at the foot of the Sierra, less than five miles from Cordova. The work proceeded until 365/976, a period of forty years, during which the grandeur and power of the Andalusian caliphate reached their zenith, as is witnessed by the disfigured ruins of the palaces of this city, the seat of the court and officialdom, and by the enlargement of the Cordova mosque at the initiative of al-Hakâm II. The portions of Madinat al-Zahrâ' until now brought to light are the ruins of stone buildings—dwellings, offices and reception halls, the last-named situated at the end of patios and consisting of several parallel aisles, separated by horseshoe arches on columns, following a basilica-type arrangement common in the East. For its decoration, the two caliphs, fired by the ambition to construct buildings of exceptional splendour and richness, imported materials and skilled craftsmen from the other end of the Mediterranean. The roofs and ceilings have gone—Madinat al-Zahrâ' was sacked and burnt several times during the early years of the 11th century and later served as a quarry up to a recent date—but there remains part of the stone and marble surfaces of the walls of many of the rooms, numerous columns and capitals of the same materials, and pavements of stone, marble and brick. The richly decorated surface of these buildings was entrusted to workshops of skilled craftsmen, some of whom came from the eastern Mediterranean; they possessed different training and different techniques for the working of stone and marble, but were especially familiar with the general characteristics of two-dimensional reliefs with vegetal motifs (there are a few simple geometrical motifs, of Byzantine origin), the majority far-removed from the vine and the acanthus motifs which derive from them. A magnificent hall, discovered in 1944, and at present in course of reconstruction because among its ruins were found many reliefs from the decorated surfaces of the inner walls, was decorated from 342 to 345/955-7.

The same craftsmen from the palaces of al-Zahrâ' worked on the enlargement of the Great Mosque at Cordova; this work, initiated by al-Hakâm II, was put in hand in 350/961, and the principal part was completed in 355/966. Workers in mosaic, requested from the emperor of Byzantium, had a hand in its decoration. An Oriental influence is also noticeable in the four vaults of intersecting arches in the extension, although no comparable example of an earlier date has yet been discovered in the East. The increase in the height of the walls of some bays in order to form vaulted lanterns probably comes from the mosques of Ifrikiya of the 9th century, although the vaults of the latter are of Byzantine origin. The arches, intersecting equally, but in plan and not in space, form an open lattice-work which, by an ingenious and skilful constructional technique, supports the cupolas. Some of the arches are cusped and 'Abbâsid in origin; there are also a number of broken arches. The former were, from then on, combined with intersecting arches, one of the favourite themes of Hispano-Muslim art, used purely as decoration—following a process common to all Islamic art, but in al-Andalus carried to its ultimate conclusion.

In this extension, which dates from the reign of al-Hakâm II, and which in fact constitutes a new mosque contiguous to the original, decorative forms of an incredible richness blend with a magnificent blaze of colour to cover the walls and the vaults, composed of vivid mosaics, with arabesques (atârique, al-tauârikh), the majority of cut stone, with the background painted red and inscriptions in other kinds of blue, and various motifs of the Byzantine and pedestals. The mosque of al-Hakâm II, like the hall of 'Abd al-Rahmân III at al-Zahrâ', illustrates an art utilising its resources to the full, at its peak,
which, without parallel in the contemporary West, is an expression of the grandeur of the Cordovan caliphate.

The third and final enlargement of the Great Mosque was due to the initiative of the powerful al-Manṣūr, the minister of Hishām II, and was carried out between 377-80/987-90. It maintained the unity of the whole by repeating once more, as regards the engaged piers and the arches, the construction of the originals, without any novel feature, and inferior in richness and style. The doorways reveal a process of unification of the great variety of decorative techniques displayed at Madinat al-Zahrā', but the result is heavy and monotonous.

Few traces remain of the work executed during the period of the ḥā'i/s as in the 5th/11th century. In the mosques, on the evidence of the texts and such traces as remain, the division into aisles perpendicular to the kiblah wall by means of horseshoe arches on columns, is repeated. The princes of the ḥā'i/s built palaces rather than religious edifices. They could not rival their predecessors, rulers of a unified Spain, in power or wealth but they tried to imitate, at least in appearance, their splendid residences. In place of the solid stone walls of Madinat al-Zahrā', they erected walls of clay and brick. The surfaces of stone and marble, as in the Alcazaba of Malaga, by wooden columns. The polychromy conceals the poverty of the interior under an ephemeral display of richness and luxury. The reduction in grandeur and solidity, and the lack of architectural greatness, were compensated for not only by the more agreeable and picturesque aspect of the 5th/11th century buildings, but also by the introduction of running water in the halls and patios, and by the use of plants in the patios, doubtless as a result of an Oriental influence, perhaps via Ifriqiya.

The decorative art which sought to conceal the structural poverty of these palaces was a direct successor of the art of the caliphate but with an evolution towards the baroque, essentially Hispanic, by the transformation of the architectural elements of Cordova and Madinat al-Zahrā' into other purely decorative elements, consisting of involved and complex designs and profuse ornamentation.

A work which is highly characteristic of the art of the ḥā'i/s is the palace built in the immediate vicinity of Saragossa by al-Muqtadir b. Hād (441-74/1049-81).

The 6th/12th century, i.e., the period of Almoravid and Almohad domination in al-Andalus, was one of the most fruitful periods of Western Islamic art, and at the same time one of the periods in which there occurred the greatest assimilation of forms originating from the eastern Mediterranean.

The Almoravids, Berber nomads from Africa, without a cultural tradition, remained on the fringe of the artistic trend. But the political union of Muslim Spain and Barbary for a period of just over a century (the 6th/12th and the first years of the 7th/13th), at first under the Almoravids and then under the Almohads, resulted in the spread of Andalusian art across the Straits of Gibraltar, into regions with a mainly rural civilization and without large urban centres. [Cf. AL-MURĀDIṬUN (section on art)].

The construction of the Almoravid mosques shows changes as compared with the earlier Hispanic mosques, probably as the result of Mesopotamian influence. In place of the columns which had hitherto separated the aisles, they built brick pillars; this resulted in increased stability, enabling them to do away with the wooden tie-beams, but also in a loss of space and in reduced visibility. Compared with a hypostyle oratory, an oratory with brick pillars always seems heavy and monotonous.

No Almoravid mosque has been preserved in al-Andalus. The Great Mosques of Tiemcen and Algiers, originally devoid of decoration, were built probably in the last years of the 5th/11th century, before Andalusian influence reached the African shore. This occurred during the reign of 'Ali b. Yūsuf (500-37/1106-43), during which the mosque at Tiemcen was enriched with splendid and profuse Hispanic decoration, which covers the surface of the mihrāb as well as the walls and the cupola of the bay which precedes it. This decoration, according to an inscription in cursive letters which forms part of it, was completed in 530/1136. About 529/1135, 'Ali b. Yūsuf enlarged the al-Karawiyin Mosque at Fez, still closed to non-Muslims, in which there are intersecting arches obviously of Cordovan origin, and vaults formed by stalactites (called mocárabes in Spanish), originating from Persia or Ifriqiya, which span some of the bays. Its amazing perfection shows that this was not one of the first experiments with these imported elements.

The most characteristic Almoravid work of the decorative style is the Kubbat al-Barudiyyin of Marrākush, built probably between 514 and 526/1120-1130. The central portion of this small rectangular building is covered by a small cupola of curved brick. Within, eight arches intersect, in a fashion similar to those of the cupola which covers the bay in front of the mihrāb in the mosque at Cordova. These arches are mistilinarian in the Marrakesh specimen, composed of cusp curves and right-angles, and the surfaces contained between their springings are covered, like almost all the others, with delicate plaster arabesques, around large scallops. This is a Hispanic work of extraordinary richness and unusual imagination; it expresses in an eloquent manner the anti-classical tendency to fragmentation and decorative excess which breaks out periodically in the course of the history of Spanish art.

The Almohads who, like their predecessors, lacked a cultural tradition, and were governed by their fundamental asceticism which condemned all luxury and all excess, as befitted a movement purporting to restore the purity of early Islam, influenced artistic evolution by placing severe restrictions on ornamentation, which was reduced to basic essentials, with precise and well-defined lines, on large, plain backgrounds. [Cf. AL-MUWAHIDŪN, section on art]. As no Almohad oratory has survived in Spain, we do not know whether these characteristics extended to them also; the remains of the Great Mosque at Seville, completed during the reign of Yaʿqūb al-Manṣūr (572-94/1176-98), lead one to suppose that they displayed richer decoration than those preserved in the Maghrib.

The Almohads influenced artistic evolution in other respects as well. Inspired by the memory of the past greatness of the Cordovan caliphate, as witnessed by its buildings, they built huge, symmetrical and well-planned mosques, solid, tall minarets, and great city gates, veritable triumphal archways in honour of the dynasty.

In the remainder of the Almoravid and Almohad palaces there appear two types of patios which later reached an extraordinary pitch of development in the art of Granada: the court with two transverse
pathways forming four squares of vegetation, with projecting pavilions on the shorter sides (El Castillejo, in the Vega of Murcia), and the type with a portico on one or two of its sides (the Yeso, in the Alcazar of Seville).

Almohad military architecture uses, in al-Andalus, arrangements deriving from Byzantine architecture and as yet unknown in the West. For instance, the bent gates (walls of Badajoz, Seville and Niebla); the barbicans; the polygonal towers (Cáceres, Badajoz, Seville) and other towers outside the walls (Cáceres, Badajoz, Écija). With the stalactites, there arrived from the Orient cursive epigraphy (plaster decorations of the Mauror at Granada, and of the Castillejo at Murcia), and glazed or varnished ceramics used for exterior architectural decoration, of which the first example known in Spain is in the Torre del Oro at Seville (617/1220-21).

After the collapse of the Almohad empire, the last foothold of Islam in Spain was the tiny Kingdom of Granada, established a little before the middle of the 7th/13th century. The universally famous palace of the Alhambra at Granada, and nearly all the other buildings remaining from this final period, are not earlier than the 8th/12th century.

Nasrid [see NÁŠRIDÉS] or Granadan art, is a brilliant final phase of Islam in the Peninsula, which maintained its position partly on the fringes of official dynastic Almohad art, enriched by the legacy of the latter and by a few importations from the East, without forgetting the changes wrought by the inexorable march of time. It also represented, in its decorative aspect, the revival of the national tradition of dense, flat and fine ornamentation, after the brief Almohad deviation; the extent to which the latter spread through Spain is not known.

The craftsmen of Granada adorned the last days of a moribund civilisation with the most exquisite examples of what human genius and art can produce in the decorative field. With poor and fragile materials, they created large, strong, plain masses and severe, purely architectural volumes, like the Tower of Comares and the Gate of Justice, in the Alhambra, compositions as serene, harmonious and original as the patio of the Alberca, and cleverly planned interiors, such as those which are arranged in echelon from the Lions' Court to the platform of Daraja, in the royal palace at Granada. At the same time they constructed fortifications which are more important than the Hispano-Almohad ones which have been preserved, and Granada was enriched by public buildings, houses and palaces embellished with exquisite art. From modest residences to the royal palaces which surrounded the city, every building had its patios, fountains, cisterns, pavements of brilliant coloured tiles, plaster decoration and skilfully-assembled wooden roofs.

It is in the royal palace of the Alhambra, miraculously preserved despite its great fragility, that the art of Granada acquires its characteristics of magnificence and grandeur. The patios of the Alberca and of the Lions, built in the middle of the 8th/14th century, are the development in the al-Andalus, commencing at least from the 4th/10th century, was of extraordinary richness and perfection. "The most skilful craftsmen", wrote an 8th/14th century historian, "agree that the minbars of the mosque at Cordova and of the Kutubiyya at Marrakush are the finest in existence; Orientals, to judge from their works, are not experts in wood-carving". According to al-Idrissi, the minbar of the Great Mosque at Cordova is without equal in the world; it was made in the reign...
of al-Ḥakam II. It is described as an incomparable example of the cabinet-maker’s art, with inlays of ivory and fine woods.

The minbar of the Kutubiyya was made at Cordova between 534/1140 and 538/1144. It is covered with a delicate ornamentation of geometric interlacing figures in marquetry, consisting of small pieces of rich woods of various colours, bordered by fine lamellae of ivory; exquisite wood-carving fills the spaces between the traceries.

One of the greatest artistic glories of the caliphate was the caskets and jars of ivory (ṣafājī [q.v.]), whose antecedents must be sought in the sphere of Byzantine culture. They were in the court workshops during the 4th/10th century and the first half of the 5th/11th, Arabesques are the predominant feature of their ornamentation, although there is no lack of representations of animals and human beings, whose Mesopotamian origins go back to eras well before Islam.

Ceramics also achieved a singular development in al-Andalus [cf. Ṣafājī]. During the period of the caliphate were manufactured what are known as “ceramics of Madinat al-Zahrāʾ”, or of “Medina Elvira”, because numerous examples have been found in the ruins of these two cities. On a white background, the decoration consisted of patterns in green (oxide of copper) outlined in dark brown (manganese). These ceramics are of Byzantine origin, but they developed independently in al-Andalus.

From ʿIrāk and Iran came the immensely rich gold faience. There is evidence of its manufacture in al-Andalus from the 5th/11th century; it may be earlier still. This luxury technique reached its greatest development and perfection in the 8th/14th century, with productions which were exceptional for their shape and richness, such as the superb vases of Malaga, the pride of those museums and collections which possess the rare specimens which have been preserved. Some have only decoration in gold; in others, gold ornamentation is combined with blue. From the 4th/10th century, we have fragments of ceramics with the colours separated by thin outline plates (cuerda seca), which appear to be of Spanish manufacture; on the other hand, engraved pottery, without glazing, only appeared, it seems, in the 6th/12th century.

Several specimens of the famous “baldachins”, imported from Baghdād, which mark the peak of mediaeval silk-manufacture, are preserved in Spain. ʿṢārīṣo (Syrian) and Graecisco (Byzantine) fabrics, mentioned in numerous documents of Christian Spain of the 4th/10th and 5th/11th centuries, are evidence that the rich fabrics emanating from the Orient reached Spain.

At Seville and Cordova, there were in the 4th/10th century workshops producing ṣirāz, i.e., silk fabrics and brocades designed for ceremonial robes. Fabrics and robes were among the best-appreciated gifts. At the time of the Almoravids, the looms of Almeria were famous. During that period, the Byzantino-Sasanid tradition of decoration was still in force; it consisted of tangential circles with representations of animals arranged symmetrically inside, following the technique and the style of the ʿAbbāsid capital. The Almohad sovereigns suppressed the ṣirāz. The circle then disappeared from silks, and was replaced by geometric designs, traceries of straight and curved lines, rhombi, star-shaped polygons, etc.; from the 7th/13th century, decoration by means of multiple parallel bands bearing inscriptive and geometric elements, finally prevailed. The silks of Granada are of this type.

We have already alluded to the bronzes of the caliphate—lamps, chandeliers, ḥandīlī, waterspouts in the form of animals, mortars, perfume-burners, etc.—and to the difficulty of establishing their place of origin because of their resemblance to the Fatimid bronzes. The perfection of the artistic metal-working technique in the 6th/12th century is illustrated by the plaques of engraved and chased bronze which cover the wooden leaves of the door of the patio of the Great Mosque at Seville, and its magnificent door-knockers, of cast and chased bronze, which remain on the very spot where they were made.

Museums and collections have preserved specimens of repousse silver bracelets dating back to the period of the caliphate. The technique of repoussé is less commonly found in gold jewelry, in which there is a predominance of filigree-work and wire threads forming settings filled with precious-stones or pieces of glass, a technique which survived until the last days of the Kingdom of Granada. Several swords are of this type, such as that of Boabdil in the Military Museum at Madrid, a masterpiece of the goldsmith’s craft, of consummate elegance, whose hilt, of silver gilt and ivory, has a decoration of filigree work and polychrome enamels set in frames.

(L. Torres Balbás)

(x) Spanish Arabic

I. Of all post-classical Arabic dialects, the Arabic spoken in the Iberian Peninsula is the best known, as regards the mediaeval period.

As early as the 4th/10th century, the philologist al-Zubaydi al-Iṣḥābī wrote a treatise on the errors of speech of the common people in al-Andalus. In the middle of the 6th/12th century, Ibn Ṭuṣmān [q.v.] wrote some sāgīlas [q.v.] full of linguistic and sociological interest, the majority of which have been preserved. In the 7th/13th century, the mystic al-ʿṢaḥḥārī [q.v.] also composed sāgīlas of which numerous collections are known. Unfortunately, the nature of the subjects dealt with in these dialect poems means that they are of less interest than those of the preceding poet.

In the middle of the 13th century, too, the reconquest of the Kingdom of Valencia by the Christians and the requirements of religious propaganda among the Muslim population, resulted in the production of a copious anonymous Vocabulista, Arabic-Latin and Latin-Arabic, which has been published. At the end of the 9th/15th century, the reconquest of the Kingdom of Granada led Br. Pedro de Alcalá to compile in his turn an Arte and a Vocabulista, giving the Arabic in Roman transcription; the latter work is particularly valuable, but the prose texts of the Arte are often incorrect.

These are only the essential sources. Many secondary sources exist: minor composers of sāgīlas; several ḡarrājīs of muwāṣṣāḥāt [q.v.]. As regards
prose, there are documents in archives, private correspondence, account sheets, etc. Finally, as regards vocabulary, the authors of technical works written in classical Arabic point out numerous dialectal names: historians, geographers, doctors, botanists, agronomists, works on hisba, etc.

There is reason to suppose that Spanish Arabic must have ceased to be a living language towards the end of the 10th/16th century, the date of its extinction probably varying in different provinces. At all events, the Moriscos who, driven out of Spain, reached Tunisia and Morocco about 1610, seem to have no longer spoken Arabic, but Spanish. The Arabic-speaking period, in the Iberian Peninsula, would therefore have lasted for about eight centuries. This long period of time, combined with the division of the country into separate physical and political units, as well as the heterogeneous character of the Arab population, ought, it would seem, to have favoured the formation of separate Arabic dialects, as had occurred within the Romance linguistic framework: this does not seem to have happened. It is true that the documents we possess are disparate, both in time and space, thus precluding any worthwhile comparison. At the most, one can try to distinguish between the dialects of the South (Seville, Cordova, Granada), those of the East (Valencia, Murcia) and those of the Marches (Aragon). In the case of Toledo, we only possess notarial documents, drawn up in an extremely debased form of the classical language.

To sum up, as far as we are able to tell, Spanish Arabic seems to have preserved a high degree of homogeneity. But one must not forget that our only documentation relates to the urban dialects. It is possible that the rural dialects, spoken by people who moved about less than the inhabitants of towns, may have been more differentiated.

Although Spanish Arabic became extinct towards the end of the 10th/16th century, as a spoken language, it survived in the poems which still served as 'words' to the "Andalusian" airs that were played and sung by the inhabitants of the towns, from Tunisia to Morocco.

II. General characteristics: (In what follows, the origin of certain linguistic facts will be denoted as follows: Q = Ibn Kuzman; V = Vocabulista of Valencia; G = Vocabulista of Granada).

A. Phonetics. Consonants.

As in all post-classical dialects, the lateral Q (ق) is represented, phonetically, by D (ظ) and, exceptionally, by D. The interdental: t, d, are preserved, at least until late 15th century Granadan. C appears to have been, originally, an affricate: k = d; in Q and V it does not assimilate the definite article. In G, it does assimilate, which can correspond either to a pronunciation k, or to a weakening of the first occulsive element. As regards kaf, there is evidence of a "weak" Spanish pronunciation, but we do not know exactly what this "weakness" consists of. Apart from the consonants of classical Arabic, Spanish Arabic has the following, usually in Romance loan-words (or developments from the substratum): p and t, written respectively in Arabic ٍ and ق. G (Old Romance or Ibero-Visigothic), transcribed by gj; this creates a problem for Romance scholars. There is a noticeable tendency, especially marked in G, for the final-n after ay to disappear: ay "where?", bay "between", gharayy "two months".

Vowels.

Short Vowels. We must wait for the transliteration of G into Roman characters in order to have an idea of the nuances of the short vowel system: a/e, i/e, u/o, governed by the nature of the preceding or following consonants. This is largely the position in present-day Magribi.

Up to the end of the 15th century, short vowels in open syllables are relatively stable. The only short vowel threatened with elimination is that occurring in the second of two internal open syllables: yat- (a)hallam "he speaks"; yata(y)āšamu "they quarrel with one another"; dat(ā)lāt "she enters".

Of the short vowels, that of the quality a is the most dominant. In nouns, it is that of segol whatever the nature of the preceding stressed vowel. It is also that of the first syllable of names of instrument of the classical type mis'afal, and that of the last syllable of the diminutives = CwChayya C and CwSanCwC. In verbs, the quality a appears at the beginning of the imperative of 1: aklab 'write', and at the beginning of the imperfect of the forms V, VI, VII, VIII and X. By analogy with the vocalisation of the perfect, this quality also appears in the imperfect of all derived forms (except, sometimes, III) and in both forms of the quadrilateral. Many vowels (short and always unstressed), seem to separate consonantal groups which are difficult to pronounce. Such a group may be initial (a process known to classical Arabic): uprurul "frontal" or final: halalt-laik "I have written to you". In addition, in poetry, a disjunctive vowel freely appears after a word ending in CVC and followed by another word beginning with a consonant. It can be internal, as in the case of nouns of the type, RvRvRv, in which R is either R, L, N, M, or B, or 3, e.g. aklab "intellect", sifal "real", Abbahal "work", saldab"smooth and supple", humar "red", Aben-Zuhar "Ibn Zuhr".

Long Vowels. In nouns, the sequence a-x tends to become a-i-a. The vowel a, not supported by a strong (back) consonant tends to become palatalised. The stage most readily reached is ـ; the Arabic letter ـ is also regularly used in aljamiado to transliterate the Romance vowel ـ. In G, this last pronunciation is reserved for the ـ of bookish vocabulary. In the words (not verbs) belonging to popular vocabulary, the palatalisation reaches the maximum degree; i, hence bib "door" written بيب, with a ya?

Diphthongs: The classical diphthongs a-x are preserved in their correct form, except in a few link-words: kif, kaf, kaysa; is las, laysa.

Accent: This is only known to us as regards of the 15th century—the result of the notations of P. de Alcala, which have been assembled and studied by A. Steiger. Several Granadan scripts in Arabic characters show that, under the influence of stress accent, short vowels in open syllables became prolonged.

B. Morphology

The Verb: There are no 2nd persons feminine. In the perfect tense, the suffix of the 2nd person plural is—lum. In the imperfect, the 1st persons are of the pattern nakhab—nakhabu. In the 1st and 2nd persons of the perfect, the "doubled" verbs in the 1st form follow the classical conjugation: halat. I "have opened". In the case of verbs with R weak, the imperfect plural is of the pattern yamsu "they set out", yaltabu "they meet". In the derived forms including the 1Ind, the form of the imperfect is in—a—,
like that of the perfect. The use of the passive with vowel-change is well attested, but only in the 1st form; it is sometimes imitated by the VIIth. While the majority of the real settled dialects created an indicative present, Spanish Arabic evolved a contingent tense, which also functions as an unfulfilled conditional (after a prothesis with lau) and as an optative. It is formed by the imperfect preceded by ham (G. = kwm), which is constant and of which the final -n is normally assimilated by the preformatives t- and y-. The patterns of the perfect, for forms V and VI, are af'ta'il, af'ta'l, derived secondarily from the imperfects yat(a)/at(a), yat(a)/at(a). On the same basis, we have af'ta'il for the 1Ind form of the quadrilateral. Note that, in these forms, the formative is assimilated, not only by the dental occlusives, but also by the sibilants (s, z, x) and the fricatives (s, g). In a nominal clause, various negative copulas derived from the classical laya; la; lar; in; is G. are used. Finally the use of -sh, to reinforce an interrogative or a negative, appears to be unknown.

Substantives: A real indefinite article is found: wuld-al-faras “a (certain) horse”. The dual is clearly obsolescent. It is only used for parts of the body occurring in pairs, and for words expressing measure. The plurals af'tul and af'tul are those ordinarily used. The type ma'sul is only used for singulars with medial or final long vowel is of the type fu^ai^al, af'tul, fdal, “eyebrows”, “as”, “how much?”), ni, “very, many”.

Grammatical link-words: The following should be noted: 1ahhal “how much?”, bahl “as”, ghaba “now”, kurna j-ash “for what reason?”, maqat, “at all events, at least”, yadda “also, equally” (the classical ayhah), ni, “same”, alqumus “a little”, fawat “late”, ttkam “it!” (for inkam), y'-sal “would to God that . . . .” (utnam).

D. Vocabulary

Attention will only be drawn to the following:

dukah “mouth”; u'dí “face”; plur. khîfâ “coins, minted silver”; wil “father”; mulkâ “poor, bad”; akhal “black”.

Bibliography: A) Texts: De Gunzburg, Le Disc de lbn Quzman, fasc. 1 (the only one which has appeared): photographic reproduction of the unicum, Berlin 1896; Nykl, El Cancionero de Ibn Quzman, Madrid 1933 (the preceding text transcribed in Roman characters, with the translation of a selection of the texts; see review, in Hesp., 1933, 165). Schiaparelli, Vocabolista in Arabico, Florence 1871; Pedro de Alcala, Arte para liggermente saber la lengua arauiga-Vocabolista arauigo in letra castellana, Granada 1505 (photographic reproduction issued by the Hispanic Society of America, New York 1928; a re-issue, partially corrected of the first edition by Paul de Lagarde, Petri Hispani de Lingua Arabica libri duo, Gottingen 1883); Martin de Ayala, Doctrina, en lengua arauiga y castellana, Valencia 1566 (reproduction in photographrap by Roque Chabas, Valencia 1911). The Arabic Ms. No. 3 (1389) of the Fagnan catalogue of the Bibliothèque-Musée d’Alger shows that it consists of a translation, in Spanish Arabic, by a certain cleric Bartolome Dorador, at Guadix, of a Castilian text written in 1554 by M. de Ayala, then Bishop of Guadix; Yafil, Madmîm al-aghâni wa 'l-tâh min kalâm-al-Andalus, Algiers, n.d.

ANDARAB “between the waters”, a frequent toponymic in Iranian countries.

(1) A district in northern Afganistān watered by the river Andarab and its tributary Kāshān, al-Iṣṭaḵārī 270 (Andarābā). Its present centre is Bānū, see Būrānān Kūkhkāt, Kāltāghān wa-Badakhšān, Russian trans., Tashkent 1926, 28-34. The Kāh-wak pass connects it with the silver-mines of Pāndjīr (Pāndjīshīr). The mint of Andarāb was used by several dynasties, and especially by the local Ablā Dādōddīs (coi. 10,000-10,000 BC), see B. Vasmir in Wien. Num. Zeit. 1924, 48-63. The rulers of Andarāb bore the title of šāh-šāisīt. See Hūdād al-Ālam, 109, 341; Le Strange, 427.

(2) A town (Andarābā) near Mārw in which Sūltān Sānḍiḍār has a castle built, see Barthold, Istoriya orosheiniya Turkestana, 1914, 63.

(3) A place in Arrān, at one day’s march from Bāḍara, al-Iṣṭaḵārī 182, probably identical with the present-day Lāmbarān on the Kāshān river, which flows to the south of the Terter.

(4) According to the Nuzhat al-Kulub, 231, a place on the river of Ardabil (now Bālīghīl-su), where it flows north of M. Sāwālān above its junction with the Ahar river. (V. Mǐnɔrskỳ)

ANDARŪN [see Enderūn].

ANDI. The term “Andi peoples” embraces eight small Ibero-Caucasian Muslim peoples, some 50,000 in number, ethnically akin to but linguistically distinct from the Awar [q.v.]. They live in the basin of the Koyus of Andi, which runs from north to south across the mountainous western portion of the Soviet Autonomous Republic of Dāḡjastān [q.v.].

The group comprises: (1) the Andi proper, numbering 8,686 in 1933, about 10,000 in 1954; (2) Aţbāwī (or Ācnād), 4,610 in 1933; (3) Būgulā (or Kānāvāna), 3,627 in 1933; (4) Bāndīk, 1,685 in 1933; (5) Godoberti, 1,500 in 1946; (6) Camalār, 5,101 in 1933, about 7,000 in 1954; (7) Kārata (or Kirddī-Kalal), 6,255 in 1939; (6) Tindī (or Tindal, Iderī), 4,777 in 1933.

The Andi peoples were converted to Islam by the Awar between the 13th and the 17th centuries, and are, like them, Sunnis of the Shafī school. Each Andi people has its own language, belonging to the Andi group is fixed by writing, the Andi using the language of the Awar. The Andi were conquered by the Russians (Russian form of the name: Andiẓān). At that time it had 36,620 inhabitants who lived largely by agriculture and horticulture. Since then, petroleum fields and iron mines have been opened in the district. On the 17th and 18th of May 1898 a national-religious rising under the Shāh Kāzīr performed in the Margilān district which Soviet historians attribute entirely to social motives, was put down after much bloodshed. (cf. such Soviet literature as Narody Daghestana, ac. of Sc., Moscow 1955; Z. A. Nikōlf’skaya, Istoričeskie pred-podpuki natsional’noy konsolidatsii Awarsev, Sovetskaya Etnografiya, 1953, 13-124; Bobs̄haya Sovetskaya Entsiklopediya, 2nd edition, 212.) Apparently the town suffered greatly from the Mongol raids and had to be rebuilt towards the end of the 13th century under the Caghatay Khans Kaydu and Duwa (Hamīd Allah Mustawfi, 246). Since then the place has been inhabited almost exclusively by Turks whose separate tribes apparently settled in different quarters of the town (Barthold, Vorlesungen, 221 following “the Aymon of Ermen”); their language became the model for the whole of Farghānā. It was used by ‘Ali Shīr Nawā’ī (according to the Bābur-nāma, Kazan 1857, 3). Andiẓān remained the capital of Farghānā and the centre of trade with Kashgār throughout the 14th and 15th centuries. In the 15th century it became the capital of the Khānate of Khān and continued to be an important market for agricultural products.

In 1875, when the Khanate was subjected, it was conquered by the Russians (Russian form of the name: Andiẓān). At that time it had 36,620 inhabitants who lived largely by agriculture and horticulture. Since then, petroleum fields and iron mines have been opened in the district. On the 17th and 18th of May 1898 a national-religious rising under the Shāh Kāzīr performed in the Margilān district which Soviet historians attribute entirely to social motives, was put down after much bloodshed. (cf. such Soviet literature as Revolyutsiya v Sredney Asii, i, Taškent 1928, in which: Sang-zāda: K 30-leitu Andiizanovskogo vosstaniya 289 g.; E. G. Fedorov, Ocherki natsional’no-ossesobodit’shego dvokh tashkentskog in Sredney Asii, Taškent 1925; K. Ramzin, Revolyutsiya v Sredney Asii v obraskah i kartinakh, Moscow 1928.) In 1902 the town lost 4,500 inhabitants (there were 46,982 in 1900) in an earthquake (F. N. Cherkísh, etc., Andiizanskoe semeyrasenye 1902 g.,
St. Petersburg 1914). After the suppression of the Basmachi [q.v.] rising (since 1916) Andijon became part of the Soviet Republic Uzbekistan in 1924 (number of inhabitants in 1939: 83,700; partly Russian) and it is now the centre of a separate district (since 6 March 1941; 3,800 sq.km.) and the centre of an important cotton-growing area. Since 1937-38 there have been petroleum finds in the area (comp. W. Leimbach: Die Sowjetunion, Stuttgart 1950, 340 f., with map). Today the town has a teachers training college, an agricultural college, a training college for women, an Uzbek theatre, a regional museum etc.

**ANDIJUMAN,** a Persian word already in frequent use in the 5th/11th century in the sense of “meeting, assembly, army”. In modern times, it denoted primarily religious or confessional associations; then, at the beginning of the 20th century, at the time of the establishment of the parliamentary régime in Iran, political groups. One of the most celebrated of these groups was the **andijuman-i milli** ("national club") of Tabriz, founded 1324/17 December 1906, by the leaders of the constitutional movement; other groups, moved by the same liberal tendencies, were then organised in the principal provincial towns [see Iran]. Later, other **andijumans** were set up by Persians in Istanbul and Bombay, and in India by the inhabitants of those parts. To-day, the term is applied primarily to learned or professional societies: the **andijuman-i adabi-i Iran** ("Persian Literary Society") preceded the foundation of the Farhangistan-i Iran ("Iranian Academy") in 1355/1936; since 1346/1926, the **andijuman-i ahkamiyeh-i milli** ("Committee for National Development") was created in Istanbul, under the name of **Endiumen-i Dinâh.** Inspired by Ahmed Djewdet Pașha [q.v.], it was modelled on the French Academy, with forty Turkish members and a number of corresponding members, including such European orientalists as Hammer, Bianchi, and Redhouse. Its programme included the encouragement of the letters and sciences in Turkey and the advancement of the Turkish language. The Academy was first mooted at the Council of Education (Medlis-i Ma'ṣūri) in 1261/1845, and was formally authorised by an irāde of 27 Radjaib 1267/2 May 1851. It was publicly inaugurated on 19 Ramađan 1267-18 July 1851, with a speech by Muṣṭafâ Reşid Pașha, indicating the part the academy was to play in the renovation of Turkey. Its work was however impeded by the political instability of the time, and it petered out in 1279/1862 without having accomplished much more than the sponsorship of a few books, which included the Ottoman Grammar of Djewdet and Fu'âd Pașhas, part of the history of Djewdet Pașha and his Turkish translation of the Prolegomena of Ibn Khaldûn. After the revolution of 1908 a number of learned societies appeared, the most important of which was the Ottoman Historical Society (Ta'rikh-i 'Oğmâniyân Endiumen), founded in 1911.

The term **Endiumen** was also used in Turkey for various parliamentary and administrative committees, for the standing provincial and municipal committees, and for certain educational committees operating under the Ministry of Education. Such were the **Endiumen-i Teftih we-Mu'dâne**, (established 1329/1882, and the provincial and local educational committees (Ma'âri Endiumen) established in 1328/1910 to initiate and supervise elementary education.—The word was also used for certain clubs founded on the European model, the first of which appears to have been the **Endiumen-i Ülêt**, founded in Istanbul in 1287/1870. In recent years it has been replaced in many contexts by words of Western or Turkish origin.

In India and Pakistan there have been and are several **andijumans** in different fields; the two most important, influential, and enduring are:

(1) The **Andijuman-i Tarâbi-i Urdu** which was founded in 1913 within the scientific section of the Mohammadan Educational Conference (itself established by Sir Sayyid Ahmad Kâñn) with Sir Thomas Arnold and Muhammad Shibli Nu'mân as its first president and secretary respectively. Its aims were to defend the Urdu language against Hindi as the language of the masses, and to develop and enrich it. Under its impulse and auspices books were written in Urdu and various others were translated from the English. In 1912 the **Andijuman** moved its headquarters from Aligarh to Awrangbâd (Deccan) since when it has been under the able and zealous secretaryship of Mawlawi 'Abd al-Hâkîm. In its new seat, where it was supported by the Haydarâbbâd State, the **Andijuman** showed vigorous activity not only in writing and editing Urdu works and classics but also in translating from the English (some translations were also made from the French, Arabic and Persian), works on history, philosophy, science and others of general interest. The **Andijuman** thus, supplemented the work of the 'Ummâniyya University (established 1928) which, in pursuance of its programme of giving all instruction in Urdu, concentrated on translating texts rather than general
works. But, besides issuing a learned quarterly called "Urdu" (which still continues) and another entitled "Science", and attempting to find means of improving Urdu script and print, perhaps the most important pioneering work has been the publication of the lists of translations of scientific, philosophical and professional technical terms and the issuing of English-Urdu and Urdu-English Dictionaries, modelled on the Oxford Concise Dictionary of English. In 1936, the Andijum moved to Delhi and in 1948 to Karachi, where an Urdu College has been established giving all instruction (including modern science) in Urdu and hoping to become a University.

The Andijum has played, through its institutions and its leaders, an important role in the awakening of the Muslims of the Panjâb. Besides High Schools for boys and girls, the Andijum runs an Islamiyya College for Women, an Industrial School, a Tibbiyya College and Dispensary (on traditional lines but with some blend of modern medicine), an orphanage etc., and had a missionary school (İsľâmi-i Islâm College). It also issues a weekly paper called İsmâ-yî Islâm and has its own press.

Bibliography: For (1) see a detailed account in Orientes Modernos, 1955, 331-43 and 536-48 by A. Hausani, also At-i Islam and professional technical terms and the issuing of English-Urdu and Urdu-English Dictionaries, modelled on the Oxford Concise Dictionary of English. ANHALWARA — ÂNI

Gujjarat in 980/1572, it became the centre of the sarkdr of Pattan in the suba of Gujjarat. It was the residence of the Catholicos of Arménia. As numerous inscriptions prove, Gagik retained the Persian title of shahdnshdh which also appears in an Armenian form (ark'aysit arka'i); he was also styled "king of the Armenians and Georgians". The remains of a church erected by Gagik in 1001 were excavated in 1905 and 1906; among them was found a statue of the king, with the model of the temple in his hand, and wearing a Muslim turban; the same headgear is also found in a relief portrait of his predecessor Smbat II, preserved in the monastery of Halbat.

Under Gagik's successors the kingdom rapidly decayed and in 1044 it became a part of the Byzantine empire but the growth of the town of Âni was further encouraged by the Byzantine governors (catapans): an Armenian inscription ascribes to the catapan Aaron the erection of a magnificent aqueduct conducting water from the hills of Alagida to the town.

The Greek rule was ended by the sultan Alp Arslan who conquered and destroyed Âni in the year 1064; according to Ibn al-Ashir, x. 27, the town possessed at that time 500 churches. In 1072, a year after the defeat of the emperor Romanos Diogenes, the sultan sold Âni to the Muslim dynasty of the Shaddadids [q.v.], and down to the end of the 12th century the town remained (apart from a few interruptions) the residence of a branch of that family. At that period the town had two mosques, one of which collapsed during the second half of the 16th century; the other, which had survived, was used (since 1907) as a museum for the objects discovered during the excavations. There are also Christian buildings belonging to the same period; the Shaddadids acted as beneficent rulers even towards their Christian subjects, and being related by marriage with the Bagratids, they were recognised by the Christian population as native and lawful kings. The walls of the town were repaired and furnished with some towers during their rule.

Âni was for the first time conquered by the Georgians in 1124, under David II, who laid the foundation of the power of the Georgian kings; the town was given as a fief to the Armenian family of the Zak'arids, (in Georgian: Mkhargrdzeli = Longiman), who extended the walls of the town so as to reach the steep banks of the Arpa-Cay. The Armenian tradition ignores the fact that the Georgian rulers (like their Greek predecessors) favoured the Greek-Orthodox tendency, which accordingly predominated in the architecture of the period. There was no religious persecution of Muslims during this period, just as there had been no persecution of Christians under the Shaddadids; a Muslim contemporary, whose gloss is found in Ibn Hawkal, 242, confirms that the Georgian king protected Islam against all injury, and made no distinction between Muslim and Georgian. Probably in connection with the
ANI — ANIS

foundation of the Trebizond Empire (1204), Ānī became an important centre of international trade; see A. Marshak, O torgove s gorodačk Armenian, Erevan 1934, 278.

Ānī was besieged unsuccessfully by the Khīrīz-mshāh Djalāl al-Dīn in 1226, and conquered by the Mongols in 1239; but even after this conquest the town remained for a time in the possession of the Zakharids; an inscription on the main gate that at a later period it was considered the 'private domain' (khāt-i indī) of the Mongol rulers of Persia; but it never regained its former importance.

According to tradition, Ānī was finally destroyed by an earthquake in the year 1319; but both inscriptions and coins of a later date have been found. A variety of copper coins struck at Ānī by the Ilkhan Sulayman (1339-144) is called by the Turks "monkey-coin" (maymān silkēsī), the coins bearing the image of a hairy figure. Coins bearing the name of Ānī were struck as late as the 14th century by the Djalār, and even in the 15th century by the Kara Koyunlu, though actually the mint must have stood outside the town, perhaps in the fortress of Mahbuberd (less than 2 miles from Ānī). The excavations have shown that, after the decay of the palaces and churches, a rude and miserable population had built their dwellings on the ruins. At the time of Ker Porter's visit (November 1817) it was possible to distinguish these houses and their separate rooms, as well as the streets of the later period, which are but 12-14 feet wide. Later the name of Ānī was preserved only by a Muslim settlement standing near the ruins. After the war of 1877-8 Ānī was incorporated in Russia, but restored to Turkey by the treaty of 1921. It is now in the administrative division of Ani in the 6th/i2th century is al-Farīki, written in Persian in 608/1211, and described by the Arabic geographers of the 9th and 10th centuries; Yakūt, i, 70, gives Ānī a single line; Ḥamd Allāh Mustawfī, Nuzhat 93, states merely that the district has a cold climate and produces much corn and little fruit.

The only Islamic source containing firsthand material on Ānī in the 16th/12th century is al-Fārīkhī's Ta'wil Ma'ydārānīn, Br. Mus., Or. 5803 and Or. 6370. See also the didactic chronicle by the local scholar Burhān al-Dīn Anāwī (Anī al-Kulub, written in Persian in 608/1211, and described by F. Köprülü in Bell, 1943, 379-521). Cf. also Ibn al-Aghār, x, 27 (not quite accurate). See Minorsky, Studies in Caucasian History 1933, 79-106.

The ruins were first visited in 1893 by Gemelli-Carreri (Collection de tous les voyages faits autour du monde, ii, Paris 1788, 94) and described at length in 1817 by Ker Porter (Travels, i, London 1821, 172-5). In 1839 plans of the town were sketched by Texier (Voyages en Arménie, Paris 1842, Atlas, plate no. 14) and in 1844 by Abich (ed. M. Brosset, Rapports sur un voyage dans la Géorgie et dans l'Arménie, St. Petersburg 1857, Atlas, plate no. 23 and Brosset, Les ruines d'Ānī, St. Petersburg 1860, Atlas, plate no. 30). The Christian monuments were described by Muravyev, Trudy 2 Armēniya, St. Petersburg 1848; for the Muslim inscriptions see Khanykov (1848), cf. Mélanges Asiatiques, i, 70 ff. and M. Brosset, Rapports etc., 3e rapport, 121-50; the Album compiled by Kästner (1859) contains pictures of architectural monuments on 36 leaves, and a collection of Armenian, Arabic, Persian and Georgian inscriptions on 11 leaves (ed. Brosset, Les ruines d'Ānī, 10-63). Among Armenian writers Nerses Sarkisyan and Sarkis Djalalyantz collected Armenian inscriptions, and their material was used in Alishan's historical work on the history of the town (Venice 1855, in Armenian, cp. Brosset in Mélanges Asiatiques, iv, 392-412, now obsolete).

Russian excavations began in 1892 and were carried on systematically by Prof. N. Y. Marr in 1904-1917. Their results were published in numerous reports in Russian periodicals and in a special series (Amyskaya seriya) containing guide books and studies by Marr, J. Orbeli, Barthold etc. In more detail see N. Marr, Ani, Kniznaya istoriya goroda i raskopki, Moscow 1934, and the architectural studies by T'oros Toromian (in Armenian), Erevan 1942-4. V. and I. Kratchkovsky, Is arabskoy epigrafiki v Ani, in the presentation volume to N. Y. Marr, Moscow 1935, 671-93. (W. Bartold-[V. Minorsky])

ANİS [see HAYAWAH].

ANIS, the pen-name of Mīr Bābar 'Alī, Urdu poet of Lucknow, India, who was noted chiefly as a writer of marthiyas or elegies on the death of the Shi'a martyrs of Karbalā. He was born at Fyzabad (Fayḍābād) in 1216/1801 or 1217/1802; but, in his early manhood, migrated to Lucknow, where he enjoyed the patronage of the Shi'a rulers of Oudh and their nobles. When the kingdom of Oudh was annexed by the British in 1856, he left Lucknow and visited many other places like Patna, Benares, Allahabad and Hyderabad-Deccan; but ultimately returned to his favourite city in his old age and died there in 1291/1874.

The chief merits of his poetry lie in the beauty and appropriateness of his dictio, the perfection of his art, his remarkable powers of description, his successful delineation of character and the striking use of rhetorical figures. The emotional effect of his marthiyas was heightened by the strong and dramatic manner in which he recited them in the presence of large audiences. In his special branch of poetry, Anis had a serious rival in the person of his contemporary Dabir [q.v.]. Each poet had thousands of enthusiastic partisans, who maintained that he was superior to his rival. The citizens of Lucknow were thus divided into two camps, the Anisites and the Dabirites, each extolling the qualities of its own favourite poet. Opinion is still divided on their relative merits; but there is general agreement that they share the honour of raising the Urdu marthiyā to its greatest heights and that their cultivation of the poetic art undoubtedly contributed to the refinement and enrichment of the Urdu language.

The works of Anis were published under the title, Marthiyā Anis, in four volumes at Lucknow in 1876, and have been reissued several times since then. There is another edition in three volumes by S. 'Alī Ḥaydar Ṭāhātabā'ī (Badāyn 19-20). A good idea of his writings may also be obtained from Wāhābī-i Karbalā, a volume of selections so arranged by S. Ṣa'īd 'Alī Kākwarrī as to make a single connected story (ed. and ed., Lucknow 1944).

The foundations of a large Roman bath have recently been discovered on the road towards the north (to Cankirl).

Spiders are applied to external wounds to stop the flow of blood; they are also used for polishing cornished silver. The spiders themselves are founded on the fact that the spider makes its web with extraordinary rapidity.

The weaving spiders make their webs according to mathematical rules; according to others the female only is capable of making a web; as material they use spittle. When putting an end to the havoc wrought by this species of bird, after Islam, the 'anfa' in the beginning endowed with all perfections, has become a plague; one of the prophets of the "Interval" (jatra), either Khâlid b. Sinân or Hânâzâl b. Sâfwân, is credited with having put an end to the havoc wrought by this species of bird. According to al-Dàjmîrî, the 'anfa' in Islamic tradition is assimilated with the simurgh, which plays some part in Iranian mythology, and probably with the Indian garuda, the mount of Vishnu; thus a Shi'ite group, the Shumaytiyya (see al-Shahrastâni, in the margin of the text) created by God, the one deserving most mention is the temple of Roma and Augustus, erected on older foundations. Of those which survive, the one deserving most mention is the temple of the mountain to the north, the citadel, called Ak Kal (or Kal'e), a fairly regular rectangle; and, on the crest of the mountain to the north, the citadel, called Ak Kal'e ("white castle").

Ancyra, at one time the capital of the Galatian tribe of the Tectosages, and later within the sphere of power of the Pontic King Mithridates, was finally incorporated into the Roman Empire in the year 25 B.C. It was then embellished with the buildings required by a Roman town. Of those which survive, the one deserving most mention is the temple of Roma and Augustus, erected on older foundations. On its walls we find the most famous of all antique inscriptions: the Monumentum Ancyranum, an account (in Latin and in Greek) given by the Emperor Augustus of his reign. In Christian times the temple was converted into a church; in Muslim times, the building was the seat of a Dervish saint, Hâdîji Bayârm Wall, whose ârâb and mosque stand beside the ruined temple. A column (Bilâls Minaresi) rises towards the north, being crowned at its summit by an extensive castle. This summit is 976 m. above sea level and 110 m. above the valley of the neighborhood, and thus also a political centre. The old town—dating back to prehistoric times—was situated on the plateau of the castle hill; it gradually spread over the slope outside the fortifications and even to the western side of the plain at its foot. The original layout of the castle itself may well date back to the prehistoric period. In its present form it dates back to Byzantine days, and it was frequently extended and restored in Seljuk times. Its walls contain many ancient remains. There are three distinct parts: the "outer castle" (Dîsh Kal'e) which can be reached by the Hîşr Kapîl, whose walls encircle the castle to the south and to the west; the "inner castle" (Kî Kal'e), a fairly regular rectangle; and, on the crest of the mountain to the north, the citadel, called Akl Kal'e ("white castle").

Ancyra has probably always been a centre for the caravans going through Anatolia in all directions, and thus also a political centre. The old town—dating back to prehistoric times—was situated on the plateau of the castle hill; it gradually spread over the slope outside the fortifications and even to the western side of the plain at its foot. The original layout of the castle itself may well date back to the prehistoric period. In its present form it dates back to Byzantine days, and it was frequently extended and restored in Seljuk times. Its walls contain many ancient remains. There are three distinct parts: the "outer castle" (Dîsh Kal'e) which can be reached by the Hîşr Kapîl, whose walls encircle the castle to the south and to the west; the "inner castle" (Kî Kal'e), a fairly regular rectangle; and, on the crest of the mountain to the north, the citadel, called Akl Kal'e ("white castle").

Ancyra, at one time the capital of the Galatian tribe of the Tectosages, and later within the sphere of power of the Pontic King Mithridates, was finally incorporated into the Roman Empire in the year 25 B.C. It was then embellished with the buildings required by a Roman town. Of those which survive, the one deserving most mention is the temple of Roma and Augustus, erected on older foundations. On its walls we find the most famous of all antique inscriptions: the Monumentum Ancyranum, an account (in Latin and in Greek) given by the Emperor Augustus of his reign. In Christian times the temple was converted into a church; in Muslim times, the building was the seat of a Dervish saint, Hâdîji Bayârm Wall, whose ârâb and mosque stand beside the ruined temple. A column (Bilâls Minaresi) erected by Emperor Julian (or Jovian?) should also be mentioned. The foundations of a large Roman bath have recently been discovered on the road towards the north (to Cankirl).
In the year A.D. 51 Ancyra was visited by St. Paul, who founded one of the oldest Christian communities there—to which he addressed his Epistle to the Galatians. Christianity survived in this town until the First World War.

In A.D. 620 Ancyra was taken by the Persian King Khusrav II Parviz on his campaign against Asia Minor. After his defeat near Niniveh A.D. 627 he had to withdraw from the country—hence also from Ancyra. Subsequently Ancyra—capital of the Bukellation theme—frequently suffered at the hands of Arab raiders. As early as 654, the Arabs held the town for a short space of time.

In 806, the Caliph Harun al-Rashid besieged and plundered the town; as did his son, the Caliph al-Mu'tasim, in 838. In 871 the town was plundered by the Paulicians of Theophilus (Diwrigi), and in 931 it was threatened by the Arabs of Tarsus.

Ancyra came under Turkish supremacy after the Emperor Romanus IV was defeated by the Seljuk Sultan Alp Arslan, near Malakzéred, in 1071 (the exact date is not known—the city was still Byzantine in 1073). During the First Crusade, however, it was re-conquered for the Byzantine Emperor by Raymond of Toulouse in 1101. Soon afterwards (it is not known exactly when), the city reverted to the Turks: first the Seljuk: then, in 1127, the Dānishmendids; and finally, after the death of the Dānishmandid Malik Muhammad Ghāzī (1143), back to the Seljuks.

When the Rūm Seljuk empire was divided up under Kılıç Arslan II (1190), Ankarā went to his son Muhuyi 'l-Dīn Mas'ūd. In 1204, however, it was taken from him by his brother Rukn al-Dīn Sulaymān Shāh, who reunified the Rūm Seljuk empire. The oldest dateable work of Rūm Seljuk art is of the time of Prince Mas'ūd (Safar 594/Dec. 1197-Jan. 1198), a wooden minbar in the so-called 'Alla-ı Dīn mosque in the fortress of Ankarā.

After the death of the Sultan Kaykhusraw I in 1219, his son 'Alla-ı Dīn Kaykobād—revolting against his elder brother, the Sultan 'Izz al-Dīn Kaykāwūs I—obtained the fortress of Ankarā. After a year's siege, however, the city had to surrender to the other brother and Kaykobād was imprisoned in Malatya, whence he returned only after the death of Kaykāwūs (in 1219) to succeed to the throne. His reign (1219-37) introduced the Golden Age of the Rūm Seljuk Empire. It is commemorated by the "White Bridge" (Ak Köprü) over the Cubuk Suyu of 619/1222, an hour's journey to the north-east of Ankarā. This bridge connects Ankarā with Beypazar and the west. It cannot be stated with any degree of certainty whether the beautiful bridge over the Kızılı irmak near Köprüköy (to the south-east of Ankarā) on the road to Kırşehir and Kayseri, the Çeşnirg Köprüsü, is of the same period. It bears no inscription but its name may well refer to the amir Sa'īf al-Dīn Ayya Caşnır who is repeatedly mentioned by Ibn Bībī, e.g. in connection with the handing over of Ankarā to Kaykāwūs I (Ibn Bībī, ed. Houtsma, index).

The large so-called Arslan-Khāne mosque, outside the gate to the fortress (which may be regarded as the main Friday Mosque for the area of the city lying outside the fortress), dates from the late Seljuk period, when the empire had sunk to the position of a protectorate of the Mongol Ilkhan Empire of Iran. It is a mosque with wooden pillars and with open beam work, containing a beautiful wooden minbar which was donated by two brothers belonging to the Ağıhs in the year 689/1290. It also contains a mihrâb with beautiful faience facing. The Kızılbeý Dîami is of roughly the same period. Its minbar bears an inscription of 699/1299-1300 mentioning a certain amir Ya'qūb b. 'Alla-ı Dīn Kaykobād. He was possibly a member of the Turkmen dynasty of the Germiyan-oghlu. Towards the end of the 13th century the Seljuk rule appears to have been merely nominal, whilst other rulers made their influence felt in Ankarā, such as the Germiyanid Ya'qūb and the members of the Abih fraternity (q.v.).

In the beginning of the 14th century, after the collapse of the empire of the Seljūks of Rūm, Ankarā belonged to that part of Anatolia which was incorporated into the Mongol Ilkhan empire of Iran. There are coins made in Ankarā for the Ilkhan from the year 703/1304 to 742/1342. There is also a Persian inscription of the Ilkhan Abū Sa'id (over the entrance to the fortress) dated 730/1330, in which the taxes payable by the population are recorded (cf. W. Hinz, in Bel., 1949, 745 ff.). The Ilkhan rule extended over the area towards the west, beyond Ankarā, as far as Siwrişahr. After the collapse of the Ilkhan Empire, Ankarā belonged to the territory of the amir (after 1341, Sultan) Eretna of Siwās, and his descendants. It may be assumed, however, that the rule over Ankarā of both the Ilghāns and the Eretnids, was merely one of military occupation and tax collection, whilst the actual government remained in the hands of rich merchants and craftsmen of the city who were able to exercise considerable influence through the Abih organisation. Abih Sharaf al-Dīn (d. 751/1350) appears to have been the most prominent personality. He made donations to the main mosque in Ankarā, the Arslan-Khāne mosque, and he lies buried in a türbe beside this mosque. In the inscription on his wooden sarcophagus (now in the ethnographical museum in Ankarā), he calls himself abīh mu'azzam.

According to John Cantacuzenus (ed. Bonn, iii, 284), Ankarā is supposed to have been occupied for the first time by the Ottomans in 1334 under Suleyman, the son of Orkhan, but the Ottoman chronicles make no mention of this. This occupation, if it occurred, can only have been a temporary one. It was not until the beginning of the reign of Murād I (762/1361) that Ankarā became Ottoman. The early chronicler Nasifī (ed. Taeschner, i, 52, ii, 80 (57) reports that Ankarā was at that time in the hands of the Ağıhs, and that they handed it over to Timūr. Beg. Murād's rule in Ankarā in the year 763/1361-2 is proved by an inscription in the 'Alla-ı Dīn mosque in the fortress. In the early days of Ottoman rule, the wealthy Abih families seem to have retained some influence in Ankarā, as we can gather from inscriptions in the mosques they built (such as that of a certain Abih Ya'qūb of 794/1391 and a certain Abih Eren of 816/1413). Later on there is no mention of them.

On July 20th 1402, there took place, on the Cubuk Ovası, north of Ankarā, the battle in which Timūr defeated Bāyezīd I and took him prisoner. During the time of the subsequent fights between Bāyezīd's sons, Ankarā belonged to the area of Mehmed Celebi. On various occasions he had to defend the city against his brothers, in 1404 against 15a Celebi, in 1406 against the quarrels between Sultan Bāyezīd II and his brother Dīm, the governor of Ankarā decided in favour of Dīm in 1482, until Bāyezīd succeeded in conquering the city. During the reign of Ahmed I, Ankarā became the centre of a revolt led by a native of the town, a robber chieftain by name of Kalendar-
oglu. This revolt spread over most of Anatolia (1607) until it was put down by the Grand Vizier Kuyudju Pasha in 1608.

The most prominent figure in Ottoman Ankara is Hâdji Bayram Wall [q.v.] (753/1352 to 833/1429-30), the founder of the dârâsh order of the Bayramiya. His türbe and the mosque belonging to it (an attractive building with a tiled roof and a flat wooden ceiling inside, built in the beginning of the 15th century) are close up against the ruins of the temple of Augustus. There are a number of small and medium sized mosques of Ottoman times in Ankara. Amongst these some are worthy of special mention, such as the İmâret Dîvânî (built in 831/1427-28 by a certain Karâja Beg, perhaps the one killed in the battle of Varna in 848/1443) in the style of an ancient Ottoman citadel, and beside it stands the türbe of its founder (d. 969/1561-62) concerning mosque and türbe see Niket Turhan Dağlıoğlu and A. Saim Çılgın, in Anadolu Vakfılar Dergisi, ii, 1942, 213-22; E. Egli, Sinan, Der greatest of Ottoman architects. It has one dome, and beside it the present Muslim quarter, which occupies the height overlooking the port and the European city. Since 425/1053 it has possessed a Great Mosque, certain mosques of Ottoman times in Ankara.

In Ottoman times, Ankara was the capital of a sanâbat (province) of the eyalet of Anadolu. In the beginning it was at the same time the capital of the eyalet, until Küttâhiyya took over this function. Under the re-organisation of the internal government in the tanzimat times (law of 7 Dümâdâ II 1281/Nov. 1864), Ankara became the capital of a vilayet with the sanâbat of Ankara, Yozgat, Kırşehir and Kayseri. The sanâbat of Ankara had the following vilâyet: Ankara, Ayaş, Bala, Zir, Beyözü, Diblikâbaği, Haymana, Sifrihisar, Mihallekât, Nallihan, Yabanabâb. Ankara is famous under the name by which it was formerly known in Europe, Angora, as the home of the beautiful white long-haired goats, which are bred all over central Anatolia. Their silky hair (mohair, Turk. hîtik) is a commodity in great demand. The long-haired Angora ("Persian") cats and rabbits also enjoy considerable fame.

Since 1892, the town has been connected by railway with Haydarpasha, opposite Istanbul. Before the First World War it was a small town; Cuinet gives 27,825 inhabitants for the time round about 1890, with a Christian minority of ca. 10%. Other reports about the number of inhabitants of Ankara agree with this. The figure 70,000, given by Sâmi Bey Frâşgeri, Kasım al-A‘lâm, i, 439, is undoubtedly exaggerated.

After the meeting of the National Congress at Stîwâs in June 1919, that town remained for some months the centre of the revolutionary government. The seat of the government was moved to Ankara in October, and Mustafa Kemal entered it on 27 Dec. 1919. On 13 Oct. 1923, by a decision of the Great National Assembly, Ankara was declared the capital of Turkey. (Cf. Gazi Mustafa Kemal, Nutuk, i, 240, 572; G. Jäschke, in WI, 1926, 262 ff.). In view of its increased importance and growing population Ankara underwent great and rapid changes after 1925. The town plan was designed by H. Jansen. The most important suburb, on a spur of the Elmalı Dağ, is Çankaya. The mausoleum of Atatûrk, a work of the Turkish architect Emin Onan, stands on a hill in the SW. Ankara is the seat of a University and of other educational institutions. According to the preliminary returns for the census of 1935 Ankara had 453,151 inhabitants.

(F. TAESCHNER) ANNA see SIKRA. AL-‘ANNABÂ, the present town of Bône, on the Algerian coast, east of Algiers. It is not known when it received the name of al-‘Annabâ or, according to Leo Africanus, Bilda el-‘Unnab, "city of the jujubes", a reference to the fruit grown there. The early Arab geographers call it Buna, derived from its ancient name Hippona and testifying to its long history. It was successively a Phoenician settlement, a Punic city, a possession of the Numidians, and a Roman city named Hippo Regius, it played a major role during the Christian era when Saint Augustine was bishop there (395-430). Captured by the Vandals (430), retaken by the Byzantines, it became a Muslim possession at the end of the 7th or beginning of the 8th century. The urban centre has occupied various sites in the course of the centuries. Al-Bakri is the most precise on the question. He distinguishes three settlements: the town made famous by "Agushin, the doctor of the Christian religion", situated on an eminence, very probably that on which the basilica of Saint Augustine stands to-day. At its foot, stretches "the jujubes", a reference to the fruit grown there. The early Arab geographers call it Buna, derived from its ancient name Hippona and testifying to its long history. features of which recall the Great Mosques at al-Kayrawan and Tunis, and which later received the name of the holy man Sidi Abū Marwān (died 505/1112).

Like al-Bīdajaya, Bōne was a base for active piracy, and was for this reason attacked by the Pisanes and Genoese (1034). Roger II of Sicily captured it in 1153 and installed a Hammādīd prince there. In 1160, it was taken by the Almohads. In the middle of the 13th century, it was annexed to the Hafsid dominions; but, frequently independent of Tunis, it was furnished with governors from al-Bīdajaya or Constantine. In 1533, it appealed to Khayr al-Dīn, the ruler of Algiers, and was occupied by a Turkish garrison, which remained there until 1830.

---

The characteristic feature of the Banū Annāz was typically semi-nomadic, in that it occupied Kirmānshāh and the castles Khūlāndān and Aranba (probably Khālidjī and Aranga near Kangāwar?) which belonged to the Kūfi Kūrs (i.e. the Kurs of the Hasānwayhid federation).

In 431/1040 a war broke out in the region between Šīrāz and Iran, which was one of the manifestations of the period "between the Arabs and the Turks" when, in the wake of the western expansion of the Buyids, numerous principalities of Iranian origin sprang up in Ḡarbābābān and Kurdistan.

As the rise of the Banū Annāz was based on the Shāḥdānjī Kurds, the dynasty should be considered as Kūrīd, although the Arabic names and titles of the majority of the rulers indicate the Arab links of the ruling family. The organisation of the Banū Annāz was typically semi-nomadic, in that it combined clans living in tents with strongholds serving as treasuries and refuges in time of danger. The characteristic feature of the Banū Annāz dominion was the constant displacement of their territories and the constant displacement of their little-known centres.

There were two periods in the history of the Annāzids. At first the external centres between which the family shifted were Baḥdād, with its branch of the Buyids issued from Abū ad-Dawla, and Rayy, with its branch of descendants of Rukn al-Dawla. In the immediate west the Shāḥdānjī were constantly involved in the tribal affairs of the Arabs Banū Buḳayl and Banū Marṣūd. In the east, they were separated from Rayy by the dominions of the Kūrīd Hasānwayhd. In the second period, the appearance of the Salqūcs and their Turkish (Ghuzz) tribes completely disorganised the life of the Banū Annāz who leaned now on the newcomers, now on the Buyid epiphanes, or fended for themselves in various tribal combinations.

The founder of the dynasty was Abū l-Fāṭā Muḥammad b. Annāz who ruled in Ḥulwān (at the foot of the pass leading up to the Iranian plateau). The fact that Hīlāl b. Muḥassin (Eclipse, ii, 432) calls him adīgh and nādīgh suggests that he was attached to the administration of Bahā ṣ-dawla (379-403/989-1013) and through that channel established himself in Ḥulwān where he ruled 20 years (381-401/991-1010). In 387/997 he temporarily seized Daḵūk̄ā from the ʿUklī. In 392/1002 he joined the commander Ḥaḏīḍī b. Ḥaḏīḥ in the campaign against the Banū Māryād. Later in the year he entered the service of Amīl al-Diyyūsāḥ. In 389/999 he destroyed the family of Zāhmān b. Ḥirbālī, lord of Ḥulwān and he retired to Baḥdād, though according to Ibn al-Athīr, ix, 157, he died in Ḥulwān.

(2) His son Husām ad-Dīn Abū l-Shawk Fāris (401-37) succeeded him in the principal lie (Ḥulwān), but at the same time his brothers became autonomous: Muḥāfīl b. Muḥammād in Shahrāzūr (q.v.), and Surkhāb in Bandānjīn (Mandal), on the border of the southern Kurdish tribes and the Lurs (q.v.). This division led to a number of complications. In 405/1014 the Buyid Shams al-Dawla (of Ḥamadān) clashed with the Ḥasānwayhd Hīlāl b. Baḍr who was killed and his son Tāhir captured. During Shams al-Dawla's absence in Rayy Abū l-Shawk occupied Kirmānshāh (Karmīlsīn). Shams al-Dawla returned to Ḥamadān and released Tāhir (405/1015) who rapidly defeated the Annāzids. Abū l-Shawk submitted to him and gave him his daughter, but then suddenly attacked and killed him. Shams al-Dawla himself marched against Abū l-Shawk but the battle was fought near Kirmānshāh (and witnessed by Avicenna, see his autobiography in Ibn Usayyibī's, ii, 4), lost the day (c. 406/1015).

The Buyids of Rayy were succeeded (in 398/1007) by their maternal relative the Kūkūydz 'Ālā al-Dawla. By that time Abū l-Shawk had already expanded up to Daynwarzar (and Shūbū-Khast), which 'Ālā al-Dawla now occupied. In the struggle between the western Buyids Abū Kūljīgār and Daynwarzāl, Abū l-Shawk (420/1026) helped the latter but insisted on the reconciliation of the rivals. In the same year parties of Ghuzz occupied Mawsīl and Abū l-Shawk was ready to assist Daynwarzāl, but the Arabs lost the day. In 426/1037 Abū l-Shawk sided with Abū Kūljīgār who was besieging Daynwarzāl. In 460/1059 he again occupied Kirmānshāh and the castles Khūlāndān and Aranba (probably Khālidjī and Aranga near Kangāwarz?), which belonged to the Kūhī Kūrs (i.e. the Kurs of the Hasānwayhd federation).

In 431/1040 a war broke out in the region of Daynwarzāl between his son Abū l-Fāṭāh and Muḥāfīl, who took Abū l-Fāṭāh prisoner. Abū l-Shawk marched against his brother (in Shahrāzūr). But Muḥāfīl appealed to the Kūkūydz 'Ālā al-Dawla who arrived and annexed Kirmānshāh and Daynwarzāl (432/1040). When his other brother, Surkhāb, made a pact with the Dīwānī (now Dīlāf) Khūrs, Abū l-Shawk turned for help to Dīlāl al-Dawla. Meanwhile 'Ālā al-Dawla pushed on to Mardj (Kerind?) and Abū l-Shawk took refuge in the castle of Sirwān (on the Dīlāf). Finally 'Ālā al-Dawla contented himself with Daynwarzāl and then suddenly died in 433/Sept. 1041. In 434/1042 Abū l-Shawk again attacked Muḥāfīl who fled to Snda (perhaps Senne?). Abū l-Fāṭāh had died in captivity and the brothers made peace.

In 435/1043 Dīlāl al-Dawla died and at the same time a new enemy threatened the Annāzids. In 437/1045 Tughrīl sent his half-brother Hīlāl b. Hīlāl Vīnāl to the west, and Abū l-Shawk fortified himself in the castle of Sirwān (see above), while the Ghuzz devastated his dominions. He died in Rāmādān 437/ April 1046.
The Kurds rallied now round (3) Muhalhil who hastened to reoccupy Kirmanshah and Daynawar (438/1047), whence he ousted Badr b. Hilal appointed by Ibrahim Yinal. It is possible that Muhalhil relied on some local tribes of Shahrazur, for his nephew (4) Sa’di (Su’dâ) b. Abi ‘l-Shawk felt disappointed by his uncle’s neglect of himself and the Shâhdandjan. He went to join Ibrahim Yinal (438/ Sept. 1046), who reinforced his Shâhdandjan by a troop of Ghuzz. In Huwilâb Badr read the hâkems for Ibrahim. He also occupied Bandandjian, and his uncle Surkhâb sought refuge in Diz-i Dolya (cf. the name of the Kurdish tribe Dolo between Sharabâb and Khamiânî). But then defeated and captured Sa’dî and his ally, the chief of the Djaqwân tribe. Soon, however, the Lurs, who were Surkhâb’s subjects, extradited their master to Ibrahim, who had one of his eyes blinded. By that time, Sa’di had been liberated by a rebel son of Surkhâb. As Sa’dî was not too favourably received by Ibrahim, he returned to Daskara (near Shahrazur) and sought the help of Bağdâd.

Ibrahim appointed a relation of his to occupy Surkhâb’s dominions and remitted Surkhâb to him to facilitate the surrender (Du’mâd II 439/Dec. 1047), but the envoy was defeated by Sa’di’s ally Abu ‘l-Fath b. Warrâm (*Warâm < Bahram?) Djaqwân. Then the Ghuzz defeated Sa’dî and spread on the left bank of the Tigris. Sa’dî sought refuge among the Banû Mazayr Arabs and Ibrahim captured the last important castle of the ‘Annâzids, Ka’at al-Sirwân (see above). Muhalhil also had to flee from Shahrazur (439/1047). During the siege of Tirânshâr (Tirân? by the Ghuzz, plague broke out among them and in 440/1048 Ibrahim ceded Sa’dî to them to Mâhdâshâ (west of Kirmânsâh). Muhalhil re-occupied Shahrazur but in 442/1050 he felt obliged to pay homage to Tughrîl-bek, who received him kindly and re-instated the ‘Annâzids: Muhalhil in Sirwân, Dâkûtâ, Shahrazur and Sângân (Zimkân? a left affluent of the Diyaîlâ); Surkhâb in Dizî Mâhkî (cf. the Kurds Mâhkî in north-western Luristan) and Sa’dî in the two Râwânds (near Nîhâwând). In 444/March 1053 Sa’dî was placed in command of Tughrîl’s van and advanced to Nunmâniya, clashed with his uncle Muhalhil and made him prisoner.

Meanwhile Bağdâd was occupied by ab-Bâsârî (q.v.). Muhalhil’s son (5) Badr went to ask Tughrîl to intervene for the liberation of his father. Tughrîl offered to exchange Muhalhil for one of Sa’dî’s sons kept by him as a hostage. Sa’dî disliked the offer and suddenly revolted against Tughrîl and sided with al-Malik al-Râhîm, the Bûyîd. He was defeated by Tughrîl’s generals and Badr. Muhalhil must have died at that time. Badr proceeded to Shahrazur, while Sa’dî remained in the castle of Rawshân-Khâsh (on the right bank of the Diyaîlâ), and even in 446/1054 the Ghuzz were unable to dislodge him.

After the occupation of Bağdâd by Tughrîl (447/ 18 December 1055) the sources are silent on the ‘Annâzids but some survivors of the dynasty can be traced even at a considerably later time. Under 455/1110, Ibn al-Athîr, x, 238, reports on the attack of Kâcharî (a Salghur Turkman) on (6) Surkhâb b. Badr. The commanders in Khurshid (Silurzi) curtailed Surkhâb’s possessions, until the latter contented himself with being a mere shîhâna on his behalf in Mânrûd (near the Mungerre range in Central Luristan). Finally the whole of Mânrûd was incorporated by Khurshid. This Surkhâb was undoubtedly a descendant of Surkhâb, lord of Bandandjian and Mâhkî, and with him the last scion of the ‘Annâzids must have disappeared.

Bibliography: Hûlîl b. Muhammîn, in Margoliouth, The Eclipse, iii; Mughîml al-Tawdrîkh (written in 520/1126), Teheran, 1318/1938; this book adds some interesting details to our principal source Ibn al-Athîr, x, 280; the founder of the dynasty of Lesser Lur (q.v.) Khurshid (Silurzi) curtailed Surkhâb’s possessions, until the latter contented himself with being a mere shîhâna on his behalf in Mânrûd (near the Mungerre range in Central Luristan). This Surkhâb was undoubtedly a descendant of Surkhâb, lord of Bandandjian and Mâhkî, and with him the last scion of the ‘Annâzids must have disappeared.

ANNIYYA, an abstract term formed from the conjunct particle an or anâna, “that,” is the literal translation of the Aristotelian term ṭû ānî and means therefore the fact that a thing is, its “thatness” (the particle anâna is used also substantively and al-anâna has the same meaning as al-anâniyya). The principal passage where Aristotle employs this term is in Anat. Post. II. 1 and the important distinction he makes there between the fact that a thing is (ṱû ṭûn) and the question what it is (ṱû ṭût) is the fundamental source of the later discussions about existentia and essentia. Indeed, the most pregnant sense in which the term anâniyya is used by the Muslim philosophers is the meaning of existentia, i.e. the existence in reality of a particular individual in opposition to its essentia, its intrinsic nature, its “thatness,” māhiyya, quidditas in the Latin translations. When, for instance, abu-Salih al-Malhâmî al-Fâlajî expounds the general doctrine of the Muslim philosophers that in God existence and essence are unified, he uses the terms anâniyya and māhiyya. Since, however, in philosophy existence and non-existential being are often confused—in Greek philosophy the terms ṭû and ṭûn serve to express both meanings and Aristotle himself uses (Met. VII 17. 1041* 15) ṭû ānî and ṭû ānâna, as synonyms (the Arabic translation of these terms here, in the edition of Bouyges p. 1006, is al-anâna and al-anâniyya)—we find the term al-anâniyya used also for non-existential being. For instance in a passage in Aristotle’s Metaphysics X 10.1057* 23 the non-existential being of truth and falsehood is rendered
by "anniyya (the Greek has ὃνομα) and Averroes in his comment on this passage explains the term by μεmβρέα.

A special feature of the pseudo-Aristotelian neoplatonist treatise is the "Theology of Aristotle" and the liber de causis in which ὀνομά and ὑπονόμω are constantly translated by "anniyya, whereas the category ὑπονόμω (identity) is rendered by ρυτίς. But in other translations e.g. the translation of Aristotle's Metaphysics ὀνομά is often translated by ἀναπίνω (e.g. in Book V, 7, where a definition of ὀνομά is given) and we often find the terms, "anniyya, ὑπονόμω and ἀναπίνω often used interchangeably.

It may be remarked that the fanciful derivation of "anniyya from 'ana, e.g. given by some Persian mystics and which has been adopted also by some modern European scholars, cannot be maintained, if only for grammatical reasons. The correct derivations from 'ana: *anniyya* and *anniyya* are both found in later Arabic philosophy for instance in Shīrāzī (17th Century).

Bibliography: We do not possess a satisfactory lexicon of Arabic philosophical terms. However, the examples given by Bouyges in the accurate indexes to his edition of Aristotle's Metaphysics with Averroes' Commentary may be studied with profit. Although the term is frequently used by Avicenna, it is found neither in Ghasálī's Tahdīfī nor in Averroes' Tahdīfī al-Tahadīfī.

(S. Van den Bergh)

AL-ANŠĀR, "the helpers", the usual designation of those men of Medina who supported Muhammad in distinction from the Muhādirūn or 'emigrants' i.e. his Meccan followers. After the general conversion of the Arabs to Islam the old name of al-Aws and al-Khazrajū jointly, Banū Kayla, fell out of use and was replaced by Ansār, the individual being known as an Anṣārī (cf. Kurān, ix, 100/101, 117/128). In this way the early services of the men of Medina to the cause of Islam were honourably commemorated. Anṣār is presumably the plural of naṣīr, but the latter is never used as a technical term. The verb naṣara has the connotation of helping a person wronged against his enemy. This is sufficient to explain why the Muslims of Medina were called al-Anṣār (sometimes ansār al-nabi, "the helpers of the Prophet"), but the choice of the name may have been influenced by the resemblance to Naṣārū, "Christians"; e.g. Kurān, lxi, 14, "Be helpers of God as Ḩāsalā Maryam said to the disciples, Who are my helpers towards God?" (cf. iii, 52/45).

Muhammad's first effective contacts with Medina were at the pilgrimage of 620 A.D., with six men of the Khazrajū. As the reconciliation of the Aws and the Khazrajū, however, was part of his aim, he seems to have insisted on the Aws being represented at the negotiations; and in the traditional accounts of "the first and second 'Akaba" [p.xxx] about a sixth of those who pledged themselves to Muhammad were men of the Aws. Medina had suffered so much from the feuds of the two tribes [see al-Aws, al-Khazrajū, al-Madīnah], that the ready acceptance of Muhammad's claims must have been partly due to the hope that he would be able to restore and maintain peace. While there is much obscurity about the details, it is clear that most of the inhabitants of Medina, apart from the Jews, had entered into the agreement with him. The chief exceptions were four clans of the Aws, called Ḫuṭṭān, Wāḥil, Wāṣif and Umayya b. Zayd, and part of a fifth, ʿAmr b. ʿAwf, all of which had close relations with the Jews. These non-Muslims are to be distinguished from the Munāfikūn or 'hypocrites', since the latter were parties to the agreement with Muhammad who afterwards disapproved of him. Despite these defections, the Aws were important among the Anṣār, and indeed the leading Anṣārī, until his death in 5/627, was Saʿd b. Muʿādh, chief of the clan of Ḥāḍir al-Asghal of the Aws.

The following table shows the number of men of the various clans present at "the first 'Akaba" (A 1), "the second 'Akaba" (A 2), and the battle of Badr (B). The last column (W) gives the number of women of the clan who are given notices in Ibn Saʿd, viii; this may be taken as a rough indication of the total strength of the clan.

These figures suggest that a leading part in the approach to Muhammad was played by clans like al-Naḍijār, and Salīma, which had many members but had produced no great leaders in war. The two chief men of Medina at this time, Saʿd b. Muʿādh and ʿAbd Allāh b. Ubayy were not at al-ʿAkaba, and their clans (ʿAbd al-Ashghal and Banū ʿAl-Hubih) seem to be relatively badly represented.

It is disputed in the primary sources whether the Anṣār took part in any of the first small Muslim expeditions. They constituted, however, about three quarters of the Muslim force at Badr. Of the leaders Saʿd b. Muʿādh was the most zealous in the cause of Islam; not merely ʿAbd Allāh b. Ubayy, but Uṣayy b. Ḥudayr (a rival of Saʿd b. Muʿādh for the chieftaincy of ʿAbd al-Asghal) and Saʿd b. ʿUbaydā were absent from Badr. At least until the siege of Medina in 5/627 ʿAbd al-ʿAsghal b. Uṣayy was trying to prevent the growth of Muhammad's power; but the others threw in their lot with Muhammad after Badr. At the meeting to deal with "the affair of the lie (tāḥshīl) against ʿAlī's chastity, it was clear that the first man among the Khazrajū was now Saʿd b. ʿUbaydā. Indeed, shortly afterwards, on the death of Saʿd b. Muʿādh, he was recognized as the leader of the Anṣār as a whole. These continued to be one of the main foundations of Muhammad's power, though about the time of the expedition to Tabūk in 9/630 a small section became disaffected.

Throughout Muhammad's residence at Medina the old feuds were slowly being forgotten, and the
Ansar were coming to feel themselves a unity, especially in contrast to the Muhaddirun or "emigrants," with whom they rarely intermarried. The cleavage between the Aws and the Khazraj was a factor of occasional importance as late as the meeting after Muhammad's death at which Abu Bakr was made caliph; but nothing is heard of it subsequently. After the wars of conquest the Ansar, despite their honourable position in the new Islamic nobility, declined in influence. They mostly opposed Qhidmân and supported 'All. Later they constituted a "pious opposition" to the Umayyads and took the side of the 'Abbâsiyád. Before the 'Abbâsiyád came to power, however, the Ansar had largely become merged with members of Kurâyah and other tribes who had settled in Medina.

(W. Montgomery Watt)

**'ANSÂRA,** the name of a festival. Ibn al-Hâdîdî (Tâdît al-Mulâk, Cairo 1312) derives the word from the Arabic root َاَلٍنْ. For more than three-quarters of a century, Dozy, on the one hand, and Eguilaz y Yancas on the other, have attributed it to the Hebrew ã'sârâ (with the variants ã'sâlî, ã'sârâ, ã'sérât, depending on the district) or in verse, which are considered writings in glossaire, 135-7; Eguilaz y Yancas, Glossario, 187-8).

In the Magrib, 'ansâra (with the variants 'ansara, 'ansâla, 'ansâra, 'ansârathe, depending on the district) denotes the festival of the summer solstice, celebrated on the 24th June in the Julian calendar, or the 5th-6th July in the Gregorian. Though known throughout Morocco, and almost everywhere in Algeria, it is not known, it appears, in Tunisia. The magico-religious character of the acts which make up its popular ritual is not in doubt: (a) fire rites intended perhaps to give greater strength to the sun at the time of the solstice; the burning of braziers full of plants, of hives, or of huts, thus producing copious smoke which is supposed to have the virtue of purification and fecundation; (b) water rites, ablations, sprinklings, the mingling of water with the ashes of the ritual brazier, by virtue of which the fructifying humidity is besought to combine with the sun; (c) pomorphism.

His works are the exact expression of the varied aspects of his rich personality: in the field of mysticism, he bared his soul in the Mandzîl al-Sâdirîn, a valuable spiritual guide, to the Hebrew *asdra (*asereth) or in verse, which are considered writings in glossaire, 135-7; Eguilaz y Yancas on the other, have attributed it to the Hebrew ã'sârâ (with the variants ã'sâlî, ã'sârâ, ã'sérât, depending on the district) or in verse, which are considered writings in glossaire, 135-7; Eguilaz y Yancas, Glossario, 187-8).

Yahya, Arab physician born at Antioch, son of the ra'is of Karrat Sidr Ḩabīb Al-Najdījī, undertook, though quite blind, long journeys which led him also into Asia Minor. There he learnt Greek, on the advice of a Persian physician who had cured him of a malady from which he had long suffered, in order to be able to study the sources of medical science in the original texts. Later, he lived at Damascus and Cairo, and died in 1086/1579 at Mecca, after less than a year's stay there.

His chief work is a large, exhaustive medical hand-book in which he followed Ibn al-Bayārī, named Taḥṣīl ʿl-ʿAḥāb wa ʿl-Ḥāmi' ʿl-ʿAḥāb al-ʿUḍāb, Cairo 1304-5/1887-8, 2 vols. (in the margin: the Ḥadyl of a pupil and the work al-Nuẓa al-Mubāhidja fi Taḥṣīl al-ʿAḥāb wa Taʾdīl al-ʿAḥāb, on therapeutics); see Leclerc, in Notices et Extraits, XXIII, 13; recent study by Ḥasan ʿAbd al-Salām. As the Art of Love was then considered as an appendix of medicine, he also edited the work of Muhammad al-Sarradāj (d. 500/1106) on love, under the title Ṭazīyīn al-ʿAṣwād bi-Taḥṣīl ʿl-ʿAṣwād al-ʿUḍāb, Būlāk 1295/1878, 1 vol. 405/1014-5. At Antioch, he had at his disposal new works, and he again revised his history and gradually completed it by an account of contemporary events, neglecting no opportunity to obtain material on this purpose. Although none of the manuscripts of his work which we possess goes beyond 425/1034, it is probable that his history continued beyond that date and that he brought it down to 455 and possibly even to 458. Yahyā b. Saʿīd does not describe events year by year, but arranges his material under the reigns of the caliphs (first the ʿAbbasids, then the Fātimids) and under countries. He displays special interest in Egypt, Syria and the Byzantine Empire, and a moderate interest in Baghdaḍ, but only mentions North Africa in connection with the early Fātimids. He used not only the Muslim sources, but also the Greek and local Christian sources with which he became acquainted at Antioch. His work abounds in chronological information, in most cases both the  Ḥijra and the Seleucid dates being given, the latter being taken from the sources and converted, perhaps by himself, into the Ḥijra dates. Yahyā's work is very important for the history of Syria—Mesopotamia and Byzantium in the 4th/10th and 5th/11th centuries; it is equally important for Fatimid Egypt and naturally for the life of Christian circles and ecclesiastical affairs. The problem of his sojourn in Egypt and the relationship between his history and the Arab chronicles of the same period is difficult to solve.

**Bibliography:** This will be found in the notice on the author in the French edition of A. Vasiliev, Byzance et les Arabes, ii, La dynastie macédonienne, 2nd part, Extraits des sources arabes, by M. Canard, Brussels 1950; in this was made of the fundamental study by V. Rosen, The Emperor Basil the Bulgar-Slayer, Extracts from the Chronicle of Yahyā of Antioch (in Russian), St. Petersburg 1883, a brief summary of which had been given by A. Vasiliev in the Russian edition of Byzance et les Arabes, ii, St. Petersburg 1902, 58-9. The only complete edition is that of L. Cheikho, B. Carra de Vaux and H. Zayyat, CSCO, Script. ar., 3rd Series, vol. 7, Paris 1900; the text and trans. by Vilatjian (Patrologia orientalis, xvii, 1924, and xxii, 1932) stops at the year 404; cf. also G. Graf, Gesch. der christl. arab. Litteratur, ii, 49-51. (M. CANARD)

**ANTAKIYA.** Arabicised form of Antiocheia, town in northern Syria, situated on the Orontes (ʿAṣaf) river, 14 m. from the Mediterranean coast. Founded about 300 B.C. by Seleucus I, and occupied by Pompey in 64 B.C., it became the largest and most important Roman city in Asia and capital of the Asian provinces of the Roman empire. Its gradual decay dates from the foundation of the Sāsānīd empire, which diminished its political and economic influence in the Tigris-Euphrates basin and made it the object of repeated Persian attacks. It was occupied and pillaged for the first time in 258 and 260 by Shāpur I, who removed many of its inhabitants to Dūndē-Šāpūr (q.p.) in Susiana (cf. al-Ṭabarī, i, 827), and from 266 to 272 it was subject to Zenobia, queen of Palmyra. Nevertheless, despite endemic internal conflicts and disastrous earthquakes (to which the region has always been liable), it maintained its prosperity until its siege and destruction by Shāpur II (Anusharvan) in 540, and a further deportation of its inhabitants to the Persian empire (cf. Th. Nöldeke, Ges. d. Perser u. Araber zur Zeit der Sasaniden, Leipzig 1879 105, 239; M. Streck, Babylonien nach
Under the early caliphates Antioch is seldom mentioned. It was the headquarters of the frontier military organisation called al-‘Awāsim [q.v.], and appears to have remained an active centre of intellectual life. With the rest of N. Syria, it was annexed by Ahmad b. Tūhān (q.v.) in 265/878, remaining in the possession of his successors until 285/898, and occupied by the Ḥamādān Sayf al-Dīn [q.v.] in 333/944. Recaptured in 358/969 by the Byzantine general Michael Burtzes, it was governed by Byzantine dukes until 477/1084, when it fell by treachery to the Saljūqid Sulaymān b. Kūtumlūf [q.v.]. His possession of the city was disputed by the ‘Ukaylid ruler of Mosul and Aleppo, Muslim b. Kurayṣ [q.v.]; Sulaymān defeated the latter (who fell in the battle) near Antioch in Safar 478/June 1085, but was himself defeated and killed by his kinsman Tūṭush in the following year. This conflict brought about the intervention of the Saljūqīdīn sultan Malikshāh, who gave Antioch in fief to the Turkish amir Yaghūṭ-siyān. It was from this governor that the city was finally ceded by France to the Turkish amir Yaghūṭ-siyān. It was from this governor that the city was
permitted to use the remains of the walls to rebuild the city are relatively small, the inhabitants having been
identified by Muslim tradition with the un-
permitted to use the remains of the walls to rebuild

surroundings (producing citrus fruit and sub-

Antioch remained thereafter a minor dependency of the Mamlikūd nīṣābūr and later Ottoman pashalık of Aleppo. After the First World War it was occupied by French troops in February 1919 and attached to the French mandated territory of Syria. When a brief episode by Salah al-Dīn Baybars Bundukdārī [q.v.] on 4 Ramadan, 666/26 May, 1268. During this period it was ruled by the Norman dynasty descended from Bohemond, whose principality waxed and waned with the changing fortunes of the Crusading forces, but whose capital was never seriously challenged except for a brief moment by Sūlāmīd al-Dīn [q.v.] in 1184/1188. Antioch remained thereafter a minor dependency of the Mamlikūd nīṣābūr and later Ottoman pashalık of Aleppo. After the First World War it was occupied by French troops in February 1919 and attached to the French mandated territory of Syria. When a brief episode by Salah al-Dīn Baybars Bundukdārī [q.v.]

The extant remains of the Byzantine and mediaeval city are relatively small, the inhabitants having been permitted to use the remains of the walls to rebuild their homes after a severe earthquake in 1872. It has no Muslim monuments of importance except the sanctuary below Mt. Silpius, the former cathedral, called by the name of Ḥā bid al-Nādjarīd (“the Carpenter”) [q.v.], identified by Muslim tradition with the
nenamed believer referred to in Kūrān, xxvi, 12 f.
tropical plants such as bananas) and because of its beautiful countryside. There are many waterfalls, and the Lycian mountain ranges on the western shores of the bay rise to a height of 2000 m. like a backdrop. The mountains are inhabited by a primitive population of Śiḥite religion, called the Takhtağlıs "woodcutters") [q.v.].

Sirat ‘Antar, the romance of ‘Antar, rightly considered the model of the Arabic romance of chivalry. This sura surveys five hundred years of Arab history and includes a wealth of older traditions. The story in the Kitāb Al-Āḥānî of how ‘Antar, the son of a slave-girl, was adopted into the tribe of Banû ‘Abs for saving them at a time of great crisis bears the stamp of a flourishing but already legendary tradition. The Sirat ‘Antar, far transcends the unconscious development of a legend. By a bold stroke ‘Antar, the solitary hero, is raised to be the representative of all that is Arab, ‘Antar the pagan is made the champion of Islam. The romance thus comes to reflect the vicissitudes of the Arabs and Islam through half a millennium; the tribal feuds of the old Arabs; the wars against Ethiopian rule in the Sudan, who becomes the mother of two sons, who are placed at the side of his. Shortly before his death, ‘Antar comes to Rome. The king of Rome, Balkam b. Markas is hard
pressed by Bohemund; 'Antar kills Bohemund and liberates Rome. On a campaign of reprisal against the Sūdānese, 'Antar goes from kingdom to kingdom deeper into Africa till he reaches the land of the Negus. Here he discovers in the Negus the grandfather of his mother Zabiba. Even more fantastic are the campaigns against Hind-Sind, against the Christian king Laylamān in the land of Bayḍāʾ, in the land of the demons. 'Antar's death is brought about by Wizr b. Dāhir called 'Antar under the delusion that he has missed. While dying, and indeed when dead, still sitting on his steed Abbigār, 'Antar still wards the enemy off from his people. 'Antar's marriage with 'Abla was childless but from his secret marriages and love-affairs, several children were born including two Christians, and indeed Crusaders, Ghadanfar, Coeur-de-Lion, son of 'Antar and the sister of the king of Rome whom 'Antar had made and left in Constantinople, and Djiurān (i.e. Geoffroi, Godfrey), the son of 'Antar and a Frankish princess. 'Antar's children avenge and lament the death of their heroic father. Ghadanfar and Djiurān then return to Europe. 'Abs becomes a convert to Islam.

Analysis. The following are the main elements that have contributed to the growth of the Sīra:
1. Arab paganism; 2. Islam; 3. Persian history and epic; 4. The Crusades. 1. The Arab paganism it owes the chivalrous and knightly Bedouin spirit of the work, the majority of the characters in it, who often have historical features, the feuds between the sister tribes of 'Abs and Faḍhāra; in connexion with the race between Dāhir and Qābāra, the most powerful of the Akhbar al-ʾArab, like Zuhayr's marriage with Tumaclir, Zuhayr's death, Malik b. Zuhayr's marriage with Tumaclir, Zuhayr's death, Harīth and Lubna, an anecdote of Rabiʾ a b. Mufcaddam etc. 2. To Arab paganism, it owes the chivalrous and knightly Bedouin spirit of the work, the majority of the characters in it, who often have historical features, the feuds between the sister tribes of 'Abs and Faḍhāra; in connexion with the race between Dāhir and Qābāra, the most powerful of the Akhbar al-ʾArab, like Zuhayr's marriage with Tumaclir, Zuhayr's death, Malik b. Zuhayr's death, Harīth and Lubna, Djiurān and Khālid, anecdotes of Hāṭum Ţayyi, the splendid figure of Rabīʾ a b. Muḥkaddam etc. 2. To Islam, the introduction with a long midrash to heaven in a box borne by eagles, several African traditions (probably taken from geographical works on Africa). There are also links with...
European legends. The marvellous signs at the birth of Charlemagne (in Pseudo-Turpin) resemble those recorded in our romance at the birth of Muhammad, but Pseudo-Turpin undoubtedly borrowed from an older source. Artificial birds made of metal, which sing in various tunes by means of bells and organ pipes are described in French and German epics and also in the Sirat 'Antar. But here we have to deal with the historical marvel of the Chrysotriklinium in Constantinople, and with a similar thing in the Ctesiphon of the Sámanids and also in the capital of the Tatar Khâns. Some coincidences are very striking. Hârîth al-Zâliîm beats his sword Dhu 'l-Hiyat against a rock, so that it may not fall into the enemy's hands; the rock is broken but the sword is uninjured, just as is the case with Roland's Durandal. ' Antar instructs his son Ghâdîbân, who wishes to slay Khusraw and seize the power for himself, on the subject of kingship by God's grace just as Girard de Viane does his nephew Aimeri who wants to kill Charlemagne. ' Antar's horse Abdjar takes flight to the desert after ' Antar's death, so that he may not serve another master, just as Renaud de Montauban's Baiart escapes to the forests of the Ardennes. Very remarkable is the parallel between the duel between Roland and Oliver and that of ' Antar and Rabî'a b. Muşaddam; the sword of the one combatant breaks in two and his magnanimous opponent gets him another; the duellists are reconciled and become brothers-in-law. But such poetical developments have their origin in a similar chivalrous outlook, the relations of the knight to his sword, to his horse, to his overlord and to his opponent.

Chivalry in the Sirat ' Antar. The Sîra is rightly recognised to be a romance of chivalry. In the pagan period among the Arabs the ideal of masculine virtue was mursawa, futuawa; alongside of this we have more frequently in the Sirat ' Antar furusya along with farasa and tajurrasa. The knight is called jâris. ' Antar is called 'a father of knights', Abu 'l-Fursân, sometimes Abu 'l-Fursân, Âlî 'l-Fursân, Fâris al-Fursân, Afrus. Not everyone who rides a horse is a knight. The knight's qualities are courage, fidelity, love of truth, protection of widows, orphans, and the poor (' Antar arranges special meals for them), magnanimity, reverence for women (' Antar begins and ends his heroic career protecting women; he swears by 'Âbla, by 'Âbla's eye, conquerors in ' âbla's name), liberality, especially to poets. The knights are also poets, especially poets of the Hîdżâz, who are found in hundreds in the Sirat ' Antar. The Sîra also knows the institutions of chivalry. We meet pages and squires, not only the sahrâ'îya of Ctesiphon; ' Antar himself trains several thousand squires. The Sîra even describes tournaments on a great scale, in the Hîdżâz, in Hîra, in Ctesiphon, the most splendid in Byzantium where ' Antar's lance strikes the ring 476 times. These toursneys have many features in common with those of Europe, fighting with blunted weapons, tilting at the ring, decorating and bellying the lists, the presence of ladies and girls. These agreements have been explained in the most diverse ways. In the one hand Delécluze saw in ' Antar the model of the European knight, in the Sirat ' Antar, the source from which Europe had obtained all its ideas of chivalry, while on the other hand Reinaud simply found European ideas, customs and institutions imitated in the Sîra (J.A., 1833, i. 102-105). In this some have seen the starting point for the study of the question of the origin of the Sirat ' Antar.

Origin. The Sirat ' Antar itself frequently and readily talks about itself and its origin. It professes to have been composed by al-'Asmâ'î in the time of the Caliph Hârûn al-Rashîd at his court in Baghhdâd; ' Asmâ'î lived for 670 years, of which 400 were in the Dîhlâliya; he was personally acquainted with ' Antar and his contemporaries, concluded the composition in the year 473/1080 and recorded traditions from the mouths of ' Antar, Hamza, Abû Tâlib, Hâtîm Taṣỳy, Amru 'l-Kâîs, Hâni b. Mus'âd, Hâzim of Mecca, ' Ubaydya, ' Âmar b. Wudd, Durayd b. al-'Simma, ' Âmir b. al-'Tuhayl. In fact we have a regular romance regarding the origin of the romance. The repeatedly mentioned nâwî, nâtî, muṣânnî, sâhîb al-bârât, ' Asmâ'î and other authorities have the same significance for the Sirat ' Antar as the Dîhlâns, Pehlew books and the hoary authorities in Firdawsi, or as the chronicles of St. Denis for the French epic. It is simply fiction when the Sirat ' Antar tells us that it exists in two versions, one for the Hîdżâz and the other for ' Irâk. The invention of a Hîdżâz recension is intended to encourage the belief that 'Asmâ'î collected from ' Antar and his contemporaries in the Hîdżâz the information, which was utilised in the romance. The Hîdżâz as the home of the romance is a pure invention. On the other hand ' Irâk may really have made a considerable contribution to the composition of the Sirat ' Antar. For the date of origin of the Sirat ' Antar we have the following clues: 1. In a religious dialogue between a monk and a Muslim (Das Arabischen übersetzt von K. Vollers, Ztschr. f. Kirchengeschichte, xxix, 49) the monk mentions the exploits of ' Antar. 2. About the middle of the xith century the former Jew Samaw'al b. Yahyâ al-Maghribî, a convert to Islâm, describes his career and mentions that in his youth he was fond of long tales like that of ' Antar (MGW, 1898, xxlii, 127, 418). 3. The evidence contained in the book itself. The appearance of Bohemund, Djufran (Godfrey of Bouillon), perhaps also of the king of the beggars, Tafur, brings us to the period after the first Crusade, that is at the earliest in the first half of the xith century. The composition of histories of ' Antar must therefore have already been begun in the xith century — on the evidence of the religious dialogue above mentioned. According to Samaw'al b. Yahyâ a book of ' Antar of considerable size was actually in existence in the middle of the xith century and if Bohemund and Djufran already appeared in it, it must have been completed at the beginning of the xith century. At the same time the meddahs may have continued to add a great deal to it and in particular continued its islâmisation. The midrash of Abraham which is quite an inorganic addition and the legends of Muhammad and ' Ali could belong to any period. An original ' Antar can be reconstructed with philological probability. In vol. xxxi., the dying ' Antar reviews his heroic career in his swan-song. He proudly recalls his victories in Arabia, ' Irâk, Persia, and Syria. But he makes no mention of Byzantium or Spain, of Fez, Tunis, or Barka, of Egypt, or Hind-Sind, of the Sudân or Ethiopia. This original ' Antar may have arisen in ' Irâk (under Persian influence or perhaps in emulation of Persian epic poetry). The swan-song makes
no mention of children, and knows of only one love of Antar's. This original Antar therefore should be called Antar and 'Abla. Following a genealogical stimulus, the later epic made royal ancestors be found in the Suddan and royal descendants in Arabia, Byzantium, Rome, and the land of the Franks. The Crusades next found an echo and a reaction in the 'Antar story. The Crusaders came from the land of the Franks via Byzantium to Syria. 'Antar goes in a kind of reversed crusade from Syria via Byzantium to the land of the Franks and brings about the victory, if not yet of Islam, at least of Arab ideals and culture over European Christianity. The whole geographical area and historical range of the novel is filled with the exploits of Antar.

The romance of Antar seems to be first mentioned in Europe in 1777 in the Bibliothèque Universelle des Romans (JA, 1834, xiii, 256); it was first introduced to European scholarship in 1819 by Hammer-Purgstall and to comparative literature in 1851 by Dunlop-Liebrecht (Geschichte der Prosadichtungen, xiii-xvi). The study of the problem of scholarship raised by the Strat Antar was begun by Goldzinner (mainly in his Hungarian works). The Strat Antar was for long a favourite subject of study in France. In the Journal Asiatique the work was often discussed and partly translated. Lamartine went into raptures of admiration and enthusiasm for Antar (Voyages en Orient: Vie des grands hommes I. Premières Méditations Politiques, Première Préface). Taine places Antar beside the greatest epic heroes - Siegfried, Roland, the Cid, Rustam, Odysseus and Achilles (Philosophie de l'Art, ii, 297). These tributes are not unmerited. The Strat Antar unfolds before us the ever changing, glowing panorama of a particularly attractive period with an extravagant power of imagination, a skill in narration which never fails throughout the 32 volumes, and a poetical style of inexhaustible richness.

(B. Heller)

'Antara, "the valiant" (see JA, vii, 183, which also gives the meaning "blue-bottle"); the word is probably derived from the root 'Ir which expresses the idea of violence. Several warrior-poets of Pre-Islam bore this name; see Āmidī, 151-2. "Antara b. ʿAbdādādār, warrior-poet of the 6th century A.D., belonged to the 'Abs tribe of central Arabia (see Ḥafṣanī). The short notice by al-ʿIṣfahānī, in the ʿAghāni, suggests that by the 4th/10th century he is called poet and 'Abdādār. Following exaggerated popular accounts which had already made 'Antara a hero of fiction. Restricted to positive facts, the biography of this man is extremely sketchy. Born of an Arab father and a black slave, 'Antara, in his youth, lived in slavery as a shepherd;

(R. Blachère)

'ANTARI (A.), noun derived from 'Antar [q.v.], denoting in Egypt: 1) a strong woolen garment worn over the kafiri; 2) a short garment worn under the kaftan.

The latter usage, assimilated by popular etymology to 'Antari, derives from the Turkish Entari, a word of Greek origin.

'ANTÀRÍTOS [see TÁRTÒS].

ANTEMURU, tribe of south-eastern Madagascar, comprising 85,000 sedentary agriculturists living in the low river valleys, from the Matatana in the south to the Namurana in the north, and eking out their livelihood by fishing. Of their number, 25,000 members of certain clans claim to come from Emaka, a region which they liken to Mecca. According to their written traditions, some siyama "Muslims", accompanied by kafiri "pagans", passing through the Comoros and the north-east of Madagascar, settled during the 7th/13th century, near their present territory. They found there, and assimilated, other groups of the same origins.

It seems likely that an Indonisian community was augmented by an influx of groups which had in varying degree been Islamised, and came probably from the east coast of Africa, which had been penetrated by the descendants of immigrants from the Persian Gulf. The prestige of these "Islamised" elements was such that the Indonesian dynasties and some clans ascribed to themselves an Arab origin.

It is possible to distinguish two successive waves of immigrants; the earlier introduced divination based on geomancy, while the Antalaotha of the more recent influx introduced writing in Arabic characters and paper-making. The latter was introduced in addition: plants (the vine, pomegranate, hemp, the copal-tree), the game of chess, a few prayers, a period of comparative fasting, some words of Arabic origin, and above all a calendar.

Since the 10th/16th century, the fame of the Antemuru magicians has extended their influence throughout Madagascar. Isolated from the Muslim world, they look upon writing not as a vehicle of communication, but as a means of preserving their magico-religious secrets. The development of the occult sciences has represented a corresponding decadence of the Islamic tradition. The astrological calendar has supplanted the Muslim lunar calendar; prayers, their meaning not understood, have become magic formulas. This decadence is most marked in the tribe which dwells to the north of the Antemuru, namely the 12,000 Antamabo or Antambahawaka.

Since the beginning of the 19th century the over-population of Temuru territory has led to a temporary exodus to the north-west of Madagascar. There, they live with the Cormanian Muslims. This has given rise since 1913, and especially between 1926 and 1939, to a new Islamic revival among some of the 2,000 literates belonging to the clans of the Antalaotha group.

After 1924, the development of coffee-planting, which created new resources, checked the migration to the north-west. Relations with true Muslims again came to an end. The Islamic revival, opposed by the Christians as well as by the traditionalist magicians, declined, despite several attempts by Pakistanis to make converts.

ANTIÖCH [see ANTİNYA].

ANTÜN FARAH [see FAHAR].

ANÜSHIRWAN B. MUHAMMAD AL-KHASHANI, Sharaf al-Din Abu Nasr Nasr, was treasurer and 'ārid al-djiaykh to the Saldjuk sultan, Muhammad b. Malikshâh. After being succeeded by Shams al-Mulk b. Nisâm al-Mulk as 'ārid al-djiaykh he went to Baghdad. He was imprisoned during the reign of Maḥmûd b. Malikshâh for a short period but subsequently appointed waṣir by Maḥmûd (521/1127-522/1128). From 526/1131-528/1134 he was waṣir to the caliph, al-Mustarshid. In 529/1134 he became waṣir to Mas'ud b. Muhammad and held office until 530/1135-6. He died in Baghdad in 533/1138-9 according to Ibn al-Athîr, but according to the Tadjîrî al-Salafl of Hindî Shâb b. Sandjâr in 532/1137-8. He composed a work in Persian on the
events of his time, entitled Futur Zaman al-Sudur wa Sudur Zaman al-Futur, which was later translated into Arabic by ‘Imad al-Din (q.v.). Al-Bundari’s abridged version of this translation has been edited by Houtsma (Recueil de textes relat. à l’hist. des Seldjoucides; ii, Hadj-dj Khalifa mentions another work by him, entitled Naafi‘al-Masdur, but this is probably the same as the Futur Zaman al-Sudur mentioned above (see Mirzâ Muhammad Kazwini, Manafi‘Tawâhid wa Insikâdî, Tehran, 1350 solar). Anûshirwân was praised by various contemporary poets. It was he who encouraged al-Harîrî to compose his mabâmas.

(Â. K. S. Lambton)

ANWA (â.), a system of computation among the early Arabs. The singular nawâ, connected with the root madâ ‘to rise with difficulty, to lean, to support one’s weight on’ (q.v.), denotes the acronychal setting of a star on or after its heliacal rising and heliacal setting of its opposite (rabîb); by extension, it is applied to a period of time and, in the language of the later Middle Ages and the modern era, it has come to mean “cloud, rain, storm, tempest” (see Dozy, Suppl., s.v.; Beaussier, s.v.; H. Wehr, Arab. Wörterbuch, s.v.), on account of the pluvial role ascribed to the stars contemplated. In the plural, anwaâ denotes the whole system based on the acronychal setting and heliacal rising of a series of stars or constellations; it also appears in the title of a number of works which constitute a separate class of their own.

1. The system of the anwaâ.—To estimate the passage of time, the early Arabs possessed a primitive system—perhaps already influenced by the “Calendar of the Pleiades” (cf. J. Henninger, Sternkunde, i14 and references quoted)—which can be summarized as follows:—(a) on the one hand, the acronychal setting of a series of stars or constellations marked the beginning of periods called nawâ, but within which the duration of the nawâ proper was from 1-7 days. The stars themselves were responsible for rain and were invoked during the istikhâla (q.v.); knowledge of these anwaâ enabled Bedouin trained in this science to foresee the state of the weather during a given period; (b) on the other hand, the heliacal rising of the same series of stars or constellations, at six monthly intervals, marked out the solar year by fixing a number of periods probably about 28. Such maxims as have survived suggest that this was the very basis of the calendar.

Some time before Islam (cf. Kur‘ân, x, 5; xxxvi, 39) the Arabs learnt from the Indians to distinguish the “stations” (or “mansion” (mansila), pl. mandisi (q.v.)) of the moon, numbering 28. Perceiving that the list of these mansions corresponded grossus modo with their own list of anwaâ, they proceeded to combine the two ideas and to adjust their anwaâ to make them coincide with the mandisi, by dividing the solar zodiac into 28 equal parts of approx. 12° 50’; thus the 28 anwaâ identified with the 28 mansidi (see list in the article mansîzî) are determined by 28 stars or constellations constituting 14 pairs (the acronychal setting of the one corresponding to the heliacal rising of the other) and marking the beginning of 27 periods of 13 days and one of 14. These modifications, the date of which cannot be fixed accurately, were definitely completed after Islam, the passage from one system to the other being favoured by the development of astronomy, and by the anathema hurled by the Prophet against the anwaâ, which are not mentioned in the Kur‘ân. The old system, however, still survived, on the one hand empirically among the Bedouin tribes (cf. for example the nawa, pl. nawwâs of the Marâjî of southern Tunisia in G. Boris, Documents linguistiques . . . Paris 1951, 208-11), on the other hand traditionally, and with complete identification of the anwaâ with the mansions, in the specialised works which have perpetuated it among certain rural populations (see Ed. Westermarck, Ritual and Belief in Morocco, London 1926, ii, 177, and Wisdom in Morocco, London 1930, 313-17).

2. The anwaâ in Arabic Literature.—As might be expected, it was the lexicographers who first assembled Bedouin ideas on the subject of the anwaâ and published them in lexicographical works of which we shall consider only those entitled K. al-Anwaâ, leaving aside the K. al-Azmina and others which fall into the same category. The following are the principal writers mentioned as being authors of works entitled K. al-Anwaâ, none of which has as yet come into our possession: Ibn Kumâs (d. 207/822), Mu‘arrîdî (d. 195/810-11), al-Nâdír b. Shumayl (d. about 245/859), al-Ashâmî (d. 213/828), Ibn al-Kûbâyî (d. 233/848), Ibn al-Arîbî (d. 243/858), al-Mubârrad (d. 285/898). On the other hand, we have the K. al-Anwaâ of Ibn Kutâyba (d. about 276/889) which has recently (1957) been printed at Haydarâbâd, and we have fragments of that of Abû Hanîfâ al-Dinawârî (d. after 285/895), the works of al-Akhrash al-Ashâr (d. 315/927), al-Zâdadîhî (d. 310/922), Ibn Durâcî (d. 321/933), the K. al-Anwaâ of Ibn Lût (d. 330/941) and others are also lost. Basically these works contain an explanation of the system of the anwaâ, a list of the mansions (i.e. the modified anwaâ), a table of the dates of the rising and setting of the stars which determine them, the system of the winds and the rains, etc.; the explanation is accompanied by maxims and poetry, usually with a commentary.

From the 3rd/9th century, however, astronomers in their turn showed interest in the anwaâ; al-Hasan b. Sahl b. Nawbakht, Abû Ma‘shar al-Balkhî (d. 272/885-6), Thâtib b. Kurrâ (d. 289/902), and Ibn Khurradâbîh (d. 300/912-3), wrote K. al-Anwaâ while al-Bûrûnî (d. 440/1049) devoted to this subject a chapter of his Athâr and reproduced in part (424-75) the K. al-Anwaâ of Sinân b. Thâtib b. Kurrâ (d. 331/943), which is an almanac.

One would expect, indeed, to see Arab authors producing almanacs on the lines of those which they found in conquered territories, and, although we only have the almanac of Sinân for Irânî, it is probable that Egyptian authors composed them at an early stage, as is proved by certain chapters of Ibn al-Mammâtî and al-Mâktrâtî, and by the names of the Coptic months which appear in the calendars produced in Spain. For the latter country, we in fact possess an almanac published by Dozy under the title of Calendrier de Cordoue de l’année 961 (Leiden 1873) and still entitled K. al-Anwaâ, as is that of the mathematician of Marrâkûsh, Ibn al-Bannâ (d. 721/1321) which has been published by H. P. J. Renaud (Paris 1926) and others which are now lost, are attributed to al-Ghâribî (d. 403/1012-13) and al-Khâtîb al-Umâwî al-Kurtubî (d. 602/1205-6).

These calendars are solar and, under each day, the author gives information on the anwaâ, the length of the day and night, agricultural practices, etc., with, in the Calendrier de Cordoue, notification of

ARAB, the Arabs.

(i) The ancient history of the Arabs.

(ii) The expansion of the Arabs; general, and the "fertile crescent".

(iii) The expansion of the Arabs: Iran in early Islamic times; Appendix: The Arabs in Central Asia.

(iv) The expansion of the Arabs: Egypt.

(See also AL-ARAB, DJAZIRAT, as well as ARABIYYA and the articles on the several Arab countries).

(i) The ancient history of the Arabs.

(For the ethnic origins of the Arabs cf. AL-ARAB, DJAZIRAT, section on Ethnography, cf. also para ii, below).

The early history of the Arabs is still obscure; their origin and the events governing their early years are equally unknown to us. Probably we would know a good deal more about them, if Uranius' five books of Arâbôxâd, which constituted a special monograph on the Arabs, had been preserved. What we know about them is derived chiefly from the Assyrian records, the classical writers, and, as far as the history of the last three centuries before Islam is concerned, from Muslim tradition and some pre-Islamic Nabataean and Arabic inscriptions.

Possibly "the Aramaean Bedouins", who in 880 B.C. interfered in the affairs of Bet-Zamâni on the upper Euphrates and helped to overthrow the local vassal of the Assyrian king Assur Naṣîrpal, were predecessors of the Arabs. Their anti-Assyrian policy was subsequently followed by the Arabs, who first appear in the light of history in 854 B.C.: Gindibu, the Arab with 1000 camel troops from the Red Sea and Gulf of Aden Pilot, 1932, 130.

(G. FERRAND).
was situated somewhere south-east of Damascus. Certainly the bedouin element of the Arabian Peninsula—for which Aram, 'Eber, and Khabiru are probably synonyms—was to be found originally in the area which extended between Syria and Mesopotamia and which, including Syria, was the oldest centre of the Semites.

If the hypothesis, presented by F. Hommel (Ethnologie, 550), that the land of Magan corresponds to Arabic Ma'in and forms the starting point for the foundation of the South Arabian kingdom of Ma'in, were established—though it would be difficult to prove it—the South Arabian tribe of the Minaeans must have detached themselves from Arab nomads settled in this country, which had already been included in the Babylonian Empire by Naram-Sin (2291 to 2244 B.C.). The traditional pro-Babylonian policy of the Arabs would, therefore, be understandable because of their old political and cultural relations with Babylonia.

The geographical position of the land of Arabi between Syria and Mesopotamia, and the rôle of the Arabs in the traffic on the commercial routes leading from the Persian Gulf to Syria, from Syria to Egypt and Southern Arabia, and along the Wadi Dawsār through the highlands of Najd to Ma'in, influenced historical events in the Near East. The struggle for the possession of these important high roads characterises the course of history during the last two millennia B.C. and the Roman period.

Already in 738 B.C., during the reign of Tiglat-Pilesar III (745 to 726 B.C.), who had occupied Gaza, the terminal point of the "incense" road from Southern Arabia to the Mediterranean Sea, Zabibē, the queen of the Arbei region, sent tribute to the Assyrian king. She probably ruled the oasis of Alutum (Dūmat al-Djandāl) and was high priestess of the Kedar tribe, to which the oil paid tribute. In 734 B.C. Tiglat appointed the Arab Idibā'il as his representative in the land of Muṣri (Midian and Northern Hijāz), through which the "incense" road passed, and in 732 B.C. he subdued another queen of Arbei, Samsī—who had, apparently joined a coalition of the king of Damascus and several Arab tribes, among them Masā' (Massa in Genesis xxv, 13 f.), Tema (Ṭaymā'), Khāyappa ('Elā, a Midianite tribe in the territory of Ḥesma, east of Ṭaymā?), the Badana (south-east of the oasis of el-'Elā'ī-Dāyān) and Sabā (the Sabaeans)—conquered two of her cities and besieged her camp, so that she sent white camels as a tribute; the aforementioned Arab tribes were also compelled to pay tribute, and Idibā'il (the Adbeel of Genesis xxv, 13), who resided near Gaza, was forced to recognise Assyrian suzerainty. In order to be sure of the loyalty of queen Samsī's land, Tiglat-Pilesar III appointed a resident at her court. As the cities subdued by the Assyrian king were situated on the caravan road in southern Hawrān and northern Hijāz, it is obvious that the object of the struggle was the possession of the northern part of the caravan road from Mārib to Gaza (Ghaza). Nevertheless his success in subduing these people was neither complete nor lasting, for in 715 B.C. king Sargon II (722 to 705 B.C.) again defeated the Khāyappa as well as the Tamādī (Ṭamādī, west of the oasis of Ṭaymā') and the Marsimani (south of al-'Aḵaba), and Samsī, queen of Arbei, and the Sānāeans are again recorded as paying tribute. In 705 B.C. the Arabs (Yatī'e was then queen of Arbei) helped the Babylonian king Marduk-apal-iddina against Sennacherib, king of Assyria (705 to 681 B.C.); but the Arab troops were taken prisoner by the Assyrians, and Sennacherib seems to have possessed considerable influence over the Arabs, as Herodotus (ii, 142) calls him "king of the Arabs and Assyrians" (F. Hommel, Ethnologie, 574). In 689 B.C., after the defeat of Babylon, Sennacherib attacked the camps of the Arab clans subject to queen Teʾelḫunu, routed them and pursued them into the inner desert around Adummatu (Dūmat al-Djandāl). The settlers of this large oasis were dependent upon the Kedar tribe, which had control over Northern Arabia (the Palmyrene). The queen and priestess of Adummatu, Teʾelḵunu, and her lieutenant Khazaʾil, king of Arbei, had taken refuge here; the latter, after a dispute with the queen, fled into the inner desert, but was pardoned by Assarhadon, Sennacherib's successor, who recognised him as chief of all the Kedar. Khazaʾil died in 675 B.C., and his son Uaiteʾ (Yataʾ) succeeded him, paying a heavy tribute to the Assyrian king, who had sent back Teʾelḵunu's daughter Tabuʾa to Khazaʾil as queen and priestess. In 676 B.C. Assarhadon made an expedition against the Bāzu (Buz) and Khazaʾ (Ḵazāʾ) in the depression of the Wādī Sirhān. When Šaṃash-šum-ukīn, the king of Babylon, revolted against Assurbanipal, the Kedar under Uaiteʾ began hostilities against him and plundered the western borders between Ḥamā and Edom, but were driven back to the desert; when they again plundered the Assyrian provinces, they were forced to flee to Hawrān, while king Uaiteʾ, expelled by his own subjects, who were enraged by the devastation of their lands during the campaign, was captured and brought to Niniveh. The Nabayati and the Kedar, settled in the Palmyrene and south of Damascus, and the Harar in the southern Sirhān valley were also subdued by Assyrian forces coming from Damascus, while an auxiliary detachment, which fought in Babylon on the side of the Babylonian king, was completely destroyed after the capture of that capital. Arbei and the tribes of the Nabayati and Kedar again recognized Assyrian suzerainty. About 580 B.C. the Kedar are mentioned as having been subdued by Babylon.

Strenuous efforts had been made during the Assyrian period to restore order in Arabia, but as a whole this was an impossible task. The utmost that could be achieved, was the protection of the important trade routes and the punishment of razzias, undertaken by the independent or rebellious tribes. If the title of "kings" reappears frequently in the Assyrian records, this title scarcely meant more than a local chief or shaykh, and it is much later before a really kingly power is exercised by these Arabian chiefs. So "the kings of Arabia and all the kings of the Arabs, who live in the desert," of whom Jeremiah xxv, 23 f. foretells the ruin, are the nomad chiefs. The kings of Arabia are the chiefs of the settlements, e.g. the inhabitants of the oasis of Buz in the depression of Wādī Sirhān. Some of these settlements are occupied by the Neo-Babylonian kings, e.g. Ṭaymāʾ, which was occupied by Nabonid (552 to 545 B.C.). Some years later (539 B.C.) Arab warriors helped King Cyrus II to take Babylonia (Xenophon, Cyropaedia, vii, 4, 26; v, 13).
[Xenophon, *Cyropaedia*, ii, 1, 5). The "King of the Arabs" mentioned in Herodotus (iii, 4) may be a king of the Libyans (the Lāitānī) of Agatharchides; the latter had occupied the Northern Hijāz, i.e. the colony of the Minaeans known as Mūṣrān ("border-land") in the land of Midian, with the centre of Agra-Hegra, between 500 and 300 B.C., and were followed by the Nabataeans.

When Alexander the Great had conquered the Achaemenid Empire, he also subdued Arabia according to Livy (xiv 9) and Pliny (Hist. xii, 62). The Arabs now had to supply clothes and arms to the Greek army, and they participated in military actions, e.g. in the defence of Gaza (Arrian, *Anabasis*, ii, 25, 4, Curtius Rufus, *Memorabilia*, iv, 6, 30) and in the battle of Raphia (217 B.C.) on the side of Antiochus III. Although the western part of Arabia was occupied by Ptolemy after the death of Alexander, the majority of the Arabs joined Antiochus (Polybius, v, 71); presumably these Arabs are the predecessors of the Nabataeans. Arab colonies, established at the foot of the Lebanon and in Syria, mainly served the traffic on the great commercial route Petra-Damascus-Mesopotamia (Pliny, Nat. Hist., vi, 142, Strabo, xvi, 749, 755, 756), as nomad Arabs ("Arabes Δικτυαται") were also settled by Tigranes with this end in view (Pliny, Nat. Hist., vi, 142). In the Mithridatian war Arabs fought along side the Romans, but in the Syrian war they harassed the Roman army under Pompey and were defeated by him. Arabs served with Cassius (53 B.C.) and Crassus against the Parthians. The Roman policy of winning over Arabs as confederates and auxiliaries against their own kindred in the Arabian-Syrian desert and against the Parthians was continued and extended by the Eastern Roman Emperors. The Arabian-Syrian border-land was under the rule of the Ḥassānids (q.v.) as phylarchs, as was the border-land of the Euphrates in Southern Babylonia (al-Ḥira) which remained under the rule of the Lakhmids (q.v.) until 602 A.D.

In the meantime Arabs had even infiltrated in the 4th century A.D. into Southern Arabia apparently in connection with camel-breeding and traffic on the "incense" road. They are mentioned in the Sabaeans inscriptions as Aʾrāb and form a notable part of the population, along with the ancestral sedentary population. Their importance is emphasised by the mention of these Aʾrāb in the title and style of the Sabaeans. But this political position did not prevent their kindred in North-West Arabia from entering into warlike disputes with the South Arabian kings. King Amr al-Ḥṣāy b. ʾAmr besieged Nāḍrān, which belonged to the king Šhammar Yūrīq, and it may have been this Amr al-Ḥṣāy who put an end to the prevailing influence of South Arabia in the region of ʾAṣir and Southern Hijāz.

At the beginning of the fourth century, the aforementioned Amr al-Ḥṣāy b. ʾAmr, who succeeded in gaining power over the tribes of Asad and Nizār and called himself "king of all the Arabs", put a detachment of Arab cavalry at the disposal of the Romans. This fact is clearly stated in the Nabataean inscription of al-Namāra dated 328 A.D.

From the end of the fourth century A.D. for about a hundred years the princes of the family of Dadjīšma, the leaders of the tribe of Bānū Śalīḥ, were vassals of the Byzantine Empire on the Syrian border, and held territories there which were gradually yielded to the Ḥassānids in the second half of the fifth century A.D. Unfortunately we do not learn very much about them from Arabic sources.

About the middle of the 4th century A.D., the tribe of Kinda (q.v.), which after a long struggle with Ḥḍrammūt, to which it was inferior, had to leave the Yaman, and migrated to the country of Māʾād, where it settled at Ghamr Dih Kinda in the south-western corner of Najdī, two days journey from Makka. Although the leaders of Kinda, as kings of the tribes of Rabīʿa and Mūṣrā, may have possessed a certain influence on the Bedouin tribes in Najdī from the time when they settled there, the real kingdom of Kinda, governing a coalition of Arabian tribes in close connection with the Ḥimyarite Power in the Yaman, actually begins with Ḥūdīr ʿĀkil al-Mūrār. Yaman tradition says that he was made king of Māʾād, when Tubbāʿ ibn Kazīb invaded al-ʿIrāq, but possibly the attacks, directed against Persia or its vassals in al-Ḥira, were made by the Kindites supported by the Ḥimyarites. It is further said that Ḥūdīr made military expeditions with the tribes of Rabīʿa to al-Ḥārṣayn and at the head of the Banū Bakr attacked the frontiers of the Lakhmids, depriving them of their possessions in the country of Bakr, so that Ḥūdīr is called "King of the Arabs in Najdī and of the border-lands of al-ʿIrāq". His dominion probably comprised most of Central Arabia including al-Yamāma, and he died after a long and successful reign, when he was buried at Baʿīt ʿĀkil on the road between Makka and al-Bāṣra south of the Wādī al-Rumma. After his death about 478 A.D., the tribe of Rabīʿa denied Ḥur al-Maḥṣūr, son of Ḥūdīr, the dominion of his father; we find the tribe of Rabīʿa now under the guidance of Kulayb Wāḥ, leader of the Banū Taghib, and at war with the Ḥimyarites who supported Ḥur b. Ḥūdīr. Kulayb as well as Ḥur were killed in these struggles about the last decade of the fifth century (c. 490 A.D.). With al-Ḥārīth ibn ʾAmr the dynasty of Kinda attained its greatest power. He is known to the Byzantine historians as Arethas, chief of the Saracens, and concluded an alliance with the Romans, directed against Persia and the Lakhmids of al-Ḥira. In the struggles and expeditions against the latter, the tribes of Bakr and Taghib played the most important rôle (about 503 A.D.).

At any rate al-Ḥārīth succeeded in uniting the tribes of the Najdī into a great kingdom and made invasions into Roman as well as Persian territory. The statement that al-Ḥārīth subdued Syria and the Ḥassānids kings may be an exaggeration. The peace of 502 A.D. put an end to the war against the Romans, and in the following year (503 A.D.) al-Ḥārīth's troops attacked al-Ḥira, doubtless with the consent and help of the Romans. Al-Ḥārīth became master of all the Arabs in al-ʿIrāq (503-506 A.D.), and the Lakhmids al-Mundhir, who got no assistance at all from his suzerain, the Persia king Kūbād, submitted to al-Ḥārīth and married his daughter Hind. However, the domination of the Lakhmid country was not complete; according to a South Arabian tradition, by an agreement between Kūbād and al-Ḥārīth, the Euphrates or the canal al-Ṣārā near the Tigris not far from Baghdad was fixed as the northern boundary of al-Ḥārīth's territory, and it is said, that, after King Ardashīr had restored al-Mundhir to power in al-Ḥira, al-Ḥārīth kept what was on the other side of "the river of al-Sawād" until 527-28 A.D. So the Kindite interregnum in al-Ḥira may have lasted some time between the years 525 to 528 A.D., when the Persian Empire was weakened by the Mazdakite movement. It seems, that al-Ḥārīth for some period even ruled
over al-‘Urak as far as ‘Umân, possibly as a cfoe of the Persian king Kubâbâ. After the fall of the Mas- dakites al-Hârij had to flee; he lost all his property and 48 members of his family were put to death by al-Mundhir. He nevertheless could again approach the Romans and was even appointed as a phylarch of the Arabs, on the side of East-Roman Empire. In 528 A.D., the date of his death, he is mentioned in this position by Byzantine sources. With his death the second climax of the Kindite power in Arabia came to an end. Al-Hârij had divided his dominion, comprising all Najd, great parts of al- Hûjâ, al-Bâhrayn and al-Yâmama, between his sons, who had been placed as chiefs over the tribes of Ma‘add. His eldest son Hudjir, who had a certain supremacy over the whole kingdom of Kinda, was killed in a rebellion of the tribe of Asad. Between Sharabih and Salama, ruling the tribes of Rabî‘a and Tamîl and possessing the eastern half of the kingdom of Kinda, a discord arose concerning the division of power after their father’s death, and Sharabih was killed in the battle of al-Kulâb (a well between al-Kûfa and al-Asa) a few years after 530 A.D.; it is highly probable that this dissension was caused or nourished by the intrigues of al- Mundhir, whom the Banu Taghibb as well as the Bakr joined after the expulsion of the victorious Salama. Ma‘diskirb, the chief of the Kays‘-Ayâlân, went mad, or fell in the battle of Uwârâ, and the fifth son of Hudjir, Abdallâh, who ruled over the Rabî‘a tribe of Abd al-Raysî in al-Bâhrayn, is not mentioned further. So the kingdom of the family of Hudjir ‘Akil al-Murâk broke down, and the Kinda, or considerable parts of them, migrated to Hadramût, where they settled about 543 A.D. according to a Sabaean inscription at the dam of Marib. Hudjir’s son, the famous poet Imrân‘-al-Kaysî, tried in vain to regain the power of his father with the help of the Byzantine Emperor, and died in Anjâra perhaps before the year 554 A.D. A cousin of Imrân‘-al-Kaysî, Kays ibu Salama, chief of the Kinda and Ma‘add, is possibly identical with Kaisos (Kâsûs), who received from the Emperor the governorship of Palestine and defeated the Lakhmid al-Mundhir b. al-Nâmân, who died in 554 A.D.

The disputes and struggles between the nomad tribes were settled under the well known “Ayyâm al-‘Arab”, and an expedition to Khaybar in 567 A.D. is referred to in the Arabic inscription of Harrân (dated 568 A.D.). That there existed “kings” of individual tribes along with those mentioned here is proved by a Nabataean inscription found in ‘Umm al-Djâmil and dating from about 250 A.D., in which a king of Tanûkh is mentioned.

(A. GROHMANN)

(ii) THE EXPANSION OF THE ARABS: GENERAL AND THE "FERTILE CRESCENT"

If the expansion of the Arabs is regarded as a continuous process certain permanent features can be detected: the expansion consists usually in the emigration of large or small nomadic groups, rarely in that of groups with permanent habitations; it may be military, by means of service in foreign armies or in their own army which has set out for conquest or through the founding of trading colonies. Apart from this last case, the extent of emigration depends partly on particular coincidences, partly on a recurrent, but inexact, factor, the increase in the pressure of population in Arabia. This is brought about by the decline of cultivation (in South Arabia also of industry) and of the caravan trade (in Islamic times also of the pilgrim traffic); there is a corresponding increase in the nomadic population. The expansion was preceded by the immigration into the central parts of the peninsula, which had been sparsely occupied by an earlier population. It was facilitated by the taming of the camel in the second half of the second millennium b.c. Nor is it likely that the occupation of South Arabia took place earlier, to judge from the philological ethnological and archeological evidence. The forerunners of these immigrants into South Arabia were presumably traders who followed the ancient trade routes into the land of incense and myrrh. A little later the Arabs began to expand in the North, at first in the direction of Sinai and Transjordan. The evidence of the inscriptions shows that in 833 they were present in the north of the Syrian desert, shortly afterwards on both edges of the Fertile Crescent; they were camel-breeders, oasis-dwellers traders. This formed the chief objective of the Arab expansion. It did not, however, remain the only one, as the emigration of the Sabaeans into Ethiopia (about 400?) shows. It depended on the strength of the various states of the Fertile Crescent: whether this immigration could be canalized in the form of colonisation and, in the borderlands of overseas nomads, of oasis, nomadic life, or whether it led to the flooding of the cultivated land by nomads. In the 1st century B.C. the nomads (Scenites) on the near side of the Euphrates crossed the border of the arable land as far as the line Apamea-Thapsacus, while in the Dâmira they roved as far as the border of the arable
land to the south of the Khabur and the Singjar. We cannot here examine exceptional developments, like that of the trading state of the Nabataeans which expanded in the same century, in the north to the Hawran, in the south to N.-W. Arabia.

The incorporation of the Syrian part of the Nabataean kingdom in 105 A.D., and the abandonment of the Roman sphere of interest in N.-W. Arabia some sixty years later, shook the security of these countries. It is, however, impossible to discern what were the main consequences of the incursions of the "Saracens" in the west and of the Tayy3 settled in the central mountain ridges of North Arabia (al-Djabal). Different is the case of the entry of two tribes into the steppe lying between the Lower Euphrates and the sandy desert, which was perhaps originated by Ardashir I, the first Sasanid (d. 241). They were the Tanukh and Asad (2), who came from East Arabia; and they were followed by Nizar from Middle and Western Arabia. The Nizar, with the exception of iyad, were absorbed by the population of the Euphrates frontiers; the Tanukh and the Asad, on the other hand, continued their wanderings, the Tanukh, for the most part, to Northern Syria and the Asad to the south of the Hawran. Since the 4th century these countries saw also the arrival of tribes from North of Syria. In the meantime, the recession in the incense trade (from the 3rd century?) and its extinction (at the latest in the 5th century) had led to the bedouinisation of part of the population of South Arabia. Groups of such tribes, taking part in military expeditions of the Himyarite kings, reached the district of Najran and also Central Arabia (e.g. Kinda). All through the 4th century we can observe its advancement into the north, speeded forward by the campaigns of the kings of Kinda; its path lay along the northerly Arid = Tuwayq to the steppe on the lower Euphrates (Bakr, Tamim), from Bisha to the Wadil al-Ruma (Amir), from the country north of Medina in the direction of Palmyra (Bahrain, Kalb). The Taghib, dwelling formerly on the lower Euphrates, moved upstream and settled at the beginning of Islam in the Dijazir to the north of the Singjar.

The expansion at the beginning of the Islam came about in the first place through enlistment in the armies and auxiliary troops which were sent by Medina to the Euphrates, to Transjordania and to Southern Palestine and after that conquered al-`irak, Syria and al-Dijazir; later through participation in the campaigns which led, across the Persian Gulf or from the garrison cities of Kufa and Basra, to Iran, from Damascus to Egypt, North Africa and Spain. It occurred further through the displacement of tribes from Transjordania to Palestine (in the north Amila and Dijasm, in the south Lakhm); the emigration of parts of Badi and Dhuayna from the Hijaz to Egypt; through continuous infiltration of families and groups into the garrison towns and the Dijazir; and through resettlement of the people of Kufa and Basra in Khurasan. With the enrolment of 400 families of the Sulaym and other West Arabian Kaysties as colonists for Lower Egypt, followed spontaneously by three times their number, the first period of expansion in Islamic times ends. The curtain between the Fertile Crescent and Arabia falls again.

It took a considerable time before the loss which the population of Arabia incurred by the emigration during and after the campaigns of conquests was made good again. The first new movement led from the Dijabal towards the north-east: before the middle of the 9th century the Asad (1) began to advance along the pilgrims' road of Kafna, and Tayyi4 followed close on their heels. In the second half of the 9th century, quarrels under the Buwayhids allowed the Asad to penetrate into the cultivated land; a part of them wandered on to Khuzistan, where already before Islam a small Arab island (Tamm) had been formed. In the meanwhile the campaigns of the Karmania of East Arabia into `irak (311-25/923-37), Syria and Egypt (353-68/964-78), had proclaimed new waves of migration to the north: Khafsja ('Uqayl) moved out of East Arabia into the steppe on the lower Euphrates, followed in the 11th century by Muntash (also of 'Uqayl). Their place in East Arabia was filled by tribes which immigrated from `Umman; part of these too later moved to `irak. Some Tayyi settled in southern Transjordania, and subsequently acquired the overlordship over the older immigrants of the same tribe in Palestine. The stream of tribes from South Palestine to Egypt, which began in early Islamic times, began again in the middle of the 11th century (originated by orders of the government), until in the late Middle Ages it was brought to a halt by a movement in the opposite direction. Since the end of the 12th century there is a trickle of Djashir from Northern Hijaz into Sinai to Egypt and particularly to Transjordania, until in the 17th century this source dries up. They are followed by Badi. Finally since the end of the 12th century groups of the pariah tribe of Hutaym penetrate into the same districts from the territory east of Khaybar. Meanwhile a new expansion had begun in the Dijabal. Around 1200 the Ghaziyya (Tayyi5) appeared in the north between Transjordania and `irak, the Banu `Amir (also of Tayyi6) in the south between Medina and the Kasim. Since the 15th century Ghaziyya camped on the Euphrates, but did not cross it for good till around 1800. The Banu Laml penetrated at the end of the 15th century to the northern frontier of the Hijaz, but were repelled by the Ottomans, and following their ancient route turned in the middle of the 16th century to the east, and on to the lower Tigis and Khuzistan.

The last great emigration, that of Shammar and Anaza, commenced in the same district. At the end of the 17th century the Shammar came from the Dijabal to the frontier of `irak. Anaza (whose territory had been till that time from Mada'in Salib to the Kasim) penetrated at the same time, accompanied by the Banu Shahr, as far as Transjordania. In the 18th century Anaza, coming from S.-W. and S.-E., occupied the Syrian desert. Into the midst of this movement burst the campaigns of the Wahhabis. In the nineties the Shammar-Djabr left their homeland occupied by the Wahhabis and went to the Euphrates. At the beginning of 1802 they crossed it with the agreement of the government and soon pushed on into the Dijazir up to the edge of the mountains of Asia Minor. Other parts of Anaza reached the Syrian Desert together with the troops of the Wahhabis or in the course of flight from their tax-collectors.

As the result of the progress of agriculture in North Arabia since 1911 and the exploitation of the oil resources in the last two decades, the expansion of the Arabs has ended for the moment. Some features of the expansion must still be mentioned, which it was not possible to fit into this article: the settlement on the Iranian coast of the
Persian Gulf (which had pre-Islamic antecedents); the foundation of trading colonies on the coasts and the islands of the Indian Ocean from the early to the late Middle Ages: Malabar, Madagascar, East Africa (Peta-Kiwa, with antecedents in the ancient South Arabian period); the more recent colonial policy of Oman; the continuous emigration from Ḥadramawt, which in the 19th century was principally, but not exclusively, directed towards Indonesia (mercuries in Ḥaydarpād); and infiltration into Upper Egypt across the Red Sea. (W. CASKEL)

(iii) The Expansion of the Arabs: Iran in Early Islamic Times

The Arab conquest of Iran brought a part of the Arab people to that country. There appear to be two separate developments in settlement. (1) The immigration from the opposite Arab coast to the south coast of Iran along the Persian Gulf. The Arabs also spread in a south-easterly direction along the coast from the mouth of the Euphrates and Tigris. Apparently Arab settlements could be found here already in pre-Islamic times (see A. Christensen: *L'Iran sous les Sassanides*, 87, 128). The number of Arabs increased considerably here in early Islamic times; there is, for example, explicit mention as settlers of the ʿAbd al-Kays from the coast of ʿUmān (al-Baladhuri, 386, 391; al-ʿldayhī, 142; Ibn al-ʿAḍhr (Būlāk), ii, 49). From then on Arab settlements remained along the coast and at some places inland (e.g. Māhān, in the district of Bardistān, 985 A.D.: al-Maḥḍī, iii, 462) until at least the times of the Mongols (B. Spuler: *Die Mongolen in Iran*, Leipzig 1955, 142, 149 f., 164). It seems reasonable to suppose that there is a connection between those settlements and the ones of today, in view of the continued migration of Arabs across the Persian Gulf and from Baṣra. (2) There was a second influx of Arab settlers into Iran from Mesopotamia. In the 7th century Arab colonies were formed in several towns such as Khāshān, Hamadān and Isfahān; Kūm became a predominantly Arab (and Shiʿi) town, and remained so for a considerable time (al-Baladhuri, 314, 403, 410, 446; Nārshakhālī (Schefer), 59). Ibn al-ʿAḍhr (Būlāk), v, 15; E. G. Browne, *Account of a rare ms. hist. of Isfahān*, Hertford 1901, 27 [offprint from *JRAS*, 1901]; B. Spuler: *Iran* [see *Bibl.*] 179). The number of Arab settlers in ʿAdharbayjān (al-Baladhuri, 328, 332; al-Tabarī, i, 2805 f.; Ibn Ḥawkalī, 353; al-Yaḥṣībī, Taʾrīkh, ii, 446; Aghānī, xi, 59) was apparently much smaller. Khūrsān, however, remained the main goal throughout all these migrations. The actual settlement was partly made by large groups: there are reports of 25,000 from Baṣra and an equal number from Kūfah, who arrived in 52/672; a further batch reached the country in 683. On the basis of this number of men capable of bearing arms (50,000) and in view of the strictness of recruiting, J. Wellhausen (cf. *Bibl.*) estimates the number of Arab settlers in the beginning of the 8th century at 200,000. They did not live only in the towns—where in some cases quarters were put at their disposal after the conquest—but were scattered all over the country, as for example in the oasis of Marw, where they acquired possessions and adapted themselves to the *dhikbāns* way of living. The geographical contours of Khūrsān suited the Arabs very well: they could easily travel across the large plains and the steppes, although they were somewhat more awkward than the natives both at crossing rivers and in the mountains (cf. Barthold, *Turkestan*, 182).

The main body of Arabs in Khūrsān had come from Baṣra. Of the tribes settled there, the ʿAbdāl (especially in the 8th century) and Kaysīs (cf. articles on these). The bloody battle between these began in connexion with the great civil war for the Caliphate in 683; a static war raged outside Harāt for one year, 64/684-5 between Bakr and Tāmil (al-Tabarī, ii, 490-6), which eventually came to an end due to internal dissensions among the Tāmil. Inspeck of the fact that a neutral Kurayshite became governor in 74/693-4, fighting continued until 81/700 (al-Tabarī, ii, 859-62). The attitude of the governor often made the difference between victory and defeat, and his attitude, in turn, depended to a great extent on the party divisions in the west (Syria and Mesopotamia). In 85-6/704-5, the ascendancy of the Azd and Bakr was temporarily checked by a change of governor in the country. Kutayba b. Muslim, the conqueror of Transoxania, who was not linked to either of the powerful groups by descent, tried to remain neutral. It was thanks to him that the Arabs had the chance of spreading to Samarqand, Buhārā and Khārīzam, often moving into specially cleared quarters (al-Baladhuri, 410, 421 f.; al-Tabarī, ii, 156; Ibn al-ʿAḍhr (Būlāk), iii, 194; Nārshakhālī, 52). After his death the nēr-zone resumed power under Yazīd II, until the Tāmil took over in 720. The misrule of the latter and of the Kays brought Umayyad rule in Khūrsān into such disrepute that even the open-minded governor Naṣr b. Suyyār could not find a way to settle the disputes of the opposing groups after 744. The ʿAbbāsid revolution, caused largely by the behaviour of the Arabs, passed them by. Its victory in 748-50 brought about new conditions for the Arabs in the east. A few of the Arabs had, of course, entered into friendly relations with the Iranians soon after the conquest of Khūrsān. Some of the *marzbāns* and *dhikbāns* had come quickly to terms with the Arab rule and the Arabs frequently took part in the cultural life of the Iranians (especially the celebrations of the *mawṣūl* and the *mihragdīn*, as similarly, they had also done in Egypt on the occasion of Coptic festivities). There were mixed marriages (mentioned expressly only where more prominent persons were concerned, yet even more likely to have taken place among the ordinary people) and the descendants of such unions in Iran were undoubtedly inclined to attach themselves to the Islamicised Iranians. In addition, there were cases of Arabs (as, for instance, Mūsā b. ʿAbd Allāh b. Khāzim in Tirmādḥ) who quarrelled with the government and joined forces politically with the natives. Furthermore, since the time of ʿUmar II
717-20, there was a growing religious consciousness among some Arabs (such as Hārith b. Suraydī) which demanded—with increasing insistence—equal treatment for the Iranian Muslims (cf. Wellhausen, *Das arab. Reich*, 280). Hence the many attempts to come to a reasonable solution of the question of the personal and land taxes where converted Iranians were concerned. In any case, one has the impression that the tribal feeling was more and more superseded by a new, predominantly religious, grouping from round about 720 onwards, when a new process of assimilation began which became important for the general feeling of pan-Arab unity. From this time onwards, political events can no longer be explained as deriving their main spring from tribal feuds.

Because of this, Umayyad politics, which had been built up on the tribal structure, were doomed, and the future belonged to the ‘Abbāsīd movement (and also to that of the ‘Alids connected with the former in the beginning) which worked on a different basis.

The collaboration between the Arabs, who often took a leading part in the ‘Abbāsīd movement, on the one hand, and the Iranians on the other, went smoothly—at least until the fall of the Umayyads (nor was there much friction on a national basis subsequently). Hence the victory of the years 746-50: at that time, however, the greater part of Arabs in Abū Musā’s army spoke Persian (al-Ṭabarī, *iii*, 51, 64 f.).

There were, however, Arabs, who took no part in this process of assimilation. The greater part of these were pushed out of Khūrāsān in the course of the ‘Abbāsīd campaign. The remaining settlers, towards whom the Iranians showed no more animosity, were politically (i.e. as Arabs) of little importance. Tribal warfare now ceased completely, although some tribes are still mentioned in the 10th century (cf. the authorities quoted below). Assimilation continued, however, without interruption so that many Arabs eventually merged completely with the Iranians: more quickly, certainly, where they lived in isolation on their estates (as for instance in the oasis of Marw).

One must also take into account a further distribution of the Arab element all over the country during the ‘Abbāsīd period, and further immigration from the west. Consequently there were places which had a partly Arab population as late as the 11th and 12th century, though the gradual decrease in their numbers is already recognisable in the 10th century. Detailed statements regarding this are rather rare: compare for Isfahān: al-Ya‘qūbī, *Buldān*, 274, for various places in Khūrāsān, ibid., 294; al-Iṣṭakhri 322/323, Ibn Hawkal, 499; al-Makdisī, 292, 303; for Kāshān: *Hudād al-‘Ālam*, 133, and ibid., 104, 108, 216 (Dūrūdān); al-Ṭabīḥī, *Tria opuscula* (van Vloten), 40; al-Ḍāhīnī, *ix*, 102, xvii, 69; al-Dūwaynī, ii, 46 (read maṇṣūgī-‘Arab’); S. A. Volin, *K istorii sredneasianskich arabov*, (in the *Trudy vostok sossis assotsiatsii arabeskion*), Moscow and Leningrad 1941, 124; B. Spuler, *Iran*, 250. The family histories in Ibn al-Balkhī, *Fars-nāma*, xix f. = 116 f., and Kummi, *Ṭarīkh-i Kummi* (Tihrānī), 266-305 (family of al-Aṣghārī) are most illuminating for the gradual assimilation of Arab families of civil servants into the Persian people.

**APPENDIX: ARABS IN CENTRAL ASIA AT THE PRESENT DAY**

The origin of the Arabs living at the present day in Central Asia, and apparently also in Afghanistan Türkistān (where they speak Persian: *The Imperial Gazetteer of India*, V, Oxford 1908, 68; without definite mention of places) can not (or not yet) be fixed with certainty. According to their own tradition, they were brought there by Timūr, and they mention the Andkhuy (g.v.) district in Afghanistan and the nearby Akča (in the province of Mazār-i Sharīf) as the site of their original settlement, and Karghi, Bukhārā and Hīsār as places through which they had passed. There is, however, no mention of Timūr re-settling Arabs, in the sources concerning his life, nor can his son-in-law, Mir Haydar, who is frequently mentioned in the oral tradition, be identified. On the other hand there is proof that inhabitants of Marw were transplanted to Bukhārā, and those of Balkh, Shaburghān and Andkhuy into the Zarafshān valley in the year 1513 (‘Ubayd Allāh, *Zubdat al-‘Āthār*, in the *Zap. Vostochnago Oddeleniya*, XV, 201 f.). We know, furthermore, that migration of “Arabs” was still possible in the first half of the 16th century between (Persian) ‘Irāk on the one side, and the areas of Bukhārā, Samarqand and the valley of the Kaghka Daryā on the other (*‘Abd Allāh b. Muhammad al-Marwarī: *Tarassul*, quoted by Volin 121 f.; cf. also H. R. Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952, 94 f., 177, with facsimile 388-393 [without the factual part of the document]).

Thus it appears that the Arabs living in Central Asia today are not the immediate descendants of the immigrants of early Islamic times [see above iii], although one must allow for the possibility of an association with these settlers, who had already been Iranised in the 11th and 12th centuries. In the 16th century, the Central Asian Arabs were under a mir hasār who collected taxes for the government; they were generally known as nomads (a’rab) (in addition to the above mentioned document cf. also an inskā collection of Samarqand of ca. 1530, published by Volin 117-20). In the 17th and 18th centuries there is no information concerning these Arabs, but there is mention of them in the beginning of the 19th century, especially in various travel reports [quoted by Volin]. Here we must distinguish two concepts:

(1) A close group marked by strict endogamy, who are, however, in their physical appearance hardly different from their Iranian neighbours; they call themselves “Arabs” but accepted the language of the country they live in. There is a group of Tajik and a group of Uzbek-speaking “Arabs” in the Samarqand area. Travellers mention similar groups of “Arabs” in Turkmenistan, Khiva, Farghāna and mountain Tajikistan. In the 19th century their number was assessed at between 50 and 60,000; Vinnikov (see *Bibl.*), 9, sticks to these numbers (in spite of the result of the census) in 1926. In the 19th century these “Arabs” were still under a mir hasār, but by this time he no longer exercised any fiscal function. The figure mentioned in a Soviet census of 1926 was 28,978, that of 1939, 24,793. According to this it would appear that these groups of “Arabs” who already spoke the language of their area, were absorbed more and more into their Uzbek or Tajik surroundings. Their economic situation is also like that of their neighbours. As
survivals of the matriarchal system, however, we still find the institution of the "avunculate" (a special connection between the nephew and his maternal uncle and the marriage of first cousins), in which at least one third of these "Arabs" lived before the revolution. (Compare M. O. Kosvesn, *Ammutulat* in Sovetskaya Etnografiya, 1948, no. i).

(2) From these self-styled "Arabs" (obviously in a historical sense), we must distinguish groups which still speak Arabic. According to the above mentioned documents, it appears that this distinction goes back as far as the 16th century. This would mean that the settlement of these Arabs must have taken place some generations earlier, otherwise there could have been (in the case of nomads) no possibility of a partial linguistic assimilation. The Soviet census of 1926 gives the figure 4,553 for these Arabs, who can be divided into the dialectally different tribes of Sa'nund and Sa'bîn. They live largely in Uzbekistan (2,170) and in Tadjikistan (2,274). In 1939, Arab speaking inhabitants of Uzbekistan numbered about 1,750. It would appear that the Russian census of 1897, mentioning 1,696 Arabs, had only the Arab speaking ones in mind; yet some doubt about this figure must remain, in view of the numbers mentioned in later years. Apparently this group, too, is in the process of being assimilated by its surroundings.

The language of these Arabs has developed from a Mesopotamian dialect but has (like Maltese) developed into an independent branch of Arabic, and has split in two. The Central Asian Arabic language developed ٓ and ٰ even in pure Arabic words, on the other hand it lost the ٛ, ٜ and partly the ٜ. ٛ often disappeared, and ٜ often became ٖ; the ٖ usually became ٗ, the w in the personal suffix ٚ (ٚ:). Stress vacillates; assimilation, inversion, and elision are frequent. The 2nd and 3rd person fem. pl. retain their endings (as in the bedouin dialects). One of the two dialects developed the prefix ٌ in the imperfect tense (this would correspond to Iranian, or to Syrian and Egyptian Arabic?). A *durativus praecessus* developed under the influence of Turkish in the Caucasian languages (e.g. Old Georgian), the direct object is taken up again by a personal suffix in the verb (cf. also the Syrian development). "Kâna" is often used as an auxiliary verb (originally with a plural perfect meaning). The infinitive ends regularly in the diminutive -ٖ (ٖ:). The converse of the nouns is almost completely absent; plurals end in -ٕٖ (ٖ: this also frequently in the case of masculine nouns), while broken plurals are rare. Arabic numerals have been replaced by Tadjik ones almost completely. Status *Construcit* is retained, but word combinations of the Indo-Germanic type are frequent (*Hijab mihibb, "wood-seller"). Usual word order: subject, object, predicate. Vocabulary largely Semitic, leaning to Iranic and occasionally to peninsular Arabic.

(iv) **EXPANSION OF THE ARABS IN EGYPT**

At the end of the year 18/639, an Arab army appeared on the Syro-Egyptian frontier and commenced the conquest of Egypt. On 20 Rabî' II 20/9 April 641, a treaty was signed which wrested Egyptian territory or, more precisely the autochthonous population, from Byzantine domination. Alexandria still held out, and only surrendered eighteen months later. Viewed as a whole, the operations give the impression of an advance carried out with no doubt with enthusiasm, but also of a carefully planned offensive. Certain papyri of this period assume particular importance. We possess requisition plans for the billeting and provisioning of Arab troops, and we learn that the expenses incurred by the villages were remitted from the taxes for the following year. From information supplied by the same documents, we see advancing into the country a well-equipped army: armoured cavalry and infantry, accompanied by a flotilla for operations in Upper Egypt. Teams of blacksmiths and armourers were formed for the repair of weapons. This information is based on Greek texts, some of which are indeed accompanied by an Arabic translation, but if the initiation of similar measures was the duty of the Coptic civil administrators, it is a fact that the Arab military leaders were fully aware of them. All this indicates training and discipline, and we may suppose that Bedouin elements did not form the major part of the Arab army. 'Amr b. al-As relied in the main on a first contingent of Yemenite origin, nearly all from the 'Akk tribe, and it is apparent from the names of the districts of Fustat that the majority of the groups were Yemenite. On the other hand, contingents of the 'Dhūdham and Lakhm tribes, who had formed part of the population of the Ghassânid Kingdom and had remained neutral at the battle of the Yarmûk, had joined the army of Egypt. The largest figure recorded of the numbers of the Arab warriors is 15,000 men; this seems to be a maximum figure, but not an impossible one.

After the conquest the Arabs remained in their tribal groups: in this connexion, the names of the districts of Fustat are again revealing. It may be questioned whether, in the beginning, the Arabs thought of anything but exploitation of the country by the military, who formed a de facto aristocracy which did not admit to its ranks any native of the country or mix with the inhabitants since it was forbidden to acquire land. The army of occupation was distributed between Fustat, Alexandria, and various posts scattered along the Mediterranean coast, on the desert frontiers of the Delta, and on the Nubian borders. We lack any critical basis on which to form an estimate of the numbers of these garrisons, which were heavily reinforced, since in 43/663 12,000 men were needed in Alexandria alone. With a view to increasing their cohesion, these elements were organised in tribes. The members of each tribe were divided into sections of seven or ten.
under the control of a syndic, who received their pay, and also administered orphans' pensions under the supervision of the ḫāli. Every morning an official visited the tribes and registered new births.

In 109/727, the Comptroller of Finance in Egypt installed an important part of the Kays tribe in the region of Bilbais: the figure 3,000, which we are given, seems to include women and children. These Kaysites who, as camel-drivers, participated in the traffic on the Fuṣṭāt–Kulzum route, were probably liable to military service, since they were registered on the pay-rolls. These reinforcements had to some extent necessitated by the first revolt of the Copts, which occurred in 107-725. When the Christian historian of the Alexandrian patriarchate is describing this, he writes "One tribe was situated in the eastern desert of Egypt, between Bilbais and Kulzum on the coast; these were Muslims, who were known as Arabs". This mode of expression seems to postulate that the indigenous Muslims, doubtless a minority of the whole population, were at that time more numerous than the Arabs.

These Arabs preserved for more than two centuries the memory of their tribe of origin, and in the majority of the funeral steles, in the cemeteries at Aswān and Fuṣṭāt, the name of the deceased is habitually followed by the ethnic appellation indicating the tribe. It was the Arab title of nobility, and Colectic converts were, in the beginning, second-class Muslims. Some of the latter aspired further, and a judicial scandal which took place in 194-5/810-2 proves that the Arab tribes were still strong enough to appeal to Baghdād against the judgement of a ḫāli of dubious integrity which conferred on Copts the status of pure-bred Arabs. We observe that in the course of the 3rd/9th century surnames relating to tribes give way gradually to surnames of geographical significance; here, too the funeral steles are documents of the greatest value, and furnish us with toponymic surnames.

The Muslims of Fuṣṭāt, at the beginning of the 3rd/9th century, must have been mainly autochthonous elements, installed in all types of sedentary employment, in government service or in trade; the Arabs, occupied in suppressing revolts in the Delta in the course of the preceding century, were then struck off the military rolls as a result of the influx of Khurāsānīs, and later of Turks, and had probably resumed in the country side the principal occupation of their ancestors, the raising of live-stock. At all events, from then on they are not mentioned in the towns. Descendants of former soldiers, moreover, acquired land: we find the proof of this in the fact that the government claimed from them the ḥārādī, or land tax. They thus became mingled with the indigenous population, which, at the beginning of the 3rd/9th century, was mainly Muslim; on the other hand, the Arabic language was used to an increasing extent by the Copts. The majority of the army, of Turkish stock, could not have made any distinction between the truly autochthonous elements and the descendants of Arab immigrants.

Finally, in 219/834, groups of the Lakhm and Djudhām tribes rebelled in the Delta: they were easily dispersed, and no further mention is made of their rights. The Arabs re-appear, even frequently, in the history of Egypt: they remained organised in tribes, some of which retained their nomad habits. They were mobilised as reserve troops in times of crisis, for example at the time of the landing by the Crusaders at Damietta. Later governments were obliged periodically to exercise their authority against them, either to collect taxes, or to suppress banditry. In general, these interventions were bloody affairs, and were virtually punitive expeditions.

The most significant events were set in train by the temporary migration, in the 5th/11th century, of the Banū Hīlāl and the Banū Sulaym before their destructive onslaught on North Africa. It should not be forgotten that a group of Bedouin from the Arabian Peninsula tried to resist the advance of French troops in Upper Egypt in 1799.

Recent censuses have been vague on the extreme: it is estimated that the Bedouin scattered among the deserts of Egypt number about 50,000.

(v) Expansion of the Arabs in North Africa

It is extremely difficult to enumerate the Arab elements which, from the year 270/679 onwards, entered North Africa. We are only accept with the usual reservations the first number of 20,000, representing the fighting men from the Hijāz, furnished by the tribes and grouped round their chiefs, reinforced by contingents taken from the army of Egypt. The first expeditions were nothing more than long-distance raids, without any intention of settling in the country. This ambition appears with ʿUqba b. Nāfī, who founded al-Kayrawān [q.v.] in 50/667. The death of this chief and the occupation of al-Kayrawān by the Berbers led to the despatch of fresh contingents. From then on, every serious failure on the part of the invaders, every Berber rising, every new phase in the arduous task of conquest, occasioned the arrival of reinforcements. Under the Umayyads, elements derived from the ʿgrānd, detached from the Syrian garrisons, and constituting regiments which already had an individual character, took the place of the fighting men recruited in Arabia. Under the ʿAbbasīds, the Khurāsān militia joined forces with the Syrians, or relieved them. All these elements, living in groups as in the East, were distributed among the towns of the conquered territory. As is well known, their haughtiness as conquerors, their demands and their lack of discipline were a source of the greatest embarrassment to the governors of Ifriqiya, and the Aghlabid amirs, obliged to subdue them with great bloodshed, found them employment in Sicily.

Along with the fighting men intended to effect the first occupation of the country, the Arab world sent civilian elements. Apart from the governors and their entourage, kinmen and clients, there were men of a religious character, who, from the time of the caliphate of ʿUmār b. ʿAbd al-ʿAzīz (99-101/717-20), undertook the methodical conversion of the Berbers. There were also merchants hoping to prosper in fresh territory reputedly rich in resources.

These Arab immigrants constituted exclusively urban elements. The towns, where they formed a considerable proportion of the population, were centres of arabisation. By virtue of the prestige enjoyed by the conquerors, through the education given in the Kūrānic schools and the mosques, and through economic relations and mutual contact in
the markets, the Arabic language spread simultaneously with Islam in the cities and their environs. Al-Kayrawān played an important part in this process, but the other garrisons of Ifrikiya and its western marches were also able to spread their influence over a limited area.

The Arab immigration of which the Hilālī invasion was the first phase was very different from the Muslim conquest and its consequences, both as regards those who took part in it and their role in the history of Barbary. The initial cause of this disaster was as follows:—in the middle of the 8th/12th century, the amir al-Mu'izz of the Banū Zirī [see ZIRIDS] branch of the Ṣanḥādja, which governed Ifrikiya in the name of the Fātimid caliph al-Muḥtaṣir, broke with his suzerain in Cairo, and the latter, on the advice of his minister al-Yazīdī, despatched against the rebel kingdom the Arab nomads then encamped east of the Nile, recognising in advance their title to any towns and rural districts which they could conquer.

The Banū Hilāl [see HILAL], who formed the first wave of this “westward movement” (taghrib), and also the Banū Sulaym, who came on the scene later, were connected through their common ancestor Manṣūr b. ʿAyāṣ with the powerful line of Muḍār. Both had previously dwelt in Naqlīd, and groups of the two families continued to live there. Brought late within the pale of Islam, they had migrated in considerable numbers to Upper Mesopotamia and the Syrian desert. Their independent nature revealed itself immediately after the death of the Prophet. The Umayyads, and the ʿAbbāsids even more, had to punish their plundering activities conducted in particular at the expense of Meccan pilgrims. In the 8th/12th century they took part in the Carmathian revolt. The Fātimid caliph al-ʿAzīz crushed the movement (368/978) and forced the Arabs who had supported it to transfer themselves to Upper Egypt. It was from there that they set out to conquer Ifrikiya.

At the moment when their first bands, which could have numbered barely a million, reached the ṢirĪd kingdom of al-Kayrawān and caused its downfall, the most powerful of the Banū Hilāl were the Ruyyāh, who occupied the plains of Tunisia. Further east, the kingdom of the Ḥamūdīdīs (q.v.) and the Zāb (q.v.) received the Athbājdī. This Arab expansion, whose limits in the 6th/12th century are described by Idrīṣī, caused the exodus of Ḥamūdīdīs from the Kāfāʾa to al-Bijayya and drove the Zanātā nomads towards the plains of Orān. The arrival of fresh bands led subsequently to an extension of the territory and to alterations in the distribution of the Arabs. The most important of these waves of immigrants was, starting from the end of the 12th century, that of the Banū Sulaym, who came from Tripolitania. At first allied to the Armenian adventurer Karakūṯū, then to the Banū Ṣanʿāniya who attempted to revive Almoravid power, they placed themselves at the service of the Ḥafṣīdīs, the Almoravid governors of Ifrikiya, who assured the fortunes of this great tribe. Thus Ifrikiya, the first domain of the Banū Hilāl, remained, with the Sulaym, the region where the Arabs were the most numerous and most powerful. But no part of North Africa escaped what was considered by Ibn Khālidūn to be an irreparable disaster. The quest by new arrivals for lands as yet unoccupied and for sedentary populations to exploit, the repulse of the weak by the strong, the advance of certain tribes, such as the Maʾyīl of Southern Morocco, from the western boundaries of the desert, were the quasi-normal causes of their “westward movement”.

To these must be added the mass transfers effected by the Maghribī rulers within their own territories of Arab contingents on whom collaboration they rashly counted. For example the transfer in 583/1187 of the tribes of Ifrikiya by the Almohad al-Mansūr who, wishing to use them in Spain, granted them the sub-atlantic plains of Morocco which were then uninhabited. The whole economy of Barbary was overthrown by this expansion. With their North African territory, where they lived during the summer, these pastoral nomads combined the corresponding Saharan territories, where they migrated in autumn with their families and where they found new pasturages for their camels. At the two extremities of the new migration, they possessed a source of income: by right of protection they claimed taxes in kind from the people of the oases, cultivators of date-palms; on the sedentary population of the north they levied imposts which the rulers had assigned to them in the form of ḥālāt (q.v.), or as part of the tax (dīḥāya) for whose collection they were responsible.

Intimately associated with Berber life, these eastern Bedouin naturally played a large part in the propagation of the Arabic language, and it has been thought possible still to recognise in dialect characteristics which seem to mark the difference between the contributions of the great tribes, Hilāl, Sulaym, and Maʾyīl. Simultaneously, however, with arabisation of the Berbers, one must take into account the berberisation of the Arabs, the progressive tendency towards a sedentary form of existence, and the adoption of the way of life of the autochtones by groups of immigrants who had become irremediably impoverished.

(i) PRELIMINARY REMARKS

Although the Peninsula may not be the original cradle of the Arab people, they have lived there for thousands of years and regard it in a very special sense as their homeland. For students of Islam, Western Arabia occupies a unique position as the land in which the Prophet Muhammad was born, lived, and died. It was there that the inspiration of Allah descended upon the Prophet, and to this Holy Land come many thousands of Muslims every year from all parts of the Islamic world to make the pilgrimage to the Ka’ba, the House of Allah in Mecca (Makkah), and to visit the Prophet’s tomb in Medina (al-Madina al-Munawwara).

The Peninsula has the shape of a rough quadrilateral with a length of c. 2200 km. from north-west to south-east and a breadth of c. 1200 km. The symmetry of the quadrilateral is marred by the bulge of Oman (‘Umán) on the eastern side reaching out close to the Iranian coast. On the west, south, and east the Peninsula is clearly defined by the Red Sea (al-Bahr al-Abmar), the Gulf of Aden (Khal’dijī ʿAdan), the Arabian Sea (Bahr al-ʿArab), the Gulf of Oman, and the Persian Gulf (al-Khal’dijī al-Fārisī). In the north, the Arabs themselves have often disagreed as to where Arabia ends and Syria (in the broad sense) begins. A vast steppe unrolls northwards from the Great Nafud with no natural feature suitable as a limit for the Peninsula. For the purposes of this article the Peninsula is considered as extending only to the borders separating Saudi Arabia and Kuwayt from Jordan and ʿTrāk, even though these borders represent little more than artificial political concepts. This definition places the northernmost point of the Peninsula at ʿUnāzā, a low mesa in the desert farther north than either Jerusalem or ‘Ammān. From ʿUnāzā the borders between Saudi Arabia and Jordan, not yet fully agreed upon, reach the sea near the head of the Gulf of al-ʿAḵaba, while the borders between Saudi Arabia and Kuwayt on the one hand and ʿTrāk on the other run to the head of the Persian Gulf south of al-ʿAṣṣara. Along these eastern borders lie two small neutral zones, in one of which Saudi Arabia and ‘Trāk and in the other Saudi Arabia and Kuwayt share undivided half interests.

It is impossible to make a reasonably reliable estimate of the size of Arabia’s population. All figures found in reference works are highly suspect, as none is based on proper statistics or sufficient familiarity with the whole Peninsula. In view of the extensive areas inhabited solely by scattered nomads and the relatively light density of population in most of the settled areas, one may doubt whether the total approaches 10,000,000, and it may well fall several millions short of this figure. The most densely populated country is the Yaman (al-Yaman). In Saudi Arabia the main concentrations are in a few cities of al-Ḥijjāz, the well watered mountains and plains of Ṭasīr and its Tihāma, some of the valleys of Najd, and the eastern oases of al-Ḥasā and al-ʿAtāf. Ḥaḍramawt and Oman both contain many towns and Bedouin tribes.

Present state of knowledge. The inhabitants of Arabia have naturally always known much about the land, but each man’s knowledge is restricted to a certain region, being detailed and particularistic rather than general and comprehensive. No single work in Arabic gives a full and accurate description of Arabia. The best volume in the language is still ʿIṣṭāṭ Diʿāzrat al-ʿArab by al-Hamdānī (d. 334/945-46), which, though rich in information, fails to provide a coherent panoramic view of the whole Peninsula. The serious scientific exploration of Arabia began with Carsten Niebuhr and the Danish expedition of 1762. While travellers of different nationalities pressed on with the penetration of the interior during the 19th century, British officers of the Indian Government undertook technical surveys of the surrounding seas and stretches of the coast. Technical surveying in the interior had to wait for the 20th century, when it began with an investigation of the southern border of the Yaman and preliminary studies for the Ḥijjāz Railway. In recent years oil companies have surveyed large parts of Eastern Arabia, using the highly refined methods of modern geological and geophysical exploration, besides engaging in extensive reconnaissance in other regions.

By 1935/1955 travellers—both Western and Arab—had visited virtually all of the remoter places, so that none of the old major mysteries regarding the surface of the land had been left unsolved. Travellers’ reports, however, are often incomplete and sometimes inaccurate, and much remains to be done in checking and correlating those now available. A number of important reports remain unpublished or buried in archives.

Recent years have also seen the introduction of aerial photography as an indispensable procedure in mapmaking. By 1954 a good part of the Peninsula had been photographed for cartographic purposes, and some of the results had already been transferred to maps. Aerial photographs, however, are of maximum value only if supported by ground control, i.e., the establishment of fixed points on the ground whose relationship to the photographs is precisely determined. For much of Arabia such control is still lacking.

The general outlines and main features of the map of Arabia have now been delineated with a fair degree—and in a few instances a high degree—of reliability, but years of study lie ahead before all the details can be filled in. Surveys done in the earlier days, such as those of the Persian Gulf, are now being redone in the interests of greater thoroughness and accuracy. Errors of the past, many of which have become established on maps, are being corrected, but the process is long drawn out.

Arabian governments are now making available information about their countries in a growing body of official publications, and modern Arab authors keep producing books and articles dealing with different parts of the Peninsula. Interest in such diverse things as oil and South Arabian antiquities has called forth a flood of material by Western authors, part of which is sound but much of which is superficial, misleading, or flagrantly contradictory to fact. Arabic sources likewise are often unreliable, so that the student of Arabia must constantly be on the lookout for pitfalls along his path.

(ii) PHYSICAL STRUCTURE

AND PRINCIPAL GEOGRAPHICAL FEATURES

Lying between Asia and Africa, Arabia is of such size and individuality of character as almost to justify its classification as a sub-continent. Usually considered an appendage of Asia, it also joins Africa through Sinai, which, though politically a part of Egypt, is closer to Arabia in both physical environment and the nature of its human life. Before the development of rift valleys provided a bed for the Red Sea, Western Arabia formed a part of the African land mass, and the southern half of Western Arabia still has a greater affinity in many ways with
Somalia-Ethiopia than with Northern Arabia or the rest of Asia. Northern Arabia, on the other hand, merges imperceptibly with Arab Asia through the Syrian steppe, and the Oman bulge contains a mountainous area closely resembling the ranges of Iran.

Geomorphologically the Peninsula consists of two main provinces: the ancient Arabian Shield of igneous and metamorphic rocks in the west, and the more recent sedimentary areas sloping away from the Shield to the north-east, east, and south-east into the vast basin consisting of Mesopotamia, the Persian Gulf, and the eastern part of al-Rub' al-Khali. The Arabian Shield is actually only the eastern part of the Arabian-Nubian Shield, an immense mass of basement rocks—greenstones, schists, granite, gneiss, &c.—which have thrust upwards to form bare and forbidding mountains, with the whole mass split into two by the rift valleys running southwards from the Dead Sea and along the course of the Red Sea. The older igneous rocks of the Arabian part represent primarily plutonic activity of the more remote past, while more recent volcanoes have blanketed the surrounding ground with fields of lava (harrān, pl. hāsrān) often imposing in extent. Regions of igneous and metamorphic rocks may be rich in minerals and precious stones, but only insignificant quantities of these have so far been found in Arabia.

To the north and south the eastern limit of the Arabian Shield lies not far inland from the Red Sea. Between these two extremities the limit sweeps around in a rough bulge reaching as far east as the vicinity of al-Dawādīmi, less than 200 km. west of the western wall of Tuwayq. The geomorphologically confused mountains of the Yaman, though composed of similar rocks, are physiographically highly different from the remainder of the Shield. Volcanic areas occur in the Yaman as well as in the mountains fringing the southern coast and those of the Oman bulge.

Valleys drop sharply westwards to the coast plain of Tihamā from the high mountains paralleling the Red Sea. The gentler eastward slope to the Persian Gulf is interrupted by cuestas in Najd such as Tuwayq and al-'Aramā, whose steep escarpments face westwards and whose backs then resume the downward trend. From the highlands of Hadramawt and Zufar the slope southwards to the Gulf of Aden and the Arabian Sea is short, while a longer slope runs northwards to al-Rub' al-Khali. The Oman bulge has a short descent north-eastwards to the Gulf of Oman and a much longer descent south-westwards to the same sand sea, though the mountains here, unlike those elsewhere near the coast, are steep on both sides, forming a hogback range.

The sedimentary province consists predominantly of limestone, along with an abundance of sandstone and shale. These rocks are products of sediments left behind by seas that in the distant past spread out as far west as the Shield. The sedimentary deposits reach a depth of over several kilometers in the vicinity of the Persian Gulf. Organic matter from the plants and animals that lived in the old seas is the source of the enormous accumulations of petroleum discovered in Eastern Arabia during the 20th century.

Islands. The islands, islets, and coral reefs (sha'bān, pl. sha'bān) off the Arabian coast increase in number as one proceeds southwards down the Red Sea. The Farasān Bank parallels the coast for nearly 500 km., its southern part including the Farasān (q.v.) Archipelago, where the largest islands on the eastern side of the Red Sea are found. Kamarān (q.v.) Island lies close to the coast of the Yaman. West of Kamarān the volcanic peak of Diabal al-Tayr in the fairway of the sea is reported to have been in eruption as late as the early 19th century. Also in the fairway is al-Zukur, the highest island in the Red Sea (nearly 700 m.). The island of Perim (q.v.) (Mayyūn) in the straits of Bab al-Mandab, the entrance to the Red Sea, stands nearer Arabia than Africa.

The island of Sukūṭrā (q.v.), c. 110 km. long and nearly 400 km. distant from the mainland on the southern side of the entrance to the Gulf of Aden, must for both political and ethnographic reasons be regarded as belonging to the Peninsula. The Kuria Muria Islands stand off the mainland in a large bay east of Ra's Nāw. The Arabic name for the group, Khūrīyā Mūrib (q.v.), is seldom used today, the more familiar names being al-Hallānīyya, al-Hāsikīyya, and al-Sawdā', which belong to individual islands. Separated from Oman by a narrow channel is Maṭrā, the only island of considerable size lying along the whole southern coast. The Arabian side of the Gulf of Oman is also almost entirely devoid of islands worthy of the name; one encounters only rocky islets standing alone, such as al-Fahl north-west of Muscat, or in clusters, such as al-Daymānīyyat a little farther towards the west.

The mountains of Oman end abruptly at the Strait of Hormuz, the entrance to the Persian Gulf, and some of the peaks detached from the main range form inospital islands, the northern tip of one of which is Ra's Musandam. Abu Mina, an island in the Persian Gulf north-west of the port of al-Shārika, has deposits of iron oxide which are worked commercially. Close to the southernmost shore of the Gulf are a number of sandy islands, the largest of which is Mūkayyāhī (shown on most charts as Aūbāl al-Ayyād, the name of its northern part). In the western half of the embayment between the Trucial Coast and the Kātār Peninsula are islands presumed to be salt domes rising above the sea, among which are Šr Banī Yās (q.v.), Dālamā, Zarakkuh, Dās, and Ḥālīl. The main island of Bahrain (al-Bahrayn) has a scattering of attendant islets and a dependency of fair size, Hawār, which almost touches Kātar. Tarāt, Aūbā 'All, and other islands hug the coast of Saudi Arabia, while al-'Arabiyya (q.v.) and al-Fārisiyā (q.v.) lie out near the middle of the Gulf.

The Great Pearl Banks (hayr, pl. hayardā) stretch along nearly the entire length of the Arabian side of the Persian Gulf, with the richer banks in the central portion. The term gha'b is not used for a reef in this Gulf, its place being taken by jafāt (pl. jafātāt), nadjūm, and bu'ā. A hidd (pl. huddāt) is a sand bank, a bāta (pl. bātāt) is a low sandy islet which may be covered at high tide, and a kassār is a projecting rock. Rukkā is the common word for a shoal, while an area of deep water—15 fathoms (bāt, pl. abudd or bādān, the Arab fathom being a little less than the English fathom of 6 feet) or more—is called a gushāba (pl. gushābā). The Persian Gulf is a shallow sea, with few depths greater than 90 m., in contrast to the Red Sea, the depth of which in places is in excess of 2,000 m.

Bays and Coasts. The coasts of the Peninsula on the three sides facing the sea are relatively unmarked by major bendings or indentations; no other great land mass on the surface of the globe provides such a paucity of shelter for ships. The Red Sea has few bays on the Arabian side, but many narrow inlets of the type called garm, which penetrate
some distance inland and then broaden out into lagoons in which small sailing vessels can anchor. The one good natural harbour along the southern coast is Aden. Between Ra’s Fartak and Ra’s al-Hadd there are four large bays, here called qubbah (cf. the use of this term in the Persian Gulf mentioned above), but all are so open to the sea that they give no protection. Muscat on the Gulf of Oman offers a small-encircled bay large enough for steamers of medium size. Excellent harbours exist in the cliff-walled inlets in the vicinity of Musandam, but they are so hot and inaccessible from the interior that good use has never been made of them. The Persian Gulf has a proportionally larger number of bays, here called dawha, but their waters are almost without exception extremely shallow. Inlets in the Arabian shores of the Persian Gulf go by the name of akwar, a term also used here for a submarine valley. One of the best examples of these inlets is Khawr al-Udayd, which pierces the coast on the eastern side of the base of the Katar Peninsula.

Mountains, Plateaux, and Plains. The chain or chains of mountains paralleling the coast of the Gulf of al-Akbara and the Red Sea are known collectively as al-Sarat [q.v.], though use of this name is not particularly widespread. In many places a lowland range lies close to the coast, and the higher range is separated from it by a plateau from a higher range farther inland. The average height of al-Sarat is considerably below 2,000 m. Between the region of Madyan and Mecca only the famous crags of Radwâ [q.v.] west of Medina and a few other mountains reach noteworthy heights. Southeast of Mecca several peaks go up to over 2,500 m., and thence the chain rises to its greatest heights in certain parts of the Arabian Shield, near its eastern edge. (Hâdîr Shusayb west of Shantɔ3, c. 3,760 m.). The more precipitous western slopes are generally the higher, but many bold features are also met with along the inner eastern slopes. The range of Ḥaḍm east of Mecca, the historic boundary between al-Hijaz and Nadjd, appears to have lost this distinction in the popular mind, though the dividing line is considered to be southern Al-Aṣîr and northern Najd. Al-Sarat passes across al-Sarat, called al-akaba in Al-Aṣîr and nabat in the Yemen, are few and far between, and are usually difficult of transit. Notable gaps in the chain are those leading through to Medina and Mecca.

Interspersed among the mountains and occurring frequently along their eastern slopes are plateaux, among the most fertile of which are those in Al Aṣîr and those surrounding Šantɔ3 and Dhammar in the Yemen. The plateaux are often capped with a bed of lava, and in places the lava has spilled down the western slopes to reach the verge of the Red Sea.

The highlands of the Yemen present a steep face towards the south, the eastern stretch of which is Al-Kawr, called after the indigenous tribe of Al-Kawr al-Awaâlîk in the east. Northeast of Al-Kawr al-Awaâlîk is the highly dissected limestone plateau of Al-Djurjw which is split in twain by the eastward-trending channel of Wâdi Ḥadrâmade. The southern part of Al-Djurjw reaches heights of nearly 2,000 m., while the higher elevations of the northern part do not greatly exceed 1,000 m. The cliffs along the edge of Al-Djurjw are often awe-inspiring in their sheerness.

Farther east in the region of Zufâr are the mountains of the tribe of Al-Karâ with peaks well over 1,500 m. in height. The growth of trees and grasses on the range is so thick that the residents often call it the Black Mountain. North-eastwards of Ra’s Nawâ the mountains paralleling the coast begin to dwindle in size and number, and the coast from Ra’s Šawkîma to Ra’s al-Hadd has generally lowlying country behind it.

Mountains reappear again overlooking the Arabian shore of the Gulf of Oman, along which the range of Al-Hadjjar runs from Ra’s al-Hadd to Ra’s Musandam. The towering peaks of Al-Hadjjar are in the central portion, in the vicinity of Dîjbal al-Akhâdar, the highest exceeding 3,000 m. by a bare margin. Northwest of Dîjbal al-Akhâdar the mountains called Al-Kawr form a part of the main range, while Dîjbal Haft almost seems to form a hogbacked ridge in the open country west of the northern half of the range.

In the interior the range of Al-Tûbayy lies in the borderland between Jordan and Saudi Arabia. Just south of the Great Najfûd the parallel ranges of Al Adja [q.v.] and Salmâ are together known as Dîjbal Shammâr. The hills of Al-Nîr lie in the central bulge of the Arabian Shield, near its eastern edge.

East of the Shield a series of roughly parallel cuestas curve around from north to south, following the contour of the crystalline bulge. The most striking of these is Tûwayy [q.v.], the backbone of Najfûd, with a length of c. 1,000 km. from Khajîm Dîjra to Khajîm Musâtir, where the sands of Al-Rubûl al-Khâlî encompass its southern end. Just east of the sands of Al-Dahnâ is the low rocky plateau of Al-Šummân (classical Al-Šammân [q.v.]).

Mesas, buttes, and ridges often rise singly or in groups above the plateaus and plains. The Bedouins use the term djabal for rocky hillocks as well as massive mountains, and other terms in common use are dîl (pl. dîlah or dîlûn, a general synonym for djabal, not necessarily a rib-shaped hill), hazm (usually lower than a djabal), aabrâ (pl. burbâm, whence the name of the great oil field of Kuwayt, al-Burûkân), and burkâ (pl. burk), the last two being applied to hills whose sides are mottled with patches of sand. The promontories jutting out from the inland escarpments are called shusmun (pl. shusmûm), the word for nose.

Within the northern border of Arabia lies the southernmost portion of Al-Hamâd, a stony plain stretching on northwards into the steppe, and south-east thereof is Al-Hadjjara, another stony plain. Among the major hâdâbâ—plains with a mantle of gravel—are Al-Dibdiba in the north-eastern corner of the Peninsula and Abu Bahr and Raydû south of the southern end of Al-Dahnâ. The plain of Al-Dijlada south-west of Raydû is completely ringed about by the sands of Al-Rubûl al-Khâlî. Other plains are found along the southern and eastern edges of Al-Rubûl al-Khâlî, all sloping towards the basin occupied by the sands.

The coast plains in the west and south are confined within a fairly narrow corridor nearly everywhere by the mountains crowding down towards the sea. Thîhama [q.v.], the general name for the coast plain along the Red Sea, is sometimes subdivided into Thîhâmât al-Hîjîîâr, Thîhâmât Al-Aṣîr, and Thîhâmât Al-Yaman. On the Gulf of Oman no more than faint traces of plains exist between Ra’s al-Hadd and Muscat, but between Muscat and Shînâq the plain begins to broaden out into Al-Bâînîa [q.v.], one of the great date-producing districts of Arabia. Salt pans are particularly common along the southern shore of the Persian Gulf, and much of the low ground in this region is covered with sand.

Sandy Deserts. Dunes may be star-shaped, dome-shaped, or crescent-shaped (the crescentic or
barchane dune = mufrawwi, pl. mabdwi). Dunes bare of vegetation are called *ucus (sing. *uruk, pl. *uruk* or more complex arrangements underlying which an orderly pattern can often be discerned. Wide expanses of ground are covered with relatively thin sheets of drift sand. Barchane dunes occur in sizes ranging from c. 1 m. to c. 200 m. in height, and the largest are several km. or more in length. Almost all of the dunes consist of pure sand, with no core of rock or other substances. The colour and composition of the sand itself vary from place to place, with the predominant colour in the interior approaching red.

A sandy area is generally called a *nafūd* (pl. pauc. *nafūd*, pl. abund. *mfäd*) in the north and a *ramla* (pl. *rimäf*) in the south. The term *irk* may be applied to a whole area containing a number of *urarh*, e.g., *Irk* al-Mañhūr embraces seven major veils. As frequently happens with the Arabs, these common nouns are transformed into proper names applied to the most noteworthy examples of their categories: the northern desert known to Westerners as the Great Nafūd is called by the Arabs simply al-Nafūd, the southern desert known to Westerners as al-Rub₆ al-Khāli is ordinarily referred to simply as al-Ramla, while al-Urayk is a sandy area south of Kātar.

Almost all of the principal sandy deserts lie in the sedimentary province, where they curve around the central bulge of the crystalline Shield in the same fashion as the coasts, along the western bases of which many of them lie. The two largest are the Great Nafūd [q.v.], with an area estimated at c. 70,000 km², and al-Rub₆ al-Khāli [q.v.], with an area estimated at over 500,000 km², making the latter the largest continuous body of sand in the world. These two are connected by the long thin arc of al-Dahna₃ [q.v.] lying east of Ṭuwayk and al-'Arama. A similar arc runs west of Ṭuwayk between the two main sandy deserts, but its continuity is broken in several places. This lesser arc begins with *Irk* al-Manhūr, which leaves the Great Nafūd south of the point of departure of al-Dahna₃ and merges into three parallel fingers of sand, which from east to west are Nafūd al-Ṭuwayrat, Nafūd al-Sirr, and al-Šukayyikā. The southern extension of al-Ṭuwayrat is named Nafūd al-Balidin after the towns of the district of al-Wasm lining its southwestern edge. Almost connected with al-Sirr is Nafūd Kunayfīdha, the south-eastern end of which nestles under the western wall of Ṭuwayk. South of Kunayfīdha occurs a major interruption in the arc, after which the sands reappear in *Irk* al-Dabī, which ends north of Wādaʾ al-Dawāṣir. The principal direction in which the sands migrate is southwards; in other words, they are slowly but steadily forsaking the Great Nafūd and working their way along the two arcs towards al-Rub₆ al-Khāli.

Although on the map al-Rub₆ al-Khāli appears to have two long arms extending northwards, the western of these, al-Dalāfīra, is regarded by the Arabs as constituting a separate desert cut off from al-Rub₆ al-Khāli by the low ground of al-Djawb (Diwāb Yabrīn). The eastern of the two arms, also regarded as a separate region, penetrates deep into the hinterland of the Trucial Coast.

Ramlat al-Sab₄atayn south of the south-western corner of al-Rub₆ al-Khāli lies outside the system just described. Perhaps the largest accumulation of sand on the Arabian Shield is *Irk* Subay in the southern part of the central bulge.

Various geographical features associated with drainage and water resources are discussed in the following section.

(iii) CLIMATE, DRAINAGE, AND WATER RESOURCES

The Tropic of Cancer bisects Arabia, passing between Medina and Mecca, between the districts of al-Khāṣr and al-Afūd, and between Muscat and Raʾs al-Hadd, so that most of the land enjoys a generally temperate climate. Even in the south, where the tip of the Peninsula approaches 12° N. lat., much of the country is sufficiently elevated to avoid the rigours of tropical heat. Only the lowlands along parts of the Red Sea, the Gulf of Aden, and the Arabian Sea have a semitropical rather than a temperate environment.

Meteorological records, though improved in recent years, are still too scanty to provide a completely detailed picture of Arabian weather. The summer heat (ḥayās) is intense throughout the Peninsula, reaching over 50° C. in the hottest places. The dryness of much of the interior makes the heat tolerable there, but along the coasts and in some of the southern highlands the humidity in summer is high and debilitating. Fogs and dews are common in the humid regions, but over Inner Arabia the sun shines the year round, obscured only by an occasional sandstorm or even rarer shower. Although not the happiest on earth, the Arabian climate has often been damned more violently than it deserves. Many days in fall and spring are fresh or mild. The winters are invigoratingly cool, with bitter cold occurring only at the higher altitudes. In the desert are still too scanty to provide a completely detailed picture of Arabian weather. The summer heat (ḥayās) is intense throughout the Peninsula, reaching over 50° C. in the hottest places. The dryness of much of the interior makes the heat tolerable there, but along the coasts and in some of the southern highlands the humidity in summer is high and debilitating. Fogs and dews are common in the humid regions, but over Inner Arabia the sun shines the year round, obscured only by an occasional sandstorm or even rarer shower. Although not the happiest on earth, the Arabian climate has often been damned more violently than it deserves. Many days in fall and spring are fresh or mild. The winters are invigoratingly cool, with bitter cold occurring only at the higher altitudes. In the desert are
their alluvial fans on the coast plains. In the dry zone rainwater from the higher areas occasionally comes down in spate through the stream channels (\textit{wadd}, pl. \textit{wid\textacute{y}n}, or \textit{\textasciitilde{g}h\textacute{a}b}, pl. \textit{\textasciitilde{g}h\textacute{a}b\textasciitilde{h}}), which otherwise contain only a few pools or none at all. These flash floods (\textit{say\textacute{l}}, pl. \textit{\textasciitilde{s}u\textasciitilde{y}ul}) sometimes cause great damage, and much of their precious water may flow away unused. Other floods come in sheets over flat surfaces such as gravel plains or the fans at channel mouths. Part of the water that seeps underground is recovered by man through wells and springs.

Although the courses of some valleys can be traced for considerable distances, bodies of sand lying athwart them in places tend to prevent through drainage. A characteristic feature of the Arabian drainage system is the local enclosed basin, varying in size from very large to very small. Wādī al-Sīrān is not a true wādī but a depression c. 300 km. long and 50–70 km. broad into which many wādīs on both sides empty their \textit{say\textacute{l}s}. Types of smaller basins are the \textit{kh\textacute{b}ara\textasciitilde{t}}, a hollow with an impervious bottom holding water for a while after rain, and the \textit{ray\textasciitilde{da}} (called \textit{\textasciitilde{ray\textasciitilde{d}}a} in the north), whose bottom does not hold water, so that wild vegetation may be fairly abundant there. Another type of basin is the salt pan or saline flat (\textit{\textasciitilde{s}ab\textasciitilde{k}ha\textasciitilde{h}}, \textit{\textasciitilde{s}ab\textasciitilde{k}ha\textasciitilde{h}}) which occurs with great frequency along the coasts and also in the interior, where it is fully enclosed.

The eastern tributaries of Wādī al-Ḥamād, which runs down to the Red Sea, originate in Ḥarrat Ḫaybar. A short distance farther east are the headwaters of Wādī al-Rumāh (al-Rumma in al-Ḥamādān), which through its extension al-Bāṭīn runs to the Persian Gulf basin in the vicinity of al-Ḥamrā, though the connecting link between al-Rumāh and al-Bāṭīn is choked with sands of al-Dāhnā. The small area in Ḥarrat Ḫaybar between the sources of al-Ḥamrā and those of al-Rumāh is the one place in the whole Peninsula from which an easy slope to the seas on both sides can clearly be discerned.

Descending from the eastern slope of al-Sārāt, the three large valleys of Ranya, Bīḍha (\textit{\textasciitilde{q}ar\textasciitilde{r}}), and Tālūhīf converge on the upper reaches of Wādī al-Ḍawāsir (\textit{\textasciitilde{q}ar\textasciitilde{r}}), which receives their waters in times of exceptional floods only to lose them again as it fans out against the sands of al-Rūb‘al-Khāli after piercing through the wādān in al-Ḥamādān and Nādirān (\textit{\textasciitilde{q}ar\textasciitilde{r}}) are valleys coursing eastwards to the sands which lie south of the southern end of Ṭuwayq. From the highlands of the Ṭuwayq the valley of al-Khārid (\textit{\textasciitilde{q}ar\textasciitilde{r}}) flows down into the basin of al-Ḍiawīl (\textit{\textasciitilde{q}ar\textasciitilde{r}}) (Ḍiawīl Ibd Nāṣir), the home of the ancient Mineans.

The mountains of the Ṭuwayq send water southwards towards the coast in the vicinity of Abyān through Tubān, Bānā, and other valleys. Water from Bānā is used for an extensive development of agriculture at Abyān. The southern outliers of al-Ḍiawīl give rise to Wādī Mayfa‘ā and Wādī Ḥaḍjar. Ḥaḍjar is the one truly perennial river in Arabia, but its total length probably does not exceed 100 km. Its water, part of which comes from the hot springs of al-Ṣīdāra in the uplands, supports vegetation in the area of Mayfa‘ā at the river delta (not to be confused with Wādī Mayfa‘ā to the west).

Wādī Ḥaḍjamawi (\textit{\textasciitilde{q}ar\textasciitilde{r}}), the principal artery of a great drainage system, is fed by valleys coming from both the southern and the northern parts of al-Ḍiawīl, those from the south being far more thickly settled than those from the north. Just beyond the town of Tarīm the Valley of Ḥaḍjamawi assumes the name of al-Masla, which it bears for the remainder of its course to the sea.

Sānā‘il, one of the valleys flung out by the range of al-Ḥaḍjar towards the Gulf of Oman, provides passage for the main road from the coast to Inner Oman. The chief valleys of al-Bāṭīnah are named after the tribes inhabiting their banks, al-Ma‘āwil and others. Going up Wādī al-Ḍiawīl and Wādī al-Ḥaḍjar, one comes to passes leading over the mountains to the Trucial Coast.

In the region east of al-Dāhnā between al-Bāṭīn and al-Sāhba‘ the insufficiency of surface water has militated against the formation of true wādīs of any size. Wādī al-Miṣyāḥ northwest of al-Ḫaṭṭīf is a basin rather than a stream channel, deriving its name from the numerous wells and springs found within its confines. Other large basins are al-Fārūk south of Wādī al-Miṣyāḥ and al-Shāk southwest of the city of Kuways.

In the far north a series of valleys known as al-Widāyān (Widāyān ‘Anaza) runs north-eastwards towards the Euphrates; among these are Tubāl, ‘Ar‘ār, and al-Khurr. In Najd a number of valleys between al-Rumah and Wādī al-Dawāsir cut through Ṭuwayq; al-Ṭā‘ik (\textit{\textasciitilde{q}ar\textasciitilde{r}}) is the northernmost of these. Wādī Ḥanifa (\textit{\textasciitilde{q}ar\textasciitilde{r}}), rising on the crest of Ṭuwayq rather than making a gap in the escarpment, twists down to the basin of al-Khārid where several important valleys empty into al-Sāhba‘ (\textit{\textasciitilde{q}ar\textasciitilde{r}}), the course of which can be traced across al-Dāhnā and al-Dīfūra into the Persian Gulf basin. The valley of Birk cleaves through the wall of Ṭuwayq via a picturesque gorge and turns northwards under the name of al-Ṣā‘ikīm to follow a course towards al-Sāhba‘.

Arabia contains no large permanent lakes. Deep pools occur in places, with the most unusual ones being those in the districts of al-Khārid and al-Ḩalaj. In oases such as al-Ḫaṣā‘ big ponds may be formed by the run-off from irrigation. Dry lakes in the north may be filled with water over an area of 10 or more km$^2$ after a rain.

The thousands of wells (\textit{bi‘r}, pron. \textit{bir}, pl. \textit{abydār}, or \textit{kalib}, pl. \textit{kulbān}) in the desert, some of them even in the central portions of al-Rūb‘al-Khāli, make possible the nomadic life of the Bedouins. The deepest is reported to descend c. 170 m. into the earth, and depths in excess of 70 m. are not unusual. The wells may be steyned or unsteyned; they may be frequently visited or seldom seen by man. Other watering places are spots in the sand or in valley bottoms where exiguous water is secured by digging down a meter or more. Blowing sand rapidly fills these shallow holes, so that finding them may tax even the navigational skill of Bedouins bred in the wild. The water in some of the desert wells is too salty for humans (such a well is called a \textit{khuwār}, pl. \textit{khuwān}), but camels drink it and furnish milk to sustain their masters.

Among most of the flowing springs (\textit{‘ayn}, pl. \textit{‘aydān}) oasis settlements or towns have grown up. Other communities draw their water only from dug wells, while sometimes tanks and cisterns are used to catch rainwaters. The larger oases consist of several or more villages or towns grouped close together, each with its own belt of date groves. The oasis name may apply to the whole group, which may cover tens or hundreds of square kilometers, rather than to any single community within its confines, e.g., al-Ḫaṣā‘ with its chief towns al-Huflūf and al-Mubarraz, and Bīḍha with al-Rawshān and Nimrān.
Various methods of irrigation are used wherever there is sufficient water. Terracing is much practised in the south with water being led from enclosure to enclosure. In some regions an old system of underground aqueducts (faladi, pl. al-faladi) similar to the bandi can be found. In Iran this is common, while in others it is not known. In large oases such as al-Hasa and in Tihamah the rules governing the distribution of water for irrigation are elaborate and firmly fixed by custom. The building of dams, once an art in which the Arabs excelled, has been neglected in more recent times, but now, with a growing population and higher standards of life demanding an expansion of agriculture, it is being revived.

(iv) Political Divisions

Political divisions in Arabia are often ill defined. Few international boundaries have been agreed upon by the parties concerned, and none has been properly demarcated throughout its full length. A rapid survey of the main political divisions as they existed in 1374/1954-5 will furnish examples of the truth of these statements.

The Kingdom of Saudi Arabia occupies the whole northern half of the Peninsula—with the exception of the small states of Kuwayt, Bahrayn, and Kaṭar, and parts of Oman—and a good share of the southern half as well. Stretching from the Red Sea to the Persian Gulf, it incorporates the large regions of al-Hiqāya (q.v.), Asir (q.v.), and Nadīd (q.v.), and also most if not all of al-Rubā’i al-Khali. Saudi Arabia and the Yemen agreed in 1354/1936 upon a boundary running from the Red Sea coast to a point short of al-Rubā’i al-Khali, but no serious attempt has since been made to extend the line southwards from this point over a gap between 100 and 200 km, in breadth. No land boundaries have been fixed between Saudi Arabia and any of the following states, all of which may be assumed to have territories abutting on the Kingdom: the Aden Protectorate, the Sultanate of Muscat, the Imamate of Oman, the Amirate of Abū Ḫābid, and the territories of the Imamate and the Sultanate; those of the Imam reach the crests of the main mountain range of al-Ḥaḍjar throughout much of its length, and a few of his governors (wāli) are established on the seaward slopes. The Imam, whose theocratic realm is a continuation of the Kharijite state founded in Oman c. 1336-37, has his capital at Masqat, and his two principal lieutenants reside at Tanūf in Inner Oman and al-Ḵabīl in the district of al-Sharkīya. Of all the major rulers in Arabia, the Imam, who maintains no formal diplomatic relations with any other power, is the most self-sufficient and the least known to the outside world. [See further ṬUMAH.]

The Trucial Coast (Sāhil al-Makhtūt) is the southern shore of the Persian Gulf running south-westwards and then westwards for an undefined distance towards Kaṭar. When the Arabs living there in the early 19th century were preying vigorously on shipping in the Gulf, the region was known as the Pirate Coast; after the British forcibly stopped the marauding and imposed a maritime truce on the rulers of the ports, it came to be called the Trucial Coast. The Trucial States, all of which are in special treaty relations with the British Government, are regarded as being under that government’s protection, though without having the formal status of protectorates. [See further BĀHAR FĀRIS.]

The Sultanate of Muscat claims a part of the oasis of al-Buraymī, but Saudi Arabia challenges this claim on the basis of its own connexions with the place. Saudi Arabia likewise challenges the claim of the Trucial State Abū Ḫābid to al-Dīwā’ī, but Saudi Arabia claims an outlet to the Persian Gulf on the coast between Abū Ḫābid and Kaṭar, but the British Government, which by treaty controls the foreign relations of these two states, disputes this claim. In 1373/1954 the two parties agreed to submit the dispute to arbitration.

The Kaṭar (q.v.) Peninsula, jutting northwards into the Persian Gulf about halfway between its mouth and its head, is the seat of an Amirate under the rule of Al Ġībānī, a dynasty of recent origin, with its capital in the port of al-Dāwḥa. The boundary
between the Amirate and Saudi Arabia in the vicinity of the base of the peninsula has not been agreed upon, and the Amir of Bahrayn claims a piece of territory around al-Zubara in the north-western part of the peninsula.

The archipelago of Bahrayn [q.v.] between Kaťar and the Saudi Arabian mainland constitutes an Amirate under the rule of Āl Khalifa, a family from Nadjd which established itself in the islands in 1297/1293 and has ruled there ever since, with its capital in the port of al-Manama on the main island. British interests in the Persian Gulf come under the supervision of a Political Resident with headquarters in al-Manama. Also subject to his administration are the Kuria Muria islands, which belong to Great Britain.

On the Arabian mainland at the head of the Persian Gulf is the small roughly triangular Amirate of Kuwait, partially separated from Saudi Arabia by a neutral zone and bounded on the north and west by Irāk. Āl Śabḥā, a family related to Āl Khalifa of Bahrayn, has ruled Kuwait for over two centuries [see Kuwayt].

Kaťar, Bahrayn, and Kuwait have all granted the British Government by treaty the right to conduct their foreign affairs and have agreed not to enter into relations with other powers without the consent of that government. Questions dealing with water boundaries and the appurtenance of a number of islands in the Persian Gulf remain to be settled between Bahrayn and Kuwait on one hand and Saudi Arabia on the other.

(v) Flora and Fauna

Throughout most of the Peninsula a sharp contrast exists between the utilised stretches of desert and the green patches of cultivation in the oases. In places, particularly along the margins of the Peninsula where rain falls more frequently or where stream channels bring sufficient water down from the highlands, cultivation is more widespread, sometimes climbing the heights in skilfully built terraces and sometimes carpeting the narrow plains between the mountains and the sea. Arabia, however, boasts no endless prairies or pampas tamed by the plough, no endless prairies or pampas tamed by the plough, and sometimes going for months without resort to water—wells—the forage supports the camels, whose milk supports their masters. The most sought after plants for forage are the annuals (wābb, pron. ‘ārāf)—grassess, wild flowers, and herbs which spring up green after a rain, especially in the rabi', the season of plenty following the first and best rains (masīm). The sands provide favorable soil for the growth of such annuals and so are reckoned by the nomads as among the most attractive types of desert terrain. Perennial shrubs and bushes (ḥādir) eaten by camels are nasī, ḥāddā, and sabāt (pron. sabāt), as well as others too numerous to mention. From time to time camels hanker after bushes of the category called hamā, a prime source of the salt needed by their system. Among the many plants falling in this category are ḍarah, ṭimāth, ‘arād, ushrum, sāmā, ḍhub, ḍhādā, and bādā (not bād as in classical Arabic). Dry bushes are also essential to the Bedouins for firewood (ḥālab), among the best for this purpose being ‘āthew (ghādā), and rīm. Burning with a fragrant scent, these woods help to make the ceremony of brewing coffee for a guest at the open door of the tent one of the chief pleasures of life. The Bedouin likes truffles (fāk) and eats other desert plants, though by preference and philosophy there is little of the vegetarian in his being. Twigs of the arakh (pron. ṭāk) are in common use as a toothbrush (miswāh), and senna (sanā) is chewed as a purgative.

Vegetation would be more abundant in the deserts were it not for the migrating dunes, some of which move 20 m. in a year. In many places, however, bushes have taken root and fixed the sand, a hummock of which is built up around each bush. An area of such hummocks may extend for many kilometers, making very rough country known as 'afḍa. Less difficult types of sandy terrain with vegetation are called marbakh or dīkākā (pl. dīkāk, cf. class.…
Among animals the camel occupies a place analogous to that of the date palm among plants. The vast majority of Bedouins in Arabia depend on the camel above all other material possessions. The tribes which herd sheep rather than camels range over the steppes north of Arabia, close to the great rivers of Mesopotamia, and do not pass beyond the territory of Kuwait in their southward migrations. Milk is the camel's most precious product, but its meat, hide, and wool are also put to good use, its dung (dimm) is collected to be burned as fuel, and the tail of a dead camel makes a strong rope. Camels are sometimes harnessed for ploughing or drawing water from well, and the nomads sell part of their stock to secure money for clothing and other necessities. In time of great thirst a Bedouin may slaughter a camel to drink the water stored in its stomach (kareb) and the urine in its bladder (mibwad).

The general term for camels is ibl (q.v.) (often pronounced bii), with bawab being common in the south. A riding camel is a ghali (pl. djiyaya); the plural rikab is used for both those that are ridden and those that are not. The most highly desired camels are the thoroughbreds (aslahi), whose pedigree has been controlled and recorded over a number of generations. Many of these are from the breeds of Oman ('Umniiyya), among which the Bawatin of al-Batin are particularly well known, though these have the disadvantage of wanting to drink every day and of not being adapted to rough country. The camels of the south tend to be smaller and lighter in color than those raised in the mountains of the Yaman. Among the multitudinous names in the special vocabulary reserved for camels are ones descriptive of beasts which graze on certain plants, e.g. hawwarim (tem. sing. haraïm) from the karm bush, and awarik (tem. sing. arika) from the arak tree. Along with camels, most of the nomads keep sheep and goats (ghasam), though not in great flocks like those of the northern steppes. Sheep and goats are valued for their milk, fleece, and skins. Sheep are in demand as the pièce de résistance of the Arab banquet; even royalty can offer nothing more appetising than a young lamb (jali, pl. tulyan) basted in a pot with saam and served on a platter heaped high with rice. Ssam, clarified butter for cooking and greasing made from the milk of the ewe (mudda) or the goat (sana), is considered superior to djeblab from the milk of the she-camel (naba) or wadak from the fat of camels, sheep, or cattle. The Arabian horse, the ancestor of the Western thoroughbred and once the pride of the Peninsula, is a disappearing strain. Few Bedouins now own horses, and the export of stock to India, Egypt, and the West, formerly an important part of the economy, has dwindled away to insignificance. An occasional man of rank still maintains a stud, but even this is likely to be neglected. The speed of the motor car has captured the Arab's fancy; cars are now used in place of horses for hunting and as cavalry in some of the Arabian military forces.

Fine breeds of donkeys are raised, particularly the large white ones of Bahrain and al-Jahl. Donkeys are used for riding, drawing water, and as pack animals in the mountains, where their surefootedness makes them more reliable than camels. Cattle, which in most places are not numerous, are usually of the small humped variety, except in Sukutu, where the humpless kind is found.

The gazelle (ṣabbi), which in days past used to speed across the plains in great herds, is rapidly being thinned out by rifles in the hands of hunters hurtling by in trucks or cars. The three common types are the ri'm (pron. rim), the 'īri (cf. class. ya'yur), and the idm; the term ghail is used only for the newly born kid. The swift greyhound (salih) of the Bedouins can on rare occasions outrun even the gazelle. Of the oryx (uwaydayhi in the south, baḥar sækē in the north), a larger antelope, small numbers survive in the remoter parts of al-Rubā' al-Khattī but none or almost none is now left in the Great Nafūd. The ibex or mountain goat (wadi' or baddan) also seeks refuge in distant retreats on higher cliffs. Other large wild beasts are the hyena (dab'), jackal (nawir), wolf (dinhū, pl. dinhi), and cheetah (nilm). The lion has long been extinct in Arabia. In the mountains of the south baboons are common, often chattering along in troops; they are fond of raiding the millet fields. Smaller animals are the fox (qalb or ṣal' or ṣalū), the ratel (sarbān), class. sarbānī, the coy or hyrax (wabī), and the hare (arnab). The hedgehog (kunūfūd) with its short quills is much commoner than the unrelated long-quilled porcupine (nis). The jerboa (jarbā', cf. class. yarbū) hops about the desert on its long hind legs, resembling a miniature kangaroo; its cousin the djarwād (cf. class. djarwād), on the other hand, runs on all fours.

Snakes live in the sands and rocks, though seldom seen because of their nocturnal habits. Some are poisonous, including the horned viper, as well as a species of Arabian cobra (= Egyptian asp) and a large snake called the ya'aym (cf. class. aym), which the Bedouins say has the power of flying or leaping over a considerable distance. According to one report, perhaps the most deadly of all is the bathn, a small innocent-looking snake living in the sands. The striped seaweasakes of the Persian Gulf are poisonous, but they rarely if ever bite human beings. The two large lizards are the dab and the Arabian or desert monitor (wara), the first of which is eaten by all the Bedouins with relish, while the second is ordinarily shunned. Among the smaller lizards of the sands are the fierce-looking thayyit and the slippery sand-swimming skink (dammūsa).

The ostrich appears to have become extinct in Arabia during the past few years. Fragments of ostrich eggs are often found in the desert, and the word sa'am and other terms relating to ostriches occur frequently in place names. Trained falcons, often called simply ju'yar, are much used in the chase, their chief game among other birds being the lesser bustard (kuhabār). Species of the sand grouse such as the kalī and the ghalf are too fast for trained falcons, though they can be overtaken by the wild variety. The presence of wild falcons is attested to by the number of high places called mashuru = nesting-place of the falcon (kuhabār). Among the larger birds of the desert are the eagle, the vulture (nasr), and the owl, while the flamingo, the egret, and the pelican are found along the coasts. Smaller birds are commoner in the cultivated regions, among them being the cuckoo, the thrush, the swallow, the wagtail, the Syrian nightingale (baubul), and the hoopoe (khubud). The bifasciated lark (amm sālim) is ubiquitous in the desert, and the curlew (darad) nearly so. The pigeons of the Great Mosque in Mecca are famous throughout Islam.

The seas embracing the Peninsula are rich in fish, many of which, such as the king mackerel (kandad) and the grouper (kamar) of the Persian Gulf, are tasty and nutritious, but are not eaten as much by...
the Arabs as might be expected. Whales occasionally enter the Persian Gulf from the Indian Ocean. Both sharks and sardines are caught in great numbers off the southern coast, and the Persian Gulf produces delicious shrimps.

The most disastrous plague visited upon Arabia by living creatures is that of the locusts (djarad). The solitary mitigating aspect of a locust invasion is that a number of the invaders themselves are eaten by the people they afflict. Minor plagues by comparison are those of flies, camel ticks, and similar vermin, which are no worse in Arabia than in many other countries, even though the Bedouin may describe his life as all rami wa-kabni (sand and lace). A more agreeable insect, even in spite of its sting, is the bee, kept for its honey.

Travellers during the first quarter of the 20th century: H. Burckhardt, in ZGBer.,

(vi) Ethnography

In the study of the ethnography of the Peninsula an array of formidable problems remain unsolved. Who were the first inhabitants? Did they arise from the soil or did they come from abroad? If immigrants, what was their original home? What was the environment in which they lived—did it differ greatly from the Arabia of today? What intrusive elements intermingled with the earliest dwellers as time went by? Who were the first people to deserve the name of Arab, and where did they come from?

A measure of progress has been made in the attempt to elicit answers to these and similar questions, but far more work must be done before any of the more likely hypotheses can achieve the status of historical fact. Much more needs to be known about the geology and geography of the Peninsula, many promising archaeological sites need to be excavated, and an exhaustive investigation must be made of the various segments of the present population and their history. Moreover, the solution of Arabian problems may well depend to a considerable degree on the success of work relating to other areas. The problem of the identity of the Arabs, for example, dovetails inextricably into the broader problem of the identity of the Semites, the host of people speaking languages of the family to which Arabic belongs.

Space does not permit a review of the numerous hypotheses receiving serious consideration with respect to the early history of man in Arabia. Suffice it to say that available evidence indicates that the highlanders of the Yaman may form the least adulterated large group anywhere in the world now representing what anthropologists call the Mediterranean race. East of the territory of these highlanders a Veddooid strain is said to appear, particularly among the tribe of Mahra and other tribes in the south speaking their own Semitic languages, which are distinct from Arabic. This Veddooid strain and other data suggest an ancient connection with lands farther east, perhaps India or Ceylon. The Bedouin of the north, to most Westerners the classic Arab type, is also basically Mediterranean, though not quite as characteristically so as the mountaineer of the Yaman. All along the southern coasts and with less frequency in the interior, other strains occur, sometimes in easily recognisable forms and at other times lying so far below the surface as almost to defy identification.

The unraveling of these mysteries is the concern of the archaeologist and the anthropologist [cf. also
BADW]. More important for the student of Islam is the concept the Arab—especially the Muslim Arab—has had, and in many cases still has, of his ethnographical development, a concept so prevalent and tenaciously held that it merits the careful consideration of the anthropologist as well.

The seeds of the Arab's own concept go far back into his past; how far can not be determined because of the relative lateness of the sources available, though the basic particulars of the concept had developed before the appearance of Islam. In weighing data pertaining to pre-Islamic times, however, one must use caution, bearing in mind the fact that most of the existing sources were recorded not only long after the event but also subsequent to the introduction of Islam with its new ways of looking at many aspects of life, so that the complete genuineness of these data may often be open to question. Furthermore, various refinements of the Arab concept were still being made in the time of the Prophet, and other refinements came even later. Finally, Islam with its doctrine of the brotherhood of Muslims and the equality of Arab and non-Arab presented a fundamental challenge to the validity of the Arab concept as a guiding principle for the life of the community.

Arab genealogists have worked out an elaborate and ingenious system for the illustration and application of the Arab concept. Although this system has weaknesses—obscurities in the early stages, obvious gaps, unexplained riddles, inconsistencies, and contradictions—on the whole it hangs together well. Most important, its primary theses—the core of the Arab concept—have been by no means the exclusive property of scholars; they have belonged to the people, and their influence on the politics and social life of Arabia has been penetrating and pervasive.

According to the Arab concept, the Arabs constitute a race, not simply a community of people speaking the same language. This race is made up of innumerable men and women each descending in a direct line from one or the other of two ancestors, who probably were not closely related (the connection between these two eponyms is one of the major unresolved aspects of the system). Greater homogeneity could have been attained only by insisting on the descent of all Arabs from a single ancestor. That the Arabs recognized in their clear and undisputed tradition the divinity of their origin is a significant fact, and its effect on the history of the Arabs and Islam has been far-reaching.

The system of the genealogists begins with a nod at those whom the Arabs regarded as the original inhabitants of the Peninsula, tribes such as ʿAd, Ṭaymūd, Iram, Dūrhum, Tasm, and Dājdīs [qq.v.], all of which are believed to have disappeared before the beginning of Islam. Some of these, such as ʿAd and Iram, may well have been entirely legendary, while the historicity of others, such as Ṭaymūd, is not in doubt. Nothing certain is known about the identity of these tribes, though they are generally reckoned to have been Arabs, the Lost Arabs (al-ʿarab al-bāʾida). Sometimes they are even called the True Arabs (al-ʿarab al-ṣāliḥa), though this has little meaning, as in the Arab concept they are mainly a historical curiosity and an example of the terrible fate visited on people who heeded not their prophets. Although in later times there were men who claimed descent from these ancients or even tribes reputed to have sprung from them, the conclusion of the genealogist Ibn Hazm (d. 456/1064) was that "on the face of the earth there is no one whose descent from them is verified" (ed. Lévi-Provençal, 8).

Disposing of the autochthons in this fashion, the Arab concept concentrates on the two great ancestors—Kahtān and ʿAdnān [qq.v.]—and the two great divisions of the Arab race they fathered. As all men go back to Adam, these two must have been at least remotely related. The question of a closer relationship depends on whether Kahtān was a descendant of Ismāʿīl, who was recognized as an ancestor of ʿAdnān. One opinion commonly held opposes such a descent for Kahtān, whose presumed line from Noah's son Sem (Ṣām b. Nūḥ) is separately traced. Kahtān's offspring are generally denominated the True Arabs (al-ʿarab al-ṣāliḥa or al-ṣalāḥi) and ʿAdnān's the Arabised Arabs (al-ʿarab al-mutaʿariba or al-mustaʿriba), though the uncertainty of this classification is revealed by the existence of various other versions, one of which brackets the Lost Arabs with Kahtān as the True Arabs, while another reserves the title of True Arabs for the Lost Arabs, designating the people of Kahtān as mutaʿariba and those of ʿAdnān as mustaʿriba. In any event, Kahtān clearly comes out closer than ʿAdnān to genuine Arabness.

The descendents of Kahtān are the Southern Arabs, Kaḫbāṭ IL-yāmān, whose origin is traditionally assigned to the south-western corner of the Peninsula, while the descendents of ʿAdnān are the Northern Arabs, held to have made their first appearance in the northern half of the Peninsula. Whether this traditional division has a basis in truth is open to question. Certain data, for example, suggest that Sabaʾ came from the north into the Yaman, though in the scheme of the Arab genealogists Sabaʾ is the great-grandson of Kahtān and the father of Ḥimyar and Kaḥlān, the eponyms of the two main branches of the Southern Arabs.

The peoples of the ancient South Arabian states—Sabaeans, Minaeans [qq.v.], and others—were regarded as descendents of Ḥimyar, so that Ḥimyar in Arabic became the comprehensive term embracing the civilisation of these states. Few of those recognised without qualification as descendents of Ḥimyar played an important role during the Islamic period, the centre of the stage having by then been occupied by the sons of Kaḥlān, among whom were numbered Ṭayyīʾ, Madhabid, Hamdān, and al-Azd. Among the subdivisions of al-Azd were al-Aws and al-Khaẓraj, residents of Medina who rose to fame in Islam as the Prophet's Ansār. Lakhm, Qashqū, Kinda, and other tribes of Kaḥlān became solidly established in the north and centre long before the beginning of Islam, so that a tribal map of Arabia in the 6th and early 7th centuries reveals a curious patchwork in which the ranges of many Arabs of Southern descent lie north of those belonging to Arabs of Northern descent.

ʿAdnān, the putative progenitor of the Northern Arabs, appears to have been even more of a misty figure than Kahtān, so that the Northern Arabs in popular practice often trace their descent back no further than ʿAdnān's son Maʿadd or even his grandson Nizār. Muʿād and Rabīʾa, sons of Nizār, were the eponyms of the two main branches of the Northern Arabs, the descendents of a third son, Iyād, having largely sunk out of sight by the time of Islam. Kaṭrā'āṭ, one of the two major divisions of Muʿād, was of such importance that the term Kaṭrā'āṭ was often used for all Northern Arabs. This division embraced Hawāzīn and Sulaym, and Hawāzīn alone included such notable tribes as Thaqīf and the whole group of ʿAmīr b. Ṣaṣān.
DIAZIRAT AL-'ARAB

(Kushayr, 'Ukayl, Diya'd, Kilab, and Hildl).

Khindif, the other major division of Mudar, numbered in its ranks Hudhayl and Tamim and abov all Kinana, the tribe of which Kuraysh formed a subdivision. Although the Northern Arabs by origin lacked the same identification with Arabdom that their Southern cousins enjoyed, the fact that the Seal of the Prophets came from the Northern tribe of Kuraysh has redeemed their prestige under Islam in ample measure.

From Rabia's sprang the tribes of 'Anaaza, 'Abd al-Kays, al-Namir, Taghlib, and the strong group of Bakr b. Wadi, one of whose members was Hanifa. Well before Islam the original groups of Mudar and Rabia dissolved, early folk of Mudar moving to the territory on the Euphrates called after them Diyar Mudar and early folk of Rabia to the territory on the Tigris called Diyar Rabia. Many of their offshoots, however, remained behind in the Peninsula: Hudhayl in the vicinity of al-Ta'tif; Sulaym in the mountains between Mecca and Medina; Tamim and Hanifa and various members of 'Amir b. 'Ashara in the center; and 'Abd al-Kays in the east.

An attitude of hostility between Kabtian and 'Adnan, which went far back into the past, was enhanced by the rivalry that developed between the Anjar of Medina and Kuraysh of Mecca, so that it became a factor of extraordinary significance in the history of the early Islamic dynasties, the effect of which extended as far afield as Spain. The struggle between South and North finally faded away into an affair of dwindling consequence with the eclipse of the Arab element in the Islamic world. Only in one section of the Peninsula—'Umran—has the ancient hostility endured down to the present as a vital force. For centuries the Northerners were known in 'Umran as Nizaris, and the Southerners as Yamaneh. As the result of a civil war there in the early 18th century, the Northerners came to be called Ghafirs and the Southerners Hinawi, a distinction which still carries weight.

A major anomaly in the system appears in the case of Kufta. A number of tribes—Bahra, Diyarha, Bal, Tanukh, Kalb, and others—recognized a common ancestor named Kufta, but agreement was lacking as to whether he was a Southerner or a Northerner. Some said he was a son of 'Adnan, while others said he was a grandson or later descendant of Himyar. The genealogists also resorted to the device of declaring that all the Arabs were descended from three men—Kabtian, 'Adnan, and Kufta—but without the suggestion that Kufta represented a third element, neither Southerner nor Northerner. In the conflicts between the Southerners and the Northerners during the early period of Islam, the tribes of Kufta tended to side with the Southerners; genealogy was used for political purposes, the attribution to Kufta of a descent from Kabtian through Himyar prevailed, and the tribe of Kalb of Kufta advanced to the fore as champions of the Southern Arabs in the days of the Umayyads.

In studying the history of Arabia from 'Abbadsid times to the present, one encounters great difficulty in determining the links between the tribes of a thousand years ago and the tribes of today. Oppenheim, Brunich, and Caskel in their work Die Beduinen have made the most ambitious attempt so far with respect to the tribes of northern and central Arabia, but much remains to be done in spite of the laudable degree of success they have achieved. Information on the tribes during the time when the government of Islam was in or near Arabia is fairly abundant, and the same is true of the last two centuries or so, but for hundreds of years in between their story remains for the most part concealed from view. Great migrations took place of which only trifling records have been recovered. Elements broke off from one tribe to join another, or whole tribes reshuffled themselves into new groupings. Popular tradition among the Bedouins has preserved some recollection of the changes, but this tradition is often far from trustworthy. In the 4th/10th century al-Hamdani remarked on the tendency of tribes bearing a given name to associate themselves with stronger or more renowned tribes of the same name, and this tendency still holds true. In the time of the Caliph Abu Bakr the appearance of the false prophet Musaylima among Hanifa brought this tribe into disrepute; descendants of Hanifa in Najd today prefer to name as their ancestor Rabia, from whom Hanifa sprang, but so many other tribes have been named Rabia and popular knowledge of the traditional genealogical system is so scant that the result is often complete confusion. The modern tribe of al-Dawasir has a tradition that its ancestor was named Umara; the ordinary Dawasir today glibly identifies him as 'Umar b. al-Khattab without knowing who 'Umar b. al-Khattab was. The modern tribe of Banu Ghafir in al-Batinah of 'Umran provides an example of the often unstable status of the tribes; although the Northern Arabs of 'Umran are now called Ghafirs after this tribe, the tribe itself is notorious for the way in which it has shifted its allegiance back and forth between the Northerners and the Southerners.

Some of the great tribes of the present, such as Tamim in the center and Hamdan in the southwest, apparently represent in a generally faithful manner the ancient entities which bore these names, though many members of each have in the course of time broken away and lost their identity, while outsiders have attached themselves to this tribe or that and become completely absorbed into the community. The modern tribe of Kabtian may be the residue of one or more segments of the original nation of Southern Arabs, or the connexion may be even more tenuous than this, despite the fact that the Bedouins of Arabia still associate this tribe with the father of all Southerners. To follow the vicissitudes of the tribe of Kuraysh since the beginning of Islam, one would have to investigate—among other things—the history and current status of the many thousands of real and reputed sayyids and sharifs scattered not only throughout Arabia, but from one end of the Islamic world to the other.

Members of one modern tribe may tenaciously insist on their homogeneity in descent from a single ancestor, while members of another tribe readily admit that they are a confluence of diverse elements. The tribes of al-Udjman and Al Murra, which migrated from the vicinity of Najran to Eastern Arabia about two centuries ago, maintain that they share a common descent from Hamdan of the Southern Arabs through Yam. Their physical characteristics, their speech, and other facets of their life and history lend credence to this claim. On the other hand, large tribes such as 'Utaybah and Mu'tayr in Inner Arabia are closely knit composites of the original components of which probably first coalesced not more than five or six centuries ago. These confederations may be transitory, e.g., the confederation of Nu'aym in 'Umran appears at present to be in the process of breaking down into its two
main constituents, Al Bu Khurayban and Al Bu Shamis, with the old name of Nucaym... Cairo 1356; Ibn Licbun, Ta'rikh, Mecca 1357; al-Suwaydl, Sabd'ik al-Dhahab, Baghdad 1280; Mahmud al-Alusi, Bulugh

Despite all the genealogical vagaries and uncertainties, it is impressive how much importance is attached by most of the Arabs of Arabia to purity of descent. Mankind is divided into those whose race is universally recognised as purely Arab (asil) and those of a lower category whose blood is mixed or impure (ghayr asil). The Bedouin who knows his immediate forebears through no more than six or eight generations is still profoundly convinced of his own nobility; his membership in a tribe of acknowledged purity of descent is sufficient guarantee that the line further back is without taint. Purity of blood is preserved by strict rules governing marriage, which among the Bedouins at least are seldom violated. The distinction between pure and impure, strongest among the Bedouins, is carried over to a considerable extent into the oases and towns, particularly those away from the coasts, where many of the townspeople keep alive their sense of affiliation with one tribe or another. Other townspeople are grouped together in Nadid under the appellation of Bani Khadr, a generic term for those whose origin can not be traced back to a specific tribe.

In the desert a few nomadic tribes by general consent bear the stigma of non-Arab descent. Among these is the tribe of al-Sulaba (q.e.) in the north, the physical characteristics of whose members, as well as the popular traditions regarding them, suggest an origin hidden in an unusual aura of mystery, though there is no foundation for the oft-repeated legend that they are the offspring of wandering Crusaders. Others of this category in the north are Hutyam and al-Shararat. The tribe of al-'Awakmin in the east has succeeded in rising somewhat above its inferior status as a result of its prowess in battle during the past forty years in the ranks of King 'Abd al-'Aziz of Saudi Arabia.

Along the coasts, in the seaports, and in towns not far inland are found the greatest infusions of foreign blood. The so-called Javanese and Bukharan colonies (made up respectively of settlers from Indonesia and Central Asia) are among the largest. Certain foreign elements exist in the so-called Takarina, who come halfway across Africa, often on foot, to make a pilgrimage; some of these stay on to eke out a living in the Holy Land, where their huts stand in the outskirts of Midda.

Racial matters in Arabia are often intermingled with religious considerations. Descendants of the Prophet, who usually bear the title of sharif in al-Hijaz and sayyid in the Yaman and Hadramawt, sometimes form a privileged caste in the community, while at other times they lead the life of simple nomads in the desert. The numerous sayyids of Hadramawt, who enjoy exceptional prestige, all claim descent from a small group of families who emigrated from 'Irak to Hadramawt in the first half of the 4th/10th century. In 'Umán the title sayyid is popularly accorded to the Sultan of Muscat, who does not claim descent from the Prophet, and in Nadid the incidence of sharifs is remarkably low. In Eastern Arabia most of the sayyids are found among the Shites, a fact which prompts the Sunni Bedouins to question the authenticity of their descent. The Jews, whose history in Arabia goes back well into the pre-Islamic period, may have been in the beginning Israelites who moved southwards or Arabs converted to the Judaic religion or a combination of the two. Once fairly numerous in the south-west, almost all of the Jews have departed within the last few years for Israel.

Slavery as an institution sanctioned by Islam flourished in the Peninsula until very recent times, though now it appears to be slowly dying out. The great majority of the slaves came from Central Africa, and Negro blood is found even in villages of al-Aflaj in the heart of Arabia. Like other Islamic lands, Arabia has remained uncursed by a colour bar, and emancipated slaves have on occasion attained positions of influence in society. Another Negro element exists in the so-called Takarina, who come halfway across Africa, often on foot, to make a pilgrimage; some of these stay on to eke out a living in the Holy Land, where their huts stand in the outskirts of Midda.

Although migrations of persons and tribes from place to place within the Peninsula and from the Peninsula to the fertile lands farther north have been common throughout the centuries, only a relatively small proportion of the Arabs of Arabia have shown a fondness for crossing the seas to settle in foreign lands. Chief among these have been the people of 'Umán, who since ancient times have moved down along the coast of East Africa and into southern islands such as Zanzibar, and the people of Hadramawt, many of whom have more recently established themselves in the Indonesian Archipelago, the Malay Peninsula, and India, where they have been influential in the domains of the Nişan of Haydarabâd. Arabs of Eastern Arabia have moved across the Persian Gulf to occupy much of the Iranian coast, and seafarers from the Yaman have founded tiny colonies in such distant spots as Cardiff in Wales.

Arabia before the First Millennium B.C. — The Arabian Peninsula has as yet no history earlier than the first millennium B.C., though future investigations will certainly bring many new facts to light. Excavations have been few and limited in extent, and even the surface in many regions has not been scrutinised by trained searchers.

Scattered finds indicate that the Peninsula was inhabited in both Palaeolithic and Neolithic times, but nothing is known about who the people were or where they came from. The problem of the site of the original home of the Semites is still a matter of speculation. The Semitic nomads who began filtering into the Fertile Crescent from the adjacent deserts in the fourth millennium B.C. relied chiefly on the donkey, a beast not as well adapted as the camel to wide ranging in waterless tracts.

The cuneiform inscriptions of Mesopotamia contain numerous references to Magan, Meluhkah, and Dilmun, places which may have lain in Arabia, though much of the geography of the time remains vague. The Egyptian records relating to Punt are similarly imprecise. Egypt's connections with Sinai and the Red Sea are very ancient, and the availability of frankincense in Southern Arabia led to indirect or even direct intercourse at an early period.

A development of vast importance in the later history of Arabia and the Islamic world occurred, probably in the early second millennium B.C., with the devising of a system of alphabetic writing from which later Semitic alphabets, including South Arabian and North Arabic, derived. Tribal migrations about which little is yet known took place inside Arabia; in this millennium many of the "sons of Kahtân" may have gone south to their new homes.

The last centuries of this millennium were a time of change, with the Iron Age beginning in the Near East and the Semitic Aramaeans entering the Fertile Crescent in strength. The domestication of the camel appears to have been achieved during this period in Arabia, the first contribution of the Peninsula to the material progress of mankind.

Arabia during the First Millennium B.C. — The tenth chapter of Genesis, believed to belong to about the 10th century B.C., mentions Joktan and Hadaraveth, who may be identified with Kahtân and Ḥadramawt. The camel-owning inhabitants of Northern Arabia who paid tribute to the masters of Mesopotamia.

In recent years knowledge of the ancient civilisation of Southern Arabia has expanded tremendously. So many new inscriptions and other traces are coming to hand that current conclusions must often be regarded as tentative. An intensive review of the chronology is in progress, with the general tendency favoring a downward revision of dates. Available information suggests that organised states came into being in Southern Arabia during the second half of the first millennium B.C.

The four chief states—Saba', of the Sabaeans, Ma'īn of the Mineans, Katabān, and Ḥadramawt—thrived on agriculture and commerce. The Mārib dam in Saba' was the most imposing structure in an elaborate system of irrigation. For centuries the Southern Arabian merchants monopolised the frankincense trade and controlled traffic between India and the West, sending their goods by overland routes which traversed Arabia from south to north. Colonies were established in Northern Arabia, and evidence of business activity has been found in Egypt, the Aegean, and the Persian Gulf region. Strong Graeco-Roman influence on Southern Arabia can be traced in vestiges of the ancient culture that is shown by archaeological discoveries. Southern Arabsians migrated to Abyssinia, to which they gave their name, and their influence reached along the eastern coast of Africa.

Many impressive buildings in Southern Arabia were temples dedicated to pagan deities. The earlier rulers of Saba', who bore the title of Mukarris, combined the functions of prince and priest; later they gave way to the more secular rule of kings. [For details see al-Yaman.]
alphabet derived from South Arabic. Thamûd, mentioned as a tribe in an Assyrian inscription of the 8th century B.C., held Egra (al-Ḥiğr or Madā'in Ṣālih) just north of Dedan. The recent finding of widely dispersed Thamûdic inscriptions has raised new questions regarding the spread of this derivative of the South Arabic script and those who used it. After the Persian capture of Babylon in B.C. 539, a short-lived satrapy called Arabaṭa was created in Northern Arabia. Darius I (regn. 522-485), who sought to stimulate trade via the Persian Gulf, sent out Scylax of Caryanda, who sailed from India to the northern end of the Red Sea. The world’s knowledge of Arabia increased through Alexander’s expeditions and the reconnaissance of the Persian Gulf carried out by Nearchus the Cretan. Alexander died in 323 just as he was planning the circumnavigation of the Peninsula and the subjugation of its peoples. Not long afterwards the Greek naturalist Theophrastus wrote an account of Southern Arabia and its products. The Ptolemies of Egypt, who often pursued a forward policy in the Red Sea, threatened the trade monopoly held by the Arabs, while the Seleucids of Syria promoted the use of the northern routes from India. The establishment of the Parthian state in the mid-3rd century B.C. weakened the Seleucids, but Antiochus III was still strong enough to conduct an expedition in 205-204 against Gerrha on the Arabian shore of the Persian Gulf.

Late in the millennium the Nabataeans, a people of Arab stock with their capital at Petra, began playing a considerable role in the affairs of Syria, and Arabs appeared as rulers in various places in the Fertile Crescent, such as Charax Spasinii at the head of the Persian Gulf. Arab vassal chiefs enjoyed a large measure of autonomy under Parthian rule, and the immigration of Arabs into Mesopotamia went steadily on.

Towards the end of the 2nd century B.C. Eudoxus of Cyzicus sailed from Egypt to India, and in time Westerners learned the secret of using the south-west and north-east monsoons for voyaging across open water. The growing competition of the West seriously undermined the commercial dominance of the Southern Arabians, in whose homeland radical changes were taking place. An important event near the close of the 2nd century, later taken as the starting point of the “Sabean era”, has been plausibly connected with the assumption of royal power in Saba by the mountain tribe of Ḥamdān. Both the kingdoms of Ma‘in and Kataban came to an end in the 1st century B.C., and the Katabanian capital Timna in Bayḥân was destroyed. Rome, which had made a client state of Petra in B.C. 60, coveted the wealth of Arabia Felix. Augustus sent the Prefect of Egypt, Aelius Gallus, supported by Nabataean forces from Petra, on a long march in B.C. 24 towards the incense country, but the expedition, finding the deserts inhospitable and its Arab allies treacherous, did not get beyond Saba. [For details see AL-YAMAN.]

Arabia during the First Six Christian Centuries. — About A.D. 50 an unknown author wrote in Greek the Periplus of the Erythraean Sea, an invaluable account of trade in the Red Sea and along the southern coast of Arabia. The King of Ḥadramawt in his capital Ṣabwa controlled the whole territory from Bayḥân in the west to Zufār in the east, while the “King of Saba’ and of Dḥū Raydān” (a recently assumed title) sat in Ṣafar in the mountains of the Yamān, where the power of Ḥimyar was growing. In A.D. 105 or 106 the Roman province of Arabia was created in the old Nabataean domain, stretching from Ayla (al-ʾAraba) in the south to al-ʾNamāra in the northeast, with its capital first at Petra and later at Bostra. Merchants were encouraged to trade via the Red Sea through the port of Ayla, and Bedouin raids were warded off by the building of a limes along the desert borders. Roman knowledge of the Peninsula in the mid-2nd century was summarized by the geographer Claudius Ptolemy. Ardashīr I, the first Sasanid (d. A.D. 224), is said to have founded a city in Eastern Arabia and to have induced the tribe of al-Azd to settle in Ṭūmān. Sasanid authority on one flank of Northern Arabia and Roman authority on the other were challenged by the Arab rulers of Palmyra, but the Roman Emperor Aurelian defeated Queen Zenobia and captured her desert stronghold in 272.

Something of the old glory of Saba and Dḥū Raydān was regained by Shāmmar (or Shāmīr) Yuharigh, who signified his triumphs about the end of the 3rd century by adding the names of Ḥadramawt and Yamanat to his royal title. His reign was followed by a relapse into weakness, during which Ḡagrān on the northern border was besieged by the Lakhmids Marb (šāmīr) al-Kṣ-ṣiyṣ, extravagantly described as “King of all the Arabs” in the oldest North Arabic inscription known (al-Namāra 382). Later Kings of Saba’ made their title even longer by appending “and of their Arabs in the mountains and the lowlands”.

One of the most obscure periods in Arabian history fell in the 4th and 5th centuries. The decline and impoverishment of the Roman Empire affected the Peninsula, where urban civilization waned and the simpler ways of nomadism attracted more adherents. Christianity with its promise of a better life in the hereafter made headway in Arabia as elsewhere. The Arabs proved particularly susceptible to the doctrines of Nestorianism, coming from Mesopotamia, and Monophysitism, coming from Egypt and Abyssinia. The Abyssinians occupied the Yaman for a brief period in the 4th century, with ʾĀṣad, the first Christian King of Aksum, proclaiming himself ruler of Ḥimyar, Raydān, Saba, etc. Shāpūr II (regn. 310-79), called Dḥū Ḭaktāf by the Arabs, subjugated Eastern Arabia; the Sasanid yoke was later removed, only to be reimposed shortly before the dawn of Islam. Judaism also made a successful appeal in Arabia, among its converts being the King of Saba’ in the early 5th century, Abkarīb ʾĀṣad, known to Arab tradition as Tubbāʾ ʿĀṣad Kāmīl, and one of its centres being the oasis of Yaḥrib (later Medina).

Both the Sasanids and the Byzantine successors of Rome found it necessary to protect their territories from the unruly folk of Arabia by relying on buffer states ruled by Arab princes, the Lakhmids [q.v.] standing guard on the edge of Mesopotamia and the Ghassânids [q.v.] shielding Syria. The two client states, like their suzerains, often came into conflict. In the first half of the 6th century al-Ḥūṣrī b. Diabal b. Diabal, the greatest of the Ghassânids, proved stronger than al-Mundhir b. Maʿṣ al-Samā, the most famous of the Lakhmids. In the late 5th century the chief of the Southern Arab tribe of Kinda [q.v.], Huqūr Akil al-Murar, assumed the leadership of a confederacy of tribes in Central Arabia, but this loosely knit Kingdom of Kinda lasted only about half a century before it was overthrown by al-Mundhir the Lakhmid.

In the 6th century Southern Arabia lay open to
attack by the Christian Kings of Aksum and the Sasanid Khusraw I Anushirwan (regn. A.D. 531-79). Persecution of the Christians of Najdun by the Judaizing Arab Dhu Nuwas [q.v.] led to a new Abyssinian occupation of the Yaman c. 521. The Abyssinian Abraha [q.v.] as ruler of the Yaman carried out the last repair of the dam of Marib before its final abandonment, marched into the heart of Najdun on a campaign against the Arabs of Ma‘add, clients of the Lakhmids, and, according to Islamic tradition, undertook an unsuccessful expedition against Mecca in the Year of the Elephant (c. 570). Under Khusraw the Persians evicted the Abyssinians, and the Yaman was Persian territory at the rise of Islam.

Mecca, a town of some antiquity on the main route paralleling the Red Sea, achieved greater prominence and prosperity in the late 6th century, aided by foreign domination of the Yaman and chaotic conditions along the northern routes resulting from the long drawn out wars between Persia and Byzantium. The Meccan merchants of Kuraysh showed astuteness and industry in profiting from their participation in international trade.

The last centuries of this period gave birth to the form of Arabic now called classical, the dialectal sources and the exact process of the development of which remain uncertain. Used by the poets of the dijâhilyya, many of whom were Bedouins and some Christians or Jews by faith, this language became the instrument of expression for the supreme masterpiece of Islam, the Kur‘ân, and the great works of Arabic literature in succeeding ages (see ‘ARABIYYA).

2. — Islamic Middle Ages

Muhammad and the Rise of Islam (A.D. c. 570-632). — About A.D. 570 Muhammad [q.v.] b. ‘Abd Allâh of Kuraysh was born in Mecca, then a principal centre of pagan worship. Only traditional accounts survive of Muhammad’s early years, during which he became well acquainted with the tribal structure of both urban and nomadic life and saw something of the world outside Arabia while accompanying merchant caravans to Syria. About 610 he received his first revelation; two or three years later he began preaching in public, after which the nature of Islam was elaborated upon in a series of revelations during the rest of his career as God’s Messenger and Prophet.

The men in authority in Mecca did not welcome Muhammad’s message. A small body of Muslims went into exile in Christian Abyssinia; later the whole Muslim community migrated northwards from Mecca to Yathrib, an event taken afterwards as having marked the beginning of the Islamic era (A. H. 1/A. D. 622). During the ten years Muhammad maintained his capital at Medina, he erected a state guided in all its functions by the precepts of Islam. Two revolutionary concepts emerged which transformed the face of Arabia. The Kur‘ân, as emphasised by the divine revelations of which it consisted, was Arabic, a standard under which all Arabs could unite. Arabia had never before known an entity larger than relatively petty states or independent tribes and tribal federations, usually at loggerheads with each other if not openly at war. At the same time, the Kur‘ân and Islam were not limited to the Arabs: the Kur‘ân is a revelation to all men, and under Islam the noblest man is the most Godfearing, not the one of highest lineage. This universal appeal opened the way for Islam to go far beyond the borders of Arabia.

Muhammad’s efforts during the Medinan period were devoted in large measure to settling affairs with Mecca, which was finally incorporated in the Islamic state in 6/630. Before this a fair number of tribes had been won over to Islam, but the great flood of applications to join Islam from tribes all over the Peninsula did not come until 9/630-1, the Year of the Delegations. Muhammad died in 11/632, before there had been time to anchor the Kur‘ânic religion in the hearts of all who had taken the name of Muslim. Neither had there been time to carry Islam abroad, though a halting attempt had been made in that direction, and the moment was indeed ripe for shattering the fragile shells of Byzantine and Sasanid defences in the Fertile Crescent.

The First Three Caliphs (2/632-636). — Soon after Abu Bakr (regn. 11/632-4) succeeded Muhammad as head of the Islamic state, many tribes reasserted their independence, with prophets in several cases preaching doctrines contrary to Islam. Abu Bakr reacted vigorously, dispatching Muslim columns to Central Arabia, Bahrayn, ‘Umân, and the Yaman. When ‘Abd-Ramawt, which held out the longest, was subdued, the Arabian Peninsula for the first and last time in history was effectively united throughout its length and breadth.

The other great achievement of Abu Bakr’s brief rule was the inauguration of the grand programme of Muslim conquests outside Arabia. After invading ‘Irak Khâlid b. al-Walid marched across the Syrian Desert in 13/634 to participate in a victory over the Byzantines.

The conquests started by Abu Bakr were carried forward with verve during the rule of ‘Umar (13-23/634-44). ‘Irak was taken from the Sasanids, and Arabs from both the Northern and the Southern tribes peopled the newly founded military settlements of al-‘Asrâ and al-Kûfâ. After a decisive victory over the Byzantines at al-Yarmûk and the capture of Jerusalem, ‘Umar came to visit this holy city, the first journey of a Caliph beyond the confines of Arabia. Islam next advanced into Egypt, the House of Umayya, wealth and luxury abounded in Medina and Mecca, into which poured booty from the lands recently subdued. ‘Uthmân had no ear for the voice of Abu Dhâr decrying the decay of the stern and frugal virtues of earlier Islam. Even more dangerous to the future of Arabia and Islam was the rift developing between the most powerful figures in the state, which led to the murder of ‘Uthmân in Medina.

The Struggle over the Caliphate (35/636-692). — The rift in high circles widened into a chasm when ‘Ali, Muhammad’s son-in-law and cousin, came to the fore as Caliph on the death of ‘Uthmân. Muhammad’s wife ‘A‘šâ and his Companions al-Zubây and Tâhâ rose in opposition to ‘Ali, who left Medina to march against them in 56/656. In the Battle of the Camel, ‘Ali overthrew his rivals and won ‘Irâk, only to find himself faced with a more formidable adversary in ‘Uthmân’s Umayyad kinsman Mu‘âwiya, the governor of Syria. When ‘Ali fixed his capital at al-Kûfâ in order to marshal strength against Mu‘âwiya, Medina lost
the preeminence it had held since the Prophet's migration. All's tactics against Mu'awiyah so exacerbated the extremists among his own followers that they turned against him as the Khararidi. Despite the crushing victory All gained over these seceders, at al-

Nahrawan in 38/659, their party survived, Arabia long providing a fertile field for its propaganda. Mu'awiyah was proclaimed rival Caliph in Jerusalem, and his forces clashed with All's in Western Arabia, from Medina to Najd and the Yemen. When a Khararidi assassinated All in 40/661, the 'Aldids set up his son al-Hasan as Caliph in al-Kufa, but he soon renounced his claims in favor of Mu'awiyah, who thus temporarily reunited the community of Islam.

For the rest of Mu'awiyah's life no serious rising took place against the new Syrian Caliphate, but resentment was stirred up by his advocacy of hereditary succession. After the accession of Yazid b. Mu'awiyah (regn. 60-67/680-3), All's second son al-Hasayn left Mecca to rally support in Irak, only to fall a martyr at Karbalâ in 61/680. His death cleared the field for a stronger candidate, 'Abd Allah b. al-Zubayr, the foremost representative of the sons of the Prophet's Companions. Yazid's army defeated the rebellious Medinans in the battle of Harrat Wâkim and laid siege to Mecca, Ibn al-Zubayr's stronghold, where the Ka'ba caught fire, but Yazid's death brought a pause in the hostilities. Ibn al-Zubayr won recognition as Caliph in nearly every quarter of Islam; in fact, had he proceeded to Syria immediately, he might well have destroyed the Umayyad power forever. While Ibn al-Zubayr lingered on in Mecca, 'Abd al-Malik (regn. 65/865-705) of the Marwandid branch of the Umayyads gradually regained ground outside Arabia. The Khararidi, who had at first leagued themselves with Ibn al-Zubayr, turned against him, the Khararidi Na'dida b. Amir of Banu Hanifa making himself master of much of Arabia, only to be overthrown by another Khararidi, Abu Fudayk. 'Abd al-Malik gave al-Hadidâdi b. Yusuf command of an army which captured Mecca in 73/692 after a long siege. Ibn al-Zubayr fell in the struggle, leaving the Holy Land of Islam in the hands of the Umayyads. Another Umayyad army marched to Eastern Arabia and put an end to Abu Fudayk.

Arabia under the Umayyads (75-132/692-750). — The Umayyads of Syria regularly appointed governors for Medina and Mecca, and exercised a measure of control, often shadowy, over other parts of Arabia. Powerful Umayyad governors of al-Hasa such as al-Hadidâdi and Yazid b. al-Muhallab made their word law in the Persian Gulf and along its Arabian shore.

The Umayyad Caliphs honoured the sanctity of the Holy Cities in Arabia and lavished large sums on their shrines, even while favouring at times the claim of Jerusalem, which was easier of access, to an equal or higher rank. During much of this period Western Arabia was at peace, enjoying a prosperity such as it was not to know among the dissensions of later ages. The Umayyads developed the irrigation system, and many personages of Islam lived in their days of retirement on estates near Medina, Mecca, or al-

Ta'if. The Holy Cities became renowned not only for Islamic learning but also for indulgent living, poetry, and singing.

The intense rivalry in Umayyad politics between the Northern Arabs and the Southern Arabs had its repercussions in Arabia, where Kalb, the principal tribe among the Southerners, owned land in Wâdî al-Kurâ near Medina.

Towards the end of the Umayyad period an alliance of Khararidi was formed under the leadership of 'Abd Allâh b. Yahya 'Alî b. al-Hâk of Kinda and Abu Hamza of al-Azid. Abu Hamza took Mecca, won a victory at Kudayd in 130/747, and then entered Medina, while 'Alî b. al-Hâk supported him from their base in Hadramawt and the Yemen. Despite the waning might of the Umayyads, Marwan II summoned sufficient strength to overcome these Khararidi chiefs, but only after they had contributed to his final undoing. Mecca was also used by the 'Abbasids as a centre for their plot aiming at the supersession of the Syrian Caliphs.

Arabia under the Early 'Abbasids (73-266/750-879). — The 'Abbasid transfer of the Caliphate to Irak enhanced the importance of the Persian Gulf as a seaway for trade reaching out to China and East Africa. Wares bound to and from the 'Abbasid capital passed through al-Hasa, where the Gulf itself Siraf on the Persian side in the 3rd/9th century became the busiest port. 'Abbasid authority in Arabia kept its strength for not much over a century, during which time governors were sent to the Holy cities and the Yemen, and on occasion to the central and eastern regions. The earlier Caliphs, notably al-Mahdi and Hârûn, and their wives, notably Zubayda, were diligent in making the pilgrimage and encouraging their subjects to do so by improving communications and the amenities of the route.

A sect of the Khararidi known as the Ibadiyya set up its own Imamate in Uman under al-Diulanda b. Mas'ud of al-Azid, but an 'Abbasid expedition under Khâzim b. Khuzayma defeated and killed al-Diulanda in 134/752. Soon afterwards this Imamate was revived to endure with few interruptions for the next four centuries. Uman, however, was an out of the way region, and the Khararidi on the whole gave the 'Abbasids little trouble. [Cf. 'Imam.]

Taking the place of the Khararidi as a thorn in the Caliphs' flesh were the 'Alids [q.v.], both Hasanids and Husaynids. Through skilful propaganda the 'Abbasids in their campaign against the Umayyads had forestalled the 'Alids and usurped the leadership they regarded as rightfully theirs. For this the 'Alids never forgave them, and one after another they contested the 'Abbasid title to rule. Even though the 'Alids themselves came from a Meccan ancestor close to the Prophet, the 'Alids almost invariably found ready followers in Arabia; in the Holy Cities their rallying cry inspired the hope of regaining the place lost to Damascus and Baghdad.

The first 'Alid pretender in Arabia was the Hasanid Muhammad al-Nafs al-Zakiyya, who appeared as the Mahdi in Medina and had his claim to the Caliphate certified by no less a scholar than Malik b. Anas, but all to no avail when he fell in 145/762 before the troops of al-Mansûr.

A major split took place among the 'Alids following the death of their sixth Imam, Diya'ar al-Sâ'dîk, c. 148/765. The main body, giving loyalty to Diya'ar's son Mûsâ al-Kâsim and five of his descendants, came to be known as the Twelvers. Others, the Seveners, advocated the cause of Ismâ'îl b. Diya'ar and his son Muhammad, for which they worked, often in secret, in the movement of Ismâ'îlism. As time went by the Ismâ'îlis in particular tended to attract to their side the discontented and oppressed elements of society, enemies of the ruling classes.
Another Hasanid pretender, al-Husayn b. 'Ali, met a martyr's death fighting against an 'Abbasid army at Fakhkhar, a son of Mecca in 260/876. The 'Aliid cause, however, made progress in the Yemen, where it received the support of the great jurist al-Shafi'i, who finally won a pardon after being delivered as a prisoner to Hārūn's presence.

The end of the 2nd century H. saw a new upsurge of 'Aliid strength in Western Arabia: in Mecca the Ḥusaynid al-Husayn al-اعتماد put forward Muḥammad al-Dīdūkhi, a son of Dīdūkhi, while the Hasanid Muḥammad b. Sulaymān established himself in Medina. These pretenders did not hold their ground against the 'Abbasids, but greater success was achieved by Ibrāhīm al-Diāzzār, a grandson of Dīdūkhi, in the Yemen. Yielding to the tide of pro-'Aliid sentiment, the Abbasid Caliph al-Ḥārūn al-Rāšid designated 'Ali b. Rūjām, the eighth Imam of the Twelve, as his heir apparent and substituted 'Ali green for 'Abbasid black as the royal colour, but this change evaporated with 'Ali's death in 203/818.

To cope with the 'Aliid threat in the Yemen, al-Ḥārūn appointed as his governor there one Muḥammad, who claimed descent from Muṣṭawiyā's lieutenant Ziyād b. Abīl. Refounding the city of Zābīd in 204/820 and carving out a domain for himself, Muḥammad established the dynasty of the Ziyādīs. 

Although not a strong Caliph, al-Wāḥidī (regn. 227-233/842-847) executed a vigorous policy in Arabia. When Bedouins of Sulaym made the region unsafe with their depredations, al-Wāḥidī dispatched the Turkish general Būghā the Elder to bring the culprits to heel. For the next two years Būghā campaigned against other tribes, climaxing his operations in 232/847 with a hard won victory over Numayr at Baṭn al-Sīr deep in the interior, after which a man of Udhāq in Najdī was appointed governor of al-Yamāmah, Eastern Arabia, and the pilgrim route to Mecca.

Following the death of al-Muṭawakkil in 247/861, the career of the 'Abbasids both at home and in Arabia took a turn for the worse. The dynasty of the Ya'fūrids [q.v.], claiming descent from the ancient Tūbakīs of Ḥīmyar, arose in the highlands of the Yemen with Ṣan'ā' as capital. Ḥaḍramawt secured its independence, and local rulers set themselves up in the east, where 'Ali b. Muḥammad—either a genuine Husaynid, as he gave himself out to be, or a member of 'Abd al-Kays—began an agitation among the nomadic tribes. Another Hasanid revolt in Mecca, inaugurated by Ismā'īl b. Yūsuf al-Ukhaydīr, led to the establishment under Ismā'īl's brother Muḥammad of a new state in al-Yamāmah, where these Ukhaydīrs maintained themselves until submerged by the onrush of Ḥaḍramawtianism.

Another blow was dealt the 'Abbasid empire by the recallcitrant governor of Egypt, Ahmad b. Tālūn, who by occupying Syria broke down the control once exercised over the tribes of the Syrian Desert. The most direct menace to the empire, however, came from the agitator in Eastern Arabia, 'Ali b. Muḥammad, who transferred his activities to Southern ʿIrāq, where he stirred up the Zanj, the negro slaves laboring in the salt marshes, in a massive insurrection (255-70/863-83) extending as far as the Holy Cities. Ismā'īlīs and Karmatians in Arabia (266-507/879-1177). — At this juncture in 'Abbasid affairs the rapidly spreading movement of Ismā'īlism (see ISMĀ'ĪLIYYA) took full advantage of its opportunities. Ismā'īlī missionaries carried out a well laid plan of penetration, with the Persian Gulf coast and the Yaman as the principal foci for their activity in Arabia. As these two parts of Arabia remained relatively isolated from each other, the connexion between later developments in them was slight.

Ismā'īlism was first introduced into the Yemen by Ibn Ḥawshab (Muṣṭur al-Yaman) and 'Ali b. al-而不 in 266/879-80. Collaborating closely, these two won many followers, and 'Ali occupied both Ṣan'ā' and Zābīd for brief periods. The Ziyādīs and the Ya'fūrids fought the Ismā'īlīs, and a new opponent arose against them in 280/893 with the arrival in the Yemen of the first Zaydī Imam, al-Hādī Yāḥyā, a grandson of the Hasanid al-Kāsim al-Rassī (d. 246/860), who had fashioned legal foundations for a Zaydi government closer to Sunnism than to the extreme Shi'ism of the Ismā'īlīs. The two Ismā'īlī leaders eventually fell out, and by 303/915 both were dead, but their doctrines did not die with them.

Ismā'īlism appeared c. 286/899 in Eastern Arabia, where under Abū Saʿīd al-Ḥasan al-Dīnāhabī and his son Abū Tāhir Sulaymān a strong state was organised. The name Karmatian, the origin and meaning of which are still in doubt, remains the popular designation for this particular aspect of Ismā'īlism, though its application is not restricted to this region. The 'Abbasids were too feeble to prevent these Karmatians from sacking al-ʿAsrār and al-Kūfah, and in 317/930 they entered Mecca and carried off the Black Stone to their new capital al-ʿAṣrār (al-Ḥassa). With the conquest of ʿUmān soon thereafter the Karmatians held the greater part of Arabia. These disturbances prompted the Husaynid Aḥmad b. Ḥasā', the most famous ancestor of the sayyids of Southern Arabia, to leave al-ʿAsrār on a migration ending in Ḥaḍramawt, where Idābīs from ʿUmān then held the upper hand.

New threats to the 'Abbasids came from the Buyids of Iran and the Ikhshīdīs of Egypt, who reached out at times to Mecca, though neither got a lasting foothold there. The Buyids, who by taking Baghdad in 334/945 assumed de facto authority over the 'Abbasid realm, also brought ʿUmān within their sphere.

Abū Tāhir died in 332/944, and the Karmatians at the behest of the Ismā'īlīs'affixed the North Africa restored the Black Stone to Mecca in 339/950-1. Under al-Ḥasan al-ʿAṣam, a nephew of Abū Tāhir, the Karmatians joined the Fātimids in a pincer movement on Syria and Egypt, the former exerting pressure from the east as the latter advanced from the west. However, after the Fātimids occupied Egypt in 358/969, the Karmatians broke with them and sided with the Buyids in resisting their designs on Syria. Damascus was captured by al-Ḥasan in 360/971, but he was repulsed on two expeditions against Egypt before reaching the newly founded Fatimid city of Cairo.

Following the death of al-Ḥasan, the Karmatian government was placed in the hands of a Council of six sayyids. The Fātimids won a military victory over the Karmatians, but had to pay a large sum to induce them to return to al-ʿAṣrār. The Karmatians lost ʿUmān in 375/985-6, were checked by the Buyids in ʿIrāq and defeated in their own territory by a chief of al-Muntafik, who plundered al-Ṣaʿīf. [ Cf. also KARMATIANS.]}
About the mid-4th/10th century the Sharifate of Mecca [for which see MARK A], destined to last a thousand years, was established by a family of Hasanids known as the Mūsāwīds. The most prominent member of this family was Abū al-Futūh al-Ḥasan, who in 402/1011-2 tried to make himself Caliph, only to be thwarted by the Fātimids, liege lords of the sharifs. Contemporary with the early sharifs. This line, which lasted until the 9th/16th century, came later to be known as the House of Muḥannā. An offshoot of Ismaʿīlism was the Druze movement, which had its origins during the reign of the Fātimid al-Ḥākim. The Druze al-Muṣṭan̄aṣ was sent a letter to the Karmāṭian sayyādis of Eastern Arabia, proposing that they combine forces on the basis that they shared a common doctrine, but nothing concrete came of this.

Early in the 5th/11th century the Maʿnids [q.v.] came to power in Aden and Ḥaḍramawt, and the Ziyādīds in the Yaman gave way before the Nāḍīḥīds [q.v.], originally their own Abyssinian slaves. Ismaʿīlism in the Yaman enjoyed a revival under the Šulaḥyīds [q.v.], rulers sprung from the tribe of Yām who held Ṣanʿaʾ as nominal vassals of the Fātimids, while the Šaydī Imams kept their base at Ṣaʿdā. In 443/1051 Ṣāṣir-i Ḧisrawi visited al-Abūṣ, where he found the Council of Six still in control. The details of his eyewitness account of the Karmāṭian state in its later days are unfortunately not supported by corroborating testimony. The Shiʿism of the Buyids, Karmāṭians, and Fātimids aroused a Sunnite reaction championed by the Šalḍiqū Turk, whose leader Ṣughbīrīt took Baghdād in 447/1055. A Šalḍiqū of Kirmān, Ẓarūʿ al-ʿArsīn, brought that Umān under his sway. About this time Ṣirāfī was yielding its place as the chief port of the Persian Gulf to the island of Kaʿīs, the rulers of which made themselves also lords of Ṣumān, where in the mid-5th/11th century a break came in the line of Ṣabīṭ Imams. For the next three and a half centuries records survive of only one Imam.

The Šulaḥyīds of the Yaman seized Aden from the Maʿnids and also expanded northwards, the authority of the Mūṣawwī sharifs over Mecca having faded away. In 455/1063 the Šulaḥyīd ʿAlī b. Muḥammad installed an agnate branch of sharifs, the Ḥašǧimīds, in Mecca. Under Malik Ẓahḥā in Baghdād the Šalḍiqūs reached the zenith of their power, and thanks to him the shadowy ʿAbbasīd of the day had lip service paid to him in the Holy Cities as the lipservice paid to him in the Holy Cities as the Ḥaḍramawt. The party favoring ʿAlī al-Ḥakamī, and soon afterwards the ʿAlī al-Ḥakamī, and soon afterwards the ʿAlī aqīl, occupied Ṣanʿaʾ and Zabīd, and made his influence felt as far north as Khaybar and Yanbuʿ.

Like the Šulaḥyīds, the Nāḍīḥīds also produced a queen to rule during the dynasty’s declining years, ʿAlamīn, originally a slave girl, whose death in 545/1150 was followed about a decade later by the ephemeral sway of the ʿAḥmadīs [q.v.], who called themselves Himyarītics and were accused of being Khawārīdī.

The Fātimids of Egypt succumbed to the Ayyūbīds in 557/1161, and a plot to restore them was nipped in the bud in 562/1167 by Ṣalāḥī, who executed the poet and historian Qimārī b. ʿAlī al-Ḥakamī of the Yaman. The center of the Mustaʿlian party was transferred from Egypt to the Yaman, where it stayed until the 10th/16th century, when it shifted to India, after which a split divided the party into the Dāʿūdīs of India and the Sulaymānīs of Southern Arabia [see Bahrān]. Extensive secular dominion in Arabia eluded the grasp of the Ismaʿīlīs until the reign of the Sulaymānī Makramīs [q.v.] of Ṣanʿaʾ in the 12th/18th century.

Arabia in the Later Middle Ages (567-end of 9th Century/1171-end of 15th Century). — The advent of the Ayyūbīds meant the triumph of Sunnism over Shiʿism in Arabia as well as in Egypt. Ṣalāḥī, recognized as sovereign in Mecca, sent his brother Turān Ẓahḥā to depose the third and last ʿAḥmadī and occupy the Yaman in 567/1173. During the half century or so of Ayyūbīd rule there members of collateral branches of the dynasty sat on this southern throne. Ḥaḍramawt was conquered, but did not become an integral part of the Ayyūbīd domains. Closer home the Ayyūbīds had their hands full with the Crusaders from the West, one of the boldest of whom, René of Châlignon, raided Taymā, sent his men cruising against the Muslims in the Red Sea, and even thought of attacking Medina.

About 598/1200 the Hasanid Kātāda b. Idrīṣ moved from Yanbuʿ to Mecca, where he founded the dynasty of all the later sharifs. Endevoring to build a strong independent state in al-Ḥaḍr, he found the rivalries of the day too great to overcome. Kātāda died in 617/1220-1, and soon afterwards al-Malik al-Muṣṭaʿd Yūsūf, the last Ayyūbīd in the Yaman, took Mecca and appointed the founder of the Rasūlīds, who claimed descent from the Ḥašṣānīds, his governor there.
On the other side of the Peninsula the Salghurid Atabeg of Fars, Abū Bakr b. Sa'd, the patron of the poet Sa'd of Shahraz, annexed islands in the Persian Gulf and set foot on the mainland at al-Ḳāṭif and al-Ḥasā. The local dynasty of the 'Uyunīds gave way before the Salghurid pressure and that of the tribe of 'Amīr of ʿUkayl, which supplied a new dynasty in the ʿUṣfūrids [q.v.].

Succeeding the Ayyūbids, the Rasūlīds [q.v.] reigned in Taʿizz and Zubīd from 625 to 850/1228-1446 as the most illustrious house in mediaeval Yemen. Islamic architecture reached one of its higher points, and scholars received the stimulus of royal approbation, some of the Rasūlīd Sultans themselves being authors of note. Embassies came to the court from China and other distant lands.

ʿUmar b. ʿAll (regn. 626-8/1229-50) ruled from Mecca to Ḥadramawt, and after Hūlāgū executed the last ʿAbbāsīd in Baghdad in 656/1258. ʿUmar's son ʿIṣāf styled himself Caliph of Islam, but full enjoyment of such rank lay beyond the capabilities of the Rasūlīd state.

Baybars, the first great Mamlūk Sultan of Egypt, assumed nominal overlordship of the Holy Cities, leaving Meccan affairs in charge of the sharīf Abū Numayy I Muhammad (regn. 652-701/1254-1301), who strengthened the foundations of Karānī rule. Bedouins of Al Mira and other tribes roamed through the Syrian Desert, exacting large fees from pilgrim caravans and penetrating into Najd on their raids. In Damascus the religious reformer Ibn Taymiyya (d. 728/1328) laid the theological basis for the Wahhabi movement of the 12th/18th century.

About the beginning of the 8th/14th century the port of Hormuz on the Persian mainland at the entrance to the Persian Gulf was moved to a nearby island, after which it grew apace and in time surpassed its rival the island of Kays in attracting to it newcomers driven by the Portuguese out of Hormuz in 1011/1602. In the Yaman the Salghurids, annexed the Red Sea coast, and under Afonso de Albuquerque the invaders seized Arabian ports on the Gulf of ʿUmnān and the great mart of Hormuz. Pedro, Afonso's nephew, toured the Persian Gulf in 920/1514, but Afonso died the following year without having achieved his ambitions of reducing Aden and launching an expedition against Mecca.

About 912/1506-7 a new line of Zaydi Imams was inaugurated by Shajar al-Dīn Yāḥyā, and from then onwards the Zaydis tended to fix their capital, if possible, at San'a. Coffee appears to have been introduced into the Yaman from Abyssinia about this time, and the use of ʿādī and tobacco spread among the people.

Badr Abū Tuwayrīḥī of Al ʿAṣāfīrī (regn. 922-76/1516-68), whose authority in his palmier days reached from the Red Sea to Ḥadramawt, was more willing to offer fealty to the Ottoman Sultan. Before Badr died he lost all his territories and suffered long imprisonment at the hands of his Ḥadramī enemies.

Salīm I, the Ottoman conqueror of Egypt in 923/1517, assumed the high title of Servant of the Holy Cities, and the reign of Sulaymān the Magnificent (926-74/1520-66) fenced other regions within the empire. The Portuguese in alliance with the King of Hormuz attacked Bahrayn, where Mūkrīn, the uncle and successor of Adjwād the Djabrid, lost his life defending the island in 927/1521. Reacting to the aggressive policy of the Portuguese, the Turks bestirred themselves in the Persian Gulf and the Red Sea. Sulaymān at Baghdad in 941/1534 received the homage of the Arab chiefs of al-Ḳāṭif and Bahrayn, and later his troops pressed up into the mountains of the Yaman. Aden and Muscat were occupied briefly, and an Ottoman governor was installed in al-Ḥasā.

For a period of some sixty years after c. 968/1560 there were no Ibadī Imams in ʿUmnān, where the secular Nabhānīds [q.v.] princes in their mountain fastnesses watched the climax of their power.

The slow receding of the Ottoman tide from the highwater mark reached under Sulaymān was observable in Arabia as elsewhere. The diversion of trade from the overland routes to the sea routes round Africa contributed to the serious economic depression which beset the Near East during the early modern age. Besides the Austrians and other foes in Europe, the Turks had to face the Salghurids, the strongest of whom, Shāh ʿAbbās I, pursued an expansionist policy in the Persian Gulf, where he subjected Bahrayn in 1011/1602. In the Yaman the Zaydi Imams kept alive resistance to the Turks, and al-Muʿawwiyād Muhammad succeeded in expelling them completely in 1045/1635.

The formation of the East India Company in 1609 was the prelude to a burst of activity by English traders in the Red Sea and the Persian Gulf. Allaying themselves with the Persians, the newcomers drove the Portuguese out of Hormuz in 1031/1622. Once the Portuguese monopoly had been broken, the English found themselves involved in competition with the Dutch, who secured commercial...
preeminence during the second half of the 11th/12th century.

After the election of Nāṣir b. Murshid of the Ya'rubids of al-'Azd c. 1034/1624 as Iḥāḍī Ḫīlām, this Ḫīlāmīs remained in his family for more than a century. The Ya'rubids in their early days drove the Portuguese out of Muscat and all other prias de terre, and in their later days extended their authority overseas to Mombasa, Pemba, and Kilwa in East Africa.

Ḥusayn b. ʿAll, the third and last ʿAṣḥa of the House of Ḫarṣa, under whom al-Ḥasra in the early 11th/17th century had become virtually independent of Ottoman rule, incited ʿĀl Ḥumayd of the tribe of Banū ʿHulal to overthrow the Ottoman governor of al-Ḥasra in 1074/1663-4. These Bedouin chiefs kept the oases and grazing grounds of Eastern Arabia subject to their will until the Wahhabs advanced to the Persian Gulf in the early 19th century H.

In Ḥadramawt the Zaydis of the Yaman encouraged the spread of their version of Islam at the expense of Shāfiʿīs. In 1070/1660 Ahmad b. al-Ḥasan, a nephew of the reigning Zaydi Imam, led into the main valley of Ḫadramawt a terrifying force known as the Night Flood (sayl al-layl) which undermined the position of the House of Ḫarṣ, but Zaydism failed to secure a permanent triumph over Shāfiʿism in this region.

In the 12th/18th century a new era began in Arabia with the spread of the reforming movement inspired by Muḥammad b. ʿAbd al-Wahhāb of Naḍjd. In a sense this also marked the beginning of the modern history of the whole Near East. Placing the unity of God above all else and demanding that the popular faith be cleansed of innovations, Ibn ʿAbd al-Wahhāb's call reverberated throughout the Islamic world from West Africa to the East Indies and moved the spirits of the modernists of the Salafiyya in Muslim countries closer than Arabia to the encroaching lands of the West. As an Arab movement opposed to the remote and vitiated rule of the Ottomans, Wahhābīs [q.v.] influenced the nationalistic tendencies developing among the Arabs in the 19th and 20th centuries. Within Arabia political unity supplanted petty particularism, and orderly Islamic government functioned as it seldom had before.

Soon after first preaching in public in 1153/1741, Ibn ʿAbd al-Wahhāb concluded a basic alliance with Muḥammad b. Saʿūd, ruler of the insignificant town of al-Dirās. When Muḥammad died, his son ʿAbd al-ʿAzīz carried on, and by 1202/1788 all Naḍjd had accepted the doctrines and sway of the reformers, who had withstood three expeditions directed against them by the Ḫumaydīī Makramids of Naḍjrān, then a power in their corner of Arabia. [Cf. also Saʿīdis.]

In 1156/1743 the Yaʿrubids of this tribe occupied al-Shihr and fourteen years later acquired full possession of al-Mukallā.

Proving resilient in recovering from disastrous blows struck by Muḥammad ʿAll's forces, the Saʿūdī state rebuilt its strength under Turki b. ʿAbd Allāh, who fixed his capital at al-Ryād, and later his son Faysal, though al-Ḥidžāz was not occupied again. Civil war between Faysal's sons after his death in 1328/1865 caused a second decline in Saʿūdī fortunes, facilitating the reimposition of Ottoman sovereignty over part of Eastern Arabia and the rise of al-правля (q.v.) of Háš to dominance in Naḍjd, where al-prayl itself was made subject. The Ottomans also reestablished themselves in the highlands of the Yaman with headquarters at Saʿūdī, but they failed to crush the resistance of the Zaydi Imams. The opening of the Suez Canal in 1869, making communications between Istanbul and Ḫiddā easier and faster, helped the Turks to exercise more control in al-Ḥidżāz.

The rapidly expanding puritan state of Naḍjd came into conflict with the ʿAbdīs of Mecca in a war lasting fifteen years (1205-1220/1791-1806), with the Saʿūdīs occupying Mecca for the first time in 1218/1803. Shortly after the death of Ibn ʿAbd al-Wahhāb (1206/1792) Saʿūdī authority flowed eastwards to the Persian Gulf, along which it extended to ʿUmān. In the south the reformers reached the Yaman and Ḫadramawt, while in the north their forces threatened to overrun Syria and Iraq. The Ottoman government, unable itself to dam the flood, turned in desperation to the new Viceroy of Egypt, Muḥammad ʿAll.

In the 13th/19th century foreign intervention in Arabia, both Muslim and Western, became more effective and extensive than ever before. Muḥammad ʿAll annihilated the first Saʿūdī state when his army captured al-Dirāsiyya in 1233/1818. The British, at first welcoming and then fearing the advent of the Egyptians, carried out military actions against the Persian Gulf Arabs and in Inner ʿUmān and occupied Aden in 1254/1839, after which their influence gradually advanced along the southern and eastern coasts and penetrated into the hinterland.

Saʿūd b. ʿUtān, the most famous ruler of Al Bu Ṣaʿūd (regn. 1221-1273/1806-1856), wielded little or no authority in Inner ʿUmān, where he was hard pressed by the Saʿūdīs, to whom he often paid tribute. In the latter part of his reign he devoted most of his attention to his East African possessions, but five years after his death the British established Zanzibar as a Sultanate independent of Muscat. The only Ibaḍī Imam elected during the century, ʿAzzān b. ʿĀṣār, failed to win recognition by the British and was overthrown in 1287/1869 after two years of rule. The Sultans who followed him depended upon British support for the maintenance of their position in Muscat in the face of the hostile Ibaḍī tribes of the interior.

During the century internecine warfare was common in Ḫadramawt, where much power rested in the hands of mercenaries imported from the mountains behind Aden, particularly of the tribe Yāfī. In 1283/1867 the Kuftūyta of this tribe occupied al-Shihr and fourteen years later acquired full possession of al-Mukallā.

Proving resilient in recovering from disastrous blows struck by Muḥammad ʿAll's forces, the Saʿūdī state rebuilt its strength under Turki b. ʿAbd Allāh, who fixed his capital at al-Ryād, and later his son Faysal, though al-Ḥidżāz was not occupied again. Civil war between Faysal's sons after his death in 1282/1865 caused another decline in Saʿūdī fortunes, facilitating the reimposition of Ottoman sovereignty over part of Eastern Arabia and the rise of al-правля (q.v.) of Háš to dominance in Naḍjd, where al-prayl itself was made subject. The Ottomans also reestablished themselves in the highlands of the Yaman with headquarters at Saʿūdī, but they failed to crush the resistance of the Zaydi Imams. The opening of the Suez Canal in 1869, making communications between Istanbul and Ḫiddā easier and faster, helped the Turks to exercise more control in al-Ḥidżāz.

Al Saʿūd, thrice crushed to earth, rose once more under the leadership of Faysal's grandson ʿAbd al-ʿAzīz, who took al-Ḥidżāz from its Ṭaḥlīlī ʿAbd al-ʿAzīz, though al-Ḥidżāz was not occupied again before finally overcoming Al Ṭaḥlīlī in the north. In 1331/1913 he drove the Turks out of al-Ḥasra and then lent the British sympathetic support during the First World War. Although the Ḫidžāz Railway from Damascus to Medina had been inaugurated in
In 1331/1913 a new Ibadhi Imam was elected in Inner 'Umam in opposition to the Sultan of Muscat. Two years later the British intervened to forestall the capture of Muscat by the Imam's army. Through British mediation a treaty was concluded at al-Sib in 1339/1920 providing that the people of Yaxnan.

Killed in a abortive insurrection in 1367/1948, Imam Yahya was succeeded by his son Ahmad. Dying in 1372/1953, ‘Abd al-'Aziz was succeeded by his son Sa'di. Thus passed from the scene two men who did far more than simply bequeath the names to the realms they wrought and guided for half a century.

Modern authorities: Pre-Islamic period:

ARABA. I. — The Turkish word araba (arba, abra), meaning “wagon” or “cart”, is as old as the 14th cent. A.D., but it does not look like a pure Turkish word; neither does it have an obvious Arabic or Persian etymology. In Osmanli the usual spelling was saraba with an ’an’ and although Sâmt Fraghî in his Kâmasî-i-Turki (Istanbul 1823-58) and E. de Zambaur, Manuel de généalogie et de chronologie, Hanover 1927. (G. RENTZ)

ARABA. II. — Like the word araba the expression arabbâ in its various forms is not a pure Arabic or Persian word. It is found in the language of the invading tribes of the 8th century. At the time of our knowledge this word has only an oriental connotation. It has been suggested that the expression is to be explained as a corruption of *śarība* and that in this sense it means “a ballista, a missile weapon”. This explanation is not, however, convincing, since it is in fact older than the development of the ballista in the West. In its meaning as “a ballista, a missile weapon” it is found in the Arabic expression araba and also in the Persian expression *sharība*.
ARABA

Series, i, fol. 336 v., l. 7), where the phrase darbud-
garl (“culverin carts” in Beveridge's translation) occurs. There is at present no direct evidence of the date of the transition from 'arr'da to araba, but the guess may be hazarded that the word was adopted as a technical term in the Mongol army during the invasion of Persia early in the 13th cent. and that the change took place there. It had certainly taken place before the 14th cent., since there is no trace of 'arr'da in Turkish at that date.

'Araba' occurs in both the Italian and the German sections of the Codex Cumanicus (early 14th cent., with a late 13th cent. substratum); on the other hand there is no trace of either word in such 12th cent. authorities as Kâşghârî's Dîvân Lugâtât al-Turk or the Kudathâkû Bilûj. It is interesting to note that araba, in one form or another, occurs in practically every modern Turkish dialect, except apparently Yakut and Cuvâş, which corroborates the general belief that these dialects had broken away from "common Turkish" before the 13th cent., and establishes the less generally accepted fact that the other peripheral dialects in Siberia, Chinese Turkestan and Europe had not yet broken away by that date.

(G. L. M. Clauson)

II. — It appears that the plains and steppes of Central Asia, inhabited by the Turco-Mongols, were the centre where, about the beginning of the Christian era, a type of vehicle with two wheels and with shafts (carts), earlier developed in China, was furnished with a yoke of modern type relying on traction by the shoulders (A. G. Haudricourt and M. Jean-Brunhes Delamarre, L’homme et la charre, Paris 1955, 173 ff.). From there the use of this vehicle spread in both directions, towards China and towards Europe. These carts play an important part in the history of the peoples of the Steppes, particularly in the period of the Mongol empire.

The word 'araba appears in the 8th/14th century in the Codex Cumanicus, where it is glossed by currus, and in Ibn Batštîna. The latter describes, in the Crimea, a vehicle called by the inhabitants 'araba, which had four wheels, carried a surf, was pulled by two or more horses, by oxen or by camels, and controlled by a driver mounted on one of the animals. He travelled from Sarà to Khârizm on an 'araba pulled by camels (ii, 362-2; 385; 451 etc.; iii, 1 ff.). This is therefore a different vehicle, at least in the first case, from those of Central Asia, and is of a type (wagon) which probably had a pole (with old-fashioned yoke; traction by the neck), invented in the Danube region of Europe or in the Ukraine in pre-historic era, and perpetuated among the Tatars of the same region under the same name (P. S. Pallas, Bemerkungen auf einer Reise in die südlichen Staatlherrschaften des russischen Reichs . . ., Leipzig, 1799-1801, 1, 144 s. and pl. 6). In the 14th century also, 'araba was used in its present day form, where the word is so common that a locomotive is termed "fire 'araba" (ot araba) (K. K. Yudainî, K'irîz sülûgû, tr. A. Taymaç, Ankara 1945, 39).

The word has infiltrated into the Slav and Balkan languages: Rumanian (âraba); Russian arab; Ukrainian karba; Bulgarian, Serbian araba (K. Lokotsch, Etymologisches Wörterbuch der europ. Sprachen, Ursprungs, Heidelberg 1927, no. 90). The word has also been borrowed by Iranian: Persian aràfe, Tâdîjk araba.

In Ottoman Turkish, the word, usually written 'araba in Arabic characters, is the generic term for all types of carriage. In Ottoman Istanbul, people always went about the town on horseback. This was also the normal mode of travel for the sultans when they left their residences. When they were indisposed, however, and on various other occasions they travelled by 'araba. Suleyman the Magnificent, an invalid at the time of his departure for his last campaign, passed through Istanbul on horseback, but had to transfer to an 'araba in the plain of Dâvid Pâša and never left this vehicle (with four wheels and a pole), the driver remaining seated on one of the two horses even during the sultan’s conferences with his viziers (Hammer-Purgstall, ii, 439; illustration based on a MS, in the article Cumhuriyet quoted in the bibl.). The 'arabus of the sultans, princes and important personages were highly decorated (ibid., v, 413; cf. the vehicle of the sultan’s wife depicted in F. Taeschner, Alt-Stambuler Hof- und Volksleben, ein Türkisches Miniaturenalbum aus dem 17. Jhdt., Hanover 1925, pl. 28). They were especially used in royal marriages processes. In 1048/1638, the wedding of 'araba-makers at Istanbul numbered 40 members and possessed 13 shops (Ewliye Celebi, I, 628; tr. Hammer, I, 231).
In the 18th century, the drivers' corporation at Istanbul was organised on regular lines. The profession of vehicle was at its height at the beginning of the 18th century during the "tulip epoch" (lale dewri) (Ahmed Refik, Lale dewri, Istanbul 1331, 47). Later the sumptuary laws restricted this luxury, and the vogue of the 'araba declined (Ahmed Refik, Hicri on ikinci asrarda Istanbul hayati, Istanbul 1930, 175, no. 210).

Apart from these luxury vehicles, the rural type of 'araba drawn by oxen (of 'arabasi) circulated in the streets of the capital. This was a disgrace for a high personage to ride in one, and the Grand Vizier 'Ali Pasha (1102-3/1692-9) was summoned 'Arabadji because he inflicted this ignominious treatment on his political enemies, a treatment to which he himself was in the end subjected (Hammer-Purgstall, vi, 566 ff.).

To the beginning of the 19th century, the right to use 'arabas in Istanbul was restricted to very important functionaries (Sheykh ül-Islam, Grand Vizier; Djeddet, Ta'rirh, x, Istanbul 1309, 185 ff.). At this period the importation of European carriages was in its initial stages. The number of vehicles increased, and they were increasingly adapted to conform to European fashions. In 1852 Théophile Gautier wrote: "Paris and Vienna send the masterpieces of their coach-builders to Constantinople, from whose streets the taikhas with their brightly-painted and gilded coachwork, the typical 'arabas (carriages with shafts used by ladies for their drives in company and properly called kÂNû) pulled by huge grey oxen, will soon completely disappear" (Constantinople, Paris 1853, 318). But in 1863 Emmanuel Scherer, living at Hamidiyye, a suburb of Istanbul, built coupes, victorias, omnibuses and every kind of carriage to order (Tashir-i Eflar, no. 193, 3 Dhu 'l-Hijjah 1280/26 April 1864). Standing-places for 'arabas were provided at many points. Their number, combined with the narrowness of the streets, caused congestion. The Tashir-i Eflar of 19 November 1909 complains about this, and demands that the constitutional régime should no longer tolerate the inconvenience caused by the arrogance of the pashas and the beys.

'Arabas made their appearance in Turkish literature with the exile to Keğhan of 1zzet Molla in 1238/1823; his celebrated poem Mi'ahet-keğhan was composed in the 'araba which conveyed him there, the author conversing with his reflection in the mirrors which decorated its interior (Gibb, Ottoman Poetry, iv, 308, 314). In his novel 'Araba savurdu (1895), Redjâzade Mahmûd Ekrem describes a snob with a passionate love of carriages. To-day the rural four-wheeled vehicles are divided into yayl "with (double) springs", and yarım yayl "semi-sprung", that is to say with a single spring for each axle-tree (cf. same Arabeo, iii, Ankara 1949, 194-6); they are framed by wooden uprights, covered by a semi-circular tilt; as they are not provided with seats, a mattress is used to sit on. Freight vehicles (yâk 'arabas) are often unsprung (but some are "semi-sprung"); this category in particular is subject to decoration in various styles. The tâlika (sometimes written ỉtiHa by false Arabic etymology, but in fact from the Slav word, see, etc., itself derived from the Mongol ściHûn) provided greater amenities for the comfort of passengers. This carriage, widely used in the 19th century and still in use, especially on the Asiatic coast of the Bosphorus, is a sort of open fiacre; it has no door, but a footboard, surmounted by a small platform; the equally commodious "long carriage" (uzun 'araba), a sort of benched carriage, is also open, with a door to the rear, and is equipped with curtains and two benches placed lengthwise inside.

In addition, Arabalâr (in the supplement to the journal Cumhuriyet, 17 şubat 1955 = Asrîlar Boyunca Istanbul, 97-100); M. Rodinson, Araba, in JA (printing) (M. Rodinson)

'ARABA, (Wâdi 'ARABA), is the Southern extension of the Jordan fault, which includes the deep depression of the Dead Sea. The term 'Araba in the Old Testament refers also to the Jordan Valley. From approximately three to five miles in width, the Wâdi 'Araba extends for about 110 miles between the south end of the Dead Sea and the north end of the Gulf of Akaba, which is the east arm of the Red Sea. Along much of its length are numerous ancient copper mining and smelting sites. They were probably worked by the Kenites and were intensively exploited in King Solomon's times. There are also extensive haematite deposits in the Wâdi 'Araba.

The route of the Exodus led in part through the Wâdi 'Araba. The few springs in the Wâdi 'Araba attracted settlements as early as Middle Bronze I (21st-19th centuries B.C.), Iron II (10th-6th centuries B.C.) and particularly in Nabataean, Roman and Byzantine times. Near the north shore of the Gulf of Akaba, at the south end of the Wâdi 'Araba, is Tell el-Kheleyife, which has been identified with Solomon's port-city and industrial center of Ezion-geber: Elath. The Nabataean to Byzantine site of Ayla [q.v.] is situated near the east side of this shore, with the modern village of 'Akaba [q.v.] immediately east of it, and the modern Israeli town of Elath is located on the west side of the shore.

ARABESQUE. For a long time this term was used in literature devoted to art to designate several kinds of typical Islamic ornament: geometric, vegetal, calligraphic and even figural. In the first edition of the EI, E. Herzfeld still took into account this wider interpretation of the arabesque, which however was already antiquated since the time when A. Riegl had defined in his Stilfragen its distinctive character as being a particular, and exclusively Islamic, form of denaturalised vegetal ornament consisting of shoots or spitz or bifurcated leaves on inorganic tendrils. The leaves may be flat or curved, pointed or round or rolled, smooth or rough, feathered or pierced, but never isolated and always joined to the stalk for which it serves as an adjunct or a terminal. The stalk itself may be undulating, spiral or interlaced, with its leaf or issuing again from it, but always intimately connected with it. To quote Herzfeld's definition: stalk and leaf are completely grown into each other, the leaves forming additions growing from the main stalk.

The principles which regulate the arabesque are reciprocal repetition, the formation of palmette or calice forms by pairs of split leaves, the insertion of geometric interlacings, medallions or cartouche compartments. In every instance, two aesthetic rules are scrupulously observed: the rhythmical alternation of movement always rendered with harmonious effect, and the desire to fill the entire surface with ornament. By its balanced and serene...

Fig. 2. Mosque of 'Ukba in al-Kayrawan (after G. Marçais, Coupole et Plafonds de la Grande Mosquée de Kairouan, Paris 1925)

Fig. 3. From a Qur'an, Granada 13th century (in the Islamische Abteilung, Berlin Museum)

Fig. 4. Wood-carving, Egypt 13th century (after Bourgoin, Précis de l’Art arabe, Paris 1892, iii, pl. 88)
convolution, the arabesque avoids the dynamic excitement, the restless whirling and violent twisting of the Nordic ornament with which it otherwise has much in common. The effect of contrast is obtained by differences in density, the stalk sometimes nearly disappearing beneath an abundance of foliage, at other times vigorously dominating the pattern.

The denaturalised vegetal ornament conforming to the rules described above is termed "arabesque" is preserved in _al-aurique_, a term commonly used by Spanish authors to designate the genuine arabesque as understood by Riegl.

The arabesque may be combined with every kind of geometric decoration. In epigraphy, it may form a background to the calligraphy, or the letters may terminate in arabesques, or letters and arabesque may be interwoven. Animals may be drawn in the form of arabesques, which may also be combined...
with human figures; the animals and the human figures may then be rendered more, or less, recognizable. Sometimes, an Islamic 'arabesque' decoration occurs in which masks and protomes of animals are combined with an arabesque scheme. It seems unnecessary to emphasise that the arabesque never has any symbolic significance but is merely one ornament from a large stock which includes other vegetal forms such as palmettes, rosettes and naturalistic flowers, and abstract forms such as cloud-bands. At certain periods, however, it played a predominant role.

The arabesque has its prototype in certain acanthus, vine leaf and cornucopia forms of late antiquity which tend to progress in undulations or with bifurcations. It is not yet completely developed in the Umayyad period, acquires its typical shape in the 9th century under the 'Abbâsids and in Islamic Spain and appears fully developed in the 11th century under the Saljûqs, Fâṭimids and Moors. From then on it occurs throughout the Islamic world in countless variations, so that it is impossible to classify the various forms according to a chronological order or according to national or dynastic predilections. Persian, Turkish and Indian artists understood the language of the arabesque quite as well as Arabic-speaking artists, and through the centuries they competed one against the other in creating ever more varieties and combinations. Its use is not restricted to any one material, but is used in architectural decoration as well as carved or painted decoration, in pottery and glass and metal-work, and above all in book illumination.

In Hispanic-Mauresque art of the 12th century and later the arabesque predominates almost to the exclusion of other ornamental forms, and from Islamic Spain it found its way in the late 13th century to the Christian countries. Known as moreisque it became fashionable in the first half of the 16th century and was introduced into Italy by Francesco Pellegrino, into France by the unknown master G. J., and into Germany by Hans Holbein and Peter Flettner. Like them, other artists tried to imitate, with more or less understanding, the particular character of the arabesque, principally in their pattern-books for jewellers and armourers (e.g. the Livre de moreisques, Paris 1546).

[See also ornament].

**'ARABFAKH,** Shihâb al-Dîn Ahmad b. 'Abd al-Kâdir, chronicler of 16th century Muslim Ethiopia. He personally took part in the war between the imâm Ahmad b. Ibrâhîm, lord of Harar, and the Negus Lebna Dengel; but, when he wrote his chronicle, he had already left Ethiopia for Djizân in Arabia. His (Harari) surname 'Arab-Fakhth, "the Arab doctor", can be explained either as the sobriquet of an Ethiopian who was particularly well-versed in the Arabic language and îshâ, or as the local laqab of an Arab who emigrated at first to Ethiopia (and who later returned to his native country). His chronicle bears the title (in the colophon) of Twâfi al-Zâmân, but it is given in the MSS. as Fûtâh al-Habâbha ("Conquests of Ethiopia"). The narrative closes with the events of the year 1537; but the colophon describes the work as the "First Part". A second part, however, has never been found, and it is quite possible that the author was never able to complete his work as planned.

The Fûtâh al-Habâbha, of which we possess only a few MSS., all recent, is also quoted and to a large extent summarised in the (Arabic) Chronicle of Gujarat (Zâfar al-Wâdth bi-Mawâfat wa-Sâdha) by al-Ulugh-Khânî, also an Arab writer, who emigrated to Muslim India during the second half of the 16th century.

**'ARABI PASHA** [see 'URABI PASHA].

**ARABIAN NIGHTS** [see ALF LAYLA WA-LAYLA].

**ARABIC WRITING** [see KHIATT].

**'ARABISTAN, 'the Arab country', a term much in use until recently to denote the Persian province of Khâbištân; the latter name was revived during the reign of Riḍâ Shâh Pahlawi. Further particular see ANZIYSTAN. Following Persian usage, 'Arabîstân denotes occasionally the Arabian peninsula. In Ottoman administrative documents from the 16th century it is occasionally applied to the Arabic-speaking provinces of the Empire, more especially to Syria.**

**'ARABIYYA. ARABIC LANGUAGE AND LITERATURE.**

**A. The Arabic Language (al−'Arabiyya).**

(i) Pre-classical Arabic.

(1) The position of Arabic among the Semitic languages;
(2) Old Arabic ("Proto-Arabic");
(3) Early Arabic (3rd-6th centuries A.D.).

(ii) The Literary Language.

(1) Classical Arabic;
(2) Early Middle Arabic;
(3) Middle Arabic;
(4) Modern Arabic.

(iii) The Vernaculars.

(1) General survey;
(2) The Eastern dialects;
(3) The Western Dialects.

**B. Arabic Literature.**

Al−'arabiyya, sc. lîwâ, also lîsân al−'arab, is:

(1) The Arabic language in all its forms. This use is pre-Islamic, as is shown by the appearance of lîsân *darbâhî in third-century Hebrew sources, arabica lingua in St. Jerome's Prae/atio in Danielem; this probably is also the sense of lîsân *arâbî (mubin) in Kur'ân, xvi, 103 (103); xxvi, 193; xlv, 12 (11).

(2) Technically, the Classical Arabic language (C. Ar.) of early poetry, Kur'ân, etc., and the Literary Arabic of Islamic literature. This may be distinguished from *arabiyya in the wider sense as al−'arabiyya al−fasâhî or al−'arabiyya al−fasâhâ, from fasâha "to be clear, pure" (cf. Assyr. fisû "pure, bright", Aram. fassâh "bright, radiant"); it means "clear", i.e. "(universally intelligible) Arabic, not "pure Arabic", as is shown by aʃâbab (al−kalâmâ) "to speak clearly" (LA, iii, 377), cf. also aʃâba "to speak clearly, intelligibly" and "to use correct Arabic".

Cl. Ar. is the chief literary dialect of Arabic, though not the only written one (cf. Old Arabic and some modern colloquials, notably Maltese). The other forms of Arabic known to us belong to three distinct stages: 1) Old Arabic, also called Proto-Arabic (though this term would better be reserved for the hypothetical common ancestor of all Arabic dialects), German altnordarabisch. 2) The Early Dialects (lîgâhâ).

3) The Colloquials (medieval lîgâhâ al−šâmîm, modern al−lîgâh al−šâmîyâ or al−darâji, or lakâdijâ).

(i) Pre-classical Arabic

(1) The Position of Arabic among the Semitic Languages

Arabic belongs to the Semitic language family, which is part of a wider Hamito-Semitic family
including, inter alia, also Ancient Egyptian. Within that family, it belongs to the South-Semitic or South-West-Semitic branch, which includes two further sub-groups: (a) South-Arabian (comprising ancient Sabaeans, Mineans, Katabanians, Hadramitic, etc. in Yaman and Southern Hadramawt and modern Mehrib, Shihhouri etc. in Northern Hadramawt and the language of the island of Socotra); contrary to a widespread assumption, ancient South-Arabian is a language-group quite different from Arabic; (b) South-Semitic or Ethiopian, comprising ancient Ethiopian or Ge'ez, modern Tigre, Tigrinaya, Amharic, Harari, Gurage, etc.; it is not yet quite clear whether Ethiopian originally derived from some form of South-Arabian (cf. E. Ullendorff, Sem. Languages of Ethiopia, 1955).

The common traits of the S.-Sem. branch (partly obscured in the modern forms) are: almost complete preservation of the proto-Sem. system, except for  for becoming  and  coalescing with  (Arabic  is proto-Sem. 4); plural of nouns formed by internal vowel changes;  and  patterns in the verb. S.-Ar. and Eth., however, have some features in common with Accadian which Arabic does not share (W. Leslau, in JAOS, 1944, 53-8).

On the other hand Arabic shares with North-West Semitic (Hebrew, Ugaritic, Aramaic) certain traits not found in S.-Ar. and Eth.: the pl. masc. suffix -  the internal passive (W. Christian, in WZKM, 1927, 283; for S.-Ar. see M. Höfler, Altsüdarab. Gramm., 82), and the prefix diminutive (F. Praetorius, in ZDMG, 1923, 524-9), see also I. al-Yasin, Lexical Relation between Ugaritic and Arabic, 1952. Some forms of Arabic had closer connection with N.W.-Sem.: Old Arabic had, like Hebrew, a definite article  with doubling of the following consonant (as in ); names like (3rd cent. B.C.) and (3rd cent. A.D.) show that  had the construct  in all cases, as in Hebrew. Among the Early Dialects, the forms, rel. pron.  corresponds to poetical Hebrew ž, while the  of other Western dialects has its equivalent in older Aramaic: the W. dialects also sounded  as 6, like Canaanite and W.-Syriac, and changed  to 4, like Hebrew. The Eastern dialects, on the other hand, had i-prefixes with the a-imperfect, like Canaanite and W.-Syriac (cf. C. Rabin, in Journal of Semitic Studies, 1950, 22-6).

Arabic as a whole thus stands between S.-Sem. and N.W.-Sem., having contacts with both. There existed perhaps dialects intermediate between N.W.-Sem. and Arabic: this has been claimed for the local dialect which influenced the Hebrew book of Job (cf. B. Moritz, in ZATW 1926, 81-93; Foster, in Am. Journ. of Sem. Lang., 1932, 21-45).

(a) Old Arabic (“Proto-Arabic”)

The oldest record of Arabic are some 40 proper names in Assyrian accounts of fighting against the Arbi (Arabu, Arbii, cf. O'Callaghan, Aram Naka-ram, 95) during the years 853-626 B.C., collected by T. Weiss-rosmarin, in JSOR, 1932, 1-37, and F. Hommel, Ethnologie u. Geogr. d. alten Orientalen, 1926, 578-89. Almost all can be identified as Arabic: the view of Landsberger and Bauer (in ZA, 1927, 97-8) that the Arbi were Aramaeans has as little foundation as that of B. Moritz (Or. Studies . Paul Haupt, 1926, 184-211) that the Aramnu mentioned in texts of the same period were Akkadu. The Gambulu were closely allied with the Arbi (Assurbanipal’s Rassam Prism iii, 65); among their chiefs (Sargon’s Annals 254-5) were Hamdanu, Zabidu, and Ḥaza‘ilu, as well as some bearing Aramaic names. Most had Assyrian names, however, showing that some of these tribes had undergone the influence of the higher culture.

Assyrian influence also marks the earliest texts written in Arabs, in the 8th-7th cent. B.C., in a North-Arabian script close to the Dedanite, but in the Accadian language, except for the mixed form ybl, which is Accadian ybl “he carried” with West-Semitic y-prefix. These include two short inscriptions found at Ur (Burrows, in JAOS 1937, 792-806) and some seal cylinders (W. F. Albright, in Bull. Am. School of Arch. in Syria 1939, 39-45). Albright identified the group from which these texts originated as the Chaldeans.

The Dedanite inscriptions at al-Ula are probably only slightly later (H. Grimme, Buch u. Schrift, iv, 19-28; id., in OLZ, 1932, 753-8). At the same locality, but later, are the Libyanite inscriptions. The latest are 150 A.D., and show Early Arabic features. About this time (see, however, Boneschi, in RS0, 1951, 1-15) “Mas‘ud king of Libyan” put up inscriptions in archaic Nabataean Aramaic.

Grave inscriptions in Libyamic script exist in al-Ḥasā (G. Ryckmans, in Mus., 1937, 239; Cornwell, in GJ, 1946, 434; Winnett, Bull. Am. School for Or. Res., no. 192, 4-6; S. Smith (in BSOS 1954, 44) they think they emanate from the people of Ḥira.

Thamudic is represented by graffiti in northern Hijāz, Sinai, Transjordan, southern Palestine (3,000 in A. v.d. Branden, Inscriptions thomaudennes, 1924-1927, 524 in Harding & Littmann, Some Th. Insocr. from ... Jordan, 1952), and EGYPT (Kensdale, in Mus., 1952, 283-90). For grammar see v. d. Branden, op. cit.; E. Littmann, Thamād u. Ṣafā, 1943; id., in ZDMG 1950, 168-80. The latest Thamudic texts occur in conjunction with Early Ar.: one line on the stèle of Ḥegār of 267 A.D. (in Nabataean script), some graffiti on the temple of Shamsina, and some graffiti on the temple of Kalāb in 300 A.D., next to the oldest graffiti in Arabic script. The language hardly changed during the 600 years of its use; this suggests some literary tradition.

Ṣafātene or Safalic graffiti are found in the Ṣafā, Hara, and Legā east of Damascus (for texts outside that area, see E. Littmann, in Mélanges Dunand, 1939, 661-72; G. Ryckmans, ib., 507-20). Around al-Namār there are some graffiti intermediate between Safetene and Thamūdic. Historical allusions provide dates as far as the 3rd cent. A.D. (G. Ryckmans, in Comptes Rend. Ac. Insocr., 1942, 127-36; M. Rodinson, in Sumer, 1946, 137-55), according to Winnett (in JAOS, 1933, 41) even until 614 A.D. One Thamūdic text may be Christian (E. Littmann, in MW, 1950, 16-8; against this v. d. Branden, in Mus., 1950, 47-53).

Since graffiti mostly consist of names, our knowledge of all these idioms is scanty. It is probable that the method of elucidating them by reference to the Arabic lexicom makes them appear more similar to C. Ar. than they really were. The transliteration of the Arab names shows that *ṣān* was sounded weakly, *ḏim* was like Accadian *g*, *ḥāl* like *k*, *ḥāl* like *t*, and *ḏāl* like *p*. Greek transliterations of names from the Safatene area show a vowel-system reminiscent of Hebrew or Colloquial Arabic, e.g. *qetodu = Usyad*. Spellings like *bny = ʿn* and *ngy = ʿn* suggest that all defective verbs ended in -iya, as in Hebrew.

While all these peoples wrote their own languages in varieties of a script closely related to Old S.-Arabian, the Nabataeans (100 B.C.-4th cent. A.D.) and the Palmyrenians (1st-3rd cent. A.D.) used local varieties of Imperial Aramaic (the *lingua franca* of the Syrian-Arabian empire) and Aramaic script, but their names show that the Nabataeans were wholly Arab, and at Palmyra there was an important Arab element (cf. Goldmann, *Palmyr. Personennamen*, 1937). In Palmyrenian, Arabic words are few (J. Cantineau, *Gr. du Palm. épigr.*, 1935, 150-1; even fewer in F. Rosenthal, *Sprache d. palmyr. Inschr.*, 1937, 94-6). Nabataean has many Aramaisms; their number increases sharply in later texts (Cantineau, *op. cit.*, ii, 171-80; id., *AIEO*, 1934, 77-97; see also F. Rosenthal, *Aramaistische Forschung*, 1939, 89-92).

This Arabic substrate—which was probably different in various regions—includes Thamudic *ṣād* "legitimate heir"; in contrast to the epigraphic Old Arabic dialects it had the *al-* article (Ṣhy ḫawm against Safat. Ṣhy ḫawm, name of a god; Ṭhrw = kgrā; long a was sounded o as in the Early Western Dialects.

A source of Old Arabic hardly tapped is the study of the personal names, thousands of which are known. These show a striking continuity from the *ṣān* names preserved in texts in Accadian (cf. under Arbi above), Hebrew (J. A. Montgomery, *Arabia and the Bible*, 1934; idem, in *Haverford Symposium on Archeol. and Bible*, 1938, 188-201), and Greek and Latin (A. Sprenger, *Alte Geogr. Arabiens*, 1875; Glaser, *Skirt*, etc., 1889-90; A. Muesl, *Topographische Itinerarii*, ii, Appendix 3; cf. also the material of S. Al-Munadidi as a work of Ismaʿil b. ṬAmr al-Mukri, Cairo 1946. The Djurhum, of course, belong to the *ʿArab al-ʿariba* [q.v.] or al-bāʿida, from whom, according to the Arab historians, the *ʿArab al-mustaʿriba* tribes, the tribes making up the bulk of the population in the 6th cent. A.D., took over the country and the language. More specifically we learn that the Tayyī adopted the language of the Saḥār (Yākūt, i, 127). We must ask (1) whether the *ʿArab tribes were identical with the known speakers of Old Arabic, i.e. what language the mustaʿriba tribes spoke before they adopted Arabic. To neither question have we any answer. The matter is further bound up with the cleavage between Eastern and Western Early dialects: on the whole the latter appear to have been somewhat closer to Old Arabic, but it is likely that the real successor of Old Arabic were the ʿKūṭaʾa tribes, spoken over the same area as the former, our knowledge of which is practically nil; on the other hand we possess practically no epigraphic material from those areas where either the Eastern or the Western dialects were spoken, and the speech of those regions during the Old Arab period may have been quite different from the Old Arab dialects perpetuated by inscriptions.

Another valuable source for reconstructing the phonetic history of Arabic is the geographical names preserved in texts in Accadian (cf. under Arbi above), Hebrew (J. A. Montgomery, *Arabia and the Bible*, 1934; idem, in *Haverford Symposium on Archeol. and Bible*, 1938, 188-201), and Greek and Latin (A. Sprenger, *Alte Geogr. Arabiens*, 1875; Glasser, *Skirt*, etc., 1889-90; A. Muesl, *Topographische Itinerarii*, ii, Appendix 3; cf. also the material of S. Al-Munadidi as a work of Ismaʿil b. ṬAmr al-Mukri, Cairo 1946. The Djurhum, of course, belong to the *ʿArab al-ʿariba* [q.v.] or al-bāʿida, from whom, according to the Arab historians, the *ʿArab al-mustaʿriba* tribes, the tribes making up the bulk of the population in the 6th cent. A.D., took over the country and the language. More specifically we learn that the Tayyī adopted the language of the Saḥār (Yākūt, i, 127). We must ask (1) whether the *ʿArab tribes were identical with the known speakers of Old Arabic, i.e. what language the mustaʿriba tribes spoke before they adopted Arabic. To neither question have we any answer. The matter is further bound up with the cleavage between Eastern and Western Early dialects: on the whole the latter appear to have been somewhat closer to Old Arabic, but it is likely that the real successor of Old Arabic were the ʿKūṭaʾa tribes, spoken over the same area as the former, our knowledge of which is practically nil; on the other hand we possess practically no epigraphic material from those areas where either the Eastern or the Western dialects were spoken, and the speech of those regions during the Old Arab period may have been quite different from the Old Arab dialects perpetuated by inscriptions.

(3) Early Arabic (3rd-6th centuries A.D.)

Following precedents in the nomenclature of English and German, we may give this name to the period from the 3rd to the 6th cent. A.D. when over a large part of Arabia dialects quite distinct from Old Arabic, but approaching C. Ar. were spoken, and during which C. Ar. itself must have evolved.

Outside evidence for this period is scarce, but we possess a number of quotations in contemporary Jewish sources (partly coll. by A. Cohen, in *JQR*, 1912/13, 221-33), including even sentences, e.g. *mab'ad li-dammatika* "make room for thy throng" (Midrash Rabba on Canticles, iv, 1).

This is the period during which hundreds of Aramaic loan-words entered the language through Christian and Jewish contacts (cf. F. Frank, *Fremdspr. im Arab.*, 1886); their phonological study throws some light on the Arabic of the period.

Thus there is an older layer where Araj. *gād = ʿn* and a younger one where it = ʿn, due no doubt to a sound-change in Arabic (D. H. Müller, *Acts VII Or. Cong.*, 1888, 229-48; Brockemiel, *Grundr. Vergl. Gr.*, i, 129-30). Other words penetrated during this period from South-Arabian (H. Grimm, in *ZA*, 1912, 138-68; cf. also F. Krenkow, in *WZKM*, 1931, 127-8) and Ethiopic (Nödeke, *Neue Beiträge*, 31-66; but see Rabbi, *Ancient West-Arabian*, 109, on šābū and mizākūd)—owing to our restricted knowledge of S.-Ar., the two sources cannot always be clearly distinguished. Some Persian loan-words, found in the Kurān and poetry, entered during this period, though the great influx of Persian words took place in the first Islamic centuries (A. Siddiqi, *Studien über d. pers. Fremdspr.*., 1919). Greek words entered mainly via Aramaic, Latin words via Greek and Aramaic: thus *kınfār* < *š̄āmātār* < Lat. *tensarius*; *māndil* < *Syri. most₂ndil* (with typical late Gk. soundchange) < Lat. *mantele*. Some military terms, e.g. *sāl < strata* or *hār < castra* (cf., however, Palest. *Jew. Aram. ḫāṣrā* may have come directly from Latin.
Bibliography: Djawallkl, Muʿarrab (Sachau), 1867; Noldeke, Neue Beiträge, 23-30; A. Jeffery, Foreign Vocabulary of the Qurʾān, 1938; A. Salonen, Alle Substrat- und Kulturwörter im Arab., 1950 (= St. Or. Soc. Or. Fennica, xvii, 2).

It must be assumed that these words originally entered some specific dialect area in contact with the culture in question and then spread into Cl. Ar. We hear of foreign words used only at Medina (Rabin, op. cit., 96; Fück, Arabiya, 10). Arabic philological literature preserves much material about the Early Dialects of Najd (Tamilm, Asad, Bakr, Ṭayyiʿ, Ḥijāz and the highland area of the South-west (Hudhayl, Ahd, Yaman), very little about those of other areas. The information seems to have been gathered during the 2nd-3rd Islamic centuries—when these dialects were probably rapidly disintegrating—partly from tribesmen in the ʿamārāʾ; it is distorted by the scholastic approach and by the use made of it for elucidating difficulties in texts which had nothing to do with the dialects cited. Interest in the dialects for their own sake developed only late, and many data are preserved only in late works whose sources we cannot check.

A sharp cleavage clearly emerges between an Eastern group centred on the Persian Gulf, and a Western one, including besides the south-western and ʿHijāz dialects also that of Ṭayyiʿ. Within the latter the characteristic features are most clearly marked in Yaman and Ṭayyiʿ, while Hudhayl and ʿHijāz show evidence of Eastern influence. The differences are in rhythm (vowel-elisions and assimilations in the East), phonetics (e.g. West distinguished ʿ—sounded ʿ—sounded ʿ; ḥamsa was strongly sounded in East and even became ʿayn, but was completely elided in the West), grammar (e.g. Eastern allāḏhī: Western dāʾ, dāʾ; E. passive ʿīlā: W. ʿīlā; E. imper. ruddūl: W. urdūl), syntax (e.g. the “ʿHijāzī md”; E. dāʿa(ʿ)i, r-rīḍālū: W. dāʿa(ʿ) r-rīḍālū) and vocabulary.

It cannot be determined whether this cleavage had but recently developed or was old-inherited; the possibility must be taken into account that the inhabitants of Arabia had come from different parts of the Semitic world and that the common “Arabic” features were produced by mutual influence or by a common substrate after their settlement in Arabia.

To the Early Arabic period belong two inscriptions in Nabataean characters but practically pure Arabic language: One is at Ḥirāʾ (Arabic al-Ḥirāʾ, now Madāʾin Ṣāliḥ), northern Ḥijāz, dated 267 A.D. (M. Lidzbarski, in ZA, 1909, 194-7; Jaussen & Savignac, in Rev. Biblique, 1908, 241-50; Chabot, in Comptes Rend. Acad. Inscri., 1908, 269-72; L. Cantineau, Nabāmah, ii, 38), with a line in Thamudic; the other, the inscription of Imraʾ al-Kays “king of all Arabs” at al-Namāra, dated 328 A.D. (R. Dussaud, in Rev. Archéol., 1902, 469-2; id., Mission ... Syrie Moyenne, 314; M. Lidzbarski, Ephemeres, ii, 34; (Repr. Epigr. Sém., no. 483; Cantineau, ii, 49). M. Hartmann (OLZ 1906, 573; Arab. Frage, 1908, 510, now also Dussaud, Penetration etc., 64 sqq.) thought Imraʾ al-Kays to have been a king of al-Ḥira, but the language of the inscription is shown to be a Western dialect by the pronouns fyem. sg. demonstr. and dāʾar relat. and (ii) The literary language

(1) Classical Arabic

The oldest texts in Arabic script are three graffito on the wall of the temple of Ramm in Sinai, dating from ca. 300 A.D. (H. Grimme, Rev. Bibl., 1935, 270; 1936, 90-5). Christian inscriptions, accompanied by Greek versions, are at Zabad, dated 512 A.D. (E. Sachau, in Mith. Fr. Ak. W., 1881, 169-90; id., in ZDMG, 1882, 345-52), and at Hārrān in the Legādā dated 568 A.D. (Schroeder, in ZDMG, 1884, 34; Dussaud, Mission ... Syrie Moyenne, 324; Cantineau, Nabāmah, ii, 50; on both inscr. E. Littmann, in RSO 1911, 193-8). The text of an inscription on the church of Hind at al-Ḥira, about 560 A.D., is recorded by Muslim historians (al-Bakri, 364; G. Rothstein, Lahāiden, 1809, 24). An undated graffito is at Umm al-Dīmāl (E. Littmann, in ZS, 1929, 197-204). All four inscriptions in N. Abbott, Rise of the North-Arabian Script, 1939, plate I.

The Christian character of the dated inscriptions suggests that the Arabic script was invented by Christian missionaries, as were so many Eastern alphabets. Abbott (op. cit. 5) localises its invention, with much probability, at Hīra or Anbār.

It is probable that at least partial Bible translations into Arabic existed before Islam. Stylistic reminiscences of the Old and New Testaments are found in the Kurʿān (W. Rudolph, Abhängigkeit d. K. v. Judentum u. Christentum, 1922; T. Andrae, Ursprung d. Islams u. d. Christentum, 1926; A. Mingana, Bull. J. Rylands Library, 1927, 77-89; Ahrens, in ZDMG, 1930, 15-68, 148-90). A. Baumstark claimed pre-Islamic date for the text of some Arabic Bible MSS (Islamica, 1931, 569-75; BZ 1929/30, 359-9; OC, 1934, 55-66; against this Graf, Gesch. d. d. Christ. Litt., i, 142-6). There also is a fragment of the Psalms in Arabic in Greek characters (Violet, in OLZ, 1901, 384-403). Examination of this and of two of Baumstark’s texts (B. Levin, Griech.-Arab. Evang. Uebers., 1938) shows a language slightly deviating from Cl. Ar. towards the colloquial. This is typical for Chr.-Arab. literature (Graf, Sprachbeizruh d. Alteren Chr.-Arab. Liter., 1905), for early papyri and for the language of scientific writing; it may be early colloquial influence, but also a Cl. Ar. not yet standardised by grammarians.

The Arabian Jews are less likely to have participated in the literary formation of Cl. Ar., since
at that period written translations of the O.T. were not being made by Jews (though a Jewish translation is mentioned by Bukhārī iii, 98). The Jewish tradition in Umayyya, as Ibn Sīdī (J. W. Hirschberg, Jüd. u. Chr. Lehren im vor- u. frühislam. Arabien, 1939) and in the Kurān (cf., e.g., Torrey, Jewish Foundations of Islam, 1933; A. Katsh, Judaism in Islam, 1954), show all signs of oral transmission. Jews, however, used Cl. Ar. before Islam, as e.g. Samaw'al ibn 'Abīdīya (cf. also I. Guldī, Arabische antikis., 1921, 145-6; Hirschberg, Dīwān al-S. b. Ḍā'im, 1937, Intro.), and are said to have taught the Muslims to write at Medina (Baladhurī, Fatīḥa, 473).

Wellhausen (Reste arab. Heidentums, 1927, 232) plausibly suggested that Cl. Ar. was developed by Christians at al-Hīra. Muslim tradition names among the first persons who wrote Arabic Žayyād b. ʿAmrī (ca. 500 A.D.) and his son, the poet ʿAdī, both Christians of Hīra (Aghānī, ii, 100-2). ʿAdī's language was not considered fully ʿajīb, which may be taken as meaning that Cl. Ar. was still in course of evolution. Al-Mufaddal (apud al-Marzubānī, Muwaṣṣilāt, Cairo 1343, 73) says that ʿAdī drew on many tribal dialects, a procedure alleged by other scholars to account for the excellence of the Kuraysh dialect. This statement gains in substance if we recall that nowadays the poetry of Arabic is often couched in bedouin dialects, and that the oldest genuine bits of poetry, those connected with the War of ʿBāṣūs, come from the Euphrates region. The court of Hīra remained a centre for bedouin poets: this helped in developing and unifying the language of poetry; its written use at Al-Hīra also furthered its standardisation.

As to the origins of that poetical language itself, earlier Muslim tradition sought it in various tribes, while later scholars, no doubt for theological reasons, identified it with the dialect of Kuraysh. This view was accepted by Grimm (Mohammed, 1904, 23), ʿĀṣa Ḥusayn (Al-ʿAdāb al-Dīhāšī, 1927), and Dhorme (Langues et écritures sémit., 1930, 53). Most western scholars agree in seeking its home among the bedouins of Najd—as did in practice the Muslim philologists of the 2nd-4th centuries, who would only accept Najdī bedouins as authoritative informants. Some believe it to have been originally the language of one definite tribe, others a compromise between various dialects; others again think it acquired some purely artificial character, both in phonetics (it lacks the contractions在一起) and in syntax, where it keeps alive constructions lost in early prose (Bloch, Vers und Sprache im Allarab., 1946). It is beyond doubt, however, that in the late 6th cent. A.D. it was a purely literary dialect, distinct from all spoken idioms and super-tribal. It is today often referred to as the "poetical koine". Its conti-

Please note that the text is quite long and contains a mix of Arabic and English words. It discusses the development of the Arabic language and its usage in early Islamic poetry and literature. The text also includes references to various scholars and their works, which are cited throughout the text.
Already in Pre-Islamic Arabia, the ko'ine had to be learnt, and the men who preserved and taught it, the ṭālīk, were ready when the need arose for non-Arabs to acquire it under the Umayyads and Abbasids. Abu ‘l-Aswad ad-Du’ali and Qhall b. Ahmad belonged to that class, but they were soon joined by men who had inherited the habits of thinking taught in the Hellenistic Schools of Rhetoric, and who systematised the traditional lore of the ṭawḍūt and applied the science thus created not only to poetry but also to the Kur’ān, harmonising wherever the texts “deviated” from the rules. Before turning into the Literary Arabic of the Islamic period, Cl. Ar. thus underwent a process of sifting and systematisation, with subsequent refurbishing of the old sources, poetry and Kur’ān, according to the new stricter standards.

The history of the European study of Arabic is at first one of increasingly effective utilisation of the Arab philologists’ work. The first grammars, by Postel (1538) and Erpenius (1613), were based on late school manuals. The first systematically to use older and more advanced Arabic works was S. de Sacy (1810). C. P. Caspari (1848) was based on Zamakhshari; in the 3rd edition of W. Wright’s translation (1896 and reprints) this base is much enlarged. D. Vernier (1892-2) utilized Sibawayh; M. S. Howell (1880-1911) digested all Arab grammarians. In lexicography, the evolution goes from Raphelengius (1613) and Giggeius (1632, based on the Kāmis of al-Fluzu‘abādī), via Gollus (1653, based on the Sa‘ād of al-Djawharī) to E. W. Lane’s gigantic translation and rearrangement of IA (1883-93; parts 6-8, ed. by S. Lane Poole, are less useful) and the practical dictionaries of Belot and Hava, based on LA.

In its second stage, European scholarship attempted to improve on the achievements of the Arabs by direct reference to texts and independent analysis. In grammar, the process begins with H. L. Fleischer’s notes on S. de Sacy (Kleinere Schriften ii, iii, 1868-8); further of special importance Th. Nöldeke, Zur Gramm. des klassischen Arabisch, SBAr. Wien, 1897, ii; H. Reckendorf, Synchronistische Verhältnisse d. Arab., 1895-8; id., Arabische Syntax, 1921; C. Brockelmann, Grundr. d. vergl. Gramm. ii, 1913; M. Gaudemet-Drombynes and R. Blachère, Gramm. de l’Arabe Classique, 1937. In lexicography, the principal fault of the Arab works is that—apart from some specialist vocabularies and al-Fayyūmī’s Miṣḥāb al-Munir—they largely neglect the post-classical accretions to the language. Texts were utilised already by G. W. Freytag (1830-7) and A. de Biberstein-Kazimierczki (1860). In spite of the Supplement of R. Dozy (1881), the Additions of E. Fagnan (1923), the glossaries added to the Leiden Ṭabarli edn. (1901) and vols. iv, v, viii of the BA, etc., the vocabulary of medieval Arabic is still far from fully recorded. I. Krachkovsky, Neustadt and Shusser (1947), and H. Wehr (1952) deal with modern Arabic. Yet even for Cl. Ar. there is still much work to be done. Some gaps are closed by glossaries with editions of poems, e.g. that of A. Müllner to Nöldeke’s Delectus etc. (1890), A. A. Bevan to C. J. Lyall’s edn. of the Muḥammadīyyāt (ii, 1924), and those added by Ch. Lyall to ‘Abid and ‘Amir b. Ṭawwāl (1913) and F. Krenkow to Ṭawwāl and Ṭirimmalla (1927). The Hebrew University of...
Jerusalem has prepared a card-index concordance to Pre-Islamic poetry. Publication is planned at Cairo of the lexicon of A. Fischer; the edition by J. Kraemer of Nöldeke's 
Belegwörterbuch (incorporating collections by Bevan and others) began in 1952. No scientific dictionary exists as yet for the Kur'ān, those by F. Dieterici (1881) and Penrice (1873) being unsatisfactory.

(C. Rabin)

Arabic poetry began in Rabl a with Muhalhil; then shifted to Kays where the two Nabighas and Zuhayr flourished, and finally reached Tamilm where it remained till the days of Islam (al-Mushir, II, 476, 477). Light on the subject may be sought in the many attempts at explaining the tradition "The Kur'ān was revealed in seven ahruf (tongues or languages)". According to Ibn 'Abbās those were the seven dialects of Upper Hawāzīn and Lower Tamilm. This may be taken to mean that these seven dialects, being the clearest and the most eloquent, contributed largely to the formation of the literary language [al-Suyūtī, al-Itha 'ān, Cairo 1935, 47]. Al-Ṭabarī raises the question as to whether the Kur'ān was revealed in all or some only of the Arab dialects, and uses the tradition referred to above to argue that the Kur'ān was revealed in some only (seven) as the Arab dialects were too numerous to count. (Tafsīr, Cairo 1323, I, 13).

The second stage in the development and spread of literary Arabic begins with the rise of Islam. The new religion chose to make its challenge to the poetically-minded Arabs through a literary composition. The new Holy Book, by its excellence, proved to the Arabs as miraculous as the turning of a stick into a snake, or the healing of the sick was to former peoples. The whole revolution in the life, belief and practical philosophy of the Arabs was embodied in the chapters of this new Book. From the beginning of its revelation it was being learnt by heart by the Muslims and recorded in writing by the special scribes employed by the Prophet (al-Djāshshiyārī, al-Wuzarā' wa 'l-Kuttāb, ed. Saḫkā and others, Cairo 1938).

The general practice was that a Muslim would learn a few verses (ten for example) and would not exceed them until he knew their meaning and followed their precepts in practical life [al-Ṭabarī, Dīmās al-Bayān, I, 27, 28]. It was not long before a group of companions (e.g. Ibn 'Abbās, Ibn Mas'ūd, 'Ikrīma, and 'All) became specialists in the interpretation of the Kur'ānic text. Thus a new branch of literary and linguistic learning started which became later an important factor in the standardisation of literary Arabic. But there was another important aspect of Kur'ānic reading which had some bearing on the development of literary Arabic, namely the variants which caused concern to many a faithful believer.

The danger of this variation in the reading of the Kur'ānic text was removed only by the preparation of standard copies at the command of the third Caliph, 'Uthmān (see Kur'ān).

Thus the first and foremost Islamic literary work in the Arabic language became the most authentic model for literary usage. Wherever the Islamic faith went in its rapid spread, it carried with it this religious and literary constitution. Every believer learnt part -or all, of it by heart, and was influenced in his literary activities by its diction and modes of expression.

Many of the variant readings of the Kur'ān, however, were preserved to us through the Kirdāt literature and have proved valuable in the reconstruction of Arabic dialects.

The Kur'ān had, yet, another aspect in which it influenced the course of the literary language, namely its miraculous unsurpassable excellence. The literary Arab celebrities admitted impotence before its challenge, and Muslims down the ages looked up to it as their literary guide and linguistic authority.

The study of the secrets of Kur'ānic eloquence (ṣīdā) has given Arabic literary criticism a special approach and a wealth of material (see M. Khāla-
During the Prophet’s life-time and some time after, poetical activities among the Arabs gave way to the propagation of the new faith by word and by sword. Some devout Muslims found better occupation in learning the Qur’an and pondering on the beauty of its style, others joined the invading Muslim armies in Syria, Irak and Persia. The art of public speaking, for a period, took the place of the art of poetry. The literary language now was turning more and more into a language of religious guidance, moral uplifting and legislation for the new order.

New shades of meaning and literary usages began to develop within the framework of the pre-Islamic literary language. “The Arabs in their dīkhāsiyya days”, says Ibn Fāris, “had inherited from their ancestors a heritage of dialects, literature, rituals and sacrificial practices. But when Islam came, the Arab tribes mingled and intermarried, and their linguistic usages were shifted from one usage to another, because of matters added, commandments imposed, and rules established”. (Examples of these changes are given by as-Suyūṭī, Ibn Khallawayh, al-Thaūlībī and Ibn Durayd, see, al-Musḥīr, 1, 294, 295, 296, 298, 301, 302).

Thus the second stage in the development of the Arabic literary language has brought in new important factors, religious and social, and introduced many necessary linguistic changes. But that was not all. The scene was considerably widening and shifting. The Arabs were no longer contained in their Peninsula, but were spreading out with the rapidly sweeping conquests of Islam. Wherever they went they carried with them not only their new Arabic Holy Book with its polished and appealing language, but they carried also their tribal linguistic characteristics, and their traditionally inherited literature (poetry, proverbs, narratives, and oratorical speeches) which they stored in their memories.

These conquests were an important factor in the process of Arab linguistic unification. Several of the big invading armies were composed of mixtures of tribes, many of whom were accompanied by their women and children. Thus a good deal of intermixing and intermarriage between the tribes took place in the conquered cities. Newly established settlements—all of them from north as well as from South-Arabia, and from Hijāz as well as from Najd.

The Arabs were now passing from the tribal stage to the stage of cities and countries. Their social units were no longer tribal, but urban, as in Basra or Kūfah, and regional, as in Syria or Egypt. This new regrouping of the Arabs must have reduced considerably the differences of the dialects, and reinforced the unifying processes already begun in pre-Islamic times.

With these conquests, Arabic was now spreading to new non-Arab territories. Its fortunes in the different units of the vast Islamic empire were varied. In some countries like Syria and Egypt it became—and is still at the present time—the national language of the country. In others like Persia it remained for a few centuries the language of culture, politics, administration, and later of the Church, while Coptic was the vehicle for daily intercourse among the population. Yet the adoption of classical Arabic as a state language, and of colloquial Arabic as a conversational medium among the Egyptians was accomplished within a century after the conquest. Authorities state that Coptic disappeared almost completely after that period from most parts of Egypt, and could only be found among the scholars who specialised in studying it (A. Amin, Fādir al-Islām, 259). When Islam entered North Africa it found three languages there; Latin, which was the language of administration and culture; a mixed language composed of Greek, Latin and Semitic elements which was bequeathed by Carthage; and Berber in the interior of the country. Arabic became the dominant language in the cities through the spread of the new religion and the arrival of wave after wave of Arab settlers. The Berber language, however, resisted the spread of Arabic in its strongholds in the interior.

These conquests, then acted as carriers of Arabic both as a literary and as a colloquial language in many different lands. As many Arabs migrated to these new territories, taking their language with them, so did great numbers of non-Arabs migrate in the opposite direction; many as slaves and clients (mawāld), and they settled in the big Arab centres of Mecca, Medina, al-Asṣāra and al-Kūfah. They naturally adopted Arabic as their medium of intercourse, and some of them mastered literary Arabic and became famous writers and poets. Some of the Persian mawāld found in the two capitals of Hijāz a fertile soil for their music and singing. Thus a movement of interaction between Arabs and non-Arabs was taking place all through the Islamic empire during the 1st/7th century. This movement produced a great civilisation which became known as Arab-Islamic civilisation. The contribution of the conquered races to this civilisation consisted in culture, learning, and administration, while the purely Arabian contribution lay in the linguistic and the religious fields. The ancient Aramaic and Iranian cultures, under the aegis of the Caliphate, were woven into a new pattern and expressed through the medium of the Arabic tongue. Arabic thus invigorated by new elements of ideas and images, was enriched with fresh conceptions of excellence and eloquence, and enriched even with a new vocabulary. Persian, in particular, was responsible for the introduction

al-Isamiyya, Cairo 1952, Vol. II). The spread and establishment of Arabic in some countries as a national language was aided by various factors. In Syria Arab elements had already settled, Arabic poetry had been welcomed at the Ghassānids’ courts, and many of the inhabitants spoke Aramaic, a kindred language. In Irak, too, Arab tribes had already settled from pre-Islamic times, and an Arab state had established itself in al-Hira. In those regions of Irak where Persian was prevalent, the long-established neighbourhood of facts and Persians paved the way for the conquering language. Some Persian kings—such as Bahram Gūr—are said to have been brought up in the Arabic courts and to have composed Arabic poetry. H. C. Woolner (in Language in History and Politics) states that Persian was influenced in the seventh century A.D. by a strong Aramaic current which prepared the way for the spread of Arabic. Another form of that influence came through Syriac which occupied an important position as a cultural medium in Persia.

In Egypt, Greek had been, since Ptolemaic times, the language of culture, politics, administration, and later of the Church, while Coptic was the vehicle for daily intercourse among the population. Yet the adoption of classical Arabic as a state language, and of colloquial Arabic as a conversational medium among the Egyptians was accomplished within a century after the conquest. Authorities state that Coptic disappeared almost completely after that period from most parts of Egypt, and could only be found among the scholars who specialised in studying it (A. Amin, Fādir al-Islām, 259). When Islam entered North Africa it found three languages there; Latin, which was the language of administration and culture; a mixed language composed of Greek, Latin and Semitic elements which was bequeathed by Carthage; and Berber in the interior of the country. Arabic became the dominant language in the cities through the spread of the new religion and the arrival of wave after wave of Arab settlers. The Berber language, however, resisted the spread of Arabic in its strongholds in the interior.

These conquests, then acted as carriers of Arabic both as a literary and as a colloquial language in many different lands. As many Arabs migrated to these new territories, taking their language with them, so did great numbers of non-Arabs migrate in the opposite direction; many as slaves and clients (mawāld), and they settled in the big Arab centres of Mecca, Medina, al-Asṣāra and al-Kūfah. They naturally adopted Arabic as their medium of intercourse, and some of them mastered literary Arabic and became famous writers and poets. Some of the Persian mawāld found in the two capitals of Hijāz a fertile soil for their music and singing. Thus a movement of interaction between Arabs and non-Arabs was taking place all through the Islamic empire during the 1st/7th century. This movement produced a great civilisation which became known as Arab-Islamic civilisation. The contribution of the conquered races to this civilisation consisted in culture, learning, and administration, while the purely Arabian contribution lay in the linguistic and the religious fields. The ancient Aramaic and Iranian cultures, under the aegis of the Caliphate, were woven into a new pattern and expressed through the medium of the Arabic tongue. Arabic thus invigorated by new elements of ideas and images, was enriched with fresh conceptions of excellence and eloquence, and enriched even with a new vocabulary. Persian, in particular, was responsible for the introduction
of new terms in the fields of luxury, ornaments, handicrafts, fine arts, government administration, and public registers (A. Amin, *Fadgr al-Islam*, Section iii): (M. Khalfallah)

(3) Middle Arabic

The creation of an Arabic Empire stretching at the height of its power from the Pyrenees and the Atlantic to the shores of the Sûr Daryâ and the Indus had far-reaching consequences on the development of the Arabic language. Arabic, hitherto spoken in Arabia proper and its immediate neighbourhood, went with the Muslim armies to the farthest ends of the far-flung empire. Life in camp and on expedition brought men of different tribes into close contact and the vicinity of the tribal quarters (khâlîfah) in the great cities soon led to a levelling of their dialects. In addition to these dialects, some forms of interdialectal speech were in existence, notably the language of oratory used by the tribal spokesman (khâlîfah) in his harangues, and the poetical language, both of which had been cultivated in pre-Islamic days and were now enriched by the language of the Kur'an. The poetical language was characterized by certain peculiarities of metre and rhyme, vocabulary and phraseology, figures of speech and imagery inherited from the ancient bards, but otherwise it was presumably still close to the language of everyday conversation; verses were still improvised on the spur of the moment, nor did their understanding require any sort of education on the part of their hearers.

It is only in the latter half of the first century that we find new linguistic traits in the love-poetry of the Hijâz. These poems, whose surroundings gave them leisure to reflect upon their emotional experiences, felt the conventions of bedouin poetry inadequate for their purposes and began to use the conversational style of the new aristocracy, which was modified by the Hijâzî dialect as well as by the exigencies of settled city-life (see Paul Schwarz, *Der Diewan des 'Umar b. abi Rabî'a*, iv, 1909, 94-172).

In the new provinces—except perhaps Syria—the Arabs were considerably outnumbered by the indigenous population who continued to use their mother-tongues, but had in their dealings with government to adapt themselves to the idiom of the conquerors, though at the beginning they used some sort of makeshift language. Then there were those non-Muslims who had been taken prisoner and were brought into the houses and harems of their Arab masters. They quickly adopted Arabic and as a rule embraced Islam. Many of them or their descendants were freed from bondage and played as freedmen (masâ'îlî) an important rôle in the economic life of the empire, especially in the cities where they formed the bulk of the population. They spoke Arabic with many alterations, due partly to the influence of the language of their forebears, partly to the dialect of their Arab patrons and neighbours, and last but not least to the rapid changes in their economic and social environment. These widely differing idioms were the forerunners of the Middle-Arabic local dialects, which were spoken by the lower classes in the towns of the various provinces. They were characterised by a simplified pronunciation, the glottal stop was dropped; ū, voiced in bedouin speech became voiceless; emphatic and non-emphatic sounds and also ādâ and ātâ were confused; in the areas where Aramaic was formerly dominant, the interdental spirants were replaced by the corresponding occlusives. But the most telling feature of Middle Arabic was the weakening and loss of the short final vowels and along with it the abandonment of the desinential inflection (khâb), which had momentous consequences for the structure of the language (J. Cantineau, *Bulletin de la société linguistique*, 1952, 112). The old system of inflexion fell into disuse; cases, status, moods were no longer distinguished. Their functions had to be taken over by word order, periphrastic expressions, and other means common in languages of an analytical type. Middle-Arabic was also adopted by the Christianizers of Palestine, Syria, and Mesopotamia and by the oriental Jews, and from the 2nd/8th century onwards used by them for literary purposes, whilst with the Arab Muslims the classical language remained the proper medium for literary activities.

In this appreciation of the language of the Kur'an and of the ancient Arabic poetry they were followed by the masâ'îlî, who from the first tried to conform to the higher standards of Arabic and were already in the 1st/7th century contributing to Arabic poetry (e.g. Ziyâd al-A'dâm). By the end of the 1st/7th century the masâ'îlî felt the necessity for some sort of training in the classical language, thus giving an impetus to the beginnings of grammatical studies, whilst the Arabs grew apprehensive of unidiomatic speech and realized the necessity for preserving the purity of their language.

Once taken up by the masâ'îlî, the classical language survived the downfall of the Umayyad dynasty and continued to be the medium of Islamic culture throughout the Muslim world, not only in those provinces where Arabic was dominant or gaining ground but even in countries where it was never to gain a firm footing. In the schools of Basra and Kûfâ the rules of the “arabiyya” were standardised according to the idioms of those bedouins who were credited with the purest language. This standard language was used at court and in good society, and to master it was one of the first accomplishments of a man of letters or learning. Its application to literary purposes shows a great variety of types. All narratives referring to Arabic and bedouin life (e.g. the amâhîl al-'Arab, asyânâm al-'Arab, but also the maqâšîd and the siâr) preserved to some extent the uncouth originality and artless naïveté of the old language. In the literature of hadîth (traditions) and fiqh (jurisprudence) the social and economic changes left their marks on the vocabulary, phraseology, and even morphology. Of a quite different type is the language of the secular prose-writers of the early 'Abbâsid period (e.g. Ibn al-Mu'âkîf). Here the changes in Muslim society brought about by the ascendancy of the non-Arab races, the pre-Islamic heritage and the revival of Oriental Hellenism, took full effect. It is polished, lucid, flexible and well adapted to the expression of thought in a precise manner; its vocabulary, though lacking the exuberant abundance of the bedouin language (as witnessed e.g. by the urdfîsâ-poesy), is rich and expressive, and its grammatical structure free from the cumbersome overgrowth of nominal and verbal forms so conspicuous in the bedouin language. The same simplicity and smoothness is found also in the verses of the so-called “modern” (maqâshîd) poets of the same period (e.g. Abu l-'Arîb, ‘Abî ‘Arîb, although in poetry as a rule the imitation of the old patterns has always been closest.

On the language of everyday life and the dialects spoken by the different strata of Muslim society during this period very little is known. How complicated the linguistic situation had grown by the
end of the 2nd/8th century we can gather from occasional remarks of al-Djahiz (165-255) not only about the direct language of true bedouins, its gradual corruption through the vicinity of towns and intercourse with the peasantry, about the patois of the lower orders, the cant of peddlars, the argot of beggars, the technical terms of trades and professions, but also about mispronunciation and faulty speech on the one hand and euphemism and mannerism on the other.

These divergent tendencies soon affected the written language. The translators and scientists who made the legacy of Greek philosophy, medicine, mathematics, and other sciences accessible to the Muslim world, enriched the vocabulary considerably by innumerable technical terms. But they were often Christians (e.g. Hunayn b. Isbák) or Jews, and had neither a good grounding in Arabic grammar nor any aptitude for literary perfection and accomplished style. Their translations, therefore, show as a rule some Middle Arabic features (see G. Bergsträsser, Hunain b. Isbák und seine Schule, Leiden 1913, 28-53).

The decline of the Abbásid power and the ascendency of the Turkish soldiery in the course of the 3rd/9th century led to a general lowering of the standards of education; even the court-language no longer preserved its former purity but was marred by vulgarisms. About the year 300/912 the classical language ceased to be used in the conversation of good society, in the law-courts and colleges, and froze into a literary idiom; to stick to the rules of the ʻɪrāb was considered a sign of pedantry and affectation. At the same time the former enthusiasm for the bedouins began to wane, and their language—the dialects of which had in the meantime undergone many changes—was no longer looked upon as the best representative of Arabic speech. The classical language was spoken only on solemn occasions, otherwise its use was restricted to the domain of literature. Here its application was mainly a problem of style. Henceforward the term 'arabiyya meant an unalterable system of words, phrases, grammatical forms and syntactical structures, which was strictly regulated by the rules of grammarians and lexicographers and could not—at least theoretically—be improved upon. In applying this artistic language to his theme—which in its turn he had to select from a limited number of topics (maʿānd)—an author had a choice between different styles, differing in the employment of rhyme, rhythm, figures of speech and other embellishments. But once he had chosen his theme and its style he was committed to the traditional patterns (see G. E. von Grunebaum, The Aesthetic Foundation of Arabic Literature, Comparative Literature, 1953, 323-40). It is for this reason that a writer had not only to possess a thorough knowledge of the intricacies of Arabic grammar and lexicography, but also to study and learn by heart the best pieces of classical prose and poetry (though the question as to what authors were of classical rank was often hotly debated). In these circumstances the 'arabiyya was bound to become a learned medium and its study was cultivated by Arabs and non-Arabs alike. The non-Arab races contributed even more of the best prose-writers (e.g. al-Khâṣṣâlam and Badîʾ al-Zamân) and philologists (e.g. Abû Hilâl al-ʻAskârî). The high literary language was the privilege of an élite and required sometimes a commentary either by the author (e.g. Abu ʻl-Âlâ al-Mâṣârî) or by his admirers (e.g. al-Muṭânâbbî) in order that it might be understood by the hearers. Occasionally vulgarisms were used for artistic purposes (in muwâsâhât, mawgâl) and even the argot of the beggars and swindlers was made use of by Abû Dulaf in his al-Kâṣîda al-Sâsâniyya; but on the whole the vocabulary of high literature was choice and exquisite.

These high standards, however, were required in high poetry and ornate prose only. In the other branches of literature there is a great variety in language and style. Often it is only the preface which is written in refined prose and in choice wording, whilst the bulk of the book betrays the Middle-Arabic character of the author’s speech. In books written for practical purposes the technical terms of the subject had to be used. If the author had no proper knowledge of the grammar, faulty speech was unavoidable; the worst example is perhaps the Kitâb ʻArâjâb al-Ḥind by Buzurg b. Shâhirîyâr al-Râmîmurzî written after 347/953 (Le Livre des Merveilles de l’Inde, éd. par P. A. van der Lith et L. M. Devic, Leiden 1883-6). It is full of vulgarisms (see de Goeje’s remarks in van der Lith’s edition, 205), some of which are common in Middle-Arabic whilst others are probably due to the author’s non-Arab mother-tongue and his profession.

These disrupting tendencies were fostered by the disintegration of the Abbásid empire. Already in 375/985 al-Mâkdisî could in his description of the Muslim world attempt to characterise each country by the peculiarities of its language. It appears from his account that in his days in all Arabic-speaking countries the conversational language of the upper classes had suffered considerably under the inroads of local dialects and that the most correct Arabic was heard in the Eastern (Iranian) countries where much attention was paid to the study of grammar.

Already in the days of al-Mâkdisî the increasing independence of the Sâmânid dynasty led to the revival of New-Persian literature, which had momentous consequences on the position of Arabic as the Islamic language in the Eastern regions. Outside the Arabic-speaking world, Arabic was in the dominions of the Sâljuqs gradually superseded by New-Persian not only as the language of court, society, diplomacy and administration, but also in poetry, belles-lettres and other branches of secular—and later on even religious—literature. At the same time the rise of independent dynasties in the Arabic-speaking countries gave a new impetus to the development of the dialects spoken in their dominions and increased the already existing tension between literary language and colloquial. Thus the picture of the Arabic language as reflected in the literature of the Sâljuq period (5th/11th-7th/13th centuries) is of a bewildering complexity. There are masterpieces of ornate prose, written in a faultless style like the Mašâmâl of al-ʻIṣârî (d. 516/1122), which could be appreciated only by a small group of connoisseurs. In high poetry the imitation of the time-honoured patterns continued, but some poets succeeded in modernising the poetical diction by adapting it to the conversational style of their contemporaries, e.g. Bahâʾ al-Dîn Zâhâyr (d. 656/1253). Others even made use of the local dialects, e.g. Ibn Kûzmân (d. 555/1160) and Ibn Dîtânil (c. 693/1294). Usâmâ b. Munkât (d. 584/1191) composed verses in the conventional fashion, but his famous memoirs are written in an unpretentious style which savours of the dialect of Syria. Some grammarians grew lenient in admitting expressions which were formerly excluded from correct speech,
whilst others, like Ibn Yā'ish (d. 643/1245) (see G. Jahn in the preface to his edition, i, 10-12) wrote in a slovenly style, without regard for the rules of grammar they were expounding. In ordinary prose, offences against grammar are rather the rule than the exception, as witnessed by the works of Yākūt (d. 626/1229) (see Wüstenfeld in vol. v, 58-65 of his edition) and al-Kazwīnī (d. 682/1283) (see Wüstenfeld in vol. ii, ix of his edition). Works written outside the Arab-speaking countries sometimes betray the fact that their authors had not a full command over the language; Persian (and later Turkish) writers e.g. Ibn al-Mudjādīwī (d. 690/1291) (see Lb'fgren, Arab. Texte zur Kennniss der Stadt Aden im Mittelalter, ii, 2, 21) were apt to disregard the differences of gender, the concord of gender and number, and the rules concerning the article. There are further works of a popular character, such as the epic romances (e.g. the Strät Amdur, Strät Bani H̱ilḏ, the Maghribī legends (e.g. by Abu 'l-Hasan al-Bakrī, c. 693/1294) and the mystic poems of the religious orders; they were destined for the edification and entertainment of the middle and lower classes and were therefore written in a rather vulgar language and style. Similar vulgarisms are found in the writings of the Druses (see de Sacy, Chrétomathie Arabe ii, 236, n. 9, etc.) and the religious poetry of the Vaṭāsids (see R. Frank, Schleich 'Adl, 107 ff.). Naturally the writers of other denominations, as e.g. the Christians, the Jews (see J. Friedlaender, Der Sprachgebrauch der Maimonides, i, Frankfurt a.M. 1902) and the Samaritans (see Abu 'l-Fath, Annales Samaritani, ed. E. Vilmor 1865) had no part in the literary traditions of the Arabs, though men like Maimonides were otherwise deeply imbued with Islamic culture. But many more inquiries into the language of individual authors will have to be made before the development of literary Arabic in these centuries can be elucidated. For these studies a perusal of autographs or at least of contemporary manuscripts will be necessary, for our editions are as likely as not "corrected" by oriental printers (see August Müller in the preface to his Ibn Abu Usaybi'ā, Königsberg 1884, VII-VIII) or European editors (see S. L. Skoss in the preface to his edition of al-Fāsī, Diqām al-Abfās, i, 1936, CXL-CXIII).

After the devastation of the Asiatic countries caused by the invasions of the Mongols, there began a new period in the history of literary Arabic. Egypt rose into prominence and became under the Māmilūs (648-923/1250-1517) the centre of Islamic culture and of Arabic literature. The literary language during these centuries was post-classical. Prose-writers like Ibn Abl Usaybi'ā (d. 668/1270; see August Müller, Uber Text und Sprachgebrauch in Ibn abî Usaybi'as Geschichte der Ärste, Sitt.-Ber. Bayr. Ak. d. Wiss. 1884, 853-977) represent the colloquial as it was then spoken in good society. Ibn Yāš (c. 930/1524; see P. Kahle in the preface to his edition, vol. iv, 1931, 26-8) and Ibn Tūlūn (c. 955/1548; see R. Hartmann, Das Tübinger Fragment der Chronik des Ibn Tūlūn, 1926, 103) are even more influenced by the local dialect, especially in vocabulary. Others, such as the Amr Bektāsh al-Fāhīfī (c. 741/1341; see K. V. Zetterstén, Beiträge zur Geschichte der Māmilūskensurah, Leiden 1919, 1-33) shaped their style on their native Turkish, as did other scholar-poets of the thirteenth and fourteenth centuries. In poetry the dialect was sometimes utilised e.g. by Ibn Sūdān (d. 868/1464) in his humorous and satirical poems.

The great changes which took place in the world from the end of the 9th/10th century deeply affected literary Arabic. After the capture of Granada in 897/1492 and the expulsion of the Moors the Arabic language vanished from the Iberian peninsula. In the Maghrib, where the classical language had always stood in sharp contrast to the local dialects, there sprang from the latter a new poetical language, the so-called malṭūt, which since the 10th/11th century has enjoyed an ever-increasing popularity in Morocco. The other Arabic-speaking countries were sooner or later conquered by the Ottoman Sultans who were not primarily concerned with the cultivation of the Arabic language and literature. Even in Egypt, hitherto the mainstay of Arabic culture, literary activity sank to its lowest ebb. Literary Arabic was the prerogative of an elite. The dialect was occasionally utilised for literary purposes (e.g. by al-Shirbīnī, c. 1098/1687, in his Hass al-kabīrī). Already in the 10th/11th century poems were composed in the vernacular (see M. U. Bouriant, Chansons populaires arabes, Paris 1893, and Fuad Hasanain Ali, Ägyptische Volkslieder, i, 1939). In Syria, the Maronite archbishop of Aleppo, Germanus Farḥāt (q.v.) (d. 1453/1732) did much to revive the study of Arabic grammar, lexicology and rhetoric amongst his countrymen. Outside the Arabic countries Arabic continued to be used by scholars, more especially in theology, juridical and legal subjects; though its sphere comprised by now parts of North and East Africa, Zanzibar, Malaya, and the Indonesien Archipelago, yet it was less influential than in the preceding period. This period of stagnation and decay lasted till the beginning of the 13th/14th century.

Bibliography: References are already given in the article. Many observations on the classical and postclassical usage are found in the prefaces to editions of Arabic texts, in grammars and dictionaries and especially in H. L. Fleischer, Kleine Schriften, i-iii, Leipzig 1885-8; Th. Nöldeke, Zur Grammatik des klassischen Arabisch, Wien 1896; see also J. Fück, Arabiya, Unter- suchungen zur arabischen Sprach- und Stilgeschichte, Berlin 1950 (Arabic translation by Abūd al-Fāhīm al-Nadjīdī, Cairo 1951; French translation by C. Denizeau, 1955).

Modern written Arabic

The intrusion of Europe into the range of vision of the Arab world begins with Napoleon's expedition to Egypt in 1798. The adoption of innumerable elements of Western civilisation had far-reaching effects on the written language. This began already with Muḥammad ʿAll's programme of reform which set out deliberately to take over Western achievements and was focussed on France, which everywhere remained the model until after the first World War. As a result of the sending of student missions to study in France, the formation of schools on European lines and the foundation of an Arabic press, and, above all, of the translation of numerous European books, the necessity of finding expressions for a host of foreign ideas was felt first in Egypt and then too in other countries—foreign ideas for which at first only foreign words were available. Even the works of early translators in Egypt, of whom the most notable was al-Ṭahāwī (1801-1873; cf. Brockelman, II 481, II 731, W. Braune in MSOS XXVI 2, 119-125; J. Heyworth-Dunne in BSOS IX 961-7, X 399-415) already contain, side by side with numerous foreign words taken over indiscriminately, pure Arabic neologisms to express Western concepts.
But a real counter-movement against the excessive use of foreign words did not begin until the second half of the 19th century. The question of how to meet the ever-growing need for new expressions in Arabic became one of the major problems of intellectual life. The impact of Europe in itself awoke among the Arabs, after an interval of centuries, reconsideration of their own linguistic and literary tradition. The revival of the old philological learning was facilitated by the printing of many old literary works and especially of native dictionaries and grammars. The dogma that the 'Arabiyya as the oldest literary form of the language was better and more "correct" than any later forms and that it must therefore be the highest authority for linguistic correctness at the present day too became the guiding idea for the whole language movement, even if there were voices in opposition. Thus the old purism was revived again, and with it the tendency artificially to control the development of the language, with recourse wherever possible to the old model language. This movement started in the Syrian-Lebanese area. Outstanding among the earlier language critics was Ibrāhīm al-Yāḍī (1847-1906; Brockelmann, S II 766), who criticised the language of the Journalists and Writers of the modern age in Lūgāt al-Dīrādī (published in book form, Cairo 1319). The inevitable modernisation and expansion of the vocabulary of the 'Arabiyya ought, according to the wishes of the purists, to be carried out by drawing to the greatest possible extent on the wealth of words, roots and forms in the 'Arabiyya. The question of how to proceed in detail and how far European words should be employed has been actively discussed again and again. In innumerable essays in nearly all periodicals and in many separate publications right up to the present moment, immense quantities of neologisms have been proposed, although it must be said that only a small percentage pass into general usage. Extending far beyond the circle of professional philologists, this movement has also affected large circles of the general educated public. The struggle with technical terms (mustālabāt) is a difficult problem for every specialist in any technical or scientific branch and gives many of them the impetus themselves to become linguistically creative and to publish their own technical terms. The literature on this subject written in Arabic is very vast and scattered, and cannot be treated here more than generally. There are large collections of the terminology for many special fields (Ahmed 'Īsā, Mu'āammad Asmā' al-Nabātī, Cairo 1930; Ahmad 'Alī, Mu'āammad al-Hayyāūnī, Cairo 1932; Mustafā al-Shihābī, Mu'āammad al-Islāmī al-Zirā'iyya, Damascus 1943; M. Asfārī, English-Arabic Dictionary of Medicine, Biology and Allied Sciences, 6 vols., Cairo 1929—only mention one a few). But such works do not confine themselves to listing expressions which are already in current use; they also introduce suggestions of their own; they cannot therefore be considered as descriptive scientific material but are contributions to the establishment of terminology. The idea of co-ordinating these efforts and of establishing language academies for the standardisation of vocabulary dates from the 60's of the last century (cf. Braune I.c. 133). After several unsuccessful attempts, a scientific academy (al-Majālat al-'Imār al-'Arabī) was founded in Damascus in 1919, which also devoted itself to the reform of the language and published many contributions to the language problem in its review, which first appeared in 1921. In 1932 the Egyptian Royal Academy of the Arabic Language (now Majālat al-Lūgāt al-'Arabiyya) came into existence. Apart from the study of the old language and literature its main concern is the regulation and expansion of the modern vocabulary. In its review (Majālat al-Lūgāt al-'Arabiyya, Vol. I-VII, 1934-1953) and since 1942 in a sequence of special publications, the use of a great many mustālabāt has been recommended, so far without the anticipated and desired effect being achieved. The official principles on which the Academy works can also be gathered from the minutes of meetings (Maḥādir, since 1936). Even in Irāq, where formerly the review Lugāt al-'Arab (Vol. I-IX, 1921-1931) of P. Anastase al-Karmali was the leading organ of the purist trend, an Academy was formed in 1947 (al-Majālat al-'Imār al-'Arabī) which, inter alia, is also concerned with the problems of terminology. The real difficulty, however, with all these official attempts at creating standard terminologies for technical and scientific fields lies not so much in coining new expressions, as in securing their general use among the specialists concerned. Although the possibility of popularising newly-coined technical terms in specialist circles has often been overestimated, the practical effect of the purist movement on actual language usage cannot be denied. In many individual cases one can observe how artificially created words have quickly entered into the general stock of words of journalists and writers. The efforts of the purists however are concentrated almost entirely on the isolated word, that is, on the extrinsic elements of the language.

Turning to the linguistic facts, the striking feature is the infiltration of English and French phraseology, translated into Arabic (so-called loan translation or "calques") and the change in the inner form. In particular the language of daily communication (press and radio) and of writers with little or no classical education has a distinct European touch. Phraseology and style are far more difficult to check than terminology. This development is therefore inevitable, and must be accepted as a fact. In the field of belles lettres, on the other hand, we find in many cases a strong attachment to tradition. Authors with a classical education are still today able to keep close to the ideal of the 'Arabiyya in their style; they sometimes make use of uncommon words and phrases of the old literature and especially of the Korān as artistic stylistic devices. But no-one can completely escape the influence of European phraseology.

Grammar, on the other hand, which can be defined in rules and which is much more subject to conscious control, gives quite a different picture. The written language has remained untouched by the sound-change, and the morphology has remained constant from the earliest times till the present day; the same is true of the syntax at least in its basic features. Here the conservative attachment to the 'Arabiyya has proved itself astonishingly effective.

In vocabulary a considerable basic stock has remained alive since the earliest times. Post-classical words, including those from the later Middle Ages, form a further element of the modern vocabulary. A host of generally accepted expressions are available from the literature, and especially of the Korān as artistic stylistic devices. But no-one can completely escape the influence of European phraseology.
behind the other > railway train); words of the 'Arabiyya still in use have been given a new additional meaning (e.g. barak = lightning > telegraph); sometimes the change of meaning is made by analogy with the foreign word, which served as model (e.g. sunduk = box > cash-box, cash office, after the French “caisse”). Moreover a large number of completely new nouns formed from old roots with the help of the Arabic nominal forms (most frequent: maf'al, -a, mif'al, -a, fa'al, -a) have passed into general usage (e.g. maf'al = museum, mif'al = jet-plane); likewise verbal nouns and participial forms are used for new expressions (e.g. iṣṭiḍ'a = broadcasting, muhaarrik = motor). The nisba-ending is widely employed in the formation of new words (e.g. iṣṭiṭrāki = socialist, iṣṭiṭrābiyya = socialism); by the expansion of its use many new adjectives have been derived from nouns, and with them European compounds can easily be reproduced (e.g. al-barid al-dīwān = airmail); genuine compound forms are still confined to those with the negation lā (e.g. lā-silik = wireless). Until the first World War the majority of foreign words were borrowed from French, others from Italian. English became an influence after the first World War, especially in Egypt and Iraq. The decrease of foreign words in Arabic is a considerable achievement of purist efforts. Words of Turkish origin have disappeared almost entirely in the last decades. We may consider as loan-words such as correspond to an Arabic nominal form or can easily be assimilated to it, and for which broken plurals are formed (e.g. bank-bunuk, jīm-al-fām, dāhur-dahāṭira) and such as are assimilated through the addition of the ending -iyah which serves as abstract ending (dimārābiyya = democracy).

The numerous accepted new words are still not sufficient. Very specialised scientific and technical details to the present day still cannot be expressed in Arabic in a form understood by all concerned. The anarchy in the field of specialised terminology even within one country is far from being at an end. The situation is aggravated by the fact that Greek and Latin technical terms which so often help specialists towards an international understanding even on complicated matters, are translated into Arabic. There are often several terms in circulation for the same thing; on the other hand cases occur where the same term means different things to different authors. Nevertheless the standardisation of technical terminology which is the basic problem of present-day Arabic has undoubtedly made considerable progress and thus we can also expect further favourable developments in the future.

The fact that there exists a basically uniform written language in all Arabic countries from Iraq to Morocco is of great value, ideal and practical, to the Arabic peoples. It is the symbol of their old cultural unity and their political union in the present day. Thus we can conclude that there is no reason to anticipate that the written language will anywhere be replaced by a local dialect and forced out of practical use.

first (see below, section II) comprising the Eastern dialects, east of a line running approximately from Sollum to Chad, the second being formed by the Maghribi dialects, situated geographically west of the above line.

The dialect of the Hijāz, and more particularly that of the Kuraysh of Mecca, is known to have been one of the pre-Islamic Arabic dialects; it was elevated to the status of a literary language, not, however, without some interference with the pre-Islamic poetic koine. But the old dialects remained none the less alive, not only in their own country, but also outside the Arabian Peninsula, because they were spread abroad by the Arabs in the territories which they conquered. Organised in their traditional groups, the Arab conquerors preserved for some time their own tongue, but dialectal peculiarities tended to become less marked as the result of the blending of tribes within the fighting units. It was this sort of koine, rather military in character, which constituted the language of the conquered or newly-founded towns, but a contrary development soon occurred, with the appearance of indigenous elements and elements from the linguistic substratum, which resulted in an ever greater differentiation between the urban dialects, although on the whole the dialects of the large cities of the Arab world still displayed common characteristics. It is therefore possible, in order to rely on a sociological rather than a geographical criterion, to distinguish on the one hand the dialects of the urban and settled populations (because the role of the large cities had aided the rapid spread of the urban dialects in concentric circles), and on the other the Bedouin dialects. The latter were the dialects of more or less homogeneous and nomadic tribes which had emigrated from the Arabian peninsula either before or after the conquests. In general, the boundaries between the two major groups defined above are not fixed absolutely, and it is even possible to discern the existence of an intermediate group of dialects which display both urban and Bedouin characteristics. The criteria which enable one to distinguish between urban and Bedouin dialects are set forth in sections II and III below, but it should be noted here that, in general, the Bedouin dialects exhibit more conservative tendencies, and greater homogeneity within the framework of the tribe. The urban dialects display pronounced evolutive tendencies; they have introduced morphological and syntactical innovations and, further, differentiated dialects quite often appear within the same urban area, not only between the following of different religions (Muslims, Jews and Christians for example), but also between the social classes and even between the sexes and different generations.

If Classical Arabic is compared, in the most general terms, with present-day dialectal Arabic, the main point to be noted is the early abandonment, by spoken Arabic, of case endings and the inflexions of the verb. Perhaps less characteristic, in the phonetic sphere, are the loss of the phoneme represented by ء and the tendency of short vowels in open syllables to disappear; further, short internal vowels, even in stressed syllables, have become weakened in the most developed dialects. Morphologically, in addition to the disappearance of terminations, one notes the almost complete disappearance of the passive with vowel change, the decreased use of the dual and the feminine plural. On the other hand the phonetic system is richer than that of classical Arabic and the vowel range greater; a present indicative a, in a number of dialects spoken by settled populations, was derived from the imperfect by means of various preverbs; the syntax, less synthetic, used an analytical construction simultaneously with the relationship of annexation (i'dā), Finally, as regards vocabulary, the basic vocabulary is also found in classical Arabic, with losses due to the disuse of a large number of special terms (notably those relative to Bedouin life, in the case of the settled populations), but also with gains due to loan words from foreign languages which continued to coexist with Arabic.

**DIALECTAL LITERATURE**

The religious prestige of classical Arabic naturally prevented dialectal Arabic from playing the part of a literary language, at least among Muslims; further, with the exception of a certain number of proverb and poems (see especially ZADJAL) dialectal literature is fundamentally oral; it consists of songs and poems, which treat of the same themes—epic, religious, lyric, satiric, eulogistic, erotic etc.—as classical Arabic, of tales, legends and even epics. When, exceptionally, a dialectal work of importance has been set down in writing, it has never preserved its original form, but has been transformed into more or less correct literary Arabic, which deprives us of documentary evidence which would otherwise be of great interest. The most typical example is that of the Thousand and One Nights (see ALF LAYLA WA-LAYLA). For the attempts made in recent years to create a dialectal literature, and for the use of colloquial Arabic in novels and plays, see *Arabic Literature* below.

Christian Arabic literature should not be overlooked (see G. Graf, *Geschichte der christlich-Arabischen Literatur* and *Der Sprachgebrauch der altesten christlich-arabischen Literatur*, Leipzig 1905), nor that, in Roman script, which developed, but without great originality, at Malta, nor the Judæo-Arabic writings. On these last, which until the present time form a vast branch of literature, see the article *Tunisia*, and E. Vassel, *La littérature populaire des Israélites tunisiens*, in *RT*, 1904; G. Veja, *Un recueil de textes historiques juido-marocains*, Paris 1951; M. Steinschneider, *Arabische Literatur der Juden*, Frankfort 1902.

No complete work has yet been devoted to dialectal literature, but the reader is referred to the references given in Ch. Pellat, *Langue et littérature arabes*, Paris 1952, 54. For North Africa, H. Basset, *Essais sur la littérature des Berbères*, Paris 1920, deals with a subject which is closely connected with Arabic dialectal literature.

**Sources:** — The works of modern Orientalists, who often give texts in dialectal Arabic and help to give a fixed form to popular literature, are enumerated in sections II and III below, which are specially devoted to the modern dialects. For a more detailed study, apart from the references of the Arab philologists and the glossaries quoted in the article AL-ANDALUS, special reference should be made to the transcriptions of Arabic texts in Coptic or Greek script (see especially the ancient psalm fragment given by Violet in *OLZ*, 1901), to the early Egyptian papyri and to the Sicilian documents edited by S. Cusa (*I diplomi greci ed arabi di Sicilia, I*, Palermo 1860).

(2) The Eastern dialects

**THE ARABIAN AND NORTH ARABIAN DIALECTS**

The geographical area covered by these dialects extends from Egypt to Syria in the case of the
former, and in the case of the latter, comprises on the one hand the Arabian Peninsula, and on the other the Syrian desert and \( \mathfrak{r} \)āğā. The non-Arab languages represented are as follows: in Egypt, the Siwa Berber group. In Syria-Lebanon, the Aramaic dialect of Ma\( \mathfrak{h} \)dāl, Dżubba\( \mathfrak{d} \)īn and Baš\( \mathfrak{h} \)a; the language of the Circassians living in villages in various parts of Syria: Ku\( \mathfrak{n} \)aytīra, \( \mathfrak{A} \)līn Zātī, Tell A\( \mathfrak{m} \)ārī, Khānāsīr, Man\( \mathfrak{b} \)ījdī, and in Jordan D\( \mathfrak{j} \)ā\( \mathfrak{r} \)ūsh; the Armenian (or Turkish) of about 200,000 Armenians (principal centres Beirut, Aleppo); the language of about 230,000 Kurds living in the region of Hassettchā, Dīyarbā\( \mathfrak{k} \)s, Di\( \mathfrak{b} \)āb A\( \mathfrak{k} \)rād and certain cities, notably Beirut and Damascus. In \( \mathfrak{i} \)rāk, these Kurds constitute a quarter of the population; in addition, there is the neo-Syriac of the Māwṣīl plain. In Arabia, Kumāzār (peninsula of Masandām, in \( \mathfrak{u} \)mān), a Persian dialect; the modern South Arabian languages, between the Hadramawt and \( \mathfrak{u} \)mān: Mahrī, Kārwāl, Harsuṣ, and Butaḥarī. In Israel, modern Hebrew.

Egyptian Arabic (nomad dialects) has penetrated into the republic of Sudan among the Nilotic and Kushitic languages, and then, with Maghārib influences, among the Negro-African languages in the region of Lake Chad. Yemenite Arabic is used as the second language in Africa among the Somalis. The Arabic of \( \mathfrak{u} \)mān has found its way to Zanzibar. In Turkmeniştān, Khazarīstān, Tādjiḵištān traces have been found of Arabic nomadic dialects. Finally, in America, there is the Syro-Lebanese diaspora. The eastern dialects. In Egypt, Cairo usage is well-known, that of Alexandria less well, that of the fāllākhs very little, and that of the nomads and the whole of Upper Egypt hardly at all. In Palestine, a tripartite division must be carefully observed between sedentary urban-dwellers, the sedentary rural population (fāllākhs), and nomads. In Syria-Lebanon, the dialects of the sedentary urban and rural populations are indeed distinguishable, but their differences are less marked; they contrast with the nomad dialects; the dialects of the large towns (Beirut, Damascus, Aleppo, Jerusalem) are curiously similar to one another. The Mountain region of Lebanon, divided into separate districts, introduces local variations, the anti-Lebanon still more. In \( \mathfrak{i} \)rāk, the urban and rural dialects have been submerged by the dialects of the North Arabian nomads; this has resulted in blending and compromise in varying degree between the two types of dialect, even in the large towns. Only assiduous linguistic research can show what remains of the dialects of the sedentary populations. In general, nomad dialects are linguistically dominant; thus \( \mathfrak{i} \)rāk remains within the sphere of the North Arabian dialects. A study of the dialects of the Jews of the Middle East and \( \mathfrak{a} \)l-fāl\( \mathfrak{d} \)ğī Darwīsh, (fahlāhs), the rural population plays for the theatre, and in the Lebanon (Fīnīānīs, Shmūnī; see J. Lecert, Littérature dièalctale et renaissance arabe moderne, in BEOD, ii, 1932, 179-258; iii, 1933, 43-175).

The eastern dialects have not received equal treatment as regards actual publications. A concise bibliography will be given here, within the limits of the general line (for convenience, \( \mathfrak{i} \)rāk will be included here):

At least six works deal primarily with the Arabic of Cairo; the following will suffice: W. Spitta-Bey, Grammatik des arabischen Vulgarädialectes von Ägypten, Leipzig 1880, xv-519 pp. in 8vo. (Texts 441-516; K. Völlers, Lehrbuch der ägypto-arabischen Umgangs-sprache, mit Übungen und einem Glossar, Cairo 1890. xi-231 pp. small 8vo. (English ed. by F. R. Burkit, Cambridge 1895; C. A. Nallino, L'arabo parlato in Egitto, grammatica, dialoghi e raccolta di circa 6,000 vocaboli, Milan 1900, xxviii-386 pp. small 8vo., 2 ed. Milan 1913; D. C. Phillott and A. Powell, Manual of Egyptian Arabic, Cairo 1926, xxxiv-521 pp. small 8vo., in addition: Spito-Bey, Arabic-English Dictionary of the Modern Arabic of Egypt, 3rd ed., Cairo 1929, xvi-518 pp. in 8vo. (arranged in purely alphabetical order). For Upper Egypt there are only the Contes arabes -----, published by H. Dulac, JA, 8th series, v, 5-38 (in Arabic characters with translation but without transcription); the Chansons populaires, collected by G. Masspero (Ann. Serv. Ant. Égypte, xiv, 97-291) are inadequate for a linguistic inquiry. For the nomads of Lower Egypt a number of the Lieder der libyschen Wüste von M. Hartmann, Leipzig 1899; it should be used with caution.

For linguistic geography, we are indebted to G. Bergsträsser's Sprachatlas von Syrien und Palästina (incl. the Lebanon and Jordan), ZDPV, xxxviii, 169-223, 42 maps. This Sprachatlas is an excellent beginning. J. Cantineau has added his Remarques sur les parlers de sédentaires Syro-Libanais-Palestiniens, BSL, no. 118, 80-8, in which he proposes a classification; his article on Le Parler des Dras de la montagne Libanaise, AIEO, Algiers, iv, 157-84, in which he shows that a dialect of the sedentary population of the Lebanon is involved; his profound study of Ḥawrān, Les parlers arabes du Hārān, Notions générales, Grammaire, Paris 1945, x-475 pp. in 8vo. (Publ. SL, iii), and an Atlas of 60 maps, ibid. 1940. Haim Blanc has studied the dialects of the Druzes in northern Galilee and on Mt. Carmel in his Studies in North Palestinian Arabic, Jerusalem 1953, 139 pp. in small 8vo. (Or. Notes and St. Isr. Or. Soc., No. 4), phonological and phonetic survey 22-78; texts 79-108.

For Syria-Lebanon, Palestine, the following should be mentioned: (1) General descriptive works: A. Barthélémy, Dictionnaire Arabe-Français, 5 fasc., Paris 1935-54 (the last two published by H. Fleisch), 943 pp. in large 8vo. (deals exhaustively with the vocabulary of Aleppo (1900), and gives the elements

The western dialects bear a certain family likeness, and the same can be said for the eastern dialects. For the purposes of this comparison the more conservative nomad dialects (this does not exclude the facts of their own evolution), which are much less well-known, will be disregarded. We are concerned with the dialects of the settled populations of east and west. We will consider first the elements which link them (and also those which distinguish them): cf. G. S. Colin, *L’arabe vulgaire,* 150th anniversary of ELO (Paris 1948), pp. 100-1.

**Pronetically:** 1) The disappearance of the velarised lateral-interdental phoneme represented by the old ƙ, replaced in general by ʔ (emphatic); dh (emphatic) among thefellahs of P. and at T.* 2) The development of the three interdental fricatives (ʔh, tʔ, dʔ emphatic) into dental occlusives (ʔ, t then ts in M. and Alg., ʔ emphatic except among thefellahs of P. and at T. 3) The tendency of the short vowels to disappear in open syllables, particularly when they are not stressed (especially i, u). 4) The tendency to reduce the diphthongs ay, aw to the simple sounds a, û (even i, u in Oc.), except in a large part of the Lebanon.

**Morphologically:** 1) The disappearance of the old inflexional vowels (i'rād); as a result the dialect becomes less synthetic, and makes greater use of grammatical instruments. Word order assumes importance in denoting relationship (construct state), the subject and the complement of the direct object. 2) The dual retrogressively becoming a survival without influence as such as regards grammatical concord. 3) The peripheral expression of relationship (determinative complement of the noun), in place of the construct state, for various reasons: Eg. beta'; P., S.-L. tabā'; (M. dīyā, Tl. tādī, T. mīdī). 4) The use of an indeclinable simplified relative pronoun: elī (similarly di, edī in M. and in several Arabic dialects (W. Marçais, *Tiemen,* 175). 5) The formation of a new interrogative pronoun for things: Eg. ʔēdī; P., S.-L. ʔaw, ʔawdī; (M. ʔağdī, Tl. ʔağī; T. ʔağī, ʔağīna). 6) The special form for the feminine plural of personal pronouns and verbs. 7) The abandonment of the passive formed by change of vowels: batala “he has killed”, kūtila “he has been killed” (except in Oman). 8) A form indicating duration: Eg. ʔammāli, ʔamm; P., S.-L. ʔam (M. ʔām, verb expressing duration or habitual action). 9) The formation of an indicative by means of various auxiliary words prefixed to the old imperfect. 10) The conjugation of the imperfect of doubled verbs with the intercalation of a phoneme ay (ʔ), e.g.: L. madda'ay or madda'. 11) The reduction of the number of types of broken plurals and still more of the types of infinitive (masdar).

The Eastern and Western dialects, over and above these common characteristics, give respectively a certain impression of unity, in so far as evolutionary tendencies have culminated, in each of the two groups, in different results. They can only be contrasted when, on both sides, the different result is identically constant. For example the method of
forming the first persons of the imperfect of the verb. The Eastern dialects have formed an indicative imperf. with b- being contrasted in general with the subjunctive-imperfect (without b-): L. bīrā ṣīḥbūb "he wishes to write". This indicative has in the 1st pers. s. a preformative b-: L. bēktob "I write", mnnktob "we write", whereas the Western dialects have a preformative n- and, secondarily, by analogical normalisation, a distinctive plural form in -u e.g.: T nisīkh "I write", nisīkūb "we write"; this is an excellent and characteristic example of contrast between the Eastern and the Western dialects; but it is not absolute: a preformative n- of the 1st pers. s. impf. is found in the Najjdū (Socin, Diwan, Part iii, 133c and 194b) and is confirmed in the Ḥadramawt (de Landberg, Arabica, iii, 55). The loss of short vowels in open syllables, largely complete in the Western dialects, is a much less reliable indication: in fact in the Lebanon at Kfarṛibida, all short vowels in open unstressed syllables disappear; at Palmyra, there is a fairly general appearance of i and u, even when stressed, if they occur in an open syllable (this is one of the dialects called "differential" by J. Cantineau, Études, in AIEO, ii, 49).

The dialects also reveal a certain individuality, by comparison with the Western dialects, by virtue of the presence of grammatical characteristics which are lacking in the latter. Note for instance, in Eg., P., S.-L.: 1) In the vocalisation of the simple verb, the retention of vowel contrasts reduced to a pattern kātāl byāšul or byāšul and kātāl byāšūl (in Eg. the pattern is not quite so clear). 2) The formation of the plural of the demonstrative pronouns in a similar manner: the addition to the singular of the old demonstrative form of the plural, or (in Eg. the fatal byiḳtel betel byiḳtal.

3) The frequent use of the j pattern is not quite so clear). 2) The formation of the

Hiḍzā: only the *Mekkanische Sprichwörter und Redensarten* of Snouck-Hurgronje, The Hague 1886.

J. Cantineau, *Remarques (BSL, no. 118)* has indicated (p. 81-2) the main general characteristics which enable a distinction to be drawn between the dialects of the settled populations of the East and the dialects of the Arab nomads. The sole effective criterion is the unvoiced pronunciation of ُعَ (irrespective of what might otherwise be the articulation-point): all the dialects of the settled populations, and only the dialects of the settled populations have this pronunciation; the voiced pronunciation of ُعَ is the mark of a nomad dialect (as it is in the case of the western dialects).

We owe our present knowledge of the classification of the dialects of the Arabian nomads to J. Cantineau in his *Études*, in *AIEO*, iii, 222 ff. The brief summary which follows is based on him:

As regards the North-Arabian dialects, he distinguishes: dialects A (‘Anaza), dialects B (Shammer), dialects C (Syro-Mesopotamian); ‘Anaza dialects: Ḥānine, Ṭālā, Sāba’a, Weld, ‘Ali, etc.; Shammer dialects: ‘Abde, Khrose, Rmāl, etc.; are linguistically akin to the Shammer dialects, group Be: in ‘Irāk probably the Ṭayyi’, in Syria and Jordan: ‘Amūr, ‘Irād, Sārqiyya, Sārbi, in part the Banū Ḫalīd of Jordan and the Banū Ṣākḥar; Syro-Mesopotamian dialects: the population of the town of Regga and the tribes: Ḥadīln, Mawāl, N‘em of Dīlān, Faḍīl (these last two forming a sub-group), which fall into the category of lesser nomads called Ḷawṣiya or ra‘y. The case of the Dīf dialect is a separate question; the dialect of ar-Rass (Kāsim) is to some extent a Baṣra dialect. It is difficult to demarcate, even approximately, the southern limit of the North Arabian dialects; their existence is definitely confirmed in Kāsim, al-Ḥāṣ, and probably in the ‘Ārid, the Woshm and the Sdeir. Of the dialects of the Hiḍzā very little is known, and nothing of those of ‘Aṣr. The dialects of the Ḥadramawt and the Daḥṣā, known through Landberg’s texts, seem to be related, distantly it is true, to the dialect of the North Arabian nomads, and it is possible that the dialects of the nomads of the Rub‘ al-Ḵālī are connected with the same group. On the other hand, through the efforts of C. Reinhardt, E. Rossi, H. Burchardt, and S. D. Goitein, we know that the dialects of ‘Umān and the Yemen are of a completely different type.

Bibliography: In the body of the article.

(3) The Western Dialects

The Arabic language is widely used in North Africa, but is by no means the only language in use. Berber is extensively used [see BERRERS], and the Berber language, though losing ground in some instances, can for the most part be considered to be in an extremely flourishing state and not on the retreat.

The elimination of the old autochthonous language naturally has taken place in those cases and in those countries in which the tide of Arabic spread without meeting any obstacles: first of all, in the towns which the Arab conquerors rebuilt, colonised and founded, and their environs; then in Cyrenaica and above all in Tunisia, which were reached by the first and largest waves; finally in those regions of the Maghrib, probably Zenata, where the old pastoral life prepared the way for Bedouin Arabism: the Sahara, the Saharan fringe, the high plains of Algeria and Constantine, the valleys of the Tell, and practically the whole of Orania. This Arabic tide surrounded but did not submerge the settled centres of the Saharan oases, and similarly the mountainous regions in the interior and on the coast, which were difficult of access. In Morocco, arabisation followed the Atlantic seaboard, reached the Fes and Taza corridor, flooded the Ṣharb, and left almost intact the riparian massifs of the Mediterranean and the interior, the Berber mountains. —The area in which Arabic is dominant in the Maghrib is thus immense. Nearly fifteen million people there speak it. They are to be found in widely-differing regions, and following very dissimilar ways of life: all town-dwellers, nearly all the agriculturalists and semi-pastoral peoples of the plains, plateaux and steppes, a large number of villagers, several groups of the settled population of the oases, and hill peoples arabised by the neighbouring towns. This geographic dispersion (which, unlike that of the Berber dialects, is still in progress) and the diversity of these modes of existence are the result both of the complex configuration of the country and of the historical circumstances of its arabisation. These two aspects will not be dealt with here. It will be sufficient to emphasise that, given physical and human conditions such as these, it is not surprising to discover great dialectal variations in spoken Arabic; variations so great that it seems difficult to define the Arabic dialects as a whole by common, specific characteristics; and that it is perhaps rash to employ the term ‘Maghribi Arabic’. It will never...
theless be employed, if only for the convenience of this exposé.

C. Brockelmann, at a time when few documents on the various Arabic idioms spoken in North Africa were in our possession, said in his Grundriss that the Maghribi dialects were mainly of the Bedouin type. He doubtless based this on the accentuation of the verb in the 1st form, which he considered as the primitive form in all Semitic languages: fa'ala, fa'ala, fa'ala culminating in /a/ as opposed to /a/ originating perhaps from the old analogical influence of tef'il, masdar of the 2nd form, a characteristic of all forms of the imperfect of the verb which is general throughout Middle East dialects. This morpheme /n/- is, to the exclusion of all others, that of all the dialects, without exception, of Morocco, Algeria, Tunisia, Mauritania, the Sahara, Fezzan, Tripolitania, Cyrenaica and Malta. Egypt seems indeed to form the eastern limit of its use. Ch. Kuentz, during recent years, has precisely defined the extreme limits (dialects of Alexandria and of certain settled populations of the Delta). The substitution of u- for /n/-, already reported by Ibn Khalid in the Hilīl popular songs which he collected, is recorded by Ibn Kūzmān for Almoravid Andalusia, and recurs in mediaeval Norman Sicily. It can be considered as a morphological innovation proper to the Muslim West. It consists in the creation of a personal sign of the singular, clearly on the analogy of the signs of the plural: na'sal from na'salı, na'salı. The purely Maghribi creation (all the dialects give evidence of this, including Maltese) of a verbal derived form fdal, originating perhaps from the old forms IX-XI, must also be accounted an innovation. It expresses a resultative meaning: kādī “he has become black”, bāyād “he has become white”, “he has become one-eyed”, ḥrāk “he has become rough-skinned”, ḫwāl “he has become tall”, ṣmān “he has become fat”, ṣhāl “he has become compliant”, ṣyān “he has become handsome”, etc. The presence of a long vowel /a/ between the 2nd and 3rd radical, creates a phonetic problem of conjugation which the dialects answer in different ways (L. Brunot, Sur le thème verbal fdal en dialecte marocain, in Mélanges W. Marçais, Paris-Maisonneuve 1950, 55-62).—On the analogy of the derived forms with a reflexive and middle-passive significance, with a prefix f- (V fdal originating from II f'sal, VI t'a'al from III f'sal), Maghribi has formed, like certain eastern dialects, a tf'al (which recalls the very old čhpe'čal as opposed to the 1st form f'al; it uses it by preference, often to the detriment of f'sal; then, carrying this further still, it arrives at a combination of tf'al and n'al and produces ntf'al and ntf'al, for instance intef'al “he is wounded”, ln'hrāk “he is burnt”.)—The old system, for forming nouns of action corresponding to verbs of the basic form, resorted freely to the subtle interplay of contrasts of vocable quality: fšÌ, fššÌ, fššÌ, fššÌ etc. It is the decay of the short vowel system, fairly general in the Maghrib (and the syllabic upheavals which accompany it), which has doubtless induced the dialects to display a preference, in the case of short vowels, for nominal forms with long vowels. Among them, there is one which recognises an unusual prolongation, which can be held to be specifically Maghribi (Malta also uses it): namely, fššÌ. Formerly a masdar form of limited application (verbs denoting a noise, a cry), to-day it constitutes the most frequently used masdar of verbs of action, especially those denoting material operations: šhr “act of dancing”, šhšl “act of washing”, šlšk “act of cooking”, šlšk “act of playing”, etc. This form fššÌ perhaps owes its success to the analogical influence of šfšÌ, masdar of the 2nd form, a characteristic of...
verbs of action, and of transitive action. Just as in the case of this masdar f*-U the case of the analogical extension of the plural f*il seems to be an entirely Maghribi peculiarity. It is, as elsewhere, a plural form f*il of nouns with a weak radical, kahou "coffee" pl. kháther, ma*ud "sense, allusion" pl. m*äni. It is widely extended to nouns with sound, not defective, roots, such as obe ra "needle" pl. abäri, bas'a "large bowl" pl. bas'iri, mechla "comb" pl. meglä, etc.

The establishment of syntactic connexions has caused the appearance of a certain number of dialectal innovations. The most noteworthy of these in the Maghríbi include: (1) the creation of a true indefinite article to express the state of the undefined noun (cl. raq'ilt). The numeral "one" is used for this purpose: wahek, made indeclinable (sometimes contracted to wa²Á, wa³Á, ka) is then followed by the noun, defined either by the definite article el-, wahek-er-rajel "a man", wahek-el-mra "a woman", wahek-ed-däg "a house", or by a determinative complement, wahek-bäb-ed-där "a house door", wahek-säbbi "a friend of mine". Where it is prevalent, that is to say in the dialects of Morocco, Algeria and the Algero-Tunisian borders, the use of wahek, the article, does not exclude the use of wahek, the pronoun, which remains indeclinable, wahek-räjel "someone, a man", wahek-mra "someone, a woman", the only construction possible in central and northern Tunisia and in Libya. (2) The tendency to eliminate the direct annexation of the determinative complement to the noun (classical i²ála), of the type rিল-el-urad "the perfume of roses", and to substitute for it an indirect annexation, which makes use of a copulative particle, of the type er-riha mä-il-el-urad. This phenomenon is found in the dialects of the Near East (Brockelmann, Grundriss, ii, 238, 161), but there are some particles of annexation peculiar to those of the Maghrib: ë, ë, ñyd in Morocco and Algeria, mä-il or mä-il in Algeria and Tunisia, ë (derived from mä-il) in Malta, ñen in Fezzan. The presence of mä-il, from the cl. mä-il "goods" is already attested in the dialects of the Maghrib, and as far as Fezzan to mark a sense of completion, result or finality in the imperfect of the verb. In the Moroccan dialect ë (or ëa) appears, preceding verbs in the same tense, in order to mark actual action in the present; the Moroccan ëa is perhaps the same preverb which occurs in the semi-flexible form ka-ku (derived from kîn-kîn) with a clearly analogical meaning, in Algeria (eastern Kabylia). In addition to these preverbs, the Maghrib, Morocco and Libya use in their own right a presentative of the verbal idea which combines the imperative of the verb "to see", ril, with the same prefixes, in the sense of "I am here, thou art here", etc., or "here I am, thou art" etc., ril, ë, ë, ë, (or ril) ëna ëkum, ëkum, to express the reality of a state or action, in the present or past, both before a verb (in the perfect or imperfect), ëna ël "here I am, I have come", ëk ëbbi, "there is, is crying", and in a nominal clause, ëk ñrila it is thou who art ill", ëkum l-ëmm "there are below". A negative sense is formed in a completely analogous way: mä-nil-mägä and mä-nil-"I am not", mä-nil-"thou art not", mä-nil-"he is not" etc., more often used in nominal clauses than in verbal: mä-nil-"I am not ill". (4) The revival of particles: it is a general linguistic fact, that the originality of the Maghribi dialects consists in the creation of a sign -säg (or -säh), deriving from the cl. jayy-shay, which is in use from one end of North Africa to the other (säg in Malta, säd in northern Constantine), in order to form, in combination with nouns or prepositions, adverbs and conjunctions: bäg "from what" and "in order that, in such a way that", läg "towards which, with what object", kisäg "how", lsäg "on which" and "why", master "of what size, how much"; the word haj, hj is used as a preposition "like, resembling" and as a conjunction "when, granted that". (5) Recourse to the expression ma-xil, mà-xil mà-", conjugated or indeclinable, to render the sense "still, not yet", xid being used in Malta and elsewhere.

More than phonetic, morphological or syntactic differences, there are points of vocabulary which place the Arabic dialects of the Maghrib in the clearest, if not the deepest, contrast to those of the Middle East. Without making a systematic inquiry to determine the origin, Arabic or non-Arabic, of the Maghribi dialectal terms, the commonest will be mentioned here. The word kâmin (with an agglutinate article) has the sense of "head of a corporation" only in the Maghrib; for "pears" anqâs or anqâs (lanjâs, lanâs), formerly Andalusian, is spreading everywhere; berrad is the usual term for "teapot", and berrâda for "water-jug", "bucket, bucket" is always bessal or bessâla from Senegal to Libya, as well as in Malta, ñedî making an appearance at Fezzan; bâkîr is the only term for "fig blossom" in Morocco and Algeria; it was formerly Andalusian; Tunisian and Maltese have bitkar, baýtar with the same meaning; bakkâk everywhere means "dumb"; the "stork" is commonly belârej (belârâmî, berrârej), from the Greek mlâsî, the word for "tea" is tây, nây, tâây in Mauritanian, Moroccan and Algerian, et-ey in Tunisia, kâhi, kâhy only appearing in southern Tunisia and Libya; "individual, person, pedestrian" is very commonly târâs, apparently derived from the cl. târâs "valet d'armes, shield-bearer"; truffles are called târâs; terma is the usual word for "rump, buttocks"; "tail" is everywhere called tâbârî, a Berber word which is found as far as Libya, where jhar "stones" is preferred; for "to find", jhab is used together with, depending on the region, ëk, ëg or sâ, with different shades of meaning ("to discover" or "to find what one is looking for"); jarra (or jerra) is the word for "trace"; the Pan-Maghribi word for "frog" is jfran, where the Berber argl is not found as well; jfrân is one of the most characteristic terms of the Maghrib, Mauritania and Tripolitania, in the sense of "draught (of liquid)"; for "orange" tjîn, letjînâ is used in Morocco and Algeria, burdân appearing in Tunisia; t̜hēllîk (t̜hēllîk, t̜hālîk) reappears, in varying forms, throughout North Africa, in the sense of "rag" or "piece of cloth"; "to open" the whole of the Maghrib uses jêll (which with the same prefixes, "I am open", jēll being reserved for a rarer and more literary usage; jēllâb is the name of the "black cosmetic", from the Greek xâlókia; for "fish" the word sâmâh, which is completely unknown, gives way to bâl; khdem, properly "to serve", is the usual word for "to work" and sometimes "to do (in general)"; khdâm, without any morphological indication of gender, denotes a "negress"; for "knife" the whole Maghrib uses t̜hâmî, formerly Andalusian; "to come upon, tobefall" is usually expressed by bhîd; for "reflect", khammem is used; degâ is the name of "rural dwellings" or even of "peasants' huts", and has a rival in mishâ, originally "winter dwelling" (shâhâ); ñdîb signifies, not "wolf", but "jackal";
'ARABIYYA 381

nágb is the usual adjective for "unstable, rotten"; 
ársh "soft, tender", opposed to áfyrash "coarse, rough", 
follows the declension of nouns denoting colours and deformities; sarbiyya "carpet", which is kúrub (Kúrun, lxxxvii, 16), has continued to exist in this sense throughout the Maghrib; to express "to hurry, to hasten", the verb zrb is used; zúu (zúu, júu, júf), properly "pair", serves for the numeral "two", either supplanting thún, or existing in competition with it—formerly an Andalusian usage, which predominates in the Saharan and eastern Maghrib, as well as at Malta; súla is the current term for "beast of burden";ásár signifies "blond"; 
swú to "scream, to shout"; "cock" is expressed everywhere, including Malta, by sérúd,úkh being heard only in Orania and Fezzan; from the Greek ύδαςγες "sponge" is derived a dialectal shémi (or sfúns) which means exclusively "fritter", "sponge" being nekáni or jíjífla; "hot" is shkén and shkwn; súkl means "to extricate oneself" and sélélk "to extricate"; the cl. súllum always appears in the recast form sélúm "ladder"; "to beg" is nearly everywhere sákú-sású; súwéék has the particular sense of "to 
swell with water"; shárek is the word for "lip" and shúgún that for moustache"; "axe" is sháhur and "knife" shúrá; sálk is the proper verb for "to fall (talking of rain)"; the word for shoes is sáb Aub (formerly the Andalusian andalusí); everywhere in the Maghrib the "minaret of a mosque" is called súmú; "to be cooked, ripe" is táb-táib and "to cook, make ripe", sáyyébek; sár, in addition to its universal meaning of "end, extremity", in the Maghrib also means "piece"; társh is fairly general in the sense of "tribe"; the word for "he-goat" is átrú, and that for "lamb" is sálú, to denote "fire" the euphemism súfýa "tranquillity, peace", is used, from the root shká, the sense "to deceive" is well-known; Maghribi derives from it a 2nd form "to cause resentment, irritation" and a 3rd form "to be vexed, irritated"; from ghdnú "chant" derives the Maghribi ghnúwa "song", with y of the 3rd radical, while the eastern dialects only recognise ghnáwa, with w; "scurry" is expressed throughout the Maghrib by sárrás, which means "bald" in Malta; for "chicken", fyllú is used, and for "toxotise" tbrúín, tbrúrán, of Berber origin; from Berber is also borrowed the word for "butterfly" tárúfló, tárúflafla and its variants; to "urinate (of a horse, donkey)" is júg; bádd means "to suffice", bádum (gdam) "heil"; the word for "dried meat" is bdsdh with doubling of the medial radical; garyuma is the usual word for "throat"; "to belch" is sárrás; one of the most characteristic Maghribi words is that for the "lock of hair which is allowed to grow long", gultáya; "to cough" is kkbh; side by side with assud there occurs, sometimes with a marked difference of meaning, ahbel "black"; "fags" are called hárms and "tig-

ners" kram; "cliff, escarpment" is kháf; dán means "they", never "milk"; "sheet" is màf or màfí; the form màshúsh "apricots" is recast as màshmàsh; to express "late, last-born", the word in use is màshúsh, taken from Berber; for the Pan-Arab kalàr "power" is often substituted nsjám; kdrár is a common verb for "to speak"; "widow" is hajálà; ssúkh (súsh), known in its proper sense of "face", also has a particular meaning, namely "shot (of a fire-arm)"; welá-vellà means "to return", but also "to become, happen to be", etc.

Thus marked differences of vocabulary separate the Maghribi dialects from those of the Near East, either as regards the actual words employed, or their form, or in a semantic sense. Equally important and equally numerous variations, if not more so, occur among the Maghribi dialects themselves, from end to end of the vast area in which they are spoken. The terms expressing the advverb of time "now" differ according to region: 1) dàbà, without doubt an Andalusian contribution, is known in the whole of Morocco (except the South), and, in Algeria, among the Jewish dialects of Tlemcen and Algiers. 2) From the cl. gáday-waki derive numerous forms, délúb, délúbb, drúb, drág, ókí, délùweh, etc. (with or without an emphatic r), which are in use in Mauretania, Southern Morocco, the whole of Algeria—
cities, villages and countryside—and which are also known in the East. 3) álún is the term of polished speech; it is also that of the Bedouin dialects of Algeria. 4) es-sáa (es-sa) is the form used in Malta. 5) taw, tawna belong to the eastern zone of the Maghrib, from eastern Algeria as far as Libya. "Much" is barsha in Tunisia, bsdÌ̇ in Algeria and Morocco, bela in southern Morocco, yásr among the Bedouin of Algeria, Tunisia and Libya, where it is a declining adjective, not an advverb.—"Enough,

that is enough", is káfî in Mauretania, lehî, yess, báylà, báylak from Morocco to Tunisia, but bess in Malta and Libya.—"There is no more", is always expressed by means of the verb kán in a personal form or as a participle; kàn, kick, mà-kàn-ó is, these are the forms usually spoken in Algeria and Morocco; but in Tunisia the forms thémmá, mà-thémá-ó, prevail, and in the south of Tunisia and in Libya bá-mó-ó-ó—"Nothing" can everywhere be rendered as shéy; it is, in fact, so rendered in Algeria and Tunisia, by freely strengthening the negation with hálta, hál-leh; but this is only replaced in Tunisia and Libya by kán-bá-barà "(nothing else) than benefaction"; in Morocco and as far as Libya, wò-là is used, properly "and if".—The exclamations "good, very good" is expressed by meszyn in Morocco and up to Tlemcen, mlh (amlh) in Algeria, fayyébek in Tunisia, hâbi in Fezzan.—To express "what, what is it?", wáyh is the Pan-Maghrib form, but Maltese recognises more particularly ghî, Moroccan and Mauritanian ásh, Fezzanese shen or esh, Tlemcenian asem.—The equivalent of "how much?" is kem in Malta, Mauritania and in the majority of the Bedouin-type dialects; it has lost ground to sî-hâl, sâk-hâl (cl. sà-yà-yà-yà-hâl), an Andalusian contribution which penetrated the urban dialects of western Morocco, and then won the countryside and the rural and pastoral regions; eastern Con-

stantine, Tunisia, and Libya prefer baddâgh, baddâgh.—"Eggs", doubtless because they represent an idea which lies under the interdict of language, are designated by various words; dhés in Libya, dàm in Tunisia, northern Constantine and the villages of Algeria, bid in rural and pastoral Algeria and Morocco, amlâh-jâf in Algiers, Tlemcen, Fez, Tangier. —Apart from the word màf, which is understood

naturally nearly everywhere and is used freely in Bedouin regions, there exists naw which means "rain" in the majority of pastoral and rural areas, except in the western Sahara, where skâb seems to predominate; the word used in the towns and villages, and especially in Malta, is skáb, properly "winter".—"Grocer" is afâr in Tunisia and Libya, hâsnnî in Algeria and Constantine, hadrî among the rural populations of Orana; in Morocco it is baâbâl, which was formerly Andalusian.—The verbs meaning "to sit down" are kâd in Tunisia and the Algerian villages, gâd in Tlemcen, Constantine, jamá in the Oranian countryside, gles in the towns of Morocco, gâmes
in Fezzan.—“To send” is sifot (sdfot, zifof, sdfed, etc.) in Morocco and a considerable part of Orania, dai in Algeria, sedyeb in the South, dezz in Tunisia and Libya, rsel representing a term of educated speech.—

For “to lift, remove”, rfd is the verb of the west, Moroccan, Oranian and Algerian, and of part of Constantine; kass is the word of eastern Constantine and Tunisia, rfd that of Suf, Tripolitania and Fezzan.—“To do” is a vague idea expressed by a word of eastern Constantine, that of Suf, Tripolitania and Tunisia, rfd in the urban dialects; sâmi (and its metathesis wâsi) as well as ‘adel, sammel prevail in the western Maghrib, ibâ-yi the extent into the north-west of Orania, khâmen in northern Constantine.

Whatever the difference between the dialects of the Maghrib, they remain closely akin to one another and are in varying degrees peculiarly Arabic. From the Arabic system proceeds the vast majority of the sounds of the language, the grammatical forms, the lexicographical material and the methods of presenting ideas. The dialectal variations found in the Maghrib seem, in general, scarcely more palpable than those which appear in the dialects of the Middle East. They can, to some extent, be attributed to influences alien to Arabic: 1) that of the Berber substratum which deeply penetrated new strengths in certain regions and in certain fields of expression (those concerning the things of the material life, especially rural); but there are also areas where the memory of Berber has almost entirely disappeared from the language; 2) that of the languages of the coloured races in the northern zones bordering on the Negro lands; 3) that of the Romance language: Latin, often transmitted through the medium of Andalusian, and also of Spanish and Italian;—

4) that of Turkish, particularly in Algeria and Tunisia;—5) finally, that of French, an influence which is still exerted to-day.

The part played by inherited or loan elements, however, does not seem to be the only reason to put forward to explain the original and moiret character of Maghrib. There is the diversity of the Arabic dialects, which were already differentiated when they were imported by the conqueror at various periods during the process of establishing himself in the Maghrib. There is also, and perhaps this is the most important differentiating factor, the caprice of innovations, spontaneous or conditioned, which have come into being and have spread in different directions, sometimes propagating themselves throughout vast geographical groups, sometimes confining themselves in districts divided into rigid compartments.

The rise of the new school contemporaneously with the spread of the Arabic language through a long chain of predecessors, who perfected its artistic devices utilised by them. The hypothesis (put forward by al-Bahblîl, v. Bibl.) of an earlier production of lengthy homogenous odes, reconstructed fragments of which supplied the model for the āṣida, is purely speculative and improbable. The rise of the new school contemporaneously with the kingdom of Kinda [q.v.] in N.E. Arabia, and its relations with the princes of Ḥira and Qassān, suggest the possibility of a stimulus from the Fertile Crescent, but nothing has been adduced in evidence for this supposition. In any case, it seems reasonably certain that the āṣida constituted a new departure in Arabic poetic art, consisting of the combination of a number of existing themes of Arabic poetry into a subjectively related pattern, and that (prefiguring a characteristic often to be seen in later Arabic literature) such a pattern, once established, became normative for future generations of poets and by reason of its combination of different types of information) itself knows nothing earlier than the rise of the āṣida-poets. Its main theme is boasting of the poet’s camel or horse, more especially (iii) by comparing it with a beast of the chase, developed into a finely-executed tableau of animal life in the desert. The main theme is similarly elaborated by the introduction of idealised pictures of beduin hospitality or drinking, thunderstorms, war and battle scenes, and satire of rivals. The whole poem runs from 60 to 100 lines in length, being composed throughout in the same metre ending in the same rhyming syllable [see further Ǧaṣīda].

The āṣida, the distinctive artistic production of this poetic literature, is essentially an art-form, which has little in common with the forms of artistic poetry in other literatures. Its main theme is boasting or panegyric, led up to by a journey theme. The latter is elaborated: (i) by an elegiac-erotic prelude (nasīb), recalling a former attachment to a woman of another tribe, leading to or connected with the journey-theme; (ii) by description and praise of the poet’s camel or horse, more especially (iii) by comparing it with a beast of the chase, developed into a finely-executed tableau of animal life in the desert. The main theme is similarly elaborated by the introduction of idealised pictures of beduin hospitality or drinking, thunderstorms, war and battle scenes, and satire of rivals. The whole poem runs from 60 to 100 lines in length, being composed throughout in the same metre ending in the same rhyming syllable [see further Ǧaṣīda].

The pre-history of the āṣida, i.e. the origins of Arabic poetry in general, are lost in obscurity and apparently irrecoverable. The Arabic philological tradition (which constitutes almost the only source of information) itself knows nothing earlier than the rise of the āṣida-poets. It can scarcely be doubted that the poets of this school stood on the shoulders of a long chain of predecessors, who perfected its diverse metrical systems [see ʿArūḍ] and who laid the foundations of the special literary idiom (ʿArabiyya [see above, ARABIC LANGUAGE, ii (1)]) and of the artistic devices utilised by them. The hypothesis (put forward by al-Bahblîl, v. Bibl.) of an earlier production of lengthy homogenous odes, reconstructed fragments of which supplied the model for the āṣida, is purely speculative and improbable. The rise of the new school contemporaneously with the kingdom of Kinda [q.v.] in N.E. Arabia, and its relations with the princes of Ḥira and Qassān, suggest the possibility of a stimulus from the Fertile Crescent, but nothing has been adduced in evidence for this supposition. In any case, it seems reasonably certain that the āṣida constituted a new departure in Arabic poetic art, consisting of the combination of a number of existing themes of Arabic poetry into a subjectively related pattern, and that (prefiguring a characteristic often to be seen in later Arabic literature) such a pattern, once established, became normative for future generations of poets and by reason of its combination of different
subjects furnished the supreme test by which their poetic powers were judged.

The ḥāsid poets also illustrated certain linguistic and aesthetic features which were to dominate all later Arabic poetry. The chief of these is verbal concision, in which all the resources of morphology, suggestion and allusion are utilised to present a sharply focussed picture in the smallest compass of words. Metaphors are limited to a few traditional images, mainly relating to war and feasting; similes, on the other hand, are extensively used to give imaginative depth to a descriptive passage; for similar reasons, situations of time or place are often indirectly indicated by pictorial imagery, and a particular situation may be universalised by adding a phrase cast in a proverbial mould. The most fully developed sections are usually those devoted to descriptions of animals, which are vivid and realistic; by contrast, the ṣasib briefly indicates the site of a former encampment in stereotyped terms and rarely describes the woman whom it recalls, although passages of erotic description occasionally occur as separate themes. Throughout, the poet appeals to the hearer's eye, and the imaginative response is determined by the completeness and precision of the concrete visual image; hence the importance attached by critics to the single line as evidence of poetic skill. This imaginative interplay between artist and hearer had the further effect that the range of visual images so presented was circumscribed by the communal basis and pattern of tribal life and its popular sentiments. Pre-Islamic poetry (or at least almost all of it that has survived) is tied to a limited number of themes treated in conformity with the prevailing aesthetic standards and moral values. Thus the content of the literary product was not only known in advance, but dictated to the extent that anything more than a slight deviation from what was expected was disapproved, and the whole emotional response was determined by the form. Form therefore acquired an absolute value; the content was merely the substrate by which the superior excellence of form was realised. The pursuit of formal perfection was, however, limited by the range and sobriety of the poet's imagination. Excessive elaboration of any theme is in general avoided, except for a limited range of accepted exaggerations in boasting and panegyric, particularly in the theme of hospitality. Finally, it was a major function of the poets to preserve the collective memory of the past, so giving an element of continuity and meaning to the otherwise fleeting and insubstantial realities of the present; and in the two main themes of eulogy and satire they pressed home the moral antitheses and sanctions by which this collective existence was regulated and sustained. Thus the ḥāsid-poets, with relatively few exceptions, express, and even prescribe, a high standard of tribal morality, and noticeably avoid any reference to the bumbler and ruder features of beduin life and environment. [See further under ʿAbd b. Al-ʿAbras, Abū Dhuṭayb, Amr b. Kūṭajmūm, Ṣantara, Al-ʿAsīḥa, Al-Ḥārith b. Hilliza, Imrūʾ Al-Kays, Labīd, Muʿal- Ṭūṣ, Umayya, Ṭūṣ, Zuhayr.]

In addition to ḥāsids, a considerable body of shorter poems and fragments has been transmitted, representing the more ordinary output of occasional verse on single subjects. All of these, however, date from the age of the ḥāsid-poets and, having presumably been influenced in technique by them, cannot be regarded as representative of the poetry of an earlier period. Partial exceptions are offered by war-poems in the ṣaḥāz metre, and by the elegy [see Ṣaḥīḥīyya], which in a few surviving examples presents some primitive features; but the later elegy approached more closely the general type of art-poetry, while retaining the characteristics required by its special function. Of the other subjects of occasional verse, the commonest is praise or boasting of courage (ḥamāsa [q.v.]), a special branch of which is formed by the poems of solitary brigands and outlaws (ṣūdat [see al-Shanfara and Tāmbata Ṣarrāfīn]).

Peculiar significance attached to the ṣaḥīr (ḥāṣīr [q.v.]), in which there still survived the primitive conception of the poet (ḥāṣīr [q.v.]) as the mouthpiece of supernatural forces (see I. Goldziher, Abhandlungen zur arab. Philologie, i, 1896, 1-121). It seems that the concentration of the aesthetic sensibilities of the Arabs on the apt use of words endowed the words themselves with mystical and magical power. Poetry was a source of pride and rivalry; and the poet who, by skilful ordering of vivid imagery in taut, richly-nuanced phrases, could play upon the emotions of his hearers, was not merely lauded as an artist but venerated as the protector and guarantor of the honour of the tribe and a potent weapon against its enemies. Tribal contests were fought out as much, or more, in the taunts of their respective poets (maʿāṣīk̇ara) as on the field of battle, and so deeply rooted was the custom that even Muhammad, though in general hostile to the influence of the poets, himself conformed to it at Madina (see Diwān of Ḥassān b. Ṭabbīt [Hirschfeld], comm. on no. XXII). The sensitiveness of the Arabs to satire (noted by al-Džāḥīt, Ḥayānawī, i, 359) did not prevent its almost universal employment against chiefs and men of note, but few of these poems have survived.

A remarkable feature is the total absence of love-poetry (apart from the conventional ṣasib); wine-songs (ḥamārīyya [q.v.]) as such are also rare, but their existence is attested by examples contemporary with the rise of Islam [see Abū Mihgān]; and there are no independent examples of hunting-poems (pardīyya [q.v.]). In the urban settlements also there were poets, whose productions differed from those of the desert poets both in texture and content, but little of these have survived except some of the drinking-songs and religious poetry of ʿAdī b. Zayd of Ḥira, and the religious poems doubtfully ascribed to Umayya b. Abī ʿl-Salt of Ṭallīf.

Transmission and authenticity. There is no certain evidence for the fixation and transmission of any pre-Islamic poetry in written form prior to the 1st century A.H. (reference by al-Farazdāk to a written text of Labīd: Diwān (Sawī), 721), although the use of Arabic script for literary purposes before the rise of Islam cannot be totally excluded [see Kitāba]. Arabic tradition represents the transmission and survival of such poems as survived as due to the existence of professional "reciters" (nawār, pl. nuwād), either of the production of particular poets or of some general body of poetry, and its fixation in written form as due to the efforts of the philologists of the 2nd/8th century to collect what could be saved of the dwindling repertoire of pre-Islamic poetry. Thus the date of written fixation was by 200 to 300 years later than the date of production. The fact itself lays the poetry so collected open to question, firstly as to the reliability of the text as finally established, and secondly (and more seriously) as to its authentic attribution to the original poet—the more so since
many Arabic philologists freely charged one another
with forgery in this field. (See, on the latter point in
particular, D. S. Margoliouth in JRAS, 1925, 417-449; and on the question in general, Tāhā Ḥusayn,īi, 1.
On historico-critical and logical grounds the argument admits of no conclusion, and it
will seldom be possible to prove the authenticity of any specific poem with complete certainty. On
literary and stylistic grounds on the other hand
it is no less certain that the commonly accepted
nucleus of poems ascribed to the pre-Islamic ḏāṣīd-
poets (allowing for verbal modifications or rear-
grangement by successive generations of ṭawwīs) is a
faithful reproduction of their poetic output and
 technique, which lies behind but is yet markedly
distinct from the poetic production of the 1st/7th
century.

(ii) Prose. The absence of any written Arabic
prose literature in pre-Islamic Arabic is even less
open to doubt (in spite of occasional arguments to
the contrary, e.g. Z. Mubarak, La Pros e arabe,
Paris 1931). Parallel, however, to the cultivation of
the art of poetry, there existed several forms of
artistic speech which were distinguished from
ordinary speech by the conscious application of
aesthetic principles to their selection and polishing.

One of these was the compression of a complete
visual observation or social experience into a brief
proverbial phrase [see MATHAL], using the same
technique of concision (ḥijāz) as was applied in
poetry. Judicial decisions and maxims also were
probably couched in the same style. Casual
references occur to the existence of “written sheets”
(sawhā, sing. šāfīha) containing proverbial phrases or
hikam (cf. I. Goldziher, Muh. Stud., ii, 204-5), and it
is probable that judicial maxims also were once
committed to writing.

In oratory, the leading principle, in contrast to
ḥijāz, was elaborate expansion or “adornment” of
the theme, by processes resembling in some respects
those employed in poetry, together with the
balancing of phrase with phrase, often emphasised
by parallelism in structure, assonance, and especially
end-rhyme (ṣaḍīr [q.v.]). The authenticity of the
pre-Islamic discourses quoted by later anthologists
is almost certainly to be rejected; probably only
fragments as were preserved by al-Dāhīz in
al-Baydān wa ’l-Tabyīn and a ’l-Tabyīn
are to be regarded with any confidence and accepted as evidence of style. As
regards the language of oratory, there is good
reason to assume that distinguished orators who
employed much the same idiom as that of the poets,
but more freely adapted to local usage. The original
language of the proverbs (except those which
perhaps originate from poetic quotation) is more uncertain; partly by reason of its special content, but also
possibly in regard to the form of some legal enactments.
For its literary art in general, therefore, the
Kurʾān discards most of the methods of conscious
artistic decoration common to the literal or
aesthetic productions of its time. Form is subordi-
nated to content, and in forcing the literary idiom
into the expression of new ranges of thought it
depends for its effectiveness rather on the suggestive
modulation of the syntactical phrase [see further
KURʾĀN]. In this highly personal art, the Kurʾān
found few imitators in later Arabic prose literature,
partly by reason of its special content, but also
because the growing standardisation of literary
usage limited the freedom of prose writers to handle
syntactical structure with the same measure of
originality. The Kurʾān thus stands by itself as a
production unique in Arabic, having neither fore-
runners nor successors in its own style; and its
literary heritage is to be found mainly in the pervasive
influence of its ideas, language and rhythms in later
artistic contexts.

During the 1st/7th century, however, the flexi-
bility imparted to the ’arabiyya idiom by the
Kurʾān made it an instrument ready to hand for
the multifarious new tasks about to be imposed on
it as a result of the Arab conquests and the new
needs of administration. Although the traditions of
pre-Islamic oratory still dominated among the tribal
and Ḥarbī orators, the later ones of the Kurʾān is
now to be seen in a new style of oratory developed,
probably, out of the formal ḥuṭba pronounced by the caliphs and their governors (cf., e.g., a ḥuṭba
of ʿUmar b. ʿAbd al-Ḥāfīz, Bayān, iii, 80), in which more
emphasis was laid on the content and less on external
adornment, ṣaḍīr in particular being avoided. It was
in all probability this style which furnished the models for the first literary art of Arabic written prose, at the hands of the scribes of the Umayyad caliphs and governors, of which, however, there are few authentic examples until the papyrus documents of the period of Sulaymān and the chancery records of 'Umar II at the end of the 1st century (between 715 and 720 A.D.).

(b) First-Century Poetry

The Arabic poetry of the 1st/7th century closely reflects the social and economic changes resulting from the Islamic movement and the Arab conquests, the military settlements of the Arabs outside Arabia, the growth of luxury and a money economy, the rise of an imperial government and the imposition of its authority over the tribesmen, and the emergence of religious and political parties and tribal factions. The results of these changes are most clearly seen in the transformation of the occasional poem, and the cultivation of particular themes or types by individuals or schools. The old satire (ḥidīṣ) loses its aura of supernatural influence and develops either into a string of indecencies or a theatrical display of mutual taunting by poets of rival groups (see below). The ḥamāsa poem becomes the vehicle of religious exaltation and defiance among the Khāridjīs (q.v.). The most remarkable new development is the rise of the independent love-poem (ghasal [q.v.]) in the wealthy and luxurious cities of the Hidjāz, using a simplified linguistic structure influenced by ḥidīṣī conversational style, and, through its close association with the rise of a new musical profession (see mawlawī), metrically adapted to the needs of singing. This ghazal was of two kinds: one, connected more especially with Mecca (see ʿUMAR B. ABI RABI), realistic, urbane, and gay; the other, connected especially with Madīna (see ḍamālī and ʿumrah), depicting an idealising and hopeless love, with beduin protagonist. New themes of politico-religious poetry were inspired by the disasters and aspirations of the ʿĀlīd shiʿa (see AL-ḤOMAYYĪ and AL-KAMAYYĪ), and the ṣafīzī poem, a simple iambic verse formerly used especially to rouse the ardour of combatants, was made into an instrument for displays of linguistic virtuosity in lengthy and consciously archaising kasidas by a school of beduin poets (see AL-ʿĀRABĪ [I]).

All these give evidence of the new vigour and plasticity which had been imparted to the literary arts of the Arabs by the Islamic movement and its political and social consequences. Poetry, without losing any of its artistic qualities, becomes less formal and more functional; style and content complement and harmonise with one another. The kasida also, revived after a short intermission during the conquests, was shaken out of the rigid mould and obligatory canons of style which had circumscribed it in the old tribal society. During the 1st century it was cultivated almost exclusively by a group of beduin extraction in al-ʿIrāk and Mesopotamia, represented especially by al-ʾAṣrāfī, al-Ḥakīmī, al-Maṣrūqī, and ʿAbd al-Ṣamad al-Gābīrī, and the authentic representative of the schools of ʿAmr b. Kuṭḥūm and al-Nābiḥī stands closest to the spirit of pre-Islamic poetry, both in his tribal odes and his panegyrics of the Umayyad caliphs. For the poets of al-ʿIrāk, on the other hand, the kasida, while preserving the traditional external structure, changes both in inner content and in function. Al-ʿArabīzdīk in his boasting odes may celebrate the renown of his ancestors, but for him, as for ʿAṣrī, beduin life is poor and brutish, and the kasida an instrument to gain riches from the powerful and wealthy at the price of often hypocritical adulation, no longer phrased in terms of tribal virtues, but of political and religious controversy. Alternatively inter-tribal mulākha is overlaid by a flood of personal taunts in slanging matches on parallel themes (nabūdī [q.v.]), of considerable ingenuity and virtuosity, for the detelection of the tribesmen of Kūfa and Baṣra. Both of these developments went far towards changing the original art-form of the kasida into an artificial convention, and in language also the poets sought the suffrages of the rising philological schools in al-ʿIrāk by conscious exhibitions of luxuriant and sonorous vocabulary. This is still further developed in the special art of Dhu ʿl-Rumma, devoted mainly to descriptions of desert scenery and life, emotionalised by a ghazal theme.

The outstanding difference between the pre-Islamic poetry and that of the Umayyad age in general is, however, psychological. The passions of the pre-Islamic age were strong, but moved within narrow limits; and the poets held them to a high moral plane. Those of the Umayyad age were multiple and conflicting, and the poets shared in the general psychological instability and conflict of principles and parties. The emotional foundation of the ghazal is self-evident; but emotion enters also into the traditional themes, bringing them closer to the popular taste and giving them a sharper and coarser tone, which lowers the ethical plane, in spite of a copious sprinkling of Kurʿānic phraseology and pious sentiment. The political role also of much of this poetry required the poets to play to the gallery and pander to the debased taste and love of excitement of the masses, especially in their nabūdī. As regards the authenticity and transmission of Umayyad poetry, it is evident from the relatively complete state of the diwāns, as compared with those of the pre-Islamic poets, that they were written down either during the poet’s lifetime or immediately afterwards. Specific references are found to a written corpus of the poetry of al-Farazdāk, kept by a secretary (Aḥbānī, xix, 22), and also to that of Dhu ʿl-Rumma (al-Dhābīz, Hawiyyānī, i, 41), and to a written text of the nabūdī (ed. Bevan, 430).

(II) Second-Century Literature

(i) Poetry. The Arabic literature of the 2nd/8th century is sharply distinguished from that of the 1st/7th century by two main features. It was, with few exceptions, the literature of an urban society, concentrated for the most part in al-ʿIrāk; and the majority of its producers were half-Arabs or non-Arabs, converts or descendants of converts from the original Aramaean and Persian population. The resulting changes and developments in literary production are more marked in prose than in verse production, but are clearly to be seen also in the poetry of this period.

In contrast to the new prose literature, however, the transition to the early ʿAbbāsīd age made no
violent breach in the tradition of Arabic poetry. Metrical systems and technique evolved within the older framework, and structural innovations met with little or no success [see Abu 'l-'Atā'īyya]. The permissible metres and deviations were ingeniously systematised by al-Khalil b. Ahmad (d. 175/791) and strictly adhered to. In language also the poets are as precise and meticulous in their pursuit of 'arabiyya as their predecessors, but begin to aim at smoothness and simplicity in place of the sonority of the beduin poets. These changes are masked to a certain extent by the continued cultivation of the kasida, which now, however, even more than in the Umayyad age, acquired a ceremonial function. The poet who presented himself at the court of the caliphs or of lesser authorities was required to demonstrate his qualities by his kasidas and was rewarded accordingly. Since it was by their patronage that the poet gained his livelihood, he was compelled to conform to their expectations, especially when the reward was not infrequently proportioned to the length of his ode. To these factors must be added the natural conservatism of the Arab, which tended to restrict the poet to conventional forms, and of the poets themselves, for whom (as for their critics in the rising philological schools) poetry was the guarantor of the pure tradition of Arabic linguistic art, and the kasida the highest proof of the poet's mastery of it. Internally, in spite of the conventionality of its form and matter, the kasida shows a development away from the old beduin themes, and both panegyric and satire are handled with considerable diversity and originality, while at the same time the newer types of poetic production affect to some extent the traditional modes of expression.

It is, however, in these newer types that the social changes and currents in the new age found their fullest expression. The first impulses came from the ghazal poetry of the Hijāz and its musical accompaniment, both directly and through Syria, where they were combined with the (probably native Syrian) tradition of wine-songs by the Umayyad caliph al-Walīd II (d. 126/744), with whom tradition connects the first representatives of the new school in al-ʿIrāq [see Muyīʾ b. ʿIyās]. Their witty, uninhibited, and often scandalous verses met with a delighted reception in the new secular and pleasure seeking society of Baṣra and Taḥmābd, and were even, set to music, enjoyed in the private entertainments in caliph's palaces. The general intellectual effervescence resulting from the contact of Islamic society with Persian and Aramaean culture stimulated, both by attraction and by repulsion, a wide range of emotional attitudes and r-actions, which were freely exposed in verse, and at the same time created a social atmosphere which, in spite of the opposition of the nascent legal and theological schools, encouraged freedom of thought and expression. Together with the new trends of urban poetry, several of the movements of the Umayyad age (notably Shīʿism) still continued to furnish themes for poetic elaboration, and the old ʿIrākī tradition of religious and moral verse was revived by the Muʿtazzīl Bighr b. al-Muʿtāmar, Abu ʿl-ʿAtāḥīyya, and others. Two other lesser poets also were originators of new literary genres: ʿAbd al-Hāmid b. al-Amsrī (d. c. 192/807), the inventor of the court-ghazal, short poems on themes of chivalrous love; and Abān b. ʿAbd al-Ḥamīd (d. c. 200/815), who first used the rhymed raddiṣa couplet (musaddaqiṣ) for verse romances and didactic poems. In sum, therefore, the output of Arabic poetry in this century was enormous, and characterised for the most part by an originality, achieved not so much by breaking with new lines as by fusing new elements with the traditional themes in such a way that the effect is almost that of a wholly new art.

Yet, for all this, the poetry of the 2nd century prefigures, if it does not itself illustrate, the decline of the true poetic art and the growth of artificiality in Arabic poetry. The freshness and sincerity of the Hijāzī ghazal were not compensated for by wit and cynicism; and the pursuit of wit led to a straining after verbal brilliance and originality in metaphor. This was the origin of the so-called badīʾī [q.v.], the embellishment of verse by tropes and antitheses and ingenious exploitation of Arabic morphology. The earliest exponent of this "new style"—not as yet exaggerated or formalised—was the blind poet Baḥṣahr b. Burd (d. 168/784), of Iranian extraction, and the first major Arabic poet of non-Arab origin. The elaboration of the traditional kasida with badīʾī devices is generally ascribed to one of the poets of the next generation, Muslim b. al-Walīd, who was in consequence highly esteemed by some critics and condemned by others as "the first who corrupted poetry". There is, in contrast, little trace of these artifices in the works of his greater contemporary Abu Nuwas (d.c. 198/803), who in poetic genius, fecundity, manysidedness and command of language has few rivals in Arabic literature. Witty, gay, cynical and foul-mouthed, he was at his best in his incomparable wine-songs, most virulent and coarsest in satire and ghazal, versatile in panegyric, and a linguistic virtuoso in the beduin style of hunting-poems (tardiyya), the fashion for which he revived. On the other hand, Abu Nuwas and the other poets of the latter half of the century exemplify a new development which was soon to affect all Arabic poetry, not generally to its advantage. Hitherto the poets had learned their art exclusively by association with, their predecessors. With the rise of the philological schools, particularly at Baṣra, they began to perfect their training by systematic instruction from and association with the philologists. The common ground of this association has already been noted above, but its effect was to imbue the poets themselves (exclusive of the purely popular poets) with a more or less philological approach to their art and the acceptance of philological criteria of poetic merit. To this, probably, is due, more than to any other cause, the increasing formalisation of Arabic poetry in later centuries, and its degeneration, in the hands of the less gifted, to an almost mechanical recapitulation of well-worn themes with a surface decoration of badīʾī.

Transmission. Paradoxically, the situation in regard to the texts of the early ʿAbbāsīd poets is often much worse than to those of the Umayyad poets, since the philologists (who did not regard them as reliable authorities for linguistic usage) made no efforts to collect their diwāns. Some have never been collected, and such diwāns as survive in later MSS (including that of Abu Nuwas) are far from reliable. The authorship of single verses and even of whole poems is sometimes in question, and later collectors of badīʾī figures have caused much confusion by lack of care in citation and attribution (see I. Kratchkowsky, Abu ʿl-Faraj al-Walīd, Petrograd 1914, Introduction, 68-96).

(ii) Prose. As already mentioned [I (a) (ii) above, ad fin.], the first essays in Arabic prose were made by the kutubb, the chancery secretaries of the...
Umayyad caliphs, in a style based on that of the official Khulās. In the earliest known literary productions those of 'Abd al-Hamīd b. Yabyūs (d. 132/750), however, in which the matter called for a logical expansion of general principles in complex detail, the adaptation of Arabic syntax to these unfamiliar demands could be met only by ingenious experiment. As in other literatures, flexibility in prose style was first acquired by the processes of translation, in this instance from the Partho-Latin court-language of Sāsānīd Persia, initiated by 'Abd al-Hamīd’s disciple Ibn al-Mukaffā (d. 139/757). In their existing forms, the extant works of Ibn al-Mukaffā have probably undergone some rehandling in subsequent decades; but it is clear that he posed the problem which was gradually solved by his successors: that of creating a smooth and palatable prose style which was capable of expressing systematic thought, within the limits of the available vocabulary. The function of this literature was didactic and ceremonial; it laid down rules of conduct for princes, court officers, secretaries and administrators of all kinds, and supplied the general knowledge required for the performance of their duties, in the form of manuals, anecdotes and romances, the whole being comprised under the general head of adāb [q.v.]. Their agreeable literary style and diverting contents procured a wide popularity for these works in the new urban society, and for several decades the translations from and imitations of Persian literature held a dominant place in Arabic prose literature.

In the meantime, native forms of Arabic prose were being developed. The primitive narrative arts were organised into conscious literary styles, such as the ḥaṣaṣ, the combination of a number of hadiths into a connected story (exemplified in the Šir āt al-Nabī of Ibn Isḥāk (d. 151/768), the kisāṣ [q.v.] or anecdote, and ḥabbar [q.v.] or narration, particularly in the romances of beduin lovers (waḥšāḥ) and of the “battle-days” (ayyām al-ʻarab [see I (a) (ii) above]). In contrast to these narrative genres, which preserved in a greater or less degree their original Arabic structure, the rapid expansion of intellectual energies in Basra and Kūfah, especially in the schools of philology and law, was creating, with the help of Greek logic, a new argumentative prose which was far more flexible and close-knit than either the new narrative forms or the translations of the secretaries. At the same time, the philologists, consciously opposing the increasing degeneration and impoverishment of Arabic in the mixed society of the Ḥirāk cities, and with the support of Islamic religious circles, set themselves to define the correct modalities of Arabic speech and to preserve both the extensive vocabulary (lugha) and the pure idiomatic usage (ṣaḥāṣa) of the peninsula. Thus, in opposition both to the jurists and to the secretaries, for whom the Arabic language was primarily an instrument, they reasserted—in a new context—the old Arabian insistence on the importance of form, and thereby contributed to maintain the concept of the ʻarabīyya as a standardised and unchanging artistic structure, which remained unaffected by the varieties and evolution of spoken Arabic. Closely related to these activities, and also in conscious opposition to the secretarial school, was their activity in searching for and preserving the memorials of the old Arabic culture, such as poems, proverbs and tribal traditions, to serve (in conjunction with the Kurān and all the materials relating to the Islamic movement) as the basis of the “Arabic humanities”. Except for technical monographs, mainly on philological subjects—the most important of which are the dictionary, K. al-ʻAyn, of al-Ṣāmī (d. 179/795), the grammar, al-Kindī, of his pupil Šābawayh (d. 180/796), and the monographs of Abū Ubaydah (d. 210/825) and al-ʿAṣmā’ī (d. 216/831)—few original literary works, in the strict sense, had been produced in philological circles by the end of the century, and it was only in the 3rd/9th century that the Arabic humanities came into full fruition.

Much the same may be said of the associated field of historical studies [see TARIKH], in which, except for the rather conscious adaptation of the ayyām-technique in the Šīrāz of Ibn Isḥāk, the activities of historical students were devoted mainly to the compilation of source-materials in the form of monographs on particular episodes of Arab or Islamic history [see ABU MIKHNAF, AL-MADAMA’I, AL-WĀ‘IDH] or on tribal genealogies [see MIḤĀM B. MUHAMMAD AL-KALBĪ].

The legal schools, on the other hand, had already attained the stage of producing major works, both expository and controversial [see FIQH]. The lead was taken by the Ḥanafī school of al-İrāk with Abū Yūsuf (d. 182/798) and Muhammad al-Ṣāhībānī (d. 285/904), while the school of al-Madina produced the first important corpus of legal hadith in al-Muwatta’ī of Malik b. Anas (d. 179/795). As early as the next generation, al-Ṣāḥibī was able to set out and defend in a series of tractates (al-Umm) the principles which were henceforth to govern legal reasoning in Sunnī Islam.

Finally, in regard to Kurānīc studies, the practice of oral transmission still predominated, and the first collected work on exegesis appears to have been made by the above-mentioned Abū Ubaydah. Bibliography (in addition to works cited at the end of § I): Ch. Pellat, Le Milieu Basrien et la Formation de Gābih, Paris 1952; Aḥmad ʿAlmān, Duha ‘l-Islām, i, Cairo 1933; A. F. Rifa‘ī, ‘Asr al-Maāmūn, ii, Cairo 1927; Ṭabā Ḥusayn, Ḥadīth al-ʿArba‘id, i, ii, Cairo 1925, 1926; J. Schacht, Origins of Muhammadan Jurisprudence, Oxford 1930.

(III) Third to Fifth Centuries

(i) Prose

By the opening of the 3rd/9th century, the philological, historical, legal and Kurānīc studies just described had laid the foundations for an Arabic-Islamic prose literature, which could challenge the predominance hitherto enjoyed by the secretarial school in the field of polite letters (adāb). The problem that remained to be solved was that of mobilisation, or how to bring these studies out of their scholastic or technical isolation into a positive relation with the public interests and social issues of the day. This problem was illuminated, rather than solved, by the genius of al-Djāhīsī (d. 255/865), who brought them to bear on all aspects of contemporary life in a series of tractates and epistles, written in a sonorous and witty style, of unequalled linguistic vigour and variety, but too individual to serve as a stylistic model for general literature. The final solution was found by his later contemporaries, who blended the clarity of the secretarial style with the traditional art-language and the argumentative prose of the philological and legal schools into a medium capable of expressing all varieties of factual, imaginative and abstract subjects with great refine-
ment and precision, though at some cost to the workmanship and vigour of the ancient idiom cultivated by the philologists. One of the first results of this "modernised" prose medium, with its superior flexibility and adaptation to social changes, was to restrict and ultimately to displace poetry from its former social function, and to relegate it more and more to a purely aesthetic role in social and literary life.

The success achieved by the writings of al-Dzhažiz and his successors was not due solely, however, to their command of the Arabic sciences and a more flexible linguistic instrument. The schools of Basra, with their rationalising tendencies, had already been attracted (especially in the theological groups of the Mu'tazila [q.v.]) by the surviving elements of Hellenistic culture in Western Asia. Early in the 3rd/9th century the revival of Hellenistic learning received a strong impulse from the establishment by al-Ma'mūn (198-215/813-33) of the bayt al-hikma [q.v.] for the translation of Greek philosophical and scientific works. During the whole period treated in this section, the dominant feature of Arabic culture is the fruitful interaction of the Arabic and Greek traditions which is already illustrated in the writings of al-Dzhažiz, and was subsequently displayed in almost all branches of Arabic literature, both secular and religious. These internal developments were further expanded and accelerated by the vast extension of literary activities, which, hitherto all but confined to al-'Irak, began in the 3rd century to be cultivated in a large number of centres, from Samarkand to Kayrawān and al-Andalus. The material foundation of this expansion was the rapid economic development of the Islamic empire, which was itself greatly expanded by the introduction of paper (warāš [q.v.]) manufacture from the Far East in the second half of the 2nd century.

The range and extent of these new literary movements rapidly overwhelmed the Sānānī tradition of the Khurāsān, in spite of their rearguard movement of resistance [see al-'Otbyy] and denigration of the Arabs and their culture. A recontrivance was effected by Ibn Kūtayba (d. 276/889-90), who in a long series of works furnished the secretaries with compendia and extracts from all branches of Arabic learning, but incorporated in them also such elements of the Persian historical and courtly traditions as had established themselves at the court and could be harmonised with the Arabic-Islamic humanities. Henceforward, adab, in the strict sense, was confined to treatises and other literary works based on this widened Arabic-Islamic tradition, including both the Persian and the Hellenistic components.

Simultaneously, the widening of general intellectual interests was displayed in the cultivation of a great variety of specialist disciplines, the cumulative productions of which constitute the climax of the mediaeval Islamic culture, and for this reason cannot be entirely excluded from any general survey of Arabic literature. In the 3rd century the Hellenistic contribution was greatly expanded by the many translations of Greek works made by Kūtāb b. Lūqā (fl. 220/835), Ḥunayn b. Isḥāḳ (d. 260/873), his son Isḥāḳ b. Ḥunayn (d. 295/901), and other translators. Already before the middle of the century, the first independent Arabic works on philosophy were being written by Ya'qūb al-Kindī (d. 236/850), to be followed in the next century by the Turk Abū Naṣr al-Fārābī (d. 339/950) and the Persian Abū ʾAll Ibn Ṣinā (d. 428/1037), to mention only the most prominent names [see ʾAlṣafā]. In mathematics by Muḥammad b. Maḥān al-Kūhī-arīmī (fl. 230/844), and in Astronomy by al-Farghānī, Abū Maʿṣhar al-Balbī (d. 272/885), and al-Battānī (d. 317/929) [see Tāfghīm]; and in medicine by Ibn Māsawayh (d. 243/859) and Muḥammad b. Zakariyyā al-Rāzī (d.c. 311/923) [see Ṭibb]. Although the technical literature of the sciences cannot be dealt with here, yet the importance of these studies, and of other popular works on Hellenistic origin (such as Sirr al-Asrār, attributed to Yāḥyā b. al-Bīṭīrīk, c. 200/815), in determining or at least influencing the intellectual climate of the period must not be underrated. In geography, in particular, they not only directly inspired the "revision" of Ptolemy's geography by the above-mentioned al-Kūhī-arīmī, but also indirectly contributed to the first road-book, by the postmaster Ibn Khurradābībī (fl. 230/844), and in conjunction both with the older philological interest in the place-names of Arabia and with Indian materials [see Sindhind] and old Persian concepts, stimulated the intellectual curiosity which produced the rich geographical literature of the following century [see al-Qāhiryya].

The opposition to these hellenising tendencies was led by those 'orthodox' students of theology and law who rejected the rationalist principles of the Mu'tazila. The search for Prophetic Traditions (hadīth [q.v.]), which had developed in the 2nd century as a weapon against the pragmatic tendencies of the local schools of Law, was vigorously cultivated in the 3rd by the orthodox everywhere, partly (as in the famous "Six Books" of the Bukharī, Muslim, al-Tirmidhī, Abū Dā'ūd, Ibn Mādīja, and al-Nasrābādī) in order to consolidate the dominant place which it had gained in the juristic sciences, but partly also (as in the more comprehensive Musnad of Ahmad b. Ḥanbal, d. 241/855) against the critical attitudes of the Mu'tazila. So potent a force did the hadīth prove to be, with its appeal to simple piety and veneration for the Prophet, that in the next century the Shi'a also, both among the Iṣmā'īlīs (Da'ā'īn al-Islām of the kāf al-e-Nu'mān b. Muḥammad, d. 363/974) and in Iṣmā'īlī circles (the "Four Books" of al-Kulīnī, d. 328/939, and others [see Ghīṭl]), aimed to rival the achievement of the Sunnīs by the collection and attribution of hadīth to the Iṣmā'īlīs. Nevertheless, although the schools of law, thanks to the early standardisation of their methodology, seem to have been little affected by the hellenistic revival and continued to produce an extensive literature of their own, both theology and popular religion could not but be coloured by their environment. Orthodox theologians, in the schools of al-Ash'ārī (d. 342/953) and al-Māturīdī (d. 333/944), reconciled Greek physics with the data of the Kurān and the hadīth by a skilful dialectic [see Kālām], which by the end of the 4th century had established itself as the universal scholastic theology of Sunni Islam; while Shi'i theology, especially in the Iṣmā'īlī schools, was still more strongly influenced by the neoplatonism expounded, together with the Greek sciences in general, in the popular encyclopaedia of the 4th/10th century called the Epistles of the Sincere Brethren [see Nūgawān ʾal-Safā]. The literature of theological polemics also, as well as that on "comparative religion" (i.e. on the differences between the Muslim and the non-Muslim religions), is clearly aware of the general positions of
Greek philosophy and prepared on occasion to
discuss them in detail. The most celebrated work
in these fields is the incisive K. al-Fasl by the
Andalusian Zāhirī Ibn Ḥazm (d. 456/1064), equally
noted for his delicate anatomy of love under the
title of The Dove's Neckring.

While popular religion was less affected by theo-
logical problems as such, it had from the first been
influenced by the older religious movements in
Western Asia and North Africa. By the 3rd century
most of these accretions had been pruned away,
except for gnosticism and Syrian mysticism (itself
incorporating many Stoic and Neoplatonic elements),
which were exercising an increasingly profound
influence upon ascetic and pious circles, and trans-
forming piety and asceticism into mystical sūfism [see ṬAṢAWWUF]. Already in the 3rd and 4th cen-
turies a new ǧīfā literature was fully developed,
ranging from systematic treatises (beginning with
al-Muḥâsibī, d. 213/857) and rasāʾīl (al-Djunayd,
d. 297/910) to collections of aphorisms, symbolist
poetry [see al-ḤA LLADĪ], and stanzas by Dhu 'l-Nūn
(d. 245/859) and al-Niffār (d. 354/965).

The total result of these specialist literary activities
was immensely to expand the range of mediaeval
Arabic as a linguistic instrument. Not only in the
technical vocabulary of the various sciences, but
also as a medium for expressing fine shades of philo-
osophical and psychological analysis, it had
developed capacities far beyond the old classical
language. But this must not be taken to imply that
the range of literary adāb, or even its expressiveness,
was widened in an equal degree. Much of this tech-
nical and analytical vocabulary was probably unlike
in earlier centuries, just as the range of genres and
topics is also different, though it might be [see above].

Nevertheless, the adāb works demonstrate very
clearly the marginal position of the purely Helle-
nistic elements and of the special sciences dependent
on them (as distinguished from the generalized
influence of Hellenistic culture) in relation to the
main body of Arabic and Islamic elements in the
mediaeval Islamic culture. A few adābā’i show in
their writings an interest in metaphysical and scien-
tific disciplines, e.g. Ahmad b. al-Ṭayyib al-Sarakhsī
(d. 286/899), Abū Ḥayyān al-Tawhīdī (d. 414/1023)
and Abū ʿAlī Miskawayh (d. 421/1030) [see also ṢUJJA’]. But such works are on the whole excep-
tional. The mainstream of Arabic letters after Ibn
Kūtayba runs through miscellaneous topics drawn
from Arab poetry and history, politics and rhetoric,
and collections of anecdotes, and popular ethics.
Illustrated by such writers as Ibn Abī ʿl-Dūnayr
(d. 281/894), Ibn al-Muṭṭaṣim (d. 296/908), the Ana-
lusian Ibn ʿAbd Rabbīhī (d. 328/939), Abū Bakr al-
Ṣūrī (d. 339/949), Abu ʿl-Faraj al-Maṣhāhī (d. 356/
967), author of the K. al-ʿAḡrā’ī, al-Muḥassen al-
Tanūkhī (d. 384/994), collector of "table-talk" and
anecdotal literature, and Abū Maṣṣūr al-Thaʾlīsī (d.
429/1038) [see below]. The huge output and
popularity of such works show how sharply, on
the whole, the social and intellectual interests of
literary circles were circumscribed, and the con-
sequent limitation of the concept of adāb. On a
more technical level of adāb, but essentially of
the same kind, were the "sessions" (māḏ̣āʾī) and
"dictations" (dāmūlī) of the professional philologists
(e.g. al-Mubarrad, d. 285/908, Thaʾlīsī, d. 291/904,
Ibn Durayd, d. 321/934, al-Kāhī, d. 356/967), in
distinction from their pedagogical works on philology
proper, which included the first major
dictionaries of the classical language by Ibn Durayd,
al-Dja’farma (d. 393/1002) and Ibn Fāris (d. 395/1004-5). 1

This intense absorption in literary and linguistic
production was bound to produce in due course a
considerable volume of technical literary crit-
icism. Although as late as the K. al-ʾAḡrā’ī criticism
seems to consist mostly of subjective judgments
on the relative merits of given poets or verses, the
first steps towards a more systematic criticism had
already been taken by al-Djāhībī and, from a different
angle, by Ibn al-Muṭṭaṣim, who in his K. al-
Rāḍī classified the figures of speech employed in the "new"
poetry. Kūdāma b. ʾAṭīfār (d. 310/922) introduced
the practice of classifying poetic "beauties" and
"faults", and by the end of the 4th/10th century the
K. al-Ṣinṭāʿ alayn of Abū Hilāl al-ʾAskarī (d. 395/955)
offers a complete critical analysis of poetry and prose
in terms of structure, rhetorical devices, and figures
of speech. The significant feature of most of this
discussion was the insistence upon form rather than
matter as the decisive criterion of quality; the
declared assumption is that little if anything new can
be originated in poetry, and that the only difference
between one poet and another lies in his manner of
expression. The balance was to some extent
dressed by ʿAbd al-Ṭāhir al-Djurdjānī (d. 396/978), who supplemented the excessively formal
analysis of his predecessors by a system of logical
and psychological analysis which demanded an at
least equal consideration for the "ideas" expressed.
Additional point was given to the argument on
literary aesthetics by its bearing on the doctrine of
the incomparability (ʾi’didz) of the Kurʾān; inevitably,
in spite of protests in theological circles and by
al-Djurdjānī, the prevailing concentration of literary
criticism upon form tended to emphasize unduly its
supreme verbal qualities in terms of the current
stylistic theories.

A further consequence, equally inevitable, was
that rhetorical and literary prose began to be
affected by the same theories and to display the
same pursuit of verbal elaboration. The virtuosity of
the adāb was displayed in "Paragraphs" (fusul) describing
scenes, persons, emotions, events, and
objects, or in Epistles (rasāʾīl) addressed to friends
or colleagues on a variety of occasions. Ibn al-
Muṭṭaṣim seems to have been, if not the inventor, at
least the populariser of this art, which in the 4th
century swept over the whole field of Arabic letters.
The secretarial class fell victim to it almost at once;
in the intense competition for office every refinement
of literary style was eagerly exploited. The technique
of secretarial correspondence was elaborated into
an art (insikha’i [q.v.]), based upon admired models
of elegant, florid, insinuating or pungent writing,
and it was not long before rhyming prose (saqāt),
which the best stylists had hitherto used only as
occasional ornament, became inexpressible from
official style. By the middle of the 4th century the
vizier Abu ʿl-Faṣārī b. al-ʾAmlī (d. 359/969) was
composing his correspondence in saqāt; with
his disciple and successor Ibn ʿAbbād, known as "the
Ṣāḥīb" (d. 385/995), its use had become a maâla.
Contemporary littérateurs, the most celebrated of
whom are Abu Bakr al-ʾAṭārīzī (d. 383/993) and
al-Hamadhānī, known by the sobriquet of Badī`
al-Zamān (d. 398/1007), developed the new style
more freely and flexibly in their rasāʾīl, which often
resemble a kind of unscanned verse rather than
prose. From then onwards every writer with a
reputation to make or to maintain had perforce to
follow their example; and industrious compilers like al-Thaqafî, in his Yatimat al-Dahr, and Abū Ishāq al-Hūrî of Kayrawān (d. 453/1061), in his Zahr al-ma‘ārîf, were quick to compose anthologies and treasures of the most successful verses and ḥusnâ and the most approved metaphorical descriptions and imagery. The additional premium which this placed on wit and agility produced, it is true, not a few masterpieces of artistic invention by those who possessed a natural gift for this style, but excised in return a heavy price. The enforced cult of rhyming prose not only contorted the style of men of natural but more ponderous genius like Abu ‘l-‘Alâ al-Ma‘ârîf (d. 449/1057), but by rewarding artificiality it contributed to turning Arabic writers still further away from the solid ground of real life and living issues and to sap the vitality of Arabic literature.

For the moment, however, the revival of ṣadāq coincided with a search for new or original methods of presenting literary themes. Bâdi‘ al-Zaman found a new setting (or revived a Hellenistic genre) in the popular theme of the witty vagabond, and created the dramatic anecdote or makâma [q.v.]. About 416/1025 the Andalusian Ibn Shu‘ayb in al-Tawâbi‘ wa l-Zawâbi‘ imagined a series of interviews with the dinmîs who had inspired the great poets of the past. Eight years later Abu ’l-‘Alâ al-Ma‘ârîf wrote his Risâlat al-Chufûran, in which, more daringly, he imagined a visit to heaven and hell to interview the poets themselves. These extravaganzas, however, were less appreciated by literary taste in their respective regions than the wittily allusive risâla of Ibn Zayyûn of Cordova (d. 463/1070), satirising his rival Ibn ʿAbdûn, and the letters in tightly-knit and decapitated sâdîq of Kāfûn and Baw娘ghir, prince of Tabaristan (d. 403/1012), collected under the title of Kamûl al-Balâgha. Even the makâmat of al-Hamadhâni seem to have found few imitators until the end of the 5th century, when they were revived by al-Ḥarîrî of Baṣra (d. 516/1122), with the same motif as that of his predecessor, but with a refinement of philological subtlety and wit equalling the most ingenious of the rasâ‘î and a striking poetic gift in addition. It is something of a paradox that with all their formal perfection and qualities of erudition and virtuosity, al-Ḥarîrî’s makâmat, like those of al-Hamadhâni, are firmly rooted in the common life of the Islamic city, and portray its manners and its humour so realistically as to constitute one of the most precious social documents of the Islamic Middle Ages.

Historical composition, though properly distinct from ṣadâq, was to some extent affected by the same influences. At the beginning of the 3rd/9th century, the continued association of history with religious studies is seen in the histories of Mecca by Muhammad b. Djarir al-Jabarî (d. 310/923), as a complement to his Commentary on the Kur‘ân, and the ‘Ali’s letters and speeches known as Nahj al-Balâgha [see al-Shânîf al-Râzî].

The elaboration of literary praise also, in time, invaded the field of historical writing, but only, it seems, in the composition of eulogistic dynastic annals. The example was set by Ibrâhim al-Ṣâhibî (d. 384/994) in his lost work al-Tâdîfî on the history of the Buwayhids, and was followed by al-Utbi (d. 427/1035) in its counterpart al-Yamînî on the history of the early Ghurânawids. It may be more than coincidence that these works are contemporary with the revival of the old Persian historical tradition and the Persian epic. At all events, no other examples of this style seem to be known until the later Sâldîq period (see § IV below).

(ii) Poetry

It has been pointed out at the beginning of the preceding section that from the 3rd century onwards poetry was displaced from its former social function by the new prose literature. Partly this was due to the adaptation of the artistic tradition of the ‘arabiyya to produce a vigorous prose style, which deprived poetry of its previous aesthetic monopoly. But to a far greater extent it was the result of the wide expansion of intellectual interests, with which the poets were unable to keep pace. As at the end of the pre-Islamic age, they were prisoners of their own conventions, broadened out and diversified as these conventions had been during the 1st and 2nd centuries. To a certain extent also they were the prisoners of their society. In his private verse the poet was no doubt free to amuse
himself as he pleased, but the doctrine which finally prevailed was that his major function was to "im-mortalise" his patron by his panegyric kāšīdīs: a curious and remarkable revival of the tribal function of the pre-Islamic poet.

From the literary-historical angle, one of the most interesting features of 3rd century poetry is the effort made, but without substantial success, to break through these conventions in different ways. ʿAbū Tammām al-Ṭayyib (d. 354/965), a self-taught Syrian, tried to revive the weighty sonority of beduin poetry and to marry it to the bādiʿ ornamentation of the poets of al-ʿIrāq; at the same time he attempted to make his verse the vehicle of a more complex structure of thought. His poetry is in consequence often strained and overloaded, or alternatively relaxed to an excessive degree, although it has found warm admirers in both mediaeval and modern times. His fellow-townman and disciple, al-Buhturi (d. 284/897), with a more natural gift, remained closer to the ʿIrāqī tradition in his smoother and more polished verse. In al-ʿIrāq, on the other hand, Ibn al-Rūmī (d. 283/896) attempted to create a new introspective and analytical poetry, in which each poem develops a single theme in an organic unity, and which has sometimes, but doubtfully, been genetically linked with his "Greek" origin. The originality of this poetry (though marred by an excessive sense of grievance) was appreciated, but not imitated; and the more typical and influential representative of ʿIrāqī modernism was the ʿAbbāsīd prince Ibn al-Muʿtazz (d. 296/908), who freely adapted traditional themes and metres to poetical rasālīd and descriptive verse, corresponding to the prose jāwīl. His innovations in technique and ingenuity (including a historical poem in 450 raddawīs completed the reign of his cousin, the caliph al-Muʿtaḍid) rest, however, on the established conventions of Arabic poetry; they revise, rather than reform, its characteristic methods and outlook.

From the 4th/10th century on, such pieces of natural description, epistles, poems on social occasions and the like constitute, together with epigrams and ceremonial versification or kāšīdās, the stock-in-trade of all minor poets in every part of the Muslim world, and in varying degrees of excellence. By now the use of bādiʿī had become so universal in poetry as to be a natural constituent of the finished poetic imagination; in the ghazal or wine-song it might be allowed to play only a minor part, but no poem with any pretensions could be composed without it. It required, however, the genius of a greater poet to blend in just proportions the Arabian kāšīā and the intellectual ingenuity of the ʿIrāqī school. This was accomplished by Abu ʿl-Ṭayyib al-Mutanabbi (d. 354/965), of Kūfīan origin and an admirer of Ibn al-Rūmī and Ibn al-Muʿtazz, but Syrian in his poetical apprenticeship, and the brightest ornament of the "Circle of Sayf al-Dawla". For skill in construction, felicity of language, and mastery of the lapidary phrase, al-Mutanabbi has no equal among the later bādiʿ poets, although his chief rival in Aleppo, the ʿAbdādīd prince Abū Firas (d. 357/968) may have surpassed him in the direct emotional appeal of his best poems. A greater rival was his contemporary Ibn Zaydūn (d. 463/1071), the panegyrist of al-Mansūr b. Abī ʿAmar, follower of al-Mutanabbi. With these may be mentioned, of later date, the Sicilian Ibn ʿHamdīl (d. 527/1132), and among the many minor poets the ʿAbdādīd prince al-Muʿtamīd (d. 488/1095). During the 5th/11th century, however, a new strophic type of poetry, of local inspiration, began to be cultivated in Spanish-Arab literary circles, but did not reach its full development until the following century (see § IV below).

(IV) Sixth to Twelfth Centuries

The beginning of the 6th/12th century witnessed the triumph of the two forces which were henceforth to dominate the intellectual life of the Arab countries: scholasticism and šīʿīsm. Both of these movements were associated in the Sunnī revival under the Saljūqs [q.v.] which, beginning in Khorāsān in the middle of the 5th century, spread to ʿIrāq under the Saljūq sultans, and to Syria and Egypt under its Zankīd and Ayyūbid offspring. In the West a similar movement, led by the Berber Muḥammad b. Tūmārī (d. 524/1130) on his return from Baghdād, was associated with the Muwaḥḥīd (Almohad) régime in the 6th century, and their parallel development in the two halves of the Arab world was maintained by multiple contacts and interactions.
The chief material factor in the spread of scholas-
ticism was the gradual concentration of all literary
education in the madrasas [q.v.], the new type of
organised college introduced by the vizier Niẓām
al-Mulk [q.v.]; d. 485/1092] into Bağhād for the
training of ʿulāma’ and administrators, and thence
spread over the entire Muslim world. The formal-
isation of education involved also the formalisa-
tion of the disciplines taught, and contributed
powerfully to the substitution of book-learning and
encyclopaedic compilation for original composition.
This tendency is already visible in the first generation
of leading scholars at the Niẓāmīyya madrasa:
the philologist al-Tibrīzī (d. 502/1109), a pupil of
Abū ‘l-ʿAlā al-Maʿarrī, whose production was
confined to schoolworks and commentaries, as also
was that of his successor al-Dīwālīkī (d. 539/1145);
and in the Shāfiʿī theologians al-Dīwānīyī ʿImām al-
Ḥāfīmīy (d. 428/1038) and his pupil Abū Ḥamīd
al-Ghazālī (d. 505/1111), whose earlier works were
devoted to methodology and the scholastic defence
of orthodoxy against Hellenistic philosophy and
Islamic heresy. In their footsteps followed the
immense majority of Sunni theologians and jurists
of the later generations, producing a vast literature
of scholastical summaries (ḥadīṣa [q.v.]; pl. ṣaḥih) the
most esteemed being those of the Ḥanafī Abū Ḥafs
al-Naṣafī (d. 537/1142), ʿAbd al-Dīn al-Ṭālī (d. 576/1180),
and Muḥ. b. Yūsuf al-Sanʿūsī (d. 892/1486)—
works on ḥadīṣ (especially the supplement to the
“Six Books” by Ibn al-Haythamī (d. 807/1405) and
the comprehensive Kanz al-ʿUmādī of the Indian
Ṣāḥīb al-Muttaqī (d. 975/1569)—school textbooks of
law and collections of precedents, as well as handbooks
on special branches of it [see Fikr]—commentaries
on the Kurʿān or on particular sections of it [see
Tafsīr] or on the kiraṣī [q.v.]—and on all of these
and similar works a ponderous structure of commen-
tary (shark) and super-commentary (kāshīya). The
Shīʿa, in turn, on the basis of the 4th and 5th
centuries worked, producing similar theological and
dogmatic compends (especially by al-Mutahhar al-
Ḥāfī, d. 726/1326, and Muḥammad Bākīr al-Majlīsī,
d. 1110/1700), textbooks of law, and Kurʿān-
commentaries.

The exceptions to this increasing stratification
and narrowing down of scholastic thought are few
but important. The outstanding original religious
thinker and reformer, the Ḥanbalī Ibn Ṭābiyya (d. 728/1328), and his pupil Ibn Ṭābiyya al-Dīwānīyī (d. 751/1350) engaged in a vigorous polemic against both the inertia of the schools and the šūfī cults,
but with little success until the revival of his teaching
by Muḥammad b. Ṣaḥib al-Wahhāb (d. 1206/1791)
in Central Arabia. In India, an important and
little-studied school of religious philosophy, founded
at Dīwānī by Muḥammad al-Dīwānīyī (d. 1052/1642),
remained active for several generations, and
influenced the work of the religious reformer (Shīʿa)
Walt Allāḥ al-Dīhlawī (d. 1176/1762). In law, original
contributions were made to the study of legal
principles by the Shīʿa Tāpjī al-Dīn al-Ṣubkī (d. 771/
1370) and the Ḥanafī Ibn Ṣaḥījam al-Mislī (d. 970/
1563). In philosophy also, fresh minds were occasionally
brought to the study of the confused schools of thikār,
as, for example, by the Andalūsi Abū Ḥayyān
(who, amongst other works, composed grammars of
Turkish, Persian, and Ethiopic; d. 745/1344) and his
Egyptian pupil Ibn Ḥishām (d. 761/1360).

The effects of scholasticism were not, however,
confined to the religious and philological sciences.
It affected every branch of literary composition,
considerable output of works on military tactics and the handling of weapons, the management of horses, and the killing in general.

Even in al-Andalus prose literature was largely a belated reflection of eastern models, as in the "Fürstenspiegel" of Ibn Abi Ranaša al-Turtushi (d. 525/1131), the reworking by Ibn Tufayl (d. 581/1185) of Ibn Sina's philosophical romance Bāyān ibn Yāhān, and Ibn Hūdha'y's treatise on horsemanship Tawḥīd al-Anfus. Granada, however, produced in the versatile Lišān al-Dīn Ibn al-Khāṭīb (d. 776/1374) one of the last all-round masters of Arabic literary art.

In the field of belles lettres in general, the cult of sadīqit reached its culmination in the 6th/12th century. Rhyming prose fūsūl were pressed into the service of ethics in the Astād al-Dhahab of the philologist al-Zamakhshārī (d. 538/1143). Secretarial prose received a fresh impulse from the rich and flexible inĝād of al-Kātib al-Fāḍil (d. 596/1199), secretary of the last Fātimid caliphs and of Saladin; and the examples of historical composition in sadīqit set by al-Sabī and al-'Utbī were followed and even surpassed by the loquacious virtuosity of Imād al-Dīn, known as al-Kātib al-Isfahānī (d. 597/1200), in his histories of the Saljuqs and of Saladin. In the next generation, the arts of versification and euphuism were reduced to text-book form by the Khārīzimīn al-Sakkākī (d. 626/1229) in his Miḥād al-Ulūm, probably the most frequently and widely abstracted, glossed and commented on of all secular works in Arabic literature. But the cult of sadīqit itself suffered some decline in the following centuries, except in secretarial inĝād, in works imitated from or modelled on the makhdūm, and in the introductions and dedications of books of every kind. It is on the whole sparingly used in the new type of homiletic adāb popularised by the Ḥanbalite preacher Ibn al-Djawiṣi (d. 597/1200), and even in the numerous later anthologies, florilegia, and similar works of literary compilation. Its reintroduction into such works seems to date from the Rayḥān al-Attābī of the Egyptian stylist Sāhīb al-Fāṭimah (d. 1059/1649) and its continuation by Ibn Ma'sūm (d. 1104/1692), and it continued thereafter to impose a veneer of literary artistry upon utilitarian works of various kinds.

The Hellenistic element in Arabic-Islamic culture remained active for several centuries, not only in the special fields of medicine, the sciences and philosophy, but also in combination with the branches of madrasa learning. Medical works based on independent study continued indeed to be written down to the time of Dā'ud al-Anṭākī (himself the compiler of one of the most celebrated florilegia of poetry and adāb, extracted from an earlier work by al-Sarrājī (d. 500/1106); d. 1008/1599). Mathematics, after the Persian encyclopaedist Jawz al-Dīn al-Mā'rūf (d. 672/1273), became increasingly confined to astronomy. Philosophy, also cultivated in the East by Tūsī and the more orthodox encyclopaedist Fakhr al-Dīn al-Rāzī (d. 606/1209), but thereafter passing into Sufistic metaphysics, flowered brilliantly for a time in Muslim Spain with Ibn Bāḏajda (d. 533/1143), Ibn Tufayl, and the great Abu'l-Walīd Ibn Rūḍh (Averroes, d. 595/1198), before yielding likewise to Sufism, with Ibn 'Abī-Šarīf [see below] and Ibn Sabīn (d. 668/1269). Scientific geography, which attained one of its peaks in the work-map and descriptive text compiled by the shāfi'i al-Idrīsī for Roger II of Sicily in 548/1154, still survived to the time of Abu'l-Fīdā', sultan of Hamāh (d. 732/1331), but was already giving way to the elective literary art of cosmography, exemplified by Zakariyā' al-Kawānī (d. 681/1283), Shams al-Dīn al-Dimashkī (d. 727/1327) and Sirāj al-Dīn Ibn al-Wardī (d. 850/1446). Natural science was cultivated chiefly in the field of medical botany (notably by al-Ghāfikī, d. 560/1165, and Ibn al-Baytār, d. 646/1248), and was included, along with a variety of literary materials, in the zoological dictionary entered in the encyclopaedic tendency, exemplified not only by Tūsī and al-Rāzī, but also by many lesser compilers. Encyclopaedism, it might be said, was one outlet for scholarship which found itself, consciously or unconsciously, cramped by the prevailing emphasis on religious studies and philology. It took many forms. The simplest and most compact was the alphabetical arrangement of data in a given field or fields, as in the dictionary of niṣbas (Kitāb al-Ansāb) compiled by Tājī al-Dīn al-Samānī (d. after 551/1156), on the basis of which the Greek Yākuṭ compiled his geographical dictionary (K. al-Buldān). The field which offered the widest scope for this treatment was that of biography, whether general (beginning with the Waḥīyāt al-As'im of Ibn Khalīlān, d. 911/1505), or by a number of writers, or by the biographers of the different schools, notably by Tājī al-Dīn al-Subkī (Shāfi`ī, d. 772/1370), Ibn Kuṭlubughā (Ḥanafī, d. 879/1474), and Ibn Fāhān (Mālikī, d. 799/1397; supplemented by Ahmad Bābā of Timbuktu, d. 1036/1626); of jurists of the different schools, notably by Tājī al-Dīn al-Subkī (Shāfi`ī, d. 772/1370), Ibn Kuṭlubughā (Ḥanafī, d. 879/1474), and Ibn Fāhān (Mālikī, d. 799/1397; supplemented by Ahmad Bābā of Timbuktu, d. 1036/1626); of Qur`ān-readers by Ibn al-Djazārī (d. 833/1429-30); of the companions of the Prophet by 'Īzz al-Dīn Ibn al-Ṭajīr (d. 650/1253) and Ibn Hādjār al-Ashkalānī (d. 857/1450); of philosophers by Ibn al-'Uṣaybi`a (d. 668/1270); of philologists by al-Kīṭī and by Tājī al-Dīn al-S̄uyūṭī (d. 911/1505); of the masters of the various schools of Justice, by Ibn al-Khatīb; of the ijtihād of the jurists of the different schools, notably by Tājī al-Dīn al-Subkī (Shāfi`ī, d. 772/1370), Ibn Kuṭlubughā (Ḥanafī, d. 879/1474), and Ibn Fāhān (Mālikī, d. 799/1397; supplemented by Ahmad Bābā of Timbuktu, d. 1036/1626); and of the companions of the Prophet by Ibn al-Djazārī (d. 833/1429-30); of the companions of the Prophet by 'Īzz al-Dīn Ibn al-Ṭajīr (d. 650/1253) and Ibn Hādjār al-Ashkalānī (d. 857/1450); of traditionists by Shams al-Dīn al-Dhahābī (d. 748/1348); and many others. The already established practice of compiling dictionaries of scholars and eminent men and women associated with a particular city or region was continued on an extensive, and sometimes massive, scale, e.g. for Damascus by Ibn 'Aṣākir (d. 571/1176), for Aleppo by Kamāl al-Dīn Ibn al-Adīm (d. 660/1262), for Egypt by Taḥī al-Dīn al-Māzritī (d. 845/1442), for al-Andalus by Ibn Basīkuwāl (d. 578/1183) and Ibn al-Abbār (d. 658/1260), for Granada by Ibn al-Khāṭīb, for the Ottoman empire by Tashkūrūzāda (d. 968/1560), in addition to many other biographical works less systematically arranged. A novel principle, introduced by Ibn Hādjār al-Ashkalānī, was to organise biographical dictionaries by centuries; his dictionary of notabilities of the 8th century (al-Durar al-Kāmīna) was followed for the 9th by al-Sakhāwī (d. 902/1497), for the 10th by Naḍimm al-Dīn al-Qhāṭī (d. 1061/1651) (supplemented with special reference to South Arabia and Gūḏqārīt by Ibn aydārī, d. 1038/1628), for the 11th by al-Muhbīb (d. 1112/1699), and for the 12th by al-Lāhāf (d. 1206/1791). A concise summary for the first millennium, in order of years, was compiled by Ibn al-Imām al-Ḥanbālī (d. 1089/1678). Here too may be mentioned the bibliographical encyclopaedia (K. al-Zunan) made by the Turkish scholar Kāṭīb Āḥādīt Khalīf (d. 1068/1658), and the
elaborate dictionary of technical terms (Išḍāḥāt al-Funun) written in 1158/1745 by the Indian Muham-
mad Ṭabīb al-Tahanawī. A second direction taken by encyclopaedism was to combine several branches of learning in a single work. Al-Nuwayrī (d. 779/1377), the Syrian Ibn Ḥāfiz al-Ḥamawi (d. 837/1434), and of the lyrical poets Bahu al-Dīn Zuhayr “of Egypt” (d. 656/1258). A panegyric on the Prophet, known as al-Burda, composed in elabo-
rate bādi‘ by the Egyptian al-Būṣīrī (d. 694/1296),
became and has remained one of the classics of religious poetry. The poetic art found more congenial expression in newer patterns of strophic poetry, related to the East to the popular mawdī and dubaytī,
and already partially exploited by al-Ḥārīfī. In al-
Andalus the more complex strophic art of the
muwaṣṣahāt [q.v.] was given finished form by the
blind poet al-Tufīlī (d. 523/1129) and Ibn Baṣīr
(d. 540/1145-6). Although it owed something to
popular poetry in its origin, the muwaṣṣahāt, as a
developed literary form, retained only in its final
line (ṣuḥūf) a trace of its provincial source and was
cultivated as a courtly art in Spain, becoming a
highly ornate lyric with musical accompaniment. In
this function it was transplanted to the East by
Ibn Sanā‘ al-Mulk (d. 608/1211), and continued to
flourish there for a time, but as a formalised art
which lacked the freshness and apparent spontaneity
of the earlier Andalusian poets. [For the muwaṣṣahāt
in sūfī poetry, see below.] Of the more genuinely
popular poetry using the vulgar speech very little
has survived, except for the nagālī of the
Andalusian Ibn Kuzmān (d. 555/1160), the
satirical Haṣṣ al-Kuḥāfī of the Egyptian al-Shiribīnī
(c. 1088/1678), and the ǧ̣īr malḥūn of the Maghrib
and of the Yaman. An isolated attempt made by the
oculist and wit Ibn Dānīyāl (d. 710/1310) to give a
place in literature to the popular shadow-play
seems to have met with no success. On the other
hand, the popular romances celebrating the epics
of the Banū Hilāl in Arabia and Africa and the Banū
Kilāb against the Greeks, and the exploits of various
heroic or legendary figures (Antar, Śiddī Bātṭāl, the
Yamanite Sayf b. Ǧāhī Yazen, and the Mamlūk
sultan Baybars) reached in centuries the climax of their development, together with the
miscellaneous collections of popular tales, drawn
from all ages and strata, out of which the All Layla
wa-Layla finally emerged in a more or less estab-
lished form about the 9th/15th century.

The literary output of the sūfī movement in Arabic
was at first small in bulk compared to the scholastic
literature described above, but of much greater
significance in the cultural development of Islam.
The 6th century opened with the epoch-making
reconciliation of Ḥasanī with orthodoxy in Ḥīḍāyat
ʿUḥūm al-Dīn of Abū Ḥāmid al-Ghazālī, and the
equally orthodox homilies and writings of the
Hanbalite ʿAbd al-Kādir al-Dījīl (or Gīlānī) (d. 561/
1166). The sūfī khanāb or sānūya everywhere took
its place alongside the madrasa in the Sunni reviva-
list movement, and received the same patronage
from the governing classes. It was not long, however,
before the sūfī movement began to develop its own
systems of theology and metaphysics. The “oriental”
platonist and illuminationist (tawḥīdī) doctrines were
restated by Shihāb al-Dīn Yahyā al-Suhrawardī
(executed by order of Saladin in 587/1191, and hence
known as al-maktul, in opposition to the Aristotelian school; but another Suhrawardi, Shihab al-Din Tumar (d. 632/1234) issued a more orthodox exposition of ṣūfī mysticism in Ṣamārī al-Maʿārī. Both works had a deep and lasting influence in the East, but much less in the Arab world. Here the new monistic mysticism (mabdat al-teyżji) was founded, on a basis of neoplatonism and Moroccan sufism, by the Murcian Muhyl al-Din Ibn al-Bagtini, known as al-Shabb al-Maktul, in opposition to the Aristotelian school; but another Suhrawardi, Shihab al-Din Ibn al-Arabi (d. in Damascus 658/1260), carried to Anatolia by this pupil al-Konawl (d. 672/1273), and spread still more widely by the order of the Sufis in the Maghrib. The term "modern Arabic literature" implies a development differing from, and a degree of change greater than, a simple revival of literary activity, whether within the narrower circle of the philosophical arts or in the wider humanistic range of the 3rd and following centuries. Such minor local revivals had occurred from time to time, as, for example, in Aleppo under the influence of the Maronite archbishop Djamansh Farhat (1670-1732), and in Baghdaḍ in the first half of the 12th/18th century (see al-Alusi, Aṣṣan al-Asfar, Baghdad 134/1930). In the 13th/19th century also, the rise of a new literature was preluded by a sustained movement for the revival of classical Arabic and an output of literary works directly or indirectly inspired by classical models. The first object of the leaders of this movement was to rescue the Arabic language from its degeneration in the preceding centuries and to restore the heritage of classical literary art; in its purest form it is represented by Nāṣif al-Yaṣṣarī (1803-1871) among the Syrians, by Naṣīf al-Ḥarīrī (d. 1874) and ʿAll Pasha Mubarak (1824-193) in Egypt, and by Māḥmūd Shukrī al-Alusi (1827-1923) in Suṭrā. All of these, and many others, were consciously ambitious to revive the classical traditions, both in their pedagogical work, and in their original productions, e.g. ʿAll Yāṣṣarī's maḥṣūm (Maḥṣūm al-Bahrāyin) in the manner of al-Ḥarīrī, ʿAll Pasha's al-Ḫāliṣ al-Tauṣīṣīyya in continuation of al-Makrī, and al-Alusi's adab collection Butūṣ al-ʿArab. Alongside these, but also fundamentally sharing their aims, was another group of writers who were led by circumstances or personal choice into closer contact with the literature and the ideas of the western world. The first major impulse in this direction was given by the needs of the military academies set up by the viceroy of Egypt, Muḥammad ʿAlī, for translations of technical works from the French, together with the establishment of a printing press in Egypt in 1828, and others soon afterwards in Syria. The chief of the Egyptian translators was Rīfāʿa Bey Rāfīʿ al-Taḥtāwī (d. 1873), whose original works included a vivid narrative of his experiences in France as awmām of the Egyptian educational mission, and many later educational handbooks. It is questionable how widely the large body of translated technical works of this period circulated, or how far they affected the outlook of men of letters; but it seems clear that for Rīfāʿa Bey and others like him the western materials which they used in their literary works were simply adjuncts embedded in the framework of the established Islamic categories or (in the case of their translations from French literature) supplements to them. The literary productions of the contemporary Lebanese scholars who were in contact with the western educational missions in Syria, and in particular Butrus al-Bustānī (1819-83), Ahmad Fāris al-Ṣāhīyāk (1803-87), and Nāṣif’s son Isḥāq al-Yaṣṣarī (1847-1906), as also of the
Tunisian Muḥammad Bayram (1840-89), were to a large extent similarly motivated; but along with this all these men were also among the creators of the new Arabic periodical press and experimenting in the formation of a modern journalistic medium.

The development of the new periodical press in Egypt, at first largely under Syrian direction but soon followed by a vigorous native Egyptian production, provided the real forçng-bed of modern Arabic literature. During the last decades of the 19th century and the first decade of the 20th, the press was the theatre in which (except for poetry) literary reputations were made and literary Arabic was adapted to modern social themes and currents of ideas. This did not exclude the widest diversification in literary styles: the strict but vigorous classicism of Muḥammad ʿAbdūh (1849-1905), the modernised ʿubādātī of Muḥammad al-Muwaylīḥī (1868-1930), the elegant neoclassicism of Muṣṭafā Ῥūfī al-Manfūlī (1876-1924), the functional prose of Dījdī Zaydān (1861-1914), Yaʿqūb Šarrūf (1852-1927) and Kāsim Amin (1865-1908), the fiery rhetoric of Wāli al-Dīn Yakūn (1873-1921) and Muṣṭafā Kāmil (1874-1908), the satirical colloquialism of Yaʿqūb Šānnūrī “Abū Naḍūrā” (1839-1922) and ʿAbd Allāh Nādir (1844-96). At the same time the Syrian press transported to America was producing a type of literary essay and Whittmanesque “prose poems” which entirely discarded the classical traditions and even sought to remodel the linguistic structure in part; its leading figures were Dījdīrān Ḫalīl Dījdīrān (1883-1931) and Amlīn al-Rayhānī (1877-1940).

This stylistic experiment in the press in the treatment of modern themes was reinforced by a very extensive output of translations of European works of literature, often by the same hands. Of the translations so made few have much claim to literary distinction, except those made by al-Manfūlī and perhaps one or two others. But the activity in translation played a vital part in the development of modern Arabic literature. “It may be said that, just as the world, the 19th century and the 20th, the 19th century and the 20th, or an al-Diḥāṣ would have been impossible without the translators of the ʿAbbāsid period, so without the translators of the 19th century modern Arabic literature could never have been called into existence” (Kratchkowsky). The translated works served not only as exercises in expanding the range of Arabic literary expression, but also as models. Not a few translators themselves tried their hands at original works of a similar kind, and many others were stimulated to original composition by them. In the former group, the most interesting are the attempts to develop a dramatic literature. The earliest of these were made by the Syrian Māḏūn al-Nakkiḥī (1817-55), inspired by Molière; he was followed by Naḍīb al-Māḥdūd (1667-99), in the style of Corneille, Hugo, A. Dumas and Shakespeare, and more successfully, by the Egyptian Muḥammad Uḥmān Dījdīrān (1828-98), who adapted Molière to Egyptian settings and speech, besides producing a remarkable adaptation in literary Arabic of Pari et Virginie. In spite of this, however, it cannot be said that the Arabic drama achieved much success in the 19th century. On the other hand, some progress was made with the novel, particularly in the series of historical novels written in the manner of Scott by Dījdīrān Zaydān and the psychological novel ʿUrūshālīm al-Dījdīda by Farāb Anṭān (1874-1922). Many other original compositions also depend largely on European materials, e.g. the politico-social writings of ʿAbd al-Rāḥmān al-Kuwwābī (1849-1903), while the literature of the nascent Egyptian feminist movement, illustrated by ʿAṣīfa al-Taymrūtīyya (1840-1902), Malāk Ḥīfīn Nāṣīf (1886-1918), and Kāsim Amin, betrays its original inspiration even though adapted to its own social and literary environment.

In the sphere of poetry, on the other hand, the continuing classical tradition far outweighed any literary influences from the west down to 1914. With the rise of nationalism, however, new themes, provided first by Muḥammad Sāmil al-Bārdūlī (1839-1904), then with more classical polish by Ahmad Ṣawākī (1868-1932) and more depth of social feeling by Muḥammad Ḥāfīz Ibrāhīm (1871-1932). But neither the new themes, whether patriotic or social or individual, nor the techniques of western poetry affected to any marked extent the long-established structure, genres, and modes of expression of Arabic poetry (in the hands, at least, of its most competent artists). The only outstanding exceptions are found in ʿIrāq, where the native Arabic poetic tradition had remained more vigorous and less cramped by artifice than in Syria and Egypt in the previous centuries. In more unconventional forms and freer language Diḏlim Sidīk al-Zahāwī (1867-1936), and with more classical restraint Maṭrūf al-Ruṣāfī (1875-1945), both achieved an authentic expression of current ideas and aspiration. An isolated attempt to acclimatise Greek poetry in Arabic was made by Sulaymān al-Bustānī (1856-1925) with his translation of the Iliad (1904); in itself not unsuccessful as a translation, it nevertheless failed to make much impression.

(b) Since 1914

In contrast to the preceding period, which was on the whole a period of experiment and imitation in modern Arabic prose, the decades since 1914 have seen the beginnings of a new and original Arabic literature which to a much greater extent reflects the social and intellectual interests of the Arab peoples. A leading part in this development was taken by the "liberal" group of Egyptian writers, inspired by Muḥammad ʿAbdūh, who were associated with the journal al-Diḏīda (issued from 1907, edited by Ahmad Luṭfī al-Sayyīd) and its successor al-Siyāsā (from 1922, edited by Muḥ. Ḥusayn Haykal); but the movement itself soon extended widely beyond this circle. The principal types of production were at first the short story (followed by the novel) and the literary essay; later on these were followed by the literary drama.

The first major work of the new school was Zaynāb, a novel of Egyptian village life, published anonymously in 1914 by M. H. Haykal (b. 1885). In spite of its merits, the technical weaknesses of the work threw a sharp light on the deficiencies of literary Arabic at that time for the adequate presentation of the novel of manners. During the decade 1920-30 these were largely surmounted by a growing output of realistic short stories of contemporary life, beginning with the sketches (Ma Tardhu' l-ʿUyun) of the talented Muḥammad Taṣmūr (1891-1921), and continued with increasing skill and success by his brother Muḥammad Taṣmūr (b. 1894) and by several others (ʿĪsā ʿUbayd, Shihāṭa ʿUbayd, Tāhir Lāshīn, etc.). The most brilliant stylist in this field was Ibrāhīm ʿAbd al-Kādir al-Māzīn (1890-1949), who eventually produced also the first successful novel of manners (Ibrāhīm al-Kātib, 1931). From 1930 the output of novels slowly increased, among the more notable of the earlier works being ʿAwadat
al-Rāḥ (by Tawfīk al-Ḥakīm, 1933), Sāra (by ʿAbbās Māḥmūd al-ʿAkkād, 1938), and Niḍāʾ al-Maḍākhīl (by Māḥmūd Tāymūr, 1939). The historical novel had already been recreated by Māḥmūd Farīd ʿAbū Ḥabdīlī with Iḥnāt al-Maḍākhīl (1926). The psychological novel also was successfully attempted on a smaller scale by Tāḥā Ḥusayn (b. 1889), who in his autobiographical work al-ʿAyūṣm (1926) endowed modern Egyptian literature with one of its masterpieces in content and literary style. Innumerable short stories have been produced also in Lebanon, Syria, ʿĪrāq and America, with the variations in subject, style and technique which one would expect. The output of novels, on the other hand, has been more fluctuating, and is still relatively small in proportion to the total literary production.

The literary essay envisaged a different purpose. It aimed not only at the critical evaluation of both classical Arabic and modern western literature (extending sometimes even to classical Greek and Latin literature) and social criticism in general, but also at the valorisation of the Arabic cultural tradition, in the widest sense, in the circumstances of the modern world. The rapid increase in daily, weekly and monthly journals after 1920 provided endless opportunities for the publication of such essays, and the representation of all points of view. The collected essays of many writers were subsequently reissued as separate works, whose very profusion makes it difficult and invidious to single out individual names. It must suffice to mention, from among the older generation of writers, Tāḥā Ḥusayn and al-ʿAkkād as particularly influential thinkers and critics on the modernist wing; Shawkī Ṣāḥḥīṣ Rīḍā (the editor of the reformist religious journal al-Maḍākhīl, 1865-1935) and Farīd Wajḍīl as equally influential in conservative and religious circles; Mūsāṭā Ṣāḥīlī al-Raḥīfī (1880-1937), who carried neo-classicism to the verge of preciosity; in Syria, the classicist Māḥmūd Bey Kūrd ʿAll (president of the Arab Academy of Damascus, 1876-1952); and of the Syro-Americans Mīḥāṭāʾl Nūḥ Kūrdī (b. 1889). The ephemeral production there gradually arose a more developed literature of literary and social criticism, with a dominantly academic bias, but also borrowing in some hands (e.g. Tawfīk al-Ḥakīm) the technique of the novel, and even other literary media, as in the scientific travel narrative al-Sīnābīl al-ʿAṣīrī by Ḥusayn Fawīl (1928). Another noteworthy later development was the application of these newer literary methods to the early history of Islam, exemplified by M. H. Ḥaykal, Tāḥā Ḥusayn, and al-ʿAkkād, and in dramatic form, somewhat earlier, by Tawfīk al-Ḥakīm.

The technical advance made in the presentation of the realistic narrative and novel was reflected also in dramatic literature. With few exceptions, the lead was taken by Egyptian authors, beginning again with Māḥmūd Tāymūr, and continued more especially by Tawfīk al-Ḥakīm, who, after some experiments in literary drama on themes drawn from Islamic literature (Aḥl al-ʿAkhī, Māḥmūd, Shākrāsālād), has shown himself a major dramatist on modern social themes. Together with these may be mentioned the experiments made by the poet Ahmad Ṣāhwālī to create a literary genre of "classical tragedy", based on traditional Arab themes, followed more recently by Māḥmūd Tāymūr.

Among the technical problems confronted by the Arab literary drama, and to a lesser degree by the short story and novel, the question of language constitutes a peculiar difficulty. In the purely literary drama and in historical plays generally the use of the written language needs no justifying; but in the contemporary realistic drama this involves a degree of artificiality which tends to destroy the theatrical effect. Whereas, however, the popular theatre has always flourished on plays in the colloquial language, the attempts made to produce a more developed drama in colloquial speech have neither been markedly successful on the stage nor met with much approbation in literary circles. Even in the short story the introduction of colloquial speech in dialogue (attempted in their earlier works by Māḥmūd Tāymūr and Tawfīk al-Ḥakīm) was felt to involve a stylistic dislocation, and has not been commonly practised. Even less consideration has been given to more ambitious attempts to produce literary works in the colloquial throughout, chiefly by Lebanese writers and poets. A definite solution of this problem is not yet in sight, but for the time being a working compromise is provided by the use of a simplified form of the literary language for dialogue both on the stage and in the novel.

At the same time, and in the opposite direction, one consequence of the vogue of the literary essay has been to mobilise more effectively the resources of classical Arabic, and to facilitate the development of a neo-classical style in the novel and general literature since 1940. With the richer and more flexible range of vocabulary and construction thus made available, together with the more technical concentration of meaning in modern Arabic (in contrast to the conceptual looseness of the older literary language), the contemporary writer has at his disposal an instrument which can express with grace and precision all normal aspects of contemporary Arab life and thought. Beyond this range, however, neo-classical Arabic is still deficient in both the fine nuances and the contextual associations which are the product only of long use and habit. For this reason, the attempt (first made by Bīṣr Fāris, in his play Māʾraš al-Tarīḵ, 1938) to create a symbolist or impressionist style in modern Arabic must be considered premature.

This applies even more especially to the poetical production of recent years. Since 1914, the situation of prose and poetry have been reversed. Whereas in prose-writing Arabic authors, after the period of translation and imitation, moved on to original compositions, Arabic poetry has moved towards the freedom of western poetry and the imitation of its techniques. On the one hand, the intensity of political aspirations and frustrations could not fail to inspire many poets in the Arab countries (particular mention may be made of the Tunisian Abū ʿIṣām al-Ṣāḥīlī, 1909-34), who have applied traditional themes and imagery to modern situations with great effect, most of the younger poets have, in the last few years, turned to the creation of a psychological poetry in new strophic and rhythmical forms, and wrestling with the traditional linguistic structure and its associations. The Syro-American poets were the first to challenge the traditional formalism, and have been followed particularly by the Lebanese poets in Brazil (Rāṣīl Sāliḥ al-Khūrī and Fawāz Māṭīf, 1899-1930), in North America (Iyās Abū ʿAṣ, 1903-1930), and in Lebanon itself (Iyās Abū Ṣāḥīla, 1903-47, and others). The leader of the "new school" in Egypt was Abū Zāk Shāhīd (1892-1953), whose magazine Apollos for a short time (1932-3) provided a forum for the younger poets, in competition with the older "modernising" school represented by the Lebanese Khalīl Maṭrān.
(1871-1949), and with greater freedom by al-‘Aţḵād, which, though no less contemporary in subject and psychological approach, made a less violent breach with the formal and linguistic traditions of Arabic poetry. Much the same may be said also of the contemporary poetry of ‘Irāk, within the framework of its own tradition.

(H. A. R. Gibb)

**Appendix—Arabic Literature in Spain**

**General bibliography:** Apart from the general histories of Arabic literature (see above, B), which devote one or more chapters to Muslim Spain, the work of A. González Palencia, Historia de la literatura arábigo-española, Barcelona, Madrid, etc., 1928, 2nd. ed. 1945 (a recast edition, with an extensive bibliography) is the only comprehensive work which exists on Arabic literature in Al-Andalus. A brief general account will be found in: Elias Térés Sadaba, La Literatura Arábigo-española, apud E. M. Pareja, Islamología, ii, Madrid 1954, 979 ff. Apart from a few monographs on authors (see under the names of these authors) and fewer still, on periods, specialists have been primarily concerned with the production of short studies (such as are to be found in the journal al-Andalus in particular); the following, however, should be mentioned; for poetry: E. García Gómez, Poemas árabe-andaluces, Madrid 1930, 1940, 1943; idem, Poema arábigo-andaluz, breve síntesis histórica, Madrid 1952; for history and geography: F. Pons Boigues, Ensayo biobibliográfico sobre los historiadores y geógrafos arábigo-españoles, Madrid 1898; in addition: E. Lévi-Provençal, La Civilización árabe en España, V eu générale, Cairo 1938, 1948 (Spanish translation, Buenos-Aires-Mexico 1953); Dozy, Recherches sur l’histoire et la litt. de l’Espagne pendant le moyen âge, Leiden 1849, 1860, 1881.

1. —Down to the Almoravids (92-485/711-1092).

When the conquerors set foot on Spanish soil, at the end of the 1st/beginning of the 8th century, Arabic literature was still only represented, in the East, by the Kur’ān and the religious sciences, as in their infancy, and by a lively poetic muse. It is therefore probable that the Arab warriors, who were poets to a greater or lesser degree, respected the old tradition, but probably confined their literary activity to the composition of a few poems designed to extol their tribe, celebrate their military exploits, lament their dead, or bewail their exile from their homeland, in the same way as their fellow-Muslims sent to conquer other parts of the world (cf. C. A. Nallino, Letteratura = Scrivi, vi, 51, 110-4; French trans., 81-2, 170-7). None of this has been preserved; a late notation states however that in ancient times, “the inhabitants of al-Andalus sang in the style of Christians or of Arab cameleers” (apud E. García Gómez, Poesía, 30-1). Nevertheless, the foundation of the Umayyad amirate brought about the establishment of close contact with the East, which did not fail to send religious notabilities to catechise Spain, and the rapid Islamisation of a considerable part of the indigenous population required the development of juridico-religious studies. From 909 onwards, the substitution, encouraged by the Umayyads for political motives, of Malikism for the madhhab of al-Awza‘ī (see al-Andalus, vii), soon bore fruit in the formation of a school of jurists who, to a varying
but not inconsiderable degree, contributed to the propagation of the Muwatta* of Malik. In his defence of Muslim Spain, Ibn Hazm (see Al-Andalus 1954/1) cites in the first place ʻIsā b. Dinār (m. 121/837), Ibn Habīb (180-238/866-952), al-ʻUtbī (m. 255/870), Ibn ʻAbī Ṭālib (d. 70), Ibn Bāṣāmīn (m. 253/867), Ibn ʻAbī Ṭalib b. Muzayn (m. 258/872), Malik b. ʻAll al-Kātanī (m. 268/882); these studies were pursued with enthusiasm by the successors of these pioneers, Muḥ. b. ʻUmar b. Lbūba (225-314/840-926), Muḥ. b. ʻAbd al-Malik b. Ayman (252-330/866-941), Kāsim b. ʻAbdād (247-340/861-951), ʻAbdād b. Saʻīd (284-350/996-1064) and especially the great ʻAbd al-Ṣāliḥ, traditionist and man of letters Ibn ʻAbd al-Barr (368-457/978-1070). The attempt made by Bākī b. Māḥhad (201-76/817-925) on his return from the East (his meeting there with Ibn Ḥanbal is worth special mention), to introduce into Spain the Shāfiʿī madhab, had little effect, but this traditionist is the author of a collection of ʻadāsīs presented in the combined form of a muṣannaf and a maṣānad, of a work on the Companions of the Prophet, and above all of a commentary on the Kurʾān which Ibn Hazm considers to be superior to that of al-Tabari. Zahirism, on the other hand, was introduced by ʻAbd Allah b. ʻAbd Rabbih, to every extent it self was not unknown; among its supporters were Ḫalf Ghaffār (3rd/9th century), Yaḥyā b. ʻAbd al-Salāma (313/927), and Muḥ. b. Ḥudayr (d. 320/932). Finally, philosophy appeared on the scene with the mystic Ibn Maṣarra (d. 319/931) and his school (see Asín Palacios, Abenmasarra y su escuela, Madrid 1914).

The disciplines connected with the religious sciences developed on parallel lines. From the end of the 2nd/8th century, the first oriental works on grammar were introduced into Spain and a course of instruction was devoted to them, but it appears that philological and lexicographical studies received a powerful stimulus as a result of the arrival at Cordova, in the reign of ʻAbd al-Rahmān III, of the work of Dioscorides. After Ibn Ḥudūjī, who has already been mentioned, and Muḥ. b. ʻAbd al-Hādī al-Maghīrī (d. 457/1064), Abu ʻl-ʻRāsīm Khalāf b. ʻAbbās al-Zahrāwī (325-404/936-1013), known to Europe in the Middle Ages as Abulcasis, and Ibn Wāfīd (388-464/988-1074) were the first of a series of great physicians and botanists who achieved fame during the era which followed.

As a result of the beneficent influence of al-Ḥakam II, a school of mathematicians and astronomers arose under the leadership of Maslama al-Maghīrī (d. about 398/1007) and continued under Ibn al-Sām (370-426/980-1034) of Granada, while in the following century there flourished at Toledo al-Zarkallī and at Saragossa, the Hāfiz kings themselves. Finally, the study of medicine and botany received a powerful stimulus as a result of the arrival at Cordova, in the reign of ʻAbd al-Rahmān III, of the work of Dioscorides. After Ibn Ḥudūjī, who has already been mentioned, and Muḥ. b. ʻAbd al-Hādī al-Maghīrī (d. 457/1064), Abu ʻl-ʻRāsīm Khalāf b. ʻAbbās al-Zahrāwī (325-404/936-1013), known to Europe in the Middle Ages as Abulcasis, and Ibn Wāfīd (388-464/988-1074) were the first of a series of great physicians and botanists who achieved fame during the era which followed.

According to customary practice when dealing with Arabic literature, it has been necessary up to this point to give an account of disciplines and genres which the historian of most other literatures would certainly disregard, and it has been made to make a rapid list of works which for the most part bear the characteristic imprint of Islam and which differ little from similar works written in the East. The same consideration obtains when one embarks on a study of the first literary works proper, whether in prose or verse. It is nevertheless astonishing that it was not until the 4th/10th century that there appeared in Spain an adab work written by an Andalusian, the famous ʻIṣāb of Ibn ʻAbd Rabbih (d. 328/940), the contents of which are still specifically oriental; it is equally remarkable that this genre had no great success in Spain and that Ibn ʻAbd Rabbih had few imitators during the first period with which we are dealing. Yet for more than a century, the country had been "ṣrajelec", from the time of the arrival at Cordova, at the beginning of the amirate of ʻAbd al-Rahmān II, of the celebrated ʻIrāqī singer Zirīyāb (173-243/789-857), who brought to Spain the fashions of the Abbāsid court (see E. Lévi-Provençal, Civilisation, 69 ff.). Baghdad was indeed still a model to be imitated, but an event of the utmost importance had occurred, of a kind which gave to the Arabic literature of Spain an orientation slightly different from that which obtained in the East. In fact, from the 3rd/9th century, a strong tradition of tribes which populated the Peninsula had,
after a long period of mutual ignorance, been gradually drawn closer together and had finally achieved a sort of fusion eminently favourable to the production of an original literature.

Our information on the Arabic poetry written during the early centuries of Muslim domination is very scanty, and the loss of the oldest collections—especially the K. al-Huday‘iK of Ahmad b. Fa‘araj (d. 344/956)—deprives us of essential documentation. Perhaps Yahyâ al-Ghâsâlî (d. 251/864), who was sent by ‘Abd al-Rahmân II on an embassy to Constantinople (see E. Lévi-Provençal, Islam d’Occident, 81 ff.), wrote poetry of merit; it is known that he favoured a minor epic form, by his use of the urjâsâ, and this form was also employed by Tammâm b. ʿAmir (184-283/801-90) and Ibn ʿAbd Rabbih. It is not the epic, however, but the muwashshâhât (q.v.) which is the most typical Spanish form. From the end of the 3rd/9th century dates the creation, attributed to a poet of Cabra named Muqaddam b. Muʿâfâ (d. at the beginning of the 4th/10th century) of this new verse-form; its fundamental characteristics were the arrangement in strophes, an arrangement virtually unknown to the Arab lyric, and the addition of an envoy (khârij a) not in Arabic, but in Romance, as has recently been revealed by S. M. Stern (Les vers finals en espagnol dans les muwashshâhât hispano-lusitaniens . . . in in And., 1948, 299-346): we have here a unique example of the combination of the two languages and the two systems. As long as there are manuscript collections of muwashshâhât still unpublished (see S. M. Stern, in Arabica, 1955/2), it would be premature to draw up a list which, if not exhaustive, would at least be fairly comprehensive, of authors of poems of this type; in any case, some of them are later than the period under review.

The importance attributed in recent years to the khârij a can be explained on the one hand by the attraction of a novelty and, on the other, by the renewed controversy on the relationship between Spanish poetry and that of the troubadours, but it must be admitted that the muwashshâhât, however much appreciated by the Andalusians, by no means Orientalists, constituted no more than a minor literary category which could in no way supersede the other poetic forms esteemed in the Muslim Orient, and the necessary concomitant of the establishment of the western caliphate was an original poetic form which neither showed clearly signs of indigenous influence, nor followed too closely oriental forms.

Nevertheless, oriental works were well known in Spain, from the pre-Islamic kâsidas—studied as relics of a bygone age but not imitated—to the dithyrambs of "modern" and neo-classical poets, in particular al-Mutanabbi—who was the subject of a Mu‘ašīm (332/441/945-1049), al-ʿAlâm al-Ḥantamârî (410/76/1019-83), and Ibn ʿAšr— and it was these works which inspired Andalusian poets when Cordova, the metropolis of the Muslim West, possessed all the conditions favourable to the production of poetry of a characteristic flavour. As was to be expected, this poetry passed through various phases; somewhat official to begin with, it later became progressively independent and free, and finally blossomed in the 5th/11th century with increased a richness.

Without going so far as to claim that the Umayyad caliphs were the centre of literary circles, one may legitimately affirm that they regularly played their part as patrons of letters by promoting Arab culture—notably by creating libraries, including the celebra ted library of al-Ḥakam II—and by granting pensions to poets commissioned to sing their praises and to give, through their compositions, the custo mary luster to the various solemn functions of official life; the waṣâir of al-Ḥakam II and Highâm II, al-Muṣâafî, (d. 372/982) is the perfect example of such poets (see E. García Gómez, La Poesie politique sous le califat de Cordoue, in REI, 1949, 5-11).

Although this type of poet did not hesitate on occasion to embark on other kinds of poetry than the political, it was under al-Mansûr—who had ordered the burning of those books on philosophy, astronomy and other sciences which were considered to be contrary to the interests of Islam—that truly urban poetry came into being with Ibn Darrâj al-Ḵastalî (347-421/958-1030), Sa‘îd of Baghdad (d. 418/1026), al-Ramâdâl (d. 403 or 413/1013 or 1022). Moreover, from the end of the period of the caliphate, a literary group was established which, aristocratic in origin, but revolutionary in its ideas, was hostile to the muwashshâhât genre which was considered too popular, stoutly defended arabism without however submitting wholly to oriental influence, and proclaimed that the production of good literature depends on the genius of the authors and not on erudition or imitation. The leader of this school was Ibn al-}elseify (384-1034), who developed his ideas in a prose work of undoubted originality, the Risâlât al-Ta‘awwî‘a wa ‘l-Zawâwî‘î (see García Gómez, Ibn Hazm de Cordoba y El Collar de la Paloma, Madrid 1952, 6 ff.; his natural heir was Ibn Ḥazm who, although he did not give evidence of superior poetic talent, was none the less the author of a charming analysis of ‘Ulûhîte love, the Tawq al-Ḥamâma which, unique in its kind, belonged henceforth to universal literature.

The momentous events which led to the fall of the caliphate and the establishment of the kingdoms of the ta‘ifas (Ta‘awwî‘î andaloues, en arabe classique, au XIe siècle, Paris 1937, 2nd ed. 1953, by H. Pérès who, while seeking to bring out its documentary value, has at the same time painted an overall picture of the poetry of this period. Although it is possible to distinguish at each of the courts which came into being a kind of specialisation in some branch of knowledge, poetry dominates all literary activities; everywhere it reigns supreme, it opens all doors and "an extempore poem can be worth a thousand lines of a bygone age but not imitated—to the dithyrambs of “modern” and neo-classical poets, in particular al-Mutanabbi—who was the subject of a Mu‘ašīm (332/441/953-1049), al-ʿAlâm al-Ḥantamârî (410/76/1019-83), and Ibn ʿAšr—and it was these works which inspired Andalusian poets when Cordova, the metropolis of the Muslim West, possessed all the conditions favourable to the production of poetry of a characteristic flavour. As was to be expected, this poetry passed through various phases; somewhat official to begin with, it later became progressively independent and free, and finally blossomed in the 5th/11th century with increased a richness.

The momentous events which led to the fall of the caliphate and the establishment of the kingdoms of the ta‘ifas (Ta‘awwî‘î andaloues, en arabe classique, au XIe siècle, Paris 1937, 2nd ed. 1953, by H. Pérès who, while seeking to bring out its documentary value, has at the same time painted an overall picture of the poetry of this period. Although it is possible to distinguish at each of the courts which came into being a kind of specialisation in some branch of knowledge, poetry dominates all literary activities; everywhere it reigns supreme, it opens all doors and "an extempore poem can be worth a thousand
Spanish poets like Ibn ʿAmmar (d. 477/1084) and Ibn al-Labbān (d. 509/1113) but even the Sicilian poet Ibn Hamdis (447/1057-1132) (see S. Khalis, La vie littéraire à Séville au XIe siècle, Sorbonne thesis 1953, unpublished); at Almeria, al-Muʿtaṣim (d. 484/1091) received Ibn ʿSharaf (444-534/1052-1139), while at Granada flourished the celebrated Abū ʿIshāk al-ʿIlībī (d. 454/1069), and at Badajoz Ibn ʿAbdūn (d. 529/1134).

From the Almoravids to the end of the period of Arab domination (488-897/1092-1149)

The Almoravid conquest, which here and there brought the careers of these poets to an abrupt close, for a time reassembled the fragments of al-Andalus. It was unfavourable to the development of poetry, because the new rulers lacked the refinement and the taste of the reyes de taifas, and showed less interest in literature than in religion. While a wholly conventional type of poetry flourished at court, only Valencia maintained the tradition of the preceding century with the “landscape-painters” Ibn Khafādīya (450-533/1058-1138) and Ibn al-Zaqqāk (d. 529/1135), who did not despise, respectively, erotic poems and bacchic songs. Under the Almohads, the only names of any note are those of al-Ruṣāfī (d. 572/1177) and Ibn Sahl (d. 649/1251); later, up to the fall of Granada, Līsān al-Dīn Ibn al-Khāṭīb (713-76/1313-74) and Ibn Zamrūk (733-963/1333-93) merely maintained the tradition. Their contemporaries did not fail to note the decline of poetry and, thinking that the time had come to gather together the legacy of the past in order to save it from oblivion, they compiled anthologies: Ibn Bassām (d. 542/1147) his Dāhkārān, al-Fātīḥ b. Khākān (d. 599/1198) his Kalā‘ūd al-ʿIḥrān and Maḥmūd al-Άjuṣ uṣūl al-Maghrib, while Ibn Saʿdī al-Maghribī (d. 672/1272), in extracting from his Mughrib the K. Rāyāt al-Mubārāz, seemed to be writing "the last testament of Arabo-Andalusian poetry" (García Gómez, Poesía, 86).

If, however, noble or classical poetry shone with but a feeble lustre, the muwashshāhāt, which the most aristocratic poets had continued to produce in the preceding century (see Arabic, 1055/2), again flourished with singular brilliance through the efforts of al-ʿAmāh al-Tāṭīlī (d. 520/1126), Ibn Bāḥī (d. 540/1145) and many others. In addition, the zabīdāt [q.v.], whose origin is attributed, perhaps erroneously to the 3rd/9th century, came truly to life with “one of the highest poetic peaks of the entire Middle Ages” (García Gómez, Poesía, 81), Ibn Kuzmān (555/1159), and a host of popular poets mastered this form and kept it alive until the end of the period of Arab domination.

Prose literature, which had made such a promising beginning with Ibn ʿṢuḥayd and Ibn Ḥāzm, again became orientalised with the Sirāj al-Muʿāṣa of al-Tūṭīlī (451-520/1059-1120), the encyclopedia of Ibn ʿṢhūyīn al-Balāwī (576-660/1180-1267), and the several imitations of the Maḥmūdīyā of al-Ḥarīrī which found their most prolific commentator in Spain in the person of al-Shārīḥī (d. 619/1222).

While particularly unfavourable to poetry and literature properly so-called, the Almoravid conquest was, on the other hand, an advantage to the sciences, both religious and profane, which developed to a considerable degree from then on. Space will not be devoted here to the religious disciplines which, though they had innumerable devotees, produced few noteworthy works apart from the Tuhfah of Ibn ʿAṣīm (760-825/1359-1426), or to philosophy or lexicography, because, apart from Ibn al-Sīd al-

Baṭāyawi (508-80/1114-85), the masters of these sciences, Ibn Mālik (605-72/1208-74) and Abū ʿIyān (595-74/1157-1344), preferred to go and give the fruits of their knowledge to the peoples of the East.

As regards history, the biographical genre achieved great success, with the bābīyāt ʿIyān (478-544/1085-1149), Ibn Bayhaq (539-578/1140-103), al-Dābībī (d. 599/1198-1260), Ibn al-ʿUbayrī (626-708/1229-308); to the dynastic chronicles was added a great work by Ibn Saʿdī al-Maghribī, a continuation of the Maḥkām of al-Hijārī (500-49/1106-55), the Mughrib, which made extensive use of earlier historians including once Līsān al-Dīn Ibn al-Khāṭīb. In the sphere of geography, the greatest name is, of course, al-Idrīsī (493-534/1100-69), while the Maghrībīs, and especially Andalusians, applied themselves successfully to the genre of narratives of travel: Abū ʿAḥmad al-Gharnāṭī (473-565/1080-1169), Ibn Dushman (560-614/1145-1217), al-Qadīf (7th/13th century). The 6th/12th and the 7th/13th centuries were for Andalusia the golden age of science: mathematics, astronomy, medicine, pharmacology, botany. There is no need to repeat here the names of those who achieved fame in these sciences (see above, B, from the 6th to the 12th century); the names of the principal philosophers and mystics of the period under review will also be found in that section.

For ajamīādī literature, see ajamīāt. On the question of the possible influence of the Arabic poetry of Spain on European works of the Middle Ages, see muwashshāhāt and zājīyāt.

ARABIYYA. Qa¡arát, island in the Persian Gulf in Lat. 27° 46’ N, Long. 50° 10’ E, about 50 miles from the Saudi Arabian mainland and 60 miles from that of Iran. It is one of a five-island group—the others being Harqar, Al-Farsiyya, Karan, and Kurayn—on the Arabian side of the Gulf. Al-Arabiyya is less than a mile square and is normally uninhabited, but it is claimed by three of the Gulf states: Saudi Arabia, Kuwait, and Iran. (W. E. Mulligan)

ARABKIR, (taken to mean 'Arabgir, i.e. 'conquest of the Arabs'), in modern Turkish orthography Arapkir, in Armenian Arabkér, in the Byzantine sources Arabicakes, a town in eastern Anatolia, 19°'s north, 38° 30’ east, about 70 km. north of Malatya, situated on the Arapkir Su, a tributary of the Karasu, which later becomes the northern Euphrates, 1,200 m. above sea-level. Capital of a bādi’ in the wilāyat of Malatya, with 6,684 inhabitants (1945); the bādi’ itself has 23,612 inhabitants.

The town is situated on a hill in a lowland which is surrounded by steeply rising walls of basalt. Because of the altitude, the climate of the town is harsh. Extensive orchards which surround the town are worthy of special mention. The town, as we find it at present, dates back only to the beginning of the 19th century, and is consequently of a modern appearance. Until then, the town had been situated at a place half an hour further to the north, which is still called Eskiègihar ('old city') and still shows traces of buildings.

The town is not mentioned by any of the older Arabic geographers; it is, however, mentioned several times in the Saldjuk Chronicle of Ibn Bbl (written 680/1281, ed. Houtsma, Leiden 1902). In the 11th century, the town was occupied by the Saldjûks; in the 13th century, it came under Ottoman rule. As the centre of a sanjak, the town belonged to the eydlet of Sivas, but it changed its orientation several times; since 1216/1278, it has belonged to the eydlet of Ma’mûrat al-Azîz (Kharput).

During the 19th century, the town began to flourish. Ainsworth gave the number of inhabitants as 8,000 (amongst them 6,000 Armenians) in the year 1839, whilst the British Consul General, J. Brant, who travelled a few years earlier, mentioned 6,000 houses (4,500 inhabited by Turks, 1,200 by Armenians), from which one might assume a higher total of inhabitants. Taylors mentions 35,000 inhabitants in the year 1868 and Cuinet 20,000 towards 1890 (n,000 Muslims, 8,500 Gregorian Armenians). A considerable part of them, particularly Armenian families, made its living by weaving (cotton goods from English yarn). Every year, emigrants come down from the mountains of Arapkîr and Kharput to try and make their fortune in Istanbul, Diyarbakr, Damascus, Aleppo and the sea-ports. In former days one used to find a servant from Arapkîr in most houses in Aleppo.

In the First World War 1914-18, the town suffered greatly, most of the houses and their famous gardens were destroyed, and trade died down. In post-war years, it recovered and began to flourish again.

ARAB SHAHIDS [see KH'ARIZM].

ARAB SHA', translation of the Aristotelian term smùbèglùgos, accident is defined as that which cannot subsist by itself but only in a substance (dòaækar [q.v.]) of which it is both the opposite and the complement. Thus, anything that is asserted of a subject is an accident, by which term the Muslim philosophers understand the Aristotelian categories (màkùlda, [q.v.]) except that of the substantive. The theologians (mutakallimûn) held different views on the subject (e.g., some believed that there can be substances without qualities and vice versa etc.) which cannot be described here (see e.g. al-Ash'ari, Ma’ásild âl-Islâmîyyin, vol. ii). Some held the doctrine of àkîlî (states) [q.v.] which they described as qualities which are neither existent nor non-existent. An important tenet held by the majority of the mutakallimûn was the thesis that an accident cannot subsist in another accident.

In another sense 'arad is the opposite of màhiyya (quiddity) or dhâl (essence) [q.v.] and denotes an attribute which is not a constituent element of an essence. Two kinds of 'arad are distinguished: (a) that which, though it is not a part of an essence, is its necessary concomitant ('arad lâkîs) e.g., laughing with regard to man smùbèglùgos kàvî' àvîvî in Aristotle, Met., iv, 1; (b) that which is found in some members of a species but not in others ('arad lâkîh or ta’dîl) e.g. writing with regard to man (simply smùbèglùgos, in Aristotle. An essential attribute, on the other hand, is e.g. rationality in relation to man.

Discussions on 'arad will be found in Muslim works on logic. For the views of the mutakallimûn see màkùlda al-Islâmîyyin of al-Ash'ari, ed. C. Ritter, ii; Dict. of Technical Terms, s.v.; S. Pines, Beiträge zur islamischen Atomenlehre, etc. (F. Rahman)

AR-'ÁF, pl. of 'afr, "elevated place", "crest". In an eschatological judgement scene in Ka'bân, vii, 46 a dividing wall is spoken of which separates the dwellers in Paradise from the dwellers in Hell, and men, "who are on the a'ráf and recognise each by his marks" (v. 48: "those of the a'ráf "). The interpretation of this passage is disputed. Bell}

The interpretation of this passage is disputed. Bell
“(Presiding) over the recognition are men, who recognise...”. According to T. Andrae the “Men on the elevated places” are probably the dwellers in the highest degrees of Paradise, “who are able to look down both on Hell and on Paradise”. Perhaps the reference is in particular to the messengers of God, who come into action again at the Last Judgement in order to separate the good from the bad. According to the traditional explanation “those of the elevated places” are to be supplied as subject of the sentence at the end of v. 46 (lam yadakhuluha) and in v. 47. According to this they would be — at any rate provisionally — neither in Paradise nor in Hell, but in an intermediate place or condition. As a result of this explanation al-‘arafa was given the meaning “Limbo” (see BARAZGE).

Bibliography: Tabari, Tafsir, Cairo 1321, vii, 126-9; R. Bell, The Men of the ‘Arâf (MW, 1932, 43-8); Tor Andrae, Der Ursprung des Islams und das Christentum, Uppsala 1926, 77 f. (R. Paret)

‘ARÂFA, or ‘ARÂFAT, plain about 21 km. (13 miles) east of Mecca, on the road to Tâhir, bounded on the north by a mountain-ridge of the same name. The plain is the site of the central ceremonies of the annual Pilgrimage to Mecca; these are focussed on a conical granite hill in its N.E. corner, under 200 feet in height, and detached from the main ridge; this hill also is called ‘Arâfa, but more commonly Djiabal al-Râhman (Hill of Mercy). On its eastern flank, broad stone steps (constructed by order of Djiâmâl al-Dhî al-Djâwâd, vizier of the atâbek Zakî) lead to the top, which is surmounted by a minaret; on the sixth step there is a platform containing the pulpit from which the ritual kubba, the Pilgrimage address, is delivered on the afternoon of the “Day of ‘Arâfa” (9 Dhu ‘l-Hijja). On the top there stood formerly a kubba named after Umm Salama (Ibn Djubayr 173), which was destroyed by the Wahhâbîs. The hill is also said to have been called Ilâ, but this name is more probably to be regarded as that of a shrine or perhaps of the deity worshipped on the spot in the pre-Islamic period (Wellhausen, Rösle arabi, Heiden- thumsber, 82-3).

The plain of ‘Arâfât (about 4 miles in breadth from E. to W. and 7-8 miles in length) lies outside the haram or sacred territory of Mecca; the pilgrim coming from Mecca emerges through a defile called Ma‘zamayn and passes the pillars which delimit the haram; to the east of these is a depression called ‘Urana, at the further edge of which is a mosque called by the names of Ibrâhîm or Namira or ‘Arâfa. The ma‘wâbî or place of assembly extends immediately to the east of this mosque and sowthowards from the Djiabal al-Râhman, and is bounded on the east by the mountain-chain of Tâhir. In the early centuries of Islam, a number of wells were dug in the plain and several plantations and dwellinghouses are mentioned. The aqueduct built by order of Zubayda to bring water from the region of Tâhir to Mecca also runs at the base of the ridge of ‘Arâfa. The plain is now covered with rough herbage and normally unpopulated, and is filled with life only on the “Day of ‘Arâfa”, when the pilgrims pitch their camp for the celebration of the prescribed kubba or festival assembly. This begins after the midday kubba and prayer and lasts until just after sunset. For further details of the ceremonies see the art. KUBBA.

The origin of the name ‘Arâfa is unknown. The legendary explanation is that Adam and Eve, separated after their expulsion from Paradise, met again at this spot and recognised each other (la’ârâfa). Arabic writers mention also other etymologies of a similar kind.

ARAGHUN [see supplement].

AL-‘ARÂFISH [“the trellises of grape vines”], in French and Spanish orthography Larache, town on the Moroccan seaboard situated on the Atlantic coast, about 44 m. S.-W. of Tangier and 83 m. N.-W. of Fas. It is situated on the first Spanish occupation coast, the history of Larache is only known with any certainty from the time that the Portuguese set foot in 1415, the Portuguese launched a successful attack against the town, but the results of this victory were short-lived. The occupation of...
Azilal and Tangier by King Alfonso V of Portugal in 1471 led to the evacuation of Larache, which the peace treaty included in the zone of Portuguese influence and which remained depopulated for twenty years. In 1489, King John II of Portugal took advantage of this circumstance to consolidate his position in northern Morocco and to constitute a more direct threat to Fás and Al-Ḳāṣr al-Ḳibr, by erecting a fort named la Graciosa on the right bank of the Lukkos a little below the confluence of that river with the Wādī Mkhāzēn. Besieged by the Moroccans, decimated by marsh-fever, ill-supplied and ill-reinforced because the river was barely navigable, the Portuguese garrison, after a long resistance, was obliged to accept an honourable surrender, which enabled it to retire unmolested. Al-‘Arā’ish was restored by Mawlay al-Nāṣir, son of the Wātḥāṣid Sultan Muhammad al-Shaykh. Leo Africanus, who gives an account of the town at the beginning of the 16th century, informs us that large numbers of eels were caught there, that a plentiful supply of game was to be found there, and that on the banks of the Lukkos there were woods abounding in wild animals. The inhabitants made charcoal which they sent to Azilal and Tangier. But they lived in fear of the Portuguese, who continually raided the area and who attacked the port itself in 1504 (there was also an unsuccessful attack by the Spanish from Cadiz in 1546). This insecurity did not prevent the development of a certain amount of maritime trade due to the fact that al-‘Arā’ish was then the only port in northern Morocco not occupied by the Christians, and that it was one of the channels through which passed the trade of Fás, to which it was relatively near. The Portuguese maintained a commercial agent there (feitor); Genoese merchants visited it regularly, and a castle situated at the entrance to the harbour became known as “Genoese Castle”. From then on, Larache became a pirates' lair, and piracy increased after the evacuation of Azilal by the Portuguese in 1550. The havoc wrought by the pirates on the Spanish coast led Philip III to occupy Larache in 1610, following an agreement with the Sa’dīd Sultan Mawlay Muhammad al-Shaykh. The town was retaken by the Moroccans in 1669 during the reign of the ‘Alawid Sultan Mawlay Ismā’īl, and was repopulated by the Djiabila and the tribes of the Rif. From that date until 1771, the operations of the European powers against Larache were confined to bombardments or to more or less successful attacks from the sea. In 1765, the French Admiral Du Chaffault suffered a heavy defeat there. In 1860, during the Spanish-Moroccan war, Larache was bombarded by a Spanish squadron. During the “Moroccan crisis”, Spanish troops landed at Larache on 8 June 1911, and the town remained within the Spanish zone of influence until the proclamation of the independence of Morocco in 1956.

Opposite Larache, on the other bank of the Wādī Lukkos, on the Shammish hill, there stand the ruins of the public town of Lixus or Lixos, where many excavations have been made.

**AL-ARAK**, to-day Santa María de Alarcos, a small citadel in the district of Calatrava la Vieja, situated about seven miles S.W. of Ciudad Real, on the summit of a mountain whose spurs descend to the Rio Guadiana. In the undulating plain which lies at its feet, between Poblete and Guadiana, was fought the famous battle between Ya’kūb al-Manṣūr and the Castilians, which ended in the rout of Alfonso VIII (see the article אֲרוֹק אֱמָסְו) for details of events immediately prior to the battle).

We have little information of the details of the actual battle, because we only have at our disposal on the Muslim side accounts which are rather fanciful. The Christian sources are more objective, although briefer. It seems that the Castilians launched a surprise attack on the Almohad advance guard, commanded by the Vizier Abū Yahyā, grandson of Abū Ḥāṣim Umar Inti [q.v.], but only achieved a partial success. Ya’kūb, with his own force, attacked the flank of the Christians who, as the struggle became prolonged, were forced, exhausted by the heat and by thirst, to take refuge in the castle of Alarcos or to flee with their King in the direction of Toledo. Moreover the Castilian Pedro Fernández de Castro, a personal enemy of Alfonso VIII, contributed with his own squad of cavalry to the success of the Almohad ruler, on whom he lavished advice. Don Diego Lopez de Haro, the great alférez of Castile, took refuge with the royal standard in the castle, but was soon forced to surrender.

The Muslim chroniclers, on the subject of this battle, have absurdly exaggerated the numbers of the troops on either side, that of the Christian dead and that of the prisoners taken in the castle. At all events, the army of Alfonso VII suffered heavy losses and experienced such a severe blow that, in the years following, despite the aid of the King of Aragon, it did not dare to risk a further engagement with Ya’kūb when the latter penetrated into its territory. The battle of Alarcos took place under the most favourable conditions for the Almohads. Alfonso VIII was at war with Leo and Navarre. Accustomed to easy and fruitful raids into Andalusia, where his troops did not meet with serious resistance, he completely underestimated the strength of the Muslim forces and the strategic ability of Ya’kūb al-Manṣūr.

Arakanese fleets and taking Cittagong in 1076/1666. (The Portuguese had been won over the previous year, and the Mughals were accompanied by Kamal, son of Prince Mangat Rai, the governor of Cittagong who had fled to Dhākā in 1048/1638).

This ended the Arakanese ascendency in Eastern Bengal, though slave raiding continued far into the 19th century. Moreover, in 1903/1692 Muslim soldiers of fortune, combining with the many captive Bengalis, rose in the capital and for twenty years had the mastery in Arakan. The Bengali Muslim poets Dawlat Kāḏī and Sayyid al-Awwal, who wrote at the courts of Kings Thirithudamma and Sandathudamma, were under the patronage of such Muslim officers and officials at the court. Descendants of these Muslim soldiers still live in the Ramf and Akyab areas, and are called Kaman (Pers. *kāmān*—a bow). (Bíśeswar Bhattacharya, *Bengal Past and Present* No. 65, 1927, 139-44)

The Arakanese connexion with Muslim Bengal found expression in the assumption of Muslim titles by the Buddhist kings and in the issue of coins on which appear those titles, or the *kalima*, in the Persian script.

It is clear that the Arakanese coins are modelled upon those of Bengal. Thus in Bengal the use of the *kalima* begins about the time when Naramiekhla was restored by the sultan to the Arakan throne, and in both countries a clumsy Kūfic is used. (See Phayre, *Coins of Arakan, of Pegu, and of Burma*, in *International Numismata Orientalia*, 1883; M. S. Collis, *Jour. Burma Research Soc.* 1925/i, 34-52; J. W. Laidley, *J.A.S.B.* 1846 pl. IV no. 12; H. F. Blochman, *J.A.S.B.* 1873/i, 209-309).

ARAL, a large, slightly salty lake in west Turkistan, 46° 45’ to 43° 43’ N and 76° to 79° 27’ E, with a surface area of (1942) 66,458 sq.km.; of this 2345 sq.km. are islands. (The largest islands are the Tokmak Aţa in front of the mouth of the Āmū Daryā, Ostrav Vozroždeniya, “Island of the Resurrection”, formerly Nicholas Island, discovered in 1848, 216 sq.km.; Barsa Kelmez, “arrival without
return", 133 sq.km.; and finally Kug Aral, in the north, eastward in front of the Kara Tup peninsula, 273 sq.km. The maximum length from NE to SW is 428 km., the breadth at 45° N 284 sq.km. The average depth of the lake is 16 m., in the middle it is up to 20-25 m., in the west up to 68 m. The lake has today in the N, E and S numerous bays, and, particularly in the SE, rocky islands offshore. Only the western shore, which borders on the Ûst Ûrït place, partly with cliffs up to 650 m. high, has no bays. The east bank is flat and sandy.

In prehistoric times (diluvium and ice ages) the level of Lake Aral stood some 4 m. above the present waterline; hence the lake had (particularly in the bays in the NE and NW) a considerably larger extension and was besides (through the Ûzboï [cf. Âmû âdarï]) connected with the Caspian Sea and through this, at the time, with the Ocean. Since the production of the present geological conditions it has no longer any outlet. (Cf. Brockhaus-Efron, Entsiklopedïesïchi Sloanor, ii, 10-12, and Bol' shaya Sovetskaya Entsiklopediya, xx, 326.)

In the historical times also the water-level fluctuated by several meters, and the banks altered because of this, especially in the E and NE; but there is no evidence of significant changes at this time. In fact the description of the delta of the Amu Darya by al-Makdisi, 288: two days from Mizidëkhkhan to the Kerder, one day and four sarbars to Parategin (B(F)aratigin) and a further day to the bank of the lake, corresponds as well with modern conditions as Ibn Hawk珪's account (ed. Kramers, 512). He says that the place Dih-i Naw = Arabic al-Karya al-Hadîthah = Turkish Yedî Kent (al-Ma'âdî: Naw Karda?), identical with the present ruins of Dian-kent, some 22 km. SW of the modern Kazalinsk (ill. in S. A. Tolstov, Auf den Spuren der all-choresischen Kultur, Berlin 1953, 254; further details, ibid., 266) is two days distant from the bank of the lake (both 10th century accounts, Barthold, Turkistan, 178). In the 19th-20th centuries the level fell and rose alternately: 1860-80 it fell, then the waterline rose till 1915 by 2 m.; within the period 1874 to 1931 it fluctuated by 3.1 m. Accordingly its height above sea-level is given variously as 49 m. (as an average: Bol' shaya Sovetskaya Entsiklopediya, 52 m. (Leimbach), and as its highest point in 1931: as 54 m. This change also correspondingly the estimation of its depth. The lake, whose salt content (1.03-1.08%) is considerably lower than that of the Ocean, scarcely ever freezes up completely. Mostly only the bays in the north turn solid, or the whole northern part (as far as the Barsa Kelmez island). To this northern part (some 5500 sq.km.) the Kazaks have given the special name Kîliî Tehîz ("small sea"); so the main southern part is called Ulu Tehïz ("great sea").

The Âmû âdarï [q.v.] concerning the possible change of its course and the Sir âdarï run into the Aral Sea. Of the Sir âdarï al-Ûmarî (1301-48) claims in his Masâlik al-âdarî (translated by W. von Tiesenhausen, Materialy otnosyaschësya k istorii Zolotoy Ordï, i, 1884, 215, transl., 237), following the account of the merchant Badr al-Dîn al-Rûmî, that it changed its direction three travelling-days below Dian, and Hâfiz-i Abrû (1442-5), who disputes the existence of the Aral Sea, makes it join the Âmû âdarï. Finally in the Bâbur-nâmâ the great conqueror of India (d. 1530) reports that the Sir âdarï subsides into the sands in the west. One should not attach much weight to these accounts, of which that of Hâfiz-i Abrû may be regarded as legendary and that of al-Ômarî conveys nothing conclusive; Abu 'l-Ûghâl too knows nothing of the Sir âdarï at one time not reaching the Aral Sea [cf. also Sir âdarï].

It is uncertain whether the Aral Sea was known to classical antiquity. A. Hermann does not refer the reports about the ÔÇêçKará çíçmûç (palus Oxiana) to the Aral Sea; on the other hand he sees in the palus Oxia of Ammianus Marcellinus, xxiii, 6, 59 the Aral Sea (Pauly-Wissowa, xviii/2, 1942, 2004-5). Also the quite general accounts of the Chinese and the çíçmûç of the Byzantine ambassador Zemarchos, 568 A.D. (Menander Protector, Corp. Script. Hist. Byz., xviii, 238 f.; C. Müller, Fragm. Hist. Græc., iv, 229) cannot be interpreted with any certainty.

In Islamic times Ibn Rusta, 92, is the first to describe the lake, without naming it. He gives its circumference as 80 sarbars; al-Istakhri, 304, makes it 100, the Hûdûd al-Âlam, 53, 300 sarbars. Whether the earlier report in Ibn Khurraðâribîbî, 173, about the lake of Kerder (for this form instead of Kûrdar cf. A. Zeki Velidi Togan in Türkiye t Me'amûsa, ii, 340) can be referred to the Aral Sea, is questionable. At that time the Öghuz (Cûuzz) and the Peñeg nomadised round the lake, except on the southern bank (Kâriîzâm) and particularly in the E and NE; but there is no evidence of a settlement in the N.E.

The Aral Sea was called by al-Istakhri, the Hûdûd, and the later geographers, Buñhayrat Khâriizâm and rightly described as a closed salty lake, which lay to the right on the journey from Gurgandj (Old Urgandj) to the Peñeg (so Gardizi, reproduced in W. Barthold, Oãçêçî o komandirovok v Sredînyu Asiyû, 1897, 95) and so had no connexion with the Sir Kâmiyî (see Âmû âdarî). On the other hand al-Masûdî (Tambîh, 65; in more general terms also in Murûtûdî, i, 211) says that the "Lake of Djurdjâniya" is connected with the Caspian Sea. Djurdjûnî (d. 861/1467-7), following the Dihân-nâmâ (from the beginning of the 13th century), calls it also "Lake of Djand" after the city on the lower reaches of the Sir âdarï. Finally, Hîfîz-i Abrû claims (in 820/1417) that the lake has vanished (and furnishes thus new proof of the fact that one must by no means blindly trust isolated accounts by Islamic geographers of the Middle Ages).

Between the 13th and 16th century no report about the Aral Sea has been handed down. Abu 'l-Ôghâl Bahâdûr Khân speaks in the Shâhârat al-Ârûf (Desmaisons), 338, for the first time of Aral ("island") as the place where the Âmû âdarî runs into the lake. After this "island" (which in the 18th century formed a separate state with the capital Kungrât [q.v.]) and was not re-united with Khîwa until the reign of Muhammad Rahîm Khân, 1806-26) the lake later received the name of Aral Tefizî, "Aral Sea", among the Kazaks. Following this the Russians call it Aral'skoe More "Aral Sea" (first occurrence in 1697). Previously the Russian work Kniga bol'shogo terrëta (finished in 1626) called it Sîne More, "Blue Sea"—it does in fact have a deep blue colour. This name appeared in 1697 also on the Dutch map in Witsen, Noord- en Oost-Tartaryë, 1687, while J. N. de l'Isle, in 1723, uses the modern name (Barthold, Aral, 77 f.).

The Russians erected first in 1847 a fortress Râmskî (the name probably derives from Rahim) on the right bank of the lower Sir âdarï, 60-65 km. from its mouth. Already from 1819 several expeditions had more closely explored the lake and furnished descriptions (1819 N. N. Murâv'ëv; 1820-1 A. F. Negri and A. K. Baron Meyendorff; 1825-6 F. W. R. Berg; 1833-5 G. von Helmersen; 1839 V. A. Count.
ARAL — ARCHITECTURE

Perovskiy; 1840 M. M. 2em£uznikov; 1840-1 Antov;
1841 I. P. Blaramberg and D. I. Romanov; 1842-2
Danilevskiy; 1843 Schulz and Lemm; then in 1848
A. I. Butakov and A. I. Maksheyev). Between 1853
and 1883 the Russians kept a flotilla on the Aral
Sea, which was stationed in the beginning in Aral'sk,
then in Kazalinsk (on the lower Sîr Daryâ). It was
disbanded after the Aral Sea had become a Russian
inland lake with the conquest of the Khânate of
Khiwa in 1873. Since 1893 the lake is reached by
the railway line Orenburg-Tashkent at the NE
corner near Aral'sk. Otherwise the lake is still to-day
situated inconveniently for traffic.—During the civil
war of 1918-21 a flotilla was formed again on the
Aral Sea. Since the reorganisation of territories in
1924 and 1936 the southern part of the lake belongs
to the autonomous republic of Karakalpakia in the
framework of the Uzbek SSR, the northern part
to Kazâstân. The lake is of importance for the
surrounding population and altogether for the USSR
principally because of its fishing industry.

ARAR [see HARAR] ARARAT [see MEBAL AL-HARÎTH] ARAS [see RAASS]

ABBAN, site of ruins in Mesopotamia, on the
Western bank of the Khabûr, to the South of the
Diabûl 'Abîd al-'Azîz, situated under 36° 10' N. Lat.
and 46° 50' E. Long. (Greenw.).
The remains of the old town are hidden under
several hills, after one of which the site is
also called Tell Âdjabûa. It was here that H. A.
Layard found several winged bulls with human
heads, products of the genuinely Mesopotamian
civilization which is closely related to that of
ancient Babyilonia. 'Arbân is probably identical
with the Gar (Shal-dikana of the cuneiform in-
scriptions. During the later Roman period the
town, then called Arabana, possessed considerable
military importance as the principal station on
the line of frontier against the Parthians. In the
Arab period 'Arbân played an important part as
the centre of the Khabûr district and as place of
storage for the cotton cultivated in the Khabûr
canyon. Geographers (cf. e.g. Yâkut s.v. 'Arbân) and
historians refer it frequently to as a flourishing town.
The date of its destruction is unknown; possibly it
took place during the Mongol invasion under Timur.

ARBUÑA, the name by which the Arab historians
designated the town of Narbonne. Reached by the
early Muslim expeditions, it was taken in 967/75
under 'Abd al-'Azîz b. Mûsâ b. Nusayr, was probably
then lost or abandoned, and was retaken in 1007/19
by al-Sawwî b. Malik al-Khawandî. In 1177/74, two
years after the battle of Poitiers [see BâkaT AL-GUHAD],
the Duke of Provence concluded a treaty with
the governor of Narbonne, Yâusî b. 'Abîd al-Rahmân,
whereby the latter was allowed to occupy a certain
number of places in the valley of the Rhône, in order
to protect Provence against the attempts of Charles
Martel and to procure a new invasion route to the
north; Charles Martel reacted at once, took Avignon
in 119/737 and invested Narbonne, but without
success. It was not until 142/759 that the town,
after a long siege, was finally taken from the Muslims
by Pepin the Short. In 177/793, 'Abîd al-Malik b.
Mughîr advanced as far as Narbonne, set fire to
the outskirts, defeated the Duke of Toulouse not
far from the city, and withdrew with considerable
booty; another expedition, which was unsuccessful,
took place in 226/840. Narbonne and its region still
maintained relations with the Umayyad court, Jewish
merchants being particularly active in this respect.

ARCHIDONA [see URBUJUBHNA]

ARCHITECTURE

I. EARLY MUSLIM ARCHITECTURE

(1) The Time of the Prophet

Arabia, at the rise of Islam, does not appear to
have possessed anything worthy of the name of
architecture. Only a small proportion of the popu-
lation was settled, and these lived in dwellings which
were scarcely more than hovels. Those who lived in
mud-brick houses were called ahl al-madar, and the
Bedawin, from their tents of camel’s-hair cloth,
ahîl al-wabar.

The sanctuary at Mecca, in the time of Muhammad,
merely consisted of a small roofless enclosure, oblong
in shape, formed by four walls a little higher than
a man, built of rough stones laid dry. Within this
enclosure was the sacred well of Zamzam. This
little sanctuary, known as the Ka'bâ, lay at the
bottom of a valley surrounded by the houses of
Mecca, which came close up to it, and we are expressly
told that when 'Umar wanted to surround it by an
open space, large enough to contain the Faithful, he
had to demolish many houses (al-Baladhuri, *Fussâh*, 46).

The Ka'ba, being in a bad state, was demolished and reconstructed by the Kuraysh, when Muhammad was in his thirty-fifth year, i.e. in A.D. 608. The Kuraysh took the wood of a ship which had been wrecked, and employed a carpenter and builder named Bâkûm, who had been on the ship, to help them in the rebuilding. Azra'î (Wüstenfeld's ed., *Chroniken der Stadt Meba*, i, 110, last line—112, l. 12) says that the new Ka'ba was built with a course of stone alternating with a course of wood up to the roof, there being sixteen courses of stone and fifteen of wood. The door, which had previously been at ground level, was now placed with its sill four cubits and a span from the ground. The root rested on six pillars (ṣawârî, pl. of ṣâriya) arranged in two rows of three each. Total height of structure—18 cubits. Azra'î says that on the ceiling, walls and columns were pictures (ṣawar) of the Prophets, trees and angels. (Cf. Creswell, in *Archaeologia*, 94, Oxford 1951, 97-102).

This curious style of architecture, of alternate courses of stone and wood, resembles the style practised in Abyssinia in early times (see Krencker, in the Deutsche Akademie der Wissenschaft, ii, 168-94) and probably an Abyssinian form of Habakkuk, that is to say the “carpenter and builder” employed was most probably an Abyssinian (see my *Ka'ba in A.D. 608*, in *Archaeologia*, XCIV (1951), 97-102).

When Muhammad migrated to Medina he built a house for himself and his family. It consisted of an enclosure about 100 cubits square of mud brick, with a portico on the south side made of palm trunks used as columns to support a roof of palm leaves and mud. Against the outer side of the east wall were built small huts (ḥudârâ) for the Prophet's wives. All opened into the courtyard. We have the description (preserved in Ibn Sa'd, *Tabâbâlî*, i, 180) of these huts, due to a man named 'Abd Allâh b. Yazîd who saw them just before they were demolished by order of al-Walîd: “There were four houses of mud brick, with apartments partitioned off by palm branches, and five houses made of palm branches plastered with mud and not divided into rooms. Over the doors were curtains of black hair-cloth. Each curtain measured 3 × 3 cubits. One could reach the roof with the hand”.

Such was the house of the leader of the community at Medina. Nor did Muhammad wish to alter these conditions; he was entirely without architectural ambitions, and Ibn Sa'd records the following saying of his: “The most unprofitable thing that eath up the wealth of a Believer is building” (*Tabâbâlî*, i, 181, ll. 7-8; also VIII, 120, l. 1). At this time Taif was the only town in the Hijâz that possessed a wall. When Medina was attacked in 5/627 it had no wall, so Muhammad had a ditch dug to defend it; the idea is said to have been due to a Persian slave named Salâmân, and it created a great sensation for nobody had ever heard of such a thing before. The word *khandaq* given to it is Persian. Medina was first surrounded by a wall in 63/662-3; (Mas'ûdî, *Tanbîh*, 305, l. 4).

(2) The Patriarchal and Umayyad Caliphates

The men who formed the Arab armies of conquest were mainly Bedouin, but even those who came from permanent settlements, such as Mecca and Medina, knew nothing of art or architecture. They soon found themselves in totally different cultural environments, one of which had been under Hellenic influence for a thousand years, the other under Persian influence for even longer.

And not only were the cultural conditions different, the material conditions were different also. Syria was a country of splendid building materials. Syrian limestone was the best of its kind, resisting weathering and taking a beautiful amber tint on exposure, and cedar wood was plentiful, for the Lebanon had not yet been draped. So the seventh century invaders found themselves in a country of splendid buildings — churches of cut stone, some of ashlar in courses 90 cm. high, with arcades on marble columns, gable roofs of cedar wood and large surfaces decorated with coloured glass mosaics on a glistening gold background.

In the other cultural sphere they met with buildings of brick, sometimes only of mud brick, sometimes vaulted and sometimes with flat roofs of palm trunks, palm leaves and mud.

In these early days, the Muslims, when they conquered a town in Syria, usually took one of the churches and used it as a mosque, or merely divided one of the churches if the town had surrendered without resistance. At Hims, for example, they took a fourth part of the Church of St. John. How was a church converted into a mosque? One can easily guess. In Syria the *kibla* (direction of Mecca) is due south, whereas churches are turned towards the east. Under these circumstances it was only necessary to close the western entrance (or three entrances), pierce new entrances in the north wall and pray across the aisles. That is this is exactly what happened can be verified in the Great Mosque of Hamâ where the west front of the *Kanîsât al-Usmâ* (Great Church) which was converted into a mosque in 15/636-7, now forms the west end of the sanctuary. Its three western doors have been converted into windows and it is now entered from the north.

At Jerusalem they made use of the remains of the basilical hall of Herod, ruined by the army of Titus, which ran along the south side of the Temple Enclosure. This primitive mosque was seen by Arculf about A.D. 670 (Geyer, *Itinera Hierosolymitana*, i, 145). In Persia, at Persepolis and Kazwin, they appear to have taken *apadânas*, or hypostyle audience-halls of the Persian kings, with flat roofs resting on columns with double bull-headed capitals.

But the situation was different in ‘Irâq, for here the Arabs founded new towns (which they did not do in Syria) so pre-existing buildings could not be employed, and they had to construct some sort of place for themselves. What manner of buildings were the first mosques of the earliest towns in Islam?

The following is a list of those Umayyad Friday mosques the essential features of which are known from literary or archaeological evidence:

1. — Basra, reconstructed in 45/665.
2. — Kûfa, reconstructed in 50/667.
3. — Damascus, construction begun in 87/706.
6. — Aleppo, built under Walîd I or Sulaymân, 86/705-99/717.
7. — Fustâṭ, reconstructed 92/710-93/712.
10. — Kašr al-Ḥayr al-Sharî (identified by Sauvaget as Rusafa, the residence of Hîslâm) built in 110/728.
11. — Ḥarrān, built in 126/744-133/750.
12. — Hamat, reconstructed, date uncertain.
13. — Dar'a, date uncertain (?)

At Baṣra, founded about 14/635, the first mosque (according to al-Baladhuri, Futuḥ, 341, 342 and 345) was simply marked out (ṣāyla) and the people prayed there without any building. According to another version, also given by al-Baladhuri (346 and 350), it was enclosed by a fence of reeds. At Kūfa, founded in 17/638, the first mosque was equally primitive. Its boundaries were fixed by a man who threw an arrow towards the kibla, then another towards the north, another to the west and a fourth to the east (al-Baladhuri, 275-6; al-Tabari, i, 248', ll. 12-23). A square with each side two arrow-casts in length was thus obtained. This area was not enclosed by walls but by a ditch only, and the sole architectural feature was a covered colonnade (ṣāyla), 200 cubits long, which ran the whole length of the south side.

The columns were of marble, taken from some buildings of the Lakhmid Princes at Bīra, about 4 miles away. This ṣāyla was open on all sides so that, in the words of al-Tabarī (i, 2494), a man praying in it could see the convent known as Dayr Hind and the gate of the town known as Bāb Diṣṭr. On the ṣāyla side and only separated from the praying place by a narrow street was built a dwelling for Sa'd the Commander-in-Chief.

The first mosque in Egypt, the Mosque of ʿAmar, built at Fustat in the winter of 641/2, was equally primitive. It measured 50 × 30 cubits and had two doors on each side except on the ṣāyla side. (Makrizī, ʿAṣr, ii, 247). The roof was very low and probably consisted of palm trunks resting on palm-trunk columns as in Muhammad's house at Madīna.

The first mosques to be worthy of the name of architecture were the second Great Mosques at Baṣra (45/665) and Kūfa (50/669). Regarding the latter al-Ṭabarī (i, 2492) says that Ziyād b. Abīhi summoned "Masons of the Days of Ignorance" (i.e. non-Muslims). Then a man who had been one of the builders of Khusrāw, came forward and described how columns of stone from Djabal Ahwaz could be used to carry a roof 30 cubits high. Ibn Dijābārī, who saw this mosque, says (de Goeje's ed., 211) that "the ṣāyla side has five aisles whereas the rest have two only; the aisles are supported on columns like masts, ... extremely high and not surmounted by arches" (Fig. 1). It is obvious that the roofing system resembled that of an apadāna, or Hall of Columns of the Achaemenian kings, exactly as was the case in the first Great Mosque at Baqīdād.

The Dome of the Rock at Jerusalem, the oldest existing monument of Muslim architecture, was built by the Caliph ʿAbd al-Malik and completed in 72/691. It is an annular building and consists in its simplest analysis of wooden dome 20.44 m. in diameter, set on a high drum, pierced with sixteen windows and resting on four piers and twelve columns, placed in a circle and so arranged that three columns alternate with each pier. This circle of supports is placed in the centre of a large octagon averaging 20.60 m. a side, formed by eight walls 9½ m. high (excluding the parapet which adds 2.60 m.) each pierced in their upper half by five windows (Plate IIIA and Fig. 2).

There is a door 2.60 m. wide and 4.30 high in each of the four sides which face the four cardinal points, and on these sides the central window above the door is consequently much reduced. The space between the circle and the octagon being too great to be conveniently spanned by single beams, an intermediate octagon, consisting of arches borne by eight piers and sixteen columns, so arranged that two columns alternate with each pier, has been placed between the two to provide the necessary support for the roof (Plate IVa). The two concentric ambulatories thus formed were of course used for the ṣuwar and ceremonial circumambulation of the sacred object, the Rock.

The exterior was always panelled with marble for half its height, as it is to-day, but the upper part was originally covered with glass mosaic (fusayfisū) like the inner arcades. This was replaced by the present coating of façyence by Sultan Sulaymān in 959/1552. The vaults of the four entrance porches were also decorated with mosaic, but it has only been preserved in the eastern porch. The lintels of the four doorways are decorated on their under side with sheet metal, either copper or bronze, worked en repoussé and exhibiting a variety of designs, chiefly vine leaves, bunches of grapes and acanthus. The raised parts of the design are gilt, the background of the central part is painted black and the outer border bright green. The inner side of the outer wall is panelled with marble from top to bottom, likewise all the piers. The tie beams of the arches of the octagonal arcades are decorated beneath with a bronze sheeting like the door soffits (Plate III b-c), but their inner faces are treated like a Corinthian entablature. The arcades above are covered with glass mosaic on both faces and their soffits also (Plate IVb, V and VI). The arcades of the central circle are also decorated with glass mosaic on their outer faces, but their soffits and inner faces have been given a coating of marble at some unknown date, but before A.D. 1340. The drum above is also decorated with mosaic.

The ceiling of the outer ambulatory is probably the work of Sultan al-Nāṣir Muḥammad in 718/1318 like the present lining of the dome. The ceiling of the inner ambulatory dates from the end of the 18th century. The original dome, until it fell in 407/1016-7, was covered with sheets of lead, over which were placed 10,210 plates of brass gilt (Ibn ʿAbd Rabībīh, al-Ṭabīh, iii, 369). The harmony of its proportions and the richness of its decoration make the Dome of the Rock one of the most beautiful buildings in the world.

The Great Mosque of Damascus. Al-Walīd began the construction of the Great Mosque of Damascus immediately after his accession in 86/705. A curious situation had prevailed here since the conquest. A great sanctuary of a Syrian god existed here, consisting of a temenos, or sacred enclosure, measuring 100 m. from N. to S. and 150 m. from E. to W., set in an outer enclosure over 300 m. square. At each corner of the inner enclosure, which had pilastered walls nearly 13 m. high, resting on a coating of marble of at least 4 m., was a square tower, and all round the interior ran a double colonnade. There were four axial entrances and in the centre, or a little to the west of it, was the temple, its entrance facing east. In the 4th century Christianity became the state religion and Theodosius (A.D. 379-95) converted the temple into a church (Malalas, Chronographia, 344-5). After the Arab conquest the temenos was divided between Muslims and Christians. Ibn Shākilī says that they both "entered by the same doorway, placed on the south side where is now the great mihrāb. Then the Christians turned to the west towards their church (i.e. the converted temple), and the Muslims to the right to reach their mosque".
Where? Opposite the traditional “mihrāb of the Companions of the Prophet”, i.e. under that part of the interior colonnade which was to the east of the entrance. As for the corner towers, Ibn al-Fākhīn (p. 108) says: “The minarets (mi‘rāḥānā) which are in the Damascus Mosque were originally watch-towers in the Greek days ... when al-Walid turned the whole area into a mosque, he left these in their old condition”. Al-Mas‘ūdī (Maṣūdī, iv, 90-91)

then built the sanctuary with three aisles running parallel to the south wall and cut through its centre by a transept about 8 m. higher. The arcades are in two tiers, the lower of large arches being 10.35 m. high, the upper, in which two small arches correspond to each one below, is nearly 5 m. high. Similar arcades form porticoes on the three sides of the court. The aisles of the sanctuary have gable roofs covered with sheets of lead, and so has the transept, but

Fig. 1. Plan of Great Mosque of Kūfā.

says: “Then came Christianity and it became a Church; then came Islam and it became a mosque. al-Walid built it solidly and the sawdāmā (the four corner towers) were not changed, they serve for the call to prayer at the present day”.

This state of affairs lasted until al-Walid, after bargaining with the Christians, demolished everything except the outer walls and the corner towers and built the present mosque. He first of all reduced the interior of the enclosure into a rectangle by building the long rooms to east and west, leaving a vestibule in front of the east and west entrances. He

the porticoes on the three sides of the court have roofs which slope slightly inwards (Plate VII a–d). Over the transept was a wooden dome, very high and conspicuous.

The decoration consisted of marble panelling (some parts of the original panelling exist next the east entrance) above which ran a golden karma or vine-scroll frieze, and above that was glass mosaic (fasayfīsā) right up to the ceiling. A considerable amount has survived the three fires of 1069, 1401, and 1893, and may still be seen under the west portico, where the famous panorama of the Baradā
(the river of Damascus) is over 34 m. in length and nearly 7 m. high (Plate VIII a). When intact the surface of the fassayfisā must have been greater than in any other building in existence! There were also six marble window-grilles (Plate VIII b) which constitute the earliest geometrical designs in Islam.

The Great Mosque of Damascus was rightly regarded by mediaeval Muslims as one of the Seven Wonders of the World.

Another building due to al-Walid is the audience hall and hammām, known to-day as Kuşayr ‘Amra, in Transjordan. It consists of an audience hall about 10 m. square, with two slightly pointed transverse arches supporting three tunnel-vaults (Plate IX and Fig. 3). There is a vaulted recess on the side opposite the entrance, with a small vaulted room on either side of it. A door on the east side gives access to the hammām, which consists of three small rooms covered by a tunnel vault, a cross vault and a dome. The latter was the calidarium, and under the floor are hypocausts exactly as in a Roman bath. But most remarkable of all are the paintings which cover the walls (Plate X), mostly scenes from daily life, a hunting scene and figures symbolising History, Poetry and Philosophy with the words in Greek above their heads. The dome of the calidarium was painted to represent the vault of heaven, with the Great Bear, the Little Bear, the signs of the Zodiac, etc. But most important of all was the painting of the enemies of Islam defeated by the Umayyads, with their names written above them in Greek and Arabic: Kayyar (the Byzantine Emperor), Rōdorik (the Visigothic King of Spain), Chosroes, Negus (the King of Abyssinia), and two more the names of which have been obliterated. Painting, contrary to the popular idea, is not forbidden by any passage in the Qurʾān, and hostility to it only took proper theological form towards the end of the 8th century A.D. (see my Lawfulness of Painting in Early Islam, in Ars Islamica, XI-XII, 159-66).

The Umayyad Caliphs were great builders of palaces. Their external fortified appearance, although built in the heart of their Empire, hundreds of miles from the nearest frontier, is to be explained by the route taken by the armies of the conquest. They passed a long series of Roman frontier forts, the castra of the Roman limes, which ran from the Gulf of ʿAğaba to Damascus and thence to Palmyra. The most important of these (for which see Brunnow and von Domaszewski, Die Provincia Arabia) are:

![Fig. 2. Dome of the Rock.](image1)

![Fig. 3. Kuşayr ‘Amra, plan.](image2)
Udhrub built by Trajan
Da'mjanlyya probably Trajanic
Ladidjun probably Trajanic
Bshayr inscription of Diocletian (A.D. 284-304)
Dumayr A.D. 162.

Some of these frontier forts were lived in by Umayyad princes. For example, Walid II sometimes lived at Azra'āl, which was rebuilt in 634-1236-7, but which in his day (A.D. 744) was a Roman fort of Diocletian and Maximian. When he was attacked by conspirators he fled north to the Kasr al-Bakhra', which is the Arabic name of a Roman fort about 15 miles S.-W. of Palmyra.

The record of this was twofold. It not only gave the Umayyad Caliphs the necessary knowledge when they wanted to build frontier forts on the Byzantine frontier, e.g. Massilla in 83/4702-3, al-Muhakkak, Katarghāsh, Mūrā, Būkā and Bağhras, all in 105/724 (see al-Baladhuri, 165-7), but it affected the design of their palaces. Here is a list of them:

5. — Hishām's palace at Khirbat al-Mafjadi, 4 miles N. of Jericho.

All these palaces, although built in the midst of Muslim territory, look externally like forts, for they are stone enclosures with round flanking towers. Nos. 1-5 are approximately 70 m. square externally, Nos. 1-5 are twice as large, 70 x 140 m. and No. 6 is four times as large, i.e. 145 m. square. Why this fortified appearance when it was not necessary? It would seem that having been in the habit of occupying forts belonging to the Roman times, they came to look upon a rectangular enclosure flanked by towers as a necessary feature of a princely residence.

When Hishām about 727 A.D. built his palace, known to-day as Kasr al-Hayr al-Gharbī, he chose a site on a small mound about 40 miles to the west of Palmyra, where there was a monastery built by the Gessānid Arethas (= al-Kārīb) under Justinian in A.D. 559. He incorporated the tower of this monastery, which had a door protected by a màchicoulis (of one opening only) high above it, so that it formed a tall watch-tower at the north-west corner of his 70 m. square kasr. This is how the màchicoulis first passed into Muslim architecture.

Kasr al-Hayr al-Gharbī has been admirably excavated by M. Daniel Schlumberger, (see Syria, XX, 195-238 and 324-73). The entrance was found to consist of two great stone door-posts and a lintel decorated with vine ornament, which must have been taken from Palmyra. He has also brought to light masses of stucco ornament, wall paneling, window grilles and frames, and human figures, part of which has been skilfully assembled and put together in the Museum at Damascus. Two large fresco paintings were also discovered, one representing the Caliph on horseback hunting with bow and arrow and using stirrups, which is almost the oldest known record of their use.

Two years later Hishām built another palace, known to-day as Kasr al-Hayr al-Sharqī, together with a small walled city provided with a mosque of three aisles, cut through the centre by a transept of greater height, exactly as at Damascus (Plate XIIa and Fig. 4).

As for the Palace Enclosure it averages nearly 67 m. a side internally and 71 m. externally with walls of stone flanked by 12 round towers, of which the total height must have been at least 14 m. There is only one entrance in the centre of the west side; it is defended by a màchicoulis as are the four gates of the Madīna alongside. The walls are decorated with a string-course of brickwork at the level of the rampart walk and each tower was crowned by a room with a brick dome. The tops of the pair which flank the entrance are decorated with arched panels of stucco, acanthus leaves and also apparently vine leaves and grapes (Plate XI). The interior consisted of an open court, which must have measured about 37 x 45 m., surrounded by two tiers of rooms, the lower tunnel vaulted, the upper with flat wooden ceilings. It awaits excavation.

Another palace of Hishām at Khirbat al-Mafjadi, 4 miles north of Jericho, has also been excavated in recent years. It consists of a palace enclosure about 70 m. square with its own mosque, a large forecourt, a tank with a little open octagonal pavilion in the centre, another mosque with axes (two) on the qibla side only, and to north a very large kasr consisting of nine domed bays arranged three by three, with a small annex on the north side containing the most beautiful floor mosaic ever discovered in Palestine. It consists of a fine tree executed in three shades of green, with two gazelles grazing on the left and a lion pouncing on another on the right. In Muslim palaces the staircases are generally narrow and inconspicuously tucked away, but here there are fine broad staircases which led to the upper floor. Here again masses of stucco ornament have been recovered and put together in the Palestine Museum at Jerusalem. It consists of panels decorated with geometrical ornament, window grilles, human heads and dancing girls (see the Quarterly of the Department of Antiquities, V, VI, VIII and X-XIII).

These three palaces each had an enclosure which is Kasr al-Hayr al-Sharqī is about 11/2 km. wide and 7 km. long, with walls of stone to the height of a metre and a half and above that at least 2 m. more of mud brick. There are half-round buttresses at intervals, first on one side of the wall and then on the other alternately. Traces of a similar wall exist at Mafjadi. Such an enclosure was called a hāyr, and here is the proof. Ya'qūbi (Buldān, p. 263) describing the foundation of Sāmārrā by the Caliph al-Mu'tasim in A.D. 836 says: "And wherever these streets of al-Hayr touched land granted to other people, he would order the wall [of al-Hayr] to be built farther back. Behind the wall were wild animals, gazelles, wild ass, deer, hares and ostriches, kept in by an enclosing wall in a fine broad open tract". And Miskawayhī (Margoliouth's text, i, 159) under the year 315/925-6, says: "This year there was a rising of the disbandied cavalry, who went out to the Oratory, plundered the palace called al-Thurayyā (the palace of the Pleiades at Baghādīd), and slaughtered the game in the Hayr".

Mshātā, about 4 miles from Zlza and about 20 miles south of 'Ammān, is the largest of all the Umayyad palaces, measuring about 145 m. each way, but it was never finished. The outer walls with their half round towers are of well dressed limestone, but all the walls of the interior are of red bricks resting of three or four courses of cut stone. The bricks are of two sizes, 21 cm. square and 28 cm. sq., and 6½ cm. thick.
The entrance is in the centre of the south side. Internally it is divided into three tracts running from north to south, the central one being 57 m. in width and the lateral ones about 42 m. The buildings intended to occupy the lateral tracts have never been begun, and even those projected for the central tract have never been finished. Of the latter, however, the group at the north end must have been very nearly finished, and the plan of the group at the south end can be clearly seen, for a great stone grid is visible formed by the stone foundation course (Fig. 5).

The part immediately behind the gateway was obviously intended to be an entrance hall 17.40 m. long, leading into a court 17.14 m. broad and 13 m. deep; these two elements were flanked by other rooms and courts. This group may be called the Gateway Block. Beyond the court just mentioned is an enormous central court, just over 57 m. sq. on the north side of which is a triple-arched entrance (the
arches have fallen) leading into a great basilical hall, 21.60 m. deep, ending in a triple apse (Plate XII b-c and Fig. 6). This basilical hall, which presumably was the Throne Room, is flanked by two symmetrical complexes composed as follows: on either side of an oblong court, placed perpendicular to the basilical hall, is another court at right angles to it, flanked on each side by a pair of vaulted chambers. These rooms were intended to have a marble panelling, for great block of a fine green stone (looking like marble, but really a calc-schist), a vine leaf and a bunch of grapes. The wall-surface is divided into twenty upright and twenty inverted triangles by a cornice-like moulding, which runs up and down zig-zag fashion from the socle to the entablature. The triangles are about 2.85 m. in height and 2.50 in width at the base. Exactly in the centre of each is a rosette, those in the upright triangles being lobed hexagons, those in the inverted triangles straight-sided octagons. The kernels of all the rosettes vary. The surface of the upright triangles is decorated with extraordinary richness in high relief, vine tendrils, bunches of grapes, birds which pluck at the fruit, etc. In the lower part of some of the triangles is a chalice, out of which two animals drink (Plate XIII). On the right hand side of the façade there are neither animals nor birds and the ornament is on a much smaller scale, in fact the differences are sufficient to justify the suggestion that it was executed by a different school of craftsmen.

Summary: The monuments of Umayyad architecture are really splendid structures of cut stone with arcades resting on marble columns and richly decorated internally with marble panelling and

Fig. 5. Mshattā, plan.
The mosques are nearly always covered with a gable roof (ḏamalun). The minarets were tall square towers, derived from the church towers of pre-Muslim Syria, and the triple-aisled sanctuaries were due to the same influence. Umayyad monuments exhibit a mixture of influences, Syria occupying the first place and Persia the second, and Egyptian influence is definitely demonstrable at the end of this period in Mshatta. Umayyad architecture employed the following devices: the semi-circular, the horse-shoe and the pointed arch, flat arches or lintels with a semi-circular relieving arch above, joggled voussoirs, tunnel-vaults in stone and brick, wooden domes and stone domes on true spherical-triangle pendentives. The squinch does not appear to have been employed. But we know from descriptions of early authors that a type of mosque prevailed in ʿIrāk and Persia quite different from the Syrian type. It was square in plan, had walls of brick (sometimes of mud brick) and its flat timber roof rested directly on the columns 4 m. thick, the inner about 17 m. high including the crenellations and about 5 m. thick; the towers, of which there were 28 between each gate, rose about 2 1/4 m. higher. There were four equidistant gateways. al-Khaṭīb says that “each was composed of two gateways, one in front of the other, separated by a ḍiḥliz and a raḥaba opening on the ḵāṣṣ between the two walls. When one entered by the ḵurāṣān Gate one first turned to the left in an oblong passage (ḏiḥliz ḵāṣṣ) with a vault of brick, 20 cubits wide and 30 long, the entrance of which was in the width and the exit in the length and passed out into a raḥaba ... 40 cubits wide leading to the second gateway. At the far end of this court was the second gateway which was that of the city ... The four gates were constructed on the same model”. It is clear from the words of al-Khaṭīb—“when one entered by the ʿArūsān Gate, one first turned to the left, etc.” that the outer gateway was a bent entrance. Al-Khaṭīb continues: “The second or inner gate, which was that the city ... gave access without the intermediary of arches. Here we have a direct link between the ancient Persian audience-hall (apaddānā) and the flat-roofed portico (ḫāṭār) of more recent Persian palaces.

(3) The ʿAbbāsid Caliphate

The effect of the foundation of Bagdad was as far reaching as the transfer of the capital of the Roman Empire from Rome to Constantinople. The whole centre of gravity of the Empire was changed; hitherto its capital had been in territory which since the time of Alexander had been in the sphere of Hellenistic culture. The transfer resulted in the weakening of this influence and its replacement by the cultural influences of Sasanian Persia, to which sphere ʿIrāk belonged. This made itself felt in the design of the new city, for which we possess such detailed accounts in al-Yaṣṣūbī and al-Khaṭīb that its form can be reconstructed, although no trace of the Bagdad of al-Mansūr has survived. The foundation took place in A.D. 762 and everything was finished in 766.

It was a circular city with an outer and inner wall, and a ḥāṣṣ or interwallum, about 35.40 m. wide between. The outer wall was about 14 m. high and to an oblong corridor, vaulted with bricks and gypsum (ḏiṣṣ) 20 cubits long and 12 wide. Above the vault was an audience hall ..., covered by a gigantic dome 50 cubits high” (Fig. 7).

The Muslim historians insist that the circular form of the city was a feature that had never been known before, but such is far from being the case, for many earlier examples are known, e.g. the Hittite city of Sinjerli, Abra, Ḍagbatana, Parthian Ctesiphon and Takht-i Sulaymān, Dārābjiird in Fārs and also Fīrdūshād.

A mosque was built in the centre of the new city. According to al-Khaṭīb it was 200 cubits (roughly 100 m.) square and had a roof supported by wooden columns. There were 17 ailes from right to left, and the side aisles were two deep, the sanctuary was probably five deep as at Kūfa and Wāṣīt. It was rebuilt by Hārūn al-Raḥīm with burnt bricks and teak-wood, in 193/808-9.

The palace of al-Mansūr measured 400 cubits each way. It was on the ḵibla side of the mosque and in contact (mulāṣṣ) with it, as was the practice in early Islam, e.g. at Damascus about 30 A.H., at Baṣra in 45 A.H., at Kāraywān in 50 A.H., at Wāṣīt in 83 or 84 A.H., at Merv in 132-8 A.H., and (if we count
Fig. 7. Baghdâd, tâkât
the Dar al-Imara as a palace) in the mosque of Ibn Tulun at Cairo, in 265 A.H.

Palace and Mosque have long since disappeared but fortunately a fairly well preserved Abbasid palace of this period has survived, viz: Ukhaydir, on the Wadi Ubayd about 30 miles west of Karbalā'.

It consists of a fortified rectangular enclosure measuring 175 × 169 m. with a gateway in the centre of each side. There are four round corner towers and ten intermediate half-round towers, not counting the peculiar gateway towers, on each side (Plate XIV a-b). Within the great enclosure and in contact with its northern face, is the Palace proper, measuring 111 m. from north to south and 82 from east to west. It also is provided with half round towers. Its main entrance forms one with the northern entrance of the main enclosure. The masonry is composed of roughly shaped slabs of limestone set in gyspum mortar. The walls with the parapet must have been about 19 m. high. The palace proper consists of a great court of honour, with a liwān for the Hall of Public Audience and a square room behind it, presumably a hall of private audience. On either side are other vaulted rooms. A great vaulted corridor about 3 1/2 m. wide runs completely round this group of rooms and the court of honour, and on the east and west sides of it are four isolated and self-contained sets of vaulted chambers, each with its own courtyard, which I regard as four bayts for the four lawful wives of the Muslim prince for whom it was built, as at Mshattā (Fig. 8).

In these bayts the side next the great corridor is bounded by a blind arcade of five arches, the central arch being occupied by the door. On the far side was a portico 2.80 m. deep of five arches resting on four round-piers, and covered by a tunnel vault. The north and south sides are occupied by a triple-arched façade. These arches form a portico, behind which are three parallel tunnel-vaulted rooms. A passage leads from the courtyard to a room 17.60 m. long and 3 1/4 wide, placed transversely behind the three tunnel-vaulted rooms. It is covered by two lengths of tunnel-vault with a space open to the sky between. It must have been intended to contain a fire, for the vault next the outer wall is pierced by a pair of terra-cotta pipes, so it must have been a kitchen.

The palace was also provided with a mosque 24.20 m. wide and 15.15 deep, with a portico one aisle deep on the east, south and west sides, but without one on the north.

Ukhaydir was probably begun by Isā b. Mūsā, uncle of the Caliph al-Mansur, in 161/778. At about this time the Aqṣā Mosque at Jerusalem was partly rebuilt by the Caliph al-Maḥdī. Recent research enables us to affirm that it then consisted of a central aisle 11.50 wide with seven aisles to right and seven to left about 6.25 m. in width, all covered by gable roofs and all perpendicular to the kibla wall. There was a great wooden dome at the end of the central aisle. On the north side was a large central door with seven smaller ones to right and left, and ten "unornamented" ones on the east side (Fig. 9).

Fig. 9. The Aqṣā Mosque in A.D. 780.

There can be no doubt that this mosque had a great influence on the Great Mosque of Cordova built by 'Abd al-Rahmān I in 170/786-7. It was added to on three occasions but this earliest part still exists; as at Jerusalem the aisles, of which there are eleven, run perpendicular to the back wall, they are all covered by parallel gable roofs, and the central one is wider than the rest. The influence of Syria in Spain at this time is not surprising for Spain was full of Syrian refugees. The arcades each consist of twelve arches with twelve more above, an ingenious device whereby a height of ceiling of about 9.80 m. was obtained with columns which, with their capitals and bases, only measure 3.80 m. (Plate XIV c and XV a).

Another building of this period, of great importance for the history of architecture, is the Cistern of Ramla in Palestine, for it consists of a subterranean excavation 8 m. deep divided into six aisles by five arcades of four arches each, all of which are pointed and appear to be struck from two centres, varying from one seventh to one fifth of the span apart (Plate XV b and Fig. 10). And there can be
no doubt about the date for on the plaster of the vault is a Kufic inscription of Dhu 'l-Ilidjdia 172/May 789. It is therefore centuries earlier than the earliest pointed arches in Europe.

In 212/827 ʿAbd Allah b. Tahir, the Governor of Egypt, ordered the Mosque of ʿAmr at Fustāṭ to be doubled in size by the addition to the west of its exact area in the same shape. Makrizi (Khitat, ii, 253) says that the part added included the great mibrāb and all that is to the west of it. The number of doors was now thirteen: five on the N.-E., three on the N.-W., four on the S.-W., and one for the kha(i)b on the kibla side. This is the last recorded extention of the mosque, and its significance is of far reaching importance for it follows that no part of the present structure lying to the right of a line drawn through its centre can possibly be older than 212 A.H. The Mosque then measured internally (as it does to-day) 109 m. on the S.-E. side, 105.28 on the N.-W., 120.55 on the N.-E. and 117.28 on the S.W. As a result of a number of trial trenches made between 1926 and 1933, we now know from the foundations that there were 7 arcades running from right to left on the kibla side and the same number on the side opposite, and four on the S.-W. side. On the N.-E. side the arcades ran perpendicular to the wall. The outer walls were about 10.50 m. high without their cresting, about which we know nothing. There were seventy-eight windows of very interesting construction. The span was about 2.70 m. There were engaged colonnettes at the inner and outer corners and a pair of dwarf marble columns placed on either side in the opening. A transverse beam resting on the latter reduced the span to about 1.90 m. The springing of the arch began about 1.40 m. above the sill, and the rise was about 1.40. Those arches which have survived are considerably stilted and very slightly pointed, and the broken edge of a stucco grille is visible along their intrados. A beam ran across the opening at the springing of the arch, and nailed to its inner side was a strip of carved woodwork which continued along the face of the wall. The decoration consists of a flowing acanthus frieze in which four-leaved whorls alternate with five-lobed leaves (Fig. 11). This is of fundamental importance, for it is derived from the Hellenistic art of Syria and it shows that the ʿAbbāsid art of ʿIrāq, which we find fifty years later in the Mosque of Ibn Tulun, had not yet reached Egypt.

The Great Mosque of Kayrawān is another famous mosque, founded in the early days of Islam, of which no part (excepting the minaret only) is earlier than the IXth century A.D. The oldest part of the present mosque dates from the rebuilding carried out by the Aghlabid Ziyādat Allah in 321/836.

The measurements of the mosque are as follows: N. 65.60 m., S. 70.28, E. 121.80, W. 120.50. The sanctuary consisted of sixteen arcades of seven arches each, running perpendicular to the kibla wall, but without reaching it, for a transverse arcade runs at a distance of about 6 m. from it and it is against this arcade that the sixteen arcades abut. The side aisles are 3.30 m. in width against 5.40 for the central aisle, which must have measured 6.60 m. originally, for its width has been subsequently reduced by two arcades built in contact with the old ones, without any bond or liaison of any sort. The columns now have their own impost blocks instead of each pair being tied together by a common impost block, and the arches of the "lining arcade" are pointed horse-shoe arches instead of round horse-shoe arches like all the rest (Plate XVI). There is no doubt that they are the work of Ibrahīm II. Ahmad, 261-89 A.H. (see below). The whole was covered by a flat roof of uniform height, even over the central aisle, for the latter was only raised during the extensive works of Ibrāhīm II. There were no riwāks on the three sides of qabs until the time...
of Ibrahim III. The outer walls were of stone, strengthened at intervals by buttresses. This same year 221/836 was marked by an event of great importance — the foundation of Sâma-râ. The palace was built on the edge of the plateau, which is about 17 m. above the alluvial valley of the Tigris. In the valley itself is a great basin, 127 m. square, from which a great flight of steps, 60 m. broad, gently ascended to the terrace in front of the Bâb al-‘Amma. The latter consists of a great triple-arched façade, about 12 m. high, with three parallel tunnel-vaulted rooms behind it (Plate XVIIa). This is the best preserved part of the whole palace; nearly everywhere else the walls either only rise a metre or two or have been exposed by excavation. Behind the Bâb al-‘Amma were six transverse halls, then a square court. To the north one reached the rooms of the Caliph, on the south was the Harim. But going directly forward led to an oblong Court of Honour, with the triple entrance of the Throne Room beyond it. The latter consisted of four T-shaped halls arranged in a cruciform fashion. Each one resembled a three-aisled basilica so as to obtain light from the clerestory. Between the arms of the cross are smaller rooms with marble dados, also a mosque for the Caliph with a mihrâb. Beyond this again is the Great Esplanade, a great court or garden, 180 m. wide and 350 m. deep, intersected by little canals. Beyond again was the polo-ground, and the distance from the great basin to the race-course must have been nearly 1400 m.

The decoration consisted of dados, generally of moulded stucco, except in the Throne-Room group where they are of marble slabs. The upper part of the walls in the Harim were decorated with fresco-paintings, which included living forms and foliage. All woodwork was of teak, carved and painted. The Great Mosque of this period has not survived, as it was entirely rebuilt in 234-7 H. Before describing it we must speak of the Great Mosque of Sûsâ in Tunisia built in 236/850-1.

The mosque proper, excluding its annexes, is a perfectly regular rectangle built of stone in courses about 1/2 m. high and measuring internally 49.39 m. deep and 55.16 wide. The sahn, which measures 41 × 221/4 m., is surrounded by low arcades of slightly horse-shoe form, resting on squat T-shaped piers. There are eleven arches to north and south and six to east and west, and the height of the façade is about 67/4 m. It is perfectly plain except for a spall-face moulding, immediately above which is a fine inscription frieze in simple undecorated Kufic, the maximum height of the characters being 28 cm. The band on which they are carved curves forward slightly to compensate for foreshortening and thus help the observer at ground level. This is the earliest known example of this treatment, which passed into Egypt with the Fâtimids and appears in the Mosque of al-Hâkim, 380-402/990-1013. The three rows vary in depth from 4.08-4.27 m. and each is covered by a tunnel-vault (Plate XVIIa).

The sanctuary consists of thirteen aisles formed by twelve arcades of six arches each running towards the kibla wall. Each aisle is divided into six bays by other arcades running from east to west. All these arches, which rest on squat cruciform piers, are of horse-shoe form. The first three bays going south are covered by tunnel-vaults, with one exception, the third bay in the central aisle, which is covered by a dome on an octagonal drum with slightly incurved faces. The next three bays going south are covered by cross-vaults at a slightly higher level. Here again the third bay in the central aisle is covered by a dome on squinches. It is obvious that the mosque has been extended towards the south, that the first three bays are the original part and that the first dome marks the bay in front of the original mihrâb (Plate XVIIIb), which has been removed together with the original back wall. Before that the depth of the mosque must have been 44 m. The date of the original work is given by the great Kufic inscription as 236/850-1.

The Great Mosque of Sâma-râ was rebuilt by Mutawakkil; the work was begun in 234/849-9 and finished in Ramâdân 237/Feb.-March, 852. It is the largest mosque ever built, for its outer walls form an immense rectangle of kiln-baked bricks measuring roughly 240 m. deep internally by 156 m. wide (proportion approximately as 3:2); its area therefore is nearly 38,000 sq.m. Only the enclosing walls have been preserved; they are 2.65 m. thick, strengthened by half round towers averaging 3.60 m. in diameter with a projection of 2.15 m., and the curtain walls between them average 15 m. in length. There are four corner towers, twelve intermediate towers to east and west and eight to north and south making forty-four in all. There were sixteen rectangular doorways spanned by beams with a relieving arch above.

The towers are perfectly plain, but each curtain. wall is decorated with a frieze of six recessed squares with bevelled edges; in each square is a shallow saucer about a metre in diameter and 25 cms. deep. The total height of the walls is now about 10.50. In spite of its simplicity the whole effect is truly monumental (Plate XVIIb).

The south wall is pierced by twenty-four windows placed on the axis of the twenty-five aisles of the sanctuary, except the central one, for there was no room above the mihrâb. There were two more windows on each side making 28 in all. Externally they are narrow rectangular openings, but internally they are splayed and covered by scalloped arches of five lobes resting on little engaged columns, the whole being set in a sunk rectangular frame. Herzfeld's excavations showed that the roof rested directly on octagonal piers of brick, with marble colonnettes at the four corners, making a support 2.07 m. square. The clear height within was 10.35. There were no arches.

The mosque proper was surrounded by an outer enclosure, or ziyyâda, on the east, north and west sides, and air photographs show that the great rectangle thus formed stood in a still greater enclosure measuring 376 × 444 m.

The minaret, the famous Malwiyya, stands free at a distance of 271/4 m. from the north wall of the mosque. There is a square socle, 33 m. a side and about 3 m. high, on which rests a spiral tower with a ramp about 2.30 m. wide, which winds round in an anti-clockwise direction until it has made five complete turns. The rise for each turn is 6.10 m., but as the length of each turn is less than the previous one it follows that the slope inevitably becomes steeper and steeper. At the summit of this spiral part is a cylindrical storey, decorated with eight recesses, each set in a shallow frame (Plate XVIIIc). The southern niche frames a doorway at which the ramp ends; it opens on to a steep staircase, at first straight then spiral, leading to the top platform which is 50 m. above the socle. From eight holes to be seen Herzfeld concluded that there was probably a little pavilion on wooden columns here.
A few years later, between A.D. 860 and 861, another immense mosque was built by the same Caliph at the north of Sāmarrā. It measures internally 213 m. from north to south and 135 from east to west. Here the outer walls are of mud brick about 1.60 m. thick strengthened by half-round buttresses, but the roof rested on arcades of burnt brick running from north to south; it was apparently only about 8 m. high. The sanctuary is divided into seventeen aisles by sixteen arcades of five arches each with an average span of 3.13 m. The two outer arcades are carried right through to the north end of the mosque, forming side riwāfs 14 m. in depth. The northern riwāf resembles the southern one, except that it is only three arches deep. On the north side and about 9.60 m. from the mosque is a miniature Malwiyya on a socle about 11.20 m. square, above which is the much damaged spiral part which barely makes three turns.

Ten years later important works were carried out in the Great Mosque of Kayrawān by Abū Ibrāhīm Ahmad, who reduced the width of the central aisle by about 1.20 m. by constructing two new arcades in contact with the old ones. The arches of these arcades are pointed horse-shoe arches instead of round horse-shoe arches in contact with. He also built three free-standing arches and one wall-arch of the same type to carry a fluted dome in front of the mihrāb. They rise to a height of 9.15 m., and the square thus formed is terminated above by a cornice, its top edge being 10.83 m. from the ground. On it rests the octagonal zone of transition, 2.15 m. in height, which is formed by eight semi-circular arches springing from colonnettes resting on little corbels inserted in the cornice just mentioned. The drum is composed of eight arched windows and sixteen arched panels arranged in pairs between the windows. The dome, which is 5.80 m. in diameter, has twenty-four ribs, each springing from a little corbel. Between the ribs are concave segments, 30 cm. deep at the base and diminishing to nothing at the apex. The whole composition is charming. Externally the dome resembles a cantaloup melon, with 24 convex ribs (corresponding to the 24 concave segments) which taper to nothing at the apex (Plate XIX a and XX). Abū Ibrāhīm's work was carried out in 248/862-3. He also lined the mihrāb with a series of very beautiful carved marble panels assembled in four tiers of seven panels each; total height 2.72 m. He also decorated the face of the mihrāb and the wall surrounding it with lustre tiles about 21 cm. square (Plate XIX b). The marble panels and the tiles had been imported by him from Irāq, and the latter constitute the oldest examples of lustre pottery of certain date.

The Mosque of Ibn Tūlūn

In 263 A.H. Ahmad b. Tūlūn decided to build a new mosque on an outcrop of rock called Dżabal Yashkur. The scheme of the mosque can be seen from the plan (Fig. 12) and the general view (Plate XXI) taken from the kibla side which was occupied by a private apartment of the amir, the Dār al-Imāra. This outer siyāda is roughly 19 m. broad and its outer walls are lower than those of the mosque proper. The whole forms a great rectangle almost exactly square, measuring 162 m. in depth and 162.46 in width, constructed of red bricks, measuring roughly 18 x 8 x 4 cm., coated with a very hard stucco in which the ornament is cut. No wooden ties are used anywhere, except at the tops of the piers.

It results from careful measurements that the unit employed for setting out the mosque was the Nilo-metric cubit of 54.04 cm., for the principal dimensions are almost exact multiples of it.

The scheme of the façade of the mosque proper is as follows. It would seem that the architect set out his design by bisecting the façade as regards its height and then took this median line for the level of the window sills. Then the plain lower part was pierced by seven rectangular doorways, and the upper part by thirty-one pointed-arched windows, with their sills from 5.70 to 5.86 m. above the floor. The window-arches rest on stumpy engaged colonnettes of brick exactly as in that part of the Mosque of 'Amr which dates from 212 A.H. The walls are 10.03 m. in height up to the roof level, above which is a row of pierced circles in squares and then a curious open work cresting, making a total height of 13.03 m. above the sills of the doorways (Plate XXII a). The latter are perfectly plain except for the carved wooden soffits, of which four original ones remain. In addition to the seventeen large and two small doors leading from the siyādas into the mosque proper there are four in the kibla wall, one of which leads into the room behind the mihrāb. This must be the door mentioned by Makrizī (ii, 269, l. 22 ff.) which enabled Ibn Tūlūn to go directly from the Dār al-Imāra to the masjīda next the mihrāb and the minbar, as was the practice during the first three centuries of Islam.

The sahn is roughly 92 m. square with thirteen pointed arches on each side (Plate XXIII b). The sanctuary is formed by five arcades of seventeen arches each, and the riwāf opposite by two arcades. These seven arcades are carried right through to the side walls. The arcades of the lateral riwāfs, however, are not against the outer arcades of the sanctuary and N.-W. riwāf and consequently consist of thirteen arches only. The arches rest on piers 2.46 m. wide and 1.27 m. deep, with engaged brick columns at the corners. They are placed about 4.60 m. apart. Dove-tailed wooden plates are used round the tops of these piers to strengthen them. The pier-capitals are derived from late Corinthian capitals, the two tiers of acanthus being replaced by conventionalized Sāmarrā vine leaves (Plate XXIII a).

The soffits of the arches are decorated with bands of stucco ornament, of which about ten are fairly well preserved (Plate XXIV). All consist of a very broad central strip between narrow double borders. The central strip in every case consists of a geometrical frame-work, the interstices of which are filled with various elements belonging to style B of Sāmarrā (Fig. 13). In addition to this a continuous border of ornament, 46 cm. wide, runs round the arches on both faces, turns at right angles at the springing, runs across the top of the pier, and then turns again at right angles to run round the next arch. A frieze of stucco ornament runs along just above the band of ornament running round the arches. About 20 cm. above this ran the famous Kūfic inscription carved on wood, of which a fair amount still remains, running along about 30 cm. below the beams of the ceiling. Calculation shows that this frieze, which must have been over 2 km. long, may have contained about one seventeenth part of the Kurān.
Fig. 12. Mosque of Ibn Tulun, plan.

The windows, in the shadow of the aisles, stand out against the sky like delicate lacework and form one of the most beautiful features of the mosque. There are 128 in all. Each consists of a pointed arch springing from a pair of engaged dwarf columns with stucco capitals, and a border of stucco ornament runs round each, turns at right angles at the springing and runs along horizontally to the next window (Plate XXIII b-c). Unfortunately only three, or at most four, of the window-grilles are original. These are mainly composed of compass work, i.e. intersecting circles and segments of circles; two have been set out by a method similar to that employed for one of the marble grilles in the Great Mosque at Damascus (Plate VIII b), the third on a network of equilateral triangles (Fig. 14).

The pendentives of the present wooden dome in front of the mihrab, on stylistic grounds, are undoubtedly the work of Ladjin in 696 A.H., and the dome is much later. I very much doubt if there was a dome here originally. The present minaret is likewise the work of Ladjin, the original one (seen by Mukaddasî) was probably fairly similar to the Malwiya of Samarra.

The statement of al-Kūdâlī, quoted by Ibn Duqmaq and Makrizî, that the Mosque of Ibn Tulun was built after the style (‘alâ bindâ) of the Mosque of Samarrâ (unless it refers to the general impression produced by the minaret) is certainly not correct, for its plan does not in the least resemble either of the two mosques of Samarrâ, except that all three are surrounded by tâyâdas. It differs from
Fig. 13. Mosque of Ibn Tulun, analysis of soffits of arches (see Plate XXIV).

Fig. 14. Mosque of Ibn Tulun, analysis of window-grille (see Plate XXIIIc).
the Great Mosque of Sāmrār in the number of its aisles 5, 2, 2, 2 instead of 9, 4, 4, 3. As for the Mosque of Abu Dulaf, its aisles run perpendicular to the kibla wall instead of parallel to it. Neither does its scheme of the façade recall either of the mosques of Sāmrār for it has no bastions. The sole feature of the façade that recalls Sāmrār is the row of circles in squares below the creasing. Its windows in no way resemble those of the Great Mosque, which are few in number, have lobed arches internally and are treated externally like arrow-slits, but they do resemble those of the mosque of Azm of 212 A.H., except that they lack the transverse beam and carved wooden frieze. In other words, Ibn Tūlūn’s façade is derived from that of the Mosque of ʿAzm of 212/827 and, as no such façade is known elsewhere, must be regarded as Egyptian.

As regards the ornament, everybody now agrees that it is derived from Sāmrār, but whereas at Sāmrār the three styles, A, B and C, occur separately in the mosque of Ibn Tūlūn they are combined and mixed. By its ornament and in certain other respects the mosque may be regarded as a foreign, ṣīrāṣī building planted down on the soil of Egypt, and large numbers of ʿirākī craftsmen must have been employed for its decoration in wood and stucco. Its ornament and that of the Days al-Suryānī in the Wādī Natrūn are the two most westerly examples of the art of the ʿAbbāsīd Empire, which prevailed over a large area from Bahrāyn and Nihāpūr to Samarqand.

Summary: Under the ʿAbbāsīd the Hellenistic influences of Syria were replaced by the surviving influences of Sāsānian Persia, which profoundly modified the art and architecture, and this gave birth to the art of Sāmrār, the influence of which extended to Egypt under Ibn Tūlūn, to Nihāpūr and Bahrāyn. In palace and mosque there was a real difference between that of the Umayyads and ʿAbbāsīds, partly due to the adoption of Persian ideas of royalty which almost deified the king. Hence elaborate throne-rooms, generally domed, for private audience, preceded by a vaulted ʿhusn (or four radiating ʿibāds) for public audience. The ʿbaṣīts were also different, following the type of Kaṣr-i Shīrīn and not the Syrian type of Mshattā and Kaṣr al-Tūb. The scale was immense and axial planning was a marked feature. But all are built of brick and a great part of that basest of materials — mud brick — hidden by thick coats of stucco. A new type of pointed arch appears, the four-centred arch. The earliest existing squinches in Islam date from this period. An important innovation was the introduction of lustre tiles, the earliest examples being those brought to Kayrāwān from ʿIrāk in 248 A.H. Bands of inscription were usually made to stand out on a blue background. But the widespread influence of ʿAbbāsīd art did not extend to Spain, where Umayyad art, brought-thither by Syrian refugees, was still full of life.

Sa'dar 'Ali attacked Maratha Tanjore, while his son-in-law Husayn Dust Khan, (Candâ Şâhib) took Trichinopoly by a trick. This aggression brought the Marathas down upon Ørkât in 1155/1740. The Nawâwb was killed at the Damalcherry pass, Ørkât sacked, and Chandâ Şâhib carried off prisoner to Satara. Sa'dar 'Ali succeeded to power but was murdered in 1155/1742. The şabâddar of the Dakhan thereupon appointed an outsider, Anwâr al-Din, a move represented by the many Nawâyâts who held subordinate posts in the province.

Their hostility allowed Dupleix, governor of Pondicherry, to intervene. In 1161/1748 Dupleix assisted the release of Candâ Şâhib, the Nawâyât candidate for Ørkât. Next year French troops under Candâ Şâhib slew Anwâr al-Din at Ambur, and in 1164/1750 when the şabâddar of the Dakhan was killed, Candâ Şâhib was proclaimed Nawâwb of Ørkât.

In the next eleven years Ørkât was a pawn in the Anglo-French struggle, now taken and held by Clive, now lost to Lally. The war ended with the British protégé, Muhammad 'Ali, established as Nawâwb. His troops twice surrendered Ørkât to Hâdâr 'Ali of Maysûr, he became deeply involved in debts, but his line continued till 1272/1855, when the estate escheated to the Company on failure of male heirs (The administration of the province of Ørkât had passed to the British in 1216/1801).

The palace and fort, and the fortifications of the town, elaborately constructed on European lines by Muhammad 'Ali, are now in ruins. There are numerous mosques, a fine tomb of Sa'dat Allâh Khan, and the shrine of Tipû Mustân Awlîyâ, after whom Tipû Sultan of Maysûr (Mysore) was named. (L. B. Bowring, Haidar Ali and Tipû Sultan, 117-18 n.).

ARD, earth, land. For the terrestrial globe, see MUKÂT AL-ARD. For land law, see İKTÂ, RAJTÂ, KHÂLÎSA, KHALÎSA, IKTÂ, MAHLUL, MATRÎJK, MAWÂT, MISÂHÂ, MUŞÂSÂMA, MUŞÂTA', MULK, SOYUĞÂLÎM, TIMAH, ŞÎŞEH, WÂFÎ, ZÎŞÎMÊT. 'ARD, [see ISTİRÂ].

'ARD HÂL, petition. In the Ottoman Empire of the 18th century, the writing of petitions was the prerogative of the 'Arz-âlîdîs (Arzhalis). Admission to their number was regulated by the 3rd-fillâh (a contract, the qualifications required being personal respectability, proficiency in calligraphy, and a knowledge of şartîa and bûmûns. Petitions were considered by the Cavugh-bashî on behalf of the Grand Vizier, and answers to them were drafted by the two Tezkirêdivî, (known as Tezkirê-i emvel and -fohatî).

(II. L. Lewis.)

ARDABB [see KAYL].

ARDABIL [Turkish Erdebl]. A district and a town in eastern Adharbaydijân. The town is located at 48° 17' E. long. (Greenw.) and 38° 13' N. lat. The distance to Tabriz is 210 km. by road, and it is 40 km. to the Soviet frontier. The altitude of the town is 4,500 ft. above sea level, and it is situated on a circular plateau surrounded by mountains. The district (Oarîbîstânî), of which the town is the capital, comprises four counties (ba'shak), capital county, Namîn, Astûrâ, and Garmî.

There are few trees around the town and irrigation is necessary for cultivation. Some 20 m. west of the town is Mt. Savalân (Sablân of Arabic geographers) 15,784 ft. at the summit, with perennial snow. The climate of the town and capital county is cold in winter (average monthly temp. below freezing) and the town is assigned to the cold districts (sardîstân). The other three counties, however, are reckoned in the warm districts (garmîstân). The river Balîşhî or Bâlîşhî (or châyô), a tributary of the Karâf, flows through the southern part of the town. In the vicinity of the town are warm springs which have attracted visitors throughout history.

The eymology of the name is uncertain, but Minorsky in J. A., 217 (1930), 68, proposes a meaning "willows of the sacred law". The pre-Islamic history of Ardabil is unknown, for we find the name only in Islamic times. Sam'ânî vocables the name as Ardibil, while the Buhûd al-Şâm writes Ardawî. In Armenian we find Arvâvet (Ghevond) and later Artavel. Firdawsi and Yâkût say the town was founded by Përoz the Sasanian king (457-484 A.D.), hence it was called Bâdân Përoz or Bâdân Fayrûz. Kazwînî in his Nuzhat al-Şâlîb attributes its founding to a much earlier monarch.

It is uncertain whether the mint mark ATRA, on Sasanian and pre-reform 'Umâyyad coins (Adharbâyджân?) refers to Ardabil, but it was the residence of the marzîbîn at the time of the Arab conquest of Adharbâyджân, according to al-Balâdhurî. The city was taken by treaty, and under the caliph 'All his governor al-Âsh'ârî made Ardabil his capital. It probably did not remain the capital continuously throughout the 'Umâyyad period; for example in 112/730 the Khazars captured it. Marâşagh may have been a second capital of Adharbâyджân, for the seat of authority seems to have shifted between it and Ardabil.

The district of Ardabil suffered from the uprising of Bâbâk (q.v.). Ardabil was in the domain of the independent Sâdjuq governors at the beginning of the 10th century A.D., and the district suffered from internecine struggles of local rulers, as well as from the invasions of the Rûs in the first half of the 10th century. We find dirhems with the name Ardabîl on them for the first time in 286/899.

The town of Ardabil was captured and destroyed by the Mongols in 647/1250. It lost its former importance until the rise of the Şafawids Shaykh Şaft al-Dîn had made Ardabil the centre of his Şâlî order at the end of the 13th century. In 1490 Isma'îl, his descendant, returned from exile in Gilân to Ardabil where he started the Şafawid dynasty, and shortly thereafter he became shâh in Tabriz. Ardabil became a Şafawid shrine and Şâh 4Abbâs especially enriched the mausoleum and mosque of Shaykh Şaft by gifts, among them Chinese porcelains and rugs. The city was held by the Ottomans for a short time at the end of Şafawid rule, but Nâdîr Shâh retook it and was crowned shâh in the nearby Mughân steppe in 1736. During the Ottoman occupation a survey of population and land was made for the city and province; a copy of this is preserved.
in the Başvekalet Arşivi [q.v.] in Istanbul. In the time of Napoleon Gen. Gardanne fortified the city and built ramparts, and ʿAbbās Mīrzā established court there.

European visitors who visited the town and briefly described it were Pietro della Valle (1619), Adam Olearius (1637, with a pictorial map of the town), J. B. Tavernier, Corinelle Le Brun (1703), and James Morier (1821). Much of the library of the shrine of Shaykh Ṣaḥīf, as well as art objects, were carried to St. Petersburg by the Russians after 1827. Morier (Second Journey) estimated the population of the town at 4,000; now it is ca. 23,000. Historical structures include the shrine of Shaykh Ṣaḥīf, the maqṣūd-i ġūmā (built in 1382) and the mausoleum of Shaykh Dībirān (father of Shaykh Ṣaḥīf) 6 km. to the north of Ardabil.

ARDAHĀN. town in the remote north-east of Turkey, 41° 8' north, 42° 42' east, on the KuTucay, which becomes the Kura, 1,800 m. above sea-level. At one time capital of a sandqūd in the syāylet of Kars. By the Treaty of San Stefano in 1878, the town, its surrounding district and Kars were ceded to Russia. On Feb. 23rd 1921, it was ceded back by Georgia; it has since remained Turkish, and is the capital of a kādā in the wilāyet of Kars. In 1945, the town had 6,182 inhabitants, and the kādā 49,699.

Bibliography: Hājjīdī, Khālīfā (Kāṭīb Celebī). 

ARDKHĀN (dialect Erdekūn), town in Persia situated 32° 18' N. Lat. and 53° 30' E. Long. (Greenew.) on the present route from Nāṭīn to Yazd. It is located on the edge of the desert. To the north is the district of Koūdā, and to the south the Mahbūd. It is located at a height of 3280 ft. above sea level. The identification with Ptolemy's * ApTa£ep?;7 is not certain. Muslim tradition has certain knowledge only of Khusraw I Anusharwan (531-79) was born here. On the early (4th/ioth century) mosque here cf. A. Gabriel, Die Erforschung Persiens, Vienna 1952, 58 (von Poser), 188 (Buhse), 304 (Baier); Stahl in Peterman's Geogr. Mitteil., Supplement 118 (1985), 29.

Another Ardakan, in Fārs, 30° 16' N. Lat., 51° 50' E. Long. (Greenew.) is a Kāšānī tribal centre.

ARDALĀN. This name was formerly used for the ill-defined province of Persian Kurdistan, the major part of which at present is the district (gahrīstān) of Sanandaj (formerly Senna). For the geography see KURDISTĀN (Persian).

Usually the name refers to the Banū Ardālān who were rulers of much of Kurdistan from the 14th to the 17th centuries. The origin of this extended family is unknown, but according to a reference to the Sharaf-nāma, Bāhā was a descendant of the Marwānids of Diyar Bakr, who lived in the Gūrān in Ardālān. Another source (B. Nikitine, Les Valis) says Ardālān was a descendant of Ardāshīr the first Sāsānīan king. Several histories of the rulers of Ardālān were written in Persian in the 19th century which are primarily biographies of the rulers (Storey, 309, 1300). The rulers received the title wāli from the Safawī shahs, but sometimes they declared their allegiance to the Ottomans.

One of the most illustrious of the rulers was Amān Allāh Khān who ruled at the beginning of the 10th century, and his son married the daughter of Fath ʿAli Shāh. Nāṣr al-Dīn Shāh appointed a ʿAbbāsī prince as governor of Kurdistan and the rule of the Ardālān family came to an end. (See KURDISTĀN, SENNA.)

ARDASHĪR, old Persian: ʿArtaḵāh, Greek Αρταξιήρ, well-known name of Persian kings. Muslim tradition has certain knowledge only of the later Sāsānīan kings of that name,viz. Ardāshīr I (226-241), Ardāshīr II (379-383) and Ardāshīr III (628-639). (See SĀSĀNĪSAN.)

ARDASHĪR KHRURĀ [see FERDĀŠĀ].

ARDIBEHĪSHT [see TA’RĪKH].

ARDISTĀN (dialect Ardūs), a town in Persia located on the edge of the desert east of the present road from Nāṭīn to Yazd, at a height of 3575 ft. and 33° 22' N. Lat., 52° 24' E. Long. (Greenew.) It was a well known town in the Middle Ages. Arabic and Persian histories say a fire temple was erected by Ardashīr the first Sāsānīd (226-42 A.D.) and Khusrāw I Anūṣ ḫrāwān (531-79) was born here. On the early (4th/ioth century) mosque here cf. A. Godard, in Athar-e Iran, 1936, 285; Zawara, NE and near Ardistān, has an old mosque and pre-Islamic ruins. The population of the district of 50 villages (1930) was ca. 27,000.

expeditions (especially with Maslama b. Abd al-Malik, against the Byzantines), but, thwarted by jealousy, he satirised the Governor of Mecca, Muhammad b. Hisham, the maternal uncle of the Caliph Hisham, and went so far as to compose, in order to discredit him, erotic verse regarding his mother Dijayda. His behaviour led to his being molested, placed in the pillory and thrown into prison, where he died, probably about 120/738.

Bibliography: His diwan was recently printed in Baghdåd (1956) with an Introduction. Levi Della Vida, 361-70, with bibl. (Cf. Pellat)

ARDJîSH. A small and ancient town situated on the north-eastern bank of Lake Van, which in the Middle Ages was still called the Lake of Ardjîsh. Its existence seems to be vouched for since the Urartean period, and more explicitly by the Graeco-Roman geographers. It was occupied for a time by the Arabs during the time of Mu’tamid, but remained an integral part of the Armenian principalities up to the 8th century A.D.; from 772 onwards, it was incorporated in the Kaysite emirate of Akhlat (q.v.). In the 10th century A.D., it belonged to the Marwânids, but about 1025 it was taken by the Byzantines, who proceeded to annex southern Armenia. In 1054, it was retaken by the Saldjukid sultan Tughgil Beg (q.v.), and, when the Saldjukid empire was divided up at the end of the 11th/12th century, it was incorporated in the principality of the Shâhs of Armenia of Akhlat and, at the beginning of the 12th/third century, in that of their Ayyûbid successors. Pillaged repeatedly in the 13th century by the Georgians and the Mongols, it was nevertheless of sufficient importance for the Ilkhanid mawṣûr ‘All Shâh to fortify it at the beginning of the 8th/14th century (it does not appear to have been fortified before). Later, it suffered from the devastations of Timûr and during the disorders associated with the Perso-Ottoman wars. It was still the chief town of an Ottoman district in the 17th century; but the growth of Van, and the northward movement of the lake waters, acted to its detriment. The last inhabitants left the town about the middle of the 19th century, and to-day the ruins are mainly under water. A small modern township has sprung up half an hour's journey to the north.

Bibliography: See Armenia and Akhlat. To the Arabic sources (al-Baladhurl, Ibn al-Azraq al-Fârîqî studied in TRk., 1902, 785-812; Ibn al-Ashîr, etc.), should be added the Armenian sources used in R. Grousset, Histoire d’Arménie, Paris 1948, and F. Nève, Histoire des Guerres de Tamerlan d’après Thomas de Medzoph, Brussels 1860, in Persian, Hadîd Allâh Mustawfî, Nuzha, and, in Turkish, the Dîhidnûmûna of Hâjidî Khallîfa and the Travels of Ewiîyâ Celebi, vol. iv, cf. also M. Canard, Les Hâmidûndîs, i, 188 and 473 ff.; E. Honigman, Die Ostgrenze des byzantinischen Reiches, Brussels 1935; and Besim Darkot, article Ercis in IA, which gives the references to the earlier modern works (Hübschman, Markwart).

ARDJÎS-DAGH [see ERGHANI].

ARGAN (Berb.), argan-tree (argania spinosa or argania sideroxyloï), a tree of the family Sapotaceae which grows on the southern coast of Morocco. A shrub with hard, tough wood, it produces a stone whose kernel, when ground, yields a much-valued oil; the oil-cakes are given to cattle. The word is also known to some of the Arabic-speaking peoples of Morocco, but they look upon it as a loan-word.

ARGHĀN [see ERGHANI].

ARGHŪN, name of a Mongol dynasty claiming descent from Hulâghû. (Raverty, Notes on Afghani- stan, 510, refuses to accept this claim). The Argûhs rose to prominence towards the end of the 13th century when Sulînân Husayn Bâykarâr of Harât appointed Dâh ‘l-Nûn Beg Arghûn governor of Kandahâr. He soon began to assume an independent attitude and resisted all attempts of the ruler of Harât to coerce him. As early as 884/1479 he occupied the highlands of Pîghûn, Shâl and Mustang which now form part of Balûcûstân. In 890/1485 his two sons, Shâh Beg and Musûmûd, returned from the highlands of Pîghûn, Shâl and Mustang which now form part of Balûcûstân. In 902/1497 he espoused the cause of Bâdi’ al-Zamân, the rebel son of Husayn Bâykarâr, and gave him his daughter in marriage. He was killed at the battle of Marûcîk, in 913/1507, during the invasion of Khuvarûn by Shaybânî Khân the Uzbeg leader. He was succeeded by his eldest son, Shâh Beg, who was forced to acknowledge the overlordship of Shaybânî Khân in order to maintain his position at Kandahâr. After the defeat and death of the redoutable Uzbeg leader at Marw, in 1510, he was threatened by Bâbûr who had established himself at Kâbûi and by Shâh Ismîl’l Safawî who had annexed Harât. He was saved for a time by Shâh Ismîl’l wars against the Ottomans and by Bâbûr’s attempt to recover Sâmârkand. Realising that his expulsion from Kandahâr was merely a matter of time, he sought to establish his power in the Balûc country and Sind. In Sind, Dâm Nanda had been succeeded by his son Dâm Fîrûz whose hold over the country was weakened by faction fights. In 926/1520 Shâh Beg entered Sind, defeated Dâm Fîrûz’s army and sacked Thatta, the capital of Southern Sind. A treaty was made by which upper Sind was surrendered to Shâh Beg while lower Sind was to remain under the Sammâs. This agreement was almost immediately repudiated by the Sammâs as a result of which they were once more defeated. Shâh Beg now dethroned Dâm Fîrûz and founded the Arghûn dynasty of Sind. After the complete loss of Kandahâr to Bâbûr, in 928/1522, Shâh Beg made Bakîr at the Indus his capital. He died in 930/1524 and was succeeded by his son, Shâh Husayn, who had the khwâja read in Bâbûr’s name, and immediately, probably by arrangement with Bâbûr, proceeded to attack the Langâh kingdom of
A man of wide learning, Arif distinguished himself as physician and poet, but is primarily known for his work as a historian. He was in fact the author of a résumé of the Annals of al-Tabari, which he continued down to his own times; the section relating to the Orient has been published by M. J. Dë Goeje (Arif, Tabari continuatus, Leiden 1897), while R. Dozy added to his edition of the Bayan of Ibn al-Idhär (Leiden 1848-51) the fragments relating to Spain (from 291 to 320), which constitute the principal source for the reign of 'Abd al-Rahmân III (cf. E. Lévi-Provençal, Hist. Esp. Mus., iii, 506 and index). Arif probably also wrote a work on obstetrics (K. Khalk al-Djamân wa Tadbir al-Habâlat wa 'Masu'd, a MS. of which has been preserved; see H. Derenbourg-H. J. Renaud, Ms. ar. de l’Escorial, ii/2, Paris 1914, 41-2, No. 833) dedicated to al-Hasam II, and a K. 'Uyun al-Adwa‘iya. The K. al-Awâm, of which he is certainly the author, has clearly been merged in the text of the Demonstrations of bishop Rabî’ b. Zayd (= Recemundo), in a composite text which R. Dozy published under the title of Le Calendrier de Cordoue de l’année 961, Leiden 1873 (a new edition by Ch. Pellat will appear shortly).

al-ʿArid has been the great stronghold of the faith. In the myriad campaigns conducted by ʿAl Ṣurūd the people of al-ʿArid, both townsmen and nomads, have almost invariably been in the front rank. One of the main reasons the reformation began in al-ʿArid in the 12th/13th century was that this district had a highly renowned religious scholars.

(Gr. Rentz)

ʿArif, “one who knows”, a term applied to the holders of certain military or civil offices, based on competence in customary matters, “ʿarif, as opposed to knowledge of the law, which characterises the ʿṣīlīm. There may have existed in some cases de facto ʿurafaʾ in Arabia already prior to and at the time of Muḥammad (al-Ṣāḥīf, Umm, iv, 81) is said to have condemned them (Ibn Ḥanbal, vi, 133; Ibn al-ʿAṣifī, Nihāya, iii, 86; al-Sarāḥshī, Sharḥ al-Siyar al-Kabīr, i, 98; al-Baghārī, al-Taʾrifīh al-Kabīr, ii, 341). But such traditions are obviously influenced by later conditions.

During the periods of the caliphs of al-Madīnā and of the Umayyads, the ʿarifs collected taxes from the tribes and handed them over to the musādākh who was appointed by the caliph (al-Ṣāḥīf, Umm, ii, 61, 72, 74; Ḥaqqāl, iii, 56, xi, 248). No details are available concerning their appointment, except that they were chosen among the tribe concerned, though not among its chiefs.

From the time of ʿUmar I onwards there are frequent references to the office of ʿarif in connection with the military organisation of the empire and the āmūrā. Sayf b. ʿUmar claims that the armies of Kūfā were divided after the battle of Ḏaibāsīyya into numerous units (ʿirāfāʾ), with an ʿarif over each unit (al-Ṭabarī, i, 424); but most of the details concerning the functions of the ʿarifs apply to the period of Muʿawiyīya only. Each ʿarif was assigned to an ʿirāfāʾ and was responsible for the distribution of the stipend (ṣafāʾ) among its members, for which purpose he had to keep a register (dhīwān) of the payees and their families. He was furthermore responsible for security inside his own ʿirāfāʾ, and probably also had other responsibilities, such as collecting blood-money and arbitrating in disputes among the members of the ʿirāfāʾ.

The governor of the misr (or the ʿābīb al-ʿawrāʾ) was the sole authority with the power to appoint and dismiss ʿurafaʾ and it was not necessary for him to seek the approval of the caliph or of the clan; he was, however, probably obliged to choose influential persons (cf. the authorities quoted in Ṣāliḥ al-ʿAṣīrī, al-Tanṣimātida, etc., 97-100).

The military office of ʿarif continued throughout the Middle Ages; the rather scanty evidence indicates that its scope varied. At the time of al-Rashīd, for instance, the ʿarif was responsible for ten to fifteen men (al-Baladhūrī, Fawāʾid, 196), while in Spain, at the time of al-Ḥāfaẓī, he is mentioned as a commander of a hundred horsemen (Aḥḥāṣ al-Muṣṭafī, 129-30). (In the ʿIrākī and Syrian armies of the present day the ʿarif is in charge of ten men). We also hear of ʿurafaʾ of the ʿayyārān [g.v.], when it was desired to organise these into official military units (al-Ṭabarī, iii, 179; al-Maṣʿūdī, Murādī, vi, 452).

Among the civil offices whose incumbents bore the name of ʿarif we hear, in the first two centuries of the Hijra, of a special official responsible for the interests of orphans and illegitimate children. An ʿarif of dhimmīs is also occasionally mentioned. But the most frequent use of the title of ʿarif in the mediaeval Arabic-speaking Orient is to denote the head of a guild, although the term was used concurrently (or in varying hierarchical relationships) with others, such as naṣīb, raʾs or simply ḍākhīṣ, fell into disuse during the Ottoman period and in the west was usually replaced by ʿāimin [g.v.]. We find instances of ʿarif in this sense, it seems, from Umayyad times, in direct relationship with the ḩāddī, prior to the appearance of the office of muḥāṣṣib (according to Wāḥid Aḥḥāṣ al-Kudūdī, ii, 347, referring to the time of the ḩāddī Ṣumayrīy, who died about 870/900). But it is mainly from the 6th/ 7th century onwards that references to ʿarifāʾ, now in the rôle of assistants to the muḥāṣṣib, occur frequently in works designed for the use of the latter.

It is impossible to discuss the position of the head of a trade-guild in detail except in the general study of the organisation of the guilds which will appear in the article Şīm. The basic problem, in assessing the position of the ʿarif or the ʿāimin, is to know to what extent this individual, situated midway between the administrator and the guilds, was the representative of an autonomous corporation comparable to those of the mediaeval Christian west at the time of the communes, or the agent of authority supervising a guild governed from above, like the colleges of the late Empire and Byzantium. His actual position must have varied according to the relative strength of the forces concerned. In general, the ʿarif or ʿāimin figures mainly as an assistant of the muḥāṣṣib as regards the regulation, internal jurisdiction and financial obligations of the guild; he could not however discharge his duties unless he was regarded with a certain minimum of confidence by the leaders of the guild, from amongst whom he himself was chosen and who often, by acclamation, accepted or proposed him. In practice he also to a certain extent represented the guild in its dealings with authority. He organised the participation of his guild in certain festivals. He was often duplicated by a ḍhāliṣ, and exercised his powers of arbitration and jurisdiction, in the large centres, assisted by a small customary tribunal subordinate to the muḥāṣṣib. It sometimes happened that there was also an ʿāmin al-ʿumānī. The ʿāimin kept a register of the members of the guild, and admitted new members, in accordance with various initiatory rites. His function was of an eminently temporary nature. This organisation has, of course, been undermined to-day by the progress of trade-unionism on the European pattern.

Bibliography: In addition to the references quoted in the article, see Dozy, Suppl., s.v.; I. Goldziher, Abhandlungen zur Arab. Philologie, i, 21; Dī. Ẓaydān, Taʾrifīh al-Tamaddun al-Islāmī, i, 148; P. Hitti, History of the Arabs, London 1946, 328; IA, s.v. (by M. F. Köprülü); Rāshīd Barrawī, Ḥalāl Misr al-Iḥtīṣādīyya, Cairo 1948, 190-4; A. A. Duri, Taʾrifīh al-ʿIrākī al-Iḥtīṣādī, Baghdad 1953; ʿAlī, A. A., al-Tanṣimāt al-Iṭṭimāʿīyya wa l-Iḥtīṣādīyya li ʿArbaʿa, Baghdad 1953, 97-100.

For matters relating more particularly to the ʿarif and ʿāimin as technical terms of the guilds, the essential sources are the Syro-Egyptian works on hisba (Shayzārī, ed. ʿArīnī, 1946, analysed by Bernhauer, who calls him Nabrawī, in JA, 1886,
ARIF HIKMET BEY (1201-1275/1786-1859)

Arif Hikmet Bey enjoyed great fame during his lifetime, and Namik Kemal wrote that he was, with Tahir Selam, the most notable poet of the era of Mahmud II.

Bibliography: On the life of Arif Hikmet, there are numerous references in the historical and biographical works written in the second half of the 19th century; see in addition: Fatima 'Aliyye, Djeuwet Paza we samani, Istanbul 1332, passim. On his poetry: the Introduction to his Divan, written by Mehemet Ziver (Istanbul 1827); Gibb, Ottoman Poetry, iv, 350 ff.; Ibn Haldun, Mumad Kemal, Son asir turk sairleri, Istanbul 1937, iv, 620 ff., IA, s.v. (article by Fevziye Abdullah). (R. MANTRAN)

AL-ARISH, or 'the Arish of Egypt', the Rhinocorura of the ancients, town on the Mediterranean coast situated in a fertile oasis surrounded by sand, on the frontier between Palestine and Egypt. The name is found as early as the first centuries of our era in the form of Laris. According to the ordinary view, which is presupposed also in the well-known anecdote about 'Amar b. al-'ᾲṣā's expedition to Egypt, the town belonged to Egypt. The inhabitants, according to al-Yaḳūbī, belonged to the Djiđham. Ibn Hawlā speaks of two principal mosques in the town and refers to its wealth of fruit. It was at al-'Arīsh that King Baldwin I died in 1131, and al-Yaḳūbī states that the town contained a great market and many inns, and that merchants had their agents there. Al-'Arīsh was occupied by Napoleon in 1799; in the following year a treaty was concluded in the town, by which the French were forced to evacuate Egypt.

Maspero and G. Wiet, Matériaux pour servir à la géographie de l’Égypte, 125; Capitaine Bouchard, La chute d’al-Arish, ed. and ann. by G. Wiet, Cairo 1945; Makrizī, Khiṭār, IFAO ed., iv, 24-7. (F. BUHIS*)

ARİSTOTELİS OR ARİSTOCİ, i.e., Aristotle, the 4th century B.C. Greek philosopher, the study of whose works became permanently established in the Greek philosophical schools from the first century B.C. onwards.

I. The commentators Nicolaus of Damascus (sec. I B.C.) Alexander of Aphrodisias (± A.D. 200), Themistius (sec. IV), John Philoponus and Simplicus (sec. VI) show the way in which Aristotle was understood in such late Greek teaching. With very few exceptions (cf. below), most of the writings of Aristotle eventually became known to the Arabs in translation, and a great number of the commentaries (which are partly familiar to us in the Greek original, partly only preserved in Arabic versions or even in Hebrew versions from the Arabic) were also thoroughly studied by Arabic teachers of philosophy and by Islamic philosophical writers. The oriental tradition of Aristotle reading follows his late Greek interpreters without a gap, and the medieval Western tradition depends as much on the Islamic study of Aristotle (particularly in the huge sections of Al-Fārābī, Ibn Sīnā and I. Rushdī made available to the Schoolmen) as on the late Greek and Byzantine expositions of his thought. A. is without reservation considered by most Arabic philosophers as the outstanding and unique representative of philosophy from al-Kindī (cf. Rastūl I, 103, 17 Abū Rida) to Ibn Rushdī's unqualified praise (Comm. Magnum in Arist. De anima III, 2, 433 Crawford): Aristotle is 'exemplar quod natura inventit ad demonstrandum...
ultimam perfectionem humanam*. A. is often referred to as 'the philosopher'. He is by implication 'the teacher', al-Fārābī being described as the second (al-muṭallī al-thāni). Since a full survey of Muslim Aristotelianism would virtually constitute a complete history of Islamic philosophical thought, it must be sufficient to point out the main facts and name the instruments of study at present available. In agreement with the Greek commentators Aristotle is understood as a dogmatic philosopher and as the author of a closed system. He is, moreover (again in a way not unknown to the Greek neo-Platonic teachers), supposed to have thought with Plato in all the essential tenets of his thought or, at least, to be complementary to him. The Arabs could even go as far as to credit Aristotle himself with neo-Platonic metaphysical ideas, and it is hence not altogether surprising that extracts from a lost Greek paraphrase of Plotinus and a rearrangement of a number of chapters of Proclus's *Elements of Theology* could pass as Aristotle's *Theology and Aristotle's Book of the Pure Good or Liber De Causis* respectively.

The Arabs eventually became acquainted with almost all the more important lecture-courses of Aristotle, with the exception of the *Politics*, the *Eudemian Ethics* and *Magna Moralia*. They had no translation of the *Dialogues*, which had become less popular in post-Hellenistic times. Their knowledge of Aristotle thus went far beyond the few logical writings known to the early Latin Middle Ages in Boethius's translation, and comprehended the whole late Greek syllabus (cf. also the interesting passage *Comm.*, in *Arist. Graec. inc. viii.ii. iv*). Surveys of the treatises and the ancient commentaries known are to be found in Ibn al-Nadīm, *Fihrist*, 248-52, Flügel (347-52 in the Egyptian edition) and Ibn al-Kīfī, *Tarīkh al-Huknām*, 34-42 Lippert. It is odd that Ibn al-Kīfī op. cit., 42-8 (cf. Ibn Abī Uṣaybi'ā, *Uyun al-Anbā' fī Ṭabāhāl al-Āshbāb* 1 67 ff.) has preserved an otherwise lost but originally Greek list of Aristotle's writings ascribed to a Ptolemy, cf. A. Baumstark, *Syrisch-Arabische Biographien des Aristoteles*, Leipzig 1900, 61 ff. and P. Moraux, *Les listes anciennes des ouvrages d'Aristole*, Louvain 1951, 289 ff.

Aristotle's lecture courses did not become known to the Arabs in their entirety at once, but in stages. The first texts translated of which we are informed are, in conformity with the syllabus followed in the Syrian monastic schools and by Greek patristic writers, limited to formal logic, i.e. Porphyr's *Isagoge, Categories, De Interpretatione* and part of the *Prior Analytics*. The first translator of Aristotle whose work is known (although still unedited) is Muḥammad Ibn ʿAbdalāh, the son of the famous Ibn al-Mukaffaʾ (cf. P. Kraus, *ISO* 1933). The *Topics* and the *Posterior Analytics* and *Rhetoric* and *Poetic* (which belong to the logical writings in late Greek tradition) were soon added but it was not before the foundation of the *bays al-sikma* during the reign of al-Maʿṣūm that non-logical writings by Aristotle were made accessible as well. Details about the history of the early translations are scarce, but 'ancient' versions of the books *On the Heavens*, the *Meteorology*, the main zoological writings, the greater part of the *Metaphysics*, the *Sophistic Elenchi* and (most probably) the *Prior Analytics* have survived until the present day; whilst the so called *Theology of Aristotle* (cf. above) was also translated at this early stage. Al-Kindī's understanding of Aristotle is based on these translations (cf. M. Guidi-R. Walzer, *Studi su al-Kindī I*, Uno scritto introduttivo allo studio di Aristotele, Rome 1940).

Humayn b. Ishāk and his son Ishāk and other associates of this renowned centre of translations of philosophical, medical and generally scientific Greek works produced a great number of partially improved and partially first translations of Aristotle. The translators sometimes worked from the Greek original, sometimes from older or recent intermediate Syriac translations. The better ones were eager to establish a Greek text before they started upon their task. We eventually find a well established tradition of Aristotle reading in the 10th century, in Bābylon, upheld by Christian Arabic philosophers such as Abū Bishr Mattā and Yahyā b. Ḍalī and others who considered themselves, probably correctly, as late descendants of the Greek philosophical school of Alexandria. The syllabus which they followed was partly based on earlier translations and partly on translations of their own (made from older or recent Syriac translations), since most of the representatives of this school were no longer able to read Greek. Al-Fārābī's acquaintance with Aristotle presupposes the achievement of this circle (his treatise *On Aristotle's Philosophy* will be published by Muḥsin Mahdī), and all the subsequent Islamic philosophers equally base themselves on the same corpus of translations which had eventually emerged (after an activity of almost 200 years) in Bābylon and spread from there all over the Islamic world, from Persia to Spain. The work of these translators seems to have surpassed even Ibn Rushd in accuracy and knowledge of textual variants. These Arabic versions of Aristotle are certainly not without importance for the establishment of the original Greek text, and they deserve the same attention as a Greek papyrus or an early Greek MS. or the variants recorded in Greek commentators. They help us moreover to get a more common sense view of the history of texts in general.

The Greek commentators became known to the Arabs together with the text of Aristotle. We meet their influence in different forms: Full texts comprising the lemmata of the Aristotelian groundwork, terse paraphrases by Themistius and his like, shorter surveys of the argument of individual treatises, and marginal notes in manuscripts which quote sentences and views taken from the larger works. Not many of the translations of these Greek commentaries have survived, since they were not used by the Arab successors of the Greek Aristotelian scholars who wrote commentaries and monographs in their own name. Of these, again, not very many have come down to us in the original text. Not one of Al-Fārābī's commentaries on Aristotelian treatises has yet been traced in any library. Ibn Bābja's elaborate summaries of works of Aristotle are still unedited. A certain number of Ibn Rushd's shorter and more elaborate commentaries are also known, whilst more survive only in Hebrew and Latin translations.

A list of the works of Aristotle (mentioning the more important spurious ones as well) which are at present available for study is following.

RNAJOTALIS
(without the marginal notes) by A. Badawi, Mantufr
Aristu, 1-55, 307 f., 673 ff. Ibn Rushd's Middle Commentary is available (together with a critical
text of the groundwork) in an edition by M. Bouyges,
Bibliotheca Arabica Scholasticorum, tom. IV, Beirut
1932.

Topics: First editions of Abû Ughmân ad-Dimashqî and 'Ibrahim b. 'Abd Allah's translations and later scholars, marginal comments published by A. Badawi, op. cit., 407-733.

2 Fragments of lost works

3 Books attributed to Aristotle in Arabic tradition.

De pomo (Kitâb al-Tuffâha): J. Kraemer, Das arabische Original des 'Liber de pomo' (Köprülü 1608), Studi Orientali in onore di G. Levi della Vida, Rome

Liber de causis, based on Proclus' Elements of Theology, ed. O. Bardenhewer, Freiburg i. Br. 1882 (with German translation); new edition by A. Badawi, Islāmica 19, Cairo 1955.

ARITHMETIC [see HISĀR]
ARKUSH — ARMENIA

... stones prove its antiquity. Arcos declared for ʿAbd al-Rahmān I when the latter undertook his campaign against Yūsuf al-Fihār; it was subsequently sacked by ʿAbd al-Wāḥīd al-Miḵnāš, leader of the most important and most dangerous Berber revolt against the first Umayyad amīr. During the Arab–Turkish conflict at the end of the 3rd/9th century in the region of Seville, the rebel castillos of Arcos, Jerez and Medina Sidonia were assaulted by the troops of the amīr ʿAbd Allāh, Yūsuf b. Tāshāfīn, stopped at Arcos on his way to Zallākka. The Almohad caliph Yaʿqūb al-Mansūr, in his campaign of 586/1190 against Portugal, concentrated his troops at Arcos de la Frontera; from there he dispatched his cousin al-Sayyid Yaʿqūb b. Abī Ḥaṣṣ against Silves, while he himself proceeded to lay siege to Torres Novas and Tomar. Ferdinand III took possession of Arcos in 648/1250, after having captured Granada; its Muslim inhabitants rose in revolt in 659/1261, and it was reduced to submission by Alfonso the Learned in 666/1264. In 739/1339, when the Marinid amīr Abu ʿl-Ḥasan undertook his Andalusian campaign, which resulted in his defeat at the battle of the Salado or Tarifa, the Andalusian Councils routed the troops of prince Abū Mālik a short distance from Arcos, and put him to death on the banks of the Barbate, which marked the frontier between the two countries. Up to 856/1452, the Moors of Granada encroached on the territory of Arcos, which for two centuries was a frontier town, kept constantly on a war footing and thus deserving its name of Arcos de la Frontera.

Bibliography: Idristi, Arabic text 174, trans. 308; E. Lévi-Provençal, La Péninsule thérifique, Arabic text 14, trans. 20; Dic. geog. de España, 1957, ii, 637; A. Huici, Las Grandes batallas de la Reconquista, 336. (A. Huici Miranda)

ARMAN [see ARMENIA].

ARMENIA, Armenia, a country of Hither Asia.

I. Geographical Outline.

Armenia is the central and most elevated part of Hither Asia. Encompassed between two mountain chains, the Pontic chain to the north and the chain of the Taurus to the south, it lies between Asia Minor to the west of the Euphrates, Ādābarbāyqān and the region south-west of the Caspian (on a level with the confluence of the Kurr [Kura] and the Araxes) to the east, the Pontic regions to the north-west, the Caucasian (from which the line of the Russian frontier and the Kurr separates it) to the north, and the plain of Mesopotamia to the south (area of the Upper Tigris). To the south of Lake Van, Gordjāk (the ancient Gordyene, now Bohtan) and the land of the Hakkari Kurds (the region of Dīlamanerk and Amadiye) form geographically a part of Armenia, although they have not always been subject to the Armenians. Armenia thus embraces almost the whole of the territory extending between long. 37° and 49° East and lat. 37.5° and 41.5° North. Its area can be estimated at about 300,000 sq. kms.

The geological framework of the land consists of mountains having an archean core and covered with sedimentary strata and tertiary deposits, but vast volcanic masses and lava flows of more recent date have modified its structure. High plains extend between the mountain ranges and vary in altitude from 800 to 2,000 metres (Erzėrûm: 1,880 m.; Kars: 1,800 m.; Mōg in the Murād Sû: 1,400 m.; Erzindjān: 1,300 m.; Erivan: 890 m.). The eruptions have produced a whole series of volcanic cones which are among the highest peaks in the land: Ararat (5,195 m.) to the south of the Araxes; the Sipān (4,176 m.), already known to al-Baladîhurl (ed. De Goeje, 196, Cf. Zeitschr. für arm. Philol., ii, 67, 162; Le Strange, 183); the Bingöl dāg (3,060 m.) to the south of Erzerûm; the Khorīdāg (3,550 m.), the Ala-dāg (3,320 m.), and the Alaghūz (4,180 m.) which forms to the north an almost completely isolated massifs.

Armenia is the cradle of great rivers: the Euphrates, the Tigris, the Araxes and the Kurr (Kura). The Euphrates is formed through the confluence of two branches, the northern branch or Kara Sû (Ar. Furât) and the southern branch or Murād Sû (Ar. Arsans) which come from the Armenian plateau; the Tigris is born in the border range of the South called the Armenian Taurus. While the system of the Tigris and the Euphrates irrigates the lands inclined towards the Persian Gulf, the Araxes (Ar. al-Rass, [q.v.]) which comes from the Bingöl dāg, waters the lands turned towards the Caspian Sea and, before flowing into it, joins the Kurr which, with its parallel prolongation, the river Rion, a tributary of the Black Sea, separates the Caucasian sharply from Armenia. The Euphrates and the Araxes cut deeply into the Armenian plateau and these breaches facilitate the drainage of water with the result that Armenia has but a small number of lakes, Lake Van (1,590 m.) called in Arabic the lake of Khīlät and Ardījāh [q.v.] and the Gōk Čāy [q.v.] or Sevanga (2,000 m.) mentioned already in 1340 by al-Mustawfī, and several smaller lakes.

The orographical and hydrographical systems of Armenia are such that the land is divided into a number of basins separated the one from the other by high mountains, a fact that helps to bring about the feudal disunion in which the Armenians have always lived.

The climate of Armenia is very severe. The winter lasts regularly for eight months on the plateau, the short and very hot summer rarely exceeds two months; it is very dry and crops have need of artificial irrigation. The region of the plains along the Araxes enjoys, however, a more favourable climate. The snow-line in the mountains of the South lies at 3,300 m., but rises to 4,000 m. in eastern Armenia.

II. History.

I. — Armenia before Islam.

Armenia is thought to have been inhabited towards the 17th century B.C. by an Asiatic people, the Hurrites, who were neither of Semitic nor of Indo-European origin; this people was organised in the first half of the second millennium by a conquering Indo-European aristocracy and later became subject to the Hittite empire and thence, after to the Assyrians. In the 9th century B.C. a people closely related to the Hurrites, the Urartians, also called Kūhlīd, established there the powerful kingdom of Urartu (the biblical Ararat), of which Lake Van formed the centre. This kingdom, which had to fight against the Assyrians, attained its apogee in the 8th century, but was destroyed towards the middle of the 7th century by the Cimmerians and Scythian wave that flowed over Hither Asia. During and after these changes an Indo-European people of the Thraco-Phrygian family, a branch, probably, of the Phrygians whose state had just been destroyed by the Cimmerians, came from the West and conquered Urartu. These new inhabitants were called Armenians by the Achaemenid Persians (Greek: ʾArrēmwn), a name of
which the meaning and origin are still unexplained, and the region became known in the course of time as Armenia. The Armenians, however, call themselves Haik (from the name of the hero who led the Armenian people to the conquest) and refer to their land as Hayastan.

The Armenians, save in the time of Tigranes II (Tigranes the Great), have never played a dominant rôle in Hither Asia. The reasons for this were, to a large degree, the feudal régime favoured by the geographical nature of the country and itself a source of internal divisions, and also the proximity of powerful empires. From the time of their settlement in Armenia the Armenians were vassals of the Medes and then of the Achaemenid Persians who placed the land under the control of satraps. These latter, taking advantage of the troubles caused by the death of Alexander the Great, became veritable kings who afterwards recognised the suzerainty of the Seleucids. When Antiochus III was defeated by the Romans at Magnesia (189 B.C.), the two "strategi" who governed Armenia made themselves independent, took the title of king and formed two kingdoms, the one, Artaxias, in Great Armenia or Armenia proper and the other, Zariadris, in Little Armenia (Sophe-Arzane). Great Armenia fell afterwards under the suzerainty of the Arsacids. In the first century B.C. a descendant of Artaxias, Tigranes the Great, threw off the Parthian yoke, dethroned the king of Sophene and united all Armenia under his sceptre; having achieved Armenian unity, he established at the expense of the Parthians and the Seleucids a vast Armenian empire and played an important political rôle. After him, however, Armenia was reduced more and more to the role of a buffer state between the two empires, the Arsacid Parthian and the Roman, each of which desired to impose a king of its choice, internal troubles furnishing a perpetual pretext for intervention and encroachments. In general, from the year 11 A.D. down to the fall of the Arsacids in 224, it was, for the greater part of the time, cadets of the Arsacid family who ruled in Armenia, now supporting their relatives in their wars against Rome, and now accepting the Roman protectorate. When the Arsacid Parthians were replaced by the Sâsdâns, Armenia, continuing under the rule of Arsacid kings and embracing Christianity at the close of the 3rd century, became once more a new apple of discord between the two empires which in the end reached an agreement to share the weak vassal state. By a partition which took place about 390 Persia received the eastern portion, four-fifths of Armenia, over which Khosraw III reigned with Dwln (Ar. Dabil) as capital, while Rome kept the western part where Arshak III ruled at Erzindjian. After the death of Arshak the Romans (Byzantines) entrusted to a council (consul) the administration of the land. The Persian part of the country or Persarmenia retained its national princes until 428-9 and was thereafter administered by a Persian marashân residing at Dwln. According to the Armenian historian Sebeos, the most important native source for the period extending from the 5th to the middle of the 7th century, the Persian domination never succeeded in implanting itself solidly in Armenia, all the more since the Sâsdâns persecuted Armenian Christianity. The Armenian lords (the nakharar) availed themselves of every opportunity to shake off the detested yoke of the fire-worshippers and in their quarrels with the Persian marashâns invoked frequently the aid of their co-religionists in Byzantine Armenia, a proce-
According to the evidence of the Arab historians and geographers (see especially al-Ya'qubi, 194; al-Baladghuri, 197-8; al-Tabarí, i, 2674-5, 2806-7; Ibn al-Aṣfir, ii, 65-6), the greatest invasion of Armenia, the one which for the first time reduced the country to effective Arab control, occurred during the caliphate of ʿUthmān towards the end of 24/645-6. Muʿāwiyah, the governor of Syria, charged the same general Ḥabīb b. Maslama, who had already distinguished himself in the battles of Syria and Mesopotamia, with the conquest of Armenia. The general marched first against Theodosiopolis (Armen. Karin, Ar. Kâlıkâla, now Erzerûm), the capital of Byzantine Armenia and took the town after a short siege. He inflicted a heavy defeat on a great Byzantine army which, reinforced by Khazar and Alan auxiliary troops, had moved forward to stop him on the Euphrates. He turned next towards the south-east in the direction of Lake Van and received the submission of the local princes of Akhlat (q.v.) and Moks. Ardîsh on the north-eastern shore of Lake Van also yielded to the Arab troops. Ḥabīb then marched to besiege Dvin, the centre of Persarmenia, which likewise capitulated after a few days. He concluded a treaty of peace and guarantee with the town of Tiflis, but returned for the recognition of Arab suzerainty and the payment of a capitation tax (díżya). At the same time, Salmân b. Rabīʿa with his army of Irākī troops, subjugated Arrān (Albania) and conquered its capital Barjīlaʿa.

The Armenian tradition differs from the Arab tradition in the matter of dates as well as in various details. On one point alone, the direction given to the great Arab invasion, is there complete agreement in Sebeos and al-Baladghuri, as a comparison of the routes indicated in each of these authors reveals.

According to the Armenian historians, an army entered Armenia in 642, penetrated to the region of Airarat, conquered the capital Dvin and then left the country by the same route, carrying off 35,000 prisoners. In the next year the Muslims made, from Ardîsh on the north-eastern shore of Lake Van also yielded to the Arab troops. Ḥabīb then marched to besiege Dvin, the centre of Persarmenia, which likewise capitulated after a few days. He concluded a treaty of peace and guarantee with the town of Tiflis, but returned for the recognition of Arab suzerainty and the payment of a capitation tax (díżya). At the same time, Salmân b. Rabīʿa with his army of Irākī troops, subjugated Arrān (Albania) and conquered its capital Barjīlaʿa.

The Armenians opposed this demand. According to the Armenian historians, an army entered Armenia in 642, penetrated to the region of Airarat, conquered the capital Dvin and then left the country by the same route, carrying off 35,000 prisoners. The first century of Arab domination in Armenia was, despite the destructive wars, an era of national and literary efflorescence for the country. And yet Muslim rule, in the time of the Umayyads and still less in the time of the 'Abbāsids, under whom the hand of the Arab governors weighed heavily on Armenia, was not able to implant itself solidly in the land. Disturbances and rebellions were therefore frequent. The greatest and most dangerous insurrection against the Arab yoke occurred in the reign of al-Mutawakkil. The Caliph sent his most skilful general, the Turk Bughā the Elder, with a strong army which, after sanguinary and desperate battles in the year 237-8/851-2, succeeded in overcoming the rebellion. The entire nobility was then carried off into captivity. Al-Mutawakkil renounced his hostile policy only when he had need of his troops to fight the Byzantines and in order to prevent a new uprising fomented by the latter. He therefore freed the captive nakhkārār and recognised (247/861-2) as the chief prince of Armenia the Bagratid Ashōt (Ar. ʿAġūt) who had already rendered to the Arab cause most important services. During the twenty-five years of his rule as the prince of princes Ashōt won the affection of all his subjects as well as that of the local lords to such a degree that, on the request of these latter, the Caliph al-Muʿtaʾṣīdīd conferred on him in 273/886-7 the title of king. He received the same distinction from the emperor, who concluded with him at the same time a treaty of alliance. The relations of Ashōt with the Caliph were never troubled; he paid his tribute regularly, but administered and governed his possessions in his own fashion; the native princes likewise acquired during his reign an almost independent status.

After the death of Ashōt (862-90) there reigned his eldest son, Smbat I (Ar. ʿSambât), a man indeed of heroic character, but one who was in no wise capable of withstanding his external foes, the Shaybānids of Diyar Bakr and the Sājdīs of ʿAḏẖarābāḏyān. He was unsuccessful in his conflict with the Shaybānids. Nevertheless, a little later in 286/899 the intervention of the Caliph al-Muʿṭadīdīd brought to an end the Shaybānīdomination and delivered the Armenian provinces from these invaders. The Sājdī Afrāhīn, however, in his thrust towards the west and the north menaced Armenia unceasingly. The situation of Smbat became still more difficult in the time of the astute Yusuf, the brother and successor of Ashōt (d. 288/901). Yusuf understood that above all else he must draw to his side the Ardzruni family which had become, since the reign of Ashōt I, the most powerful princely house next to that of the Bagratids. About 900 he even conferred the royal crown on the head of this family, Gagik, the lord of Vaspurakan, a distinction that the royal crown on the head of this family, Gagik, the lord of Vaspurakan, a distinction that the means of the Caliph al-Muʿṭadīdīd renewed in 304/916 and 306/919. Yusuf, from the year 910, ravaged Armenia in the course of his expeditions and at length, in the fortress of Kapoīt, besieged Smbat, now abandoned by all the princes. In 913 (according to Adontz in 911) the king of Armenia surrendered to his adversary, who, after having inflicted on him a year of imprisonment, had him put to death by cruel tortures (914; according to Adontz 912). Anarchy ensued in Armenia after the fall of Smbat I. His vigorous son, Ashōt II, the "Iron King" (915-29), succeeded in recovering the throne with the support of Byzantine arms; he was at first thwarted by Yusuf who raised against him one of his cousins, but Yusuf, seeing that Ashōt was getting the better of his foes, granted him recognition and sent him a royal crown (about 917). After the capture of Yusuf, who had risen in revolt, by the troops of the Caliph in 919, his successor Subūk (Subuk) allied himself with Ashōt II in order to drive out the Caliph's forces and bestowed on him the title of Ṣāḥḥān Ṣāḥḥāh, a title which recognised as belonging to Ashōt suzerainty over the principalities of Vaspurakan, Iberia, Georgia and other regions. Ashōt II raised the Bagratid power to its apogee and ruled over the greatest part of central and northern Armenia where Smbat had already considerably enlarged the territory of this family. His reign ended in tranquillity after a reconciliation of the Armenian princes and the nominal recognition of his supremacy by his rivals, notably the Ardzruni. Dvin, however, remained in the hands of Yusuf's lieutenant.

In southern Armenia the Ardzruni (see above) ruled over a less extensive territory (Vaspurakan, with Van as the capital). Apart from these two great kingdoms there still existed a series of smaller principalities which for the most part recognised only nominally the suzerainty of the Bagratids. Moreover, in the south, in the region of the Apahunik and Lake Van, there were several Arab emirates, independent but isolated from the Caliphate. The history of Armenia is not therefore conterminous with that of the Bagratids.

Throughout the entire reign of Ashōt II and for much of the reign of his successor Abas (929-53) the war between Byzantium and the Arabs continued without interruption and was at times fought out in Armenia. The Greeks operated in northern Armenia as well as in southern Armenia against the Armeno-Arab emirates of Lake Van which, according to the Byzantine sources, were compelled to submit to the emperor Romanus Lecapenus (919-45). The last Sājdī amirs of ʿAḏẖarābāḏyān retained hardly any influence in Armenia. The Ḥamdānīs, who were the masters of Diyar Bakr, bordering on Armenia, and were in constant war against the Byzantines, succeeded for a time in exacting from all Armenia (according to the historians Ibn Ẓāfir and Ibn al-ʿArāk) a recognition of their sovereignty and established a more effective dominion over the Armeno-Arab emirates in the region of Lake Van. These emirates later recognized the suzerainty of Bāḏr, the founder of the Marwānī dynasty [q.v.] of Diyar Bakr, and of his successors.

After the Ḥamdānīs, it was the Musāfīrīds [q.v.] of ʿAḏẖarābāḏyān who exacted from the princes of Armenia a recognition of their suzerainty, imposed tribute on them (see Ibn Hawqāl, 354, for the year 955-6) and became the masters of Dvin. Ashōt III (952-77) transferred the official capital of the Bagratid kingdom to the little fortress of Anl [q.v.] which he and his successor Smbat II, by erecting there magnificent buildings, transformed into a pearl of the Orient. It is during his reign that the territory of Kars was raised to the rank of a kingdom for the benefit of a prince of the Bagratid house and that Byzantium, moreover, in 968 annexed the region of Taron, the fief of another Bagratid.
Smbat II (977–89) and his brother Gagik I (990–1020) ruled with vigour and success but, in consequence ... as far as the Armenian–Byzantine borders. Although this thrust was possibly not, as is sometimes alleged, the cause of the defeat of the Seljukid dynasty by Byzantium in 1064 after the Seljukid invasion; it is plain in part the success of the Seljukids in Armenia. 

Thereafter the greater part of Armenia was drawn to Constantinople and was obliged to cede the Caliph, but converted to Islam, like the celebrated amir 'Ali al-Arman who died in 863, not long after he had been named governor of Armenia and Azerbaijan. Armenians were also to be found in Egypt in the army of the Tulunids. It is above all in Byzantine territory, however, that the immigration was important and contributed, in the second part of the 11th century, to the repopulation of the lands in Cilicia and northern Syria reconquered by Byzantium and evacuated by the Muslim inhabitants. The geographer Mu'addas (BG4 iii, 189) states that in his time the Amanus was peopled with Armenians. Asophik tells us that under the pontificate of Khalk I (972–92) there were Armenian bishops at Antioch and Tarsus. During the course of the 11th century the role of the Armenians in the defense of these regions (Cappadocia, Commagene, northern Syria and even Mesopotamia, e.g., at Edessa) was considerable; numerous Armenian officers acted as governors of towns for Byzantium and, profiting from the troubles caused by the first Seljuk invasions, founded Armenian principalities (see ARMENIA). During the same period Armenians were to be found with the Fatimids of Egypt. Following the Armenian Badr al-Djamali [q.v.] who, after being a slave, had become commander of the Egyptian troops in Syria and then rose to the rank of wazir at Cairo (1073/94), there entered into Egypt, first, the Armenians with whom he had already surrounded himself, and later all those whom he summoned there and who took service in the army and were appointed in the administration. These Armenians furnished to the Fatimid Caliphate a number of wazirs, of whom one, Bahram [q.v.] remained a Christian. The introduction into Egypt of an important Armenian population led to the creation of numerous Armenian monasteries and churches and also of an Armenian catholicosate. The Armenians were regarded with favour by some of the Fatimid Caliphs. See on this subject M. Canard, Un vizir chrétien à l’époque fatimite, in AIEO, Algiers, xii (1954) and Notes sur les Arméniens en Égypte à l’époque fatimite. Ibid., xiii (1955). Cf. J. Laurent, Byzance et les Turcs Seldjoucides dans l’Asie Occidentale jusqu’en 1081, in Annales de l’Est, 28th year, fasc. 2, Paris, 1931 (1939). (M. Canard).

II(b). The Armenians under the Turks and the Mongols.

While these last events were taking place, the Turkomans, before long led by the Seljukid dynasty, were conquering Muslim Iran as far as the Armenian–Byzantine borders. Although this thrust was probably not, as is sometimes alleged, the cause of
the first losses of Armenian territory to Byzantium (J.A., 1954, 275-9 and 1956, 129-34) it
nevertheless constituted a tragedy in the middle of the 5th/11th century. After a
period of Turkomän ravages, the battle of Manaz-gird (1071) [see Malazerd] marked the end of
Byzantine supremacy, and the Turkomans settled in Armenia, Cappadocia and throughout most of
Asia Minor. The Armenian territories on the borders of Ağharbâyqân were incorporated in the Saldjûkîk empire, while those in the centre and west took shape as
different principalities: that of Akhlat [q.v.], founded by a Saldjûkî officer and vassal, Sukanmân
al-Kutbî, who assumed the ambitious title of Shâh-i Arman; that of Anî [q.v.], assigned by the Saldjûkîs
to a branch of the former Kurdish dynasty of Arrân, the Shâddâdîs (V. Minorsky, Studies in Caucasian
History, 1953, 79-106); and finally the autonomous
principalities of Asia Minor, where there remained an
ecclesiastical organisation, monasteries, some cultural
activity (cf. for example S. Der Nersessian, Armenia and the Byzantine Empire, Harvard 1947, 133),
and large Armenian towns, such as Erzindjan and
Erzerum. The only dramatic events which occurred
were due to special causes. There was first of all,
about 1280, the massacre of the Armenians of
Djabal Sassûn, as a result of the disorders among
the almost autonomous Turkomans and Kurds of
that region, and especially, the massacre of part of
the Christian population of Edessa, at the time of the
recapture of the city from the Franks by Zangi in
1144 and Nûr al-Dîn in 1146.

Fundamentally, in fact, it was not for religious but
political reasons that the Armenians at different
times suffered at the hands of their Muslim masters.
Despite some friction, the Armenians of the west
generally acted as “accomplices” of the Franks.
This was the reason, moreover, for the frequent
disputes in the Armenian Church. Despite some friction, the Armenians of the west

were still to be fought on Armenian soil, and part of the Armenians of Adzhbarbaydjan were later deported as military security measure to Isfahan and elsewhere. Semi-autonomous seigniories survived, with varying fortunes, in the mountains of Karabagh, to the north of Adzhbarbaydjan, but came to an end in the 18th century.

**Bibliography:** (in addition to the general works): the general sources, in all languages, for the history of the Near East from the 11th to the 15th centuries will be briefly mentioned here; a study of these will be found, with regard to the period of the Crusades, in *Syrie du Nord* mentioned below. Special attention will be drawn here to the not inconsiderable number of 12th and 13th century Armenian historians, especially Matthew of Edessa and the anonymous “Royal Historian” used in the works of Alishan mentioned below (an edition of the text has been prepared by Skinner), and to the historians of Great Armenia at the time of the Mongol conquest; in connexion with the latter, the *History of the Nations of the Archers*, for long attributed to Malachi the Monk, has been restored by its editor-translators R. P. Blake and R. N. Frye (*Harvard Journal of Asiatic Studies*, xii, 1949) to its real author Gregory of Akanc. For the last two centuries of the Middle Ages, only one noteworthy Armenian chronicle exists, that of Thomas of Medzoph, part of which has been made accessible in French by F. Nève, *Exposé des guerres de Tamerlan* etc., Brussels 1880; for the Safavid period, Arakel of Tabriz, trans. by M. F. Brosset, *Collection d’Auteurs arméniens*, i.

II(c) Ottoman Armenia.

The Ottomans conquered western Armenia in the last decade of the 14th century, under Bayezid I, and eastern Armenia in the following two centuries under Mehmed II and Selim I. They eventually became masters of the whole of Armenia, Great and Little (separated *grosso modo* by the upper reaches of the Euphrates), except the Khirate of Erivan (or rather Erevan), in Persian and Turkish Revan, a region containing the patriarchal seat of Echmiadzin (in Turkish *Ul Kilsa*) and relics of the ancient capitals of the Kings of Armenia. This region, situated in Transcausia on the middle Araxes, for long disputed by Turks and Persians, was ceded by the treaty of Türkmen-Çay (1 February 1828) to the Russians, who have since created from it the Soviet Federal Republic of Armenia. In the south of this region is situated Mt. Ararat (in Turkish *Agri Dagh*, in Armenian Masis), on which western expeditions periodically seek and claim to discover the wreckage of Noah’s Ark. It is the point where the Turkish, Persian and Russian frontiers meet.

The province of Kar on the other hand, ceded to the Russians in 1878, was recovered by Turkey in 1918.

Ottoman administrative terminology—especially with regard to the provinces of reforms promised to the European Powers—adopted the term *wilâyât-i sülle* “the six provinces (sülle, populated by Armenians)” : *van*, *Van*, *Bitlis* (alternating with *Mug*), *Erzerum*, *Harput*, *Sivas* and *Diyarbekir*. No account was taken by this convention of the *sandjakh* of Marash, forming part of the former *wilâyât* of Aleppo, or of the former *wilâyât* of Adana (*Cilicia* or Little Armenia in the strict sense of the term).

Turkish domination did not result in the assimilation of the Armenians, who were preserved by the difference of religion. Many Armenians, especially among the men and the Catholics, adopted Turkish as their second, or even as their first language.

After the capture of Constantinople an important change occurred in the life of the Armenian community. Up to 1453 it had at its head three patriarchs *or katoghikos* (katholikos): (1) the patriarch of Echmiadzin, restored to this monastery since 1441; (2) the patriarch of Sis (now Kozan) in Cilicia, who had resided in this town since 1292 and did not recognise (1); (3) the patriarch of Aghtamar, (a small island in the Lake Van), since 1113. The Armenian bishop of Jerusalem also bore the title and ornaments of a patriarch.

After the conquest of Byzantium, Mehmed II, true to his political views, summoned to Istanbul the Armenian bishop of Brusa, Joachim, and made him a patriarch with the same prerogatives the patriarch of the Greek Orthodox Church. In this way the Armenian “nation” (Turkish *miillet*) was formed. A council of the clergy and a council of the laity assisted the patriarch who was elected from the “prelates” superior to the ordinary bishops and called markhassa, properly “saint priest” (from the Syriac *marhassa*; the etymology through the Turko-Arabic *murabkhâsa* must be rejected). The residence of the patriarch of Constantinople is in the Kum Kapu quarter.

From then on on a better footing, the Armenians succeeded in occupying an important position in Turkey, notably as bankers (*sârrâd*, properly “money-changers”). Ubicini (*Lettres sur la Turquie*, 1734, ii, 311-14) gives interesting details about the position of genuine strength which they had achieved in their dealings with the provincial pashas and the Ottoman government in general. They were also merchants (oft cloth merchants) and active caravan leaders who maintained connections between Istanbul, Moldavia, Poland (*Lemberg, Łwów*), Nuremberg, Bruges and Antwerp. As artisans they were architects, house-painters, manufacturers of silk stuffs and gunpowder, and printers (Armenian printing-press at Istanbul in 1679). Like the Jews they were exempt from military service until the revolution of the Young Turks.

The most important events in the history of Ottoman Armenia are:

1) The religious schism, which resulted in the formation of a (Uniate) Catholic Community and internal persecution (Protestant propaganda played a less important part);

2) The revolutionary activity;

3) The repression and massacres.

Roman propaganda had been sporadically effective in Armenia since the 17th century. It was resumed by the ecclesiastical council of Florence (1438-45) and, in 1587, by the famous Pope Sixtus Quintus, among the Armenians of Syria, but found its greatest driving force in Mechitar (born at Sivas in 1675, died Venice 1749). Converted to Catholicism by the Jesuits, he
succeeded in founding a remarkable order which bore his name. The Republic of Venice ceded in 1717 to the Mechitarists the small island of Saint-Lazare, near Lido, where their monastery was installed in an old leper hospital. After the death of Mechitar a schism occurred, and a certain number of clergy retired to Trieste and then to Vienna (1810). There was also a subsidiary branch of the order at Padua which, transferred to Paris, continued to exist there for twenty years. The Mechitarists possessed rich libraries (numerous oriental MSS.), and printing-presses; from these they published historical and philological works which gave a place to Turkish as well as Armenian studies.

Even during the lifetime of Mechitar the overzealousness of Catholic propaganda, which was gaining ground in the richest and most enlightened section of the Armenian community, provoked a lively reaction among the patriarchs of the Gregorian persuasion. The latter were supported by the Ottoman government, which regarded with disfavour these “Frankish plots”.

There were martyrs among the Armenian Catholics who refused to abjure their faith, as in the case of Der Gomidas or Don Cosme and two of his followers (1707). He was the grandfather of Cosme Comidas of Carugnano, an interpreter at the Spanish embassy and author of a Turkish grammar in Italian (Rome, 1794). The Catholics suffered further persecutions in 1759, and even during the reign of the reforming Sultan Mahmoud II, in 1815 and 1828. They found allies, on the other hand, in the French ambassadors and the Jesuits. Thus the imprudent M. de Ferriol secured from the Porte the banishment of the patriarch Avedis, who was hostile to the Catholics, after which the latter was abducted and incarcerated in the Bastille. He died in 1712 at Paris in the house of Francois Pétis de la Croix. The Jesuits at the same period secured the closure of the Armenian printing-press.

In 1830 General Guilleminot, who also was a French ambassador, secured for the Catholics a separate ecclesiastical organisation, and in 1866 Mgr. Hassan, already patriarchal vicar of Constantinople, assumed the title of Catholic-Armenian Patriarch of Cilicia for all the Ottoman empire.

To what cause are the Armenian revolts to be attributed? Certainly not to utilitarian considerations. “The Armenians”, wrote the impartial Ubicini (op. cit. ii, 347), “are of all the nations subject to the Porte, the one which has most interests in common with the Turks and is the most directly interested in preserving them”. See also Victor Béard, La Politique du Sultan (Abdulhamid II), 1897, 149. In the official texts, and when compared with the Greeks and Macedonians, the Armenians were termed millet-i sîdîka, “the loyal nation”.

The causes of Armenian discontent were as follows:

1) The vexatious and troublesome behaviour of, and the acts of brigandage committed by, the Kurdish and Circassian immigrants.

2) The negligence, exactions and extortions of Ottoman officials.

3) Russian incitement, especially from 1912 onwards.

4) A keen love of independence in a generally courageous people which pride itself on being one of the most ancient known, and which still looks back nostalgically to the short periods during which it succeeded in maintaining its autonomy. Certain districts even succeeded in remaining virtually independent; for example the unconquerable mountainers of Zeytun (now Suleymanli, in the present wilâyet of Maraş), Haçin (now Saimbeyli, in the present wilâyet of Seyhan) and Sasun (Kabilcoz, in the present wilâyet of Siirt).

5) The activities of the revolutionary committees, sometimes particularly audacious, as in the case of the armed attack in broad daylight by 24 Armenians, and the siege of the Ottoman Bank at Galata (26 August 1896). The extremist or terrorist revolutionary parties were called Tashnakdsyun. There existed a more moderate committee, the Hincak, formed in 1867 at Paris by Avedis Nazarbek, an Armenian from the Caucasus.

All these factors served as reason or excuse for a violent campaign of repression which took the form of mass deportations or massacres. With the connivance or at the instance of the authorities there occurred, among a people who were by nature kindly and even chivalrous, a long and contagious outburst of religious fanaticism and racial hatred. The calvary of the Armenians in Turkey began with the Erzerum affair (25 February 1890), went through numerous crises, notably in 1895-6 and in 1909 (Adana), and reached its culmination during the First World War, in 1915, during the systematic suppression of the Armenians organised by the government of the Young Turks.

Armeno-Turkish war of 1920. — After the collapse in 1917 of the Bolshevised Russian front, which in Turkey passed to the west of Trebizond and Erzincan, it was in the main the Armenian corps formed by the government of Transcaucasia which had to contain the Turkish counter-thrust. It was defeated and driven from Turkish territory (Turkey concluded the treaty of Batum with the Armenian Republic on 4 June 1918). In 1920 Mustafa Kemal Pasha, in order to put an end to a state of undeclared war, appointed General Kâzım Karabekir Pasha, commanding the 15th army corps, to the command of the north-east front. The troops of the “United Armenian Republic” of Tashnakdsyun allegiance, were again defeated, and the treaty of Alexandroupolis (to Turkish Gümrü, now Leninakan) of 2 December 1920 confirmed the gains won by the Turks, the most important of which was the recovery of Karș.

Bibliography: As far as is known, no works specially devoted to Turkish Armenia exist in any western language (the works in Armenian are not accessible to me). Such information as exists, often bearing the imprint of a strongly partisan bias, is to be gleaned here and there in the general works on Turkey. The following should be mentioned: Amédée Jaubert, Voy. en Arm. et en Perse, 1821; Comte de Cholet, Arm., Kurdistân et Mésopotamie, 1892; André Mandelstamm, La Soc. des Nations et les Puissances devant le problème armén., 1895; Aghasi, Zeitoun depuis les orig. jusqu'à l'intervention de 1895, translation by Archag Tchobinekian, preface by Victor Béard, 1897—There is a copious bibliography on the massacres. The following only will be mentioned: Le traitement des Armén. dans l'Emp. Ott. (1915-1916), extracts from the “Blue Book” with a preface by Viscount Bryce, 1916; René Pinon, La suppression des Armén., 1916, Les massacres d'Arménie; témoignages des victimes, preface by G. Clemenceau, 1896; Khûštrî-i Şâd-i esbaḥ Kâmil pașa, Istanbul 1339/1911, 2nd ed, 84 ff.; Sâ'id paşkanîn Kâmil pașa Khûshtrîînâ Demâblîrî, Istanbul 1327/1909, 78 ff. (J. Deny)
III. Division, Administration, Population, Commerce, Natural Products and Industry.

Division.

Since the size of Armenia, in its territorial delimitation, has varied much in the course of the centuries, the regions into which the lands designated under this name were divided have not always been the same. In ancient times the Armenians (see the Geogr. of the Pseudo-Moses Xorenatsi, 606) separated the land into two unequal sections: Mez-Haik (Armenia major) and Pokr-Haik (Armenia minor).

Great Armenia, i.e., Armenia proper, extended from the Eurphrates in the west to the neighbourhood of the Kur in the east and was divided into 15 provinces; Little Armenia ran from the Eurphrates to the sources of the Hays. The Arabs also were acquainted with this twofold division (see, e.g., Yakuti, i, 220, 13).

Yet, in contradistinction to the Armenians, the Romans and the Byzantines, they extended the name Arminiya to the whole of the land situated between the Kur and the Caspian, i.e., to Djurzan (Georgia, Iberia), Arran (Albania) and the mountainous regions of the Caucasus as far as the pass of Darband (Bab al-Abwab), the reason being that the history of this country, especially in the struggle against the Muslims, reveals itself as closely linked with that of Armenia. By Arminiya al-Kubra, “Great Armenia”, the Arabs (see Yakuti, ibid.) understood particularly the districts which have Khiilat (Akhlat, q.v.) as their centre, whereas they applied the name Arminiya al-Sughra, “Little Armenia”, to the region of Tiflis (i.e., to Georgia).

Ibn Hawkal (ed. De Goeje, 255) was acquainted with yet another division of Armenia proper (excluding Albania and Iberia) into Inner (Arminiya dakhila) and Outer (Arminiya kharidja); to the former belonged the districts of Dabil (Dvin), Nashawa (Nakhchawan) and Kalkala, later Arzan al-Rum (Karvin) and to the latter the region of Lake Van (Berki, Aghlat, Ardzikh, Wastan, etc.).

Apart from this division there existed also another of ancient date which was adopted by the Byzantines (partition of Justinian in 536) and which, with the changes introduced by Maurice (591), remained in force until the Arab invasion. This system (Armenia prima, secunda, tertia, quarta) was also taken over by the Umayyads and the Abbasids times onward, was also obliged, in place of the various kinds of taxes (dizya, kharadji, etc.: capitation tax, land tax, etc.) the system of nakharar, and lords (Arm. ishkhdn, Greek agogomi, Ar., barth, patrikios) who, after the Arab invasion, retained all their possessions and enjoyed within their domains a certain independence. Each of these lords, from ‘Abbāsid times onward, was also obliged, in case of war, to furnish a contingent of troops without receiving any indemnity.

Armenia was, among the provinces of the empire of the Caliphs, a land taxed only moderately. In place of the various kinds of taxes (dizya, kharadji, etc.: capitation tax, land tax, etc.) the system of nakharar was applied from the beginning of the 9th century, i.e., the Armenian princes had to pay a fixed sum. The list of contributions given by Ibn Khuldun, which relates to the period of greatest prosperity for the Caliphate, mentions: "Armenia" (taken in the broad sense of the Arabs) the sum of 13 million dirhems, i.e., more than 15½ million gold francs, as the revenue of the years 1587-775-86; in addition to this there were also the revenues in kind (carpets, mules, etc.). Kudama gives as the average figure for taxes during the years 204-37819-52 no more than 9 million dirhems only. The treaties, in respect to taxation, were scrupulously kept by the Umayyads and the ‘Abbāsids and were violated only by Yūsuf b. Abi ‘l-Sa’d. See, in regard to financial matters, A. von Kremer, Kulturgesch. des Orients, i, 343, 358, 368, 377; Ghazarian, op. cit., 203 ff.; Thöpschbian, op. cit. (1904), ii, 132 ff. The Arab monetary system was also introduced into Armenia; under the Umayyads, coins were already being struck there (see Thöpschbian, ii, 127 ff.).

According to Yakuti (i, 222, 12) there were in Armenia not less than 18,000 localities great and small, of which 1,000 were situated on the Araxes alone (according to Ibn al-Faqlū in). In Arab mediaeval times the most important towns of Armenia proper were: Dabil (Dvin) which, as the residence of the...
Muslim government, filled the rôle of a capital throughout the period of the Caliphs — while it had a large population at this time, it became, in the modern period, nothing more than an insignificant village; in addition, Kâlkâlû, later called Arzan al-Rûm (Erzerûm), Arzindân (Erzindân), Malázgîrd (Mânzakert, Mantzîkert), Badîlis (Bîlîts), Âkhlî (Hûlî), Ardjîsh, Naghawâ (arm. Nakchcavân), Anî and Kârş (see the separate articles).

The native Armenians formed, in the time of the Caliphs, the main part of the population; but there were strong Arab colonies at Dâblî, Kâlkallû, and likewise at Bardhâ'a in Arrân and Tîffîs in Djûrzân, which were the chief bases of Arab power. Outside these great towns there existed also more extensive settlements of Arab tribes, notably to the south-west in the region of Almîn (Arzan in the Arzananen); the old district of Bagûnays (Arm. Apânumik) with its capital Malázgîrd was controlled by a branch of the famous tribe, the Kays, who also held a number of places on the northern shore of Lake Van. The growth of the Bagratid dominion was "like a thorn in the flesh" to these Muslim colonies, since it hindered the consolidation and extension of their own power (see especially, on these colonies, Thôpschîan, op. cit., 1904, ii. 125 ff.; Markwârt, Sweden, 501 ff.; and, on their situation in the 10th century, M. Cânard, Histoire de la dynastie des Hamadânides, 471-87).

After the Russo-Persian and Russo-Turkish wars of the 19th century, Turkey, Russia and Persia shared possession of the Armenian territory and, until the war of 1914-18, there existed a Persian, a Russian and a Turkish Armenia.

(1) Persian Armenia: the smallest of the three sections, with an area of about 15,000 sq. km.; it embraces only a few districts and forms, as it were, an appendix to Russian Armenia; politically, it is joined to the province of ÎÊharbâygûn. To the west it touches the Turkish wilîyet of Van, while to the north, facing Russia, the Araxes serves as the frontier over a distance of about 175 km. from the eastern foot of Ararat as far as Urkabût (Ordûbâdh). The chief town is Kayhîn. In addition, Mîhâ, Çors and Marand should be mentioned. In general Persian Armenia corresponds to the eastern part of the old Armenian province of Vaspûrûkan (Ar. Basfuradên). There exists, moreover, an Armenian population at İșfâhân, resulting from the deportation of the inhabitants of Djûlûsî [q.v.] by Bayâzîd 2nd in 1605.

(2) Russian Armenia: the territory of the independent Armenian republic (28 May 1918), the republic itself was reduced, by the treaty of Batum (4 June 1918) to Erivan and the region of Lake Sevan, the Turks and the Azerbaijandis sharing between themselves the remainder of Russian Armenia. There now ensued the collapse of the Turks on other fronts and the armistice of Mudros (30 October 1918). At the beginning of 1919 Armenian forces recaptured Alexandropol (Leninakan) and, in addition, Maku, Çors, Karsh and Marand. The government, on its part, reconquered the territories of Erivan and Lake Sevan, but the Kara-Bâgh and Nakhtcîhevân are attached to the centre of the Armenians, Nakhtcîhevân (Nakhcîhevân) [q.v.] which, like Erivan, has played a pre-eminent rôle in Armenian history, and Alexandropol (the ancient Gumri), an important frontier fortress until 1878 and thereafter a town given over to the silk industry; in the government of Eliavetpol, Eli-avetpol (the ancient Gandja, [q.v.]), Shûhâ situated in the region of Kara-Bâgh and formerly the capital of a separate Kânate, and the frontier town of Ordûbâdh (Urdûbâdh) on the Araxes.

(3) Turkish Armenia: the greater part of the Armenian territory, far superior in size to the Russian and Persian sections taken together, had been for 500 years in the hands of the Turks and included the wilîyet of Bitîs, Erzerûm, Mâmûret al-Äzîz (now Elaziç, i.e., Karpútî), Van and, although only in part, Diyârbekir, with a total area of about 186,500 sq.km. The most important towns were Sîvâs, Erzerûm, Van, Erzindân, Bitîs, Karpútî, Mûh and Bâyrâzîd [q.q.v.].

Save in Persian Armenia, the war of 1914 brought about important changes in this situation. In 1917, after the retreat of the Russian troops from the Caucasian front, the regime which was then created in Armenia and itself formed part of the provisional government of Transcaucasia (Georgia, Armenia and Azerbaijan), undertook the task of defending the front against the Turks; but could not prevent the latter from regaining Erzindân and Erzerûm (February-March 1918), and then Kârş (25 April) after the peace of Brest-Litovsk which granted to the Turks possession of Turkish Armenia, together with Kârş and Ardâhân, previously in Russian hands since 1878. After the dissolution of the Transcaucasian government and the formation of an independent Armenian republic (28 May 1918), the Turkish possession of Turkish Armenia, together with Kârş and Ardâhân, was confirmed by the treaty of Batum (4 June 1918) to Erivan and the region of Lake Sevan, the Turks and the Azerbaijandis sharing between themselves the remainder of Russian Armenia. There now ensued the collapse of the Turks on other fronts and the armistice of Mudros (30 October 1918). At the beginning of 1919 Armenian forces recaptured Alexandropol (Leninakan) and, in addition, Maku, Çors, Kars and Marand. The government, on its part, reconquered the territories of Erivan and Lake Sevan, but the Kara-Bâgh and Nakhtcîhevân are attached to...
Soviet Socialist Republic of Azerbaijan under the designation of autonomous Region of Nagorny Karabakh (mountainous Karabagh) and autonomous Soviet Socialist Republic of Nakhitchivan, while the districts, formerly included in Russian Armenia, of Akhalkhalaki, Akhalcalik (Akhaltitskhe) and Baştım, this latter in the form of the autonomous Soviet Socialist Republic of Adjara, are part of the Soviet Socialist Republic of Georgia. The principal towns in the Republic of Armenia are Erivan, Leninakan (formerly Alexandropol), Kirovakan (the old Elizavetpol) and Alaverdy.

The former Turkish Armenia, which can no longer bear this name, since it is now empty of Armenians as a result of the deportations and massacres of 1915-18, has been increased by the addition of Kar, Ardahān and Iğdır.

Population.

Owing to the invasion of Turkish and Turcoman tribes on the one hand and, on the other, to the advance of the Kurds (in the south) the composition of the population had undergone, ever since the second half of the mediaeval period, a transformation so profound that the Armenians properly so called constituted, over the whole extent of their ancient homeland, no more than a quarter of the total inhabitants. According to the statistics of L. Selenoy and N. Sediltz (Petermann's Geogr. Mit., 1896, 195.), out of the 3,470,000 people to be found in the provinces of Transcaucasia enumerated above 897,000 (27%) were Armenians; in the purely Armenian districts, out of 2,000,000 inhabitants, the Armenians numbered 760,000 (more than a third). The government of Erivan, however, had a population of which 56% was Armenian. In the whole of Transcaucasia the towns were more strongly peopled by Armenians than the countryside (notably Tiflis: 48%); but, in regard to the total number of inhabitants (4,782,000), the Armenians (960,000) constituted only 20% of the population.

The five vilayets of Turkish Armenia had 2,624,000 inhabitants, of whom 1,828,000 were Muslims, 633,000 were Armenians, and 179,000 were Greeks; in the sanjak of Mugh, however, and also in that of Van the Armenians possessed the numerical superiority (almost twofold).

The total population of Russian and Turkish Armenia, according to the estimates given above, amounted to about 4,642,000, of whom 1,400,000 were Armenians. In Russian Armenia the Caucasian peoples were more numerous, while in Turkish Armenia it was the Kurds, Turks and other racial elements (Greeks, Jews, Gypsies, Circassians, Nestorian Christians to the south-east of Lake Van, nomad Tatar tribes) who had the majority.

In Persian Armenia there were, in 1891, 42,000 Armenians, only half of them to be found in Ardharbaydjan (see above concerning Iṣafān).

Such was the estimate of the Armenian population given by Streck, for a period anterior to 1914, in the first edition of the Encyclopaedia of Islam. He noted that as a result of massacres and of emigration the number of Armenians on Turkish soil was constantly diminishing. The settlement of Armenians in foreign lands and their dissemination throughout the world had continued, although in varying degree (see above for the emigration into Byzantine territory, and then into Syria and Egypt). Cf. on this subject Ritter, Erdkunde, x. 594-611; R. Wagner, Reise nach dem Ararat, 239-50. The total number of Armenians living in the Old World amounted to between 2 and 2⅔ millions.

According to the figures given by Pasdermadjian Histoire de l’Arménie, Paris 1949, 444, the total number of Armenians in the world in 1914 was approximately 4,100,000, of whom 2,100,000 lived in the Ottoman empire, 1,700,000 in the Russian empire, 100,000 in Persia and 200,000 in the rest of the world. In Russian Armenia proper they numbered 1,300,000 (including Kar, Nakhitchevan, the Kara-Bagh and Akhalkhalaki) and, in Turkish Armenia (with Cilicia), 1,400,000. They represented in Russian Armenia the majority of the population, 1,300,000 out of 2,100,000.

Here, on the other hand, are the figures of the Armenian population in the world and in the Soviet Union for 1926 and 1939, according to W. Leimbach, Die Sowjetunion, Natur, Volk und Wirtschaft, Stuttgart 1950. In 1926 the total number of Armenians in the world amounted to 2,225,000 (the difference from the figure given for 1914 being explained to a certain degree by the losses due to the war, to the massacres and to the sufferings endured during the deportations); of these, two thirds were in the Soviet Union, while one third remained in the Near East (150,000 in Syria, 100,000 in Persia, approximately 100,000 in Turkey, Palestine, Egypt and Greece, with a further 100,000 in America). The Soviet Union held 1,658,000 Armenians, of whom 1,340,000 were in Transcaucasia and 162,000 in Ciscaucasia. Of those to be found in Transcaucasia 744,000 lived in the Soviet Socialist Republic of Armenia (29,900 sq.km.) and constituted there 83% of the total inhabitants (831,290), i.e., the half of the Armenian population of the Soviet Union and one third of the entire Armenian population in the world. 312,000 dwelt in Georgia, 112,000 in the autonomous Region of Nagorny Karabakh (89% of the total population there) and 173,000 in the rest of the Republic of Azerbaijan.

According to the census of 1939 the Armenians of the Soviet Union numbered 2,152,000; in the Republic of Armenia they were 1,100,000 out of a total population of 1,281,599; they constituted 90% of the total population of the autonomous Region of Nagorny Karabakh, but, in the remainder of the Republic of Azerbaijan, only 19% of the total population. In Georgia they numbered 450,000. The Armenian population of the Soviet Union, taken as a whole, had increased by 37% between 1926 and 1939.

In Syria and the Lebanon there were in 1914 about 5,000 Armenians; in 1939 they numbered approximately 80,000 in the Lebanon, and more than 100,000 in Syria. In 1939, after the reunion of the sanjak of Alexandretta with Turkey, 25,000 Armenians left the country. When, in 1945, the Soviet government issued its appeal to the Armenians, inviting them to return to Soviet Armenia, this invitation concerned, in Syria, about 200,000 Armenians who lived especially at Aleppo and Beirut (Aleppo: 100,000 out of a total of 260,000; Beirut: 50,000 out of 160,000). In Persia, between 1926 and 1939, the Armenian population had risen from 50,000 to 150,000; approximately 53,000 expressed the wish to emigrate to Soviet Armenia and the Armenians of Persia formed a great part of the 60,000 to 100,000 Persians who, from Syria, the Lebanon, Persia and Egypt, went to Soviet Armenia after this appeal. Of the 27,000 Armenians who dwelt in Greece, 18,000 emigrated to Soviet Armenia in the period down to 1947.
In 1945 (see H. Field, *Contribution to the anthropology of the Caucasus*, Cambridge, Mass. 1953, 5) the population of Soviet Armenia amounted to 1,500,000, with a figure of 200,000 for the capital, Erivan. Today (see F. Rendot, *Les Chrétien d’Orient*, Paris 1955, 191 and 196) the Republic of Armenia approaches a total of 1,500,000 inhabitants and there are almost as many Armenians in the rest of the Soviet Union. Erivan numbers 300,000 inhabitants and has formulated plans for 450,000. 400,000 to 500,000 Armenians are to be found in the Near East, 100,000 in the countries where 'popular democracy' prevails, 200,000 to 300,000 in North America, 20,000 in France and important nuclei in South America, India, Palestine and Greece.

The Armenian question had been given a definite form. Various Armenian groups in Brazil, the United States, etc. have presented to the U.N.O. demands which seek to bring about the restoration to the Armenians of the former Turkish Armenia with the frontiers fixed by President Wilson and the Armenian question continues to be an obstacle to the improvement of relations between the Soviet Union and Turkey.

**Commerce.**

As a land of transit between the Pontus and Mesopotamia and as a frontier territory between Byzantium and the Muslim empire, Armenia played an important economic rôle in the mediæval period. The numerous merchants and the caravans that crossed it contributed to the development of a native industry which was favoured, like the flow of commerce, by the richness of the country in natural products. The commercial importance of Armenia arose also from the existence of numerous transit routes which cut across the land and of which the Arab geographers have described the most important. The Arabs attached to the support which these routes furnished to their military interests a greater weight than to their commercial usefulness. For this reason they linked together the principal routes at Dablil, the bulwark of the Arab domination. The maintenance and security of the routes was a duty which fell to the Muslim governor. Even today Erzerûm, a point of junction for all the great routes, is a place of high strategic importance and, as it were, the key to Asia Minor.

Armenia communicated with Byzantium through Trebizond (Tarabazanda), the main entrepôt for Byzantine merchandise (above all, precious materials). The great fairs held there several times a year were visited by merchants from the entire Muslim world; the traffic ran ordinarily from Trebizond to Dablil and Kâlıkalâ (Erzerûm). In Persia, Rayy was the most important market for the Armenian merchants (see Ibn al-Fakih, ed. De Goeje, ii, 67 and 217). See in particular, on the commerce and industry of Armenia in the mediæval period, Thöpschian in the *Mitt. des Sem. für orient. Sprache*, 1904, ii, 142-53. On the caravans, see Aramians, *Les tapis d’dragons et leur origine arménienne*, in *Syria*, ix (1928) and, by the same author, *Les tapa arméniens*, in *Revue des Ét. arm.*, i/2 (1928). On Armenian textiles in general, see R. B. Serjeant, *Material for a History of Islamic Textiles up to the Mongol Conquest*, in *Ars Islamica*, x (1943), 91 ff.

**Natural Products and Industry.**

Armenia was considered to be one of the most fertile provinces of the Caliphate. It produced so great a yield of cereals that some of it was exported abroad, e.g., to Baghdad (see al-Tahtari, iii, 272, 273). The lakes and rivers, which were full of fish, also favoured the export trade; Lake Van provided enormous quantities of a certain kind of herring (*Ar. tarihik*) which, from mediæval times, was sent out in salted form even to the Indies (according to al-Kazwînî, ed. Wüstenfeld, ii, 352). This salted fish is encountered even today as a food much sought after throughout the whole of Armenia, Ağharbâyqân, the Caucasus and Asia Minor.

Armenia is rich, above all, in minerals; copper, silver, lead, iron, arsenic, alum, mercury and sulphur are especially to be found there; gold, too, is not lacking. Very little is known concerning the exploitation of these products by the Arabs; the only Arab author who has furnished us with information on the natural products of Armenia is Ibn al-Fakih. According to the Armenian writer Leontius, silver mines were discovered at the close of the 8th century A.D.; these mines correspond no doubt to the silver (and lead) mines which are exploited at Gümüşhâne (now Gümüşhane = House of Silver, halfway between Trebizond and Erzerûm (see, on this subject, Ritter, *Erdkunde*, x, 272 and Wagner, *Reise nach Persien*, i, 172 ff. and cf. also the article *Gümüşhâne*). There were important mines, too, at Bayburt and Arghâna (q.v.). The great and ancient copper mine of Kedabeg with its offshoot at Kalakent (between Elizabetopol-Gandja and the lake of Gökçay) had been much developed before 1914 (see Lehmann-Haupt, *Armenien einst und Jetzt*, i, 122 ff.). Today there are important copper foundries at Alaverdy, Zangezur and Erivan. It was, however, the salt mines which, in the past, were the richest in Armenia, their products being exported to Syria and Egypt. The salt beds mentioned by the mediæval authors were probably to the north-east of Lake Van; there was also an extensive salt-bearing deposit at Kulp to the south of the Upper Araxes and east of Keghiszan (see Ritter, *op. cit.*, x, 270 ff. and Radde, *Vier Vorträge über den Kaukasus*, 47). Erivan today is an industrial town with workshops for the building of machinery and factories for preserves, tobacco, synthetic rubber, etc.

The industries for which Armenia was most renowned during the mediæval period were weaving, dyeing and embroidery. Dablil was the centre of this industrial activity; magnificent woolen cloths were made there, carpets and heavy materials of silk decorated with flowers and multi-coloured (*Ar. baqâyân*) which were also sold abroad. The *hirmis*, a kind of purple-bearing worm, was used for dyeing. Armenian carpets were long considered to be of the finest workmanship. Ardashî (Artaxata), some kilometres from Dablil, was so famous for its dye works that al-Baladhuri calls it “the town of the kermes” (*haryal al-hirmis*) (ed. De Goeje, 200; cf. *Zeitschr. für arm. Philol.*, ii, 67 and 217). See in particular, on the commerce and industry of Armenia in the mediæval period, Thöpschian in the *Mitt. des Sem. für orient. Sprache*, 1904, ii, 142-53. On the caravans, see Aramians, *Les tapis d’dragons et leur origine arménienne*, in *Syria*, ix (1928) and, by the same author, *Les tapa arméniens*, in *Revue des Ét. arm.*, i/2 (1928). On Armenian textiles in general, see R. B. Serjeant, *Material for a History of Islamic Textiles up to the Mongol Conquest*, in *Ars Islamica*, x (1943), 91 ff.

On the period of the Arab invasions and the Arab domination, see: Baldaihurst, Futûh, 193-212 (trans. Hitti and Murugotten, 2 vols., New York, 1916-24); Ţabart, (references indicated in the course of this article); Yaḵūb, 190-1 (the passages relative to Armenia in Baldaihurst and Yaḵūb have been translated into Russian by P. Zuze, Baku 1927, in Materials for the History of Aserbaydžân, fasc. iii and iv; the same author has translated the passages from Ibn al-Algîr.
which concern the Caucasus, Baku 1940). Pseudo-

(M. CANARD)

ARMS [see SILAH].

ARMY [see DVAH, LASKHAR, ORDU etc.].

ARNAWULTUĞ, the Ottoman Turkish name for ALBANIA.

1.—Language. Allegedly descended from Pelasgian, Albanian is an Indo-European language of "satem" type like Armenian, Indo-Iranian and Slavonic. No literary records occur before 1496 A.D., but ancient Illyrian and ancient Epirese, on the basis of personal and place names, are held to be the prototypes of Geg (northern) and Tosk (southern) Albanian respectively. Illyrian manthus, manthia, "bramble", and grossa, "tile", are Albanian manaz, mansë and grersë respectively. Macedonian, Thracian and Daician were languages of Albanian type.

Known as shqip in Albania, ardhesh in the Albanian colonies, the Albanian language is spoken by some 1,500,000 in Albania, 700,000 in the adjoining Kosovo-Metohija area of Yugoslavia, and some 40,000 in Epirus. An archaic form of the language survives on the Greek islands of Hydra and Spetsa, and in Sicily and Calabria, brought there by Tosk exiles from the Turkish invasion. Impoverished by centuries of neglect, Albanian has a small native, but a large borrowed vocabulary. Thus the wheel, the cart and the plough are represented by borrowings from Greek; names of prepared dishes, garments, parts of the house, and Islamic terms have come in via Turkish.

The composite alphabet is: a, b, c (like ts), ç (like ch), d, dh (like th in this), e, ë (like French e in le), f, g, gj (like Turkish g before e, i, ð), h, ñ, j (like y in you), k, l (as in French), ll (as in English all), m, n, nj (as in canone), ò, õ (like Turkish: õ before e, ñ, ñ). (weak), rr (strong trill), s, š, ñ as in shop, t, òh (as in thin), u, v, x (as in adze), zh (as in judge), y (German ü), z, ù (as in pleasure). The vowels a, ë, l are Geg nasals.

Geg is the dialect of Tirane, the capital, and the North, including Kosovo-Metohija. Tosk has a considerable literature. Its main deviations are: replacement of the infinitive by subjunctive constructions, absence of nasal vowels, occasional conversion of n to r, and representation of us, wem as wa, var. There are small differences of vocabulary.

The noun has three genders and five cases. A noun is classified as animate or inanimatae, and has a number of case forms. In the singular, cases are: nominative, accusative, dative, ablative, genitive. In the plural, cases are: nominative, accusative, dative, genitive, vocative. Pronouns have the same cases as the noun.

The verb is a strong verb, with a conjugation pattern similar to the Indo-European verb. It has four tenses: present, imperfect, perfect, pluperfect. The verb is conjugated in the present tense by the addition of suffixes to the root.

There are three active theatres and a writers' union. The brief fascist regime (1939-1943) attracted a few writers with pro-Italian leanings; the present communist regime encourages writing on the partisan movement, the class struggle, work themes and peace. Textbooks are based on Russian models. There are three active theatres and a writers' union.

This activity is paralleled in Kosovo-Metohija, where the communist themes are Titosist.

2.—Literature. From the third century A.D. the Roman Church has maintained a bishopric at Scutari in N. Albania. This became the first cultural centre; evidence of this is Bishop John Buzuk's Matranga, descendant of the exiles, began a tradition of hymn-writing using folk-rhythms (1592), which was continued by Brancato (1675-1741) and the Calabrian Variobba (born 1725). The movement became secular with the folksongs and rhapsodies of De Rada (1813-1903), an ardent spokesman of Albanian liberation, and was continued well into the present century by Zef Schirò (1865-1937), Sicilian-born author of two allegorical epics and a collector of folksongs.

The work of De Rada was helpful in inspiring three Tosk patriots, the brothers Abdyl, Sami and Naim Frashëri, to form a league at Prizrend in 1878. Under the stimulus of the San Stefano settlement they sought Albanian autonomy and literary freedom. After several years of activity in Istanbul, where they were joined by the lexicographer and Bible translator Kristoforidhi (1827-1895), they were forced into exile. At Bucharest Abdyl the politician, Sami the educationist, and Naim, the Bektashi lyricist of Albanian nostalgia, formed a literary society and printed Albanian books from 1885 onward. Thimi Mitko and Spiro Dine, exiles in Egypt, collected folksongs from the local colony. In Sofia Midhat Frashëri, son of Abdyl, published an almanach, an anthology, a journal, and wrote didactic essays and short stories with a moral. Books printed in exile were smuggled into Albania by caravan.

The absence of a literary centre, and the want of a standard alphabet, hampered the movement, and Sami's difficult phonetic spelling was replaced by a digraphic one resembling that of A. Santori of Calabria and the linguist Dh. Camarda (1821-1882) of Sicily. After independence in November 1912 the various literary currents combined. A. Drenova (born 1872), the Tosk lyricist, Bubani, and L. Poradeci (born 1899) continued the Buchareste tradition, the last in an unorthodox style of his own; the Catholic North was represented by the nostalgic F. Shiroka (1847-1917), the linguist and historian A. Xanoni (1865-1913), N. Mjeda (1866-1937), the satirist Gj. Fishta (1891-1908), the folk-poet and elegist V. Prennushi (1885-1946), and the short-story writer E. Koliqi (born 1903). Fqoljon Postoli, and M. Grameno (1872-1931), the Tosk novelists, Kristo Floqë (born 1873), the dramatist, and F. Konitza (1875-1943) transferred their activity to Boston, U.S.A., where a literary society Vatra, and a journal Dielli ("The Sun") were founded in 1912.

The brief fascist regime (1939-1943) attracted a few writers with pro-Italian leanings; the present communist regime encourages writing on the partisan movement, the class struggle, work themes and peace. Textbooks are based on Russian models. There are three active theatres and a writers' union.

This activity is paralleled in Kosovo-Metohija, where the communist themes are Titosist.

3.—Geography. Albania (Shqipni, Shqipëri) lies on a N-S axis 20° E of Greenwich. With a total area of 21,097 square miles (54,748 sq. km.) it is bounded by Yugoslavia, Greece and the Adriatic. Lying between N Latitudes 39° 38' and 40° 41', its total length is 207 miles. It narrows to 50 miles at Peshkopf, and by Yugoslavia, Greece and the Adriatic. Lying between N Latitudes 39° 38' and 40° 41', its total length is 207 miles. It narrows to 50 miles at Peshkopf, and widens to 90 miles at the lake of Little Prespa. Its ten prefectures formerly had 39 subprefectures, now redrawn and renamed as 34 districts. Continuing the limestone formation of the Dinaric Alps, the terrain is highest in the E, reaching some 7,000 feet in places. Of the western lowlands, some below sea-
level, the largest is the fertile Myzeqja plain. The longest river, the Drin, rises in Lake Ohrid (Ochrida), and flows N-W and S-W to the Adriatic below Shengjin. The Mat, Ishem, Semeni-Devoll-Berat and the Vjosa flow in general N-W, but the Shkumbi, a torrent in winter, flows broadly E to W dividing the country into two roughly equal areas, Gjegjja and Toskerrija.

The mountain massif consists of three north-to-south barriers in Gjegjja, and four N-W to S-E parallel ranges in Toskerrija. The highest mountain is Tomorr near Berat (7,681 feet: 2336 metres). Denudation and deforestation have given the country a bare, rugged character. The lakes of Shkoder (Scutari), Ohri and Prespa are only partly in Albania; Terbuf in the central plain is a marsh, and Malik, below Korçë, has been drained.

Durrës (Durazzo) is the main port, with wharves and a shipyard; Valona has a fine natural harbour, and handles refined oil and bitumen; Saranda is a fishing port, and Shengjin handles ore. Chief towns in Albania: Terbuf in the central plain is a marsh, and Malik, below Korçë, has been drained.

According to the census of 1955 the population of Albania was 1,394,310 (in 1930 it was 1,003,097). Outside Albania there are Albanians in Yugoslavia (750,000 according to the Yugoslav census in 1948), in Greece (estimated between 30-60,000) and in Italy (estimated at 150-250,000). The number of Albanians by birth all over the world is estimated at 3 millions (see ed. S. Skendi, New York Cambridge 1957; S. Skendi, Albania, (Statistical, Historical, Political, etc.), New York and London 1957.

(S. E. MANN)

4.—Population.

According to the census of 1955 the population of Albania was 1,394,310 (in 1930 it was 1,003,097). Outside Albania there are Albanians in Yugoslavia (750,000 according to the Yugoslav census in 1948), in Greece (estimated between 30-60,000) and in Italy (estimated at 150-250,000). The number of Albanians by birth all over the world is estimated at 3 millions (see ed. S. Skendi, New York 1956, 50). According to the 1930 census there were 45,000 Vlachs, 35,000 Slavs, 20,000 Turks and 15,000 Greeks in Albania. Approximately 20 percent of Albania's total population lived in towns in 1949-50. In the same year the larger towns were Tirana, the capital, with an estimated population of 80,000 (in 1930, 30,806), Shkoder 34,000, Korçë 24,000, Durrës 16,000, Elbasan 15,000, Vlora 15,000, Brat Mavrovo, Gjirokaster 12,000.

The Albanians are divided into two principal ethnic groups: The Gëgs to the North of the Shkumbi River and the Tosks to the South. The Turks called these two regions Gjallak and Toškallk. Not only in their dialects but also in the outlook and social behaviour the Gëgs differ from the Tosks. The Gëgs are considered as keeping national characteristics purer than the Tosks.

Generally speaking the barren mountains of Albania provided too little for an increasing population to subsist. Especially when an epidemic decimated livestock, the helpless people had no choice but to emigrate or to fall upon neighbouring plains. They usually went out as mercenaries, shepherds or agriculturists.

Toward the middle of the Albanians, under the pressure of the Serbs or as mercenaries of feudal seigneurs in Greece, migrated and settled in Epirus, Thessaly, Morea and even in the Aegean Islands. There most of the Albanians were gradually graecised, or migrated to Southern Italy under the pressure of the Ottomans later on. But about 1466 in Thessaly there were still Albanian districts in the towns as well as 24 Albanian katunes in Livadja (Lebadea) and 14 in Istifa (see my 1954. 146). Under the Ottomans these katunes had a special status and, later, are known as armatols.

When Iskender-beg died in 1468 a number of the Albanians involved in his struggle against the Ottomans either retired to the mountains or migrated to the kingdom of Naples. In 1478, 1481 and 1492 more Albanians migrated to Southern Italy and Sicily where they preserved their language and customs down to the present day.

In the 15th century the Ottoman government transferred some Albanian timar-holders (see TIMAR) of the feudal families (Mazeraki and Heykal) to Trebizond.

No large Turkish settlement is recorded in Albania except a small number of exiles from Konya, locally called Konici. There are also the Yürüks of Kojadiik on the mountains to the East of Dibra where they were stationed apparently to safeguard the Rumeli-Albania highway. The surguns (the deported), sent c. 1410 from such parts of Anatolia as Sarukhan, Kojla-ili, Djankik were also few in number (see S. Skendi, An English-Albanian Dictionary, London 1932; idem, A Short Albanian Grammar, London 1953; idem, An English-Albanian Dictionary, Cambridge 1957; S. Skendi, Albania, Statistical, Historical, Political, etc.), New York and London 1957.

(S. E. MANN)
From the beginning the Ottoman government had to respect the tribal organisation and autonomy of these tribes. As they had actual control of the important mountain passes from Rumeli into Albania, the government charged them with the guardianship of these passes and in return for these services made them exempt from taxation. A regulation dated 1496 (Başbakanlık Archives, İstanbul, Taşpı Def. no. 26) reads as follows: “The nahiyye of Klemente (Klementi) consists of five villages. Their inhabitants of Christian faith pay one thousand aktas of xarida and one thousand aktas of ispenje to the Sandjakbeg and they are exempted from the aktas and the ispenje and other taxes, but they are made dorsendjii (guardians of the passes) on the route Scutari-Petrişan’s territory-Altun-ili as well as the route Medun-Kuća-Plava”. Later in the 17th century the Klementi caused troubles through their depredations in Rumeli and their co-operation with the rebellious tribes of Montenegro (Karađag). To the south of Drin lived the Mirditë tribe, 32,000 in number (in 1681) and all Roman Catholics. They were divided into five clans called bayraḳ, namely Oroghi, Fandi, Spashi, Kushneni, Dibri. Distinguished by their service to the Ottomans against the Venetians in 1696, the Hotëti were promoted to the first place among the clans. Their bayraḳ headed all the others. But today the Shalë tribe is the chief.

In tribal tradition the origin of the bayraḳ goes back to the Ottomans. In fact it was an Ottoman institution to give a bayraḳ or a sandjak to military chiefs as a symbol of authority. Each clan was under a bayraḳdär i.e. standard-bearer, who was a hereditary chief. The public affairs of the clan were decided in the council of the hereditary elders. In order to discuss general affairs the five clans had their annual meeting at Orosh. A bòluk-bash, appointed by the Ottoman governor, arranged all kinds of affairs between the administration and the clans. The “captains” of the five clans of Mirditë claimed to descend from Lekë Dukagjin who played an outstanding rôle in Iskender-beğ’s struggle against the Ottomans. Lekë Dukagjin is believed to have codified the customary law practiced among the tribes, which is called Lekë Dukagjin (A. Sh. K. Gjeçov, Kanuni i Lekë Dhubagjinit, Shkodër 1933).

These tribes used to send to the Ottoman army an auxiliary force composed of one man per household, an Ottoman practice which was also applied to the Yürük and the Kurds. When from the end of the 16th century onwards the empire came to need more troops for its lengthy wars the Albanian auxiliaries seemed to gain an increasing importance. They were used especially in the local wars against the Montenegrins. The Mirditë were regarded as the bravest soldiers in Rumeli. But at the same time H. Hecquard (1855) calls them “the greatest plunderers in the world”. In 1835 when the Tanşimati administration attempted to disarm them and enrol them in the regular army they rose up and infested the Zadrima (Zadrimë) area with the result that the next year the government gave up these attempts. Later the Mirditë chief Frenk Bib Doda played an important part in the Albanian independence movement (1908). The “Republic of Mirditë”, proclaimed under Yugoslav auspices in 1921, collapsed the next year.

Religion.

According to the Italian statistics of 1942 (see, Albania, ed. S. Skendi, 58) out of a total population of 1,128,143, 779,417 were Muslims, 232,320 Orthodox and 116,259 Catholics. The only significant Catholic group is located in the Shkodër (Scutari) district, while large Orthodox groups live in the districts of Gjirokastër (Argyrokastro), Korçë (Körice), Berat and Vlorë (Avlona). Muslims are spread all over the country, but mostly in the Central Albania.

Albania which became attached to the Patriarchate of Constantinople in 732 A.D., was split between Rome and Constantinople in 1054, the northern part coming under the jurisdiction of Rome. The Normans and the Angevins strengthened Catholicism in the country; Antivari was the seat of the Archbishop of Albania and Durazzo that of Macedonia.

Orthodox Albania was dependent directly on the Archbishopric of Ohrida. As the protectors of the Orthodox Church the Ottomans, even before their restoration of the Patriarchate of Constantinople in 1454, favoured Orthodoxy against Catholicism. However, for political reasons the Porte tolerated the Catholic church in Albania. The Albanian lords wavered between East and West according to the political conditions. The Orthodox Albanian immigrants to southern Italy had their own Uniate church recognising the Pope’s supremacy. According to the Ottoman year-book of 1893 there were, in the province of Yanya (Epirus and Albania south of the Devoll River), 223,885 Muslims, 126,053 Greeks, 139,517 Orthodox Albanians, 3,517 Jews and only 93 Roman Catholics. It must be added that a part of these Greeks were in origin Orthodox Albanians graecised through the Greek religious and educational institutions which were zealously founded beginning with the second half of the 18th century. After the independence of Albania an autocephalous Orthodox church of Albania was finally recognised by the Patriarchate (1917). The first converts to Islam were the Albanian feudal lords holding timârs from the Ottomans. Contrary to what is generally held conversion was not required as a condition for keeping their lands as timârs; allegiance to the Ottoman state was sufficient in order to receive timârs. Throughout the 15th century Christians were granted timârs. By the end of the 16th century, however, only one Christian timâr holder was left because of voluntary conversions. Elbasan, built by Mehemmed II in 870/1466, became a Muslim centre from the outset, as did Yeniçehir in Thessaly. It appears, however, that Islam had then only a few converts among the common people, ra’dây. At the beginning of the 16th century in four sandjaks of Albania (Elbasan, Ohri, Avlonya and Iskënderije) there were about three thousand Muslim ra’dây families. In Catholic sources written around 1622 it was estimated that only one thirtieth of the Albanian population was Muslim. During the 17th century the Venetians and Austrians attempted to foment an insurrection of the Catholic Albanians as well as the Orthodox Serbs who were feeling hostile to the government because of an increase in the džizyr. In 1634 at a meeting of church dignitaries at Kuçi it was decided to ask for aid from the Pope. Toward 1622 the first Franciscan missionaries appeared in Albania and Southern Serbia. Albanian Catholics and the Serbs co-operated with the Venetians in 1649 and with the Austrians in 1659-1690, which made the Porte decide to have recourse to retaliatory measures. To escape these, the Christian populations in the plains of Peć, Prizren, Djakovë and Kossovo, who were partly Albanian, migrated in mass or adopted Islam; but many of them became
crypto Christians, locally called lanunati (molyvi). The baptism and Islamisation of these plains went hand in hand in the 17th and 18th centuries.

Conversion to Islam received a new impetus under the Bushahls and Ali Pasha [q.v.] of Tepedelen. According to the contemporary witnesses, the latter forced a number of the villages to adopt Islam. It is believed to have been a Bektash himself and in his time Bektashism (see Bektashîya) made its greatest progress in Albania. Under King Zag its adherents were estimated at about 200,000. With its prosperous ßaktsin in Tiran, Ak diagnostics (the old centre of the Bektashîya), Berati, and on the Tomor mountain, as well as its central organisation in the capital, Bektashism assumed importance in Albania. During the Congress of Karat in 1921 the Bektashîya sought to establish a community of their own, separate from the Sunnîs. This was to be accomplished only under the Communist régime in 1945.

Islam played an essential part in Ottomanising the Albanians. Christian Albanian often referred to their Muslim compatriots as Turks. On the other hand Islam prevented the Albanians from being assimilated by their Greek or Slavic neighbours. It is asserted that under the venerated of Christ as well as Islam the primitive religious beliefs survived with the Albanians, especially in the highlands.

6. History.

The Illyrian origin of the Albanian people is generally admitted, but their ethnic relationships to the Thracians, Epirots and the Pelasgians are still subject to argument. The Illyrian tribes first came into contact with Greek culture, through the Greek colonies founded on the Albanian coastland, in the 7th century B.C. The principal one was Epidamnos near Durazzo (Durrës). The Illyrians formed their first independent political organization in the third century B.C. Conquered by the Romans in 167 B.C., they were subject to strong Roman influence for centuries. The Roman highway to the Orient, Via Egnatia, started at Dyrrachium (Durrës) and followed the Shkumbi valley. Ptolemy mentions, for the first time, the ßaktsin, among Illyrian tribes and their capital ßaktsin in (near Dorrës). In the 6th century the invasion of Albania by the Slavs put an end to the romanisation of the Albanians who retired to the mountains in northern Albania to live a pastoral life for half a millennium. In the 15th and 16th centuries the Albanian empire extended its rule over southern Albania, including Dyrrachium (Greek Dyrrachion), and toward the end of the 12th century the Serbs under Nemanja occupied northern Albania. The long coexistence with the agriculturist Slavs left a deep cultural imprint on the Albanian people. Finally, Emperor Basil II restored Byzantine rule in southern Albania, and conquered Dyrrachium (1055) which had been the capital of the Byzantine theme of Dyrrachion and Ohrida-Prizren, are seen to be mentioned more by the contemporary sources, 'AXASOU or 'Aßßåvî in Greek, Aromanian or Aromanian in Latin and Aromanian in Slavic sources.

The Ottomans first used the Greek form Arnavut and then its turcised versions Arnavut and Arnavut. Again from the 11th century on, Albania became a bridge-head for feudal Europe to attack the Byzantine empire. Dyrrachion was temporarily taken by the Normans in 1081 and 1185, and by the Venetians in 1204. Then, it came into the possession of the Despot of Epirus, Theodore Angelus (1215-1230). In 1272 Charles of Anjou occupied Dyrrachion as well as the rest of the Albanian coastland, and he called himself the "King of Albania". This started a long struggle between the Byzantines and the Angevins in Albania.

Anatoïlian Turks, as a result of their alliance with the Byzantine emperor, first came to know Albania in 1237/1238. During the Byzantine civil war the Albanian highlanders had increased their depredations in Albania, taken Timonor (Timoniri), and threatened the other Byzantine strongholds, Kanina, Belgrade (Berat) Kliura and Skaraper. In order to establish his control in Albania as well as in Epirus, Andronicus III entered that province with an army which included a Turkish auxiliary force. It was sent by his ally Umar Beg, ruler of Aydın, as far as the country as far as Durazzo (Dyrrachion). The rebels who retired into the mountains suffered great losses at the hands of the Turks. The Turks returned home through Thessaly and Boeotia (Chatziconstantinou).

Before long Stephan Dushan occupied Albania (Croya in 1343, Central Albania 1349-1360). This seems to have accelerated the migration of Albanians into Greece. Native Albanian feudal lords and soldiers joined Dushan in his conquests further south (L. von Thannlecz-C. JirecK, Zwei Erkunden... 85). The voyvodes whom we later find in Albania under the Ottomans settled there apparently with Dushan at this time. When in 1335 Dushan's empire collapsed, local feudal lords, Slav, Albanian or Byzantine in origin, appeared in all parts of Albania. Soon the Balhs (Balgis), in the north and the Thopias in the centre emerged as the most powerful of these lords. The Balhs possessed the coastline between Durazzo and Cattaro, and tried to secure control of a large area as far Prizren. They came into conflict with Twarke, king of Bosnia, as well as with the Serbs who sought to bring this region, Zeta, again under their control. Soon the Balbs, who had already settled themselves in Aviona, Belgrade and Kanina, threatened Carlo Thopias in Durazzo. He asked for help from the Ottoman Turks in 1287/1385, as their frontiers (frontier) units had appeared near Yannina already in 1283/1381. Balba II was defeated and killed by an Ottoman army at Suvra on the Vojso River in Myzeqen on 12 Sha'ban 787/18 September 1385. This is recorded in Ottoman chronicles as the expedition to "Karlil-îl", that is "the land of Karlil" (Carlo Thopias), and it is dated correctly as 1287/1385. The Albanian lords, including Balba's heirs, recognised the Sultan's overlordship. The Dukagin of Alessio notified the Ragusans of their peace with the Ottomans in 1289/1387. Alarmed by the Ottoman advance, Venice sent Daniel Cornero to Murad I to protect Thopias (Reneder) in the 15th century. When toward the middle of the 12th century the control of Byzantium was weakened in the provinces the Albanians came out from their mountain retreats. From this time on, the Albanians, who were then located between the lines of Skodra (Skodaret) and Durrës, were occupied by the Ottoman Turks, and the land of the Albanians was populated by Albanians. The Ottoman Turks then occupied the Greek form Arnavut and then its turcised versions Arnavut and Arnavut. Again from the 11th century on, Albania became
to Neghri, this expedition was made at the request of the "Lord of Skutari" (G. Stratsimirovic) who after Shahin's defeat was accused of a secret understanding with the enemy. After their victory at the Kossovo plain (791/1391) the Ottomans made Skoplje (Uskub) a strong frontier centre by settling there the Turks from Sarukhan under Pasha-Yigit (toward 793/1391). Then Shahin came back and drove out G. Stratsimirovic from Scutari, and St. Sergius (1393-1395) who had returned to the Venetians for protection. Venice for its part took Alessio, Durazzo (1393), Drivasto (1396), all given up by the native lords for a yearly pension. The Ottomans too tried to keep the local lords on their side by guaranteeing them their lands as timârs. Thus Dimitri Vonina (Gionima), Constantin Balsha, Gjergj Dukagjin as Turkish vassals all co-operated with Shahin against the Venetians.

The establishment of the Ottoman rule in Albania with its läbeer (see Tapu) and timâr [q.v.] system started first in the region of Premedzi (Premetë) and Korçë (Korbizë). The regular Ottoman administration with its subâkshì and kâdis in towns and sipâtës in villages is found there in the records going back to the time of Bayazid I (Basaqehat Archivo, Istanbul, Malıyë no. 231). This must have followed the Ottoman expeditions in Albania in 796/1394 and 799/1397. The Ottoman revolt of Akfahisar (Croya, Kroje) was granted tax exemption in the same period. Albanian forces under Coia Zaccaria, Dimitri Vonina, Gjergj Dukagjin and Dhushmani were present at the battle of Ankara in 804/1402. Upon the collapse of Bayazid's empire in 1402, many of these Albanian lords (Ivan Kastrioti, Coia Zaccaria, Niketa Thopia) recognised Venetian suzerainty. When in 1403 George Stratimirovic died, Venice, which had already taken Scutari, seized a part of his heritage—Dulcigno, Antivari and Budua (826/1423). In the south the Despot Carlo Tocco died in 832/1429 and Murad II, taking advantage of the conflict between his heirs, took Yannina (Muharram 834/October 1430). After that a new land and population survey of Albania was effected (Shab'an 835/Spring 1432) which meant the tightening of the Ottoman administrative control there. This survey may be regarded as the real starting-point of the long Albanian resistance during the subsequent decades. Moreover it demonstrates the real character of the rebellion. Firstly some of the villages in the mountainous Kurvelesh and Bzorshek areas refused to be registered. In a few places they even killed their Ottoman timâr-holders. Great feudal lords such as Ivan (Yuvan) Kastrioti in the north, Arianites (Araniti, Arnit) Comnenus in the Argirkaft region, had to return to Stephen, Drivasto. Antivari and Budua (826/1423) were declared against Venice during which the latter finally reached an agreement on Albanian affairs with their suzerain, Stephen Lazarevic of Serbia, against Venice, which finally had to return to Stephen, Drivasto. Antivari and Budua. But his son Balsha, supported by Stephen Lazarevic and Vuk Branković of Serbia embarked upon a long struggle against Venice. The latter finally reached an agreement on Albanian affairs with their suzerain, Emir Siileyman (19 Djumada I, 812/29 September 1415). Then Pasha-Yigit Conoi, Kastriot to submit to the Sultan's suzerainty (813/1410). In the South the Ottomans supported Albanian Spatas against the Toccos. Finally war was declared against Venice during which the Ottomans made the real conquest of Albania from Northern Epirus to Croya (Akapshas) and formed the province of Arvanid ili or Arnavud ili (818-20/1415-1417).

The conditions which the Ottoman conquest brought into the country can be fully ascertained with the help of the details contained in the timâr register of 835/1432 (Sâret-i defter-i Sânh-i Arvanid, ed. H. Inalcik, Ankara 1954). The names of various regions in the register frequently contains references to the chief feudal families who were vassals of the Ottoman, about 819/1416: Yuvan-ili (land of Kastrioti), Balsha-ili (east of Kavajë and south of Shkumbi), Gionoomayno-ili (North of Pekin), Pavlo-Kurtik-ili (the Jilema Valley), Kondo-Miholo-ili (area west of Elbasan), Zenebishi-ili (Zenebissi, Gjonokaster and its surroundings), Bogdan-Ripe-ili (north of Elbasan), Argjini-ili (Premetë). Besides these great families, many smaller Christian feudal kept their lands as timârs. Among them we may mention Dobrile (in Çartolos), Simos Kondo (in Kokinolitsari), Bobza Family (Gion and his sons Gjin and Andre in the Village of Bobza or Bugës), Kachi family (Matja). This kind of timârs constituted 16 per cent of all the timâr-holders in Arvanid ili. Conversion to Islam was not considered necessary for possession of timârs. One Metropolis in Belgrade (Borat) and through Peshapo in Kanina, Akçaahisar and Kartos were given their former villages as timârs. The Turkish population in the province consisted only of the military and religious personnel. The Turkish timâr-holders with their men did not exceed 800 in number. The whole sâbâksh was distributed among about 300 timâr-holders who lived in the villages or castles, namely, Argirkaft (Argyrocastro, Gjino-kastër), Kanina, Belgrade, Iskarapar, Bratujesh or Yenidje-kale and Akçaaahisar. Argirkaft (later on Argiri or Ergiri) became the seat of the sâbâksh-begi and in each county (ulidâyët) centre there was a subâksh and kâdi. The revolutionary step taken by the Ottoman state was that it considered almost all the agricultural lands as owned by the state, because only such a system would enable it to apply its timâr system. The peasants, therefore, must have had the feeling that they were under an impersonal central government as compared to their close dependence upon the feudal lords under the old régime.

In the north, the Ottomans supported first, Balsha III, and upon his death (824/1421), Stephan Lazarevic of Serbia, against Venice, which finally had to return to Stephen, Drivasto. Antivari and Budua (826/1423). In the south the Despot Carlo Tocco died in 832/1429 and Murad II, taking advantage of the conflict between his heirs, took Yannina (Muharram 834/October 1430). After that a new land and population survey of Albania was effected (Shab'an 835/Spring 1432) which meant the tightening of the Ottoman administrative control there. This survey may be regarded as the real starting-point of the long Albanian resistance during the subsequent decades. Moreover it demonstrates the real character of the rebellion. Firstly some of the villages in the mountainous Kurvelesh and Bzorshek areas refused to be registered. In a few places they even killed their Ottoman timâr-holders. Great feudal lords such as Ivan (Yuvan) Kastrioti in the north, Arianites (Araniti, Arnit) Comnenus in the Argirkaft region, had to give up considerable parts of their lands for distribution to the Ottoman sipâtës as timârs. First Araniti took up arms, killed many sipâtës in the autumn of 836/1432, and Thopia Zenebissi besieged Argirkaft. Alfonso V. of Naples, Venice and Hungary encouraged the rebels, who defeated 'Ali, son of Evreuax, governor of Albania, at the Bzorshek pass. Encouraged by these developments Christian lords in central and northern Albania joined the rebellion. Finally in 837/1434 all the forces of Rumeli under Sinan Beg, governor-general of Rumeli, combined to put an end to this dangerous rebellion which was giving hope to Hungary of a new Crusade. But Araniti managed to escape to the mountains. The additional records made after 836/1432 in the defter of Arvanid ili indicate that the rebellion did not affect the Ottoman control of the country to any considerable extent. A great majority of the Ottoman and Christian timâr-holders remained in possession of their timârs. It appears that mostly the highlanders co-operated with the feudal families who had matrimonial connections with their chieftains.

From 847/1443 onwards Iskender beg [q.v.], the son-in-law of Araniti, assumed the leadership of the rebellion; his unusual energy and boldness, and the international situation which obtained at the time, gave the movement a character of international
significance. Setting aside the legend that has grown up around his person, it must be emphasized that the origin and the motives of his rebellion were not different from those of the other Albanian lords. Appointed sâbık of Ağaçhisar (Croya) about 842/1438, he was dismissed in 1440. He wished to recover Croya and his father’s lands in their entirety and to possess them as a feudal lord, not as a timár-holder. It is true that he made an alliance with other feudal
families, Thopias, Balbašas, Dukagjin, Duqman, Lecca Zacarria and Araniti (The Alexis Meeting, 1st March 1444), but the idea of an Albania unified by a national leader is far from reality. He controlled only northern Albania while central and southern Albania always remained under Ottoman control. Sâbık and sandjak-begs, based on Argirkarsfi (Gjinokaster), Ohrda or Belgrade (Berat) tried to suppress him with local forces. He waged guerrilla warfare all the time. Many of the battles described by Marino Barilzio with such fantastic figures were nothing but local clashes. Iskender-beg’s own forces seem never to exceed 3,000. By the treaty of 26th March 1452 he became vassal of Alfonso V of Naples and surrendered Croya to the king’s men. Araniti, who had claims on southern Albania (Vagenelia, Valona, Kanina) followed his example. Araniti was authorised by the king to accept in his name oaths of allegiance by other Albanian lords. So Zenebissi and others also became Alfonso’s vassals. In return, the King agreed to grant a yearly pension varying between 300 and 1400 ducats to each of these vassals and to provide them a place to take refuge in case of danger. This simple change of masters was obviously determined by the fact that the Aragonese system appeared much more advantageous than the Ottoman regime to the Albanian feudalists. But as witnessed by a contemporary Aragonese document, “the common people had hardly any complaints against the Ottoman administration” (see C. Marinesco, Alphonse VIII., Mii. de l’école Romaine, in France, Paris 1923, 104). A timár register made in 872/1466-67 included Dibra, Dgëbri, Rjeka, Mat and Cermeinika (Başbakannlık Archivio, Istanbul, Mâliye no. 506). It is therefore seen that after Mehmed II’s [a.e.] expedition in 870/1466, the timár system was extended into these areas. Whatever his real motives may have been, Iskender-beg, who defied, in his mountains, Murad II (in 854/1450) and Mehmed II (in 870/1466 and 871/1467), was also glorified in his time as “Champion of Christ”, by the Pope, and as the Albanian National hero, by the nationalists in the 19th century.

During the Ottoman-Venetian war of 1465-1479 Albania became one of the main scenes of operation. Finally the Ottomans were able to take Croya, Drivasto, Alessio and Jabljak (Jabyak) in 1478, Scutari in 1479, and Durazzo in 1502. Alessio (Leshi), which the Ottomans lost during the war of 1499-1503, was retaken in 1509. After having failed in their attempts in 1538, the Ottomans finally took Antivari (Bar) and Dulcigno (Uëlçinj, Œlgün) in 1571, and thus completed their conquest of Albania. That appears to be up to the end of the 16th century Ottoman rule in Albania created a peaceful and prosperous era. Most of the old feudal families then adjusted themselves to the Ottoman régime, and even one of the Aranitis named Ali beg had a large timár around Kanina, Argirkarsfi and Belgrade toward 1506.

Until about 870/1466 Ottoman Albania was organised as a sandjak under the name of Arvanid (or Arnavud)-li. Its subdivisions were the ulayets of Argirkarsfi, Kilsura, Kanina, Belgrade, Timoringie, Iskarakar, Pavlo-Kurtik, Cartalos and Ağaçhisar. When in 1466 Mehmed II erected the fort of Elbasan, this region was set up as a new sandjak.

| Sandjaks | Communities | Population | Officials and solders** | Tax revenues
|----------|-------------|------------|------------------------|-----------------|
|          | Towns | Forts | Villages | Christian households | Muslim households | Jewish households | Sandjak-beg & džafti | Zaim | Timár-salāhid | Deçanes | Meşrit in ducats | in abăb (one Venetian ducat was worth 52-6 abăb in this period)

* These figures are for the êdâs of Belgrade, Argirkarsfi and Awlonya only.
** We have not included in this list disdârs, ketâbudâs, khabîls, ûmâns, or shâykhâs, who were present almost in every town.
Moreover in the south the sandjaq of Awlonya (Avlona) and in the east that of Ohri were created and in 1479 the sandjaq of Iskenderie (Scutari) was founded in the north. The following is a list established on the basis of the surveys of 912/1506 and 926/1520. (Bus. Archives, Tapu no. 34 and 94), showing the administrative and military situation in the 16th century.

A comparison of the survey of 835/1431 with those of the 16th century reveal the fact that everywhere, in towns and villages, the population more than doubled during the intervening period and in consequence the tax revenues increased similarly. The following illustrates this for the principal towns.

(These figures do not include the military or the civil officials).

The Albanian towns, which numbered 19 in the four Albanian sandjaqs, were small local market-towns with populations varying between 1,000 and 4,000. Only Awlonya (Avlona) became a commercial centre of some importance (population 4 to 5 thousand). In order to further commerce, the government settled there a sizeable Jewish colony of the refugees from Spain (end of the 15th century). According to the Kanun-nâme of Awlonya (see Arvanid Defteri, 123) the port handled goods imported from Europe, and velvets, brocades, mohairs, cotton goods, carpets, spices and leather goods came from Bursa and Istanbul. Some of the citizens of Awlonya even had business associates in Europe. Quite a large amount of tar and salt, produced near the city, was bought by state agencies at fixed prices. The tax income from Awlonya for the sultan’s treasury alone amounted to about 32 thousand gold ducats a year. A garrison and a small fleet were stationed there permanently (for vols. 7 and 8).

The Ottoman towns did not radically change the taxat-
... everywhere took into their service these highlanders who were reputed to be the best mercenaries. They were organised in bôlyak of about 100 men under a bôlyak-bashi, who, as a perfect condottiere, arranged everything for his men with the hire. The part played by such bôlyak is well illustrated by the example of Mehmed Ali in Egypt. Many Albanians also joined the mountain bands in Rumeli, called Daghil ekghyas or Kirilais.

In the same period the lease system of the state-owned lands (mirt ardi mukdita'si) on the lowlands, coastal plains or inland basins, in Albania gave birth to the big land-owning class of 'a'yân [q.v.]. These absentee land-lords used every means to obtain more and more mukdita'si. Among them, the Buçhatli family in the North, in the land of Gëg, and Tepe-delenli 'Ali Paşa (see 'Ali Paşa teperdeleni) (1744-1821) in the south, in the area of Toçka, emerged as semi-independent despots. The first Buçhatli (in Turkish chroniclers Buçhatli or Buçcatti), Mehmed Paşa, built up his power by acquiring large mukdita'si and by making an alliance with the Malisors, the highlanders, and thus forced the Porte to confer him the governorship of Scutari (Ishkaodra, Shkodër) (1779). After his death (1796), the Porte's attempt to get back these mukdita'si caused his son Kars Mahibed Paşa [q.v.] to rebel. 'Ali Paşa, too, possessed about 200 estates (bôlyaks). The Porte at first did not challenge the increasing power and authority of the Buçhatlis and 'Ali Paşa, as they were rightly considered to check the domination of the local 'a'yân, and the rivalry between these two pagas seemed to counterbalance each other. 'Ali Paşa once tried to extend his control into the zone of the Buçhatlis and fought them. Through his sons, whom he managed to have appointed governors of Thessaly, Moera, Karli-il he actually formed a semi-independent state in Albania and Greece. In 1820, when the central government finally took action against him, he rebelled, and instigated the Greeks to revolt. The power of the last Buçhatli, named Mustafà Paşa, was destroyed only in 1832 by the reformed army of Mahmud II. The centralist policy of the Taşlimid of the Times caused troubles with the autonomous tribes in North Albania.

The "Albanian League for the Defence of the Rights of the Albanian Nation" had been set up at Prizren on June 13, 1898, only to influence the decisions of the Congress of Berlin; but it proved to have great significance for the birth of an Albanian state later on. Encouraged by the Ottoman government at the beginning, the League set up resistance to the Montenegrins and Greeks in order to keep the Albanian provinces united (the four Ottoman millet of Yanya, Ishkodra, Manastir and Kosova).

The league tended to further the idea of an autonomous Albania, the Porte sent an army and dispersed the League in 1875. But the great powers, especially Austria-Hungary and Italy, encouraged this autonomy movement with the purpose of extending their influence over Albania while Russia was supporting Montenegrò's territorial claims over Albania. On the other hand, by enlisting Albanians in his bodyguard and conferring special favours on them, 'Abd al-Hamid II was trying to win Albanian support. But the Albanian intellectuals, in cooperation with the Young Turks in Paris and elsewhere, were anticipating an autonomous Albania.

In 1908 the stand taken by the Albanians against 'Abd al-Hamîd at the Frizovik Meeting did actually help the Revolution to succeed. In the Ottoman Parliament the influential Albanian deputies, such as Ismâ'il Kemâl, Es'ad Toptani, Hasan Priftihina, joined in the İttihat ve Terakkip Party which sought decentralisation as against the centralistottomisation policy of the İttihat ve Terakkip Party. While the heated discussions on an Albanian educational system was going on (the Congress of Manastir, November 1906) an uprising broke out among the Albanian highlanders who resisted the Ottoman government attempt to collect their arms. Finally, at the end of September 1912, the new Ottoman government accepted the Albanian demands for an autonomous administration. But the Balkan War completely changed the situation in the Balkans. A short time after the declaration of war, in November 1912, Ismâ'il Kemâl declared the independence of Albania at Awlonya (Vlorë). The London Conference proclaimed Albania an autonomous principality under the guaranty of the six powers (25th July 1913); but the newly elected prince, William von Wied, had soon to leave the country (3rd September 1914). After the first world war Serbia laid claims to Shkodër and Durrës. Seeing their country dismembered, the Albanian leaders hastily convoked a congress at Lushnjé (21st January 1920) and demanded the independence of Albania. A national government was formed in Tirana, and an Albanian partisan army drove out the Italians from Vlore. Italy finally recognised the independence of Albania with the treaty of Tirana (3rd August 1920). The small Albanian state experienced a tumultuous parliamentary life during the first years of its existence (1921-4). The Muslim land-owning beys of the western and central plains came into conflict with the Popular Party (under its leader Fan Noli). A revolution forced Ahmet Zog, the Foreign Minister, to flee to Yugoslavia. With Yugoslav support he came back into power (24th December 1924). A constituent Assembly proclaimed Albania a Republic and named Ahmed Zog (Zogu) President. He then signed a series of treaties with Italy (12th May 1925; 27th November 1926; 22nd November 1927 and March 1936) putting the country practically under Italian protection. In September 1928 Zog was proclaimed the King of Albanians. He fled from Albania one day before the Italians invaded the country on April 6, 1939.

(HALİL İNALCIK)
ARNIT, Span. Arnedo, a small town in the 
province of Logroño, chief town of a partido judicial; 
it numbers about 10,000 inhabitants and is situated 
on the left bank of the Cidacos, a tributary of the 
Ebro, about 22 m. (35 km.) from the capital. Arnedo is 
a toponym of Iberian origin which is found in the 
provinces of Burgos, Albacete and Logroño, and 
which also occurs, in the last-named, in the diminu- 
tive form Arnedillo. In the middle of the 6th/12th 
century, Muslim Spain consisted, according to al-
Idrisi, of twenty-six clires (išâlim) or regions, among 
which figured that of Arnedo, with the towns of 
Calatayud, Daroca, Saragossa, Huesca and Tudela. 
The only Arabic work which describes it is the al-
Rawd al-Mi'âr; according to this, it is "an ancient 
town of al-Andalus, 30 m. from Tudela, surrounded 
by rich cultivated plains. It is a place of great 
strength, and ranks among the most important. 
From this fortress one looks down on to Christian 
territory". Arnedo, Tudela and Oñate were naturally siege 
and a measure of rather less than a quarter 
weight of approximately 35.3 milligrams (half a 
*arthab, or *arnada, its arrow itself instead of using it to propel a pro-
lance or field weapons. The word itself comes from 
the Classical Greek *aronos; but, strangely enough, 
*arnada, or *mandianik, were naturally siege 
*arrada, and in the fact that the *arrada discharges

ARRADJÁN, town in Fars. According to the Arabic authors it was founded by the Sásání king, Kawād I (488, 496-531), who settled there the prisoners of war from Amid (Diýár-bakr) and Mayyā-fārik, and gave to the new settlement the official name Weh ἀμίδ-i Kawād = “Good (or Better) Amīd of Kawād”, run together and arabicised into Wāmkubād or usually simply Amīd-Kubād (Marquart proposed to read so in al-Ṭabarī, i, 887, 888)! Some Arabic writers have erroneously given to Arranjān the name Abar(š)ubāḏ, which was borne by a district and a town on the western frontier of Ahwāz (Ḵūzistān); see also Abarkubād. In any case, the name which is in common use, Arranjān, comes from an older town which existed before the new one founded by Kawād.I

In the Arabic mediaeval age Arranjān was a very frequently mentioned frontier-town of Fārs against Ahwāz, and down to the end of the 7th/13th century was the capital of the most eastern of the five provinces of Fārs; a part of the province of Arranjān belonged earlier not to Fārs but to Ḵūzistān (cf. Ibn Fakhūr, 199; al-Makdisī, 421). Arab geographers describe Arranjān as a large place with excellent bazaars, which manufactured much soap, grew great quantities of corn, possessed numerous date and olive plantations, and was considered to have one of the healthiest situations of the “hot land” (Garmstān). The rise of the Assassins portended its decline; for they seized possession of several strongholds on the neighbouring hills and from there made frequent plundering raids on the town and its adjacent district, and finally took it in the 7th/13th cent. Arranjān never recovered from the horrors of this conquest. The inhabitants emigrated mostly to the neighbouring town, Bībāhān, which succeeded Arranjān as capital of the province.

According to the Arab geographers Arranjān lay on the road leading from Shīrāz to ʿIrāq, 37 miles distant from Shīrāz and al-Ahwāz, and a day’s journey from the Persian Gulf; it was situated on the river Tāb, which here formed the boundary between Fārs and al-Ahwāz.

The ruins of Arranjān were discovered by C. de Bode on the river Tāb (modern Ab-i Kurdistān or Mārān) at 31 40’ N. Lat. and 50 20’ E. Long. (Greenw.). Mustawfi shows that the form Arghān or Arkhān for the town, was in popular use at the beginning of the 8th/14th century. The site of the ruins, according to Herzfeld, is a ride of two hours by horse east of the town of Bībāhān on a canal leading out of the Mārān River, and it forms an almost rectangular plain of ruin ca. 3930 × 2620 ft. near the Kūh-i Bībāhān. Cultivation has now effaced all structural remains, according to Stein. About two miles farther up the river remains of a bridge from the Middle Ages, and of a barrage below the bridge, still exist. The bridge was mentioned by Arab geographers.

'ARRĀF. (a.; the abstract is, 'irāf) one of the names for a diviner. Literally “eminent in knowledge” or “a professional knower”; the European equivalent would be “wise woman” with a change of sex. There are several synonyms. Ṭabbī (physician); “I said to the 'arrāf of Yamāma, ‘Treat me, for if you cure me you are indeed a physician’; and “I will give the 'arrāf of Yamāma his due and the 'arrāf of Najḍ, if they cure me.” The two were respectively Rābān b. Jāda al-Asadal b. Ṭabāq. Kāhīn (diviner) [q.v.] is especially one who deduces his answer from the words, behaviour or circumstances of the enquirer or finds things which have been stolen or lost. It is said that the 'arrāf is somewhat less than the kāhīn. Of course, opinions differ on the precise meaning of these words; a proverb says that the 'arrāf takes what escaped the thief. Kūshān or Ḵīnūn, dowser. Ḥāst one who divines from the shape of the limbs or moles on the face. A tradition says that he who consults the 'arrāf or kāhīn is an unbeliever. Nevertheless the examples of their activity are Islamic. ‘Amr b. Al-ʿĀṣ was not a professional 'arrāf but was famous for his practical wisdom; from the names of two travellers, Ḥāṣira and Kāṭṭāl, he deduced that ʿUthmān had been first besieged and then killed (al-Ṭabarī, i, 3250). The Iḵ wand al-Ṣaʿāfī say that the kāhīn uses no tools, books or calculations but relies on his motherwit and interprets what he sees or hears. Zadīr is employed to describe this method of divination though it first meant drawing omens from birds or animals. Ibn Khaldūn sets out a theory of divination. “It is a property peculiar to the human soul. The soul is so constituted that it can divest itself of its fleshly integument and rise to a higher spiritual state. Men who belong to the rank of prophets through their natural disposition receive as it were a flash (of intuition), and this comes to them without effort on their part, without the aid of sensual means of perception, and without forcing the imagination; nor need they bring their bodies into play by uttered word or hurried movement. They need employ no artificial means. By divesting themselves of the flesh they put on the angelic state which is natural to them in less than the twinkling of an eye.”
ARRÁN. The name is usually applied in Islamic times to the district in Transcaucasia between the Kur (Kura) and Aras (Araks) Rivers. In pre-Islamic times, however, the term was used for all of eastern Transcaucasia (present Soviet Azerbaijan), i.e. Classical Albania (cf. article “Albania” in Pauly-Wissowa). By the 15th century A.D. the name Arrán was not in common parlance, for the territory was absorbed into Ádharbáyján.

The origin of the name Arrán, Georgian Ram, Greek 'Aξjβαλον, and Armenian Alwank (people), is unknown. (In some Classical authors one finds the form Arzian/Arayan, and in Arabic sources one can find al-Ran). Before 387 A.D. the land between the two rivers was considered part of Armenia, comprising the provinces of Ardzakh, Uti, and P'aitakaran. After the division of Armenia between the Greeks and Sassanians in 387 A.D., the first two provinces went to Albania/Arrán and the last to Persia. This is one reason for much confusion in the designation of Arrán, since the Armenians considered only the land north of the Kur River as Arrán.

By the 7th century A.D. the population of “greater” Arrán was thoroughly mixed, and one can hardly speak of a distinctive people. Istaqhrí, 192, and Ibn Hawkal, 349, however, mention al-rānīyya as a language still spoken in the city of Bardha'a in the 9th century A.D.

The Arabs, adopting the Roman system of designation of Armenia, extended the terminology, including all of eastern Transcaucasia under Armenia I (Ibn Khurradalzhib, 122; al-Baladhurí, 194). When the Arabs appeared in the country they found it divided among many small lords, some of whom held allegiance to the Khazars, especially after the fall of the Sassanians. Arrán had been part of the Armenian territories and during the Umayyad Caliphate was nominally under the rule of the princes of Armenia, who in turn were subject to the Arabs. Since it was on the Islamic frontier, subject to Khazar raids and rule, Arrán in fact enjoyed a great measure of independence.

The early Arab raids under Salmán b. Rab'á and Ḥábīb b. Maslama at the end of the caliphate of 'Umar and the early years of 'Uthmán brought the nominal submission of Baylakán, Bardha'a, Ḥabala, and Shammur, the principle towns of Arrán. Afterwards the Arabs warred constantly with the Khazars and local princes (cf. Baladhurí, 203; Tabarí, i, 1889-97). After the first civil war, and in the caliphate of Mu'tawiya Arab rule in Arrán was established, but the Khazars continued to raid south of the Caucasus Mountains. In the caliphate of 'Abd al-Malik the Christian church of Arrán, which had been joined to the Greek Orthodox church, was united with the Armenian church by the Armenian clergy with Arab aid and approval (cf. J. Muylders, La domination arabe en Arménie, Louvain 1927, 99). On the Umayyad governors of Armenia (including Arrán) cf. Baladhurí, 203-9. During the governorship of Maslama b. 'Abd al-Malik, appointed by the Caliph Hishám in 107/725-6, large Arab garrisons were brought into Arrán, and Bardha'a served as head-quarters in operations against the Khazars. On the campaigns against the Khazars cf. D. M. Dunlop, The History of the Jewish Khazars, Princeton 1954, 60-87, and F. Gabrieli, Il Califato di Hishám, Alexandria 1935, 74-84. Under the governorship of Marwan b. Muhammad, last of the Umayyad caliphs, from 113-26/731-44, the Khazars were decisively defeated and Arab rule firmly established.

During Umayyad and 'Abbásid rule in Arrán local Armenian and Arránian dynasties continued a semi-independent existence subject to the Arabs. Taxes were paid in Islamic coins, and we find a mint with the appellation Arrán on 'Abbásid dirhams as early as 145/762. This mint was either in Bardha'a or Baylakán. By 207/822 we find coins bearing madinat Arrán, and after 226/840 the mint seems to have been abandoned.

The local ruler from the ancient house of Mihrán was called the baṛīš of Arrán by the Arabs, and the last of the family, Varaz Trdat, was assassinated in 821 or 822. Shortly after this the lord of Shakk, north of the Kur River, a certain Sahl b. Sunbát, extended his sway over all of Arrán declaring his independence of the caliphate. He became reconciled with the Arabs by delivering the rebel Bábak to them after Bábak had taken refuge with him. Later he, or his son and successor, was taken to Samarra about 854 when the new governor of Armenia Bugdá deported many of the local princes. At this period the lords of Shîrwan and Derbent interfered in Arrán, but the Sâjjids were the most powerful rulers in Arrán.

The Sâjjid governors of Armenia at the end of the 9th and early 10th centuries A.D. were especially harsh to the Christian population of Transcaucasia, but local dynasties continued to rule, especially north of the Kur River (cf. Ibn Hawkal, 348). Marzubân b. Muhammad b. Mu'âsir ruled over Arrán, as well as Ádharbáyján from 941-57 A.D., and most of the lords of Arrán were his vassals. It was under his rule, in 943, that the environs of Bardhâ'a were ravaged by the Russians. After this Arrán fell under the sway of the Shâddâdids of Gandja. The strongest member of the Shâddâdîd dynasty was Abu 'l-Aswâr Shâwûr b. Faḍl b. Muḥ. b. Shâddâd, who ruled from 444-459/1049-1067. In 472/1075 Alp Arslân sent one of his generals, Sawtegin, to rule Arrán displacing the Shâddâdîd dynasty. Turkish tribes, primarily Ghuzz, settled in Arrán and gradually Turkish replaced all other languages in common use.

In the Turkish period Baylakán seems to have replaced Bardhâ'a as the most important city of Arrán, but the former was destroyed by the Mongols in 1221. After this Gandja became the leading city of Arrán. Under the Mongol Angas was joined to Ádharbáyján and single governors ruled both provinces. The process of islamisation and turkisation was hastened after the Mongol invasions.

The land between the rivers came to be called Karabâgh. After the conquests of Timur, who did much building and repair of canals, Arrán only appears as a memory, and its affairs are part of the history of Ádharbáyján.

ARSENAL [see DAR AL-SHINĀ'].

ARSH [see DIVA].

'ARSH [see KURST].

'ARSH, the name given in Algerian legislation, during about the last hundred years, to some of the lands under collective ownership. This meaning of the word, which has various senses in the Maghribi dialects: "tribe" (for example, on the high plains of Constantine), "agnatic group" (for example, in the Tunisian Sahel), "federation" (for example, in Kabylia), only seems to be sought for from the time of the preparatory enquires for the Law of 16 June 1851.

A dispute has long existed in Algeria between those who support recognition of the collective ownership, or only usufruct, of these lands, and those who support recognition of their private character. This dispute overleives the conflict between the administrative theory, which tends to safeguard the patrimony of the tribes, and the expansion of private interests, which want the rapid conversion of these lands into movap property. Arguments have been borrowed, somewhat superficially, from ibad, which offered the theory of tenure subject to payment of the mudj,[5] or "collective, communal holding"; (2) 'azib, or "domain constituted into a pious endowment". According as one or other factor predominated, it seems that there was a certain alternation, characteristic of the social history of North Africa, between these different concepts and the realities that they correspond to.

At all events, the decree of the Senate of 22 April 1863 lays down, (article 1), that the tribes of Algeria "are the owners of the territories of which they enjoy the permanent or traditional usufruct, under what title soever". This patrimony, under the tutelage of the administration, is, however, liable to come under the private initiative through the medium of "partial inquiry". This legislation aroused lively opposition. With less clarity than the Moroccan law, but with greater resolution than the Tunisian law, it seems to have found a compromise solution to this long-standing and difficult problem of real estate and society.

ARSHGUL, a town, not now in existence, on the Algerian coast, within the Othmani border area.

ARSHEL [see DIVA].

ARSHN [see AZA].

ARSAN (r.), lion; also frequently appears as a Turkish proper-name.

ARSLAN b. SALDJK, the son, probably the elder son, of the ancestor and eponym of the Saljukid dynasties, Saljuk. His history is merged in that of the first contacts between the Oghuz led by his family and the Muslim state of Central Asia.

His personal name was Israil (cf. his brothers Mihkal and Musa, fore-names in which it is possible to see Jewish Khazar or Nestorian Central-Asian influence), with Arslan as a totemic name (cf. his famous nephews Tughril Muhammad and Caghri Dagh). The beginnings of his history are confused. During his lifetime the Saljukid family, which had settled at Djand, was converted to Islam and freed itself from the Kingdom of the Yabghu of the Oghuz; it is not disputed that his father, Saldjuk, then sent him to the aid of one of the last Sāmānids who was engaged in a struggle with the Karaghānids, as is affirmed by the tradition of the Malikhāna, a history of the family written under Alp Arslan about 1060; and it is generally thought that it is he who is mentioned, under the title of Yabghu, by the Ghaznavid historian Gardīzī, as assisting in 1003 the last Sāmānī attempt at resistance to the Karaghānids; but latterly this version has been contested by O. Pritsak, according to whom the title of Yabghu can only be understood to refer to the last Yabghū of the Oghuz Kingdom north of the...
It is true that manuscripts of the Arab and Persian chronicles frequently attach to individual Seldjoukids an appellation which can be read yahhū, but O. Pritsak has shown that side by side with this name payghū, it is probable that the word must be read thus in some cases; I think however that as far as Arslan Isra'īl is concerned, he could not have had two totemic names, and did in fact bear the title of yahhū, indicative of the revolt of his family against the pagan kingdom of the north, and it seems to me probable, although not certain, that he is, in agreement with the traditional account, the person mentioned by Gardizi.

The main features of his later history are less open to dispute. After the final collapse of the Sāmānids, he is found associated with the Karakhanid rebel at Bukhara, ʿAll Tegin, in whose service he was eventually joined by his nephews Jughril and Caghri. ʿAli Tegin, in whose service he was rebel at Bukhara, nids, he is found associated with the Karakhanid prince, and did in fact bear the title of the pagan kingdom of the north, and it seems to me probable, although not certain, that he is, in agreement with the traditional account, the person mentioned by Gardizi.

Michael VII, but he later appears principally as an officer in the service of the Great Saldıŋik Mawṣili. In 1077 he brought the Cuman Khan of Bahluy under the rule of Malikşîh; in 1079 Malikşîh placed him under the command of his brother Tutuşh in the Syrian campaign, and in 1084 under Ibn Djahr in the Diyar Bakr campaign; in 1085 he was sent to Khurāsān against the sultan’s brother, Tûkûsh. He received as an iqtâ’ Ḥalwân, a strategic point in southern Kurdistān. From 1085 onwards, however, he intrigued in Diyar Bakr with the Muslim, the Arab prince of Mawṣili and Aleppo, who was at variance with Malikşîh. The death of Muslim obliged him to re-enter the service of Tutuşh, who gave him Palestine (1086). The date of his death is not known; he left several sons, among whom were Şukmân and Iľghâzî.

After the death of Malikşîh, the Artûkîs, led by Tutuşh into Dijâlra, helped him to displace the throne with his nephews (1092-5); on the death of Tutuşh, they supported his son Rûdwan of Aleppo against another son, Duşkâ of Damascus; they later lost Palestine, and its reconquest by Egypt (1098) and subsequent occupation by the Crusaders finally prevented their return there. One of the two Artûkî leaders, Iľghâzî, then entered for a time the service of Muhammad, one of the sons of Malikşîh, whom he had supported against his brother Barkûk, and who made him governor of Īrāk, but the Turkomans from whom the family derived its strength remained in Diyar Bakr. In 1097, the nephew of Şukmân succeeded in occupying Mārdîn. Şukmân himself, who had taken possession of Sarûgî, was expelled from there by the Crusaders (1097), but, as a result of quarrels between the chiefs of Diyar Bakr, obtained possession of Hisn Kayfâ (1102), controlled numerous districts further north, and then inherited Mārdîn. He took part in the wars against the Franks, and in 1104 before Harrân captured Count Baldwin of Edessa. He died soon afterwards.

Muḥammad, who became sole sultan by the death of Barkûk, sent Iľghâzî back to Diyar Bakr, where in 1107 he had a hand in the defeat of Kârî Askân of Rûm, whom he had been supported by Muḥammad’s enemies, and in 1108 he took the place at Mārdîn of one of the sons of Şukmân (another son, Dâ’ûd, retained Hisn Kayfâ). Other chiefs, at Āmid, Aḫhlâz, Arzan etc., carved out seignories for themselves. Muḥammad tried to unite them for the Holy War against the Franks; he could not prevent the rupture, in the middle of the campaign, between Iľghâzî and Şukmân of Aḫhlâz, who, however, died (1110). From then on, relations between Iľghâzî and Muḥammad became strained; the former more and more avoided participation in the expeditions sent against the Franks by the Sultan, from which, having regard to the risks run, only Saldıŋik authority stood to gain. In 1114, Iľghâzî formed a Turkomân coalition against the governor of Mawṣili, Akszunkâr al-Barsûkî. He was victorious, but, apprehensive of retaliation by Muḥammad, fled to Syria, and reached an understanding not only with Tughtegin, the ṣabâbeg of Damascus, who was also disturbed at the Sultan’s Syrian ventures, but even with the Franks of Antioch; the latter, by crushing the Saldıŋik army (1115), saved Iľghâzî. In 1118, Muḥammad died, and Iľghâzî seized possession of the last Saldıŋikid post in Diyar Bakr, Mâyyafarîkîn. He was now a power to be reckoned with. Aleppo, threatened by the Franks and rent by anarchy, appealed to him, despite its leading men’s dislike of handing over power to him. Iľghâzî, secure as regards the Saldıŋikids, did not wish to see the power of the Franks increase. In agreement with Tughtegin, he answered the appeal (1118), and, in 1119, his Turkomans inflicted on the Franks of Antioch a resounding defeat. Their base, however, remained in Diyar Bakr, and, in face of the reaction of other Franks, Iľghâzî was disposed to make peace. He was also called into action against the Georgians; this time he was defeated (1121). Nevertheless his prestige was unimpaired at the time of his death in 1122.

From 1113 onwards, his nephew Balûk had been progressively building up, north-east of Diyar Bakr, astride the eastern Euphrates, a stable principality whose chief town, from about 1115, had been Khartpert. Moreover, as tutor of the Saldıŋikid of Malâyî, who was a minor, he achieved fame by crushing, with the aid of an alliance with the Dânishmandid Gümüşteğen, Ibn Mangûdjak of Erzînjân and the Byzantine governor of Trebizond, Gavras (1120), and later, in the service of Iľghâzî, by capturing Josselin of Edessa (1122), and, after the death of Iľghâzî, Baldwin of Jerusalem, who had come to protect the Franco-Armenians of the border regions of the Euphrates (1123). He was then able to take the place of another nephew of Iľghâzî at Aleppo but was killed while besieging Manbûtî in 1124. Aleppo then passed out of Artûkî hand.

In Diyar Bakr, where they remained firmly entrenched, Şams al-Dâwli Sulaymân, son of Iľghâzî, who had succeeded at Mâyyafarîkîn, also died at the end of 524/1129-30. Another son of Iľghâzî, Timurtash, already master of Mârdîn, succeeded him. Balûk’s principality had passed to Dâ’ûd, the son and successor, since 1104, of Sukmân at Hisn Kayfâ. From then on, the two branches maintained a separate existence for two centuries.

The period of expansion, however, was at an end. From 1127 Zenkî ruled at Mawṣîl, and from 1128 at Aleppo also; he built up a strong kingdom there. Timurtash acted as Zenkî’s vassal, by hostile action against Dâ’ûd, then (1144) against his son Kara Arslân, as well as against the prince of Amîn whom Zenkî and he besieged in 1133. Dâ’ûd had been active in the north, where he had also conducted an anti-Georgian expedition; he had absorbed the small seignories bordering on his own, especially to the east of Hisn Kayfâ. But he was subjected to relentless pressure from Zenkî, who conquered Buhtân, east of Diyar Bakr, and, on the accession of Kara Arslân, the districts lying between Hisn Kayfâ and Khartpert. Kara Arslân was forced to effect a rapprochement with the Franco-Armenians of Edessa against whom, like Timurtash, he had waged war from time to time; the capture of Edessa by Zenkî (1144) was a disaster for him too, but he was saved by his enemy’s death (1146). Not without difficulty Timurtash and Kara Arslân divided Diyar Bakr between them.

Zenkî’s dominions were divided between Nûr al-Dîn at Aleppo, and at Mawṣîl a line of other princes, brothers and nephews of Nûr al-Dîn, who increasingly brought them under his tutelage. His struggle against the Franks and his efforts in the Mawṣîl direction led him again to seek an alliance with the Artûkîs; he did not contend with them for Diyar Bakr and allowed them north of the Euphrates to take their share of the spoils of the Count of Edessa, but dragged them along in his wake in holy wars against the Franks or Byzantines. Nevertheless his relations with them were excellent, especially with Kara Arslân, and Alpî, the son and successor of...
Timurtash, sought to secure his position by obtaining the protection of the Shah-i Armin of Akhlat, whom he was obliged in return to aid against the Georgians. Kara Arslan himself, in 1163, attempted to take Amid from the Inalids and the Nisanids, but was prevented from doing so by a Danishmandid attack; but soon his son Muhammad, with Nur al-Din, went to the aid of the Danishmandids who were threatened by the expansionist policy of the Saljukids of Konya. The growing power of Nur al-Din had imperceptibly caused the Artukids to assume the rôle of vassals, when Nur al-Din died in 1174.

The history of the following years is mainly concerned with the resistance offered by the princes of Upper Mesopotamia to the ambitions of Salih al-Din who, master of Egypt, gradually took possession of the Syro-Djaziran heritage of Nur al-Din. The Artukids to begin with gave their united support to the Zenkids of Mawsil. Then Muhammad considered it more prudent to come to terms with Salih al-Din, who captured Amid, for long the object of the envious regard, and gave it to Muhammad as fief; from then on it became the family seat (1183). Muhammad’s death shortly afterwards, which left only young princes on the throne of Amid, Mardin, Akhlat and Mawill, together with the division of Muhammad’s dominions into two branches, Amid and Khartpert, increased their subjection to Salih al-Din; the latter directly established his authority in Diyar Bakr in 1185 by the occupation of Mayyafarikd.

The Artukids were from then on only remnants gradually whittled away by the successors of Salih al-Din of the Ayyubid dynasty, his brother al-Afdal and the latter’s descendants, who became masters of Akhlat in 1207 but were sometimes divided among themselves. Against the most powerful of them, al-Kamil of Egypt, the Artukids became for a time vassals of the Saljukids of Rûm, then expanding rapidly to the east, and then of the Ilch*arzmshah Djalal al-Din Manguberti, who had become master of Adharbaydjan and Akhlat; Saljukid vengeance caused them to lose the towns of eastern Syria. In 1226, and the vengeance of al-Kamil deprived them of Amid and Hisn Kayfa (1232-3). Al-Kamil quarrelled with the Saljukids Kaykubâd and was defeated, and as a result the Artukids of Khartpert, who had supported him, was dispossessed in his turn (1234). From then on only the Mardin branch remained; this continued to exist for nearly another two centuries. In 1260 its representative, al-Malik al-Sa’id, endured a lengthy siege by the Mongols; but his death saved the dynasty, for his son, al-Mu’azzam, submitted to Hulagu and thus, as a humble vassal, preserved the heritage of his ancestors.

The internal organisation and the civilisation of the Artukids principalities are too little known and, on the whole, too late to allow us to merit a general study on their own. Forming, with the exception of Khartpert, part of the Muslim world since the Arab conquests, the territories over which the Artukids reigned continued to be governed by the same people (for example the illustrious family of the Banû Nubata at Mayyafarikd) and according to the same principles (summarised in the ‘Ilk al-Farad of Muhammad b. Talha al-Karshi al-Adver, waste of Mardin in the 7th/13th century) which had existed formerly or still existed in the neighbouring principalities. The taxes recorded in one or two inscriptions are those obtaining everywhere, and it would be unwise to attach more than a passing significance to the anecdote which emphasises the lightness of the burdens borne by the rural elements subject to Timurtash compared with those subject to Zenki. The introduction of the Turcoman element had no effect on the traditional economic activity of the country, which was based on agriculture and stock-breeding, the iron and copper mines, and trade with ‘Irāk and Georgia. Culturally, although we do not know of any writer of note who lived in the entourage of the Artukids, the Arabic literary tradition was sufficiently alive among them for a Usma b. Munkif, for example, an exile from Syria, to have lived for several years at the court of Kara Arslan at Hisn Kayfa.

When all this has been said, we still have to see whether, by virtue of its origin or otherwise, the Artukid règeime had any particular characteristics. The first problem is that of Turcoman influence. The Turcomans remained until the end an important element in the life of Diyar Bakr, in the south perhaps more than in the north, where the Kurds were always dominant; and Diyar Bakr was one of the starting points for the vast Turcoman migration of Rustem, which embraced about 1185-90 the whole of eastern and central Asia Minor. It is known, on the other hand, that the few verses which constitute the earliest specimen of popular literature in the Turkish language in western Asia, emanated from Artukid territory. There is no doubt that the Artukid dynasty did not remain purely Turcoman. The use of the symbolic arrow, however, continued for some time, and the princes (but not more than the Zenkids, who were not of direct Turcoman origin) preserved in their style, alongside Arab and Persian names, specifically Turkish titles. There has been much discussion on the significance of the animal motifs on certain coins or in decorative work on buildings, which perhaps belong to a general group of Turkish traditional symbolic signs. None of this has much bearing on the actual organisation of the Artukid principalities. What perhaps has a greater bearing on this, if it must be attributed to an original tribal practice deriving from authority which was more family than individual, is the impossibility which faced the dynasty of avoiding apportionment, and the numerous and detrimental grants of apanages to "princes of the blood". All the same, it is hardly open to dispute that the continued existence of the dynasty at Mardin, and its replacement by the Ayyubid Kurds north of the Tigris, should be related to the redistribution of the population and consequently to the support given to the Artukids by the Turcomans despite the existence of numerous Turks in the Ayyubid army. This does not mean to say that the Artukids had had much quarrel with their Kurdish subjects, despite memories of the Marwânid; nevertheless one sees them pursuing on their eastern frontiers the same policy of reabsorbing the autonomous Kurdish states which had faced the dynasty of avoiding apportionment. As regards religious belief, the attitude of the Artukids seems in general to have been fairly tolerant. It is true that the introduction in the general trends towards orthodoxy which characterises the Saljukid and post-Saljukid period, and were among the most active builders of madrasas and mosques and executors of public works (bridges, khâns, etc.) and military defence works. Ilghazu, who was of necessity a diplomat, had avoided a complete break with
the Assassins; none of his successors had the appearance of a champion of orthodoxy comparable to that of Nūr al-Dīn, and one of them, at Kharpert, favoured the Persian mystic Shuwarwadī who, it is true, had at that time not yet been denounced as heterodox. The same tolerance, on the whole, characterised the relations of the Artūkīds with their Christian subjects. The latter complained, in the second half of the 6th/12th century in particular, of various tribulations; but popular disturbances sometimes among the Kurds, rather than any action by the government, seem to have been at the root of the matter. About 1180, Turkomans and Kurds massacred, on the borders north of Diyār Bakr, the Armenians of Djiabal Sassūn, but the latter constituted a quasi-autonomous group, intriguing frequently with the Shāh-i Armin, and the action of which they were the victims was therefore of a political rather than religious nature. Towards their ordinary Christian subjects, it has been admitted that the Artūkīds acted with correctness. There is no other explanation for the fact that the Armenian Catholicus resided for a period during the 12th century at Dzovk, in the province of Kharpert, and that the patriarch of the Monophysites constantly alternated his periods of residence at the Convent of Sūr Barajswa (itself momentarily subject to the Artūkīds, but normally a dependency of Edessa, and then of the princes of Malayta) with periods of residence at Āmid or at Mārdīn, where their election frequently took place with Artūkīd permission. Several bishoprics, especially Monophysite, always existed in Diyār Bakr, the Christian population remained numerous and, on the south-eastern frontier of the province, the district of Tūr-ʾAdbīl remained a great centre of monastic life until the 8th/14th century.

The strange character of Artūkīd coins, which, like those of the Dānishmandīs, for long resembled ancient Byzantine coins, is sometimes explained as a Christian influence. This does not seem to me to be a sufficient explanation. To speak of the impossibility of finding an artisan, the table of striking Muslim coins in an ancient Muslim country does not make sense; nor does the importance of trade with Byzantium carry greater weight, because it is impossible to believe that it had suddenly assumed greater importance than trade with neighbouring Muslim states, or that the copper pieces with which we are exclusively concerned could be used for any other purpose than local consumption. These arguments are admissible for the Dānishmandīs, but not for the Artūkīds, and the problem deserves to be reconsidered as a whole.

The history of the Artūkīds after the Mongol conquest, despite their disappearance from the larger political stage, should not cease to attract our interest as an example of an autonomous principality adapted itself to new circumstances; unfortunately very little is known about it. The Artūkīds played the role of loyal servants of the Ilkhāns; they gained, apart from the title of sultan, the advantage of being considered for a time as auxiliaries or delegates of Mongol authority, and of recovering more or less permanently a considerable part of Diyār Bakr (Āmid, in a state of decay, Mayyāfārīkīrī, perhaps Iṣʿirī) and in addition Khābūr, only Ḥiṣn Kayfā (Ayyūbīd) and Arzan (Sādīqīkīd) remaining autonomous. Moreover, like all the vassals of the Ilkhāns, the Artūkīds, in the second quarter of the 8th/14th century, as a result of the break-up of the Mongol state, found themselves once more free, and subsequently free to bow momentarily before one or other of the new powers created by this break-up. The little which is known of their "foreign policy" shows them trying to preserve their pre-eminence in the face of, on the one hand, the Ayyūbīds of Ḥiṣn Kayfā, against whom they waged in 735/1334 an unsuccessful war which cost them their possessions on the left bank of the Tigris, and on the other hand the Mongols, Turcomans and Mamlūks who contested Upper Mesopotamia with them. On the one hand they appear to have joined forces with the Turcomans against the Kurds of the north, supporters of the Ayyūbīds; there is, however, no further mention of any special link with their parent tribe, the Döger, now settled further to the west, on the borders of the Mamlūk state; on the other hand, with the formation of the two great rival Turcoman federations of the Aq Koyūnlu and the Kara Köyūnlu in Armenia and Upper Mesopotamia in the middle of the 8th/14th century, the Artūkīds seem at first to have supported the enemies of the latter (although it is not possible to affirm that they belonged strictly to the Aq Köyūnlu group); but, some time before the invasion of Timūr, a general rapprochement seems to have taken place between the Mongols (Djiālāʾīrīds) of Bagdad, the Kara Köyūnlu and the Mamlūks.

Whatever the position regarding these disputed questions, on another plane, that of economic and social life, the increase, by comparison with pre-Mongol times, of the nomad element compared with the settled element, and the consequent decline of agricultural life, are not open to dispute. Nevertheless some towns, among them Ḥiṣn Kayfā and Mārdīn, perhaps derived from the surrū of the 6th/12th century, remained a great centre of refuge. Building was definitely still going on at Mārdīn in the 8th/14th century, and Arab culture, represented, for example, by the poet Šayf al-Dīn al-Hill, still held an honoured position there. Christianity, favoured by the Mongols, but sometimes ill-treated by their descendants, retained for its part a certain vitality in Artūkīd territory; the Monophysite patriarch often resided at Mārdīn, and Daniel bār al-Khatṭāb is a theologian still held in respect there.

The invasion of Timūr caused fresh upheavals. Sulṭān al-Ẓāhir Ḫūš, suspected of maintaining a connexion with Egypt, could not save his principality from the ravages of one conqueror. He contended with the Ayyūbīds, zealous vassals of Timūr, and especially with the Aq Köyūnlu who, to begin with on behalf of Timūr, then, after his death, on their own account, sought to conquer the Artūkīd principality; in 809, al-Ẓāhir was killed making a vain attempt to save Āmid, and in 811/1409 his successor al-Ṣāliḥ decided to abandon Mārdīn to Kara Yāsuf, the leader of the Kara Köyūnlu. This represented the end of the dynasty and of the period of comparative autonomy of southern Diyār Bakr.

(A special note should be made of the following: for the 11th century, the History of Aleppo of Kamāl al-Dīn Ibn al-ʿAdīm (ed. Sāmī Dahān, Damascus vol. 1, 1951, vol. 2, 1954, vol. 3 in preparation), the Mirʾāt al-Zamān of Sibṭ Ibn al-Djwaṣi (the portion relevant to this period has not been published), and, for the Bahrayn episcopate,
the annotator of Ibn al-Mukarrar (De Goeje, La fin des Karmatès, in J.A 1895); for the 12th century, the Syriac chronicle of Michael the Syrian, ed. and trans. by Chabot, iii, and above all, a unique extant chronicle originating from Artukid Dyār Bakr, the History of Michael the Syrian of Ibn al-Azraq al-Fārīqī (unpublished; analysis of the political events in my Dyār Bakr au temps des premiers Urtuqids, in J.A 1935); for the 13th century, before the Mongol intervention, the great histories of Ibn al-ʿAdīn (mentioned above), Ibn al-ʿAṣīr, Ibn Wāṣil (edition in course of preparation by Djamāl al-Dīn al-Shayvālī, Alexandria; vol. i, appeared in 1953), al-Dīzarī (Orientis 1915, 151), and especially the section relating to Dāṣir in the ʿArab of Ṭizz al-Dīn Ibn Shaddād (unpublished; analysis in my Dāṣir in XII th cent., in REI 1934), which constitute the Arab sources, and, in addition, in Persian, the History of the Saljūqs of Armanīs Mūsā of Ibn Bahr (facsimile edition by A. S. Erzi, Ankara 1956, critical edition by N. Lugul and A. S. Erzi, i, Ankara 1957; a Turkish version was edited by T. Hotamsa, Recess, iii, A. German translation by H. W. Duda is in the press) and, in Syriac, the Chronography of Gregory Abu l-Farajī Bar Hebraeus (ed. and trans. by Budge); for the Mongol, post-Mongol and Timūrī period, one must glean the fragments of information scattered among the standard chronicles of the Mamluks, the Ilḫansids and Timūr, and moreover especially in the History of the Ayyūbids (of Ḥīṣn Kayfā, unpublished, analyzed by the author in J.A 1953), and augment this by the ʿinābī works of the period, the continuation of the Syriac Ecclesiastical Chronicle of Bar-Hebraeus (ed. Abbeles and Lamy) and (for the period since Timūr) the anonymous Syriac work edited and translated by Behnisch (Bratislava 1839) and the Armenian history of Tamerlane by Thomas de Medrroz (ed. and trans. by Nâve); see also the dīnān of Sayf al-Dīn al-Hillī, and, perhaps, the Kīdāb-i Diyarbakrīyya of Abū Bakr Ṭibrānī (end of the 13th century), which is not accessible to me (see J. T. Rainaud, Monumentum Hicenas, ii, 30, and P. Casanova, Invenia re de la collection Princesse Ismaïl, 1896. For coins (not a few unpublished coins exist in private collections), the İstanbul and British Museum catalogues, and S. Lane Poole, The Coins of the Urūqīs, in Marsden Numismatic Chronicle, 1875; B. Butak, Resimi türk paraları, İstanbul 1947-50.

The only comprehensive works are those, necessarily brief, by Mukh. Háli Yınanq (Diyarbakir) and id. trslls (Arikūr, ed.); I.A. My Dyār Bakr etc. mentioned above, one of my early works, is only of value for political events; see also my Première Pénétration turque en Asie-Minor (Byzantium 1948) and my Syrie du Nord mentioned above; the histories of the Crusades of Grousset and Runciman; the valuable commentaries on inscriptions by Van Berchem in Abb. G. W. Göttingen 1897, and in Strzygowski, Amida 1910; H. Derenbourg, Osama b. Mounbidh, i, 1886; Faruk Sümer, Dügeleri Day, in Tikeyih Mecmuaası 1953. For the 14th century, see my Contribution à l'histoire du Dyār Bakr au XIVe s., in J.A, 1955; on Daniel bar al-Khāṭīb, Vau, in Rev. Or. 383 (1950).

ARTVIN, town in the far north-east of Turkey, 41° 10' north, 41° 50' east, situated on the Çoruh. It was ceded to Russia by the Treaty of San Stefano in 1878 together with Kars and Ardahan, and ceded back by Georgia on Feb. 23rd, 1921. Since then it has been the centre of the kādā and the capital of the wilāyēt of Çoruh. In 1945, there were 30,810 inhabitants in the town itself and 16,966 in the kādā.

[Fn. Taeschner]

ʿARŪBA (see Taʾrīkh).

ʿARUD. i. ʿIlm al-ʿArūd is the technical term for ancient Arabic metrics. ʿIlm al-ʿArūd and ʿIlm al-gīr are occasionally used synonymously in the sense of "science of versification", and in this extended sense ʿIlm al-ʿArūd embraces not only the Science of Metre, but also the Science of Rhyme. Usually, however, the rules governing rhyme (ʿIlm al-Kuṭūfī, sg. Kuṭūfī) are treated separately, and ʿIlm al-ʿArūd is confined to the strict sense. As such, Arabic philologists define it in the following manner: Al-ʿArūd ʿilm bi-ṣaybā yuʿraḍ biḥa ṣāḥib aswān al-šarʿ wa-faṣīdah ʿArūd is the science of the rules by means of which one distinguishes correct metrics from faulty ones in ancient poetry.

There is no generally accepted etymology for this sense of the term ʿArūd. Some Arabic grammarians maintain that it acquired the meaning of metrics because the verse is constructed on its analogy (yuʿraḍ ʿalayhi); others say that the term was used because al-Ḥallī developed it in Mecca, and this city is also called al-ʿArūd. Georg Jacob (Studien in arabischem Dichtern, 180) has suggested a curious explanation by pointing to the passage in the Dīnān of the Hadhaylītes (65, 16), where the poem is compared to an obstructive female camel (ʿarūd) which the poet tames. The most plausible explanation still remains the one based on the concrete meaning which ʿArūd has as part of a tent, and the transferred sense which it acquired in metrics, as the last foot of the first hemistich: originally it describes "the transverse pole or piece of wood which is in the middle of a tent, and which is its main support and hence the middle portion (or foot) of a verse" (Lane). Since the last foot of the first hemistich in the centre of the line (baṣṭ al-ghīr) is as important for its structure as the centre pole is for that of the tent (baṣṭ al-ḥār), one may readily assume that ʿArūd then came to be the general term for the science of metric structure.

There are few works on metrics by Arab philologists, and their contents are of little value. This fact is all the more surprising if one bears in mind how many works of lasting value have been written by prominent Muslim scholars on grammar and lexigraphy. The Kīdāb al-ʿArūd, which al-Ḥallī, the founder of the science of metrics, is said to have written, has not survived, nor have any of the works on the subject written by the older grammarians. The earliest monographs which we have concerning ʿIlm al-ʿArūd are those of the 4th century A.H. There are sections on metrics in some of the larger ʿAdab works; the oldest and best known of these can be found in the ʿIbād al-ʿArūd (Ed. Cairo, 1305, III, 146 ff.) of Ibn ʿAbd Rabbih (died 328/940). The following list gives the names o
those Arab philologists whose works on metrics are preserved in manuscripts (—mere commentators are omitted). They are arranged in centuries, reckoning from the Hijra, and details are given only in the case of the better known works; references to Brockelmann are, however, given in every case.

Just as the ancient Indians and Greeks developed their own form of metric poetry, so did the ancient Arabs. Ancient Arabic poems were already written and recited in the known metres a hundred years before Islam, and they retained their form more or less unchanged in the succeeding centuries. The usual ancient Arabic poem, the so-called Kasida, is comparatively short and simple in its structure. It consists of 50 to 100 monorhyming lines (rarely of more), and there is no strophic division in ancient Arabic poetry. Each line (bayt, pl. abây) consists of two clearly distinct halves (mîsârā', pl. masârî'); the name for the first hemistich being al-μâdr, that for the second al-μadjus. Only these more obvious attributes of the line were recognised and named during the ist century A.H. Al-Khalil Ibn Ahmad al-Farahidi (died ca. 175 A.H. in Basra) was the first to investigate the inner, rhythmical structure of Arabic verse; he distinguished between different metres, gave them the names by which we still know them, and divided them up into their subordinate metric elements. The written description and analysis of observations made by ear presented, however, very serious difficulties.

In all languages the choice and position of words in prose is solely governed by generally accepted syntactic rules and by the desire of the speaker to express his thoughts as clearly as possible. In poetry, however, when it is based on rhythm, the choice of words and their sequence within the line is not so uncontrolled. The rhythm of the verse and the metres in which it finds its external expression are
created by the following factors: 1) the observance of a definite order in the sequence of syllables within the line, and 2) the regular recurrence of accent, indicated either by stress or some other means. The rhythm of a line in poetry is as completely tied to the phonetic properties of the language in which it is written as are the syllables of the words in the prose of the language concerned. This is, above all, a matter of the duration of the syllables and the stress with which they are pronounced. Syllables have a measurable length in all languages, but whereas in some (e.g. in the Germanic languages) there is no fixed and definite proportion of length of syllables (for, although there are admittedly some syllables in these languages which are always long and others which are always short, there are many which have no fixed quantity), there, on the other hand, other languages (such as ancient Greek) where the quantity of every syllable in every word is absolutely fixed. In these, there is a strict distinction between long and short syllables in prose, too; the ratio of their length is roughly 2:1. The position is similar with regard to the element of stress: whilst in every language there is one syllable in a word which is somehow raised above the others, the strength of this accent is, however, something which differs widely in the individual languages.

Thus, for example, ancient Greek uses musical pitch, whereby individual syllables are distinguished only by a higher tone, whilst in the Germanic languages they are distinguished by an expiratory stress which renders them more emphatic in comparison with the other syllables. The rhythmic structure of the verse has in all languages to adapt itself to these qualities of the syllables. If the quantity of the syllables is definitely fixed, then the rhythm of the verse is attained largely by regularly recurring sequences of short and long syllables, forming metrical 'feet', which last the same length of time. One then speaks of 'quantitative' verse. If, on the other hand, stress, rather than any fixed quantity, is the characteristic by means of which definite syllables are distinguished from their neighbours, then the rhythm of the verse and the structure of its metre, will both be largely produced by the alternation of accented and unaccented syllables. In this case we speak of 'accentual' verse.

From the prose of the Korân, and the poetry of the ancient poets, as it has come down to us, we know that in the ancient Arabic language the quantity of the syllables was definitely fixed. From certain grammatical facts one may assume that an expiratory accent was also present, though only slightly developed. A priori one can therefore assume that the rhythm in ancient Arabic verse (as in ancient Greek verse) found its expression in 'quantitative' metrics. The theoretical treatment of this problem, however, was at that time a far more difficult one for the Arabic philologist than for the Greek prosodist. The latter used the term 'syllable', made a clear distinction between short and long syllables, and chose the short syllable, the χρόνος περιστάσεως, as the basic unit for measuring the duration of the verse. They also had a term and a graphic sign for the pitch by which one syllable in every word was distinguished. Arabic philologists, by contrast, did not possess the concept of syllable, let alone the refinement of the 'short syllable'. Al-Khallî, too, did not know the words 'syllable' and 'stress', yet his ear surely perceived what we call syllables and stresses, for his graphic paraphrase—which we can understand if we try hard—does give us a clear picture of the rhythm in ancient Arabic verse.

Primarily, Al-Khallî made good use of the peculiarities of Arabic script, in which the face of each word is a guide to the quantity of its syllables: one individual 'moving' consonant (bayn mutaharrik), i.e. a consonant with a vowel sign (e.g. ٔ), corresponds to what we call a short syllable, and two consonants, of which the first is 'moving' and the second 'quiescent' (sahîn) (e.g. ٔ), correspond to what we call a long syllable. There are only a few fixed spellings which fail to comply with this rule (e.g. ٔ, ٔ = ٔ , ٔ = ٔ , ٔ = ٔ , ٔ = ٔ , ٔ = ٔ ). Thanks to this peculiarity of the Arabic script, Al-Khallî was able to take the face of the verse as a basis for his treatment of Arabic metres. In order to be independent of the changing shape of the letters, graphic symbols were introduced, namely the symbol ٔ for the 'quiescent' and the symbol ٔ for the 'moving' consonant (e.g. ٔ = ٔ = ٔ = ٔ).

Both al-Ḥarîrî and 'Ibn Khallîkân report that Al-Khallî had noticed the different rhythms produced by the hammering in different copper-workshops in the bazaar in Başra, and that this gave him the idea of developing a science of metre, in other words, of determining the rhythm in the structure of the ancient poems. This late report agrees with the earlier one by Al-Djahîzî, who states that Al-Khallî was the first to distinguish between different metres, that is to say, that he was the first who in listening had distinguished different rhythmic structures in the ancient verses, and that he was the first to analyse this rhythm, by dissecting it into its metric elements. His theory was supplemented in its details by later Arabic prosodists, but these additions made no difference to the basic conception. Even today, the 16 Arabic metres are still given in the very order in which Al-Khallî gives them, because it is only in this order that they can be united in the graphic presentation of the five metric circles (dawai'a, sg. āšara).

According to him, every metre comes into being by the repetition of 8 rhythmic feet which recur in definite distribution and sequence in all metres. The term applied to these feet is ٔ, pl. ٔ ("part"). In accordance with the common practice of Arabic grammarians, he represents each of these 8 "parts" by a mnemonic word, derived from the root ٔ. Of these eight mnemonics, 2 consist of five consonants each, namely: fašûlun, and fâšûlun, 6 of seven consonants each, namely mafâšûlun, mufâšûlun, mufâšûlun, mafâšûlun, mufâšûlun, mafâšûlun, mafâšûlun. The following table of the 5 metric circles will clarify how the 16 metres are made up of these 8 feet. For the sake of clarity, the circles are opened out and given as straight lines, and only one hemistich is given in the rhythmical mnemonic words for each metre (see Circle 1-5, p. 670).
The order of the 5 circles is based on an arithmetical principle. They are arranged according to the number of consonants in the mnemonic words of the metres which compose them. The three metres Tawil, Basît and Madîd, whose hemistichic consist of 24 consonants each, form the first circle; the two metres Mutâbârîb and Mutâdarîk, whose hemistiches consist of only 20 consonants each, form the last circle. The remaining metres, whose hemistiches consist of 21 consonants each, are divided among the three circles in the middle. The order of the metres within the circles is also a formal one: the Adîjazî of a metre are first written around the periphery of a circle, thus the three mafázîlan mafázîlan mafázîlan of the Hazâdî are inscribed around the periphery of circle 3. If one reads the same circle again, but starting at a different point, one automatically gets the mnemonic words of another metre: thus if, for instance, in circle 3 one does not begin with mafâzî (as in Hazâdî), but only with the -tân of mafázîlan, one obtains the metric scheme of Rasîdâz, and if one advances still further and does not begin reading till the -tân, one obtains the scheme of Ramal. The possibility of dividing the Adîjazî of a circle in various ways, and of reaching different metric schemes by doing so, is only due to Al-Khâlli having purposely constructed his circles so that the mnemonic words united in each circle not only produce the same total number of consonants, but coincide completely in their ‘moving’ and ‘quiescent’ consonants as well, if they are written in a certain relationship to one another.

The same relative coincidence is also found between the metres contained in the remaining 4 circles. Al-Khâlli’s object in arranging the metres in this purely formal system of the 5 circles has not been handed down to us either by himself, or by any of the later prosodists. It is quite certain, however, that this merely external superimposition of ‘moving’ and ‘quiescent’ consonants in the mnemonics is not meant to imply a rhythmic development of one metre out of another.

The 8 Adîjazî, which, as we have seen, recur again and again in different distributions in the 16 metres, can be further split into their metric components. For Al-Khâlli, however, the metric component means something different than for the occidental prosodist. It is not the smallest indivisible unit of sound, but the smallest independent word occurring in the language. Accordingly, he distinguished two pairs of metric components which he apparently regarded as such because none of the 4 words concerned (each with its particular sequence of ‘moving’ and ‘quiescent’ consonants), could be derived from any of the other 3, whilst all 8 feet could be formed by combinations from these 4 words. He took the terms for these two pairs of components from two important parts of the tent, and he distinguished between:

A: The two Asbâb (sg. sabab “cord”) which consist of two consonants each, namely

1) sabab khâfi = 2 consonants, the first ‘moving’, the second ‘quiescent’, as in words like حَفَّ
2) sabab shâkil = 2 consonants, both ‘moving’, e.g. words like شَكِيل

B: The two Awtâd (sg. watât “peg”) which consist of three consonants each, namely

1) watât madjma = 3 consonants, the first two ‘moving’, the last ‘quiescent’, as in words like مَدِجَمَث
2) *watid mafrūk* = 3 consonants, the first and third moving, the middle one ‘quiescent’, e.g. words like ə̊-

In this manner, each of the 8 feet can be reduced to its metric components as follows; thus *mafād-ilun* = $B_1 + A_1 + A_1$ or *muta- ja-ilun* = $A_1 + A_1 + B_1$. Each of the 16 metres given in the circles can therefore be scanned on this basis, e.g. *Wāfīr* = *muta*\(^{ja}a\)luna* muta*\(^{ja}a\)luna* *muta*\(^{ja}a\)luna* = $B_1 + A_2 + A_1$, $B_1 + A_2 + A_1$, $B_1 + A_2$ + $A_1$ or *Sarī* = *muta*\(^{ja}d\)lun* *muta*\(^{ja}d\)lun* *muta*\(^{ja}d\)lun* = $A_1 + A_1 + B_1$, $A_1 + A_1 + B_1$, $A_1 + A_1 + B_2$.

Since it is thus possible to reduce all the metres to their basic components, one might assume this metric system to be complete. The fact remains, however, that the 16 metres never actually appear in the form in which they are given in the 5 circles, but nearly always deviate from this ideal form—at times to a considerable extent. In other words, the sequence of ‘moving’ and ‘quiescent’ consonants in ancient Arabic poems does not correspond to the sequence determined by the circles. Therefore one can no longer split the metric forms used by the poets into the 8 ideal feet, nor yet divide these into their two metric elements, because that method of scanning is based completely on the sequence of ‘moving’ and ‘quiescent’ consonants in the ideal metres of the circles. This fact was, of course, known to Al-Khallal just as well as it is to us, and in fact his circles are just a kind of rhythmic *Usul*, which expresses the normal metrical sequence of their ‘moving’ and ‘quiescent’ consonants, there are also mnemonics denoting the forms actually occurring in ancient poetry and are called *awzin al-gār* (= metres).

The smallest of the deviations is the shortening of the metre. This is immediately visible, because then the metre no longer has its full (ādām) number of *aḍżi*\(^{a}\). According to the degree of shortening, there are three possibilities. The line is either

a) *madja*\(^{a}\), if there is one *dja*\(^{a}\) missing in each of the two hemistiches (i.e., in *Hasād*, *Kāmil* or *Radīd* the foot is repeated only twice and not three times); or

b) *maštād*, when a complete half (*ṣdāt*) is absent (as, for instance, when the *Radīd* is reduced to one hemistich); or

c) *manāhīd*, when the line, on rare occasions, is “weakened to exhaustion” i.e. (as for instance in *Munāsirī*) when it is reduced to a third of its size.

All these deviations only concern the external shape of a metre and not its rhythmical structure, which does find its expression in the sequence of ‘moving’ and ‘quiescent’ consonants.

The very numerous cases in which this particular sequence in the ancient poems differs from that prescribed by the circles have been covered by a special set of rules. This forms a necessary supplement to the circles, because the deviations would be arbitrary—and thus the circles would lose their authoritative character as *Usul*—if there were no such rules. Just as one is amazed at the regularity of the first part of the system—the five circles and their normal metres—so one is confused by the second part with its casuistry and its complications. This, however, is inherent in its very nature. Neither Al-Khallal nor the later prosodists use the term ‘syllable’, and we can therefore not expect any general rules (e.g. concerning the reduction of long syllables to short, the omission of short syllables etc.). In effect, they were obliged to mention in each individual case whether and to what extent the ‘moving’ and ‘quiescent’ consonants in ancient poetry showed a plus or a minus as compared with the ideal scheme of the circles. This had to be done in every metre and every one of its feet in both halves of the line, and in order to denote them clearly, individual terms had to be created to cover each one of these numerous differences. A certain order and clarity emerges from this baffling list thanks to the fact that all deviations fall into two classes, which perform different functions and appear in different parts of the line.

The last foot of the first hemistich (*al-zīhāf*; pl. *dīrīd* and the last foot of the second hemistich (*al-zarb; pl. *durbūb*), that is to say, the ends of the two halves of the line, suffer most from deviations. The terms for these two vulnerable parts of the verse are definite, the terms for the other feet vary and are usually given the collective name *al-hājim* (‘stuffing’). By analogy, one also distinguishes two groups of deviations, the *zihāf* and the ‘Ilal. The *zihāf* (‘relaxations’) are, as the name suggests, smaller deviations which occur only in the *dīrīd* parts of the line in which the characteristic rhythm runs strongly, and their effect is a small quantitative change in the weak *Asbāb*-syllables. As accidental deviations, the *zihāf* have no regular or definite place, they just occur occasionally in the feet. By contrast, there are the ‘Ilal (‘diseases’, ‘defects’) which appear only in the last feet of the two halves of the lines, and there, as their name suggests, they cause considerable change as compared to the normal feet. They alter the rhythmic end of the line considerably, and are thus clearly distinct from the *dīrīd* feet. As rhythmically determined deviations, the ‘Ilal do not just appear occasionally but have to appear regularly, always in the same form, and in the same position in all the lines of the poem. A further difference between the two groups of deviations is the fact that the *zihāf* fall only on the *Sabab* (and there on its second consonant), whilst the ‘Ilal alter the *watid* in each of the last feet of the two hemistiches as well as in their *Sababs*.

By applying the definite *zihāf* and ‘Ilal rules, and taking the normal form of the feet of each metre as a point of departure, one arrives at the forms actually occurring in the *Kāsidas*. Just as the normal feet are denoted by their 8 mnemonic words, *faʿalun, maṭaflun*, etc.), which express the normal sequence of their ‘moving’ and ‘quiescent’ consonants, there are also mnemonics denoting the forms which have undergone alteration because of *zihāf* and ‘Ilal, and these indicate the changed sequence of consonants. Thus, for instance, *muṣṭalāʿīm*, when its *Sin* is lost, should become *muṣṭalāʿīn*. If, however, as in this case, the resulting form is not one linguistically possible in Arabic, then the same sequence of consonants (i.e., the same sequence of ‘longs’ and ‘shorts’) is expressed by an equivalent word which is linguistically acceptable, in this case, for instance, by *maṭaʿalim*. By contrast with the *Uṣāl* forms of the feet, these modifications are known as the *Furūʿ* forms of the feet. In the following, the *Furūʿ* will be added in brackets, if their form
differs from that of the Usul. Space here does not permit a detailed list of all Ẓiyafād and Ṭāl (cf. for the details the Arabic compendia of the ʿIlm al-ʿArūḍ). A few examples will be given, however, in order to illustrate the theoretical exposition, and to show how peculiar and complicated this particular part of the system is.

As already stated, the Ẓiyafād appear when the Sabab in a line does not possess its full normal form, but shows a change in the second consonant. Then, however, one does not simply speak of a Ẓiyafād, because this would be ambiguous. In order to describe the Ẓiyafād accurately, one must state which consonant of a foot is affected, and whether that is a 'moving' or a 'quiescent' consonant. For example, one can divide the so-called 8 'simple Ẓiyafād' into two groups, according to whether a sabab ḥaṣīf or a sabab ḥabīl is affected. Even then, one must denote the eight cases by individual terms. 1) We have a ḥaṣīf, if the second consonant of a foot is missing, e.g., the sin in ١٢٣٤٥٦٧٨٩ = ١٢٣٤٥٦٧٨٩, or the alif in ١٢٣٤٥٦٧٨٩; we have a ṭaʾālīf, if the 4th consonant is missing, e.g., the ẓā of ١٢٣٤٥٦٧٨٩ = ١٢٣٤٥٦٧٨٩; a ḥabīl, if the 5th consonant is concerned, e.g., the nun in ١٢٣٤٥٦٧٨٩ or the ẓā in ١٢٣٤٥٦٧٨٩; and a ṭaʾālīf, when the 7th consonant is missing, e.g., the nun of ١٢٣٤٥٦٧٨٩ = ١٢٣٤٥٦٧٨٩. 2) In the sabab ḥabīl, there can either be only the vowel of the second consonant missing (then one speaks of an ḍāʾālīf, in the case of the ṣaḥā in the case of the muḍāfālātun [ = muḍāfālātun] or both this consonant and its vowel (then one speaks of a waḥās, if the la of muḍāfālātun [ = muḍāfālātun] is missing, and of an ṣaḥā in the case of the la of muḍāfālātun [ = muḍāfālātun]).

Whilst the Ẓiyafād always lead to a minus, when compared with the normal Sabab, the Ṭāl (which change the last feet of the two hemistichs) fall into two groups, according to whether they arise out of an addition (ṣiyāṣa) or an omission (waḥās). 1) the ṭaʾālīf, for example, adds a 'quiescent' consonant to the waṣīd maḍzhūm (thus ١٢٣٤٥٦٧٨٩ becomes ١٢٣٤٥٦٧٨٩, the ṭaʾālīf a sabab ḥaṣīf (thus ١٢٣٤٥٦٧٨٩ becomes ١٢٣٤٥٦٧٨٩). 2) On the other hand, the ḥaṣīf means the loss of a sabab ḥaṣīf (as for muḍāfālātun [ = faḍālātun] or for faḍālātun [ = faḍālātun]), the ḥaṣīf means the loss of a sabab ḥaṣīf and the preceding vowel (as, for instance in muḍāfālātun [ = faḍālātun] and the ṭaʾālīf means the loss of a whole waṣīd maḍzhūm (as in muḍāfālātun [ = faḍālātun]).

These examples give only a rough impression of the complexity of the classical system. Even more complicated changes take place to obtain within one foot and in certain other special cases. In this manner one can derive from the 8 basic feet no less than 37 Fūrū feet, all of which actually appear in old poetry. Feet undergoing a change through Ṭāl play the greater part for two reasons. Firstly because they produce a greater plus or minus in the normal feet than the weaker Ẓiyafād, and secondly because they cause rhythmic variants, which recur throughout the whole poem. Because of the large range of varying line endings, a great number of sub-divisions appear in all metres; and because the Darb, the last foot of the second hemistich, is (being the end of the whole line) more concerned with these changes than the ʿArūḍ (the last foot of the first hemistich), the possible metres are named after their different Darb. The Tawwīl, for example, has only one ʿArūḍ, i.e., the last foot of its first hemistich always has the same form (shortened by ḥaṣīf) of maḍāfālātun; but it has three Darbū, i.e., apart from the normal form of the last foot of its second hemistich there are two further forms of its Darbū. Accordingly, one speaks of the first, second, or third Tawwīl, depending on whether the Darbū has the form maḍāfālātun, maḍāfālātun or faḍālātun. The same goes for all other metres. The Kāmil, which has 9, has the greatest number of Darbū. The sum of all possible ʿArūḍ of all 16 metres is 36, and that of all Darbū is 67; in other words, the 16 ancient Arabic metres are used by the poets in a total of 67 rhythmic variations, merely counting the changes caused by Ṭāl in the line-endings and ignoring the sporadic Ẓiyafād in the Ḥašṣā of the line.

We are now—if we trust the Arabic prosodists and follow them on their circuitous ways—in a position to scan all the metres which appear in ancient Arabic poetry, and this would appear to bring to an end the exposition of ʿIlm al-ʿArūḍ in its general structure. Nevertheless, European Orientalists have never relied unrestrainedly on the Arabic prosodists, because the inner reason for the complicated structure of their system has not been understood. What was the reason for constructing the circles? And why formulate statements about ideal metres when one cannot arrive at the actual forms of the metres except by a complicated system of permissible deviations? To these objections we must add that the underlying concepts of Arabic prosodists, and the way in which they expound the patterns of sound and rhythm, are completely alien to us. They describe prosodic phenomena externally, according to the changes which the consonants of the words in the line undergo, whereas we are accustomed—as already mentioned—to explaining the changing metrical shape of a line in different languages by giving the characteristics of the syllables of the language concerned. In the system of the Arabic prosodists we do not, however, find any direct statement concerning the length and stress of syllables in ancient Arabic poetry. Therefore it seems that we have nothing to learn from them concerning the real essence of Arabic metrics, that is to say, nothing about the way in which the characteristic rhythm of ancient Arabic poetry originated, whether—as in ancient Greek—it came into being exclusively through the harmony of periodically recurring sequences of 'shorts' and 'longs', i.e., purely quantitatively, or whether the element of accentual stress was also a factor in deciding the shape of the rhythm of their poetry. Hence one has generally tended not to accept their system, making use of its terminology with reluctance and only to the extent required in order to understand the commentaries on the ancient poems.

It has already been pointed out that the quantity of the syllables is absolutely fixed in the ancient
Literary Arabic language, so that one can assume that the rhythm in their verse has found its expression in some form of quantitative metrics. This basic assumption is shared by almost all the experts who have dealt with Arabic metrics. There is no agreement, however, on the question as to whether (and to what extent) factors other than the quantity of syllables shaped the rhythm of ancient Arabic verse. There are various views as to the composition and sequence in which 'shorts' and 'longs' are arranged into feet, and these, in turn, into metres; and there is furthermore the particularly vexed question of whether the rhythm of the lines found its expression exclusively in a quantitative pattern of 'shorts' and 'longs' in the individual feet (as in ancient Greek), or whether there was also a rhythmic stress (ictus), which recurred regularly and emphasised certain syllables in the line.

Heinrich Ewald, disregarding the theories of the Arabs, produced an entirely fresh theory regarding the organic growth of ancient Arabic metrics. He began with the thesis that its rhythm originated not only from the quantity of the syllables but also from the presence of marked stress on some of them (rhythmum constat acqueabli arses et theses visibilibus continetis). To begin with (in 1825), he found only iambic metres (marked by a recurrence of short and long syllables); but Hartmann (1833) he distinguished 5 rhythmic kinds: genus sambicum, genus antispasticum, genus amphibrachicum, genus anapaesticum, genus ionicum. This classification has gained currency because W. Wright accepted it and printed it at the end of his Grammar of the Arabic Language (3rd ed. 1898, vol. II, 361 ff.). Whereas Ewald could start on secure basis concerning the quantity of syllables, his conclusions, as far as the second rhythmical factor (stress) was concerned, could only be based on assumptions at which he had arrived by comparing the structure of Arabic verse with the structure of Greek metres and the sequence of 'longs' and 'shorts' within them. His conclusions not only cannot be proved, but are not, in fact, tenable because they start with the assumption that the same rhythm obtains in both Arabic and Greek metres, without adding any proof to this effect and without taking into account that the very presence of rhythmic stress in ancient Greek poetry is itself a matter of controversy. This is the reason why all the later experts who started from the same or similar assumptions as Ewald disagree both with Ewald and with each other on the important question of how to divide up the feet and whether any syllables are to be stressed (and, if so, which).

Stanišlas Guyard advanced an entirely different explanation of the essence of Arabic metrics: he decided to adopt a musical beat, measuring the exact time of each syllable and fixing it by a musical note, instead of merely distinguishing metric 'longs' and 'shorts' at the rhythm of 'shorts' and 'longs' at the tone of 'shorts'. Accepting the division of feet and metres, handed down in the Arabic mnemonics, he concluded from his musical measurements that a temps fort and a temps faible had to alternate every time. Apparent contradictions were explained either by describing a temps fort as weak or by inserting a pausal note (silence) — which was not, however, graphically expressed — to play the role of a temps faible. Other variations were explained by the assumption of a double ictus in every Arabic foot, and he discarded the mafsalatu foot as imaginary because it would not fit in with his theories. He was then in a position to assert that the 16 metres with all their variations did correspond to the musical rhythm which he had assumed; but far from explaining the essence of the metric line-structure in Arabic poetry he had simply transposed it into a sequence of musical terms.

Martin Hartmann is concerned with the development of the various metres and with their derivations from each other, rather than with the actual essence of Arabic metrics. He therefore does not argue with Ewald, though one may assume that he disagrees with him because he goes so far as to say that there was nothing to indicate that the Arabs ever thought of quantitative distinctions in their poetry. Although Hartmann never explicitly says this, it has been asserted that ancient Arabic poetry was in his opinion accentual in character. On the other hand, he rightly asserts that the syllable with the main stress must always be of a constant length and that its preceding short syllable must equally be of a constant duration. Concerning the origin of the metres, he assumed that these were in the last resort instinctive rhythmical imitations of the regularly recurring sounds made by camels' feet. As a camel advances its feet in pairs, he assumes the basic metre to be the one which consists of the alternation of an accented and an unaccented syllable. Depending on whether one starts with the animal's first step, as it starts off from the static position, or from one of the intermediate paces, one gets the difference between them being that the stress is on the first element in the first case and on the second in the other. According to him, Mutādarib and Mutādarib developed from these two basic metres by inserting not one, but in each case two, unstressed syllables between the two steps, i.e., between the two stressed syllables; and Wājir and Kāmīn respectively by the alternate insertion of two unstressed syllables and one unstressed syllable between the two stressed ones. Similarly, he takes Sāṭif ( ḫ ← ḫ ← ḫ ← ḫ) and Ṭawīl ( ḫ ← ḫ ← ḫ ← ḫ ← ḫ) to be defective forms of Rādijas and Ḥasādī. He, too, has difficulties with the derivation of other metres from the diiamb, because in that case there is no alternation of stressed and unstressed syllables, but two unstressed ones have to come together. Hartmann's expositions are subjective assumptions concerning the origin of Arabic poetry in general, and the derivation of metres from one original metre in particular. His arguments do not convince as he offers no conclusive proof, and also because he appears to believe that rhythmic occurrences can be adequately explained by the arbitrary inclusion or exclusion of syllables or by the simple assumption of an anacrusis or a pause. Hartmann himself admits that he has been unable to show what made the Arabs choose the particular combinations which appear in the 16 metres.

Gustav Hoelscher, too, has advanced a theory concerning the origin of Arabic metrics and the derivation of its metres from each other. The simplest, and according to tradition the oldest, metre, the Rādijas, developed from rhymed prose, Sājī, by regulating the number and quantity of syllables; it has a rising rhythm and is dipodically bound. In his opinion, all other metres developed from Rādijas: first Sājī, Kāmīn and Ḥasādī; and then, with varying forms of syncope, Wājir, Ṣāṭif, Ṭawīl and Mutādarib. The same objections must be raised here as were raised in the case of Hartmann's theory of derivation: Hoelscher himself admits that Kāmīn and Mutādarib cannot be derived from Rādijas, and apart from diiambic metres he also lists dithraic metres of a falling rhythm. In addition,
Hoelscher deals extensively with the baric rhythmic factors which determine the essence of all metres. He says that the simplest rhythmic group, the beat or foot, has a "division of time into fixed proportions" and consists of a "regular change from light to heavy"; but he does not define these two factors any further. The rhythmical time-value of the syllable, according to him, is always one single "counting-unit", irrespective of its quantity, and the law according to which a long syllable has twice the length of a short one is not to be applied to Arabic poetry. Similarly, he admits the presence of an ictus, and states that a "bar" consists of two dynamically related parts (of which the second is always the heavier); at the same time he asserts that the stronger ictus, being free, is not tied to either of the two stresses.

Alfred Bloch, in contrast to Hoelscher, stresses the existing clear difference between longs and 'shorts'. His detailed study of the patterns in ancient Arabic verse and the facility with which it can be fitted into all metres lead him to the conclusion that—comparing with other languages—ancient Arabic possessed truly ideal phonetic conditions which rendered it suitable to quantitative metrics. Furthermore, he regards quantity as the only factor shaping the rhythm of the verse, and (following Rudolf Geyer) decides against the assumption of an ictus.

The reason why such varying and contradictory theories concerning the essence of Arabic metrics have been advanced lies in the fact that we have no record of the recitation of ancient poems, and that the casuistic expositions of the Arabian metricians have such a repellent character that it seemed justifiable to disregard them completely. Thus, different experts approached the subject from personal points of view (the musical analogy, analogies with the poetry of other peoples, etc.). Neither attitude towards the teaching of the Arabian metricians (uncritical acceptance or outright rejection) is in fact justifiable. Surely as renowned a philologist as Al-Khalil, whose fundamental achievements as a phonetician, grammarian and lexicographer are recognised even today, did not construct the five circles and the complicated metric system connected with them just for fun. One may assume with certainty that thereby he meant to express his personal points of view (the musical analogy, the obvious purpose for the construction of the 5 circles. Only 4 of the 8 basic feet can be absolutely unambiguously scanned. These are the following: FÁ-O-lun, MAFÁ-li-un, MUFÁ-lula-un, mai-á-LÁTU. Since every foot must have a Wālid, one cannot divide those 4 feet into their components except as shown in print, the Wālid being represented by capital letters. In other words, the syllables which carry rhythmic stress in these 4 feet are clearly established; consequently it is equally clear which syllables carry the stress in the 4 metres Tawill, Wādir, Hasaddi and Mutahārī, because these metres consist exclusively of unambiguous feet. But, according to the teaching of Al-Khalil, there are two ways of analysing the other 4 basic feet. Either: já-ILUN, mus-laf-ILUN, lá-ILÁ-lun, muta-jā-ILUN, or: FÁ-í-lun, mus-TÁF-lun, FÁ-lí-lun, muta-FÁ-lun. In other words, the rhythmic stress in these 4 feet could actually lie on a different syllable in every case, and, accordingly, all metres of which consist of these 4 feet could also have either a rising or a falling rhythm. In the case of these ambiguous metres—which form the greater part of those in existence—there is only one possible method of showing clearly in which of the two possible ways it is to be read, namely by placing it
in one of the 5 circles. The following well thought-out inner mechanism emerges as the actual reason for the construction of the circles: the first metre of every circle—with the exception of circle 4—is the leading metre, and consists only of unambiguous feet, for which the position of their \( \text{Awtād} \) is absolutely fixed; the second and third metres, however, consist of the 4 ambiguous feet. If one writes down the mnemonic words of these metres in relation to the first metre (as reproduced in the table), it will be found not only that the short and the long syllables coincide, but also that in every circle from the second metre onwards, one of two possible \( \text{Awtād} \) falls in its entirety (i.e. in the indivisible syllable-sequence) under the unambiguous \( \text{Watid} \) of the first metre. This, in turn, means that the second possibility of scanning is out of the question. Thus the circles are graphic figures whose purpose is to show which syllables bear the rhythmic stress as \( \text{Watid} \) elements by means of the arrangement of all metres in relation to one another. Thus, for example, the two feet \( \text{mustaf'dilun} \) \( \text{fā'ilun} \), which form the \( \text{Basit} \), cannot be unambiguously scanned. However, the fact that their \( \text{TAF'I} \) and \( \text{FA'I} \) do not fall under the \( \text{Watid} \) of the \( \text{Tawīl} \), but that in both cases their \( \text{ILUN} \) falls under the unambiguous \( \text{Awtād} \) \( \text{FA'ILUN} \) and \( \text{MADF'A} \) of the \( \text{Tawīl} \), shows (as clearly as its were written in a table) which syllables of the \( \text{Basit} \) actually bear the rhythmic stress. In this way it has been proved that the metres brought together in the circles 1, 2, 3 and 5 have, without exception, a rising rhythm, and we also know, on what syllables the stresses were laid.

e) Circle 4 differs from this rule. This is already clearly visible externally, because its first metre, the \( \text{Sārī} \), does not consist exclusively of unambiguous feet. This deviation was surely intended by Al-Khalil, because (1) in contrast with the other circles, which are homogeneous and only incorporate metres of rising rhythm, circle 4 is not uniform; in it—and only in it—one finds the foot \( \text{muf's-ā-LATU} \), the only one of the 8 basic feet which has a falling rhythm, but that, too, never alone, but always together with one of the other 7 feet. The metres of this circle thus have a mixed rhythm of rise and fall. (a) The \( \text{Watid madā'mī} \), the representative of rising rhythm, \( \text{xw-£} \) has a particularly rigid structure in Arabic verse; it never undergoes any change within the hemistich and therefore clearly and distinctly dictates the rhythm of those metres in which it is to be found. In contrast with it, the \( \text{Watid maf'ārkh} \), the core of the falling rhythm \( \text{xw-£} \) is less clearly fixed in composition, hence variable and weaker in shaping rhythm. This explains why the syllables carrying the stress in the metres \( \text{Sārī} \), \( \text{Khalīf} \) and \( \text{Munsarik} \) do not stand out with the same clarity as in the other metres. It is certain that Al-Khalil realised this because he gave this circle the name “\text{al-mustabihār}” (“the dubious one, the one of several meanings”).

It becomes evident that analysis of the circles produces an answer to the questions which have been in dispute, and on which arabs have hitherto held such different views. (1) The rhythm of ancient Arabic metres was not only produced by the quantity of the syllables, but also by the element of rhythmic stress; we even know on which syllables this stress lay in all the metres. (2) Nearly all the metres have a clear, rising rhythm; in no metre was there exclusively a falling rhythm; only a few metres—namely those in circle 4—which occur more rarely, have a rhythm which changes from rise to fall and which, because of this mixture, has less of a clear character. (3) The rhythmic core of all feet and metres (excluding the few in circle 4) is formed by the sequence of a short and a long syllable \( \text{xw-£} \) which is inseparable in its sequence and unchangeable in its quantity, and where the long syllable always carries the stress.

Al-Khalil listened to recitals of ancient poetry and embodied his observations graphically in the construction of the circles, hence the results of his analysis can be taken to be contemporary evidence; and, indeed, they lead us to a complete understanding of the peculiarities of ancient Arabic metres. As we shall see, a metric system, theoretically constructed from the inseparable core of the rising rhythm \( \text{xw-£} \), is completely identical with the system of metres used by the ancient Arabic poets.

If neutral syllables are grouped around the core, we get feet of a rising rhythm; these cannot have less than 3 or more than 5 syllables. Thus we arrive at the following 7 feet: (1) \( \text{xw-£xx} \), \( \text{xw-£xx} \), \( \text{xw-£xx} \), \( \text{xw-£xx} \), \( \text{xw-£xx} \), \( \text{xw-£xx} \), \( \text{xw-£xx} \). No further or different forms of feet can be derived from the core \( \text{xw-£} \). If one does not represent these feet by symbols, but in the manner of the Arabic grammarians by \text{voces memoriabiles}, then one gets exactly those mnemonic words which Al-Khalil fashioned for the 7 feet of the rising rhythm: (1) \( \text{FA'O-lun} \), \( \text{fā-ILUN} \), (2) \( \text{MADF'A-lun} \), \( \text{mustaf'SILUN} \), \( \text{fā-ILĀ-lun} \), (3) \( \text{MUF'A-lal-un} \), \( \text{mudā-f'a-SILUN} \).

Whilst the actual rhythmic core of these feet always appears in the same indivisible and unalterable form, with the stress on the 'long', the neutral syllables (which have no part in the shaping of the actual rhythm) are neither bearers of stress nor stable in their quantity; they can be either a 'long' or a 'short', and their only function is to bring some variation into the rhythm. Such variations do appear, and the difference between them depends on whether (a) the foot begins immediately with the core, which makes a rising rhythm especially strong: \( \text{xw-£xx} \), \( \text{xw-£xx} \), \( \text{xw-£xx} \), \( \text{xw-£xx} \); (b) whether the core is at the end of the foot, which gives the rhythm a somewhat hurrying and skipping character: \( \text{xw-£xx} \), \( \text{xw-£xx} \), \( \text{xw-£xx} \); (c) or whether the core is enclosed within the foot, which somehow hampers the force of the rising rhythm: \( \text{xw-£xx} \).

Just because the grouping of neutral syllables around the core determines the rhythmic variations, it is absolutely necessary to keep to this fixed shape of the feet when scanning the metres.

By combining these 7 feet, one gets metres of rising rhythm of the following 3 groups: (1) The 7 "simple" metres are arrived at by the repetition of the 7 feet in identical form. These 7 theoretically constructed metres are completely identical with the metres \( \text{Wājir} \), \( \text{Kāmil} \), \( \text{Hasāj} \), \( \text{Rudjas} \), \( \text{Ramāl} \), \( \text{Mulkārīb} \), \( \text{Mutādārīk} \) used by the ancient poets. (2) If the 7 feet are combined not with themselves (as sub 1) but with each other, there result according to the calculation of variables many possibilities of "combined" metres. Most these potential metres, however, are incapable of realisation chiefly because they would offend against the general metric law according to which two cores can never succeed each other directly, but must always be separated by not more than two neutral syllables. It will then be seen that the three groups of feet, distinguished above, can be combined into compound metres only with
themselves, but never with each other. Consequently
of the list of possible combined metres only three
pairs are left, namely those which correspond
exactly to the metres Tawil, Basit, Madid used by
the ancient poets and to their reverses.

(3) The gap which is caused by the absence of
metres combined by feet of diverse variations of
rising rhythm (as shown sub 2) is filled in by
"mixed" metres which commence with one of the
7 feet of rising rhythm and are then varied by the
foot of falling rhythm ma-'a-LĀTU. In this case too
the theoretical construction again leads to the mixed
metres used by the ancient poets, and which Al-
Khalli has united in circle 4.

The fact that the metrical system constructed
theoretically in a circle of the rising rhythm ω is
identical with the metres actually used by the
ancient poets affords us full insight into the ground-
plan and the system of the ancient Arabic metres.

If the rising rhythm was "the" poetic form, by
means of which Arabic poets fashioned their poems,
one can, a priori, assume, that those metres which
displayed the core of the rising rhythm most
strongly were preferred and used most readily. Such
are, primarily, the two metres Tawil and Basit,
which combine unequal feet, and of the simple
metres Wājir and Kāmil (in which the rhythm is
more variable because of the sequence of the two
'shorts'), rather than the other simple metres. In
fact, this accords with the results obtained by
various arabists (cf. Bräunlich, in Islam, XXIV,
249) in their statistical investigations into the
frequency of metres: three-quarters of all Kasidas
were composed in these 4 metres, and amongst
these Tawil (as the strongest) heads the list.

Thus the peculiarity of ancient Arabic metres
lies in the fact that they are not formed by joining of
single syllables, but are developed from an inseparable pair of
syllables, the core of the rising rhythm. Only this
one rhythmical idea has taken shape in Arabic
metres, but the principle is carried out in all its
possible variations and effects. The reason why
poets unconsciously developed this one principle to
perfection can only be explained by the fact that
the Arabic literary language, in its structure of sound and syllable,
conforms to the shape of the rising rhythm and invites such development. It is
this monorhythm which basically distinguishes
ancient Arabic metrics from the polyrhythm of
ancient Greek metrics (which expressed various
rhythmic figures without developing any one, as it
were, systematically to its ultimate possibilities, as
the Arabic does). Because Arabic metrics are some-
times wrongly simply equated with Greek ones, a
further basic difference between the two systems of
versification must be pointed out: the only factor
which governs the rhythm of Greek verse is the
quantity of the basic metric units which recur at
regular intervals, and it is therefore a case of a
quantitative metric (measuring the time); the ictus
(the element of energy of rhythmic stress), if indeed
it was present, merely had the task of regulating the
quantity when this was disturbed by an anomos-
syllable. Ancient Arabic metrics are also of a
quantitative nature (every syllable in the language
has an absolutely fixed duration), but in poetry the
number of neutral syllables which can be either a
'long' or a 'short' is so great that the quantity alone
cannot have been decisive for the rhythm. Therefore,
with it we have—not only in a regulating but in a
shaping capacity—stress; these two together, in an
indivisible and unchangeable unit, form the rhythmic
core of the feet and metres. In most lines, the ictus
and the word-accent will coincide on the same
'long', but even when a word-accent falls on a
syllable without an ictus there could be no discord.
Within a line, the ictus—being the factor which
shapes the rhythm—acts more strongly than the
word-accent; but in ancient Arabic, with its contrast
of 'long' and 'short', both are dependent on the
quantity of the syllables, and hence are not as
strong as in accentual languages.

The special peculiarity of the rhythmical structure
in ancient Arabic poetry is in itself proof enough
that Arabic metrics are an autochthonous growth
which has not been transplanted from somewhere
else to Arabic soil. Merely for the sake of comple-
teness, let it be mentioned here that Tkatsch (Die
arabischen Übersetzungen der Poetik des Aristoteles,
vol. I, Vienna 1928, 99 ff.) supposes that "the
illiterate sons of the desert" had received knowledge
of Greek metrics through Aramaic-Christian inter-
vention, and that they had then developed it
further. This assumption, however, has been
accorded little attention and no acceptance because of
its lack of substantiation.

The form of the Kāṣīda and the ancient metres
used in it, have survived—though in a limited range—until today. There is considerable material on this in Sozin’s Dinos aus Central-Arabien (Leipzig,
1901, T. 1-3), where the older literature is also
mentioned (vol. III, 1 f.). The Kāṣīda and its
ancient metres are still used today by the Bedouin;
but they are rarely used by other poets, and then
only when they want to appear consciously archaic.
The metre of the modern Bedouin Kāṣīda is usually a
Tawil with the first syllable missing; Ramal, Basīt,
Kādīs and Wājir are also used. As this form of
modern verses is a direct continuation of ancient
Arabic poetry in content, form, and language, the
rules of the 'Ilm al-‘arūd are applicable to it. They
can, however, not be applied to the actual Arabic
folk-poetry, of which there are traces even in pre-
Islamic times, and which was greatly cultivated in
later centuries. This ‘muse populaire’ is different from the ancient Kāṣīda because it is longer
and its monotonous rhyme which recurs throughout
the poem but a rich strophic structure, and because it
is freer in its choice of themes, but most particularly
because the language of folk-poetry is the language
of every-day life. The sound-structure of this,
however, is fundamentally different from that of
ancient literary Arabic. The emphatic stress which
is evident in the colloquial language caused a short-
ening of the vowels and omission of the endings.
Consequently one can no longer find the regular
alternation of 'long' and 'short' and the absolutely
fixed relation in the quantity of the syllables which
were the most characteristic feature of the old
literary language, and as such determined the
rhythm of the poetry. Therefore we cannot expect
to find in popular poetry the metres which the
ancient poets created and adapted to the phonetic
structure of the Arabic literary language. In it,
as well as in the colloquial language, stress prevails;
it even gains in force when the song is recited,
because the stressed syllables are then emphasised
by beating on instruments or by hand-clapping.
The different forms of Arabic popular poetry are therefore
outside the framework of the article ‘Arūd, which
is concerned only with the metrics of the ancient
poetry.

II. The most outstanding feature of the ʿArūd system as adopted by the Persians is the emphasis laid on quantity, which gives to Persian verse a lilt and swing which can be more readily appreciated by ears to which the more subtle rhythms of Arabic verse are unfamiliar. To words ending in two consonants (mīn excepted) preceded by a short vowel, or one consonant preceded by a long vowel, an extra short vowel was added. This sin-fatha, as it is called, is now not pronounced by the Persians. By poetic licence, certain monosyllabic long syllables may become short according to scansion. Of the types of poem in use the Mathnawi and the Rudāḥ are most characteristic of Persian poetry. The former is a many-rhymed poem in couplets of which each hemistich rhymes with the other. The freedom thus allowed in rhyming renders this form eminently suitable for epic and didactic verse. The Rudāḥ (Quatrains), also called Tarāna, is said (Browne, i, 472-3) to have been the earliest of the verse-forms invented by the Persians. It is derived from no less than twenty-four varieties of the Ḥaṣān metre, and it is perhaps the form best known to the West. The Kashida lost much of its importance at an early period in Persian literature and became more and more artificial under such poets as Khākānī (d. 582/1185). In scope and subject matter, it much resembled its Arabic prototype except that in Persian hands it became more of a eulogy of the poet's patron. Of the same single-rhymed type but shorter (five to fifteen verses), the Ghazal achieved more fame at the hands of Persian poets and lent itself to a graceful sonnet-like form. In the opening lines do the hemistichs of these poems rhyme. The two types of refrain poem—the Ṭarkīb-bānd and Ṭarkīb-bānd were a Persian innovation. The former consists of about five to ten lines which differ in rhyme with a refrain (waṣīla) in the same metre. If the refrain differs in each instance where it occurs, the poem is then called Ṭarkīb-bānd. Of the various types of multiple poem which have internal rhymes and are grouped under the general term of Musammat, the Musaṭādād deserves special mention. It is a poem of which each second hemistich is followed by a short metrical line which has some bearing on the sense of the first hemistich without altering the meaning. All these rhymes rhyme together throughout the poem. The Persians have been credited with the invention of three new metres: the Dīdād, Karīb and the Manīṣākīlī, but these are of rare occurrence.

The adoption by the Turks of the Perso-Arabic metrical system was facilitated, not only by a genuine admiration for Persian belles-lettres, but also by the resemblance which the ancient Turkish method of versification (parmak) bore to the ʿArūd metres. For example, the Kulanğıbī Ṭikā, composed in 462/1069, was written in a metre which was not unlike the Mutakābībī, and the Turkoman Ṭuyuğ was similar to the rubāʾī. Both the original and the ʿArūd systems enjoyed a parallel existence until the former was ousted by the latter during the XVth century. The main difference between the two forms is that in the parmak the verses were based not on quantity but on the number and beat of the syllables. The old system survived only in the folk-poetry of Anatolia of which the most representative types are the türkū, şarkī and the manī (maʿnī). In the XVII century, a revival of the old prosody began under such poets as Karadjağhlan, and, in the course of last century, the growth of national feeling led to the victory of the Turkish system. The ʿArūd system is now obsolete and is cultivated only by a few conservative or neo-classicist poets. The most important innovation produced by the Turks in the ʿArūd was somewhat artificial, although it was very necessary. In purely Turkish words there are, of course, no long syllables, but the Perso-Arabic letters of prolongation were used as vowel-letters. By a poetic licence, these were regarded as long where the metre demanded it.

The metres in use in Persian and Turkish are rather less numerous than those used in Arabic. Some of the more popular metres such as the Tawīl, Bāṣīf, Wājīr, Kamīl and Māddī are scarce. For details of the metres most used the reader is referred to the bibliography.

Fuad Köprülli). (G. Meredith-Owens)

ʿARUDI [see niyām ʿarūdī].

ʿARUDJI, Turkish corsair who seized possession of Algiers at the beginning of the 10th/16th century. He is sometimes designated by the name of Barbrossa (a term which is sometimes interpreted as a corruption of Bābā ʿArūdji), but it appears this surname more often refers to his brother Khayr al-Dīn [q.v.]. ʿArūdji came from the island of Midilli [Mytiene-
ancient Lesbos); his father was a Turk, a Muslim soldier of the garrison of occupation (Ghasawud), or a Greek potter (Haedo). He had at least two brothers, who were with him in the Maghrib; Khayr al-Din and Ishāk. A sailor and a Muslim from an early age (Ghasawud), or only from his twentieth year (Haedo), he began to act as a privateer in the eastern Mediterranean. He later decided (the exact reasons for this decision are not known) to operate off the coast of the Maghrib.

It is fairly certain that from 1504 onwards, or soon afterwards, ʿArūdī and his brothers made their base at Goletta; they started in a small way with two ships, but soon took some remarkable prizes; as a result of these they increased both the numbers of their fleets, which comprised eight galliots in 1510, and their capital, which enabled them to honour their obligations to the ruler of Tunis. The latter, Abū ʿAbd Muḥammad b. al-Ḥasan (1494-1526), in fact only authorised them to establish a base on his territory on condition that he received a share of the prizes. The Ghasawud describes on one occasion the magnificent cortège organised by the corsairs in Tunis to carry to the Ḥafsid ruler his share of the booty (text, 15-16; tr., 28-30). They were authorised to establish a secondary base on the island of Djerba, and ʿArūdī was even appointed Ḥālid of the island in 1510 (Haedo). Until 1512, they cruised in the western Mediterranean and off the Spanish coast.

The Spanish, however, occupied various points on the coast of North Africa, notably Oran (1509), the Peñón of Algiers, Bidjāya (Bougie) and Tripoli (1510). Despairing of being able to retake Bidjāya (Bougie) by his own efforts, the Ḥafsid governor of that town appealed to ʿArūdī who had then at his disposal twelve ships armed with cannon, and a thousand Turkish soldiers. ʿArūdī established a naval blockade of the port, while the “king” of Bidjāya (Bougie), supported by the Turkish troops, laid siege to it by land with three thousand “Moors”. After eight days’ bombardment, ʿArūdī lost his left arm. His brother Khayr al-Din took him back at full speed to Tunis where he spent his time recovering his health. In August 1514, he attacked Bidjāya (Bougie) for the second time, with twelve ships and 1120 Turkish troops. Again ʿArūdī was forced to raise the siege, this time because of bad weather, the appearance of a Spanish relief squadron, and perhaps the desertion of local contingents; it is even possible that he was forced to burn some of his vessels in the gulf of Bidjāya to prevent them falling into the hands of the Spanish.

He may perhaps have been already established at Dijdelli [p.v.], as the Ghasawud lead one to believe. At all events, he took refuge there after his second reverse before Bidjāya, because his relations with the Ḥafsid ruler had undergone a change—we do not know for what reason.

At this juncture, apparently, ʿArūdī conceived political ambitions. Haedo describes him as supplying corn to tribes in the vicinity which had been smitten by famine, thereby acquiring great popularity, and intervening in the quarrels of the Kabyle chiefs.

When King Ferdinand the Catholic died on 22 January 1516, the inhabitants of Algiers sought to rid themselves of the threat from the Peñón, and appealed to ʿArūdī, who had him in the Maghrib. He answered their appeal, and bombarded the Peñón without success. The leader of the Arabs of Algiers, Sālim al-Tūmī, then sought to get rid of ʿArūdī and his Turks, who behaved as though they were in conquered territory. But ʿArūdī forestalled him, put him to death and seized power with the help of his Turks. Despite the intrigues of the son of Sālim al-Tūmī, who had taken refuge with the Spanish, he succeeded in maintaining his position at Algiers by exercising the greatest severity. He also succeeded in repulsing a Spanish landing carried out by Diego de Vera (30 September 1516).

The Spanish then sent the Sultan of Ténès against him, but ʿArūdī went out to meet him and inflicted on him a severe defeat, as a result of which ʿArūdī made himself master of Miliana and Ténès. According to the Ghasawud he then organised the territory he had conquered; Khayr al-Din had the territories to the East, with Dellys as his seat, while ʿArūdī took Algiers and the western territories.

ʿArūdī then received an appeal from the inhabitants of Tlemcen, whose king had accepted a sort of Spanish protectorate. He at once organised an expedition with the greatest thoroughness, and entrusted the government of Algiers to his brother Khayr al-Din. He occupied in passing the stronghold of the Kal’a of the Banū Rashid, now the site of Oued-Fodda, and left his brother Ishāk there with a small garrison. He then proceeded to Tlemcen, which he took possession of without great difficulty, after having defeated the troops of King Abū Ḥammūn in the field (September 1517). Instead of raising to power the pretender Abū Zayyān who had no link with the Spanish, ʿArūdī assumed power and despatched expeditions as far as Oudjā and the Beni Snassen; he seems to have had the intention of negotiating with the ruler of Fez against the Spanish.

The latter did not give him time for this: in January 1518, a Spanish column under the command of Don Mart. of Argote captured the Kal’a of Banū Rashid, thus cutting communications between Tlemcen and Algiers. In May, the Marquis of Comarés, governor of Oran, marched on Tlemcen. There he laid siege to ʿArūdī, who hoped, it appears, to be relieved by the troops from Fez. The inhabitants of Tlemcen rebelled against the Turks, and forced ʿArūdī to shut himself up in the fortress of Mīshāwār [see TLEMČEN]. As supplies were running low, ʿArūdī attempted a sortie and managed to escape with a few men, but he was overtaken, probably in the vicinity of the present Rio Salado (department of Oran) and put to death; he was 44 or 45 years of age (Autumn 1518).

It will be seen that on the whole very little is known about the history of ʿArūdī. It seems likely that political aspirations awoke within him, when he realised the political anarchy existing in the central Maghrib and the possibilities it offered to a bold man backed by a body of men equipped with fire-arms and artillery. But the possibilities were so great that ʿArūdī allowed himself to be carried away by ambition, and he failed because he was too far from his base, and had not prepared the ground politically to a sufficient extent.

The best known Turkish account is that given by Hadidji Khalifa in his Tutifat al-Bihar (Istanbul 1141/1728 and 1329/1914, Eng. tr. of chaps. 1-4 by J. Mitchell, History of the Maritime Wars of the Turks, London 1831). This narrative, which was used by Hammer in his account of the naval wars, rests on earlier sources, some of which are still extant. A list of Ottoman gazassnames dealing with the campaigns of Arudj and Phayar al-Din is given in Agah Shirz Levendor, Gazansnameler, Ankara 1956, 70 ff. (K. L. Turnska). Arudj also written Al-Ruk, town in Sind; it is surmised to have been the capital of king Abd Abbas Ahmad (b. Muhammad b. from Abu 'l-Salam b. Abl Bakr) b. al-Arus, who died c. 1460 in Tunis. The text cf. Marquart, Erinsahr, 25.

Arzachel [see al-Zarkali].

Arzan (Syriac Aroz, Armenian Arzin, Alzn). The name of several towns in eastern Anatolia. The most important was the chief city of the Roman province of Arzane, Armenian Aldmeth, located on the east bank of the Arzansu River (modern Garansu) a tributary of the Tigris, at about 42° 41' E. long. (Greenw.) and 38° N. lat. By Islamic authors Arzan is linked with the larger city to the west, Mayyafirkin.

The origin of the name is uncertain but of undoubted antiquity; see the discussion in H. Hübschmann, Die altarmenischen Ortsnamen, in Indogermanische Forschungen, 16 (1904), 248, 311. On the pre-Islamic history of the town, a Syrian bishopric, see Marquart, Erinsahr, 25.

Arzan surrendered to Ilyad b. Qhan in 20/640, and the district was included in the territory of Djazira (Baladhur, 170), later in Diyār Bakr. The town was in a rich agricultural district, and the average combined revenue from Arzan and Mayyafirk in 'Abbāsid times was 4,100,000 dirhems, according to Kudama (BGA vi, 246). Until the rise of the Hamāndis Arzan was ruled by Armenian amirs allied by marriage, as well as allegiance, to the Arabs. Cf. Canard (below), 472.

At the beginning of the 4th/10th century the Hamāndis Sayf al-Dawla resided in Arzan when preparing expeditions against the Armenians or the Byzantine Empire. In 330/942 the Byzantines captured and sacked Arzan (Canard, 748). The Hamāndis recovered the town but had to fight many times with the Byzantines in the Diyār Bakr district. Afterwards the town lost its importance and in the 12th cent. A. D. Yaghit (ed. Wüstenfeld, i, 205) wrote that it was in ruins.

Few travellers have visited the site, but it was identified by J. G. Taylor in JRIS, 35 (1865), 26, where a piastre of the ruins is given.

One should not confuse Arzan with a smaller nearby site also on a river, the Bohntaus, called Arzan al-Zarm; see J. Markwart Südarmenien und die Tigrisquellen (Vienna 1930), 41*, and 341. Also to be distinguished from Arzan is Arzan al-Rum (Erzurum), and nearby Byzantine Apure.

The name Arzan is known to have been current in the 1st century B.C. and the 2nd century A.D., when the town appears in the inscriptions of the province of Armenia Cilicia. Arzan is known to be one of the oldest towns in the region, and its name is of uncertain origin, but of undoubted antiquity. Arzan is located on the east bank of the Arzansu River (modern Garansu) a tributary of the Tigris, at about 42° 41' E. long. (Greenw.) and 38° N. lat. By Islamic authors Arzan is linked with the larger city to the west, Mayyafirkin.

Bibliography: In addition to references in the text cf. Marquart, Die Entstehung und Wiederherstellung der armenischen Nation, Potsdam 1919, 33; M. Canard, Histoire de la Dynastie des Ham-
ARZAN — ARZAN

ARZAN (Berb. Arzyu; modern orthography Arzew or Arzej), town on the Algerian coast situated between Oran and Mostaganem, 7 km. E. of the present small town of Arzeu. The Muslim town of the Middle Ages doubtless occupied "on the littoral of the plain of Sirat" the site of the ancient Portus Magnus (modern Saint Leu, still called Vieil Arzeu). In the 5th/6th century, al-Bakri speaks with admiration of the Roman town and its ruins, but declares that it was completely uninhabited. He notes however, on the nearby mountain (the one which dominates the present Arzeu), three castles which were used as wirk. This is the more remarkable because fortified monasteries were very rare on the northern coast of Barbary. The Arzaw region thus appears to have played a military and religious role. One assumes that maritime activity was, here as in other towns on the same coast, carried on not by the Berbers of the region but by Andalusian immigrants. In the 6th/7th century, al-Muqaddasi speaks of the activity. "It is," he says, "large village to which is brought the wheat produced in the surrounding countryside, which is sought after by merchants who export it to numerous countries". In the 10th/11th century Leo Africanus, in his list of the large and small towns on this coast, does not mention Arzaw.

At an unspecified period, probably in fairly recent times (18th century?), a Berber tribe which used to be known as the Botjoua, among whom the original dialect was still spoken forty years ago.

(G. MARCQ'S)

ARZÚ KHAN (Sirâdî al-Dîn ʿAllî Khân Arzû) 1099/1687-8 or 1100/1689-90 to 1168/1756. Indo-Muslim scholar and poet in Persian and Urdu. Son of Shaykh Husâm al-Dîn Husâm, Arzû Khan was, according to Shams al-Ulâm Mawlâm Muhammad Husayan Ṭâzî, descended from the family of the saint Naṣîr al-Dîn Muhâmmâd Ṭâzî-i Dîhî on his father's side and from the saint Muhammad Gawah Gwâdiyâr on his mother's.

A native of either Gwalior or Akbarâbâd (Agra), in 1124/1713 he went to Dihlî and obtained a mansab and a gâzi, also receiving patronage from Mu'taman al-Dawla Ishaq Khân, Khân-sâman to Muhammad Shâh. The former's sons Naṣîm al-Dawla and Nawmâbâd Sâlân Dîjân continued their father's favours to Arzû Khân and when Sâlân Dîjân went to Awadh in 1168/1754-5 Arzû Khân accompanied him there and secured a stipend from Shugârâd al-Dawla, the Nawmâbâd-Wazir of Awadh. Arzû died at Lucknow but his body was brought back to Dihlî for burial.

In Persian literature Arzû Khan was an important commentator on the Gulistân of Sa'dî, on the Sikandarnâma of Nizâmî and upon the Khâbâd-i Khâkânî and ʿUrîfî. His other Persian writings include a lexicon, Sirâdî al-Lughâtî, the ʿAfiyya-i

Kubrâ on simile, metaphor and metonymy, the Zâd al-Fawa'id, a dictionary of Persian verbs and the nouns derived from them, the Tanbîh al-Sâlihûn, a criticism of the poems of Ḥazîn, and the Madâmr al-Nâfâsî, a biography of ancient and modern poets with extracts from their works.

In Urdu literature Arzû Khân was more of an influence than a figure. Although he composed a few verses in Urdu he is more important as a teacher of such luminaries of the Dihlî school of Urdu poets as Mirzâ Dîn Dîjân Sâlân and Muhammad Ra'în Sawdâ, Muhammad Tâj Mir and Mir Dârî. He also composed an Urdu dictionary of mystic words, the Gharâbî al-Lughâtî and a Hindûstâni dictionary, the Nawâdîr al-Farî.

(A. JEFFERY)
Ašāba is an Arabic word meaning originally 'spirit of kinship' (the ašāba are male relations in the male line) in the family or tribe. Already used in the hadith in which the Prophet condemns ašābiyya as contrary to the spirit of Islam, the term became famous as a result of the use to which it was put by Ibn Khaldūn, who made this concept the basis of his interpretation of history and his doctrine of the state. Ašābiyya is, for Walde-Hofmann, Lat. *sym. Wb.*, the fundamental bond of human society and the basic motive force of history; as such, the term has been translated as 'esprit de corps' (de Slane), by 'Gemeinsinn' and even by 'Nationalitätssidee' (Kremmer), which is an unjustified modernism. The first basis of the concept is undoubtedly of a natural character, in the sense that ašābiyya in its most normal form is derived from tribal consanguinity (nasab, šīkhām), but the inconvenience of this racial conception was already overcome in Arab antiquity itself by the institution of affiliation (waala'), to which Ibn Khaldūn accords great importance in the formation of an effective ašābiyya. Whether it is based on blood ties or on some other social grouping, it is for Ibn Khaldūn the force which impels groups of human beings to assert themselves, to struggle for primacy, to establish hegemonies, dynasties and empires; the validity of this principle is tested firstly in Arab history, pre-Islamic and Muslim, and secondly in the history of the Berbers and other islamised peoples: the Arab empire is the product of the ašābiyya of Kuraysh, especially of the Banū ʿAbd Manāf group, but once power (mulk) has been seized, the dominant group tends to detach itself from the natural ašābiyya on which it is based, and to substitute for it other forces which become the instrument of its absolutism. This extraordinary appreciation of a non-religious force as the motive power of history (the religious element only superimposes itself as a secondary element) involved Ibn Khaldūn in delicate problems of reconciliation with the traditional view of Muslim history and civilisation, a view, moreover, which he supported with whole-hearted conviction; this effort of harmonisation, apparent in more than one page of Ibn Khaldūn's political Theory, BSOS, vii, 1933, 23-31.

Al-aṣād (a.), plural usually al-usād, al-usud, al-usūd, the most usual word for lion. It is also frequently found as a personal or tribal name (see following article concerning the presumable etymology and connexions with other names, see discussion by C. de Landberg, l.c., II/II, 1237-40). The old poetic word, which has been more and more replaced by al-aṣād, is al-layth; this is found not only in Semitic languages (Akk. nēšu, this, however, generally only in prose: Landsberger, l.c., 76), but also, according to Koehler (Lexic. in VT, 1938, 481b), in Greek λέον, λέαντης, in which it is also used by poets—though rarely—from Homer onwards. The same author, 472a, also gives, alongside the kindred Akk. λαβα' etc., the Arabic fem.: labā' (with numerous kindred forms for lioness), and gives λέος, λέαντας, λέανα as an "African" word, referring to ZDPV, LXII (1939), 121-4 (with a geographical distribution of the words). H. Osth, in Symb. Rozwadowskii, I (Cracow 1927), 295-313, derives the name of the lion in the Semitic languages (including the Arabic forms labā' and layth), Egyptian Coptic, Greek, Latin, German and Slavonic from an original Alarodic form and its variants. Recently, Indo-Germanic scholars once more refused to admit any connexion between the Semitic languages and the words for "lion", but they are unable to give any Indo-Germanic alternative (Paul Thieme, Die Heimat der u̱g. Gemeinsprache, Wiesbaden 1954, p. 32-9; also Walde-Hofmann, Lat. *sym. Wb.*, Heidelberg 1938, i, 285; and Pauly-Wissowa, RE, XIII, col. 968). The phonetic difficulties involved in the undoubted relationship between the words for "lion", "elephant" etc., in the different languages, remain a problem. It is noteworthy that all the cases concern animals which appear as characters in fables, playing a great part both in literature and ornamentation (see below, and Indogerm. Jahrbuch, XIII [1929], 94, No. 83).

It is a matter of common knowledge that various hypotheses have been advanced concerning the distribution of the lion in Arabia. M. Grünert, l.c., 3, 4, states that more than two-thirds of the great number of words for the lion (3 Arab philologists vie with one another in mentioning 600 and more) can be found in the ancient poets. In his opinion, the "epitheta ornantia" which he has collected are proof of "such a perceptive way of observing nature" that "some ancient Arabic poets really observed the lion". Here, however, it is not the great quantity, but the significance of these epithets which must be the decisive factor: they do not so much give a clear picture of the animal itself, but—and this is typical in Arabic lexicography—they give a great number of synonyms for the generic concept, such as "gibbous, crater, scatter-pieces, crusher, hammer" etc. (cf. ibid., 15 f.). B. Moritz (l.c., 40 f.) is likewise led to accept Grünert's view, in the main, because of this wealth of synonyms (following Ibn Sīda, Kitāb al-Muḥāsas, viii, 59-64). On the other hand we have the objections by G. Jacob, l.c., 17; Th. Nöldeke, in ZDMG, XLIX (1895), 713; H. Lammens, Le Berceau de l'islam, Rome 1914, i, 287 f. In addition to these objections, there is, above all, the fact that the figure of the lion as the king of animals—and hence as a personification of kingly power—appears very early in places where the living animal never existed (for example in Ceylon, Indonesia, and in parts of Europe; cf. M. Ebert, l.c., vii, 318a). It was in such places that it could most easily turn into a semi-mythical animal, engaging an imagination which had already endowed it with those ideals which its appearance evokes. This may perhaps also serve as an explanation for attributing other qualities to it, such as courage, bravery, magnanimity and the like, which some experts definitely deny to the real animal (cf. R. Lydekker, The Royal Natural History, London-New York 1893/4, i, 357 f., as opposed to Brehm, l.c., i, 144, 150).—

Another attribute of the lion is its strength, its magnanimity and the like, which some experts definitely deny to the real animal (cf. R. Lydekker, The Royal Natural History, London-New York 1893/4, i, 357 f., as opposed to Brehm, l.c., i, 144, 150).
the colour of the animal and the growth of its mane.
Facts for a more detailed description of these (cf. e.g.
Jacob, *ibid.* and Moritz, *ibid.*, 41, n. 3) are, however,
sca'ty. In Islamic countries today, one finds,
according to Brehm, *ibid.*, i, 144 ff., the Berber lion,
the Senegalese lion, the Persian lion and the Gudjarat
lion.
The Arabs caught lions in pits, a primitive method
which is still found in some parts today (Grünewald,
*ibid.*, 144; Ebert, *ibid.*, vi, 146; Brehm, *ibid.*, i, 151 ff.;
according to Pliny, this was the method employed
to catch animals for the circus: *RE*, XIII, col. 980).
Following the example of the rulers of the ancient
Orient, as well as that of the Achaemenids, Sasanids
and the Caesars, the Caliphs later went on lion-
hunts themselves and in Islam, too, it became a
prerogative of the rulers. They kept the lions in
zoological gardens, trained them as companions, and
organised shows with them in the Roman manner
(cf. *RE*, XIII, col. 980 f.; Ebert, *ibid.*, vi, 144-5; G. Contenau,
Soden, *Herrscher im AO*, Berlin 1954, 37, 75, 82, 134; C. de Wit,
*ibid.*, 10-4; Streck, *ibid.*; Mez, *Renaissance*, 385 f.; M. F. Köprülü,
*ibid.*, i, 599 f.).

"In Islamic art, the lion is the probably the most
frequently and diversely represented animal. It
rarely has an apotropaic meaning, it sometimes has
an astrological or symbolic one, but it is generally
merely decorative and without any deeper signi-
ficance. The main forms are:
1) In the round, as in the Fountain of the Lions
in the Alhambra, hewn in stone in Konya, by Faţimid
and Seljuk metal work, and in Persian ceramics of
the 12th to 14th century (particularly as pouring
vessels and censers).
2) In bas-relief, and also flat, in the various
spheres of art, and in almost any material, either:
a) passant, statant, sejant, rampant, either alone
or paired, in the so-called 'heraldic style';
b) either in battle with other animals—such as bulls,
gazelles or camels—or attacking them (thereby
going back to ancient Iranian tradition) from mere
playful modelling. However, W. Andrae, *Dargestelltes u.
Verschlüsseltes in der ao. Kunst*, in Welt d. Or., 11/3
(1956), 250-3, shows that there was often a deeper
reason behind it, especially when the lion, bull, and
eagle occur together. Here, Islam took a great deal
from older cultures without enquiring into its
significance. Frequently, ancient Egyptian art
provides the answer in its added explanation of
what is portrayed (cf. C. de Wit, *ibid.*, 84-90, 96 ff.).
— The apotropaic nature of the lion is of
considerable significance. With his fierce look, warding
off all hostile attack, he becomes the guardian of the
throne (also of the throne ofAllah: Grünewald, *ibid.*, 5)
the gate, halls and graves (cf. Keller, *ibid.*, 1, 58;
Bonnet, *ibid.*, 429, like the Sphinx: cf. C. de Wit,
*ibid.*, 66 f.). — Some representations of lions may, of
course, have resulted from mere playful
modelling.
3) Partial representations are rare; the most
frequent are: lions' paws, used as ornamental legs;
lions' heads (modelled fully in the round) as door-
knockers, as handles and in similar functions,
usually in bronze.
There seems to be little direct debt to the ancient
Orient or Hellenic art; the stylisation of the
figure of the lion, at least, is nearly always typically Islamic,
both in details and ornamentation. — There is as yet
no iconographic study of the lion in Islamic art."
his body: brain, teeth, gall, flesh, fat, etc.; these are held to be infallible in their magic effects. The court apothecary in Stuttgart sold lion's excrement as late as 1561 as a remedy (cf. Keller, Loc., i, 44; RE, X111, col. 982; Grünter, Loc., 19 f.).

Names show most clearly how much the lion entered into the cultural history of man. Usd al-Ghūbū “the lions of the thicket” is what Ibn al-Athir (died 632/1234) calls his biography of the companions of the Prophet. The names formed with Asad(s), Layth(s) are numerous (sometimes theological: J. Wellhausen, RA, 2, 64); in Turkish those formed with Arslan (particularly the Saldıņgūs; M. F. Köprüölü, Loc., 600-4 deals with personal names, place names and titles); in Persian, gūr, either alone or in compounds, such as gūrdīl “lionhearted”, ghūrmār “hero” (like asad: Landbcrg, Loc., I fii, 1239 f.; Fr. Wolff, Glossar zu Firdosi’s Shīhānma, 1925, 584-7). In the Turkish of today, the word is usually aslān, which also means “brave, upright, good”; arslancılım “my little lion”, is practically a term of endearment for boys. — Thus the likable traits of the animal, its traditional virtues, the dignity of its appearance, have triumphed everywhere.

Bibliography: Owing to lack of space, the subject can only be roughly sketched.

Max Grünter, Der Löwe in der Literatur der Araber, Prague 1899, is little more than a study from a lexicographic standpoint. — M. Fuad Köprüölü’s article Arslan in IA, i, 598-609a is hitherto the best exposition, not only for Turkish. There is no general survey of the Islamic field, nor are there any monographs on particular areas. — For comparison with antiquity, the following will be found useful: the article “Lōwe” (by Steuer) in Paul-Wissowa, RE, xii, 1927, col. 968-990; Otto Keller, Die antike Tierwelt, i (Leipzig 1909), 24-67; further: Max Ebert, Reallex. d. Vorgesch., vi, 1144-6, VII, 318-9b and especially Paulus Casell, Löwenkämpfe von Nemea bis Golgota, Berlin 1875, this also for oriental conditions. — For relationship with the ancient Orient: B. Landsberger, Die Fauna des alten Mesopotamien, Leipzig 1934; M. Streck, in Verönder-Bibliothek, vi (1936), 46ff. H. Ionescu, Reallex. d. ägypt. Religionsgesch., Berlin 1952, articles “Lōwe”, “Sphinx”, and others; especially C. de Wit, Le rôle et le sens du lion dans l’égypte anc., Leiden 1951, passim. — Concerning Arabic and Semitic matters in general, cf. F. Hommel, Die Namen der Säugetiere bei den südsem. Völkern, Leipzig 1879, 287-94; C. de Landberg, Études sur les dialectes de l’Arabie méridionale, II/ii, Leiden 1909, 1237-40; G. Jacob, Altarab. Beduineneleben, Berlin 1897, 16-18; B. Moritz, Arabien, Hanover 1923, 40-41. — For zoology in general: Brehm’s Tierleben, I (1893), 144-152.

H. Kindermann

ASAD, BANĪ (later, dialect: Ban) Arab tribe. They are a tribe related to the Kīnāna [q.v.]; the awareness of this interconnection remained remarkably alive, though it had little practical effect owing to the great distance separating them.

The homelands of the Asad are in North Arabia, at the foot of the mountains formerly inhabited by the Tayy [q.v.]. In contrast to the latter, the Asad led a mainly nomadic life. Their grazing lands extended to the south and south-east of the Nejd, from the Shammar mountains [q.v.] to the Wādi ’l-Rumma in the south, and beyond it in the neighbourhood of the two Abān in the direction of Rass and further eastwards up to Sīr. Here their territory overlapped with that of the ʿAbs [q.v.], in the north with that of the Yarbū [q.v.] of the Tamīm [q.v.], for the Asad owned the spring of Line beyond the Dahān [q.v.], as well as the adjacent tract of Ḥanz (Ḥeḍjera) to the north.

An important event in the pre-Islamic history of the Asad is their revolt in which Hujjir fell, the son of the last great ruler of the Kinda and the father of the poet Imrūʾ al-Kays [q.v.], and in which they struck the disintegrating kingdom of Kinda [q.v.]; a mortal blow. — The Asad’s relationship both with their immediate and their more distant neighbours, the Tamīm and the tribes beyond the Wādī, varied. In contrast, at the end of the sixties and the beginning of the seventies of the 4th century A.D., a permanent alliance with the ʿAyān and the Ghaṭāfān [q.v.] was developed, in which the Dhubyan [q.v.] and finally the ʿAbs joined. A few decades later, however, a rift among the allies occurred, as a result of which clashes ensued, particularly between the Asad and the ʿAyān, until Islam established peace among the tribes.

As an Asad family, the Ghanm, who had long been settled in Mecca, belonged to the inner circle of Muhammad’s disciples. But these connexions in no way affected the great Asad tribe. At the beginning of the year 4/625, Muhammad sent a raiding expedition to the Asad wells at Kaţān, where were encamped the sub-tribe Fakās, with their chief Tulayha (Taḥa) and who, according to tradition, were contemplating an attack on Medina, already weakened by the battle of Ḫudaydah. It is conceivable that Tulayha took part in the siege of Medina, the so-called Battle of the Trench (6/627). When, after further unsuccessful struggles against Muhammad, famine broke out among the Asad, Tulayha appeared with other chiefs in Medina at the beginning of 9/630 to embrace Islam. Though it is uncertain that Sura XX1X, 14-17 refers to their emissaries, as is maintained by tradition, nevertheless these verses undoubtedly reflect their attitude towards Islam. However that may be, their leader Tulayha is said to have proclaimed himself a prophet even before Muhammad’s death. During the ensuing widespread troubles of the Ridda wars, he succeeded in re-establishing the alliance with the Ghaṭāfān and the Tayy, which was joined by sections of the ʿAbs and Fazāra (Dhubyān). After being abandoned by the leader of the Fazāra [q.v.] at the battle of Buzāţ (631), he took to flight (11/632). This victory of the Muslims broke the resistance of the insurgents in North Arabia, who then for the first time were converted to Islam, the Asad among them.

In the ensuing wars of conquest, we find the Asad predominantly on the Idrāk front; Tulayha also, having in the meantime returned to Islam, fought both there and in Persia. — Most of the Asad were absorbed by al-Ḵūf; here in the course of time, they evolved from warriors to herdsmen as a result many of those who handed down the Shiʿa tradition, were men of the Asad from al-Ḵūf. Smaller groups of the Asad were incorporated in the Syrian army and subsequently settled near Aleppo and beyond the Euphrates.

When the withdrawal of the Bakr [q.v.] and Tamīm left the way to the north open to them, in the second half of the 3rd/4th century, they extended their grazing lands along the Kīfā pilgrimage road from al-Ḵīţān (Bāne) in the Dahān [q.v.] as far as Wāḵīsa. Later it was extended still further northwards: up to al-Kādisiyya [q.v.] on the frontier of the Sawād. In the East the Asad extended right up to Baṣra and in the West to Ayn al-Tamur [q.v.].
In the second half of the 4th/10th century, the Asad penetrated into the settled lands. Shaykh Mazyad of the sub-tribe Nashira settled on the Nile canal at al-Hilla [q.v.], whilst another chief, Dubays, crossed the Tigris and set up his camp in the neighbourhood of the later Ḥuwaze (Ḥuwawayza; see Ḥawza) (Khūrāsān).

The internal troubles under the Būyids [q.v.] favoured the rise of the Banū Mazyad [q.v.]. Ḥāfil b. Mazyad was confirmed in his office as a vassal of the Būyids in 401/1013-3. His son Dubays (404-474/1018-82) and the latter's son Ṣanṣūr (427-479/1082-1086) were considered to be the ideal type of Arab aristocracy. Both were surpassed by Ṣaḍaqa b. Ṣanṣūr [q.v.] (479/1086-1108), in personal nobility and political significance. In the struggle between Sultan Bāḳrīyār [q.v.] and his brother Muhammad b. Malikgāh [q.v.], he sided with the latter and occupied al-Kūfa (494/1101), Hit, Wāṣīt, Bāṣra and Tākrit and brought several Beduin tribes of Irāk under his influence; thus he was well justified in calling himself Malik al-ʿArab (Prince of the Beduin). Later however, he quarrelled with his overlord Sultan Muhammad, who defeated him at al-Madāʾin in 501/1108, in which battle he fell. Ṣaḍaqa united in his person the virtues of an old-time Arab warrior and those of an Islamic prince. He stands on the threshold of the transition from the Beduin way of life to that of urban civilisation. Though at the outset he still lived in tents, in 495 (1101/2) he set up his residence al-Hilla. The sons of his son and successor Dubays II [q.v.], who led a restless and adventurous life and was murdered at the court at Marāgha of the Sādījī Sultan Masʿūd b. Muhammad [q.v.] in 539/1143; ruled at al-Hilla under 545/1150.

The Asad had followed the Banū Mazyad to al-Hilla and remained there after their princely family had become extinct. Because they had supported Sultan Muhammad II b. Ṣanṣūr [q.v.] in the last Sādījī feat of arms in Irāk, the unsuccessful siege of Baghdād (551/1157), the Kalīfa al-Mustāqīlī [q.v.] determined to expel them from al-Hilla (558/1163). They entrenched themselves in the neighbourhood and were, with the help of the Muntakib [q.v.], finally compelled to submit. Four thousand of them were slaughtered and the remainder banished for ever from al-Hilla. The victors were perhaps induced to adopt this merciless procedure, because the Asad belonged to the dhiya (see above).

The Asad then dispersed, but must have reassembled again later. In any case, in the 14th and 15th centuries they lived to the south east of Wāṣīt.

In the course of time they finally found a new home in al-Dījāzār. The Banū Asad or Benī Sed as were punished by Turkish troops for having set fire to their home in al-Dījāzār. The Banū Asad or Benī Sed as are said to have advanced under Shek Dānā as far as the region east of ʿAmāra and later, under the latter's son Ḥeyyūn, to Little Medjer. 1894-5 they were punished by Turkish troops for having set fire to Medina (below el-Cēbāsh on the Euphrates) under Ḥasan el-Ḥeyyūn. Ḥasan was driven out of el-Cēbāsh and perished miserably in Ḥūr al-Dījāzār (ca. 1903). His son Sālim, thanks to the influence of the family of Sayyid Tālib, was appointed to the office of Shaykh over the Banū Asad in 1906. After the first world war, he remained faithful to Sayyid Tālib and declared himself opposed to the choice of Fāsyāl as King of Irāk. In 1924/5 he revolted against the Government, was taken prisoner and then exiled from his home. He now lives on his estates in Belerdž (North East of Baghdad).

ASAD, ancient Arab tribe. The Asadīyōn mentioned by Ptolemy VI, 7, § 22 (Sprunger, 206), and stated by him to have lived in central Arabia, to the west of the ʿOawārub = Tanūkh [q.v.]. Like them, and perhaps with them, the Asad had emigrated to the Euphrates line before the middle of the 3rd century. They appear in the inscription on the grave of the second Lāqīmīd of Ḥira (in al-Numāra, 328 A.D.), together with the Tanūkh, as al-Asadīn, "the two Asads". Here the dual a potiori may well have been chosen in order to erase, together with the name, the memory of the Tanūkh rule, whose kings had preceded the Lāqīmīd in Ḥira. It is not obvious what this term is based on—possibly on some relationship. This is also accepted by the Arab genealogists, who say that the core of the Tanūkh arose from the Asad. The inscription in Numāra mentions that "he reigned over both the Asad . . . . and their kings." It is not known for how long the Asad were under the Lāqīmīd. Some of their descendants, the B(ānu) ʿl-Kaṣrūn [q.v.], lived until Islamic times to the south and south-east of the Ḥawrān on the eastern border of the Balkhā and down to Arabia; other branches had joined the Tanūkh.

ASAD [see SAD].

ASAD b. ʿABBĀD ALLĀH b. ASAD AL-KASB (of the Kārīest of Bagdād; not al-Kaṣhrīyān, as sometimes printed in error), governor of Kūrāsān, 106-9/724-7 and 117-20/735-8, under his brother Khalīd b. ʿAbbād Allāh [q.v.], governor of al-ʿIrāq and the East, in the reign of Hīshām b. ʿAbd al-Malik. His first period of governorship coincided with increasing pressure by Turkish forces against the Arabs in Transoxiana, which he was unable to counter effectively, although he conducted successful raids into the fringes of the Parapamisus. In 107/726 he rebuilt the city of Balkh (destroyed by Kutayba b. Muslim after the rising of Nēzāk) and transferred the Arab garrison troops to it from Barūkhān. The Caliph was forced to remove him from office, however, owing to his violence against the local Muṣarītes. But when the disorders in Transoxiana and Eastern Kūrāsān came to a climax with the revolt in 110/734 of al-Ḥārīth b. Suraydī [q.v.], supported by the native princes, Asad was reappointed to the province. He drove the rebel forces across the Oxus but in spite of a raid towards Samarkand failed to restore the Arab position in Ṣughd. In order to control the disturbed sector of Tūrghānāstān he established a garrison of 2500 Syrian troops in Balkh in 118/736. In the following year he led an expedition into Kūttal, but the local princes called for support from the powerful khākān of the Tūrghsān, Sū Lu, who drove Asad back to Balkh with severe losses (1 Shawwāl 719/
1 October 737). The joint forces of the Tūrgesh and the princes of Shughd, supported by al-Ḥanīf b. Surayqī, now crossed the Oxus in their turn, to make a raid on Khurāsān. Asad, with the Syrians from Balkh and some local forces, surprised the main body at Khurāsān, and the remainder were all but cut off in their retreat (Dhu 'l-Hijdād 119/December 737). By this fortunate victory Asad restored the Arab power in Eastern Khurāsān but himself died a few months later (120/738). In his second government, as in his first, he had had to take severe measures against the emissaries and local agents of the 'Abbāsids [q.v., p. 15 above], but he also endeavoured to reform the local administration, and gained the friendship of many diṭkāns, who applauded him as a prudent "steward" (kathṭūdā) of his province. Among other nobles, Sāmānkhudāt, the ancestor of the Sāmānīd [q.e.] dynasty, was converted by him to Islam, and named his eldest son Asad in his honour. The village of Asadābadh near Nāyshābūr is said to have been built by him, and remained in the possession of his descendants until the government of 'Abd Allāh b. Tāhir. In Kūfa also, the suburb of Sūk Asad was established by and named after him.

Asad b. al-Furāt b. Sinān, Abū 'Abd Allāh, scholar and jurist of the 2nd-3rd/8th-9th century, born at Harrān (Mesopotamia) in 124/739. At the age of two he went with his father to live in Ifrīqiya. He completed his early studies there, and in 172/788 went to Medina, where he received an initiation in Mālikism from Mālik b. Anās himself. From there he went to 'Irāq, where he profited by the teaching of several disciples of Abū Ḥanīfā. The lessons he received from Mālik provided him with the material for his great work, the Asadīyya. On his return to I'tīqāiya, he established himself as a master in the science of ṣadīq and as an eminent jurist; he was appointed by the Ḥablāhid amīr Ziyādat Allāh bādī of al-Kayrawān, jointly with Abū Muṭbih (203/818), an unusual division of this office between two holders. Of a violent nature, he sometimes quarrelled with his colleague and disagreed with the famous Saḥnūn, a Mālikite doctor whose Mudawwana outlived the success of the Asadīyya. His passionate convictions and perhaps his belligerent energy led to the appointment of this man of learning as amīr, leader of the expedition which left Sūs in 212/827 to attack Byzantine Sicily. He marched at the head of the Muslim troops and took the first step towards the conquest of the island by the capture of Mazzara. He died of wounds or of the plague before Syracuse in 213/828.

Asad Allāh Isfahānī, celebrated Persian sword-maker (shamsihār) of the time of Shāh 'Abbās I. It is said that the Ottoman sultans presented a helmet to Shāh 'Abbās, and offered a sum of money to anyone who could cleave the helmet in two with a sword. Asad made a sword with which he achieved this feat, and, as a reward, Shāh 'Abbās remitted the tax of the sword-makers, who continued to obtain exemption until Nāḏīr times (see A. K. S. Lambton, Islamic Society in Persia, London 1954, 25). For a description of Asad Allāh's work, see Survey of Persian Art, iii, 2575.

Asad al-Dawla, a title held by several princes, of whom the most important was Aslān b. Mīrād [q.v.].

Asadābād, town in al-Dībāl, 7 jārsāh or 54 kms. southwest of Hamadān, on the western slope of the Alwand Kūh at the entrance to a fruitful well-tilled plain (5659 ft. high). As a permanent caravan-station on the famous, ancient highway Hamadān (Ekbatana)-Baghdād (or Babylon), it is a settlement reaching back into antiquity, and (according to Tomasek) is probably the 'Aḥṣarātsixa of Isidor of Charax and the Beltra of the Tabula Peutingeriana (cf. Weissbach, in Pauly-Wissowa's iii, 264). In the Arab Middle ages, and even into the Mongol period, Asadābād was a flourishing, thickly populated place with excellent markets, and its inhabitants were considered well-to-do because of the rich yield of their domains, to which canals gave a plentiful supply of water. In 1872, according to Bellew, it was a fine village with some 200 houses, some of which were occupied by Jewish families. The Persians call it, according to the accounts of European travellers, Asadābād (Petermann), also Sa'dābād (Dupré, Petermann) or Sahadābād (Ker Porter). In 514/1120 there was fought at Asadābād a battle between the two Saldājūk sultans Mas'ūd of Mawṣil (Mosul) and Maḥmūd of Iṣphān, which resulted in favour of the latter. 3 jārsāh from Asadābād there stood imposing buildings of Sāsānian times which the Arabs called Mālha or Maṭbakh Khisār, i.e. the Kitchen(s) of Chosroes; for the explanation of this name cf. the legend deriving from the Risāla of Mis'ār b. Muhāhil in Yākūt, iv, 593 s.v. Maṭbakh Khisār.

Asadi, this poetical name (tabak) is probably that of two poets born at Tūs (Khurāsān): Abū Naṣr Ahmad b. Maṃṣūr al-Tūsī and his son 'Alī b. Ahmad. According to the extremely doubtful statement of Dawlatšāh, the father was the pupil of Firdūsī (born ca. 320/932-4), while the epic composed by 'Alī b. Ahmad is precisely dated 458/1066; H. Etché concludes from this that it is impossible to attribute to the work of Houdas and R. Basset the works placed under the name of Asadi. Thus Abū Naṣr, about whom it is only known that he died during the rule of Mas'ūd al-Gharnawī, becomes the author of the Mundardī ("Debates"), which show analogies with the Provençal tensones, and are consequently important from the point of view of literary history,
Apart from their originality of matter and form. On the other hand, CAII b. Ahmad, situated at the court of the prince of Arran, Abu Dulaf composed on the advice of a minister, his Gerzasp nama, the oldest of the epics complementary to the Shakh-nama of Firdausi: this work is remarkable not only for its spirited narrative and for its style, but also for its supernatural episodes and philosophical discourses which foreshadow the later development of the Persian epic. The valuable Lughat-i Furs, a dictionary of rare words with quotations from Persian poetry, was probably written after the epic. A copy of the pharmacopoeial treatise of Abu Mansur Muwaffak b. Ali of Harat dated 447/1055-6 one of the oldest Persian manuscripts, is in the handwriting of Ali b. Ahmad, and is dated and signed by him. K. I. Tchaikin has tried to show that all these works are by one and the same author, Abu Mansur Ali b. Ahmad (Sadatellov Academici Nauh SSSR, Leningrad 1934, 119-59; resumé by H. Massé in introd. Gerzasp-nama).

AŠAF B. BARAKHYA (Hebrew Asaf b. Baraka'ya), name of the alleged waqf of King Solomon. According to the legends of thehouse of Solomon, he was a confidant, and always had access to him. When the royal consort Dariyada was worshipping idols Asaf delivered a public address in which he praised the apostles of God, Solomon among them, but only for the excellent qualities he had manifested in his youth. Solomon in anger at this took him to task, but was reproved for his speech by the introduction of idol-worship at the court. This was then done away with and the consort punished; the king became repentant.

AŠAF-DJĀH, title of the Niğam of Haydarabad [q.v.].

AŠAF KĀN Abu 'l-Hasan, second son of Djahāngīr's waqf-i-kul. Titimad al-Dawla Ghīyāth Bāgh and elder brother of Nūr Djāhān. After Nūr Djāhān's marriage to Djahāngīr in 1020/1611 Abu 'l-Hasan became Khān-sūrān with the title of I'īlūkān Khān. In 1021/1612 his daughter Ardjmand Banu Begam Mumtaz Mahal married Prince Khurram, the future Shāh Djāhān. He himself received the title of Ašaf Khān in 1023/1614 and attained in 1031/1622 the rank of 6,000 shāh and wādūr and was appointed sūḥābār of Bengal in 1033/1623. In 1025/1616 the imprisoned Prince Khusraw, eldest son of Djahāngīr, was delivered over to the charge of Ašaf Khān, now sharing the real power in the empire with Nūr Djāhān, Titimad al-Dawla and Prince Khurram. Despite his negligence in allowing Mahābāt Khān, the enemy of the Nūr Djāhān faction, to capture Djahāngīr on the banks of the Jhelum in 1035/1626, his own flight to Atāk and eventual seizure there by Mahābāt Khān's forces, Ašaf Khān survived to become governor of the Pandjab and waqf.

Ašaf Khān quickly despatched the news of the death of Djahāngīr in 1037/1627 to Prince Khurram in the Dekkan. Always a supporter of the latter's succession, Ašaf Khān diplomatically proclaimed Dāwar Baksh as pādshāh at Bālimbar, pending the arrival of Prince Khurram. He also placed Nūr Djahān, who supported Prince Dāhīrīrūr, under restraint. His services in securing the succession of Shāh Djāhān were rewarded by the title of Yāmn al-dawla, the rank of 9,000 shāh and sūdūr, do-aspāsh-aspā and the office of waqf. In 1041/1631-2 Ašaf Khān was employed as commander of the Mughal armies fighting against Muṣammad-Ādī Shāh of Bidjāpur.

Ašaf Khān died in 1051/1641 and was buried in Lahore not far from Djahāngīr's tomb. A patron of Mughal miniature painting and a great builder, he left a fortune estimated, in European sources, at more than twenty five million rūpūs apart from his residences and gardens.

AL-AŞAMM, "the deaf", a sobriquet applied to several people, notably: 1. Sufyan b. al-Abbad al-Kalbī, called al-Ąṣamm, an Umayyad general famous for his eloquence, who led several campaigns against the Khāridjītes, the most notable of which, about 78/677 or 79/678, led to the crushing defeat and death of the Azrakī Khāridjīte Khāriji b. al-Fudā'ī [q.v.].

Bibliography: al-Tabari, Annales, ed. de Goeje, ii, 1018 (Cairo ed. v, 126); Dāhīz, Bayān, ed. by Ḥārūn, i, 61, 407 and ii, 264.

2. Abu l-'Abbās Muḥammad b. Ya'kūb al-Nissābūrī, called al-Ąṣamm, a celebrated doctor and traditionist of the Shāfi school, born in 247/861, died in 340/957-8, died in 340/957-8, died in 340/957-8, died in 340/957-8, died in 340/957-8; al-Muzanī (d. 320/932), who was a pupil of his at Naṣībūr, also won great renown.

Bibliography: Friīrist, 211, 212; Ibn Khalīkān, Wafayāt, Cairo 1310, i, 219 and ed. 'Abd al-Ḥamīd, Cairo, n.d., iii, 154; Dāhābī, Tabākh al-Huṣnūs (Librer Classum, etc., ed. ASAS [see ISMAILIYYA].

‘ASAS, the night patrol or watch in Muslim cities. According to Makrizi the first to carry out this duty was ‘Abdallah b. Mas‘ūd, who was ordered by Abu Bakr to patrol the streets of Medina by night. ‘Umar is said to have gone on patrol in person, accompanied by his mawla Aslam and by ‘Abd al-Rahmān b. ‘Awīl (Khīṭāt, ii, 243, cf. Tabārī, i, 5, 2742; R. Levy, ed. Ma‘ālim al-Kurba, 216; al-Ghazzālī, Nāṣīḥāt al-Mulūk (ed. Humāyūn, 13, 58). Later the ‘asas was commanded by a police officer, known as the ṣāḥib al-‘asas (Makrizi, loc. cit.; Ibn Ṭabarī, ii, 73; Nuwārī, iii, 153). Makrizi says that in his day the ṣāḥib al-‘asas was popularly known as the wa‘l-l-ṭawf (Khīṭāt, ii, 103); a ṣāḥib al-‘asas is reported in Baṣra in the time of al-Ḥādīṣī (Baladhūrī, Futūḥ, 364. On the ṭawf, apparently a synonym of the ‘asas, see also Badi‘ al-Zamān, Ma‘ālim, al-Maḥāma al-Rusūfiyya; Kālkhashālī, Ē, xxiii, 93, citing the instructions given to them in 697/1297 by the Sultan). In Mamlūk times there were also night patrols known as asḥāb al-‘arbā‘, coming under the authority of the Wālī, or chief of police; in Spain they were called ṣa‘īdūn (Makrizi, Subḥ, i, 135).

In the East, a diploma issued by the dā‘īdīn of the Sa‘īdī family of Sandgar (id. 552/1157) orders the ma‘ārīf of Rūyūs to appoint ṣa‘īdūn in the town wherever there may be the suspicion of vice and corruption (‘Atabat al-Kalbāt, ed. Muḥammad Ǧażwīnī and ‘Abdāl Ikbāl, Tehran 1950, 44).

In Ottoman times the commandant of the ‘asas (‘Assadāb) was a Janissary officer (according to ‘Oṯmān Nūrī the ṣurūdāb of the 38th būlāk, according to Hammer from an unspecified regiment). He was in charge of the public prisons and exercised a kind of supervision over public executions. He attended meetings of the Diwan of the Agha of the Janissaries and at the Saray and the Porte, in case anyone was to be handed to him for execution. He also played an important role in public proceedings. He received one tenth of the fines imposed by the Su Dağlı for drunkenness and similar offences by night, though not by day; in addition the ‘asas levied a due (Rawsī or ‘Assesīyye) from every shop. (Ewliyā Celebi, i, 517 = Hammer’s translation, i, 2, 108-9, attributing their foundation to Mehemmed 11; ‘Oṯmān Nūrī, Mejidīl-i Umār-i Beledīyye, i, 901-2, 954; Omer Lutfi Barkan, Osmanlî İmparatorluğu Zorat Ekonomisinin Hukuţ ve Mall Esasları I Kânsular, Istanbul 1943, 69, 70, 134, 139, 147, 160, 162, 163, 164, 178, 400).

In Saafawi Persia the night patrols were under the command of the dārūqāh and were called abādāh (q.v.) and constable as well as ‘asas. (Minorsky, Taḥḥīrat al-Mulūk, 149). In 19th century Shīrāz the head of the night watchmen was known as mir ‘asas (Ann K. S. Lamton, Islamic Society in Persia, London, 1954, 14-15).

In Ghārdāz in the other cities of the Māzāb, the organization of night watchmen not only assures public security and morals, but possesses a secret and almost absolute authority, superior even to that of the ūlāma of the ‘Aʿzābā and the Djāmā′s of the laymen, in the important affairs of the community. (M. Vigouroux, La garde de nuit à Ghārdāz, in Bulletin de Liaison Saharienne, no. 9, Algiers 1952, 9-16). The minaret of the Abādī mosque in the Māzāb is called ‘asās, ‘watchman. (M. Mercier, La civilisation urbaine du Māzāb, Algiers 1922, 60 f.).

The term ‘asās is used in North Africa in the sense of “night-watchman”. R. Brunschvig (La Berbérie orientale sous les Hafsides, ii, 203) uses it in connection with the night-watchmen in the sēks at Tunis. It is also found in Budget Meakin, The Moors, London 1902, 174) to denote the watchman who keeps guard at night over the caravans which have halted in the villages; the same custom, but without the word being used, is mentioned by M. Rey (Souvenir d’un voyage au Maroc, Paris 1844, 124). At Fès, the word was used at the beginning of the 20th century to denote not only night-watchmen, but policemen in general.

Whether the word ‘asās is indicated or not, the use of guards at night, particularly in the central market, at warehouses and on the ramparts, was the general practice in North African towns up to the advent of the French. There is evidence of its use in Algiers (R. P. Dan, Histoire de Barbare et de ses corsaires, Paris 1637, 102), where the ‘asās and his agents patrolled the main streets at night, and in Fes (Leo Africanus, Description de l’Afrique, ed. Épaulard, Paris 1956, i, 206), where “four police officers, not more”, went the rounds from midnight until 2 a.m., and where the central market and warehouses were guarded by Berber porters or zarīṣuwa (R. Le Tourneau, Fès avant le Protectorat, Casablanca-Paris 1940, 196), while the police of the ward commanders (‘asāsā) kept watch on the ramparts (ibid., 253). At Wazzān, the head of the family of the Shūfā of the town paid each night 58 guards who kept watch over the city (Budget Meakin, The land of the Moors, London 1901, 325), while at Sāli, the Moroccan army took part in guarding the city by night (ibid., 200).

In Spain, the term ‘asās does not appear to have been used. E. Lévi-Provençal (Xe siècle, 253), mentions the use of the word darrib to denote night-watchmen; the person responsible for nocturnal security was sometimes known as ṣāḥib al-layl, which is apparently the equivalent of the term: ṣāḥib al-shūrfa (E. Lévi-Provençal, Hist. Esp. Mus., iii, 155, following al-Maḥāmī, Analectes, i, 134).

(Le Tourneau)

AŚFAR (A.), yellow: also, in distinction from black, simply light-coloured. Some Arab philologists and exegetes indeed claim for asfār also the meaning “black”; see the discussions thereon in the Khitānat al-adab, ii, 465. The Arabs called the Greeks Banū ‘l-Asfar (i.e. Banū al-Asfār, i, 274). ab
infra) according to Tabari (ed. de Goeje, i, 357, 17; 354, 16) signifying "Sons of the Red One" (Esau). In the Hadith mention is made of the contest of the Arabs with the Banu 'l-Asfar and of the conquest of their capital Constantineople (Musnad Ahmad, ii, 174). Mulāh Banu 'l-Asfar (Akbâr, ed. vi, 95, 14) = the Christian princes, especially those of the Rûm (ib. 98, ab infra; cf. Abû Tamâm, Dîwan, ed. Beirut. 18 ult. in a poem to Al-mu'tasîm after the battle at 'Amurîfâ). Later this designation was applied to Europeans in general, especially in Spain. Ta'rikh al-Sufy (Spanish Era) can thus be best explained; other views in ZDMG, xxxii, 626, 637. Many genealogists have explained Asfar as the name of the grandson of Esau (2oüpég in the Septuagint, Gen. 36, 16) and father of Rûmîl (Re'ü'il, Gen. 36, 14), ancestor of the Rûm. According to the explanation of De Sacy (Not. et Extr., ix, 437; Journ. As., 3. Serie, Pt. i, 94), which Franz Ermann accepts (ZDMG, ii, 237-241), the designation Banu 'l-Asfar was a literal translation originally referring to the Flavian dynasty, then became extended beyond it to the western nations. From his travels among the Nuṣayris [q.v.] H. Lammens relates that they designate the Emperor of Russia Mâlik al-Asfar (Au pays des Nosairis in Rev. de l'or. chresien, Paris, 1900, 42 of the separate edition).

ASPÂR B. SHIRAWAYHÎ. (Aspar the son of Shêrôd), a Daylamite condottiere, to be more exact a Gilie, who played an important rôle in the civil wars which followed the death in 304/917 of the 'Alid, Ḥasan al-Utrush [q.v.], the master of Tabaristân, and put an end to the domination of the 'Alids in this region. He made his appearance with another Daylamite condottiere, Mâkân b. Kâkûy (Ar. another Daylamite brigand, Mâkân b. Kâkûy (Ar. Kâkî), in 311/923, in the struggles which brought al-Utrush's son-in-law and successor, Ḥasan b. al-Kâsim, surnamed al-dâ'î al-aghrîr, "the little misi-ciery", into conflict with some of al-Utrush's sons, Abu 'l-Husayn and Abu 'l-Kâsim. He revolted against Mâkân or was dismissed from his army by the latter for his execrable conduct, and entered the service of the Sâmânîd prefect of Nâysâbûr. After the death of Abu 'l-Kâsim in 312/925, Mâkân proclaimed one of the latter's sons, Îsâmîl, in opposition to one of his nephews Abû 'All, whom he had imprisoned in Dîjrûdân; Abû 'All succeeded in escaping, killing his custodian, Mâkân's brother, and appealed to Aspar (315/927-8). Aspar came to Dîjrûdân and with 'All b. Khurshîd, another Daylamite, the leader of Abû 'All's army, defeated Mâkân and expelled him from Tabaristân. After Abû 'All's death in the same year, Mâkân recovered Tabaristân and Aspar returned to Dîjrûdân, where he was appointed governor by the Sâmânîd amir Nasr. Then with the help of the Gilie Mârdwâdî b. Ziyâr, he again took possession of Tabaristân. Mâkân had brought the Dâ'î Ḥasan back to power and they then tried to take Tabaristân from Aspar, but were routed and the Dâ'î was killed in the battle by Mârdwâdî. In this way the 'Alid dominion in Tabaristân came to an end, for Aspar seized the other 'Alids and sent them to the Sâmânîd at Bukhâra (316/928-9).

Aspar, now master of Tabaristân, extended his power over Dîjrûdân, over Rary (from which he expelled Mâkân), over Kazwîn and the other towns of the Ḍîbâl. However he lefts Āmul to Mâkân on condition that he did not seek to dominate the rest of Tabaristân. He proclaimed the sovereignty of the Sâmânîd. He removed his family and treasures to Alamût (Ibn al-Ağhîr: Kâlî'st al-Mawt), the famous future fortress of the Îsmâ'îlîs to the North of Kazwîn, which he took by a ruse. Within a short time, he conducted himself as an independent prince, adopted the external marks of sovereignty at Rayy (golden throne and crown) and defied the Sâmânîd and the Caliph. At this point the Caliph al-Muktađîd sent an army against him, under the command of his maternal uncle Hârûn b. Gârbîr, which Aspar completely routed near Kazwîn. However, Asfâr found himself the object of the hostility of both Mâkân, who had not renounced his claims to Tabaristân and Dîjrûdân, and the Sâmânîd, who marched against him and reached Nâysâbûr. Asfâr's minister persuaded his master to make peace with the Sâmânîd, paying him tribute, and recognizing his suzerainty. In this manner Asfâr avoided war and took advantage of the situation to further extend his authority by deceit and fraud. He became increasingly tyrannical, took the most fearful revenge on the people of Kazwîn for having helped Hârûn b. Gârbîr, and, in order to pay the tribute to the Sâmânîd, collected a poll-tax of one dinar per head on all the inhabitants of his possessions and even on foreign merchants in the country, in fact the dîyatî (the word occurs in al-Masûdî).

His tyranny caused his lieutenant Mârdwâdî to rebel against him; the latter made an alliance with the prince of Shâmrân in Tûrum, Sallâr, and with Mâkân, and won over a large part of Asfâr's troops. After fleeing to Rayy, where he was only able to collect a small amount of money, Asfâr wanted to set out for Khurşûn and reached Baybak; then he turned back towards Rayy, his purpose being to reach Alamût so as to regain possession of his treasures there, raise new troops and take up the struggle again. But on the way, he was overtaken by Mârdwâdî, who cut his throat (there are several versions of this occurrence). The chronology of events between 316 and 319 is not well established: Ibn al-Ağhîr gives them under 316 and 319 but Ibn Isfandîyâr under 319. The latter is the most likely date for Asfâr's death. It is with Asfâr that the domination of the Daylamites in North-West Iran really begins, continuing with Mâkân and Mârdwâdî, and then the Buwayhidîs. According to al-Masûdî, who stresses Asfâr's behaviour at Kazwîn (the muwâhhdîn thrown from the top of the minaret, the suspension of the prayers, the ruined mosque), he was not a Muslim.

ASFÂR, ASFÂL (Fr. Safî, Sp. Safí, Port. Cânem or preferably Safim), town and port on the Atlantic coast of Morocco, a few kilometers to the south of Cap Cantin; about 25,000 inhabitants in 1936, and about 70,000 in 1953, of whom, in round figures, 62,000 were Muslims, 3,500 Jews and 4,000 Europeans.
Safi does not appear to date from any very considerable antiquity. Al-Bakri (sth. uth.) mentions it, without treating it as a place of any great importance. Al-Idrīsī in the following century considers it to be a relatively busy port, though its roadstead was not very safe. According to the same geographer, this was the point where the flotilla of roadstead was not very safe. According to the same mentions it, without treating it as a place of any great enclosure, which contained a castle called ribdh which they turned into their citadel (now Kechla). Almost the whole of these fortifications still survive. Safi was the main Portuguese stronghold in Southern Morocco. The Portuguese made it the centre of the manufacture of the rugs called hambeils (Ar. hanbîlêl), which were one of the basic articles of their trade with the rest of the Barbary States, with the Western Sahara (through their trading post at Arguin) and with Negro Africa (through their trading post at Mina on the Gulf of Guinea). Enterprising and bold captains (governors), the most famous of whom was Nuno Fernandes de Ataide, working through native notables, especially through one man who seems to have been a great chief, Yaýhâ b. Taûfîfî, gave Safi a vast military and political sphere of influence which they turned into their citadel (now Kechla). Almost the whole of these fortifications still survive. Taûfîfî, gave Safi a vast military and political sphere of influence which they turned into their citadel (now Kechla). Almost the whole of these fortifications still survive. Safi became the main port of the Saências and, owing to its nearness to Marrakesh, the residence of the Sultans, and played a considerable role until the accession of the ʿAlawis; it was one of the centres of Christian trading. When the ʿAlawi Sultans transferred their residence to the North (Fez and Meknes), the activity of Safi declined to the advantage of Rabat; yet European merchants were still numerous there at the end of the 18th century. In the 19th century the town's decline became increasingly evident. The establishment of the French Protectorate gave Safi a new lease of life; it is today a busy port, exporting the agricultural produce of the ʿAbda region and the Louis-Guettî phosphates. Recently the number of factories for producing salted goods has been increased. The name of one of the two quarters of the old ribdh has been preserved, whilst the other is absorbed in the old Portuguese walls.

From 1487 (?) to 1542, Safi was the seat of a bishoeripic, held by Portuguese prelates, the best known of whom was D. João Sutil (1512-36); the Encyclopaedia of Islam remains of a Christian church, which was probably the Cathedral, are still to be seen.

(H. Basset and R. Ricard)
deeply involved in politics. After the fall of King Nu'mān (in 501 or 502), the Bakr had begun their raids into the cultivated land of 'Irbātā, along the Euphrates border where Aṣḥāb resided—presumably with the powerful Shaybān b. Tha'lāba, who shared the area in which they migrated in summer with the nomad Kays b. Tha'lāba. He threatened to bring death and destruction upon the valley of the Euphrates in an insolent reply to Khusraw II, who had demanded hostages. With equal boldness he confronted Kays b. Mas'ūd, the head of the Shaybān, when the latter—under the impression of the great losses he had suffered—went to the court (No. 34; 26). Thus the poet may be said to have helped to bring about the battle of Dhu Kār (605). If the stray and corrupted verses 5, 32-50 do indeed refer to Ḣālāb b. Ḳābiṣa, then he was also active in that change that soon brought the victors of Dhu Kar under Persian influence again. In his home country, he interceded in favour of the rightful prince, Ḥawdāha, to whom he was indebted, and ridiculed the usurper al-Ḥārīūth b. Wa'la (7, 4-5; 30). Meanwhile he had left the Shaybān in favour of the Kays b. Tha'lāba, because he considered that the Shaybān had violated the honour of his tribe (6; 9). He was therefore deeply hurt, when (a few years later) he was accused in his own homeland and lost the case. Actually, he had hesitated to reach an amicable solution until his opponent opposed him with a poetaster by name of Djiḥinnām. The two met at a fair near Mecca. A mob—stirred up by Djiḥinnām—closed in on him with whips and spearstaffs, but was then dumbfounded by his verses, in which Aṣḥāb allowed Mīshāl—his demonic alter ego—to appear for the first time (14; 38; 15). He had once previously had occasion to save himself from great danger by means of a hastily improvised poem (on Samaw'āl [q.v.]). He subsequently, with or without their consent, interfered in the quarrel between 'Amīr b. al-Tufayl [q.v.] and 'Ālkama b. 'Uṯūtha (18; 19). He also defended 'Uyyayna and Khāridjā of the Fāzārā (Gaḥṣafān [q.v.]) against Zabbān b. Sawayrā, a well-known chief of the same tribe (20, 27-37; 9). This probably took place to the beginning of the twenties. As can be seen from 1, 67; 3, 32-54; 5, 62-64; 13, 69; 34, 13 al-Asbāb was a Christian.

The poet was educated at Ḥira, where the tradition of legend and poetry was broader than that of any other individual tribe. His style is rhetorical and at times (especially in 1), artificial. Connected with this is his preference for sound-effects and for sonorous (Persian) foreign words, as well as for effective endings. He occasionally treats the traditional themes of the ḫisāda with a high-handed indifference. He likes many types of allusion. Thus, for instance, Ḥurayyara waddaṣi, 9, 1, prepares one for the recurrence of the theme, only with the motto inverted, in No. 6. The praise of Mecca and his panegyric on the leaders of the Gaḥṣafān (20, 27-37), both of which are otherwise apparently meaningless, indicate the whereabouts of Aṣḥāb, who had good reason on both occasions to avoid his homeland. The first passage discloses furthermore the place where he clashed with Djiḥinnām, and the second shows Aṣḥāb's intention to proceed against Zabbān, who is left out of the panegyric on leaders of the Gaḥṣafān.

The immediate impact of the poem seems to have been confined to his anonymous (Christian?) pupils and forgers, who counted on gaining the patronage of Aṣḥāb. Their works fill almost the whole of the second part of his Diwan (No. 52-82), although the first part, too, contains many a verse which is not authentic.

AṢḤĀB HAMDĀN, properly ʿAbd al-Raḥmān b. ʿAbd Allāh, Arab poet, who lived in Kūfā in the second half of the 10th century. In his early career a traditionist and Qurʿān reader he was married to a sister of the theologian al-Ṣaḥīb, who in turn had married a sister of al-Asbāb. Later he concentrated on poetry, acting on occasion as the spokesman of the Yamanite faction. He was active in the wars that marked the governorship of al-Ḥādji-djādi and his health appears to have suffered during an expedition into Mumrān. The role which he played under ʿAbd al-Raḥmān b. al-Asbāb is best known. He took part in his campaign against the Turks and was taken captive but escaped with the aid of a Turkish woman whose passions were enflamed for him. When Ibn al-Asbāb turned against al-Ḥādji-djādi the poet's sharp tongue aided him with satires. The decisive battle at Dayr al-Damādīm resulted unfortunately; Ibn al-Asbāb took to flight, and al-Asbāb was led prisoner before al-Ḥādji-djādi, who immediately recalled to him some of his malicious songs. His extemporaneous mannerisms made him no longer: al-Ḥādji-djādi's sentence of death was carried out on the spot (83/702). The poems of Aṣḥāb Hamdān which have been preserved to us are reflexes of his adventures and political sentiments. The level of his poetry which remained curiously unaffected by the modernism of the Medinese school is considerable, both as regards his partisan verse and his treatment of the traditional motifs of erotic description. The vigour of his diction lends a certain attraction even to his handling of conventional topics.

AṢṬĀB, nicknamed "the Greedy", a Medinese comedian who moved in the circles of the grand-children of the first four caliphs and flourished in his profession in the early years of the 8th century. He is said to have survived until 154/771. The historical information about him is rather plentiful; though contaminated by much legendary material, it permits us to get a glimpse at the life of a professional entertainer in the Umayyad period. The jokes and stories connected with his name concern politics, religion, and middle-class life. The middle-class jokes come last in the chronological development of the Asbāb legend; but then, even since early 'Abbasid times, they have enjoyed the greatest popularity in Islam. Among the famous jokes under Asbāb's name, there is a brilliant parody of the foibles of hadīth transmitters: Asbāb says that he heard 'Ikrima (or some other well-known transmitter) report that the Prophet had said that two qualities characterised the true believer. Asked which they were, Asbāb replied: "'Ikrima had forgotten one, and I have forgotten the other." Even more famous is the story of greedy Asbāb who tries to get rid of annoying children by telling them that free gifts
are being distributed in some place, and then runs after them because he thinks his story might be true. **Bibliography:** al-Aghānī, vii, 32-105; O. Roscher, Abriss, i, 235-9; F. Rosenthal, *Humor in Islam and its Historical Development* (Leiden 1956), which centres around ʿAshāb.

(For Rosenthal)

**Aṣḥāb** [see ʿAshāb].

**Aṣḥāb al-Ḥadīth** [see Ahl al-Ḥadīth].

**Aṣḥāb al-Kahf**, “those of the cave”. This is the name given in the ʿKūrān, and further in Arabic literature, to the youths who in the Christian Occident are usually called the “Seven Sleepers of Ephesus”. According to a legend, in the time of the Christian persecution under the Emperor Decius (250-52), seven Christian youths fled into a cave near Ephesus and there sank into a miraculous sleep for centuries, awoke under the Christian Emperor Theodosius, were discovered and then went to sleep for ever. Their resting place and grave was considered, at any rate since the beginning of the 6th century A.D., as a place of worship.

The story of the Seven Sleepers of Ephesus is found in various Oriental and Occidental literatures, particularly in Greek and Syriac; the Greek version would appear to be the earliest one (texts edited by Land, I. Guidi, Bedjan, Alligier). Since Muhammad the legend is handed down in Arabic as well.

Muhammad has got to know the legend, like so many other stories of Jewish and Christian origin, has assimilated it and put it to edifying use in the ʿKūrān (viii, 9-26; hence the whole sūra is called ʿsūra al-kahf). The main outlines are clearly recognisable: The youths and their flight into the cave, so as to be able to remain true to the belief in the one God; their miraculous sleep, which lasts 309 years (v. 25), but which appears to them as at the most one day (v. 19); the circumstances of their discovery (by means of the ancient coinage, with which one of them attempts to buy provisions in the city). But some details remain doubtful. Muhammad himself points out that the number of the youths is variously given as three, five, or seven, and that only God really has knowledge of the length of their sleep.

It is strange that the dog who “stretches out his paws on the threshold” (v. 18), is taken into consideration when the number of the youths is given (v. 22); thus he also appears to be considered as holy. Not quite clear is the hint at the building of a place of worship over the resting place of the youths (v. 21). Particularly disputed is the expression ʿal-rakīm (v. 9: “those of the cave and (or) al-rakīm”; N.B. the definite article).

The Arabic commentators and historians have attempted to overcome the difficulties in the interpretation of the ʿKūrānic text and to fill in gaps, making use of much material from the Christian-Oriental tradition about the Seven Sleepers. Consequently their accounts are also of significance for the history of the transmission of the legend in pre-Islamic times. J. Koch and M. Huber have been at great pains to make use of the various reports for the history of legend and literature. Here a certain amount remains to be done. Huber’s monograph *Die Wanderlegende von den Siebenschläfern* (1910), and his translation of Arabic historians in Middle Arabic: *Forschungen*, xxvi (1909) are however still to-day useful as collections of material.

The expression al-rakīm is variously interpreted by the commentators. As the name of the dog (to whom the name ʿKūmīr is otherwise given); as a place name; and as the name for an inscription, which is supposed to have been put up in that place cf. H. Horovitz, *Koranische Untersuchungen*, 95.

Torrey suspected here a misreading for Decius, such an interpretation can however not be maintained (cf. Horovitz, loc. cit.).

Once the legend had taken root with the Muslims, it was connected with various places within the Islamic world, so with a cave in Transjordan, in Cappadocia, in East Turkistan and in Spain. This does not however alter the fact that originally it belongs to Ephesus.

In the course of time the story of “the people of the cave” has drifted into the realm of the magical. In this way can be explained the custom of hanging up leaves on which the names of the sleepers are inscribed, for the sake of ʿbarākā or for averting evil.

The name of the dog, ʿKūmīr, plays a special part. Among the Turks of East Turkistan, as in Indonesia it was still customary in recent times to inscribe letters which it was desired to protect from loss, with the word ʿkūmīr instead of “registered”.

In a treatise somewhat overloaded with symbolistic details, L. Massignon has attempted recently to do justice to the story of the Aṣḥāb al-Kahf, as it were from the inside, that is, in the sense in which it has become meaningful for Muslim believers.

ASHĀB AL-RASS, “the people of the ditch” or “of the well”, are twice mentioned in the Qur’ān (xxv, 38; lxxv, 12), along with Thamūd and other unbelievers. The commentators know nothing for certain about them, and so give widely divergent explanations and all manner of fantastic accounts. Some take al-Rass to be a geographical name (cf. Yākūt, s.v.); some hold that these people, a remnant of Thamūd, cast (rassa) their prophet Ḥanāqāl into a well (rass) and were consequently exterminated. It is also related that the mountain of the bird ‘Anfā was situated in their region. Al-Jabari mentions the possibility of their being a remnant of Thamūd, cast (rassa) their prophet and the distinction between Ashab al-Rass and other unbelievers. The commentators know nothing for certain about them; just as little do we.

ASHĀB AL-RA’Y, also AḤL AL-RA’Y, the partisans of personal opinion, a term of depreciation applied by the aḥl al-hadīth (q.v.) to their opponents among the specialists in religious law. Ra’y (q.v.) originally meant “sound opinion”, and was used of the element of human reasoning, whether strictly systematic (see ʿiṣārāt) or more personal and arbitrary (see istiḥsān), which the early specialists used in order to arrive at decisions on points of religious law. The aḥl al-hadīth, however, who rose in opposition to the ancient schools of religious law, regarded this as illegitimate; in particular they thought it wrong to reject, as the followers of the ancient schools used to do, traditions which were reported as coming from the Prophet, on account of ra’y. As a consequence of the success of this point of view in the theory of religious law (see ʿuṣūl), each group was apt to qualify those who on any particular question gave to personal opinion a wider scope than they themselves did, as aṣḥāb al-ra’y, and it became impossible for those who did, in fact, use ra’y, to recognise this and to justify it from Islamic premises. There never was a school of thought in religious law that called itself, or consented to be called, aṣḥāb al-ra’y, and the distinction between aḥl al-hadīth and aṣḥāb al-ra’ay is to a great extent artificial. From the point of view of the aḥl al-hadīth, both Abū Ḥanīfa and his school and Mālik and his school belong to the aṣḥāb al-ra’ay, and they were indeed so called by al-Shaḥīḥī, Ibn Ḥusayn, and others. For adventitious reasons, Abū Ḥanīfa and his school became the principal objects of the attacks of the aḥl al-hadīth, and this gave rise to the erroneous opinion that they were the aṣḥāb al-ra’ay par excellence. Warnings against ra’y and its partisans, sometimes with explicit mention of Abu Ḥanīfa and his followers, were even put into the mouth of the Prophet, his Companions and their Successors, and thereby became themselves traditions.

ASHĀM (Turkish EŞHĀM), plural of Arabic SAMA (Turkish SEHIM), share. In Turkey the word was used to designate certain treasury issues, variously described as bonds, assignats, and annuities. The Sama are called annuities by Hammer (Leibrenten) and also in the Ottoman budget of 1862-3, where they are mentioned as rentes viagères. The description is not strictly accurate, as although the eshām reverted to the state on the death of the holder, they could be sold, the state claiming a duty
of one year’s income on each such transfer. According to Muṣṭafā Nūrī Pasha, the ʾeshām were introduced in the early years of the reign of Muṣṭafā III, when assignats on the proceeds of the customs of Istanbul and other revenues were issued to creditors of the state and other applicants, with an annual income of 5%. ʿAbd al-Raḥmān Weffil remarks that most of the proceeds were spent in the war with Russia beginning 1182/1768. The handling of the ʾeshām, he says, was at first entrusted to a muḥāfāza, and later transferred to a muḥāfaẓ. The records of the ʾEshām Muḥāfāzās Kālemi in the Istanbul archives begin in the year 1189/1775, and end in 1281/1864. According to Ẓewiadet the ʾeshām were introduced by the finance official Peykt Ḥasan Efendi, who first became baqṣdefterdar in 1192/1775, after having previously been defter-emmi. The issue of ʾeshām on provincial revenues is reported in 1198-1200/1783-5. The practice of issuing ʾeshām was continued by later Sultans, and Mḥmūd II used them to compensate the fiwar-holders dispossessed by the land reform of 1831.

The first regular bond issue in the European style dates from 1250/1840, when bearer treasury bonds were floated, carrying a high rate of interest. These bonds, which circulated like banknotes, were classified into ʾEshām-i ʾEmām aḥmad-i Mūḥāfāzā-i Nūkhāyye (see ʾkhilāma).

In 1864, in the course of the Taṣṣāṣūṯ [government] reforms, the old ʾEshām Muḥāfāzās Kālemi was abolished. Meanwhile, however, in 1274/1857, a new internal loan was floated under the name of ʾEshām-i ʾMiṣnadā, and was followed by a series of others—ʾEshām-i ʾPīrīde, ʾEshām-i ʾAtṣiyāye, ʾEshām-i Ṣadiyye. These mid-19th century loans are sometimes referred to collectively as ʾEshām-i ʾOḏbānīyye.

Bibliography: Muṣṭafā Nūrī Pasha, Nedēdī al-Wuqādā, iii, 114 f.; Taʾrīkh-i Luṣṭi, vi, 127; Taʾrīkh-i Ẓewiadet, iii (1309 A.H.), 101-2, 148-9, 286; Charles White, Three Years in Constantinople, ii, London 1845, 71 ff.; Ubicini, Lettres sur la Turquie, letter xiv; Hammer, Des osmanischen Reichs Staatsverfassung und Staatsverwaltung, ii, London 1845, 7* ff.; Ubicini, Les Finances de la Turquie, iii, (1309 A.H.), 101-2, 148-9, 286. As a member of the Islamic aristocracy, it was only natural for him to be appointed as an official of the treasury (Ibn Saʿd); he also appears as one of the notables of Kufa in 51/671, when he gave evidence against the followers of Ḥūdjī b. ʿAḍī (v.q.). (Tabarī, i, 131 f.; ʾAḍīnī, vi, 7), and again in 76/695-6, when he did homage to the Khdariī insurgent ʾShaībī b. ʿYaṣīr (q.v.) (Tabarī, ii, 928). It is generally taken for granted that he was Kādī of Kufa, but even early sources give contradictory reports of the circumstances of his alleged appointment by al-Hadījīdī (Mubarrad, Kāmil, 285, l. 20 f.; Wakiʿ, ii, 391 f.), of the persons of his predecessor (ʾShurayḥ), according to Ibn Saʿd, to the K. al-Muḥabbār, and to Wakiʿ, loc. cit.; ʿAbd al-Raḥmān b. ʿAbd Laylā, according to Wakiʿ, ii, 407 and his successor (Saʿdīd b. ʾDjabār, according to the K. al-Muḥabbār; ʾShaʾbī, according to Wakiʿ, ii, 392, 413; his brother ʿAbū Bakr, according to Wakiʿ, ii, 412 f.), and of the length of his tenure of office (a very short time, according to Wakiʿ, ii, 392: three years, according to Wakiʿ, ii, 413: an unspecified time, between three and eight years, from 79/698-9 onwards, according to Tabarī, ii, 1039, 1191). The accounts that ʾShurayḥ should have recommended Abū Burda and Saʿdīd b. ʾDjabār by his joint successors to al-Hadījīdī (Wakiʿ, ii, 392), or that Muḥāwiyya on his deathbed in 60/680 should have advised his son Yazid to avail himself of Abū Burda’s good counsels (Ibn Saʿd, iv/1, 83; Tabarī, ii, 203 ff.) are certainly apocryphal (cf. Lammens, Moḏırā I, 139). Another anecdote (Wakiʿ, ii, 409 f.; Ibn ʿAbād Ṣabīḥī, al-ʾĪdb al-Fardī, Būlāk 1293, iii, 140) makes Abū Burda peevishly complain to Muḥāwiyya of an attack by a poet. From Ibn Ḥallīkān onwards, however, the person of Abū Burda is idealised. Abū Burda died in 103/721-2 or 104/722-3. At the age, it is said, of more than 80 lunar years.

The traditional biography of Abū Burda reflect an absence of positive information, combined with the desire of fitting his name into the fictitious picture of the development of Islamic law and the administration of Islamic justice in the first century of the hiḍrā which came to prevail. He played no part in the formation of the doctrine of the school of Kufr, and he does not belong to its authorities. The one report on a judgement of his, on the ownership of household chattels, that occurs in an early source (Wakiʿ, ii, 211), represents him as undecided among the secondary opinions held in the second century (cf. J. Schacht, Originals, 278 ff.), and is therefore not authentic. In his time, the implications of the prohibition of ʾriḥā were only in the course of being worked out in ʾīrāk rather than in Kufr; the anecdotes which report that Abū Burda, having been sent by his father to Medina for study, was warned by his teacher there against the laxness of the ʾKrārians in matters of ʾriḥā, must therefore be later, although they bear ʾBāṣān ʾismādī (on this phenomenon, see
Abū Burda appeared as a transmitter of traditions because his name was used in "breathing hands", which were meant to authenticate sayings which his father was claimed to have related on the authority of the Prophet. The fact is attested already by Ibn Sa'd, but traditions themselves are quoted for the first time only by Waki'; some express repugnance for accepting government office (Waki', i, 65 ff.; ii, 22), an attitude which became fashionable only under the Abbāsids (cf. E. Tyan, Organisation judiciaire, i, 387, n. 2; N. J. Coulson, in BSOAS, xviii/2, 1956, 211 ff.); another (Waki', i, 100) aims at enhancing the reputation of Abū Burda's father, Abū Mūsā, to the detriment of that of Muḥāsh b. Jājāl (it seems to presuppose the well-known tradition about the instructions of the Prophet to Muḥāsh b. Jājāl, and could then be hardly earlier than the last third of the second century of the hijra); there are, finally, the alleged instructions of the caliph 'Umar to Abū Mūsā on the administration of justice, which appear for the first time in Waki' (i, 70 ff.); these are certainly not earlier than the third century of the hijra (cf. Tyan, i, 106 ff.). Abū Burda's reputation as a traditionist in his own right, with a respectable number of authorities from whom he was supposed to have heard traditions, had been established by the time of Abū Ḥātim al-Rāzī, and it continued to grow, together with the number of authorities from whom he was alleged to have transmitted, until Ibn Hajar could ascribe to Ibn Sa'd the statement that Abū Burda "was reliable and transmitted many traditions", although Ibn Sa'd said nothing of the sort.

A son of Abū Burda, Bilāl, became kādī in Baṣra, and authentic, contemporary information on him is ample (cf., e.g., Waki', ii, 21 ff.; Pellat, Le siècle bāzirien, 288 f.).

**AL-ASHʿARI, ABU ‘L-HĀSAN,** theologian, and founder of the school of orthodox theology which bears his name. He is said to have been born in 260/873-4 at Baṣra, and was ninth in descent from the Companion Abū Mūsā al-ʿAshʿari. Little is known of his life. He was one of the best pupils of ʿAlī b. Ḥubbār, head of the Muʿtazila in Baṣra, and might have succeeded him, had he not left the Muʿtazila for the party of the orthodox traditionists (ahl al-ʿaṣma). This change or conversion is placed in 300/912-3. In later life he moved to Baḥbād, and died there in 342/953-4.

The story of al-ʿAshʿari's conversion is told with many variations of detail. Three times during the month of Ramaḍān he is said to have seen Muḥammad in a vision, and to have been commanded to adhere to true Tradition. He regarded this vision as authoritative, and, since the traditionists disapproved of rational argument (ḥalām), he gave up this also. In the third vision, however, he was told to adhere to true Tradition but not to abandon ḫalām. Whatever be the truth of this story, it is a succinct account of al-ʿAshʿari's position. He abandoned the dogmatic theses of the Muʿtazila for those of opponents like Ahmad b. Ḥanbal, whom he professed to follow; but he defended his new beliefs by the type of rational argument which the Muʿtazila employed.

The chief points on which he opposed the doctrines of the Muʿtazila were:

1. He held that God had eternal attributes such as knowledge, sight, speech, and that it was by these that He was knowing, seeing, speaking, whereas the Muʿtazila said that God had no attributes distinct from His essence.
2. The Muʿtazila said that Qurʾānic expressions, such as God's hand and face, must be interpreted to mean "grace", "essence" and so on. Al-ʿAshʿari, whilst agreeing that nothing corporeal was meant, held that they were real attributes whose precise nature was unknown. He took God's sitting on the throne in a similar way.
3. Against the view of the Muʿtazila that the Kurʾān was created, al-ʿAshʿari maintained that it was God's speech, an eternal attribute, and therefore uncreated.
4. In opposition to the view of the Muʿtazila that God could not literally be seen, since that would imply that He is corporeal and limited, al-ʿAshʿari held that the vision of God in the world to come is a reality, though we cannot understand the manner of it.
5. In contrast to the emphasis of the Muʿtazila on the reality of choice in human activity, al-ʿAshʿari insisted on God's omnipotence; everything, good and evil, is willed by God, and He creates the acts of men by creating in men the power to do each act. (The doctrine of 'acquisition' or ḥab [q.v.], which was in later times characteristic of the Ashʿašariyya, is commonly attributed to al-ʿAshʿari himself, but, though he was familiar with the concept, he does not appear to have held the doctrine himself; cf. J.R.A.S., 1943, 246 f.).
6. While the Muʿtazila with their doctrine of al-mansila bayn al-mansilātayn held that any Muslim guilty of a serious sin was neither believer nor unbeliever, al-ʿAshʿari insisted that he remained a believer, but was liable to punishment in the Fire.
7. Al-ʿAshʿari maintained the reality of various eschatological features, the Basin, the Bridge, the Balance and intercession by Muhammad, which were denied or rationally interpreted by the Muʿtazila. Al-ʿAshʿari was not the first to try to apply ḥalām or rational argument to the defence of orthodox doctrine; among those who had made similar attempts earlier was al-Ḥarīrī b. ʿAsād al-Muhāsibī. Al-ʿAshʿari, however, seems to have been the first to do this in a way acceptable a large body of orthodox opinion. He had the advantage, too, of having an intimate and detailed knowledge of the views of the Muʿtazila (as is shown by his descriptive work, Makābūd al-Islāmiyyūn, Istanbul, 1929; cf. R. Strothmann, in Islam, xix, 193-242). His many followers came to be known as the Ḥaššariyya [q.v.] or Ashʿarīs, though they mostly deviated from him on some points.

To a European reader his argumentation differs little at first sight from that of the ultra-conservative followers of Ahmad b. Ḥanbal, since many of his proofs depend on the interpretation of Kurʾān and Tradition (cf. A. J. Wensinck, Muslim Creed, Cambridge, 1932, 91). This, however, was because his opponents also, including even the Muʿtazila,
used proofs of this sort, and he was always arguing *ad hominem*. Yet when opponents would admit a purely rational premise, al-'Ash'ari had no hesitation in using it to refute them. Once the permissibility of such arguments was established, at least for many theologians, it was possible for the Ash'ariyya to develop this side of his method until in later centuries theology became thoroughly intellectualistic. This, however, was far removed from the temper of al-'Ash'ari himself.

**AL-ʿASH'ARI, ABŪ ʿMUṢĀ**

Ibn ʿAṣīr, Kays, Companion of the Prophet and military leader. Born about 614 A.D., Abū Mūsā, a native of the Yemen, left South Arabia by sea with several of his brothers and members of his tribe (the Ash'ar) and joined Muḥammad at Ḳhaybar at the time of the famous expedition against the Jews of that oasis (7/628) to swear allegiance to him (the information given in some sources [for example Ibn Ḵadżar, Ṭabḥāb, ii, 1265] according to which he was one of the emigrants who went to Abyssinia, is therefore most unlikely to be authentic; Ibn ʿAbd al-Barr, Ḵistāʿih, Ḵaydar-ābād 1318, 392, no. 1622; 678-79, no. 678). In 8/630 he took part in the battle of Ḫunayn (al-Ṭabar, i, 1667); in 10/631-2 he was sent to the Yemen with Muʿāṣa b. Ṭabāqal to spread Islam there and was one of the lieutenants of Muḥammad and then of Abū Bakr in that region. Umar appointed him governor of Baṣra when he recalled al-Mughira b. Ṣhubaʿa [q.v.] from that post in 17/638 (al-Ṭabar, i, 2529; see also 2388). At the request of the inhabitants of Kūfah, Umar appointed him governor of that town in 22/642-3, but after retaining him in the office for a few months, until the reappointment of al-Muḥirra al-Ṭabar, i, 2678 f.), he sent him back to Baṣra.

As governor of Baṣra, Abū Mūṣā organised and carried out the occupation of Ḳhūzistān (17-21/638-42), of which he must be considered the conqueror (Caetani, *Annali*, 16 A.H., para. 261). The capital Sūk al-ʿAḥwāz (or simply al-ʿAḥwāz) fell into his hands as early as 17/638, but the campaign continued and offered many difficulties, for the numerous well fortified towns of the region had to be subdued one after the other, some of them having to be retaken after 21/644, the date of the fall of the second capital of Ḳhūzistān, Tustar (= Ṣhuṣṭar or ʿṢuḥṣhtar). Abū Mūṣā also took part in the conquest of Mesopotamia (end of 18-20/639-41), uniting his forces with those of ʿIyāḍ b. Ghaṃ, and in the campaign on the Iranian plateau, where he is mentioned as being present at the battle of Niḥāwand; the occupation of several towns is ascribed to him (al-Dinawar, Kumm, Kāshān, etc.).

In 23/643-4, in a bloody but indecisive battle, he defeated numerous Kurdish tribes which had gathered with hostile intentions at Bāyrūḏ (in the province of al-ʿAḥwāz) and had attracted many of the inhabitants of the territory to their ranks; he laid siege to the town, where the survivors of the insurgents had found shelter, and took it after having subdued the rest of the country. It was on account of the distribution of the booty taken on this occasion that an accusation was made to the Caliph against him, to whom he had to justify his conduct (al-Ṭabar, i, 2708-13). After this success, he advanced into Fārs (end of 23/644) and, in several expeditions, gave support to ʿUṯmān b. ʿAbī ʿl-Ḵāṣ, who had begun the conquest of this province from Baṭrāyn and ʿUmān (al-Balādūrī, Ṭuḥāṣ, 387).

There is an episode showing that discontent against Abū Mūṣā was already threatening in 26/646-7 (al-Ṭabar, i, 2829, where a movement of insubordination amongst his troops is reported under the year 29, which in fact took place in 26: Caetani, *Annali*, 26 A.H. para. 38). But the most serious protest against the actions committed by him was brought to Medina by a delegation of Baṛṣāns in 29/649-50 (al-Ṭabar, i, 2830), whereupon the Caliph ʿUṯmān decided to replace him at Baṣra by ʿAbd Allāh b. ʿAmīr. However Abū Mūṣā had won the respect of the inhabitants of Kūfah to such an extent, that they demanded his reappointment, when they drove out the governor Saʿīd b. al-ʿĂṣa in 34/654-5 (al-Ṭabar, i, 2930-31; Risdal, *Istihsan* ii, 31), and he was governor of the town at the time of ʿUṯmān's assassination. Upon the election of ʿAll, Abū Mūṣā took the oath of allegiance to him in the name of the Kūfans (al-Ṭabar, i, 3089; al-Masʿūdī, *Burāqī*, 296 etc.), retaining his office, when the other governors of ʿUṯmān were dismissed (al-Yaʿṣībī, ii, 208); but when war broke out between ʿAll and ʿAḥṣāʿ, Ṭalḥa and al-Zubayr, he called on his subjects to remain neutral (al-Ṭabar, i, 3139; al-Dinawar, 153 ff., etc.), and, in spite of pressure, did not relinquish this attitude; as a result the partisans of ʿAll expelled him from the town at the first opportunity (al-Ṭabar, i, 3145-9, 3152-4) and the Caliph wrote him a letter of dismissal couched in the severest terms (al-Ṭabar, i, 3173; al-Masʿūdī, *Burāqī*, iv, 308; cf. al-Yaʿṣībī, ii, 220); yet a few months later he granted him ʿamān (Naqr b. Murāḥīm al-Minḵārī, *Waḥš al-Ṣifīn*, ed. ʿAbd al-Salām Muḥammad Ḵārūn, Cairo 1365, 572; al-Ṭabar, i, 3333).

Abū Mūṣā was one of the two arbitrators appointed at Ṣīfīn in 37/657 to settle the dispute between ʿAll and Muʿāṣīwīya and more exactly the arbitrator nominated to represent ʿAll, whose supporters had obliged him to choose someone neutral, so certain were they that the decision would be in their favour (for the details of the arbitration, see *ʿAtī b. Abī Ṭalīb*). After the meeting at Adḥrub, Abū Mūṣā withdrew to Mecca, but when Muʿāṣīwīya sent Būṣ b. Abī Ṭaṣlī to occupy the holy cities (40/660), he was afraid of his vengeance, for at Adḥrub he had opposed his election to the Caliphate, and according to some sources, he took to flight; Būṣ reassured him (see Caetani, *Annali*, 40 A.H., para. 8, note 3 for the different versions of this episode). After that Abū Mūṣā took no further part in politics, as is shown by the uncertainty of the date of his death (41, 42, 50, 52, 53; 42 is the most probable date).
Abū Mūsā was very highly thought of for his recitation of the Qur'ān and the prayers, for he had a pleasant voice (Ibn Sa'd, Ṭabākī, ii/2, 106), but above all his name continues to be connected with Qur'ānic studies, for he established a muṣḥaf which locally outlived the composition of the vulgate of Uthmān (see Ch. Pellat, Milieu de l'Ismaïlisme, 73 ff.).

Bibliography: All the chroniclers and historians of early Islam, and all the collections of biographies of early personalities speak of Abū Mūsā (the main ones have been indicated in the body of this article). Numerous quotations are to be found in Caetani, Chronographia islamica, 42 A.H., 479; idem: Annali, Indices and vols. vii-x, passim; Ibn Abī l-Hadīd, Sharh Nahj al-Balāgha, Cairo 1329, iii, 287-9, 291, 293 f., iv, 199 f., 237 f. On the conquest of Khūḏistān: Welhausen, J., Sitten und Vorarbeiten, vi, Berlin 1890, 94-113. (L. VECCIA VAGLIERI)

Aš'āriyya, a theological school, the followers of Abu'l-Ḥasan al-Aš'ārī [q.v.], sometimes also called Aš'ārīya. (The history of the school has been little studied, and some of the statements in this article must be regarded as provisional).

External history. During the last two decades of his life al-Aš'ārī attracted a number of disciples, and thus a school was founded. The doctrinal position of the new school was open to attack from several quarters. Apart from members of the Muʿtazila, certain groups of orthodox theologians attacked them. To the Ḥanbalīs [q.v.] their use of rational arguments was an objectionable innovation. On the other hand, to the Māturīdīs [q.v.], who also defending orthodoxy by rational methods, some of their positions seemed too conservative (cf. the criticisms made by an early member of that school in Sharḥ al-Fīkh al-Akbār ascribed to al-ʿAmīn). Despite such opposition the Aš'āriyya apparently became the dominant school in the Arabic-speaking parts of the 'Abbasid caliphate (and perhaps also in Ḥūraṭān). In general they were in alliance with the legal school of al-Ḥāʾī [though al-Aš'ārī's own school remained too conservative (cf. the principles made by an early member of that school in Šarḥ al-Fīkh al-Akbār ascribed to al-ʾAmīn)]. Despite such opposition the Aš'āriyya apparently became the dominant school in the Arabic-speaking parts of the 'Abbasid caliphate (and perhaps also in Ḥūraṭān). In general they were in alliance with the legal school of al-Ḥāʾī [though al-Aš'ārī's own school remained too conservative (cf. the principles made by an early member of that school in Šarḥ al-Fīkh al-Akbār ascribed to al-ʾAmīn)].

From the middle of the 5th/11th century there was a change in method. Ibn Khaldūn (tr. de Slane, iii, 61) speaks of al-Ghazālī as the first of the "moderns", doubtless because of his enthusiasm for the Aristotelian syllogism, but there are already in al-Dīwānīyyā traces of methodological advancement (cf. Gardet and Anawati, op. cit. infra, 73). It was al-Ghazālī, however, that steeped himself in the doctrines of Ibn Sīnā and others of the philosophers until he could attack them on their own ground with devastating success. Little more was heard of the philosophers, but from this time onwards their Aristotelian logic and much of their Neoplatonic metaphysics was incorporated in the teaching of the Aš'āriyya. This teaching rapidly became intellectualised in a bad sense, sometimes even views of doubtful orthodoxy were taken over, and the philosophical propenomena occupied more space and attention than the strictly theological doctrines (notably in al-ʿĀṣī and his commentator al-Dīwānīyyā). In the end the school may be said to disappear in a blase of philosophy.

Aš'ārī, Abū Muḥammad Maḍīkārī b. Kays b. Maḍīkārī, of the clan of al-Ḥāṭīr b. Muʿāwiyah, a chief of Kinda in Ṣaḍramawt. The nickname, by which he is most commonly known, means "with unkempt or dishevelled hair"; he is also called, but less frequently, al-Shaddādī, "the scar-faced", and ʿUrūḍ al-Nār, said to be a South-Arabian term for "traitor". In earlier life he led an expedition against the tribe of Murād, who had murdered his father, but was taken prisoner and
had to pay 3000 camels for his ransom. In 1063 he was leader of the delegation (waṣīla) which offered the submission of a section of Kinda to the Prophet at al-Madina. It was arranged that his sister Kayla should be married to Muhammad, but he died before she arrived in al-Madina. After Muhammad's death (10/632) al-Asūlī rose in revolt with his clan and was besieged by Muslim troops in the castle of al-Nāḍjarī; according to the legend he surrendered the castle on condition of immunity for himself and nine others, but omitted to include his own name in the document of surrender, and barely escaped execution. He was, however, sent to al-Madina, where Abū Bakr not only pardoned him but married him to his own sister Umm Farwa or Qurayba (according to other reports this marriage had taken place already at the time of the delegation to Muhammad). He took part in the wars in Syria and lost the sight of an eye at the battle of the Yarmūk; he and his tribesmen were sent thereafter by Abū ʿUbayda to join Sa'd b. Abī Waḳḳās at Kādisiyya, and he commanded one of the Arab forces which occupied northern ʿIrāk. He settled in Kūfā as chief of the Kindite sector, and appears to have taken part in the expedition to Alḥarbāyḏān in 26/646-7. At the battle of Siffin he played a leading part both in the fighting and in the negotiations, and if represented as having forced ʿAll to accept the principle of arbitration and to agree to the selection of Abū Mūsā on the ʿIrākī side (see ʿALI B. ABī TALĪB). Pro-Ṣihīte tradition accordingly represents him and his whole house as invertebrate traitors. He died in Kūfā during the government of al-Ḥasan b. ʿAll (40/661), to whom one of his daughters was married. For his descendants see IBN AL-ʿASHiq, al-Asīlī.

AL-ʿASHIQ, an Arabic word meaning lover, frequently in the mystical sense. Among the Anatolian and Aḏharbāyḏānī Turks, from the late 10th/16th or 10th/16th century, it is used of a class of wandering poet-minstrels, who sang and recited at public gatherings. Their repertoire included religious and erotic songs, elegies and heroic narratives. At first they followed the syllabic prosody of the popular poets, but later were subjected to Persian influence, both directly and through the Perso-Turkic poetry of the central Turkish ʿAshīq poets. Köprüli has argued that they represent a social element distinct alike from the popular poets, the court poets, and the madrasa or convent-educated religious poets, and are the successors of the earlier Turkish bard known as ozan (q.v.). They are especially numerous in the 17th century, when we find them among the dervish orders, the Janissaries, and other branches of the armed forces. The most famous among them are Gewheri and ʿAshīq ʿOmer.

Köprüli, Türk Sazsairleri ve anlamları, iv, Istanbul 1939-40; numerous other writings by M. F. Köprüli on this subject will be found listed in Fuad Köprüli Armağant, Istanbul 1953, xxvii-l. For an account of the impression made on a young Turk in the 19th century by the ʿAshīq poets, see the autobiography of Ziyā Pasha, translated in Gibb, Ottoman Poetry, v, 40, 51-2. A contest between ʿAshīks in Mughlā is described by H. J. van Lennep, Travels in Little-known parts of Asia Minor, 1, New York 1870, 253-4. See further H. Ritter, Orientalia, i, Istanbuller Mitteilungen, i, Istanbul 1933, 3 ff. (Der Sängerweltstreit). (B. Lewis)

ʿASHIK, Muḥammad b. Uṯmān b. Rāyżid, Turkish cosmographer, born about 964/1555 in Trebizond, the son of a teacher at the Koran elementary school of the Kháṭümiyya mosque. At the age of 20, he left his native town to see the world. The geographical part of his writings (mentioned below), contains references to his travels covering Anatolia and Rumelia. He did, for instance, take part in ʿUtḫmān Pasha’s (died 993/1585) campaign in the Caucasus and southern Russia in the years 989-992/1581-1584. After 994/1585, the spent several years in Salonica, whence he participated in the 1002-1003/1593-1594— in Köläss Şinâ Pasha’s (died 1004/1596) Hungarian campaign. In 1005/1596, he settled in Damascus, where he completed the writing of his cosmographic work in Ramāḏān 1006/April-May 1058. The date of his death is not known. Muḥammad ʿAshīq’s work, Mandūsir al-ʿawālim is composed of two parts. Part I begins with the creation of the world and describes the upper world, and something of the ‘lower’, i.e. the stars, paradise and its inhabitants, and hell and its inhabitants. Part II treats the ‘lower’ world in 18 chapters. Chapters 1 to 12 are strictly geographical, and 13 to 18 are of a more general nature. In a final chapter, he speaks of the duration and the end of this world. It is a vast compilation of the reports of the older Arabic and Persian cosmographers, geographers and natural scientists. It is clearly arranged under headings and written in Turkish, giving precise references to the source in every case. In the geographical part, he mentions in addition—again with references—what the personal view of each author on individual objects was. There are consi-
Ashik — Ashik Pasha

Ashik, sometimes copying parts of his Manazir al-sudurah and Ashik Pasha, born at Prizren and educated at Bursa, is known about his life is half legendary. Husayn Husam al-Din, the only author who gives detailed information about his life and his family, does not mention his sources (Amasya Tarikh I, 1327, II, 1315, III, 1927, IV, 1928). Ashik Pasha was the son of Babba Muhhins, whose father the shaykh Babba Ilyas migrated from Khorasan to Anatolia and founded the Babba sect. A disciple of his, Babba Ishkh, was the organiser of the famous 15th century religious revolts in Anatolia. Ashik Pasha, educated at Kirshehir, has been an important cultural centre, had a chequered political career, was sent as an envoy to Egypt and died at Kirshehir in 733/1333, where his tomb sanctuary, of remarkable architectural interest, has been a place of pilgrimage for centuries. A devout shaikh, it seems to have had a rich and influential man. One of his sons, Elwan Celebi, was a poet of some distinction and his great-grandson is the famous 15th century chronicler Ashik Pasha-Zaade. Ashik Pasha's main work is the Gharibname (630/1330) sometimes wrongly called Divan-i Ashik Pasha or Mu'addnname. This is a mystic-didactic madhunaw of more than 11.000 couplets in ramal. The work begins with a preface in Persian and a long panegyric introduction, and is systematically divided into ten chapters (bab) and each chapter into ten discourses (dastan). Each chapter treats of a subject in relation to its number (i.e. Chapter Four—The Four Elements, Chapter Five—The Five Senses, Chapter Seven—The Seven Planets, etc.). The whole can be described as a collection of moral precepts and exhortations illustrated by quotations from the Kur'an and the Hadith and followed by relevant anecdotes. The influence of Mawlanâ Djalal al-Din's great Mathnawi is apparent in the Gharibname as in most contemporary mystic works. But Ashik Pasha's poetry is plain and merely didactic and lacks the lyrical élan of both Mawlânâ and Yûnus Emre. The Gharibname represents on the whole Sunni Islam and the question how far the heterodox tendencies which were very active at the time in Central Anatolia find an echo in it has not yet been sufficiently studied. The language of the Gharibname offers interesting philological material for the study of old Ottoman, since it was written at a period when Turkish was struggling with Arabic and Persian to secure its place as a written language in Anatolia, and Ashik Pasha's conscious contribution towards this is not unimportant. But his handling of the 'arûd is less secure and skilful than that of his contemporaries Gulshenâ and Deyhanî. The numerous copies of the Gharibname witness its great popularity as one of the main mystic-religious works in Turkish. It has not yet been edited. Among dated copies: the oldest are: Berlin No 259 (840 h.), Paris No 313 A.F. (848 h.), Vatican Turkish 148 (854 h.), Casanatene No 2054 (861 h.), Bâyezid No 3633 (861 h.), Lâleli No 2752 (882 h.). Apart from the Gharibname we have from Ashik Pasha a number of poems,
mostly hymns (ildhis), preserved in certain Gharib-nâme MSS, or other codices. In recent years some minor works by ʿAshīk Pasha or attributed to him have come to light. The most important is the Fârâb-nâme. This is a short mathnawī (16 couplets) in praise of mystical poetry, and is developed, like the Gharib-nâme but on a smaller scale, upon quotations from the Korân and the Ḥadîth. The commentary on the well-known hadith “Poverty is my pride” introduces the subject. It has been published in facsimile and edited in transcription (v. Bibliography).

ʿAṣīk PASHA-ZADE, great-grandson of the poet ʿAshīk Pasha, his actual name was Dervīsh Ahmed b. Šâykh Yâbû b. Šâykh Šâmûn b. ʿAshīk Pasha (makhâṣ ʿAshīk), one of the oldest Ottoman historians. He was born in 803/1400, probably in Elvan Čelebi near Amasya, and died some time after 889/1484. His historical work (Tawdrlkh-i dl-i *Uthmân) has been edited three times; by ʿAlî Bey, Istanbul 1932, by Friedrich Giese (Die altosmanische Chronik des ʿAṣīkpašâzde), Leipzig 1929 and by Çiftsoğlu N. Atslz in Osmanlı Tarihleri, i, Istanbul 1949. In addition to these, and to the manuscripts enumerated by Babinger (see below), mention must be made of the manuscript in the Kûnâk al-Atrâk of al-Azhâr in Cairo, Taʾrîkh No. 3732 (completed in 1021/1612), a copy of which is in my possession (No. 140 of my collection).

Giese, Zum ʿAṣīkpašâzde-Problem, in OZL, 1932, 7-18 (a reply to Wittke’s criticism), ibid., Die verschiedenen Textversionen des ʿAṣīkpašâzde; M. Fuad Köprülü, ʿAṣī Paha Paša, in IA, i, 706-709.

Arabic text: ʿAṣīk PASHA — ASHIR

ASIHR, an old fortified town in North Africa situated 100 km. SSW of Algiers in the Titeri mountains, makes its appearance in history during the first half of the 4th/10th century. It belonged to the country occupied by the Şanşâhja on the western borders of their territory. The founding of the town by Zîrî b. Manâd, chief of the main tribe of the Şanşâhja, is an episode in the struggle which brought these Berber highlanders, the sup-

porters of the Fâtimids of Ifrîkiya, into conflict with the Zanșa of the plains of Oran, adherents of the party of the Umayyads of Cordova.

As a reward for services rendered to the Fâtimids, especially during the tenure of Abû Yaṣîd, “The Man with the donkey” (q.v.), in 324/935 Zîrî obtained permission from the Fâtimid Caliph al-ʿAṣim to found a town, which to a certain extent gave this tribal chief the prestige and autonomy of a sovereign. However it should be noted that it is to Zîrî’s son Bulûkîn that al-Bakrî and Ibn al-ʿAṣîr attribute the founding of the fortified town of Asîhr, which the former dates from 364/974 and the latter from 367/977.

The new city was artificially populated by elements brought from Tobna, Msila and Hamza (now Bouira), and later from Tlemcen, which had served as a gathering place for the Zanșa. Palaces, caravanserais and baths were erected there. Bulûkîn, after being invested by the Fâtimid al-Muʿizz, who quitted the government of Ifrîkiya for Cairo (363/973), left Asîhr and repaired to al-Kâyrâwân; this exodus, however, took place in stages, the chief’s family remaining at Asîhr.

The protection of this frontier region of the Zirid kingdom was entrusted to the Banû Ḥammâd (b. Bulûkîn), and Asîhr was incorporated into their territory, when their secession was recognised by the arrangement of 408/1017. Possession of Asîhr, the town of the Banû Ḥammâd, was moreover, disputed by members of the family. It was taken by Yûṣuf the son of Ḥammâd just after 440/1048 and completely pillaged by his troops. In 468/1076 it was besieged and occupied by the Zanșa, being subsequently retaken by the Banû Ḥammâd. In 495/1094 the Almoravid governor of Tlemcen, Tâshfîn b. Tinâmer, took and destroyed it. Resurrected once more from its ruins by its Ḥammâdî masters, it fell into the power of Gbârî the Şanşâjî, ally of the Banû Gbârî (about 580/1184). After this date the name of Asîhr disappears from history.

The uncertainty which surrounds the founding of Asîhr and its attribution to either Zîrî or Bulûkîn is to some extent illustrated on the actual site, for anybody wishing to study what has survived.

The same region of the Tišer, which dominates from afar the high plains of Southern Algeria, retains traces of three inhabited places, rather different in appearance, but all three showing the characteristics of Muslim origin.

1. One of them, called Mazza Bint al-Sultan, is a fortified enclosure crowning a rocky massif 276 metres in length, surrounded by deep ravines, jutting out in a northerly direction from the Kâf Lâhîdâr range. A building—a guard-house or storehouse—stood near the centre. A large cistern was intended to assure the temporary food supply of the small garrison holding the position.

2. On the slopes falling away from the same range towards the South, there stretches a rectangular enclosure, part of the perimeter of which was encircled by a rampart two metres thick. Inside it, walls appear to mark off terraces at different levels; but no other building is visible there. A spring called “The Man with the donkey” in 324/935 Zîrî is used to denote the enclosure itself.

Outside this enclosure, recent excavations by M. L. Golvin have revealed the existence of a castle built of stone, the plan of which is remarkably symmetrical. A projecting porch in the middle of the south façade gives access to an entrance-hall.
ASHIR — 'ASHKABAD

closed at the far end by a wall. Two side passages connect this entrance-hall with the rest of the building. This entrance shows a clear similarity to that of the Fatimid palace of al-Kā'im recently excavated at Mahdiyya (see M. S. Zbis, in JÀ, 1956, 79-93).

3. The site of another fortified town faces Yashir and the castle, from which it is separated by a distance of two and a half km. and a valley. This is Benia (Banya), which covers an area sloping down towards the north of Kaf Tsemsal. Near the bottom of the slope, the rampart crowns the escarpment which borders the valley and a continuation of it extends towards the Kāj, against which the town rested. At the foot of this rocky eminence there used to be a dungeon. Three gates are set in the rampart. The ground is covered by numerous ruins. Of these the most easily identifiable is the mosque. The prayer chamber, which is preceded by the courtyard, had seven naves and four bays. Several copious springs discharge themselves in the town.

It is possible to regard these three sites in the same region as marking three phases in the history of the Zirid Šanḫādja, and to see in them three successive foundations. Manzah Bint al-Sułtan is not a town, but a refuge and an observation post of the Šanḫādja, and probably preceded the founding of a real city.

The affinity between the neighbouring castle of Yashir and the palace of Mahdiyya permits the identification of the castle and the town with the foundation of Zirī (324/934), authorised by al-Kā'im and carried out with the collaboration of an Ifrikiyan architect.

On the other hand, probably represents the city of Bulukku (364/974), of which al-Bakrī gives such a remarkably exact description.

ASHIR, usually a synonym of kabila [q.v.] "tribe", can also denote a subdivision of the latter. Thus 'Abd al-Dīlāl Tāhir, after using the word in the former sense in the title of his lectures on "The Bedouin and the Tribes in the Arab Countries" (al-Badu wa l-'Åširāh fi l-Bilād al-'Arabiyah, Inst. des Hautes Études arabes, Cairo 1955), gives it a more technical definition (20, 1, 2-7): "The social unit or nucleus of tribal society is the family qabila [q.v.]; several families descended from a common ancestor; most commonly of the fifth degree, form a šabila [q.v.]. The šabila consists of several aghāhir, and the kabila several aghāhir. The difficulties encountered by the author in chapter vii, in an effort to give precise definition to the "actual designations of these fluid social ideas", are explained by the instability of the groups, and are a reminder that "Arab authors have experimented with them over a period of centuries; from this fact derive the contradictory versions of dictionary and, as anyone can verify for himself, in al-Mawardi, al-Akām al-Sulṭāniyya, and in Bishr Fares, L'honneur des Arabes", (77-8). Josef Henninger, Die Familie bei den heutigen Beduinen Arabiens und seiner Randgebiete (Leiden 1943, 134-5), by means of the extremely inconsistent extension of the units which marks his theory, supported by numerous references, gives the same explanation of tribal structure in four stages: 1) family, šayle; 2) offspring up to the fifth degree, dīl or ahl; 3) clan; 4) tribe, ašhir, šabila, badda, jirks. These last expressions are synonymous, but "sometimes ašhir or badda are regarded as subdivisions of šabila (134) ... ašhir and badda are often used interchangeably, and ahl for a whole people" (135). On the other hand the definition of LA (vi, 250, 1, 9) suggests that some of these fluctuations may be accounted for by the normal conflict between the proper meaning and the ordinary, less precise, usage: "The ašhir of a man is constituted by the nearest male offspring of his father" (proper meaning) "who are also called the šabila" (meaning altered by synecdoche). Comparison with other Semitic languages gives no clue, because Arabic is alone in affording, from the 10th root, small group of apparently isolated derived forms with the dominant idea of "direct, intimate, relationship", and this etymological problem has only been touched on, as far as is known, by Marcel Chen (Essai comparat. ... chaminio-semistique, Paris 1947, 86). The roots of nouns of number do not seem to give, apart from a few obscure names of animals or plants, derived forms without semantic connexion with their number, and it is perhaps not impossible that the original idea was one of a group of about ten persons. This would still be an extremely flimsy basis of evaluation, because the additional remark of LA (ibid., 16): "The ašhir consists exclusively of men" (also valid for maqāṣar, nafar, baum, rahl and 'adlam) can equally well support a contrario a current use of the term which is considered corrupted, as give an indication of its social and juridical value, as a group consisting only of warriors.

Bibliography: The work first mentioned, edited by the Arab League, gives much information. The work of J. Heining, which is absolutely fundamental for all these problems, ought also to have appeared in the bibliography of the article qabila. (J. Lecerf)

ÂŞHAKÂBÂD (properly Ashkhabad; according to the Turkish pronunciation of the Arab word Âšhâb, "love", called by the Russians since 1924 Ashkhabad, previously till 1921 Askhabad, 1921-4 Poltorack), a town, since 1924 the capital of the SSR of Turkmenistan. It lies in an oasis south of the desert Kara Kum and developed out of a Turcoman and with (1881, time of the Russ. conquest) 500 tents. Already in the year 1807 it had, as capital of the district, a museum (which contained inter alia objects of interest for the ethnology of the Türkmen) and a library (with some Persian manuscripts). After 1917, in spite of the difficulty of maintaining a sufficient water supply the city became an important industrial centre in this district (woven wares, silk factories, foodstuffs, building materials), possessing also cultural significance (since 1950 Gor'kiy-University and four other higher schools, a branch
ASHKABAD — ASHRAF 'ALI

of the Academy of Sciences of the USSR and other research institutes). The number of inhabitants rose (1926) to 51,593 and (1939) 127,000; no information in particular concerning their nationality has been given. Doubtless however numerous Russians live there.

The place has been very frequently (17-xi-1893, 17-i-1895, 1929) struck by earthquakes and possesses since 1947 a Soviet seismic observatory. A particularly destructive earthquake took place on 6 October 1948. Numerous buildings were destroyed and many people lost their lives. (The centre of the earthquakes is mostly fifty miles south in the Kopet Dagh.)

The district of 'Ashkabād is notable for its cotton and corn cultivation; vines, melons and vegetables are cultivated here. It contains the foothills of the Kopet Dagh, the oasis Tedjent and the central parts of the desert Kara Kum [q.v.]. Minerals: zinc, lead, sulphur, barytus.

Four-five miles west of 'Ashkabād lie the ruins of the city of Nasā [q.v.]; six-seven miles east of the ruins of the city of Anaw with the remains of a beautiful mosque with an inscription by its builder, Abu 'l-Kāsim Bābur (d. 886/1480-1) where during excavations (1904) a rich Neolithic culture of the time 3000-5000 (? B.C.) came to light.

AL-ASHMŪNA'N [see USHMŪNA'N].

ASHRAF [see SHAREF].

AL-ASHRAF, AL-MALIK [see AYYUBIDS].

ASHRAF, town in the Persian province of Mazandaran, and chief town of a district (bāštāk) of the same name, situated 36° 41' 55" N, 53° 32' 30" E, five miles from the shore of the Caspian Sea, 35 miles E. of Sārī and 43 miles W. of Astarābād on the road between these two towns. The town lies at the foot of wooded spurs of the lofty Alburz range, and commands a fine view northwards over the bay of Astarābād. Although the approaches to Ashraf are fertile and produce excellent cotton and wheat, the plain of Ashraf itself tends to be marshy. The cypress, the wild vine, the citron and the orange grow in profusion.

Formerly an unimportant town named Khar-kūrān, the new town of Ashraf dates from its foundation by Shāh 'Abbās I in 1021/1612-3. Intended by 'Abbās to be a rural retreat, Ashraf at first consisted of a group of large farmhouses surrounding the royal palace and scattered along the Sārī road, but eventually the royal residences extended over a considerable area, and comprised six separate establishments, each with its gardens. According to Fraser five of these, the Bāgh-i Shāhī, the ʿImārat-i Shāhī y Zämān (used as a banquetting hall), the Haram, the Khwāt, and the Bāgh-i Tappā, were enclosed by one wall, while the sixth, the ʿImārat-i Čaḡma, lay outside. Spacious accommodation was provided for guests and travellers. Great skill was employed in the construction of the palaces and of the famous causeway, large blocks of stone and marble being brought from Bābd, and joined by iron clamps cemented with lead.

The gardens were laid out with walks bordered by pines, and by orange and other fruit trees, and were watered by an elaborate system of reservoirs, cisterns and channels, fed by a spring which also supplied numerous fountains and cascades. On the hills above were situated the observatory known as Șaflābād, and a dam which controlled the water supply to the rice fields round Ashraf.

At the beginning of the 18th century, the power of the Șafawī dynasty declined, and Ashraf suffered heavily in the ensuing civil wars, and from Turcoman invasions from the N-E. It was plundered by the Afghāns and again by the Zand armies. The great ayyān called Chīlīh Sūtān was burnt down in the time of Nādir Shāh, and Nādir's replacement was a much meaner edifice. Muḥammad Ḥasan Khān Kāder carried out certain repairs, but what remained of the imperial residences was destroyed by Muḥammad Khān of Sawādḱūkh, Governor of Mazandaran, and Ashraf remained virtually uninhabited until Algā Muḥammad Khān Kāder escaped from Zand captivity at Sāhrāz and, making Mazandaran his base, rebuilt the town in 1193/1779-80. Though making a slow recovery—in 1826 it numbered 500 houses, in 1859 845, and in 1874 over 1200—Ashraf has never regained its former prosperity, nor can its ruined palaces do more than hint at their former magnificence.

ASHRAF 'ALI b. 'ABBĀD AL-ḤARK AL-FĀRŪQĪ, was born at Thānā Bhawan (Mozafarward district, India) on 12 Rabī‘ I, 1280/19 March 1863 and died on 6 Radjah 1352/29 July 1933. He received his education at his hometown and at Deoband [q.v.]. Leaving Deoband in 1301/1883-4 he started life as a teacher at Cawnpore. The same year he performed the pilgrimage to Mecca where he met Hādījī İmdād Allāh, İmdād Allāh al-Hindi al-Muhaddīr al-Makīt with whom he was already in correspondence. He renewed his ǧa‘īl, contracted ǧawāb, and formally became his disciple. In 1307/1890-9 he again left for Mecca and stayed there for a number of months with İmdād Allāh. He left Cawnpore in 1315/1897-8 and settled down at Thānā Bhawan for the rest of his life.

An eminent scholar, theologian and sāfi, he led a very busy life, teaching, preaching, writing and lecturing, and making long journeys. A prolific writer, his works exceed one thousand in number. These are mostly on ǧafir, hadīth, logic, kalām, ʿākīdāt and tasawwuf. His first work, a Persian maṭnāwī entitled Zīr o Bām, was written while he was still a student; his last is al-Bawdār al-Nawādir, published in 1355/1935-6, being a selection of his innumerable writings. His most famous works are: (i) Bayān al-Kurān, a commentary of the Kurān, in 12 vols. in Urdu, completed in 2½ years and first published at Delhi in 1334/1916-7. A revised and enlarged edition was published at Thānā Bhawan, in 1353/1934-5 and at Delhi in 1349-52. Since then several editions have appeared; (ii) Bihīthī Żewar, in 10 vols., also in
Urdu, a compendium of Islamic teachings meant for women. The 11th vol. "Bishti Gauhar" for men, was added much later. It has been frequently printed in India and Pakistan and is still in great demand. A collection of his fatâwâ in 8 vols., compiled posthumously, is in process of publication.

ASHRAF ALI KHAN, foster-brother of Ahmad Shah, King of Delhi (1161/1748-1167/1754) was born in Delhi c. 1140/1727. His father Mirzâ ‘Ali Khân "Nawad" was a convert of Muhammad Shâh [q.v.]. His uncle ‘Ali Khân was the nâmâz of Murshidubdî during the reign of Ahmad Shah. A composer of poetry in both Urdu and Persian, he wrote under the pen-name of "Fughân" (Figuân) and enjoyed the title of "Zarf al-Mulk Kokaltâ Khan Bahâdur", conferred on him by Ahmad Shâh.

He lived in Delhi till the dethronement of Ahmad Shah in 1167/1754, when he left for Murshidubdî. He seems to have been unfavourably received by his uncle and after a brief stay with him returned to Delhi. In 1174/1761 when the Durranis again attacked India he left Delhi for good and went to Faydubdî. He, however, soon fell out with his patron Shudâ‘ al-Dawla al-Simnâni [q.v.] and left for A‘zâmubdî (Patna) where he was well received by Râdja Shittâb Rây, Governor of Bengal and Bihar and a great patron of learning. Offended by an unkind remark of Shittâb Rây he decided to leave him. But soon after he somehow came into contact with officials of the East India Company and appears to have entered their service. Thereafter he led a comfortable life and died at A‘zâmubdî in 1186/1772-3.

A good poet, his compositions are, however, marred by biting satire and lampoon. His Urdu and Persian diwân was published at Karachi in 1950.

ASHRAF DHAJANÎR b. S. Muhammad Ibrahim was born in 688/1292 at al-Sâljuq (Khu-rânî, the principality of his father. His mother, Khadijâ, was a grand-daughter of ‘Aymâm Yâsawî [q.v.]. A fasâ‘î of the Kur’ân, with its seven readings, he completed his education at the age of 14. His love for mysticism took him to A’lâ’ al-Dawla al-Sâljuqîî [q.v.], a leading passâ‘î of his days, whose company he frequented. Succeeding his father, on the latter’s death in 705/1305-6, to the principality he soon abdicated in favour of his brother Muhammad and set out for India having been told to do so in a dream. Passing through Mâ ‘arâ‘î al-Nahr, he visited Bûkhânî and Samarkand and then left for Uchchî [q.v.] where he met Dâlâl al-Dîn al-Bûkhânî, sur-named Dâhânîyân Dâhân Gâshî [q.v.]. After a long series of travels covering Delhi, several places in the Indo-Gangetic plain, Bihâr and Bengal, including Sunârgânî, near Dacca, he finally settled at Rûhabâd (an old name for Kahâchwâ, a village 53 miles from Faydubdî), where he died on 27 Mu’harram 808/July 6, 1405 and was buried in his own Khânâmâh.

A short time after having settled at Kahâchwâ he again left on his global travels, this time visiting Mecca (twice), al-Madîna, Kârbâla‘, al-Nadîjâf, Turkey, Damascus, Bâghbâdî, Kâshân, al-Sîmânîn, Meshed, Ghaznî and Bûkhânî, returning to Rûhabâd via Multan, Pâkpattan and Delhi. On his first voyage to Mecca he was accompanied by Bâdî’ al-Dîn Shâh Madâr [q.v.].

The statement in the Latefî-ud-Ashrafî (ii, 105-6) that Sultan Ibrahim Sharki (804/1401-848/1444) was introduced to him by Khâdij Shihâb al-Dîn al-Dawlatâbâdî early on his arrival in India is apparently wrong as the Sultan succeeded to the throne in 804/1402 while the saint died four years later in 808/1405. The meeting, therefore, must have taken place during the closing years of the life of Ashraf Dhajanîr.

He is the author of Bashâr ‘al-Mu‘tâdîn and Makbûbâs-î Ashrafî, the latter is highly spoken of by ‘Abd al-Hâjîk Dihlawî [q.v.]. His shrine is visited, in thousands, by persons possessed and patients suffering from mental derangement in the hope of obtaining a cure.

ASHRAF OGULLARI, march-wardens of the Saljûqs in Anatolia during the second half of the 13th century. Members of a Turkoman tribe which had been settled by the Anatolian Saljûq state on its western frontiers, they embellished the town of
Gorgurum, and subsequently Beyshehri, and estab-
lished a principality in that region.

The first of the family who is known to us is the Saltuk amir Ashrafoghlu Sayf al-Din Sulayman Bey, who played an important part during the reigns of Ghiyath al-Din Kaykhusraw III and Ghiyath al-
Din Mas'ud II. After the Mongols of the west, the
Ilkhans, had put Kaykhusraw III to death, they ordered Mas'ud II to rule in his stead (Rabi' I 685/June 1285), but Kaykhusraw's mother, who was at the court of the Ilkhans, and his sons as his successors, with the approval of the Ilkhans, thus declining herself against Mas'ud. She invited the Ashrafid Sulayman Bey to Konya and appointed him regent to these infant sovereigns (8 Rabi' I 685/14 May 1285).

With assistance from the Mongols, Mas'ud II, who was at Kayseri, disposed of the two children and seized power, whereupon Sulayman Bey withdrew to Beyshehri. Subsequently (687/1288) he made submission to Mas'ud and came to Konya.

Mas'ud II wished to have his brother Siyavus, whom he regarded as a rival, placed under restraint. He therefore sent him to Beyshehri, ostensibly for the purpose of bringing back the Ashrafid's daughter as a bride for himself. By prior arrangement the Ashrafid arrested and imprisoned Siyavus, but was compelled to release him and send him to Konya by the threats of the Karamanid Guneri Bey, who was favourably disposed towards Siyavus (Seldjukname, Paris, Bibliotheque Nationale, Persian MS no. 1553).

By this time the Saltuk state had lost its authority, and Sulayman Bey was in perpetual conflict, sometimes with his neighbours and sometimes with the Saltuk governors: at one point he was even in danger of falling into the hands of the Karamanid, who was attacking Beyshehri, but he later gained the victory. He also suffered considerably at this period from assaults on this territory by the Ilkhânid Gaykhâta.

Sayf al-Din Sulayman Bey died on Monday 2 Muḥarram 703/27 August 1302, and was buried in the mausoleum he had had constructed a year before beside his mosque in Beyshehri. Sulayman Bey had embellished Beyshehri, which he called Sulaymanghehri, with a number of foundations, and had repaired the fortress, placing his inscription over the fortress gate in 689/1290. He built his mosque, a distinguished work of art, in 696/1296, and his mausoleum in 1302. In his waŷhiyya he appointed his sons Muhammad and Ashraf as mutawallis of these foundations (Khâll Edhem, Anadoluas İslami kitâbeleri, TOEM year 5, 139-44; Yusuf Akyurt, Beyshehri kitâbeleri ve Eşref oğulları camii ve türbesi).

He was succeeded by his elder son Mu'abariz al-Din Muhammad Bey, who added the towns of Akshehri and Bolvadin to his domains. The Ashraf id Amir Dîya' al-Din Şîkhârî built the market mosque in Akshehri in 720/1320 (I. H. Uzungûlû, Kitâbeler, ii, 26). When the amir Cihan, the Ilkhânid governor-general, visited Anatolia in 1314 there was an Ashrafid among the Anatolian beys who came to offer them their obedience (Musamarat al-Ashrafı, 311); this must have been Mu'abûrî al-Din Muhammâd.

Muhammad Bey died after 1320 and was succeeded by his son Sulayman II, whose reign however was of short duration. The influence of the Ilkhâns in Anatolia having begun to wane, Darîmâr, son of the amir Cihan, was appointed governor of Anatolia.

In his efforts to subdue the Anatolian beys, who had grown accustomed to acting independently and rebelliously, he first took Konya (1320), which had come under Karamanid control. A few years later he marched on Beyshehri, seized Sulayman Bey, killed him, and threw his corpse into the Beyshehri lake (the Mâdâlik al-Abîr records that he was tortured to death: his eyes were put out, his nose and ears cut off, and his severed testicles were hung about his neck) on 11 Dhul '1-Ka'da 726/9 October 1326 (this is the date shown in the Paris MS of the Seldjukname; the Ta'bih-i Nûğâmî gives the year of his death as 722/1322-3).

With the murder of Sulayman II the principality of the Ashrafids came to an end. After Demirzâ's time, their territories fell into the hands partly of the Hamîlds, partly of the Karamanids. No coins of the Ashrafids have yet come to light, but it is possible that coins of Muhammâd Bey exist.

In his Mâdâlik al-Abîr, Şihâb al-Din Umârî says that the Ashrafids possessed almost 70,000 cavalry, 60 towns, and 150 villages.

It is evident from the titles used by Sayf al-Din Sulayman Bey in his inscription which he placed over the gate of the fortress of Beyshehri (which he called Suleymanghehri) in Dhu 'l-Qa'da 689/May 1290 (Amir-i Mu'âazzam), and on his other inscriptions (al-Amîr al-'Adîl: see Halîl Edhem and Yusuf Akryurt) that he was an amir of the Seldjûks.

The mosque of Sulayman Bey, its minbar and mihrâb, are choice works of art. The ornate ceiling of the mosque, which is rectangular in shape, is supported on 48 wooden pillars, decorated with stalactites. The mihrâb is adorned with porcelain mosaics, Kûr'ânic verses and hadîths. The minbar is a masterpiece of the woodcarver's art, made of jointed sections of ebony. Around the front of the door to the minbar is inscribed the Throne-verse, in Saltuk script, while above the doorway are seen the names of the first four caliphs, in Kûfîc lettering. The mausoleum of Sulayman Bey, though most artistic, has become dilapidated with age.

There exists a philosophical work in Arabic, in 9 sections, entitled al-Fusul al-Ashrafîyya fi Uşûl al-Burhânîyya wa l-Kaşfîyya, written for the Ashrafid Mu'abîrît al-Din Muhammâd Bey by Shams al-Din Muhammâd Tu'ghârî. The author's autograph copy, written at Konya in 710/1311, is in the library of St. Sophia (no. 2244).

AL-ASH'TAR, Malik b. al-Harith al-Rakha', warrior and political agitator of the time of the Caliph 'Uthman and supporter of 'Ali. He was surnamed al-Ash'tar, "the man with inverted eyelids", as the result of a wound received at the battle of the Yarmuk (15/636). He distinguished himself by his boldness in the campaign against the Byzantines and even dared to venture further than Darb in enemy territory (see Caetani, Annali, index). He was one of the most persistent agitators against the Caliph 'Uthman and the ruling class of the period and defended the rights—or the claims—of the warriors to the jayy (booty consisting of landed property). After a violent scene in the presence of 'Uthman's governor at Kufa, Sa'd b. al-'As (36/654-5), he was banished from Kufa to Syria together with ten other agitators; Mu'awiyah subsequently sent him back to Kufa, but Sa'd sent him on to the governor of Hims. As the agitation persisted in Kufa, he lost no time in returning and stirring up the masses (al-Tabari, i, 2907-17, 2921, 2927-31). He is to be found at the head of the band of seditionists who prevented the return of the governor Sa'd b. al-'As who took upon themselves to obtain the appointment by the Caliph (35/654-5) of Abū Mūsā al-Aṣqārī. (n.b.) (al-Tabari, i, 2927-30; al-Mas'udi, Murūdī, iv, 262-5). At the time of the insurrection in Medina, which ended with the assassination of the Caliph 'Uthman (35/656), he brought two hundred men from Kufa (Ibn Sa'd, ii/1, 40) and was one of those who besieged the "House" (al-nuffarr) (al-Tabari, i, 2989 f., etc.): his name is even cited among the murderers of the Caliph (Ibn 'Asākir, in Caetani, Annali, 35 A.H., paras. 137 and 160; Ibn 'Abd Rabbih, 'Ibīd, (Bulāk 1293), ii, 278 etc.).

His violence came to the fore also during the election of 'Ali, for he threatened several recalcitrants, forcing them to swear the oath of allegiance to him (al-Tabari, i, 3068-9, 3073-77; al-Dinawarī, 132). He then attached himself to 'Ali, but was often among those of his supporters who presumed to impose their own will on him.

During 'Ali's campaign against 'Uqba, Ta'ba and al-Zubayr, he was sent to Kufa with other men of importance to persuade the inhabitants to take 'Ali's side, and after succeeding in this objective, he brought reinforcement to his master. He took part in the battle of the Camel (36/656); the sources mention a duel which he fought with 'Abd Allāh b. al-Zubayr, and other brave deeds. At the head of the vanguard of 'Ali's army in the campaign against Mu'awiyah, he obliged the inhabitants of Ra'ka to build a bridge of boats over the Euphrates to enable the troops to cross (al-Tabari, i, 3259-60). At the battle of Siffin in which he commanded the right wing of the army, he displayed zeal and bravery (al-Tabari, i, 3283, 3284, 3294-300, 3337, 3338; al-Dinawarī 194-8; al-Mas'udi, Iv, 343-4).

'Ali wanted to have him as an arbitrator at the time when the famous arbitration between himself and Mu'awiyah was proposed (see 'Ali b. Abī Talīm), but his supporters refused, well aware that such a choice would mean the continuation of the war; when al-Ash'tar was informed that a truce had been decided upon, he wanted to go on fighting, for he thought that victory was near and the speech which he delivered on this occasion has come down to us (Naṣr b. Muzāḥim al-Minkarī, Waḥat Siffin, 562 f.; al-Tabari, i, 3331 f.; cf. al-Dinawarī, 204); he then tried to avoid signing the agreement. It was probably because of his uncompromising attitude towards the truce with Mu'awiyah, that 'Ali got rid of him, by appointing him firstly governor of Mawsil (as well as of other towns of 'Irāq and Syria which were in his possession, but al-Ash'tar encountered opposition from al-Dāhḥāk b. Kays al-Fihrī, appointed governor by Mu'awiyah, and had to withdraw to Mawsil) and then governor of Egypt; it is not known precisely whether this took place immediately after the recall of Kays b. Sa'd or after the dismissal of Muhammad b. Abī Bakr who had proved himself a bad politician (al-Kindī, Governors 22; al-Maṣāfīrī, ii, 336; al-Tabari, i, 3242; al-Ya'qūbī, ii, 227; al-Mas'udi, Murūdī, iv, 492; Caetani, Annali, 37 A.H. paras. 221-3). However that may be, al-Ash'tar never reached the seat of his appointment, for when he arrived at al-Kulzum (37/658 or 38?) he was poisoned by the local diyāstārīr (not the quaestor) but the lustriarius, see J. Maspero, in BIFAO, xi, 155-60), (al-Tabari, i, 3392-5). On hearing of his death, 'Ali and Mu'awiyah are said to have sworn the words which have subsequently become famous: — the former: li 'iyadān wa li 'l-umārā (["fallen hands and mouth [to the ground!"] an expression indicating the pleasure felt on seeing someone fall (Ma'Yânī, Amīhā, ii, 475; cf. Caetani, Annali, 37 A.H. paras. 224, n. 1); the latter: "God even has troops in the honey" Mu'awiyah was indeed suspected of being the instigator of al-Ash'tar's assassination: more certain is the fact that Mu'awiyah considered al-Ash'tar one of the "arms" of 'Ali, the other, according to him, being 'Ammār b. Yāsir.

From the physical point of view, al-Ash'tar was a giant; his sword bore the name al-lūdūdī "the sheen of running water" (TA, ii, 93).

Bibliography: Information on al-Ash'tar is to be found in all the chronicles and histories dealing with the early period of Islam as well as in the collections of biographies of early personalities; Caetani, Annali, Index and vols. vii-x passim; several quotations of sources, ibid. 37 A.H. paras. 332-9; Naṣr b. Muzāḥim al-Minkarī, Waḥat Siffin, ed. 'Abd al-Salām M. Hārūn, Cairo 1365, Index: Ibn Abī 'l-Ḥadīd, Shahr Nāḥij al-Balḍāgha, Cairo 1329, i, 158-60, ii, 28-30, 80, iii, 416, 417. (L. Veccia Vaglieri)
‘Ashūra’, name of a voluntary fast-day which is observed on the 10th Muharram.

When Muhammad came to Madīna he adopted from the Jews amongst other days the ‘Ashūra’. The name is obviously the Hebrew ‘āsūr with the Aramaic determinative ending; in Lev. xvi, 29 it is used of the great Day of Atonement. Muḥammad retained the Jewish custom in the rite, that is, the fast was observed on this day from sunset to sunset, and not as in other fasts only during the day. When in the year Muhammad’s relations with the Jews became strained, Rāmahān was chosen as the fast month, and the ‘Ashūra’-fast was no longer a religious duty but was left to the option of the individual.

—On which day of the Arabian year the fast was originally observed cannot now be ascertained owing to our defective knowledge of the calendar of the period; naturally its observance coincided with the Jewish on the 10th Tishri, and so fell in the autumn. The 10th Muḥarram finds early mention as the ‘Ashūra’; probably the tenth day of the first Muslim month was selected to harmonise with the tenth day of the first Jewish month. From the calculations which have already been made, it does not seem possible that it could have been originally celebrated on the 10th Muḥarram (see Caetani, Annali, i, 431 f.). Presumably for the sake of distinguishing themselves from the Jews some fixed the 9th Muḥarram either along with or in place of the tenth as a fast day with the name ‘Tās’ud’.

The Jewish origin of the day is obvious; the well-known tendency of tradition to trace all Islamic customs back to the ancient Arabs, and particularly to Abraham, states that the Meccans of olden time fasted on the ‘Ashūra’. It is not impossible that the tenth, as also the first nine days of Muḥarram, did possess a certain holiness among the ancient Arabs; but this has nothing to do with the ‘Ashūra’.

The fast of the ‘Ashūra’ was later and is still regarded by Muslims as commendable; the day is kept by the devout of the entire Sunni world; it is holy also on ‘historical’ grounds: on it Noah left the ark, etc. In Morocco the day is opened on the day of the ‘Ashūra’ for visitors (see Snouck Hurgronje, Mekka, ii, 51). In lands which are Shi‘ite or come under Shi‘ite influence quite different usages have become associated with the 10th Muḥarram; in this connexion see Muḥarram.

Bibliography: The Chapter Sawm ‘Ashūra’ in the Collections of Traditions, and the appropriate sections in the Fīqh-books; Goldziher, Usages juifs d’après la littérature des musulmans, in Rev. des Études juives, xxviii, 82-84; A. II.—‘Ashūra’ (‘Ashura’) in the Maghrib. In practice a distinction is usually made between ‘Ashūra’, the name given to the month of Muḥarram, and ‘Ashūra’, the name of the feast celebrated on the tenth of that month. The supererogatory fast enjoined on that day seems to be unevenly kept, whilst alms-giving is a more usual practice. Perhaps this is why children from the ḥurānic schools, at ‘Ashūra’, go from door to door, singing and making collections for their masters. The dead are also honoured by visits to their tombs, which are copiously watered, and branches of myrtle are placed on them. The feast is celebrated by eating special dishes (fritters, flat cakes and gruel), and especially eggs and poultry. Popular manifestations of ‘Ashūra’ vary according to the region and are at times on an extraordinary scale.

Three essential elements can be distinguished in the practices in use: 1) Fire and water rites. A bonfire of branches, leaves and grasses is built; this is very frequently lit by a person of repute, who is possessed of haraka [g.v.]. Whilst the bonfire burns, those present jump over it (‘sammi’ of Takrom). These very common practices are throwing burning faggots from the bonfire into the river, mixing water with the ashes, bathing and sprinkling oneself with water. 2) Marriage rites (when a sacrificial animal is sometimes slaughtered). These are especially observed in Morocco: Douzrou ceremony (Tafilalet); the making of dolls and puppets representing ‘Ashūra’ and his fiancée ‘Ashurah, in the Region of Agadir, in the Sūs and the Middle Atlas, etc. 3) Carnaval rites, mainly in Morocco, in Western Oran, all along the edge of the Sahara, in the Sahara, Tunisia and Libya. The Maghribi carnival (fajrā), with numerous variations, almost always includes a trial, an execution and a funeral; the victim is usually an old man or an old woman, dressed up in a lurid costume, at times wearing animal skins or pelts or a tunic made of plaited plants (ghyāb ‘Ashūra’ at Ouargla, bā-lifā at Biskra, bā-falā in Morocco and at Timencen, bā-heremma in Southern Morocco and Oran, bu ‘l-ţālām, bābā ‘ţūr elsewhere, etc. . . .). One of the figures in the fajrā is usually that of an enormous beast, a lion, a mule or a camel, which both delights and terrifies the spectators.

It is generally agreed that the complex customs of ‘Ashūra’ in the Maghrib reflect the survival of very ancient agrarian rites, in fact the celebration of the death of the year coming to its end and the birth of their popular aspects, which are both sad and joyful. The traditional Muslim Shi‘ite mourning has, in all likelihood, become grafted on to this magico-religious substratum, whilst the lunar calendar has taken over a solar year cult, subjecting it to a temporal displacement. Through these superimpositions, remains of this ancient disrupted ceremonial have, here and there, become haphazardly attached to Muslim feas (the two ‘ids and mawlid [g.v.]) and to the various periods and holidays of the agricultural year (rās ‘el-‘ām, annār, rīb, ‘ansāra [g.v.]).

AL-'ASI is the name in use among the Arabs for the Orontes. The classical name of this river, the most important in northern Syria, is preserved in Arabic literature as al-'Urunj, al-Urunj. Presumably the origin of the word 'Aši, like that of the Greek Axios, must be sought in an ancient native name. The common explanation of al-'Aši = "the rebel" is a popular etymology with no actual foundation, and the name al-nahr al-majšūd = fluvius inversus is probably a scholarly invention.

The river-system of the 'Aši begins to the north of the watershed formed by the highland-valley of al-Bikâr not far from Ba'albak, but really only obtains its volume of water farther north near al-Hirmil from a spring, generally called simply the Orontes Spring, which wells forth in a strong stream from the rock. Following the line of the Syrian canal to its northern end, the river flows through several lakes or marshes (those of Kadas and of Fāmīya = Kaš't al-Mudīk); on its banks are situated the most important towns of central Syria, Hitim and Hamāt. At the point where the Syrian buttresses rejoin the faults of Armenia and Asia Minor the river turns away from the north and flows towards the south-west, receives the streams which, rising in the most northerly regions of Syria, discharge into the marshes of al-'Amk, and reaches the sea below Antākiya, to the south of the Amanus, at a point where the coast is flat and devoid of natural harbours (Seleucia and al-Suwaydiyya were artificial harbours).

The geographical peculiarities of the course of the Orontes, and its comparatively abundant flow, have long permitted the traditional use of its waters for irrigation. But the favourable conditions which it presents for large-scale modern development have as yet only given rise to partially realised projects.

_Aśila_ (now Asila in Fr. and Port., Arcila in Span.), town and port on the Atlantic coast of Morocco, situated about 50 kms. S.S.W. of Tangiers and not far from the mouth of al-Wadl al-Hulw (Oued el-Helou). According to Spanish statistics, the population rose from slightly over 6,000 inhabitants in 1935 to just under 16,000 in 1949, with a majority of Muslims, a negligible Jewish minority and a small number of Europeans, mainly Spaniards.

The name Aśila seems to derive from the forms ḥlaši (Strabo), ḥlaš (Itinerary of Antoninus and the Anonymous of Ravenna) or ḥlīa (Ptolemy and Pomponius Mela); but the ancient authors tell us hardly anything about the town, which may have originally been a Phoenician trading-post. In contrast, it is frequently mentioned and described by the Arab historians and geographers, among others by Ibn Ḥawkal and al-Bakrī. According to the latter, Aśila was twice visited by the Normans in the 3rd/9th century. In the 6th/12th century, al-'Idrīsī describes it as a small town in complete decay. But trade must have enjoyed a certain prosperity there in the 9th/15th century, because at the time of the disaster suffered by the Portuguese before Tanjier (1471), Jewish merchants and Genoese and Castilians who traded in spices were to be found there; the Wattasid sultans of Fez, especially Muhammad al-Burtukāl: they endured several sieges; the most serious was that of 1508; the Portuguese lost the town and only retained the citadel; they were saved by the intervention of a squadron which arrived from Portugal, which was soon after reinforced by the Spanish fleet of Pedro Navarro. Furthermore, the fortress was handicapped by the insecurity of its port, which was blocked by a reef. In August 1550, King John III of Portugal (1521-57) had it evacuated — a few weeks after al-Kašar al-Saghîr — with a view to concentrating all his forces in Northern Morocco at Tangier and Ceuta. In 1577, Aśila was reoccupied by King Sebastian (1557-78), as the price of his alliance with the Sa'did prince Muḥammad al-Maslūḥ and with a view to the expedition in which he lost his life, at the battle of the Three Kings, or the battle of al-Kašar al-Saghîr (4th August 1578): it was at Aśila that the Christian army landed and it was from Aśila that it set out on 29th July 1578 to meet the Moroccan army. Philip II, King of Portugal since 1580 following the death of Cardinal Henry, gave the town back to the Sa'did sultan al-Manṣūr in 1589. From this date onwards, Aśila has led a quiet and obscure existence. It formed part of the region subject to the authority of the Ḥārîf Rāysūnī, when it was occupied in 1912 by the Spaniards, who incorporated it in their zone.

_Bibliography:_ All the requisite information on Aśila prior to 1589 is collected together in David Lopes, Historia de Arzila durante o domínio português, Coimbra 1924-5 (based strictly on the sources, especially Bernardo Rodrigues, Anais de Arzila, ed. David Lopes, 2 vols., Lisbon 1915-9); see also Adolfo L. Guevara, Arzila durante la ocupación portuguesa, Tangier 1940, and Pierre deenival, David Lopes and Robert Ricard, Les Sources inédites de l'historie du Maroc, Portugal, 5 vols., Paris 1934-53; and the bibliography of the article Aši in the dictionary of the Portuguese period. For recent events: Tomás Garcia Figueras, Miscelânea de estudos históricos sobre Marruecos, Larache 1949, 421 ff. (R. Ricard)  

'ASIIM, ABU BAKR 'ASIIM B. BHADLA ABI 'L-'ADNĀDĪD AL-ASAIDI, a mawla of the Banu Diudhayma of the Asad. Some say Bhadla was his mother's name and his father's name 'Abd Allāh, though he was known Abu 'l-'Adnādīd. He is said to have been a dealer in wheat (qanâdī) who succeeded as-Sulamī as head of the Portuguese School of Qur'an Readers, where his preeminence in Qur'anic studies secured him a place as one of the Seven Readers whose systems became canonical. Indeed
through his pupil Ḥāfs [q.v.], his system of pointing and vowelling the Kur'ānic text has become the testus receptus in Islam. He is classed as a Follower and had a small part in transmitting hadīth. His fame, however, was as a kāri' and a teacher of kīla'tī, in which he had the reputation of being a būdīgī. In this branch of learning he is said to have been the pupil of Abū 'Abd al-Rahmān al-Sulamī (d. 74/693-4), Zīr b. Ḥubaysh (d. 82/701-2) and Abū 'Amr Sa'd b. ʿIyās al-Shaybānī (d. 96/714-5). Through one or other of whom his readings may be traced back to all the most famous names in Kur'ānic learning among the Companions. He had a large number of pupils who transmitted his system, but his two rāwās in the canonical list are Abū Bakr b. ʿAyyāsh (d. 194) and Ḥāfs b. Sulaymān (d. 190). He died late in 127 or early in 128/745.

(A. Jeffery)

ʿĀSIM, ʿAHMAD, imperial historiographer of the Ottoman empire, born in ʿAynātāb (the modern Gazarante) in south-eastern Anatolia about the year 1755. He was the son of Seyyid Mehmēd, a clerk of the court, who became famous as a poet under the name of Djiynānī. His family was one of the old-established ones in the place. In his early youth he acquired an equally fluent knowledge of Arabic and Persian, and this helped him in later years to achieve his fame as a translator (muji̇rijīm) of well-known dictionaries. To begin with, Seyyid Ahmed was the secretary of the law-court of his home town, and later in nearby Kila. In 1790 he went to Istanbul, where he gained the sultan's favour with a translation of the Burdānī Kūdī which was dedicated to Selmī III. He subsequently became a professor. In 1802 he was sent to the Hijāz, and on his return he brought his whole family from ʿAynātāb to Istanbul. In 1807 he became imperial historiographer (makānī-nūkālī) as such he compiled a history of the Ottoman empire (later printed in two volumes) from the peace treaty of Sistova (4 August 1791) to the accession of Maḥmūd II (28 July 1808). Later, he translated the Kāmās al-Muḥkīt (which was reprinted several times) into Turkish. In later years he returned to his calling as a teacher, then as judge (Mulla of Selānī, Feb. 1814), and died on 28 Sept. 1819 in Skutarī, where he owned a house near the well of Neh (Nāb hành). He lies buried in the Karadāj Ahmed cemetery, and the inscription on his tomb is in ʿOthmānī Muʾīlīlīrī i, 375.

In his capacity as imperial historiographer, he surpasses his predecessors in a presentation which is at the same time a fluent day-to-day chronicle, yet also critical in its treatment of events. Finally, he translated the Cairo chronicle of the French occupation, by al-Dīzarī—whose became known in Europe too (French ed. by A. Cardin, Paris 1838)—from Arabic into his mother-tongue. This version is preserved in manuscript form in Paris (Bibli. Nationale s.t. 1283; cf. E. Blochet, Catal., ii, 221) and in Cairo. It was never printed because the Cairo chronicle was soon afterwards translated again by the court-physician Muṣṭafā Bahlūl Efendi, and then printed (as Taʾrīḥ-i Misr, 260 Ss. 12°, Istanbul 1282) after having previously appeared as a feuilleton in Dīrke-i hāwādīlī (cf. JAS, 1869, i, 477 f.).

(Fr. Babinger)

ʿASIM EFENDI ISMĀʿĪL [see CEBELI-ZADE].

ʿASIR, the taḥkūlis of Miẓrā Djalāl al-Dīn Miḥmān b. Miẓrā Muʿīmin, Persian poet and pupil of Faḍlū Harawī, born at Isfahan; probable date of death 1049/1639-40, though some sources give later dates. Unlike many of his contemporaries, he did not migrate to the Mughal court, but became a boon companion and close relative (according to one account the son-in-law) of Shah ʿAbbās I. He composed most of his poetry under the influence of alcohol, from an excess of which he died. His diwan, comprising badīdas, mathnawīs, qasidas, and ghazals, was lithographed at Lucknow in 1880.

ʿASIR, a region in Western Arabia named after a confederation of tribes in al-Ṣarāt [q.v.]. The center of a separate region intervening between al-Hijāz and the Yaman developed in the 19th century and is now sanctioned by official Saudi Arabian practice, which uses the name ʿAsīr for the highlands southwards from al-Nimās to Nadārān, and Tiḥmat ʿAsīr for the lowlands bordering the Red Sea between al-Kaḥmā and the Yaman frontier.

From al-Taʾif to the Yaman there is no gap in the bold range of al-Ṣarāt. The core is crystalline rock, but in certain fault zones volcanic activity has produced lava fields, one of which, reaching the Red Sea just south of Hāl, used to form the natural boundary between al-Hijāz and the Yaman. The main drainage divide, some 50 to 75 m. (80 to 120 km.) inland, rises abruptly to heights of over 6000 ft. (2,000 m.), with peaks over 9000 ft. (3,000 m.). Streams fed by rain from the fringe of the monsoons have carved great gorges on the steep eastern flanks. Drainage on the gentler eastern slope follows fracture zones northwards, creating the major wadi systems of Bīsha and Taḥlibh, which eventually turn eastwards to empty their flood waters into Wādī al-Dawāsīr. Along these wadi systems Philby traces the Road of the Elephant (Darb al-Fīl).

The highland capital is Abhā (q.v.), the centre of the confederation of ʿAsīr, which consists of Banū Muḥayyad, Banū Malīk, ʿAlkam, and Rabīʿa wa-Ruwayda. Other important tribes are Rīdāl Alma b. Muḥayyad, the western slopes, Rīdāl al-Hijāz and Shahrān north of Abhā, and elements of Khāṭān, including ʿAbīda, from Abhā south to Zahrān.

Along the reef-lined coast of Tiḥmat ʿAsir are the little ports of al-Kahma, al-Shukayk, and Ṭayyār (Baysh), Šabya, and Abu ʿArlsh. Among the larger wads debouching on the plain of Tiḥmat ʿAsir are those of ʿĪtawd, Baygh, and Dāmad.

Terracing is widely practiced in the highlands, where rainfall of c. 12 ins. (30 cm.) a year provides for the cultivation of grains and fruits. Coffee is grown near the Yaman border, and kātī on the slopes of Dībāl Fayfa. Grains and vegetables are raised.
in Tihama, and some indigo around Sabya and Abu 'Arish. The dawm palm is cultivated for its fruit and leaves which are woven into baskets and mats, but almost all dates come from Bishá or by sea.

The ways of the mountainiers tend towards those of Najd, while the ways of the lowlanders indicate the closeness of their contact with Africa. Dwellings vary from mud-brick buildings with projecting stone tiles in the mountains to thatch huts on the coast. There are virtually no tent-dwellers in the mountains or on the coast plain, the nomads using a mat shelter. The isolation of mountain towns and ranges has contributed to the complexity and fragmentation of the tribal system. The Arabic speech of some of the tribes is held to be remarkable for its purity and freedom from outside influence, but kashkasha and other dialectal deviations are not uncommon.

The name 'Asfr was originally borne by several Kaššaníte tribes centred on Abáh who had attached themselves to the ʿAdnániyyé of 'Anz b. Wáhíl. Among the early divisions of 'Anz were Rabíb, Rufúyáda, and Málík. Other old tribes in the region were Kháth'am (including Sháhrún and Aklub) and al-ʿAzzd (including al-Ḥiḍr, Alímá, and Aṣzd Šanát, among whose branches were Gáhmíd and Záhrán). Sections of Kínána were established along the coast.

In the time of the Ziyyádíds, the power of the Yaman was already descending, and the nomads of the Tihama were often divided. The ʿĀʾid b. ʿAbd al-Razzáq, his son Muhammad b. ʿAbd al-Razzáq, also called 'Abd al-Razzáq b. ʿAbd al-Razzáq the Šaráfí, died 959/1553, was the last of the Yaman to hold power there. His death in 959/1553 was the last of the Khayratíds, out of Abu 'Arish in 959/1553. The expanding power of Al ʿĀʾid in Tihama provoked Ottoman intervention, facilitated by the opening of the Suez Canal. In 1285/1863 Muhammad Radíf Páshá defeated Muhammad b. ʿAbd al-Razzáq at Rayda and put him to death. 'Asfr, established as a mutásarriḍíyya attached to the wíldýey of the Yaman, remained under Turkish rule for more than forty years, but this rule often extended no farther than the gates of the garrison town of Abáh.

Early in the 9th century the place of the Sulaymáníds was taken by Sayyíd Muhammad b. All al-Idrísl. He was the great-grandson of Ahmad b. Idrísl, the founder of the Aḥmádiyyá (Idríslíyyá) ĥarís who had migrated from Morocco to Sabyá, which was to become the Idríslí capital. Relying on his great prestige as a man of religion, al-Idríslí brought the lowlands under his sway, negotiated with the Italians on the other side of the Red Sea, and laid siege to the Turks in Abáh. The Sharíf of Mecca, al-Ḥusayn b. 'Ali, led an expedition southwards to relieve the beleaguered garrison of Sulaymán Šhaḥí Kamáll Páshá in 1265/1849.

During the First World War, al-Idríslí was the first independent prince in Arabia to join the British against the Turks by virtue of a treaty signed in 1235/1915. After the defeat of the Turks the British awarded the port of al-Hudaydá to him rather than Imam Yábyá of the Yaman. An attempt to annex the highlands having failed, al-Idríslí solicited the mediation of 'Abd al-ʿAzží Al Saʿúd, but this was rejected by al-Ḥasan b. Muhammad Al ʿĀʾid, the lord of Abáh since the evacuation of the Turks in 1335/1918. An expedition sent by 'Abd al-ʿAzží occupied Abáh in 1338/1920. Al ʿĀʾid later revolted and continued the struggle briefly, but in 1342/1923 the resistance of the dynasty ebbed away and the highlands were incorporated in the Saudi state. Muhammad al-Idríslí concluded a treaty with Ibn Saʿúd in 1339/1920, but the dissensions within the Idríslí realm subsequent to his death resulted in the establishment of a Saudi protectorate. The Imam of the Yaman maintained a claim to the Idríslí territories until the Treaty of Al-Ṭifí, finally determined their appurtenance to Saudi Arabia in 1353/1934.

ASIR — ASKALAN

(R. Headley, W. Mulligan, G. René)

ASIRGARH, a fortress situated 21° 28' N., 76° 18' E in the Burhanpur tahsil of the Nipar district of Madhya Pradesh, about 2,200 feet above sea level and 850 feet high from its base, dominating the only route through the Satpura range between the Narbada and the Tapti from north west India to the Dekkan.

Probably of great antiquity (see H. Couzens, Lists of Arabiarian Remains in the Central Provinces and Berar, Arch. Surv. India, 1897, P. 39; A. Cuming, Report on a Tour in the Central Provinces, Calcutta 1879, 210-1, Gazetteer, (Khándesh) Bombay 1886, 557-58), Asirgarh was certainly a stronghold of the Tak branch of the Couhan Radjputs from the 13rd/9th century. It was stormed by Ala 'al-Din Khalid, then muqaddas of Karra, in the winter of 695/1295-6 in the way back from his Dekkan raid (see Tod, Annals and Antiquities of Rajasthan, ed. C. Craddock, 1920, iii, 1463 and 1467 where the date Samvat 1351 is given), but not permanently occupied by Muslim forces until about 802/1400 when it was seized by Malik Nasir Khán Fârakh to become the supposedly impregnable stronghold of the Fârûk Shahs, sultans of Khândesh. (See Fihriga, text, ed. Briggs, ii, 544. A. in-1 AKB, text, ed. Blochmann, i, 475 and Bombay Gazetteer, loc. cit.).

Asirgarh was captured by Akbar in 1009/1600-1, becoming the headquarters of the marubân of the frontier shîba of Dândih. (On Akbar's conquest see Vincent Smith, Akbar the Great Mogul, Sec. ed. 1902, 272-286).

In 1032/1623 Shâh Dîjalân, then in rebellion against Dîlahângr, took refuge at Asirgarh and later c. 1061/1650-1 built a mosque there. In 1132/1720 it passed into the hands of Niâm al-Mulik, jâbadar of Malâw, and was lost entirely to the Mughals in 1175/1760 when the Maharata Badrâna Pâshâ occupied it. Asirgarh was first captured by the British in 1218/1803 and finally occupied by them in 1234/1819.

ASITÂNA [see ISTANBUL].

AŠIVA. This is the name given by the commentators to Pharaoh's wife, who is twice (xxviii, 9 and lxvi, 21) mentioned in the Qur'an. She plays the same part as Pharaoh's daughter in the Bible, so that in the second passage these words are put into her mouth: "My Lord, build me a house with thee in Paradise, and deliver me from Pharaoh and his doings and deliver me from the wicked!"

In connexion with this passage it is related that Ašiva endured many cruelties at the hands of Pharaoh because of her faith (she was an Israelite); and finally he even caused her to be cast down upon a rock; at her prayer God took her soul to himself, so that only the body fell on the stone.—It is also related that Pharaoh scourged her to death, but on Moses' praying to God she did not feel any pain. J. Horovitz explains the name as a corruption of Ašena, the name of Joseph's wife in Gen. xii, 45.

(A. J. WENSCING)

AŠKALAN, a town on the coast of southern Palestine, one (Hebrew: Aškelon) of the five Philistine towns known to us from the Old Testament; in the Roman period, as oppidum Ascalon liberum, it was (according to Schürer, Geschichte des jüdischen Volkes im Zeitalter Jesu, ii, 65-7) "a flourishing Hellenistic town famous for its cults and festal games" (Dercetis-Aphrodite-shrine); in the Christian period a bishop's see (tomb of the tres fratries martyres Aegyptiæ).

Aškalân was one of the last towns of Palestine to fall into the hands of the Muslims. It was taken sülüs by Mu'âwiya shortly after the capture of Kaysariyya in 19/640, but may have been briefly occupied by 'Amr b. al-'Azî before that. It was reoccupied for a short time by the Byzantines during the time of Ibn al-Zubayr and was subsequently restored and refortified by 'Abd al-Malik b. Marwân (Balâghuri, Fâribî, 143-4). According to an inscription from a building which was discovered by Clermont-Ganneau, the Caliph al-Mahdi in 155/772 caused a mosque and minaret to be erected there (Rcea, i, 32-3). After varied fortunes the town passed into the hands of the Fatimids, under whose rule, according to Muhaddasi and Nâsir-i Khusrav, it attained some prosperity. It housed a mint, and served at times as a secondary naval base. Together with some other coastal towns, it was retained by the Fatimids, even after the loss of the rest of Syria and Palestine to the Saljûqs, though sometimes this retention amounted to no more than a nominal suzerainty over the local rulers. In 492/1099 the Egyptian army retreating from Jerusalem entered the town, and for a while it seemed that Aškalân itself was about to pass under Frankish rule. It was however saved by the internal dissensions of the Crusaders, and was retained by the Egyptians. For the next century and a half it was a frontier city and a key military objective in the struggle between the Crusaders and the Muslim rulers of Egypt. For the first 53 years after the coming of the Crusaders, it
was held by the Egyptians, and used by them as a bridgehead and as a base for raids into Frankish territory. With its population swollen by refugees from the Frankish occupied areas, and its garrison reinforced from Egypt, it became a major military centre. Despite the partial resumption of trade with Jerusalem, life in this outpost was difficult, and the Egyptians found it necessary to send new supplies and relief troops several times a year (William of Tyre, XVII, 22; Ibn Muyassar, *Annals*, 92). According to William of Tyre, the whole civil population, including children, was on the army payroll. After the fall of Tyre to the Crusaders in 1134, the position of 'Askalān was much weakened. To neutralise the threat which it offered to Jerusalem, the Crusaders surrounded it with a ring of fortresses, and in 548/1153, after a siege of seven months, Baldwin III got possession of the town by a combined land and sea attack. It now became the base for Frankish military and political adventure in Egypt. After the battle of Hīṭṭa it had, like most of the Crusader strongholds in Palestine, to surrender to Salāḥ al-Dīn (583/1187).

In 587/1191, after the defeat at Arsur, the latter found himself unable to hold 'Askalān against Richard of England and therefore destroyed the town. The Muslim population migrated to Syria and Egypt, the Christians and Jews moved to Jerusalem. A vivid description of the destruction of the town and the evacuation of its inhabitants is given in the anonymous Mamluk chronicle published by K. V. Zetterstéen (Beiträge, 233-5). Richard reached 'Askalān in Dhūl-Hijādā 587/January 1192 and rebuilt the fortress, but according to the peace terms of August-September of the same year, it had again to be demolished. The rivalries between al-Salih Ayūb of Egypt and al-Salih Ismāʿil of Damascus once more let it slip into the hands of the Franks. It was garrisoned and fortified by the Hospitallers, who successfully defended it against an Egyptian attack in 642/1244. After the decisive battle of Ghazza (17 Oct. 1244), 'Askalān could, however, no longer expect help, and it fell in 645/1247 to Fāḫīr al-Dīn Yūsuf b. al-Shaykh. In order to make it impossible for the Franks to effect a landing, the Mamluk Sultan Baybars [sce] demolished a number of places on the Palestine coast, and in 668/1270 levelled the last vestiges of 'Askalān, filling the harbour with trees and rubble (Makrīzī, Sulāḥ, i, 590). The town, which had never recovered from its demolition by Saladin, remained desolate until modern times. Abu 'l-Fidāʾ (239), Ibn Baṭīṭa (i, 126), Muqīlī al-Dīn (432), Piri Reis (*èsbiyye* 724, English trans. by U. Heyd, *A Turkish Description of the Coast of Palestine*, Israel Exploration Journal, vi, 1956, 205-7) and Volney (*Syrie*, ch. 10) all describe it as ruined.

In antiquity and the Middle Ages the environs of the town were famous for their wine, sycamores and henna (*Kypros*). It has given its name to a species of onion (*shallot = allium ascalonicum*). Mediaeval authors, using an expression attributed to the Prophet, often call 'Askalān the "Bride of Syria, Sponsa Syriae," "Aris al-Shām".

In the vie of the Shiʿite supremacy of the Fātimids falls the construction by al-Afaq b. Badr al-Djamāl (491/1098) of the Masjīd for the reception of the head of the Prophet's grandson, Husayn. This highly venerated relic was in 548/1153-54 saved from the Franks and carried off to Cairo (cf. Makrīzī, *Akhtaf*, i, 427; Mehren, *Cahiers et Kultur*, Copenhagen 1970, i, §§22-24; Ibn Baṭīṭa, *esbiyye*, 757; Ibn Taymiyya (ed. Schreiner, *ZDMG*, 53, 81-2) dismisses the whole story as a fable). Besides Husayn's chapel, later Muslim pilgrims visited, in particular, Abraham's Well.

(R. Hartmann-[B. Lewis])

**AL-'ASKALĀN** [see IBN HAḌĀR].

**AL-'ASKAR** [see DIJAYŠA].

**AL-'ASKAR** [see SĀMĀRĀ].

'ASKAR MUKRAM ("Mukram's Camp"), formerly a town built on the site of a camp pitched by an Arab leader named Mukram whom al-Ḥājīdīdāḥ had sent to Khurāsān to suppress a revolt near al-Ahwāz. This camp or cantonment adjoined the ruins of Rustam Kāwād (corrupted by the Arabs into Rustākūbād), a Sāsānian town which the Muslim Arabs had destroyed. 'Askar Mukram was situated on both sides of the Māsrūkān canal (the modern Ab-i Gargar) just above the point where it now flows into the Shatayt (= Shutayt, "the small river"), the main arm of the Kārūn (at the time of which we write, the Māsrūkān canal joined the Shatayt much further to the south, near al-Ahwāz); furthermore, the Dīzūf Rūl (modern Ab-i Diz) flowed into the Shatayt just west of the town. Owing to its favourable situation and its relatively good climate (see Ḥamd Allāh Mustawfi, *Nashāḥ, 112*), 'Askar Mukram developed into a flourishing town and became the chief place on the Māsrūkān canal; two bridges of boats linked the two parts of the town. It was a mint-town during the 4th/10th century, under the Bāyid ruler Muʿīz al-Dawla; cf. *ZDMG*, xi, 452. The ruins now known as the Band-i Kūr ("Bitumen Dam") are those of 'Askar Mukram; the remains of that town and of earlier cities cover an area of nearly 9 sq. m. (see Layard, *A Description of the Province of Khuzistan*, in JR, Geog. S xvii, 724); Sponsa Syriae, 126-9). The inhabitants of Shuštār (Arab. Tustar) wrongly identify with 'Askar Mukram some ruins near their city, which they therefore call Lashkar (Persian = Arab, al-Lāshkar); according to Hamd Allah Mustāwfl, *asfakān, 711*. (M. STRECK-[L. LOCKHART])
ASKARI — AL-ASKARI

ASKARI; from askar, soldier; in Ottoman technical usage a member of the ruling military caste, as distinct from the reâyä—the subject population of peasants and townspeople (reâyä sometimes means the subjects generally, sometimes only the peasants). The term askari denoted caste rather than function; it included retired or unemployed askaris, the wives and children of askaris, manumitted slaves of the Sultan and of the askaris, and also the families of the holders of religious public offices in attendance (mustazemah) on the Sultan.

The Ottoman askari class comprised both the slave military establishment (see KUL) and the feudal levies (see SIPAHI). The latter seem to have originated as offices in attendance on the Sultan.

C of peasants and townspeople dyd sometimes (re'dyd), of the peasant stock (apart of course from the deuwzime of boys) to askari positions; Koçu Bey and later memorialists aduce the violation of this rule as one of the causes of Ottoman decline. An askari could, by decree, be demoted to the reâyä class or a ra'iyyä promoted as a reward for exceptional services to be an askari. Both were infrequent in the early period. By the early sixteenth century, however, Sultan Suleyman found it necessary to issue a decree confirming sipahi of peasant descent in their fiefs, and protecting them from dispossession on these grounds. In the period of decline the dilution of the military caste by the intrusion of peasants and townspeople becomes a common complaint. By the 18th century the extension of the fiefs to the peasantry and of Janissary affiliation to the merchants and artisans had distributed the status of askari so widely as to deprive it of any real meaning.

AL-ASKARI. Two Arabic philologists of the 4th/10th century, both bearing the same name al-Hasan b. 'Abd Allah, but of a different kunya, are known by this name, a relative noun derived from 'Askar Mukram in Khuzistân.

(i) Abu Ahmad al-Hasan b. Abd Allah b. Sa'id was born in 'Askar Mukram, on 16 Shawwâl 293/ 11 August 906 and died there on 7 Dhû 'l-Hijjah 382/2 Febr. 993. The date 382/940 is less probable. He began his studies under his father and the traditionist 'Abdân, d. 306/919, and continued them at Baghdad, Başra, and Iṣbahân under Ibn Durayd, d. 321/933, and the traditionists al-Baghwâl, d. 317/929, and Ibn Abd Dâwûd al-Sidjistânî, d. 316/929. He also met al-Ṣâli and other men of letters. Then he returned to 'Askar Mukram. He declined an invitation of the vizier al-Ṣâhib Ibn 'Abbâd, but paid him a visit when the latter came to 'Askar Mukram. He went several times to Iṣbahân where his brother, the traditionist Abu ʿAll Muhammad had settled, e.g. in 340/950 and again in 354/965. He was a scholar of vast erudition and wrote a number of books (see Brockelmann S I, 193) but he was little known outside of Khuzistân; Yâkût had great difficulties in obtaining information about his chief work, the Kitâb al-Taṣhîf, contains useful information about rare and difficult words and proper names occurring in traditions and poems and misunderstood by their transmitters. It was utilised by Yâkût (IV, 384) and by 'Abd al-Kâdir al-Baghdâtî (see ʿIlâd al-Khânâna, 31 f.). Much of his learning has been preserved through the writings of his pupil Abû Hîlal al-'Askarî.

Bibliography: Abu Nuṣaym, Geschichte Iṣbahânîs, i, 272, ii, 291; Samânî, Ansâb fol. 390 b; Yâkût, Irshâd, iii, 126-135; Ibn Khallikan, Cairo 1299, i, 234 f.

(ii) Abu Hîlal al-Hasan b. 'Abd Allah b. Saïl. Of his life very little is known. He was a pupil (but not a sister's son, for he never calls him khâtîl) of the aforesaid Abu Ahmad al-Askarî and owed to him the bulk of his learning, as is proved by the numerous references in his writings. He wrote amongst other works (see Brockelmann, i, 126 and S I, 193 f.) for the benefit of budding writers (1) Kitâb al-Sinâ'ât al-Khitâb wa l-Siyâr (Istanbul 1350, Cairo 1952; cf. P. Schwarz, in MSOS ix, 206-230), a systematic hand-book of rhetoric. (2) Dîwân al-Maṣâni (Cairo 1352), an anthology of the most elegant and original expressions of ideas met with in poetry and prose. (3) Kitâb al-Furûh al-Lughawiyya (Cairo 1353) dealing with synonymous words. (4) al-Mo'tâ'dîm fi Bâkîyyat al-Akhaya (Cairo 1353; abridged ed. by O. Rescher, in MSOS, xviii, 103-130), a list of words meaning "remainder". (5) Dîmârkarâh al-Ānâfî (Bombay 1306-7 and on the margin of al-Maydânî, Cairo 1310), a collection of proverbs. Not yet published is his taṣfîr whose title Maḥâsin al-Maṣâni suggests that he dealt mainly with the stylistic beauties of the Kurâ. The latest known date of his life is the year 395/1005 in which he finished dictating his Kitâb al-Amâlî on the so-called inventors of arts etc. (Yâkût, Irshâd, iii, 130). He is said to have died after 400/1301.

AL-'ASKARI, Abu 'l-Hasan Ali b. Muhammad, the tenth Imam of the Twelver Shia. He is commonly known as al-Nakhd, the son of al-Hadi. He was the son of the ninth Imam Muhammad b. 'Ali al-Ridha [q.v.], and was born in Medina. Most Shi'i authorities give the date of his birth as Rajab 214/Sept. 829, though others say that he was born in Dhu 'l-Hijja 212 or 213/Febr.-March 828 or 829. His mother, according to some sources, was a daughter of the Caliph al-Ma'mun, according to others she was a Maghribi woman named Hamama or A'yan, who was sent to Medina to escort him to Samarra. He was the son of the third Imam Muhammad b. al-Zubayr [q.v.].

As the tenth Imam of the Twelver Shia, he is commonly known as al-Nakhd and al-Hasan. He was the son of the ninth Imam Muhammad b. al-Zubayr [q.v.].

from the Prophet denouncing the “two liars” (al-Jadhdhdbdni) who should issue from Thaqif (i.e. al-Mughira b. Shu'ba and al-Hajidüdä b. Yüsuf). She died in Mecca shortly afterwards, in 73/693.

(H. A. R. Gibb)

AL-ÄSMÄ\(^2\) AL-HUSNÄ—“The most Beautiful Names”, these being the divine Names. “To God belong the most Beautiful Names—pray to Him, using (these Names)”, Kur'an, vii, 179. Cf. xvii, no; xx, 8; lix, 24 etc. Pious Muslims have always revered the mystery of the Name, which at one and the same time both designates and veils the Named (cf. 'Abdü al-ism).

The Theological question. A chapter of “Muslim theology” (sim al-tawfrid) is devoted to the divine Names. The reply of the narrators of Tradition, reiterated by the strict Ash'arites, is: the divine Names can only be given to God by taukif, i.e. by preconceived “determination”; by which we understand: as God Himself has “determined” it in the Kur'än and secondarily in the Sunna. The employment of the latter in this connection must be limited to “authentic” (sa'ih) and “good” (hasan) hadith. Some people admit a possible determination derived through 'asmiya'. According to the Mu'tazilites and the Karramites: when 'akl (Reason) proves that an attribute (either of existence, or negative or of action) is suitable to God, it is permissible to employ the corresponding Name, whether or not it is mentioned by the texts. This is a case of attribution of the Name by human reason. Al-Ghazzâlî admits this solution for those attributes (psi'd) which, he says, designate a significant addition to the essence; he does not admit it for the employment of the Name designating the divine essence itself. "Middle" solution of the Ash'arite al-Bâkîllâni, followed by many later Ash'arites: if the text or the tradition gives an attribute to God or speaks to us of an act of God (but in these cases only), “according to the rules of the language”, one may designate Him by the corresponding Name, even though the texts do not “determine” it. And one should in particular exclude non-scriptural names, which would evoke a notion incompatible with the absolute divine perfection. (God should not be called 'ârsî, as ma'rî'ah “presupposes that some inattention has been overcome”; likewise He should not be called sa'ih, 'âthî, etc.). According to this thesis, which has become current, the Names must, therefore, either be scriptural or at least have a scriptural derivation. Two related problems: a) the Names are eternal, Ash'arite thesis, in opposition to the Mu'tazilite thesis, which holds them to be contingent; b) Hanafite-Mâturidite line: they are equal in importance and excellence (cf. Fihk Akbar, ii, 26): Ash'arite line: a hierarchy exists among them with the Name Allâh taking precedence (or, as the Şafis are prone to say, with some other Name known to the initiated, or even the ineffable Name, only attained through initiate experience, taking precedence). The 99 Names. A hadith, transmitted by Abû Hurarya, states: “To God belong 99 Names, a hundred less one; for He, the Odd Number (= the Unique) likes (to be designated by) these enumerated Names one by one; whoever knows the 99 Names, will enter paradise”. The meditated recitation of these Names became one of the most diligent devotions in Islâm. The pious Muslim repeats them and meditates on them, usually with the help of the 99 beads of the subha ("rosary") (q.v.), except for the Wahhâbîs, who object to this custom as being a reprehensible bâtî' ("innovation"). It appears that a Syriac (Christian) custom already made use of the subha to count off an enumeration of divine Names, which was much shorter than the Muslim enumeration.

In fact, on the one hand, the traditional 99 “most Beautiful Names” do not exhaust the list of all the Kur'ânic Names; on the other hand, some of them do not occur ad litteram in the Kur'ân. As a result, the list was not always absolutely fixed and was liable to contain variants. It does not suffice, therefore, to settle the entire question of the divine Names. But the place held by this recitation in Muslim piety gives it an outstanding importance. It expresses clearly enough the pious Muslim’s faith in God, and what the supreme Name Allâh, which, in itself, recapitulates all the others, means for him. We shall reproduce the most usually accepted list, in accordance with the hadith, with a translation and a brief commentary. As space does not permit us to trace its usage historically, we shall take it in its finished form, as given by most of the tafsir to Kur'ân, xvii, 110. Fairly frequently the Name Allâh is as though set apart, the hundredth Name if one so desires (thus the tafsir of the Djallâyn): But it is also at times considered as the first of the enumeration; in which case the 67th Name al-wâhiḍ is suppressed and joined to the 68th al-akîd. Main references: al-Maḥad al-Asmd of Ghazzâlî (Cairo ed. n.d.), especially 23-72; Musannaf of ʿAḍud al-Dîn al-Jâfrî, commentary by al-Djurdjulâni (Sharh al-Mawâbiḥ) Cairo ed. 1325/1907 vol. 8 211-17 who himself refers to al-Ghazzâlî and to Sayf al-Dîn al-Amidi.

The usual order may be established as follows: the first 13 Names (or Names 2 to 14 when the list starts with Allâh) refer to the Kur'ânic enumeration of verses lix, 22-24. The subsequent order seems to be mainly mnemotechnic, governed by assonances, associations of verbal forms, doublets having both a correlative and paradoxical sense, etc. Connection with the attributes (psi'd), where indicated by us, is that put forward by al-Ghazzâlî or al-Djurdjulâni. Also to be noted: the Arabic root of several of these Names expresses different, sometimes opposite meanings, which are, therefore, present together in the mind of the Muslim reciting and meditating on the subha. It is therefore impossible at times to translate a Name into a European language by one single word or at least have a scriptural derivation.

List of the “99 most Beautiful Names”: 1) Allâh, name belonging to God, “designates God Himself and may not be applied to any other thing”; 2) and 3) al-rahmân al-rahîm, the Benefactor (or the Merciful), the Compassionate: depend on the attribute of will, both connoting the same sense; however according to al-Ghazzâlî, rahmân, unlike rahîm, may only be applied to God (reminder of Rahmân, divine proper Name); 4) al-malîk, the King indicates independence (negative attribute) towards all things, the dependence of everything as regards God (active attribute), and the perfection of the divine power (attribute of power); 5) al-kuddûs, the
Holy, in the sense of Separated (negative attribute), indicates: a) the absence of all blemish; b) giver of peace and salvation at the beginning of the creation and at the time of the resurrection (active attribute); c) will pronounce the benediction of peace over his peace and salvation at the beginning of the creation (attribute of speech); 7) al-mi4?min, al-saldm, Holy, in the sense of Separated (negative attribute), c) will pronounce the benediction of peace over his peace and salvation at the beginning of the creation (attribute of speech); b) giver of protection (amdn); 8) al-muhaymin the Vigilant: a) with regard to this Name, the doctors stress the absolute perfection of the Name, beyond the limits of human understanding, and never dominated (negative attribute); b) - according to Ghazali: is beyond the limits of human understanding, nothing bad can come from Him (negative attribute); 31) al-latīf, the Benevolent, who creates in His servants a grace of benevolence (luft), to come to their help (attribute of action); 32) al-ghabbīr, a) the Sagacious, very close to 'ulim, in the sense of knowing the intimate secrets of creatures (attribute of knowledge); b) who chooses, who decides freely (attribute of speech); 33) al-raft, endowed with gentleness, who is slow to punish (negative attribute); 34) al-‘asīm, the Inaccessible (cf. the sense given with regard to al-‘ajabbār); according to Ghazalli: is beyond the limits of human understanding, just as the earth and sky cannot be taken in at a single glance; 35) al-ghaffār, the Very Indulgent, who pardons; a) according to al-Iṣār: al-Diurđi: identical in meaning to al-ghaffār, just as al-rahmmān and al-rāhim are identical in meaning; b) according to Ghazalli: al-ghaffār stresses that God pardons even repeated sins, whereas al-ghaffār conveys in an absolute manner and without precision the infinite pardon of God; 36) al-ghabār, the “Very Grateful”, in a metaphorical sense, coming from ghfr (gratefulness), i.e. a) who gives much as reward for little (attribute of action), b) and proclaims the eulogy of whomsoever obyes him (attribute of speech); 37) al-‘ālī, the High; for al-‘īdā: synonym of al-mu‘akkabār; for al-Ghazalli: God, primary Cause, is on the highest step of the scale of beings; 38) al-‘a‘lī, the Great; for al-‘īdā: synonym of al-mu‘akkabār and of al-‘a‘lī; for al-Ghazalli: synonym of al-‘a‘lī, stresses the absolute perfection of the being of God, whose eternal existence is the source of the being of all creatures; 39) al-hafīs, the vigilant Guardian: sense close to ‘ulim according to al-Iṣār, for vigilance (hafs) is the opposite of negligence and forgetfulness, and therefore has its origin in ‘ulim; a) God is Vigilant, continually
in action, by this action watching over the whole universe, without having to give His attention to things one after the other (negative attribute); b) He assures the permanence of created forms by vigilance which resists depredations (attribute of action); 40) al-mukhl (four shades of meaning), a) the Nourisher, source of strength, for He creates nourishment (physical and spiritual): synonym of al-rasâl (al-Ghazzali), b) the Determiner, who decrees and fixes destiny, attribute of power (Hudra); c) the Witness (ghâshid), who knows the Mystery (al-ghayb), attribute of knowledge; d) the Present; 41) al-basîb, the Calculator, He who settles accounts; a) who gives sufficiency, for He creates for His servants what is sufficient for them (active attribute); b) who, by His words, asks of whomsoever is subject to the Law, account of what he does of good and of evil (attribute of speech); 42) al-dâlî, the Wise; a) synonym of al-ahad (al-Idji), endowed with wisdom, i.e. with knowledge of things as they are, close to kâfîs (and thus derived from the sense of safîm) according to al-Ghazzalî, with a stress placed on the absolute and jealous vigilance; 43) al-karîm, the Generous; four shades of meaning: a) endowed with liberality (attribute of action); b) who fixes the measure of generosity (attribute of power); c) from whom comes all nobility (attribute of relation); d) who pardons faults; 44) al-ra'dîb, the Jealous Guardian, sense close to hâfîs and thus derived from the sense of safîm; according to al-Ghazzalî, with a stress placed on the absolute and jealous vigilance; 45) al-mudûsîn, the Assenter, who grants prayers; al-Ghazzali: who hastens to satisfy the needs of creatures, who anticipates them; 46) al-wâli, the Omnipresent, who embraces and contains all things: He extends His generosity to everything which exists, His knowledge to everything which is knowable, His power to everything which may be determined by it, absolutely and without His having to pay attention successively to things (al-Djurdjianil); 47) al-bâhim, the Wise; a) synonym of al-sâlim (al-Idji), endowed with wisdom, i.e. with knowledge of things as they come from Him and with the production of actions according to what is expedient; b) the Prudent in His decisions: which corresponds to the perfect soundness of His providence; 48) al-wâdâd, the Very Loving; a) who loves the well-being of His creatures and procures it for them gratuitously; b) refers to the attribute from which proceeds the praise He bestows on the believer and the reward which He gives him; 49) al-mâjîdî, the Glorious, a) whose actions are replete with His favours abroad; b) the praise due to him belongs to Him alone; 50) al-bâ'dish, the Revivifier, who will revivify every creature on the day of the Resurrection (this name has only a traditional origin); 51) al-ghâshîl, the Witness, a) who knows the Mystery, b) and who is Present (cf. 3rd. sense of al-mukhl) • 52) al-hâshîb, the Real, supreme Truth, connotes al-‘asal (same kind of attribute): a) necessary by essence (ontological truth); b) perfectly truthful in His speech; c) who makes the Truth); manifest; 53) al-wâshâl, the Trustee, He to whom everything is entrusted, who takes care of all the needs of creatures; 54) al-bawîl, the Strong, who has power over all things; 55) al-mâshîl, the Unshakable, whose power is without limit; 56) al-wâlî, the Friend, the Protector, in the sense of helper, defender; and also: the Holder of authority; 57) al-bâmid, Worthy of praise (attribute of relation); 58) al-mukhti, the Numberer, who comprehends and knows comprehensively all numbered things (al-‘âlim) and has power over them (al-bâdir); 59) al-mubâtîn, the Innovator; a) absolute creator of beings; b) whose favours are purely benevolent; 60) al-mu‘tîd, He who resuscitates, who causes the creature to “return” after its destruction; 61) al-mukiyî, the Creator of life, and 62) al-mawmi, the Creator of death: a) who causes to live and to die; 63) al-wâdidî, the Living, one of the “essential attributes”, “in the obvious sense” (al-Idji): God is always acting and watching, whereas none can act upon Him in any way and none can perceive Him without dying: He is Living in the highest and most perfect degree of life, by reason of the absolute perfection of His Activity and His Knowledge (al-Ghazzalî); 64) al-bayyâm, the Self-Subsisting: a) who subsists in Himself and by Himself, without any reason for being other than Himself (negative attribute); b) who rules and co-ordinates creatures, and none can subsist without Him; 65) al-wâhidîd, the Opulent (the Perfect), to whom nothing can be lacking or be needed (negative attribute); 66) al-mâjudî, the Noble, the High (al-dîlî), attribute of relation; 67) al-mubâdîlî, who has power over them (al-‘âlim) and resuscitates, who causes the creature to “return” after its destruction; 68) al-mumît, the Creator of death,—He who brings and 72) He who brings and 73) He who brings and 74) He who brings and 75) He who brings and 76) He who brings and 77) He who brings and 78) He who brings and 79) He who brings and 80) He who brings and 81) He who brings and 82) He who brings and 83) He who brings and 84) He who brings and 85) He who brings and

wishes to lighten the burdens (sense close to raḥmān, according to Ghazzālī); 84) mulk al-mulk, the Master (King) of the Kingdom, who possesses in complete sovereign independence the world and each creature; 85) ʿādū l-ʿādālā wa l-ītrām, the Lord of Majesty and Generosity, sense close to al-ṣalālī, observe al-Īdālī and al-Āmīdī; 86) al-muṣṣīl, the Just, —al-Ghazālī specifies “on the Day of Judgement”, (al-Dūraydī recalls that the root, according to the verbal forms, has both the meaning of “just” and “unjust”); 87) al-ṣāmīḥī, the Assembler: a) who assembles beings according to their similitudes, their differences, their oppositions (al-Ghazālī); b) who reunites adversaries on the Day of Judgement (al-Īdālī—al-Dūraydī; 88) al-ğhāntī, the Rich, the Independent, who lacks nothing; 89) al-muṣṭāḥfī, the Enricher, who embellishes every creature, from whom creatures derive their perfection; 90) al-mānīʾ (traditional Name only), the tutelary Defender: correlative of al-ḥāfīẓ, the vigilant Guardian; al-ḥāfīẓ stresses the idea of guarding, protecting,—and al-mānīʾ the idea of prohibiting and suppressing obstacles; 91) al-dārī, He who affects, and 92) al-nāṣīḥī, He who favours: two traditional Names only; they teach that evil and good, affliction and favour, harm and benefit derive only from God; 93) al-nāṣr, the Light,—God is Light: a) of a perfect and manifest consciousness of the limits fixed to philological knowledge and poetry. They were all of them disciples of the leading philologist of Baṣra, Abū ʿAmar b. al-ʿĀlāʾ (q.v.). Among their numerous disciples the littératus al-Diḥābīs has left in his works a monument of their learning. An astonishing memory and an unusually critical mind distinguished him. Abū ʿAmar had taken over also an accurate consciousness of the limits fixed to philological knowledge: (see an utterance of Abu ʿAbbās quoted by al-Duwārīsīhī, i, 323). The method of seeking information from the bedouins in matters concerning grammar and lexicography which seems to have been developed in Baṣra under the stimulus of Abū ʿAmar was taken over by his disciples. A list of the bedouin teachers of the Baṣrans is given in Fībrīst, 43 f. (cf. al-Muṣṭirī, ii, 401 f.). In Baṣra common people were familiar with his scholarly interests and could suggest to him where he could find a ṣiḥāḥ possessing a perfect knowledge of the liḥṭā; (see al-Muṣṭirī, ii, 307). Anecdotes tell also of his rides into the desert to visit bedouins and collect pieces of poetry from their lips. Already as a young man he was sought by students who were anxious to learn from him, and his maqāṣis was widely known. Of the different branches of philological work which had already developed, lexicography particularly corresponded to his talent, whereas Abū Zayd is said to have been his superior in grammar and al-Ḫallī to have been in despair about him. From the work which had already developed, lexicography particularly corresponding to his talent, and the number of his contemporaries. Abu ʿAbbās and his companions Abu Zayd and the Kāṣīms al-Bahill from the ill-reputed Kaysite tribe al-Bāhila, a relationship which is alluded at in a satirical poem of a contemporary poet; (see Ibn al-Muṭṭāzīsīhī, Tabākāt al-Shuṣrārīsīhī, i, 117). This scholar and his contemporaries Abū ʿAbbās and Abū ʿAmar b. al-ʿĀlāʾ (q.v.) constituted a triumvirate to which later philologists owe most of their knowledge about Arabic lexicography and poetry. There were all of them three disciples of the leading philologist of Baṣra, Abū ʿAmar b. al-ʿĀlāʾ (q.v.). Among their numerous disciples the littératus al-Diḥābīs has left in his works a monument of their learning. An astonishing memory and an unusually critical mind distinguished him. Abū ʿAmar had taken over also an accurate consciousness of the limits fixed to philological knowledge: (see an utterance of Abu ʿAbbās quoted by al-Duwārīsīhī, i, 323). The method of seeking information from the bedouins in matters concerning grammar and lexicography which seems to have been developed in Baṣra under the stimulus of Abū ʿAmar was taken over by his disciples. A list of the bedouin teachers of the Baṣrans is given in Fībrīst, 43 f. (cf. al-Muṣṭirī, ii, 401 f.). In Baṣra common people were familiar with his scholarly interests and could suggest to him where he could find a ṣiḥāḥ possessing a perfect knowledge of the liḥṭā; (see al-Muṣṭirī, ii, 307). Anecdotes tell also of his rides into the desert to visit bedouins and collect pieces of poetry from their lips. Already as a young man he was sought by students who were anxious to learn from him, and his maqāṣis was widely known. Of the different branches of philological work which had already developed, lexicography particularly corresponding to his talent, whereas Abū Zayd is said to have been his superior in grammar and al-Ḫallī to have been in despair about him. From the work which had already developed, lexicography particularly corresponding to his talent, and the number of his contemporaries. Abu ʿAbbās and his companions Abu Zayd and the Kāṣīms al-Bahill from the ill-reputed Kaysite tribe al-Bāhila, a relationship which is alluded at in a satirical poem of a contemporary poet; (see an utterance of Abu ʿAbbās quoted by al-Duwārīsīhī, i, 117).
them after they had fallen into disgrace; (see al-Dihāshīyārī, 206). As an intimate of Diacfar he was himself in fear of his life when he got to know about the fall of Diā‘ar in 878/883; (see al-Dihāshīyārī, 206).

In al-Asma‘ī’s opinion, the poet Iṣḥāk b. Ibrāhīm al-Mawṣhil, his rival at the court, was more successful in obtaining from the caliph a ready-money consideration for his wit; (see Aḥānī, v, 77, al-Ḥamīs, Zahr al-Addb, 1014, and Irshad, ii, 205). The Ḥūd of Ibn ʿAbī Ṭālib contains a number of the “extraordinary tales” (nawddir) and the “amusing stories” (mulād) with which al-ʿĀṣma‘ī entertained the caliph. After the death of Hārūn, al-ʿĀṣma‘ī seems to have returned to Baṣra. According to an isolated piece of evidence he died in Marw; (see Ibn Khallikān, nr. 389).

Among the disciples of al-ʿĀṣma‘ī and related circles of Baṣra and Baḥḍād there circulated numerous stories told by him or about him which found their way into Arabic literature. Some of them certainly catch authentic features of his character. Thus we are told that, at the summit of his career, though possessing at that time considerable property, he persisted in living as a poor man. As against the luxuriousness of the Persians, the plain living ascribed to him in tradition to ʿUmar b. al-Ḥaḍhrāt and al-Ḥansān al-Baṣrī [see Irshad, ii, 416] was also the sincere piety of plain-living people. His predilection for the sentimental and pathetic elegy—he is said never to have transmitted satirical poetry—is in accordance with his idealisation of the Arab race according to his own religious feelings. In authentic traditions he relates the sayings of al-Ḥansān al-Baṣrī. Numerous traditions beginning with the formula “I heard a bedouin saying in his prayer” are in the same spirit. In the works of later writers these sentimental features dominate the character of al-ʿĀṣma‘ī. We find them in the romantic story put into the mouth of al-ʿĀṣma‘ī in one of the fictitious traditions ([ṣiddīq] of Ibn Durayd; [see al-Kālī, al-ʿĀṣma‘ī, iii, 7). In the Muhāدادār al-ʿAbdr of Ibn al-ʿArabī, the learned philologist of Baṣra, tells, as did his contemporary the Egyptian mystic Ḫūrūḥ-1-Nūn, about his meetings with poor bedouins and young girls who revealed to him an unexpected and extraordinary insight into the mysteries of the divine love; (see op. cit., 81 and 133).

His orthodox contemporaries and later writers agree that al-ʿĀṣma‘ī was an orthodox Sunnī. According to Ibrāḥīm al-Ḥarbī (d. 285/898), there were among the philologists of Baṣra only four definite adherents of the sunna, one of them being al-ʿĀṣma‘ī, (see Taʾrīḥ Baḥḍād, x, 418; cf. Ibn al-ʿAnnārī, 170).

As an instance of his piety tradition adduces that in order to “avoid sin” he answered with strict silence to any philological question which evidently had or could have a bearing upon the reading of the Kurān or the wording of tradition. (A list of examples is given in al-Mushir, ii, 325 f.). Whereas for ʿAbū ʿAmr and Abū ʿAbdālād the study of the lugha was dependent on that of the Kurān, al-ʿĀṣma‘ī thus separated in himself the “reader” from the grammarian and the transmitter of poetry. In accordance with the attitude held by his teacher Nāḥī and the readers of Medina (see about this subject Two Muqaddimas to the Quranic sciences, ed. A. Jeffery, Cairo 1954, 183) al-ʿĀṣma‘ī consequently abstained also from taṣfīr; (see al-Mushir, ii, 416, and Irshad, i, 26 f.). In this respect he was opposed to people of Muḥtāzīlitte and Ḥamāsī outlook who, in his view, commented upon the Kurān according to their “opinion” (ra‘ī), as did Abū ʿUbaydālād in his al-Mudārīb; (see Irshad, ii, 389 and vii, 167).

As a transmitter of poetry al-ʿĀṣma‘ī and his generation were essentially influenced by “the great transmitters”, Ḥāmāsī al-Ra‘wīya and Khaṭaf al-ʿAlmār [qq.v.]. The inconveniences connected with the unreliable character of these persons were clearly seen by him; (see Irshad, iv, 140 and al-Mushir, ii, 406; cf. E. Schüle, 99 f.). In order to collect in a complete and definite form the odes of the great pre-Islamic poets he sought persons known to have a reliable knowledge of the tradition. In his work he developed a critical method remarkable for his time, a deep knowledge of the topography of the Arabian peninsula, of the genealogies of the tribes and, above all, of lugha and of grammar. Handed down by his disciples, these critical remarks found their way into the works of later commentators. On the basis laid by al-ʿĀṣma‘ī, his disciples Ibn Ḥābīb, ʿAbī l. ʿAbd Allāh al-Ṭūsī and, finally, al-Suḵkārī, prepared the definitive editions of the diwāns.

From the 72 pieces or fragments of early Islamic or early Islamic poets which he collected in an anthology called al-ʿĀṣma‘īyyāt (ed. Allard, Sammelbände aller arabischer Dichter, i, Berlin 1902), we can get an idea of al-ʿĀṣma‘ī’s literary taste. On the subject of criticism (nabd al-ṣafir) numerous sayings of al-ʿĀṣma‘ī are quoted in later writers. In a note-book called Fuhūlat al-Ṣuwarā (ed. Torrey, ZDMG, 1911, 457-516), his disciple Abū Ḥāṭim al-Sīǧistānī collected answers given by his teacher to the question which poets are to be regarded as jāzī. Whereas Abū ʿAmr, according to al-ʿĀṣma‘ī, was never heard to quote an Islamic poet (Ibn Ḥaṣṭīk, al-ʿUmād, i, 73), his disciple valued the new poets who mastered the lugha; (see for instance Ibn al-Djarrāb, al-Waraka, 60). For his criticism of the muwaṣṣalāt, see J. Fück Arabiya, 22 f.).

Applying to the rich lexicographical materials collected by him the systematic methods employed by philologists from the very beginning of these studies in ʿIrāk, i.e. of grouping together items of similar materials, al-ʿĀṣma‘ī composed a series of monographs the titles of which are listed in the Fihrist, 55. In his Dīṣārat at-ʿArab, which is lost but is copiously quoted by Ṭāḥīr in his Muṭṣām, he often seems to adduce a first-hand knowledge of topography; (see for instance Muṭṣām, i, 205). About the size of these treatises we know from Fihrist only that the Gharīb al-Ḥadīth was written in 200 folios. A number of them, however, have been preserved; (see Brockelmann, I, 104 and S I, 164). That these specimens of al-ʿĀṣma‘ī’s lexical work do not represent the final state of his collections seems obvious, if one compares for instance the rather meagre text of his al-Nabāt wa-l-Ṣhadār (ed. Hafner, Beirut 1898) with the rich material on the subject quoted from al-ʿĀṣma‘ī by Abū Ḥanīfa al-Dīnawarī in his Kitāb al-Nabāt.

Among the disciples of al-ʿĀṣma‘ī, Abū Naṣr ʿĀṣmād b. Ḥāṭim al-Bāḥillī was known to be his rāwīya. He is said to have transmitted the books of his teacher to Ḥuṣayn; (see Irshad, ii, 140). As a transmitter of them there is mentioned also Abū ʿUbayd al-Kāsim [qq.v.] who divided the books of al-ʿĀṣma‘ī into chapters and added some pieces of information to them on the authority of Abū Zayd al-Anṣārī and the philologists of Kūfā; (see Irshād, vi, 162 f.).
For later lexicographers the main source of information about materials collected by al-AsmacI was the Tahdhib al-Lugha of al-Azharl. In the introduction (ed. Zettersten, MO, 1920, i, i), al-Azharl mentions the direct and indirect sources from which he drew these materials.

AL-ASMACIYYAT [see AL-ASMACI].

ASPER [see ARSE].

‘ASR (a), time, age; particularly the early part of the afternoon, until the sun becomes red; hence *salâ al-‘asr*, the prayer in the afternoon, cf. SALAT.

ASRÂFIL [see ISRAFIL].

ÂŞS [see ALAN].

ASSAB, town and port at the N.W. end of the Bay of Assab on the coast of Eritrea. The surrounding country is arid and is inhabited by afar (Danakil). Assab is generally identified with the ancient Sabae, described by Strabo (xvi, 771) as *polis euperepog*.

Its importance is due to its position opposite Mukhâ and at the end of a caravan route leading to the Ethiopian plateau, both the Red Sea and the coastal desert being comparatively narrow at this point.

In 1936-39 the Italians built a motor road from Assab connecting with the main Addis Ababa-Assmara road near Dessey. Assab was known to the Jesuit missionaries of the early seventeenth century; they called it a “very good road...where you may have wood and water freely, and refreshing for your money or coarse calicoes”. (Sir W. Foster, *Letters received in the British'intervened to check the threat of the Burmese and integrated Assam into their territory. The Ahoms retained the services of the Muslims for their skill in arts and crafts. The *Marias* (braziers) and the *Garias* (tailors by profession) are even now common in some districts. In the middle of the 19th century a large percentage of the Muslims were affected by the “Farâkhî” movement. The humber peasants have developed a peculiar local culture, combining with their faith in Islam the local rites and customs and national festivals of this region.

ASSAM, name of the easternmost province in the Republic of India, situated between East Pakistan and Burma, within 22° 19' and 28° 16' N. Lat., and 98° 42' and 97° 12' E. Long. It comprises the Brahmaputra valley and the hill ranges enclosing small plateaux, the shelter of numerous hill tribes and refuge of the Mongol hordes. The province covers 85,012 English square miles, and its population in 1951 was 9,043,707, of whom 1,996,456 were Muslims, three-fourths of these being concentrated in the westerly districts of Goalpârâ and Kârâpur, contiguous to North Bengal, and Cachar, adjacent to Pakistani Sylhet. Since 1920 their percentage has considerably increased in other neighbouring districts owing to immigration from Bengal, the eastern portion of the valley remaining unaffected.

In Sanskrit records the valley is called “Lâwhitya”, “Prâk-jyotishâ”, or “Kârâpur”. The word, Assam (correctly Asâma, locally pronounced Ah6m), is connected with the *Sanskrit* A+sama (= “peerless”) is unwarranted. The Ahom migrants had a sense of history, and produced works called *Bwakhîs*. The first king known is Sukâpha, who, in 1228, occupied a portion of the Upper Valley. His successors gradually conquered the neighbouring tribes and established the Ahom kingdom. The western valley, with the city of Gâwâtî, which lay outside their domains, retained the name of Kârâpur, and was ruled by petty landlords, collectively called Bârâbhuîyas. Twice they were integrated into the kingdom of Kârâpur-Kântâ, first by the Khens, and next by the Kochas, northern rival neighbours of the Muslim SultânS of Bengal.

The Muslim advance into Kârâpur falls into three stages. The first, which began in A.D. 1206 with Bâkhtîyar Kâhdî, is a period of raid, occasional occupation and imposition of tribute. It culminated in 1357, when Sikandar Shâh founded the mint of Gâwâtî (possibly Gâwâtî). It is in one of the neighbouring castles that Ibn Ba'ttûS possibly met the famous saint Shâh Dâ'ûl Tâhrîz. The second period began with the defeat of Kâmêsvara, the king of Kântâ, by Bârbak Shâh, and the final occupation of Kârâpur by ‘Alâ’ al-Dîn Hûsain Shâh after overthrowing the Khen king, Nîlânâban, in 1498. So far the Muslims had not contacted the Ahoms, Kârâpur being alone mentioned in contemporary Muslim records. The *BârâbûtS* speak of a first Muslim invasion in the 14th century B.C. by Torkh (possibly Bah-r-bak = “naval officer”), obviously an official posted in Kârâpur, but the invading forces were utterly routed. With the downfall of the Hûsain Shâh dynasty in 1538, the Kochas emerged and established their kingdom. Of this period the tomb of Shâh Qâhidî al-Dîn A‘wîlîyâ at Hâjî is an important memorial. The third period began in 1612, when Islam Khân, the Mughal Governor of Bengal, subjugated the Kochas and occupied Kârâpur once again. Hereafter wars with the Ahoms became frequent, and Assam loomed large in Persian chronicles. In 1662 Mîr Dîjunâ finally reduced the Ahom king and imposed an annual tribute on him. The subsequent weakness of the Mughals encouraged the Ahoms, who by 1682 occupied the whole Brahmaputra valley and continued to rule till 1824, when the British intervened to check the threat of the Burmese and integrated Assam into their territory. The Ahoms retained the services of the Muslims for their skill in arts and crafts. The *Marias* (braziers) and the *Garias* (tailors by profession) are even now common in some districts. In the middle of the 19th century a large percentage of the Muslims were affected by the “Farâkhî” movement. The humber peasants have developed a peculiar local culture, combining with their faith in Islam the local rites and customs and national festivals of this region.
There were frequent rebellions in Gurgan during both the Umayyads and the 'Abbasids caliphates. Astarabād is rarely mentioned by historians, and the geographers also give little information. It was a silk centre according to al-‘Iṣṭakhrī, 213. The port of Astarabād (and Gurgan) on the Caspian, Abaskūn, was an important trading centre. The Ḫudūd al-‘Ālam, 134, says the people of Astarabād spoke two languages, one of which is probably preserved in the dialect used by the Hurufī sect.

After the Mongol conquest of Iran we find Astarabād replacing Gurgan as the most important town of the area. The province was the scene of strife between the last Il-Khāns, the Timurids, and local Turkish tribal leaders. Sometime during this period the Kādjar tribe of Turkomans became the leading power in Astarabād. Aghā Muhammad, first of the Kādjar Shāhs, was born in Astarabād. Shāh Ḥabib I, Nādir Shāh, and Aghā Muhammad all erected buildings in Astarabād. The town, located on the steppes, continually suffered the depredations of Turkomans.

Astarabād had many mosques and shrines (see Rabino, below), and was called dār al-mu‘minīn probably because of the many sayyids living there.

The name of the town was changed to Gurgan under Rīḍā Shāh, and in 1350 it had ca. 25,000 inhabitants. There are few old remains in the town, and only two are noteworthy, the Imāmzāda Nūr and the mosque of Gushān. Rabino (below, 73-5) lists the shrines of the town as well as the inscriptions.

The province of Astarabād, as it existed under the Kādjar, was bounded on the north by the Gurğan River, on the south by the Elburz Mts., on the west by the Caspian Sea and Māzandarān, and on the east by the district of Dājadiān. The district (ghābaristān) of Gurgan under Rīḍā Shāh was smaller. The province could be divided into two parts, the mountain area and the plains. The former predominates in the mountain area and the towns, and Turkomans on the plains.

Astarabād was the second city of the province of Gurğan in Islamic times and underwent the same fortunes as the capital city Gurğan. The province was raided by the Arabs in the time of the caliph ʿUṯmān (al-Baladḥūrī, Futḥā, 334), and again by Saʿīd b. ʿUṯmān under Muḥāwiya, but it was not conquered until Yaʿṣīr b. Muḥallab defeated the ruling Turks of the area in 98/716. There is a tradition that Yaʿṣīr founded Astarabād on the site of a village called Astarak.
AL-ASTARABADHI — ASTRAKHAN 721

travelled scholar who consorted with Sufis (d. in Baghdad in 412/1021-2). There were several well-known Astarabadi scholars in Safawid times, including Ahmad b. Tadj al-Din Hasan b. Sayf al-Din al-Astarabadhi, author of a biography of the Prophet, 'Imad al-Din ‘Ali al-Shafi'i al-Kari al-Astarabadi, author of a treatise on the recitation of the recitation of the Qur'an, and Muhammad b. 'Abd al-Karim al-Ansari al-Astarabadi, who translated an Arabic work on ethics. The misba Astarabadi is given also to several lesser known scholars, such as al-Hasan b. Ahmad al-Astarabadi, a grammarian and lexicographer, and the traditionist Muhammad b. ‘Ali.

AL-ASTARLABDH, RADII AL-DIN MUHAMMAD b. AL-HASAN, author of a celebrated commentary on the Kitabiya, a well-known grammatical work of Ibn al-Hadjib. Suyuti, who praises the commentary as unique, admits to knowing nothing of Radil al-Din’s life, except that the work was completed in 683/1285-6, and that Radil al-Din was reported to have died in 684 or 686/1285-8. He also wrote a lesser known commentary on the Shafiiya of Ibn al-Hadjib. The Radil Nuri Allah Shushtari interprets a reference in the introductory prayer as meaning that the commentary on the Kitabiya was written in Nadif, but the term haram which occurs in the Arabic edition could refer just as well to Mecca, where Suyuti obtained his information on the date of Radil al-Din’s death. There seems no doubt, however, that Radil al-Din was a Shi‘i.

AL-ASTARABADHI, RUKN AL-DIN AL-HASAN b. MUHAMMAD b. SHARAFGHAN AL-ALAWI, known as Abu l-‘Faq’al al-Sayyid Rukn al-Din, a Shi‘i scholar best known for his commentary on the Kitabiya, a grammatical work of Ibn al-Hadjib. This commentary, the Kitabiya, is known also as the ‘Alawiyya, or “intermediate”, as it was the second of three commentaries. Al-Suyuti, quoting Muhammad b. Rafi‘s appendix to the Ta’rikh Bagdad (the passage is not included in the abridged Bagdad edition of 1938) says that he enjoyed the patronage of Nasir al-Din Tusi [q.v.], in Maragha where he taught philosophy and composed commentaries on Tusi’s Tadjrid al-Ahd and Kaddid al-Akh. He accompanied Tusi to Baghdad in 679/1281-2, and, after the death of his patron in the same years, settled in Mawsil, where he taught in the Nuriyiya madrasa and composed his commentary on Ibn al-Hadjib. From Mawsil he went on to Sul‘aniyya, where he taught Shafi‘i jurisprudence. He died in 715/1315-16 or 718/1318-19 (two MSS in the Bibliotheque Nationale give the date of his death as 717/1317-18 and 719/1319-20). Rukn al-Din was reputed for his modesty as well as for the honour in which he was held in the Mongol Court.

ASTARLAB [see ASTURLAB].

ASTORGA [see ASHTURKA, in the Suppl.].

ASTRAKHAN, city and district. The city lies on the left bank of the Volga, some sixty miles from the point where it runs into the Caspian Sea, 46° 21’ N, 48° 2’ E, 207 m. below normal sea level, 7.6 m. above the level of the Caspian Sea. Ibn Battuta, ii, 410-2, who passed through here in 1333, mentions for the first time a settlement supposed to have been founded by a Mecca pilgrim, whose religious reputation brought the district exemption from taxes; this was supposed to explain its name, viz. Hadjib Tarhan (tarhan means among the Mongols in later times a man exempt from taxes, a nobleman). Other names of the form are Cytrykad or Cytrykhad, in Ambr. Contarini’s account (1487) Citirкано, in Turkish-Tatar sources also Azdarkhan and Ashtagaran. The settlement lay on the right bank of the Volga on the Shareniy (or Zareniy) hill; the first coins discovered are from 776/1374-5 and 782/1380-1. (777/1375-6: Chr. Frahn, Münzen d. Chane etc., St. Petersburg 1832, 22, no. 102; idem, Recension etc., St. Petersburg 1826, 500, no. 1; A. K. Markov, Inv. Katalog, St. Petersburg 1896, 860; 1380-1; ibidem, 476; P. S. Savelev, Money Divdven, ii, St. Petersburg 1858, 18, no. 416; also the Kaiser Friedrich Museum, Berlin, possessed a specimen.) In the winter of 798/1395-6 Timur destroyed the city, as well as Saray [q.v.] (Shaml, Zafar-nama, ed. Tauer, 1, 158-62). In contrast to the latter Astrakhan rose again and took over eventually its importance as a centre of trade; in the course of this it became, as earlier the neighbouring Khazar city of Hil (Atil) [q.v.], eventually the centre of the traffic on the Caspian Sea and the lands bordering on it.

In 871/1466 there was established in Astrakhan, during the decline of the Golden Horde [cf. nIrfords] a Tatar dynasty of the Noghays princes stemming from the Tatar Khan Kušik Mehmed. The territory ruled by the Khans Kāsim (872-966/1466-90) and his brother Ab-il-Karim (in Russian and Polish Ablungiryim; 896-910/1490-1504) encompassed the country as far as the modern Stavropol’, Orenburg (Okalov), Samara (Kuybshev) and Saratov, and was divided into various uluses. The population supported themselves mainly by cattle raising, hunting and fishing. Conflicts with the begs, the rapid changes of Khans after 910/1504 and the interference of the Crimean Tatars and the Noghaykuls brought the Khans into difficulties; the Khan ‘Abd al-Rahmad (947-51/1534-8) sought help against these and the Ottomans from the Russian Czar.

For a list of the Khans see Zambaur, 247, and for a genealogical table ibid., 241.)
In 962/1554 the Khānate (since 951/1544 under Yamghurcay or Yaghmurcl) was conquered by the Russians; since the Khan Darwlsh Fahl (in Russian Derblsh), who was nominated by them, allied himself with the Crimean Tatars and the Noghays, he was deposed in 964/1556-7 and the Khanate incorporated into the Russian state. Apart from the Russian there immigrated into the country Kalmucks [q.v.] since 1632; those of whom lived east of the Volga returned in 1770-1 to the East, while those who settled west of the Volga were driven out in 1544-5. They were followed with Russian permission by Kazaks [q.v.] since 1801. A as counterbalance 25,000 so called Astrakhan Cossacks were settled here in 1750 (new organisation in 1817; their corporation dissolved in 1919). In 1717 the Government of Astrakhan was established by the Russians; 1785-1832 the territory belonged to Caucasus. The re-established Government of Astrakhan received in 1860 new boundaries (208, 159, according to other calculations 236, 532 sq.km.). In 1918-20 the territory became part of the Russian SSR and forms since 1801. As a counterbalance 25,000 so called Astrakhan Cossacks were settled here in 1750 (new organisation in 1817; their corporation dissolved in 1919). In 1717 the Government of Astrakhan was established by the Russians; 1785-1832 the territory belonged to Caucasus. The re-established Government of Astrakhan received in 1860 new boundaries (208, 159, according to other calculations 236, 532 sq.km.). In 1918-20 the territory became part of the Russian SSR and forms since 27 Dec. 1943 (after the dissolution of the Kalmuck territory) an oval of 96,300 sq.km.

Astrakhan was rebuilt by the Russians in 1558 seven miles downstream on the left bank and has since then always contained an overwhelmingly Russian population; there was a Tatar and an Armenian suburb. Indian settlers of the 17th century mixed with the Tatars ("Agryzans"). The city was threatened in 1569 by an Ottoman-Crimean Tatar army (cf. Ahmad Refik, Bahr-i Khatær—Kara Dehvari Kanal va Eiderdgh Shari, TOEM, viii, 1-14; Hallî Ênêz, Osmanli-rus tebâebmen menesci ve Don-Volga kanal sêsibüsii, Boi, 1948, 349-402; cf. also 84216). Consequently in 1582 the Russians built a stone wall and in 1589 a fortress. In spite of this the city was repeatedly plundered by Tatars and Cossacks (especially Steénka Razinn, 1660-8); it suffered too from repeated earthquakes and epidemics. In 1722-1867 it was the naval port for the Caspian Sea (since then Baku); in 1918-21 also, during the civil war, a flotilla operated from here. Astrakhan has in 1897: 113,001 inhabitants (among them 12,000 Muslims; Persians, Tatars, etc., and 6,200 Armenians), six Şafî mosques and one Sunni, 73 madrasas and three makhâb. In 1939 the city had 253,655 inhabitants and possessed over ten Tatar schools and several Tatar newspapers. For the Soviet Union it is important mainly as a starting-place for Caspian ships and because of its fisheries (with caviar and blubber factories) and its fishing industry.

(B. Spuler)

ASTROLOGY [see nüdüm, ahkâm al-].

ASTRONOMY [see hā'īm al-].
instruments preserved date from the second half of the 4th/10th century. In learned European circles the astrolabe and its theory became first known through the writing of Muhammad ibn Zakariya ibn al-Hasan al-Idrisi (c. 1013-54); they, as all posterior European compositors, strictly depend on Islamic models, above all the Writings (spurious?, see Millas [i], ch. vi) of the earliest European instruments that have survived date from c. 1200. After the invention of the telescope, the astrolabe fell into disuse in the West, whereas, in the East, the tradition was carried on till late in the 18th and even the 19th century. As attested by the λακάβ al-asturlābī encountered since the beginning of Islamic science, the making of astrolabes was a handicraft of its own cultivated by specially trained craftsmen, but many astrolabes prove to have been wrought by other artisans, too, as is shown by the sobriquets al-ibari, “the needle-maker”, al-nadidār, “the carpenter”, etc., frequently found in colophons. According to Chardin (Voyages du chevalier Chardin en Perse, ed. Langlès, iv, Paris 1811, 332) the most highly valued instruments were manufactured, not by artisans, but by astronomers. For illustrations of astrolabes (Eastern and Western), see Gunther [1]; for the names of astrolabe-makers see Mayer [i] and Price [1].

2. Description of the instrument. The planispherical astrolabe is a portable metal (brass, bronze) instrument in the form of a circular disc with a diameter varying from 4" to 8" (10-20 cm.). The simplest type of this astrolabe, taken over with respect to its essential features from Greek and Syrian models, consists of the following pieces:

(A) The suspensory apparatus, which comprises three parts: a triangular piece of metal called kursī, “throne” (large and richly decorated in the Māghrib, esp. Persia, smaller and simpler in the Māghrib), which is firmly attached to the body of the instrument; a handle, ʿumma, L. armilla suspensoria, affixed to the point of the kursī so that it can be turned to either side in the plane of the latter; a ring, ḫalīḥa, L. armilla rotunda, passing through the handle and moving freely. When in use, the astrolabe is suspended with a cord, ʿīdāba.

(B) The body of the astrolabe, which has a “front”, ʿawidī, L. facies, and a “back”, ṣahīr, L. dorsum.

(a) The front of the astrolabe consists of an outer rim, ḥadīra, L. tawb, ṣafāfa, L. limbus or margo, which encloses the inner surface, usually depressed, called “mother”, ʿumma, L. mader. A number of thin discs, ʿaṣafīḥi, L. tympana or tabulae regionum, are fitted into the ḥadīra over the ʿumma; a bit of metal, mumṣikha, projecting from the ḥadīra and fitting into an exactly corresponding indentation on the edge of each disc, prevents the discs from turning. A hole is bored through the centre of the ʿumma and the ʿaṣafīḥi; a broadheaded pin, ṣabīt, waṣat, or miḥwar, L. clavus, axis, passing through it holds the parts together and serves as an axis around which turn the two movable parts of the instrument, viz., on the front, the “spur”, ʿankabūt (also called “net”, ʿaṣabakha), L. aranea or rete, and, on the back, the “alldad” (from the Ar. al-티dad), L. radius or regula. A wedge called the “horse”, ṡarās, L. eques, cavallo, or cauci, which is passed into a slit in the narrow end of the ṣabīt, prevents the latter from coming out. A small ring, ʿaṣr, placed under the horse, protects the spider and ensures a smooth turning. N. B. A ruler in the shape of the hand of a watch turning on the face of the astrolabe (L. index, esteor) is often found on European, but never on Islamic, astrolabes.

The mathematical divisions of the parts mentioned are as follows:

The ḥadīra carries a circle graduated from 0 to 360°, beginning at the middle point of the ḥursī, i.e., at the top of the astrolabe.

The ʿumma may either function as one ʿaṣafih (see next section), or carry a list of the geographical latitudes of a number of cities.

The ʿaṣafih carries on each of its two sides the stereographic projection of the equator, the tropics, and the horizon for one particular geographical latitude, with its parallel circles called “almacantars” (from Ar. al-ṭardīra al-mubantara) and vertical circles, daŭwīr al-sumūt. For a northern astrolabe, the centre of projection is the South Pole of the heavens, and the plane of projection, the equator; then the southern tropic constitutes the edge of the ʿaṣafih. For a southern astrolabe, the centre of projection is the North Pole, the plane of projection, again, the equator; then the northern tropic coincides with the edge of the ʿaṣafih. Most, if not all, of the astrolabes preserved are northern; only for the spicer northern and southern projections may be used simultaneously (see below, section on the ʿankabūt). Fig. 1a illustrates the face of an astrolabe with a ʿaṣafih constructed for the geographical latitude 36°. There NS represents the meridian, ḥaṭṭ ʿwaṣat al-samāʾ, L. linea medii coeli; its section CS is called the “line of midnight”, ḥaṭṭ nisf al-nahsh, L. linea meridionalis, and section CN, “line of midnight”, ḥaṭṭ nisf al-lāyīl, L. linea mediae noctis. The diameter EW represents the “straight horizon”, ʿuḫ ṣaṭīraʾ, also called east-west line, ḥaṭṭ ʿwaṣat al-maghrīb ʿwāl-maghrīb; its sections CE and CW bear, respectively, the names “east line”, ḥaṭṭ al-maghrīb, and west line, ḥaṭṭ al-maghrīb. On the meridian NN, the following points are marked (for their construction, see Fig. 1b): C = projection of the North Pole, being the centre of the three concentric circles represented, viz., counting from within, the northern tropic, madār raʾs al-saratin, the equator, al-ṭurūq al-iṭīdīl, and the southern tropic, madār raʾs al-diadiy (outer rim). The points Rₐ, R₁₀, . . . Rₙ mark the centres of the horizon, ʿuḫ, L. horizon obliquus (meeting NS at ʿuḫ and of the almacantars from 10° to 10° (intersecting with NS at 20° . . . 80°). R₉ = ζ marks the “zenith” (from Ar. ʿṣāmīr al-raʾs). The points ʿη₀, ʿη₁₀, . . . ʿηₙ (ζ) represent the second intersections of the almacantars with NS, south of the zenith.

The horizon, the equator, and the east-west line meet in the east and the west points, from which Islamic astronomy counts the azimuths (from 0°30° towards N and S). The vertical circles, daṿawīr al-sumūt pass through the zenith and the points 0, 10°, etc. on the horizon. Mₙ marks the centre of the “first vertical”, aṣawīl al-sumūt, towards the east and west points. For the construction of the other vertical circles, see Hartner [i]. 2529 and Fig. 846.

The lines under the horizon indicate the equal or unequal hours (ṣifāt al-iṭīdīl, horae aequales, and al-ṣifāt al-samānīyya, horae inaequales seu temporales), to be counted from sunset and sunrise; for their construction, see Hartner [i], 2540. The European way of counting equal hours from midnight was known to Islamic astronomers, but never used in civil life. Therefore the second division
of the ḥadīra into $2 \times 12$ hours, starting from $0^\circ$ and $180^\circ$, as shown in Fig. 1a (outer rim), is often found on European, but never on oriental astrolabes. The latitude for which a ṣafīḥa is designed is usually engraved near the middle of the disc; it may be expressed in various ways: by degrees and minutes (e.g. "valid for the lat. of $36^\circ 54'$"), by the name of a particular city ("valid for the lat. of Mecca"), or by the duration of the longest day ("valid for $14^h 45^m".") N.B. Astounding errors are sometimes found in the descriptions of astrolabes in European collections, where abjad numbers are misread for names of (non-existing) places. The number of the ṣafīḥa varies; a good instrument may contain nine and even more. Certain astrolabes have also a ṣafīḥa which gives for a particular geographical latitude the projection of the circles of position, as required for the calculation of the astrological directiones (ṭasyr); others have a ṣafīḥa "for all latitudes" (li-djemî al-ṣurūḍ) also called the "tablet of the horizons" (ṣafīha ḍāḥiyā) or "general tablet" (djamī'ul), which carries only the projection of the

Fig. 1a. Face of an astrolabe showing the division of the Ṣafīḥa.
meridian and that of the horizon for a number of latitudes; the projection of the latter is often reduced to one-half of each arc of horizon. This disc serves to solve, for any latitude, the problems concerning the hour and the azimuths of the rising and setting of stars (cf. Michel [r], 91-2). The "perfect" (kāmil) astrolabe, moreover, bore the circle of the sun's equation. Finally, by interchanging the four quadrants of a safīha, such fanciful figures as the "ogival tablet" are obtained (see Michel [r], 61 and Fig. 44); although being only a geometrical play, they allow the same measurements to be carried out as does an ordinary safīha. An astrolabe on which all of the 90 almacantars are marked, is called "complete" tāmm, L. solispartitum. If only every second, third, fifth, sixth, ninth, or tenth almacantar is marked, it is called nisfī (bipartitum), ḥuṣbī (tripartitum), ḥumsī, sudī, tusī, ḭubī.

The "ankabūt" represents the vault of the fixed stars turning around the earth at rest represented by the safīha. In order to allow the diagram of the safīha to be seen as clearly as possible it is wrought in the shape of an openwork plate, having of course due regard to its solidity and the space required for attaching the protuberances or pointers (in the sing. șāḥla, șāḥ'inna) indicating the fixed stars. It is because of this reticulated form that it has been called a "spider", referring of course to the spider's web (Gr. ἰχνος and L. aranea may both mean "the spider and its web"). In designing this "spider", no limits are imposed on imagination, and almost every conceivable type is found, from the simplest geometrical pattern to the most beautiful leaf and scroll designs. As shown in Fig. 2, its most important part is the circle of the zodiac, (mīnthat al-burūḏī), which is constructed in exactly the same way as all other circles represented on the safīha. It is divided into the 12 burūḏī comprising 30° each, but it is well to note that this division, radiating not from the pole of the ecliptic, but from that of the equator, does not indicate ecliptical longitudes, but the points of the zodiac having the right ascensions 0°, 30°, etc., and their subdivision into degrees (mediationes coeli, see Michel [r], 67 f., and Hartner [i], 253 f.). At the point of contact with the southern tropic, the zodiac carries a little point or hand, ʿA, which serves to read the graduation on the ḥadīra.

The spider is rotated by means of one or several handles, M, called mudīr or muhrīt. By combining parts (halves, fourths, sixths, even twelfths, i.e., single signs) of the zodiac represented in northern with others represented in southern projection, the zodiacal belt assumes more or less fantastic shapes for which equally fantastic names were invented: al-Bīrūnī and others tell us about ʿabātī, "drum", ʿā莘, "myrtle", sarafīnī or musafaran, "crab", ʿadāfī "shell", ẓarwī, "bull", ʿabātī, "anemone" astrolabes, etc. Probably the asturlāb zawraṭī, "boat astrolabe" of Ahmad al-Sidjzl (c. 400/1009) belongs to this category. For more detailed information, see Frank [r], 9 ff. and Michel [r], 69 f.

Other planispherical astrolabes based on other projections than the stereographic are to be regarded as theoretical constructions without practical significance, e.g. the astrolabe devised by al-Bīrūnī and called wājzāfī "cylindrical", because of its projection (Ptolemy's "Analemma"), which al-Bīrūnī called cylindrical, and which we now call orthographic; the circles of the sphere are projected there in the form of straight lines, circles and ellipses. The muḥabṭāt ("flattened") astrolabe, described by al-Bīrūnī (Chronology, 358-9), appears to have been only a stellar chart in equidistant polar projection, i.e., the pole of the ecliptic was the centre of the projection, the parallels with the ecliptic or circles of latitude (dawāṭir al-ṣārīf) were represented by equidistant concentric circles and the circles of longitude (dawāṭir al-tūl; N.B.: in European astronomy, illogically, these great circles through the poles of the ecliptic are called "circles of latitude") by equidistant radii. The other projection mentioned on 359 f. is a peculiar variant of the one devised by al-Zarqallī (see below).

(b) The back of the astrolabe is nearly always divided into four quadrants. The outer rim of the two upper are graduated from 0-90°, starting...
The inconvenience that a special saqibah is required for each latitude was remedied by the Spanish Arab al-Zarkall (Azarquiel, Arzachel) who made the meridian or the autumnal point the centre, and the solstitial colure (i.e. the meridian passing through the solstitial points) the plane, of projection. In its final form, which al-Zarkall called al-‘ubbadiyya in honour of al-Mu’tamid b. ‘Abbád, king of Sevilla (461-84/1068-92), the entire instrument consists of a single tablet with two small subsidiary pieces. On the face of the tablet in stereographical “horizontal” (as opposed to the ordinary, “vertical”) projection the equator is represented with its parallels (madiird) and its circles of declination (manarrát), and the ecliptic with its circles of latitude and longitude; the projections of the equator and the ecliptic, then, are straight lines through the centre. Then evidently the tablet is valid for any geographical latitude; moreover, since the projections of the two hemispheres exactly coincide, it suffices to add the principal stars, to make it replace the “spider” of an ordinary astrolabe. A rod (ufk md’il) “oblique horizon”, with an attached perpendicular ruler, both turning about the centre of the graduated face, fulfils the functions of the saqibah of the common astrolabe; by inclining it at an appropriate angle to the line of the equator we obtain the horizon of the place of observation, and can then deduce from its divisions the eastern and western amplitudes or else solve any other problem of spherical astronomy. On the back of the tablet are the alidad and the markings found on the back of the common astrolabes; but al-Zarkall further added the “circle of the moon”, which enabled him to follow also the course of our satellite.

—This simple and perfected astrolabe was called by the other Arabs al-saqibah al-zarkalliyah, “the tablet of al-Zarkall”. As mentioned above, the idea of making the solstitial colure the plane of projection appears to have been first conceived by al-Biruni, whose Chronology was composed 30 years before al-Zarkall was born. But curiously enough, he there (359 f.) acquiesces in devising a purely schematical, not projective, diagram, with the circles of longitude and latitude drawn through equidistant parts of the radii. It is, therefore, really al-Zarkall who must be credited with the invention of this new type of an astrolabe. Through the Libros del Saber (Vol. 3, Madrid 1864, 135-237: Libro de le asafa’ha) the instrument became known and famous under the name Saphae. It is practically identical with Gemma Frisius’s Astrolabum (sic) Catholicum of 1556; the astrolabe of Gemma’s pupil, D. Juan de Roias Sarmento (published 1550) is a variety of it, where the stereographic is replaced by orthogonal projection (cf. above, al-Biruni’s “cylindrical” pro-

![Fig. 2. Spider of an astrolabe.](image-url)

The alidad is a flat ruler turning around the kubå on the back of the astrolabe. Figs. 3 a and c show the two principal types employed, Fig. 3b being a drawing in perspective of 3a. The straight line A B passing through the centre is called kafir, L. linea fiduceae or fides. The two arms of the alidad are sharpened to a point (gatha, shaziyya) and each has a rectangular plate (libna, dafa, hadaf) standing at right angles to the plane of the alidad itself, through which a hole (thukha) is bored above the linea fiduceae.

![Fig. 3. Types of alidads.](image-url)
Another early variety of al-Zarkall's astrolabe is the "safiha shakdziyya" (or "shakdriyya"), about which we do not yet possess any accurate information.

For the difficult problem of deriving the date of manufacture of an astrolabe from the astronomical data on which it was based (position of the vernal point, longitudes of stars and, in some cases, the longitude of the perihelion), see Michæl [1], 133 ff. and Pouille [1]; for a demonstration that the application of modern astronomical methods necessarily leads to false conclusions, see also Hartner [2], 104, 135 ff.

No conclusions whatever can be drawn from the extremely slow variation of the obliquity of the ecliptic; astrolabists nearly always assume it to be 23½° sharp.

11. The linear (масаат) astrolabe, also called 'asa' l-Tusi, "the staff of al-Tusi", after its inventor al-Mu'attafr b. Mu'attafr al-Tusi (d. 610/1213-4), consists of one single piece, viz., a rod, with a plumb-line attached to its mid-point (i.e. the projection of the North Pole) a second thread fastened at its lower end, and a third thread, which is freely movable. The rod represents the NS line of an ordinary "safiha"; its main divisions are those points in which the horizon, the almucantar, etc. meet the NS line. In the upper part are marked, moreover, the centres of the horizon and the almucantar, in the lower, the points in which each of the 12 "burudj" and its subdivisions, as represented on the "spider", intersect with the NS line, in the course of one complete revolution of the latter. Another graduation, serving for measuring angles, indicates the cords of the angles 0-180°, where the cord of 90° equals the length of the whole rod. For further information, see Michel [1], 115-22, and Michel [2]; a first description was given by Carra de Vaux, L'astrolabe linaire ou bâton d'Estous, in JA, 9th series, v, 464-516.

111. The spherical (кури, ukuri) astrolabe, called astrolabio redondo in the Libros del Saber (Vol. II, Madrid 1863, 113-222, text compiled by Isaac b. Sid (Isaac ha-Hazzan, called Rabīʿa Zaq), exhibits without projection the diurnal movement of the sphere relatively to the horizon of the place of observation. Its history is at least as long as that of the flat astrolabe. P. Tannery, Recherches sur l'histoire de l'astronomie ancienne, Paris 1893, 53 ff., in dealing with the principle of the latter, demonstrates how easily the idea of a globe carrying the main constellations, surrounded by a hemispherical "spider" carrying the hour lines, could have been derived from the hemispherical sundial, струна (called ðepéýx in Eudoxus). The Fihrist (trans. by Suter in Abh. z. Gesch. d. math. Wiss., Vol. 6, 19, 1892) mentions Ptolemy as the first manufacturer of a spherical astrolabe, but this is evidently due to a confusion with the description in Alm. 5, 1 (see introduction to the present article). Neither can the instrument devised by al-Battānī (Op. astr., ed. Nallino, Vol. ii, 319 ff.) be called a spherical astrolabe, as it is a combination of a celestial globe with an armillary sphere which lacks the essential characteristics of the astrolabe, above all the "spider". The main steps in the development of the spherical astrolabe before Alphonsine X are marked by the treatises of Kūsṭa b. Lūkā (d. 300/912), Abu 'l-'Abbās al-Nayrizī (d. 310/922), al-Bīrūnī (K. fi Istīlab al-Wudhūh al-Mumkina fi Ṣan'āt al-Asturlāb), and al-Ḥasan b. 'All 'Umar al-Marrākūshī (d. 660/1262), see L. A. Sédillot's translation of the section on the spherical astrolabe in Mém. sur les instruments astron. des arabes, Vol. i, Paris 1834.

The spherical astrolabe serves the same purposes as the planispherical astrolabe. Its main disadvantage is, that it is considerably less handy than the latter and yet does not yield better results. The instrument as described in the Libros del Saber consists of the following pieces: (a) a metal globe on which are engraved three complete great circles representing the horizon, the meridian, and the first vertical; furthermore, in the upper hemisphere, the almucantars and the halves of the vertical circles that lie between the horizon and the zenith. The lower hemisphere, as on the flat astrolabe, carries the lines of the unequal hours (the equal hours can be read directly on the equator). On the meridian a number of pairs of diametrically opposite holes are bored so as to make the instrument adjustable to any geographical latitude; (b) the openwork "spider" containing the ecliptic, the equator, a number of fixed stars, a quadrant of altitude, and (only on the Alphonsine astrolabe) a shadow quadrant and a calendar; (c) a narrow semicircular strip of metal fitting closely to the surface of the "spider" and fastened with its centre to the pole of the ecliptic, about which it can be turned freely; together with the two diopters (tangent to the globe and parallel to one another) the whole of it forms the alidade of the spherical astrolabe; (d) an axis passing through the appropriate pair of holes on the globe and through the equatorial pole of the "spider". — On the Alphonsine astrolabe, the equator, otherwise always represented as a half great circle, is given the shape of a small (!) circle parallel to the equator proper. The astrolabe of al-Marrakushi, instead of the alidade, has a metal strip (safiha) turning about the pole of the equator, with a small gnomon fixed at right angles to it, which can thus be set on any point of the equator.

For detailed information, see Seemann [1].

AL-ASWAD b. YA'FUR (also called Yu'fur and Ya'fur) b. 'Abd al-Aswad al-Tamlimi, Abu '1-Djarrāb, pre-Islamic Arab poet who lived probably at the end of the 6th century A.D. He is said to have travelled about among the tribes, composing eulogies or satires in verse, and was for some time the companion of al-Nu'mān b. al-Mundhir. He is sometimes called al-Ashār of the Banū Najd, because he was night-blind, but he lost his sight at the end of his life, which is thought to have been extremely long. Of the poems which have come down to us, the most celebrated are a ḥaṣida in dīl dating probably from his later years and containing the usual commonplace on life's difficulties, the approach of death, the flight of youth, the infirmities of old age, etc.

Bibliography: His poems have been collected by L. Cheikho, Shu'ara' al-Nasirātīyya, 475-85; two ḥaṣidas figure in the Muḥaddasiyya, 1, 445-57, 846-95; Ibn Ḥutayba, Ṣahra, 134 f.; ibid., Ma'ārifi, Cairo 1353/1934, 282; 'Abd al-Malīk, Ṭabakāt, 73-74; Buṣūrī, Ḥamās, index; Ibn Durayd, Ṭabākih, 149; Aghānī, xi, 134-9; Baghdadī, Khisāna, i, 193-6; Abkāryūs, Randa, 44 ff.; O. Rescher, Abris, i, 178. (CH. PELLAT)

ASYŪT, town in Upper Egypt. Asyūt, the largest and busiest town of Upper Egypt, is situated Lat. 27° 11' N. on the west bank of the Nile. Owing to its situation in one of the most fertile and sheltered districts of the cultivable Nile valley, and also to its being the natural terminus of great desert highways it was in antiquity an important town (Syowt, Greek: Lykopolis) and the chief town of a Nomos. Under Islam Asyūt remained the chief town of a kāra (modern markaz, "district"), and on the inauguration of the division into provinces became the capital of a province (tamāl, now mudūrīyya).

Asyūt is the colloquial form of the literary Usyūt. Both are Arabic for the Coptic Siout, to which in the land registers of the Middle Ages the form Sayūt or Sayūt corresponded. But as early as the time of al-Kalqashandī (d. 821/1418) the popular pronunciation was Asyūt. A history of Asyūt cannot be written for the reason that we scarcely find any mention of it in the historians, and only towards the end of the Mamlūk period, under ʿAlī Bey, did it play any historical part, viz. in the year 1270 when it was for a time the centre of revolt. From the accounts of geographers and travellers we ascertain that it enjoyed unbroken prosperity throughout the entire Islamic period. At the end of the 19th century, it gained considerably in importance, especially after it became linked by rail with Cairo (in 1292/1875). Its population has risen from 26,000 in 1293/1876 to 42,000 before the first world war and about 120,000 at the present time.

In the Middle Ages Asyūt was famed for its agricultural products, its industry and trade. Besides corn and dates, quinces of an exceptional size were grown, as well as fine linen goods, called dabifri, dyed indigo obtained from the adjacent oases of al-Muṣār, and fine woollen goods and carpets modelled on the classical Armenian products. Today Asyūt still manufactures black and white tulle shawls with silver appliqué-work, which are much sought after for export.
after in Europe, and represent the last remains of an industry once very famous throughout the Orient. Further Asyut was engaged in the preparation of opium and in the making of high-quality pottery which, with its antique patterns, is still much in demand as black and red “Asyût-ware”.

There was a brisk trade in all these products throughout Egypt and abroad. The direct trade with the Sûdân is specially famous. The annual caravan (numbering about 1500 camels) brought slaves, ivory, ostrich-feathers and other products of the Sûdân, and received in exchange the products of Egypt’s industries, especially stuffs. The scholars of Napoleon’s expedition made careful investigations into this trade which has now so much declined.

Like all the industrial towns of Egypt, Asyût had a large Christian population—60, according to others as many as 75, churches and chapels—but no Jews at all, a fact explicitly stated. Caravanserais, bazaars, baths—one of the latter famous and very ancient—, mosques and other public buildings adorn the town to-day as formerly. In one of the mosques stood a minbar which at certain seasons was filled with corn and carried through the streets as an akhbâr (bayt al-mdl [q.v.]). Like all the flourishing towns of modern Egypt, Asyût has a strong admixture of Levantines.

Asyût is the birth place of Plotinus, the Coptic Saint John of Lykopolis and of several Arab scholars named al-Suyûtî, of whom the versatile historian Djalal al-Dîn (d. 911/1505) is the best known.

ATA. A Turkish word meaning “father”, and also “ancestor” (cf. the expression ata sîvât “proverb”). Among the Oguz, the qualifier ata was appended to the names of people who had acquired great prestige; this term can also bear the derived meaning of “wise”, and even of “holy”, “venerated”.

‘ATA, “gift”, the term most commonly employed to denote, in the early days of Islam, the pension of munifim, and, later, of the mawdûd, was impossible to give here the history of the system of pay throughout the Muslim world, and this article will be confined to a general outline.

The traditional starting-point is the organisation of the pensions by ‘Umar b. al-Khaṭîb. The first Muslims had derived no material advantage except their share of the booty from successful expeditions. The flow of taxes into the coffers of the nascent caliphate enabled a better regulated form of reward to be envisaged, which the traditionists and jurists explain in connexion with the organisation of the first divân and within the framework of their theories, subsequently evolved, on the utilisation of layâ recibir: the various versions which they give accord ill with one another, because they all reflect the desire, conceived at a later date, to find in the decisions of ‘Umar a precedent which did not exist. The main outlines, however, are clear: according to a hierarchic order which took into account kinship with the Prophet and especially seniority as regards admission to Islam, graduated pensions were distributed to the whole Muslim population which had been displaced from its homes by the holy war (the mukhâfibûn and anşâr of the early days, together with the fighting men of a later date), women, children, slaves and clients (still not numerous and not by definition foreigners), but excluding, of course, the Bedouins and others who remained, in Arabia and elsewhere, unaffected by the military expansion of Islam. The amount ranged from 200 to 12,000 dirhams, the great majority of the men receiving from 500 to 1,000 dirhams annually. The registration and classification of those eligible necessitated the organisation of a service which constituted the first divân, and the division of the beneficiaries into groups, ‘ârâfî, under the control of an ‘ârîf [q.v.]. All the quotations relevant to these questions are given with a commentary in Caetani, Annali, iv, 368-417, to which should now be added Abu ‘Ubayy Ibn Sallam, Kitâb al-anâmî, 233-71, and the references in Tritton, Notes on the Muslim system of pensions, in BSOAS 1954, 170-2, which also deals with the century following.

This system, conceived in terms of conditions at the time of ‘Umar, obviously could not continue unchanged. The ramification of family trees, conversion on a large scale, the slowing-up of the rate of the conquests and the reduction in the benefits derived from war, the increased complexity and specialisation, of military techniques during the Umayyad period, and later, during the ‘Abbasid period, the increasing professionalism and progressive “de-arabicisation” of the army, led, after many tentative procedures and irregularities, to a distinction between, on the one hand, civil pensions, reserved for the descendants of the Prophet’s family (‘Alî and ‘Abbasîd branches) and in general men of an honorary than concrete nature (we are, of course, not discussing here the salaries of officials, cf. riza), and on the other hand military pay; as regards the army, a distinction was made between the class of professional soldiers, registered in the divân and entitled to regular pay, and occasional volunteers, not registered in the divân, who received a smaller allowance confined to their period of effective service. On the other hand, whereas under the Umayyads, in spite of the ephemeral effort of ‘Umar b. Abî al-‘Azîz (cf. Wellhausen, Arabische Reich, 186-7), the mawdûd, who were by that time numerous and were for the most part Iranians, were virtually excluded from the benefit of pay, under the ‘Abbasids, it was the Khâshqâdâm and later the other elements, Turks, Daylamites, etc., who, as professionals, were almost the only persons to receive pensions, and the Arabs in the end were systematically removed from the registers in the course of the 3rd/9th century, at least in the East. In the early days, payment was made principally on a provincial basis, or, in Syria and Spain, on the basis of military districts called divân [q.v.], as a charge on the local taxes; but ‘Abbasid centralisation made the majority of these payments a charge on, or placed them under the direct control of, the Treasury (bayt al-mâl [q.v.]).

Although the amount of the payments seems to have been subject to considerable fluctuation, the
annual pay of a foot-soldier, in the second century of 'Ata’s rule, can be estimated to be of the order of 1,000 dinaars, or three times the pay of a Baghdádí journeyman, and that of a cavalryman twice as much. Commanders and specialised corps naturally received more. Kudáma describes in detail the functioning of the system, the differences between the various categories, the minute detail of the rolls, the different intervals at which different payments were made (W. Hoenerbach,

The extent to which 'Atá may have used traditions from the Prophet and from the Companions as his authority, he did not hesitate to use his personal opinion (ra'y), both in its disciplined and in his arbitrary form (šiyyás and šiikháns, respectively); statements which, reflecting a later fashion of thought, make him reject ra'y, are therefore spurious. The extent to which 'Atá may have used traditions from the Prophet and from the Companions as legal arguments, is difficult to ascertain; if he did so, he probably made use of the mursal (q.2) traditions. Owing to the rapid development of Islamic law at the beginning of the second century of the hijra, some of the distinctive opinions of 'Atá seem to have become unfashionable already towards the end of his life; this is probably reflected in the statement that some younger contemporaries of his ceased attending his lectures, and that the mursal traditions transmitted by him are weak. This was more than compensated by attributing to him, when the attitude to traditions had changed, personal contact with an ever increasing number of Companions of the Prophet, though some Muslim critics themselves point out that he did not hear traditions from 'Abd Alláh b. 'Umar, Umm Salama and others, and express doubt concerning his direct contact with 'Aisha. At the beginning of the second century, the interest of the specialists in Islamic law had already spread from purely religious problems to more technically legal questions; the authentic doctrines of 'Atá bear this out, and he did not specialise in the ceremonies of hajj and umrah as some sources assert in deference to the fiction that this was the favourite subject of the scholars of Mecca. Already during the life-time of 'Atá, his reputation spread far beyond Mecca, and Abu Hanífa states that he was present at his lectures; this is perhaps the earliest authentic piece of evidence on technical instruction in Islamic religious law.

'Atáí BEY, Tayyázád 'Atá Allah Ahmad, known as 'Atáí Bey, Ottoman historian. He was born in Istanbul in 1225/1810, the son of a palace official. He himself was educated in the palace, and held various official positions. In 1293/1876 he went to the Hidjáz to take up an appointment as administrator of the sacred territory (harám) of Mecca, and died in Medina in 1294/1877 or 1297/1880. His most important work is his five volume history, known as *Ta’lím-i 'Atáí* (Istanbul 1291-2/1874-6). Its chief interest derives from its intimate knowledge of the organisation, customs, personalities, and affairs of the Imperial household in the 19th century. An autograph copy of his diwán is preserved in the Miýet library.

**MEHMED 'ATÁÍ BEY** (1856-1919), Ottoman scholar, journalist, and public official. After the revolution of 1908 he became a member of the Financial Reform Committee and was for one week Minister of Finance. He published many articles in journals and periodicals, under the names of Meşgári and 'Atáí, and also produced a literary anthology called *Hikayé*, which was extensively read as a school text-book. His most important undertaking was the Turkish translation of Hammer’s History of the Ottoman Empire. This version, based on the French translation of J. J. Hellert, began to appear in Istanbul in 1329/1911. Of the fifteen volumes that were planned, only ten actually appeared, the last in 1337/1918.

'Atáí ALLÁH EFENDI [see ŞAHİZÁDE],

'ATÁÍ MALIK DJİWAYNİ [see al-Djìwayn].

'ATABA, modern Arabic four line verse, common in Syria, Palestine, Mesopotamia and Irák. The first three lines not only rhyme, but generally repeat the same rhyming word with a different meaning (tadjnîs lâmîm). The last line rhymes with the paradigm jídhaa ("lovers' reproach"), and the last syllable of which is often supplied without making sense. The metre is a sort of wájír. A peculiar form common in Irák is called (a)bíðhíyye ("man of sorrow") or lámi and ends with iyya (eeyah).

**Bibliography:**

ATABAK (ATABEG), title of a high dignity under the Saljuqids and their successors. The term is Turkish and first makes its appearance in Muslim history with the Saljuqids; it is therefore reasonable to enquire whether any precedents exist in the Turkish societies of Central Asia. So far no occurrence of the actual word seems to have been reported and the fact that in the Orkhon civilisation there is apparently a person called ata, father, acting as a tutor to a young prince, is too vague to enable one to affirm a connexion; the same is true of similar cases existing in other civilisations (see for example Harun al-Rashid and Yahya al-BarmakI); moreover no such office has so far been noted even under the Karakhanids. The term atabeg, therefore, seems to be more precisely characteristic of the Oguz or the Saljuqids. Even under the latter, the first definite indication of the title, which was subsequently to make history as the title of Turkish military chiefs, applies to an Iranian 'civilian': Malikshah, who was very young when he came to power, added the term atabeg to the valab of his wazir Nizam al-Mulk, thereby indicating that he conferred upon him the entire delegation of his own authority, as though he were his father (Ibera, ed. Tornberg, i, 151; BCEA, vii, no. 2734-2737). Nevertheless the fact that from the death of Malikshah the title is to be met with in all branches of the Saljuqid dynasty, including that of Asia Minor, which has a specific evolution, prompts one to admit its existence already at the origin of the regime. In these circumstances there is no reason to reject the evidence, not apparently previously adduced, of the event at Dawla al-Saljijiyya, ed. Muh. Nizam, 28-29, which places a Turkish atabeg beside the young Alp Arslan during his father’s lifetime in the person of a certain Kuft al-Din Khurial (Kizil Sahiroglu?). The honour conferred on Nizam al-Mulk, a non-Turk and wazir, appears to have been something of an exception, all the more characteristic of his ascendancy.

However that may be, from the death of Malikshah, the atabegs appear more and more regularly, whilst the role played by them increases, favoured by princely minorities and strife between pretenders. Henceforth only Turkish military chiefs are involved, corresponding to the growing influence acquired by this element during the period of the Saljuqids regime’s decay. Malikshah appearedly during his father’s lifetime, had the djanlär Gumishtakin as ‘preceptor (murabbiyyi)’ and atabeg (‘Imad al-Din al-Ishahani, abridgement by Bundari, ed. Houssia, 53; cf. al-Rawandi, Khatat al-Shudar, ed. Muh. Kazwini, 110). He, in turn, created others for his young brothers Sandjar and Muhammed, when he accorded them autonomous appanages, and on his death-bed, also for his son Malikshah, who was still a child. At the same time, on the death of Malikshah’s brother Tutush, whose appanage was in Syria and who was the unfortunate rival of Barkyurk, we find an atabeg with each of his sons Rudwan and Duqak. Henceforth every Saljuqid prince seems to have had an atabeg, at least if he was endowed with an appanage whilst still a minor; in other words, wherever there were several sons, there were also several atabegs. As they now issued exclusively from the category of military chiefs of servile origin, their function may in a way be associated with the duty of every slave or manumitted slave to guard the interests of his master’s family to which he himself belonged. Furthermore the atabeg frequently made his position as a ‘father’ complete by marrying his pupil’s mother, when the latter became a widow (for example early on, Tughtakin at Damascus, the mother of Duqak). As for his authority, this consisted in his sharing in the unrestricted power of the prince and therefore it cannot be defined by precise attributions, as in the case of ordinary functions. However, he could be dismissed by another atabeg; in any case, when the prince grew up, the atabeg’s authority naturally disappeared, only leaving room for his influence as a counsellor, who had the prince’s ear; if the atabeg assumed more than that, a rupture with the prince followed (for example, Rudwan and Duqak), or even the atabeg’s execution (Kutlughathkin by Barkyurk’s brother Muhammed).

This, at least was the initial state. But relatively soon the atabeg’s position was consolidated at the expense of that of the prince and their claimant to the throne. The office of atabeg gave its holder great authority, which he was normally tempted to perpetuate. But in addition, from the second generation of Malikshah’s heirs, the respective roles of prince and atabeg were reversed. The starting point now was that either willingly or under duress the sultan would bestow a major governorship on a powerful amir and, in order to safeguard the formal independence of the latter, he attached one of the Saljuqid children to him, whose atabeg he became. For a while the young prince continued to serve as a cloak beneath which the chief concealed his own ambitions; such was the case in the disputes which brought Sultan Mas’ud into conflict with various of his relatives, each of whom was urged on by his atabeg. Thus Farz, Aghbaraydjan and, at one time, Mas’ud, the latter became a widow (for example early on, Tughtakin at Damascus, the mother of Dukak). The honour conferred on Nizam al-Mulk, a non-Turk and wazir, appears to have been something of an exception, all the more characteristic of his ascendancy.

A further new stage was reached when the atabeg succeeded in making hereditary, in addition to his office, possession of the governorship, which in theory constituted his reward for it. This was accomplished after the middle of the 6th/12th century by the family of the atabegs of Aghbaraydjan, who were descended from Ildegiz, the atabeg of Sultan Arsian. Lastly at the beginning of the century, the death of her son Barkyurk, apparently during his father’s lifetime, had the atabeg Tughtakin to found a dynasty which was both autonomous and in his own name. Elsewhere all-powerful atabegs reached the same results by suppressing their sultans, who were completely devoid of resources: this was accomplished at Mawji’il on the death of the atabeg Zangi by his heirs in 539/1144 and was achieved against the last Persian Saljuqid, with the help of the Caliph, by the heirs of Ildegiz, who summoned the Khwarizmshah into central Iran (588/1192). Moreover the sultan’s disappearance did not hinder the masters of Aghbaraydjan and of Mawji’il from continuing to have themselves called atabegs; the word, hence-
forth, had in practice the exclusive sense of territorial prince. Thus it seems that from the middle of the 6th/12th century the title in Fars had been adopted by the Salghurids, the vanquishers of the real atabegs, without their having any longer a sultan under their tutelage. The most famous of the Atabeg dynasties is that of Mawsil, by reason of the work devoted to them by their historian and subject Ibn al-Athir. A further new dynasty of pseudo-atabegs was to appear in the 7th-11th century in Luristan (Hamd Allah Mustawfi Kazwinî, Ta'rikh-i Guzida).

The title atabeg was still to be met with among the successors of the Saljukids, in particular under the Khwarizm-shahs, who did not allow those who bore it, exclusively tutors of young princes, to acquire much influence (Djâwâni, ii, 22, 33, 39, 209). Later on, in all those states which derived from the Mongol conquest, the appellation atabeg is to be met with upon occasion fortuitously, applied to indefinite princely tutors or as one of a number of simple honorific titles inherited from the past (see references in M. F. Köprüli, art. Atabeg in IA). More remarkable is the penetration of this title, attributed to military and feudal leaders, into Christian Georgia, which had borrowed other institutions from neighbouring Agharbaydjân, with whom they were alternatively at war or in matrimonial relationship (J. Karst, Le code géorgien du roi Vakhlang, Commentaire, i, 221 ff.; M. Fr. Bosset, Histoire de Géorgie, 1/2, passim; Allen, A History of the Georgian People, 1935, chap. xxiii).

Among the Saljukids of Asia Minor, the atabeg is attested from the beginning of the reign of Khalîl Arslân I, in the person of Thumartâb al-Salâymânî (consequently a manumitted slave of his father Salâymân b. Kuṭû lmumî) (Ibn al-Azraq, quoted in a note by Amedroz to the History of Damascus of Ibn al-Kalânî, 157). Shortly afterwards the mother of the young Saljukid of Malatya, to protect him against his brother of Kunya, gave him a series of atabegs, whom she took in marriage, the last of them being the neighbouring Arâkîl Balâk [q.v.] (Michael the Syrian, trans. Chabot, 194 and 200). In the main branch, atabegs are also reported in the 6th/11th century (RCEA, no. 3376-3377), and then in the 7th/12th century; the power of the sovereigns prevented them from expanding and it is only after that disaster which ended in the Mongol protectorate that the title occurs borne by men with a decisive influence on the régime, such as Djalâl al-Dîn Karatây. However, in Asia Minor the actual conditions of the evolution had given the power to a team of high dignitaries, friends or enemies according to the case, rather than to a single individual, and the atabeg was not the most important. In this area he does not appear to have survived the Ilkhanid régime and he was unknown to the Ottomans.

The title of atabeg, however, still had a fairly long independent career in the Mamlûk state. The Ayyûbids had made it known in their realms; it may perhaps have found expression in the ephemeral tutelage which al-Afdal exercised in 595/1198 over his young nephew, the son of al-Asfî in Egypt; in any case it was used more permanently and formally during princely minorities in the Yemen and particularly at Jâhîâ (History of Aleppo of Ibn al-Aầnîn passim). This is the way in which it reached the Mamlûks. The founder of the régime, ʻÎzâz al-Dîn Aybak, bore the title, not as tutor to a prince, but as regent-spouse of the famous heir and widow of al-Šâhîb Ayyûb, Shâdîrât al-Durr; and the title, sometimes accompanied by considerable power, at other times devoid of it, survived down to the end of the dynasty. If one may believe al-Makrîzî (Saltak, trans. Quatremère i/1, 2), Aybak bore the title of atabeg of the armies; but no contemporary author has attributed it to him and one must perhaps envisage a confusion in al-Makrîzî's mind with the title of atabak al-'asākîr [q.v.], which was usual in his time. In effect it then corresponded with a kind of supreme military command, though it only acquired this extended meaning apparently under the Circassians, following the suppression of the office of the naṣîb.

Bibliography: The only general study is by M. F. Köprüli, op. cit., where detailed references and additional information will be found. For the sources and other materials, apart from those already cited in the article, see below the articles Mamlûks and Saljuqids. On the Great Saljuqs and their irano-irakî successors, the information used here has been taken mainly from Ibn al-Athir, ʻImâd al-Dîn al-Isfahânî, and Râwandi. See also Sanaullah, The decline and fall of the Saljuqids Empire, Calcutta 1938; M. A. Köyemen, Büyûk Selçuklu Imparatoriylu Tarihi, ii, Ankara 1954; I. H. Uzunçarşı, Osmanlî Devleti lehîçilîhna medhâl, Istanbul 1941, 50-1. For Asia Minor, see principally the chronicles of Ibn Bîblî and Akkoyunlî, passim. For the Mamlûks, see the following article.

(Ç. CAHRI)

ATABAK AL-'ASĀKIR. After the decline of the office of the viceroy (Nâ'îb al-Saltanâ) the Atâbak al-ʻasâkîr (Commander-in-Chief) of the Mamlûk Army became the most important amir in the Sultanate. His functions were much broader than the name of his office indicates. For all intents and purposes he had become the sultan's viceroy. Very frequently the title muâdâbîr al-mamâlik or muâdâbîr al-mamâlik al-isâmîyya was appended to his name. It was common, especially in the Circassian period, for him to succeed the sultan on the throne. (See D. Ayalon, Studies on the Structure of the Mamlûk Army, in BSOAS, 1954, 58-59, and references on p. 59, n. 6.)

(Ç. AYALON)

ATABEG [see ATABAK].

ATABEG AL-'ASĀKIR [see ATABAK AL-'ASĀKIR].

'ÂTÂ. 'ÂTâ. 'ÂTâ. ‘átâ. 'ÂTâ. AYBAK, ILI, NASÜ Ï, known as NEW‘I-ŽANÌ 'ÂTÂ, a prominent Ottoman poet of the early 17th century and continuator of Taşkprüö-zade's biographical work on the Ottoman 'ulama' and dervishes. (Muhbîb, Khulâsâ, iv, 263, incorrectly gives his ism as Muhammâd). He was born in Istanbul in Şawwâl 991/1583, where his father (who, under the malâkâs, New', enjoyed high esteem as a poet and scholar—from 998 to 1003, he was tutor to the ill-fated sons of Murâd III) was at this time professor of the Djâfar Agha madrasa; his mother was the daughter of the famous Nishânlî Mehmed Pasha (Siďiîlî-i Öthmânî, iv, 131). Having studied under Kâfâ-žeđe Fâyd Allah Ef. (the father of the anthologist Faydî) and Akgî-žeđe ‘Abdülhalim Ef., he began his career as professor of the Djanbahîyye madrasa in Istanbul Şafâr 1014/1606, but was soon to be transferred to the judicial class by his appointment as kâfî of Lofdja in Şa‘b. 1017. He held a number of such posts in Rümî (Şaykhî) gives the most detailed information about these, the last of which was Üsküb, whence he was dismissed at the end of 1044/1635. He returned to Istanbul where he died in Diumâdâ I, 1045 (‘Uşşûhâr-zâde, i, 26b and
The most famous and valuable of his works is the Ḥaddīth al-Ḥakā‘īf fi Tahmīlīlī al-Ṣakā‘īk (completed in Rabi‘ II, 1044 and printed in Istanbul, 1268), in which he brings down to his own day the biographical sketches of the Ottoman ulamā‘ and dervishes begun by Taşkköprüzade in his Arabic al-Ṣakā‘īk al-Nu‘mānīyya (Brockelmann, i, 425). Like the latter, it is organised according to the reign in which the individual died, the last being that of Murād IV, but the language is now Turkish and the notices are far more precise in detail and frequently contain ʿAtā‘ī’s personal remarks and reminiscences. The style is similar to that used by Medjdi in his translation of the ʿṢakā‘īk, and, while the taste of recent generations almost intolerably elegant, was greatly admired by his contemporaries; and, indeed, it is this alone which redeems the work from being a mere statistical summary. The popularity of his poetry, too, has not survived (cf. Gibb, Ottoman Poetry, iii, 232 ff. for the 19th century Ottoman critics), though at least one modern scholar, M. F. Koprulū, has found his naghmā works deserving of study. These latter are included in his khamsa, of which the fifth portion, entitled Ḥiyāt al-ʿAkhdar, was until recently regarded as lost or non-existent. For a full analysis of the other four works and a short account of his divan, all still unpublished, cf. Hammer-Furgatt, Gesch. osman. Dichtkunst, iii, 244-283. (It should be remarked that the chronogram given here for the date of completion of the Naḥf al-ʿAṣr is 1020, while that given by A. S. Levend is 1034). The only other work ascribed to him is a legal monograph, al-Kawāl al-Ḥasan fi Ḍiyāwāb al-Kawāl Liman ... (Brockelmann, ii, 427), which, from its title, appears to be a reply to an unfinished work by his contemporary Mollājkī Ḍumāned Ef. (cf. Ḥakā‘īk, 669).

Bibliography: To the works mentioned by Babinger, 171 and Brockelmann, ii, 427, should be added those given by Behcet Guni, Istanbul Kültüphanelerinde al-Ṣakā‘īk al-Nu‘mānīyya Terküme ve Zeyilleri, Türkiyat Memmuadı, vii-viii, cüz 2 (1945), 161; ʿṢayyik, Ṭabaqat al-Fudalā‘, (Süleymanpaşa, Beşir Ağası, 479), f. 38; Riyāḍ, Riyāḍ al-Shu‘arā‘, (Nuruosmaniye, 3724), f. 216b. ʿUṣṭaköprüzade’s Ḥiyāt-i Şakā‘īk was used in the Murād Mollā MS., nr. 1432, f. 26a. Sadeddin Nühet Ergün, Türk Şairleri, ii, 541-550, gives the most extensive selection of his verse and reproduces in his article the statements of ʿṢayyik, Riyāḍ and Rūzi, as well as the opinions of M. F. Koprulū. On the Khamsa, cf. Ağāh Sirî Levend, ʿAttā‘înin Hiyâ-țul-Efdar, (Ankara, 1948); however, his argument in support of 1046 as the year of ʿĀṭā‘ī’s death is unconvincing.

(J. WALEH)

ATAK (Attock), a fort in West Pākistān 33° 53’ N, 73° 15’ N, commanding the passage of the Indus just below the junction with the Kābul river. Atak was founded by Akbar in 959/1553 (under the name of Atak-Banārān) to defend the main invasion route from Kābul via Peshāvar against the incursions of his brother Mīrzā Ḥakm. For contemporary explanations of the name see Fīrūzhta, 1, 502 and Abu T-Faḍl, Akhar-hāna, Bib. Ind. Text, iii, Calcutta 188-87, 355; for a comment on its possible historical derivation see Cunningham, Arch. Sur. India, ii, 1877, 7.

Coming into British occupation at the end of the second Sikh war, Atak lost some of its military value with the opening (1900/1883) of the combined road and rail bridge to carry the Grand Trunk road and the North-West railway.

(PI. HARDY)

ATALIK. A term synonymous with atābeq, used not only among the Turks, but also in the Caucasus, Turkistan, and by the Timūrids and the Turkish dynasties of India. It was still used in the 19th century by the amirs of Buğhāra and Kuḥva, and the amir of Rāshīq, ʿYaḥyā Bey bore the title of atalik ghāzī.

Bibliography: See the article, with a very full bibliography, by M. F. Koprulū in IA, s.v. (R. MANTRAN)

ʿATAMA (a.), the first third of the night, according to the lexica, from the time of waning of the ʿṣaḥāk (the red colour of the sky after sunset). This definition covers exactly the right time for the ʿsalāt al-ʿiqāb, which is therefore often called ʿsalāt al-ʿṣama, even in quite large a number of traditions. But later on, pious circles rejected this name, since the ʿsalāt al-ʿiqāb is expressly called thus in the Kūrān. A tradition appeared which declared the use of ʿṣama with regard to the prayer to be characteristic of Bedouins, who used to milk their camels at that time and call the milking itself ʿṣama. Muslims are requested to use the name which ʿAḥlām himself used in the Holy Book.

Bibliography: Wensinck, Handbook, s.v. ʿṣama, ʿiqāb.

(PI. PLESSNER)

ATAR, town in Mauritania, chief place of the Circle of the Adrar, situated at a height of 230 m. on the route Saint-Louis to Tindouf, about 420 km. to the east of Port-Etienne. The Kṣar has 4500 inhabitants belonging for the most part to the Smāṣids, a tribe of marabout. According to local tradition Atar was founded in the 16th or 17th century. At this period the pilgrims’ caravan to Mecca was organised each year by the İdān ʿĀli of Chinguetti (Shinkītī) who used to give the imamate to a distinguished member of the Smāṣids. It happened that they broke with this tradition in favour of a Ghellawi. Outraged, a group of the Smāṣids left the town in protest and arrived at an important settlement of the Azoūgui which has now disappeared, but was then rich enough for the Portuguese to have established a factory there in the 15th century. So this display of temper gave birth to Atar.

Although Chinguetti has remained the spiritual and religious capital of the Adrar, Atar is now the principal commercial centre, providing a market for the great nomads and the southern outlet for the products of Moroccan workers. It is here that graziers come to sell their camels and sheep and to stock themselves up with tea, sugar, indigo, oil etc. It is also to its important palm-grove that they come to perform the process known as ġaṭna, the cleaning of the dates, which brings in great wealth at the time of the date-harvest.

When, at the beginning of the 20th century, Coppolani and his successor, Colonel Montane-Capdebosc, extended French influence to the north of Senegal, they were soon forced to the conclusion that no peace was possible in Mauritania while the
mountainous range of the Adrar provided an ideal centre for armed malcontents.

It was Atar, capital of the Adrar, "the Key to the Situation", that Colonel Gouraud chose as the objective for his column in 1908.

After defeating the Emir's warriors and the (alibs of Shaykh Ma al-Àynayn at the pass of Hamdoun, he entered the Ksar on 9 January 1909 and received the submission of the chief of the Smacids, Sidia Ould Siddi Baba.

Since then Atar, linked by road and air to Senegal and Morocco has considerably increased its economic and commercial importance.

(S. D'Otton Loyewski)

**ATAR** (Mustafa Kemal), the founder and first President of the Turkish Republic, was born at Salonica 1881 and died at Istanbul on 10th November 1938. He lost his father, 'Ali Rida, whilst still very young, so that it was his mother, Zübeyde Khânlâ, who saw to his education. At the age of twelve he entered the military preparatory school at Salonica, where one of his teachers made him take the name of Kemal in addition to Mustafa. In 1895 he entered the Military School of Monastir, then in 1899 that of Istanbul, where he started to take an interest in political life and to play an active part in the secret opposition movements, which the despotism of Sultan 'Abd al-Hamîd [q.v.] had called into being. He obtained the diploma of the Academy of War of Istanbul in 1905, and was then sent to Damascus as a Captain, where he founded the *Watan ve Hürriyet* (Fatherland and Freedom) group. Upon his return from Salonica, he only took part from a distance in the activities of the *Hüttâd ve Terakki* (Union and Progress) movement. He took part in the defence of Istanbul during the first world war, distinguished himself in the Dardanelles' fighting (1915) and, as an Army Commander, in the fighting in the Caucasus (1916) and in Palestine (1917). After a short visit to Germany, he reassumed command of the 7th Army in Palestine, with which he retreated as far as the area north of Aleppo, where he was at the time of the Mudros Armistice (30th October 1918). Mustafa Kemal did not agree with the Draconic terms of the Armistice and came into conflict with Sultan Mehemmed VI. Recalled to Istanbul, where his national feelings were severely tested, he was then appointed Inspector of the Army of the North at Erzurum on 30th April 1919. On 19th May, he landed at Samsun with his mind made up to fight for the total independence of Turkey, threatened by the designs of the Allies, by relying on the troops which had remained faithful to him. On 22nd June he issued a circular from Amasya condemning the government of the Sultan and of the Grand Vizier Dâmâd Ferid Pasha. Through the medium of the congresses which he assembled at Erzurum (23rd July) and at Sivas (4th September) he launched the demand for the independence and unity of Turkey. On 23rd April 1920, having won a certain number of political and military personalities to his cause, he assembled the first Great National Assembly (*Büyük Millet Meşâisi*) at Ankara, which elected him President. The struggle had begun against both the Government of Istanbul and the Allies, more particularly the Greeks (1920-2). His decisive part in the campaigns conducted against the latter caused the Assembly to bestow on him the title of *Ghazi* ("The victor").

The Armistice of Mudanya (11 October 1922) set the seal on Mustafa Kemal's victory, and on 1st November 1922 he obtained the vote abolishing the Sultanate. The Lausanne Conference (November 1922-July 1923) gave complete independence to Turkey as well as national frontiers. The second Great National Assembly, the majority of whose members belonged to the People's Party (*Khalk Fırkası*, modern Tki. *Halk Fırkası*), founded by Muşafâ Kemâl (subsequently the People's Republican Party: *Cumhuriyet Halk Fırkası*), by Mustafa Kemal was elected President—an office to which he was constantly re-elected until his death—whilst 'İşmet Pasha (İşmet İnönü) was appointed Prime Minister and Ankara became the capital of Turkey. The abolition of the Caliphate was voted on 3rd March 1924.

The first years of the Turkish Republic were marked by the fierce determination of Muşafâ Kemâl to modernise the country, to free it from foreign economic tutelage and to secularise it. Relying on a single absolutely devoted party, he imposed a Constitution which virtually placed all power in the hands of the President of the Republic (30th April 1924). Secularisation, marked by the suppression of the religious courts, Kurânic schools and dervish orders, the prohibition of the wearing of the fez, the abolition of the article of the Consti-tution declaring Islam the state religion, brought about local risings (Kurdistan and the Izmir region) and reactions in some political circles, which were swiftly suppressed. Modernisation and turkisation proceeded hand in hand through the nationalisation of foreign companies, the impulse given to agriculture and industry, the creation of national banks, the development of means of communication, a reform of the alphabet, the vote for women and the introduction of new civil, criminal, and commercial codes. Muşafâ Kemâl's decisions, sanctioned by the Assembly without opposition, were disseminated throughout the country by the local sections of the People's Party and by the *Halk okler* (Houses of the people); the whole nation was affected and impreg-nated by the new ideas. In November 1934, a law required all citizens to use family names; the Assembly accorded Muşafâ Kemâl that of Atatürk.

In foreign policy, he showed himself to be pacific, though determined to protect the independence of his country: he concluded treaties of friendship or alliance with the neighbouring states and with the Great Powers. He signed a pact with Greece, Rumania and Yugoslavia, "the Balkan Entente" (9th February 1934), which was extended eastwards by the Pact of Sa'dâbdâd (Turkey, 'Irâk, Iran and Afghanistan, July 1937).

Mustafa Kemal died on 10th November 1938 at Istanbul, mourned by a whole nation, who saw in him the liberator and the renovator of their country. A provisional tomb was erected at the Ethnographic Museum in Ankara; on 10th November 1953, his remains were solemnly transferred to the vast mausoleum erected in his honour in the capital.

Mustafâ Kemâl was a man uncompromising by nature, impatient of opposition, exacting in his
demands both upon himself and others, his sole objective being the restoration of his country and the promotion of its greatness. Opposed to the Sultanate and to Islam, he strove relentlessly to suppress them both, for he considered them responsible for the decay of the Ottoman Empire. His passionate love of his country led him into the severe treatment both of ethnic minorities long settled in Turkey and of prominent Turks whose crime was that they did not subscribe to all his political ideas. Yet Atatürk has imparted to the new Turkish régime the deep imprint of his personality. There could be no question for his successors of going back on his work, except in the matter of religion and in the democratisation of the régime.

ATABARA, a tributary of the Nile, known to the ancients as Astobara. It rises in Abyssinia not far from Gondar and, entering the Sudán near Gallabat (Kallabat) is joined lower down by the Salam and Setti; it joins the Main Nile at a point about 200 miles north of Khartoum. During the flood season (end of May to end of September) it contributes a considerable amount of silt-laden water to the Nile; for the rest of the year it dries up into a series of pools.

The town of Atbara near the river mouth is important as the headquarters of the Sudán railways (population of the Municipal council area 36,143), and as the junction for the Red Sea line. In the battle of the Atbara fought on 8 June 1898 at Naghlaya, a short distance upstream from the river mouth, the Anglo-Egyptian forces under Sir Herbert (later Lord) Kitchener destroyed a Mahdist army of 12,000 infantry and 4,000 horsemen commanded by the Darwish amir Mahmud Ahmad.

(CHASELLSON)

ATEIBA [see .utfayba].

ATEK, district in Soviet Türkmenistan on the northern slope of the frontier-mountains of Khurâsân (Kopet Dagh), between the modern railway-stations Gjaur and Dughak. The name is really Turkish, Etek, “edge border” (of the mountain-chain), and is a translation of the Persia district, viz. Dâman-i Küb, “foot of the mountain”; but the word is always written Atk by the Persians. During the Middle Ages no special name for Atek appears to have been in use; being a district of the town of Abiward [q.v.] it belonged to Khurâsân. In the 10th/11th and 11th/12th centuries, it fell into the power of the Khâns of Khârizm, and later into that of the Turkomans; before the appearance of the Russians the frontier with Persia was never clearly defined. Previous to the delimitation of the borders in 1881 a part of Atek with Abiward belonged to the principality of Kalâ, which was subject to the overlordship of Persia. (W. BARTHOLOMÉ)

‘ÂTF (=? connexion), an Arabic grammatical term denoting a connexion with a preceding word. Two kinds of ‘âtf are distinguished: ‘âtf al-nasab or ‘âtf properly so-called, and ‘âtf al-bayân:

1. The simple co-ordinative connexion (‘âtf al-nasab) consists of the co-ordination of a word with a preceding word by means of one of the ten particles of connexion, e.g.: kâma Zayd wa-‘Amr. The co-ordinative particles (al-‘awdîf or huruf al-‘âtf) are distinguished according to their degree of strength: wa is used for the simple co-ordinative relationship (‘ata’-’lam); fa, qumma and hâl express relationships of governance and subordination (‘ata’-’tartib); aw, imra, or am express a fluctuation between these two terms (‘ata’-’l-khâk bi akhâ ‘l-madhâkhram), and la, bal, or lâkin an antithesis (la ‘l-khâlîl). ‘Aft can connect words (mufrad ‘alâ mufrad) as well as clauses (diwâla ‘alâ diwâla). According to Ibn Yâhya, nasab is a term belonging to the terminology of Kûfa, ‘âtf to that of Basra.

2. The explicative connexion (‘âtf al-bayân) is an apposition, which however cannot be an adjective, and which, in contrast to badal, explains the preceding word (mâdîh li-matbu’ihi), e.g.: diwâla ‘alâ Zayd, or askama bi’l-hâla Abû Hafs ‘Umar. From this point of view ‘âtf al-bayân has exactly the same value as wa-huwa.

In both kinds of ‘âtf, the second word is called al-ma’ffâl, and the preceding al-ma’faq ‘alayhi.

Bibliography: See the works on grammar, especially Zâmakshâri, Mulassal, 54, 54, 140, 142, 142, 142; Dict. of Techn. Terms, 1007-10.

(G. WEIL)

ÂTFIH, town in Middle Egypt. Atfih (also written with f instead of ç) is a town of about 4,300 inhabitants on the east bank of the Nile at the latitude of Fayyûm. The name of the town in old Egyptian was Tep-yeh or Per Hathor nebt Tep-yeh, i.e., “house of Hathor, lady of Tep-yeh”. The Copts changed this name to Petpeh, the Arabs to Atfih. The Greeks, identifying Hathor with Aphrodite, called the town Aphroditopolis, abbreviated to Atfih. The Persians, keeping the name, modified it to the modern form Atek, “edge border” (of the mountain-chain), and the preceding al-ma’ffâl ‘alayhi.

Bibliography: See the works on grammar, especially Zâmakshâri, Mulassal, 54, 54, 140, 142, 142, 142; Dict. of Techn. Terms, 1007-10.

(G. WEIL)
was already in a state of complete decay. It was only under the Khedives that the government again began to do something for this region. The incessant raids by Bedouins and Mamluks came to an end; canals were built or restored. Atfih is today a port of no more than local importance; trade is only on a small scale.

(C. H. Becker *)

ATFIYĀSH, Muhammad b. Yūsuf b. ‘Isa b. Șalām, called Kūṭib al-’Awmāna, Ibāḍī scholar and author of Bīnī Īṣqu (arabicised: Banū Yāṣqan) in the Mzab, d. 1332/1914, 94 years old. Descendant of a family of scholars, he brought about, by his extensive literary activity (of which the few items in Brockelmann, S II, 893, cannot give an adequate idea), a real renaissance of Ibāḍī religious studies in the West. This went parallel with an increasing strictness in religious practices and in social life, the effects of which, seen through the eyes of the women of the Mzab, have been described by A. M. Goichon (REI, 1930, 231 ff.). Shāykh Ṭafīyāsh was in close relations with his coreligionaries in the East, where another great Ibāḍī scholar, Ṣāḥib Allāh b. Humayyid al-Šālimi (Brockelmann, S II, 823), was his contemporary. Whilst defending his point of view vigorously, he did much to make the Ibāḍīs known to and respected by the other Muslims, and this brought him into contact with sultan ‘Abd al-Hamīd II. The leading Ibāḍī scholars in the Mzab in the present time are his disciples. His library, a unique collection of Ibāḍī and other works in manuscripts and in printed and lithographed editions, is a wakf in Bīnī Īṣqu; it contains many of his autograph manuscripts.

His main works are: commentaries on the Qurʾān: Himyan al-Zād illā Dar al-Ma‘ād, 14 vols., Zanzibar 1150; Tafsīr al-Tafsīr, 6 vols., Algiers 1326; traditions: Wafi al-Damāna, 3 vols., Cairo 1366-68; religious law: Sharh al-Nil (commentary on the K. al-Nil of ‘Abd al-‘Arīz al-Mus‘ābī, d. 1121/1708; Brockelmann, S II, 892), Cairo 1305-6; Ǧamīl al-‘Arī al-Wal-Far, 2 vols., Cairo 1348; Sharh Dāʾīm Ibn al-Naqṣ (on this author, see Brockelmann, II, 538), 2 vols., Algiers 1326; Taḥkīh al-Ǧamīl, Algiers 1319; dogmatics: Sharḥ Risālat al-Tazkīḥ (commentary on the ‘Irshād of Abū Haṣṣ ‘Umar b. ‘Uqayl); Brockelmann, S II, 357), Algiers 1326; al-Dhakh al-Ḫalāṣi, Cairo 1343; also works on grammar and philosophy, some poetic, and writings on various subjects.

(J. Schacht *)

ATHAR (A.), pl. Ṭāḥār, literally "trace"; as a technical term it denotes: 1) a tradition [see Ṭāḥār]; 2) a relic: al-ṭāḥar al-ṣarīr (pl. al-ṭāḥār al-ṣarīr[a]), relics of the Prophet, hair, teeth, autographs, utensils alleged to have belonged to him and especially impressions of his footprints [see KADĀM]; these objects are preserved in mosques and other public places for the edification of Muslims. Relics are also called, both by Christians and Muslims, dhakhira ("treasure").

For a description, with illustrations, of the sacred relics preserved in Istanbul see Tašzin Ğa, Hitrā-i Saʿdāt Dairesi ve Emanet-i Mukaddese, Istanbul 1953.

(I. Goldziher *)

3) Ğhār also is used as another technical term in the theory of causality, although it is less commonly used than ḥalāla and sabab with their derivatives [qf./pl.]. From the latter mode of style, e.g. from a higher, active being or thing, (for example, God), emanate taḥārāt, "influences", in contrast under certain conditions ġhār, "impressions", in lower beings or things. In contrast to the higher beings, the latter behave in a passive (or better: receptive) manner. This use of the word is most frequently found in the astrologers and natural philosophers, with reference to the influence of the stars (considered as higher beings possessing a soul) on the terrestrial world and on men. In addition, the atmospheric phenomena, which are also under the influence of the stars, are called al-ṭāḥār al-ulwiyya [q.v.]. The Meteorology of Aristotle was translated into Arabic under this title. Ğhār fi ‘l-nafs (ṭāḥārul Ṭāḥār) is the name given to the emotions and ideas of the sentient soul, because the soul experiences the impressions of things. (T. de Börk *)

AL-ÂTHĀR AL-ULWIYYA, "The meteorological phenomena," title used by the Arabs to designate the Meteorology of Aristotle and that of Theophrastus.

1. In his Risāla fi Kamiyyuṭ Kutub Aristotēlēs wa ma yuḥtāḏu ilāyah fi Taḥsīl al-Falṣafa, al-Kindi mentions, in fourth place among the books of physical sciences (al-fabiyyāt), The Book of the phenomena of the air and of the earth (Ḳūbār Āḥāṯ al-Dīsaw wa ‘l-Arṣ); (see M. Guidi and R. Walzer, Uno scritto introduttivo allo studio di Aristotele, Studi su al-Kindi, i, Atti della R. Accad. dei Lincei, Mem. della classe di scienze morali, 6: 6, 1937). The same division of the fabiyyāt occurs in al-Yaḥṣābī, i, 149, who cites the book Fi ’l-Ṣharā’ib. Also in the Mzab, d. 1332/1914, 94 years old. Descendant of a family of scholars, he brought about, by his extensive literary activity (of which the few items in Brockelmann, S II, 893, cannot give an adequate idea), a real renaissance of Ibāḍī religious studies in the West. This went parallel with an increasing strictness in religious practices and in social life, the effects of which, seen through the eyes of the women of the Mzab, have been described by A. M. Goichon (REI, 1930, 231 ff.). Shāykh Ṭafīyāsh was in close relations with his coreligionaries in the East, where another great Ibāḍī scholar, Ṣāḥib Allāh b. Humayyid al-Šālimi (Brockelmann, S II, 823), was his contemporary. Whilst defending his point of view vigorously, he did much to make the Ibāḍīs known to and respected by the other Muslims, and this brought him into contact with sultan ‘Abd al-Hamīd II. The leading Ibāḍī scholars in the Mzab in the present time are his disciples. His library, a unique collection of Ibāḍī and other works in manuscripts and in printed and lithographed editions, is a wakf in Bīnī Īṣqu; it contains many of his autograph manuscripts.

His main works are: commentaries on the Qurʾān: Himyan al-Zād illā Dar al-Ma‘ād, 14 vols., Zanzibar 1150; Tafsīr al-Tafsīr, 6 vols., Algiers 1326; traditions: Wafi al-Damāna, 3 vols., Cairo 1366-68; religious law: Sharh al-Nil (commentary on the K. al-Nil of ‘Abd al-‘Arīz al-Mus‘ābī, d. 1121/1708; Brockelmann, S II, 892), Cairo 1305-6; Ǧamīl al-‘Arī al-Wal-Far, 2 vols., Cairo 1348; Sharh Dāʾīm Ibn al-Naqṣ (on this author, see Brockelmann, II, 538), 2 vols., Algiers 1326; Taḥkīh al-Ǧamīl, Algiers 1319; dogmatics: Sharḥ Risālat al-Tazkīḥ (commentary on the ‘Irshād of Abū Haṣṣ ‘Umar b. ‘Uqayl); Brockelmann, S II, 357), Algiers 1326; al-Dhakh al-Ḫalāṣi, Cairo 1343; also works on grammar and philosophy, some poetic, and writings on various subjects.

(J. Schacht *)
Among the works of Abu '1-Khayr al-Hasan b. Suwar (born 331/942), the Fihrist, 265, mentions the translation of a Kitab al-Alghar al-Ulwiyya, by whether this title in fact refers to the Meteorology of Aristotle is uncertain. On another meteorological work of Ibn Suwar, see also Ibn Abi Ushaybi'a, i, 323.

The great commentary of Olympiodorus on the text of Aristotle was translated, according to the Fihrist, 251, by Abu 'Ishir Matta b. Yunus (died 338/950), and that of Alexander of Aphrodisias by Yahya b. 'Adi (died 363/972). None of these translations has come down to us. On the commentary of al-Farabi see Ibn al-Kifit, 279, and Ibn Abi Ushaybi'a, i, 138. In the Kitab al-Shifa' of Ibn Sina, the Meteorology and the Geography form part of the fifth fann; that part of it dealing with the halo and the rainbow has been translated by Horten and Wiedemann (Meteorologische Zeitschr., 30, 1913, 533-544). In the Kitab al-Najdi (Caio ed. 1938, 152 ff.), Ibn Sina gives the extract of the detailed account of the Kitab al-Shifa'. Of Ibn Rushd's commentaries on the Meteorologies, we possess the Arabic text of his abridgement (ed. Haydarabad 1365).

The ideas expounded by Aristotle in the Meteorology, especially those of the fourth book, have played an important rôle in the history of physical ideas in Islam. At the beginning of the third century of the Hijra, the Mu'tazilite theologian al-Nazamat [q.v.], criticised the doctrine expounded by the al-Shifa', the four elementary qualities (kwtna gharisa): this he considered to be arbitrary, since it was based only on the sense of touch (lams, malsama = tؤ altrukou). He knew the fundamental theory of the two exhalations ('awkar ard, 'awkar mar = dewyhalaznc, zayaq) and expounded an opinion on the saltiness of the sea (see the fragments of his writings cited by al-Djash, Kitab al-Hayawon, v). In Djash's system, the doctrine of the elements is clearly based on that of Aristotle; (see Kraus, op. cit., 163 ff.). In the Arab tradition of the Meteorology, starting from Ibn al-Bitrîk, down to Ibn Rushd, the doctrine vaguely indicated by Aristotle (350a 20 ff.) of the influence of the Spheres on the sub-lunar world is interpreted in conformity with the astrological theory expounded for example in the Book of the Treasure of Alexander, the Arabic text of which is cited by Ruska, Tabula smaragda, 80. According to this theory, "the world below follows the world above, and the individual bodies of the former are subject to those of the latter, because the air is contiguous (mutaṣqil) to the exterior of all the bodies and to the Spheres as well". In the Sirr al-Khalika, a hermetic work attributed to Balinas (Apollonius of Tyana) (see Kraus, op. cit., 147, n. 2), the idea of the influence of the Spheres is presented under the form of a cosmogony, according to which the successive development of minerals, plants and animals is due to the increasingly rapid motion of the Spheres. This idea is also present in Ibn al-Bitrîk's paraphrase of Meteor., i, 1:

"The movement of things directed (by the celestial bodies) belonging to the earth such as plants, the creation and production of animals, minerals, etc. taking into account their transformation and mutation, is produced by the celestial influences".

This theory is also expounded by the Ikhwan al-Shafa', in the chapter on al-Athar al-Ulwiyya, Rasani, ii, 34 ff. It is explicitly attributed to Aristotle by 'All b. Rabban al-Tabari, Firdawas al-Hithma, 21. See also Ibn Rushd, al-Alghar al-Ulwiyya, 6.

| Formerly a harbour on the coast of Palestine between the promontory of Carmel and al-Forfira (Dora), on a little tongue of land which lies to the north of a small bay and is washed on three sides by the sea. According to the Itinerarium Burdigalense there was a mutatio Certha there, but the name 'Athlith appears to be ancient. 'Athlith appears in the light of history in the period of the Crusades. In 583/1187 it fell into Saladin's hands. In 1218 the Castellum Peregrinorum, as the Franks called it, was reconstructed as a powerful Templar-fortress. Along with Districtum-Detroit (Khurbet Dustrî) it had to guard the passes of Carmel leading south. In 690/1291 it was conquered and demolished by the Mamlûk Sultan al-Ashraf Khallî. In the late 14th century al-`Uthmânî speaks of 'Athlîth as the southernmost wilîda of the mamlaka of Saif (BSOAS, xv, 1953, 483).

from Ṣanā‘ah, between al-Hadżar (= Dīžān) and Bayd, and is quoted already in the year 12/632 as belonging to the insurgent al-Aswad [q.v.]. Scarcity also was transferred to the opposite island(s), usually called Farasan [q.v.]. The name is not on the maps; the closest correspondents would be Khūr Abū es-Seba, or Qawz (al-Dīja‘afira) 32 km. N of Dīžān.

(4) A small place on the maritime road Adan-Mekka, between ʿĀra and Sukyā (ʿUmāra, 8), three farsakhs from the former village (Ibn al-Mudjawir, 100).

Reisereisen, 150; idem, *Die alte Geographie Arabiens*, 45-54, 197; on the orthography of the nispa: Ibn al-Āṭir, Lubāb, ii, 122 and Dhahabi, *Mushkātab*, 377 f.

(0. ĖRFRENG)

**ʿĀTKA,** Meccan lady, the daughter of the hadjīyī Zayd b. Amr and sister of Sa‘d b. Zayd, of the clan ʿĀdī b. Ka‘b. She embraced Islam early and took part in the ḥijra. She was married first to ʿAbd Allāh, a son of Abū Bakr, then after his death to ʿUmar b. al-Khaṭṭāb (in 12/633 according to al-Tabari, i, 2077), whom she bore a son ʿīyād (Ibn Sa‘d iii/1,190). When ʿUmar was killed, she married al-Zubayr b. al-Awwām, whose death she lamented in a much quoted elegy (Ibn Sa‘d iii/1,79 etc.). The sad story of this beautiful woman and her husbands whose lives ended so tragically was soon turned into a fanciful romance and embellished with spurious love-poems and elegies.

**Bibliography:** Ibn Sa‘d viii, 193-5; ii/2,97; Ibn Kutayba, *ʿUyūn al-ʿAkhdār*, iv, 114 f.; ʿHamāsā (Freytag), 493 ff.; Aḥzābī, xvi, 133-5; *ʿAynī, ii, 278 f.; Khizdnat al-ʿAdab*, iv, 351 f., etc.

**ATIL,** or Itil, sometimes Atil (Itil)-Khazaran, also Khazarin Atil, the Khazar capital, a double town on the lower Volga, itself called Atil, Itil [q.v.] in the early mediaeval period. The exact site is unknown. According to al-Mas‘ūdī (Murūḍī, ii, 7), the capital was transferred to Atil from Samandar in the neighbourhood of the Caucasus in the time of Sulaymān (Salman) b. Rābi‘ a-bi ʿAbdi, i.e. about 30/650, though elsewhere (Tānĥīkh, 62) he says that Balandjar, also in the Caucasus region, was the original Khazar capital. Already at this date the Arabic sources speak of al-Baydā, 200 parasangs from Balandjar (al-Ṭabbar, i, 2668), by which doubtless the later capital is intended. Ibn Rusta (139) gives what are apparently the earlier Khazar names for the double town on the Volga. According to al-Īṣṭaḥkhrī (320), the west part, which was the larger, was a straggling town of felt tents with a few clay houses, several miles in extent and surrounded by a wall. The Khazars proper, i.e. the Judaised ruling class, as well as the army and the royal castle, built of brick, were on this bank. Most of the Muslims, estimated in all at 10,000, lived on the east bank, which was the commercial part of the town. Markets, baths, mosques, etc. are mentioned. There was also a considerable Christian population, and a colony of pagan Śaṅkālība and Rūs (Murūḍī, ii, 9, 12). The correct naming of the double town appears to be: west bank, Khazarān; east bank, Atil (cf. Ibn Hawkal, 369 note). Like its modern counterpart, Atina, it was an important entrepôt of trade. The products of the north, especially furs, passed through the Khazar capital, while contact was made with Kievan Russia to the west and with Khaṭārin to the east. The slave-trade seems to have been of importance. In the sixties of the 10th century the Khazar capital was destroyed by the Rūs (Ibn Hawkal, 352; Russian Chronicle, anno 956) and never recovered its former prosperity, though the Rūs withdrew and attempts were made to rebuild it (Ibn Hawkal, 398; cf. al-Makdisī 361). The Khazar state appears to have drawn out a precarious existence for some time afterwards, but Khazarān Atil ceases to be mentioned.

**ATIJA,** Athens, capital of Greece. The history of Athens in pre-Islamic times will not be treated here. The first closer—admittedly hostile—contact with the Muslims was made in 283/896, when Saracen pirates occupied the town for a short time (cf. D. G. Kambourouglios, *H Διοικητήριον Αθηναίων* τοῦ Σαρακηνικοῦ Ἰσλάμ, Athens 1913), and the remains, and influences on the ornamental style in Athens, have been traced back to this event (cf. G. Soteriou, *Arabic remains in Athens in Byzantine times*, in: *Praktikd (Proceedings) of the Academy of Athens*, iv (Athens 1929), reproduced by D. G. Kambourouglios, *I., 160; cf. also Byzant.-Neugriech. Jahrbücher*, xi (Berlin and Athens), 233-69). The whole question still appears to be in need of clarification (cf. K. M. Setton, *On the raids of the Moslems in the Aegaean in the ninth and tenth centuries and their alleged occupation of Athens*, in: *American Journal of Archaeology*, vol. LVIII (1954), 311-9).

Shortly after the time of Justinian I, Athens had sunk to the level of a provincial town, and apart from its great buildings, there was nothing left of its ancient cultural importance. During the period of western rule in Greece, Athina was the capital of a duchy which was successively held by the Burgundians and the Catalans, who occupied it in 1311, bringing it under the sovereignty of the kings of Aragon (cf. Kenneth M. Setton, *Catalan Domination of Athens* 1311-1388 (Cambridge, Mass., 1948 with excellent bibliography on pp. 261-301). From 1358 to 1458 the Florentine house of the Acciajuoli ruled in Athens. In 1397 it was temporarily taken by sultan Bāyāzīd I. In some Turkish sources this capture is mentioned as taking place before the battle of Nicopolis (which took place on 28 Sept. 1396); after the conquest of Salonica (which is mentioned as having taken place in the previous year) (Neṛrī, Rūbī; in others, as taking place after that battle (Sa‘d al-Dīn and his plagiarists, Solaksāde and ʿHādī Khālfī as well as Mūnedījīm-bashī). The later date seems preferable, as Timurtash is mentioned as the conqueror of Athens, and the *Chronicum breve* mentions a raid by Ya‘qīb-Paġha and ʿMour-tasīs, ʿMūr-tasīs = Timurtash against Morea in summer 1397. Doubtless it was only a temporary occupation of the town, perhaps no more than a raid, so that Greek sources do not mention the event explicitly (cf. Sa‘d al-Dīn, *Tādīq al-Tawdīrīk* i, 149 f. also Neṛrī in ZDMG, XV (1861), 344; and concerning the whole question J. H. Mordtmann, *Die erste Eroberung von Athen durch die Türken zu Ende des 14. Jahrhunderts*, in: *Byz.-Neugriech. Jahrbücher*, IV,
ATİNA — ATJEH

346-350). It was not until Mehemmed II, that Athens, "the city of wise men" (madinat al-hukama*) finally came under Ottoman rule, when the Conqueror personally made his triumphal entry in the last week of August, thus beginning nearly 330 years of Turkish occupation. Concerning this event and all its details, cf. F. Babinger, *Mehmed der Eroberer und seine Zeit*, Munich 1953, 170 f.; (Italian edition, *Maometto II il Conquistatore ed il suo tempo*, Turin 1956, 246). In the following centuries, Athens sank into insignificance, as one can gather clearly from reports of western travellers (cf. in particular Comte de Laborde, *Athênes aux XVIe, XVIe et XVIIe siècles*, Paris 1854, 2 vols.). The Parthenon had been converted into a mosque, and barracks were built in the Propylaea. Turkish domination meant a time of decadence for Athens, which sank to the status of a small country town. In autumn 1687, it was besieged by a Venetian admiral, Francesco Morosini (subsequently Doge), and on this occasion the Parthenon was largely destroyed (on Sept. 26th) by a bomb which hit the ammunition store there. The two mosques of the city were turned into places of Catholic and Protestant worship (the latter because a considerable number of German mercenaries were present) by the Venetian Provveditore Daniele Dolfin. Shortly afterwards, however, on April 9th 1688, Athens was again abandoned by the occupying troops (which were much reduced by an epidemic) and the Turks re-entered. A city-wall—built largely from the remains of ancient monuments—was erected in 1777. From the 17th century onwards, there was great interest in the monuments of Greek antiquity in Athens, hence there are detailed descriptions dating from that time, especially in French (e.g. J. Spon (1678) and G. Wheler (1682); cf. also Sh. H. Weber, *Voyages and Travels in Greece*, the Near East and adjacent Regions made previous to the Year 1801, Princeton, 1953. These describe vividly to what a pitiable state Athens had sunk. The Greek fight for liberation increased this devastation. In 1822 Athens was conquered by the Greeks, but had to be ceded to the Turks again no later than 1826 (the Acropolis in 1827). It was only after the London Conference (1830), that Athens was incorporated into the new kingdom of Greece. It became the capital of the country at the end of 1834, and soon developed into an intellectual and cultural centre. Owing to the quick economic and political development there was a steep rise in population. Today, Athens has about one million inhabitants. The university was founded in 1835.

Bibliography: The best bibliography of the history of Athens during the periods of Catalan and Florentine rule is found in Kenneth M. Setton, *Catalan Domination of Athens 1311-1358* (1948) in chapter XII, from 261 onwards. Concerning the Turkish rule cf. Th. N. Philadelphia, *Istoria, του Αθηνών του Τουρκοκρατία, viii, Istanbul 1928, 249-67; in connexion with this, see also short notices by Hadidji Khalifa, J. v. Hammer, *Remels und Bosna*, Vienna 1822, 109-10. There is a thorough study of Athens in the Middle Ages and in modern times by Wm. Murray, *The Universities in the Levant*, London 1908, 335 ff., with numerous further bibliographical details. Ferd. Gregorovius, *Die Geschichte der Stadt Athen im Mittelalter*, Stuttgart 1889, 2 vols. See also G. C. Miles, *The Arab Mosque in Athens in Hesperia, Journal of the American School of Classical Studies at Athens, xxv (Athens 1956), 329-44 (with plate 49). (Franz Babinger) *ATÎRA* (pl. *'ätîra*) denoted, among the Arabs of the dîkîliyya, a ewe (and by extensions its sacrifice) offered as a sacrifice to a pagan divinity, either as a thanksgiving following the fulfilment of a prayer (concerning in particular the increase of flocks), or when a flock reached the total of a hundred head (cf. the word farsa); the head of the idols before which the sacrifice was performed was smeared with the blood of the victim. If one bears in mind on the one hand that these sacrifices (which were also called radjâbyya; hence the phrase radjâbya *'átra*<sup>**w**</sup>) took place in the month of *radjab* (i.e., in the spring), and on the other hand that in principle the first born were used for the sacrifice, a close connexion will be established with the sacrifice which took place during the *umra* (q.v.), and also with the Jewish Passover and the magic rites which introduce a scapegoat. It seems that the Prophet forbade these sacrifices (cf. the hadîth: là farsa<sup>**w**</sup> (sacrifice of firstlings) wa là *'átra*<sup>**w**</sup>.

ATJÊH<sup>1</sup> (Atchin, Achin), the most northerly part of the island of Sumatra. Here flourished the once powerful Muslim empire of Atjêh, which is now a province of the Indonesian Republic. The southern limit was, under Dutch rule, formed by the residencies of Tapansuli and "Sumatra's Oostkust", now the province Sumatra Utara. In earlier times the province (or at least the sphere of political sovereignty) of Atjêh extended much farther towards the south. A considerable part of both the east and west coasts of Sumatra was subject to the authority of Atjêh, and even pagan chiefs in the Batak regions received their rank at the hands of the princes of Atjêh.

Great-Atjêh. Only the district to the north-west with the Atjêh river and the port Atjêh, the former residence of the princes of Atjêh, was from the first reckoned as Atjêh proper. The Dutch named it Great-Atjêh and the capital Kuta Radja (i.e. fort of the prince). The port of Sabang situated on the island of Pulô Wê (to the north-east of Kuta Radja) only dates from the beginning of the present century. The inhabitants of the littoral (Barûh) are distinguished in many respects from the population of the highlands of the interior (Tûnông); the customs and speech of the former (who live of course in the vicinity of the residence) are always considered to be the more refined.

The Dependencies. The other districts situated on the west, north and east coasts were under Dutch rule usually referred to as the Dependencies. Among the important towns are: on the west coast: Meulabôh, Tapa' Tuau and Singkil; on the north coast: Sigîl, the former residence of the princes of Atjêh, and even pagan chiefs in the Batak regions received their rank at the hands of the princes of Atjêh.

1) In this article tj is retained in deference to the official orthography in Indonesian; ð = closed, ð = open; ð = open, ð = closed; eu is one vowel (not a diphthong).
the year 746/1345. On the east coast are situated among others: Idi, Langsa and Kuala Simpang. A steam tramway joins the east and north coasts with Kuta Radja. A part of the population has migrated thither from Great-Atjeh; many Malays have also settled here from the neighbouring districts.

With an estimated rice export surplus of 45,000 tons in 1942, and an important export of betel nuts, patchouli, copra, rubber and live-stock, Atjeh developed under the Dutch government into a thriving country, in spite of the ruin of the traditional pepper culture, to which the settlements in one part of the Dependencies had owed their original existence. Large irrigation works were completed or were under construction. The road system was extended. In addition on the West and East Coasts of Atjeh extensive acreages of waste ground were cleared by Western estate companies for the planting of rubber, oil-palms and fibres. The BPM (Bataafse Petroleum Maatschappij) had fields in operation in Rantau (Kuala Simpang), and Peureula (Langsa); whilst in Meulaboh a concession was granted to a gold mining company.

Gayó and Alas-Countries. High mountain-chains overgrown with virgin forest separate the littoral from the Gayó-country; transverse chains divide the region of the tablelands. The most northerly (containing the great Tawar lake and the sources of the river Peusangan) is occupied by the so-called "Uorang Laut" (i.e. people of the lake), the plain to the south of it is occupied on the other hand by the "Uorang Döröt" (i.e. people of the land); to the southeast lies the table-land of Sérándjadi containing the sources of the river Peureula, which flows in an easterly direction. The fourth table-land, situated in the south and containing the bed of the river Tripa which discharges its waters on the west coast, is called Gayó Luos (i.e. the wide, spacious Gayó-countries). The Alas-countries lie south of this. The population of these regions, who differ in many respects from that of Atjeh, have from the first recognised the authority of Atjeh. The four chiefs appointed by the princes of Atjeh in the several parts of the Gayó-country (the so-called "Këdjërunus") were the mediators between the Gayós and Atjeh. Two of these Këdjërunus had their sphere of influence in the region of Lake Tawar (their distinctive titles were Rödëjë Bikut and Siah Utama), one among the Döröt (with the title Rëdjë Liingë), and the fourth in Gayó Luos (Këdjërun Pëlaambang). Sérándjadi was formerly without inhabitants; later its most eminent chiefkin was also called Këdjërun (Këdjërun abuk). In the Alas countries the authority of Atjeh was represented by two Këdjërunus.

The most important administrative centres are Takêngôn, on Lake Tawar, and Blang Këdjërin, in Gayó Luos. In the sub-district of Takêngôn, which has an area of 75,000 hectares of fir trees, an important government resin and turpentine industry has developed. Plans for the establishment of a paper factory were in an advanced state of preparation at the time of the Japanese invasion in 1942.

For accurate information about the people of Atjeh we are indebted above all to C. Snouck Hurgronje, who (first in the years 1891-1892) investigated the previously but little known social, political and religious conditions of this nation (De Atjehers; Batavia 1893-1894; cf. the English translation of this work which is provided with a new introduction and some additions by the author: The Achehnese, Batavia-Leiden 1906; Ambtelijke adviesen i, The Hague 1957, 47-438), and later described at length the land and customs of the Gayós (Het Gayóland en zijn bewoners, Batavia 1903). A wealth of ethnographical details was collected by J. Kreeker and published in his work Atjeh, 2 vols., Leiden 1922-23, which also includes the Alas region.

Population and Language. Little is known about the origin of the people of Atjeh. Linguistically they belong to the Malay-Polynesian peoples. Slaves (from the island of Nias, etc.) and other foreigners (e.g. merchants from Hindustan) have influenced to some extent the composition of the population. Atjeh has many dialects, and each dialect again many variants; the literary language has in general closest affinity with the idiom of the Baroh-district.

For the literature of Atjeh see Snouck Hurgronje, The Achehnese, ii, 66-189. Gayó is an independent language, whilst Alas is a Northern-Batak dialect.

In the 19th century Malay was almost unknown in Atjeh except among a portion of the inhabitants of the sea-ports, but formerly it was the language of the court and from earliest times in Atjeh letters, official documents and many works on theology were written in Malay. The earliest Achehnese adaptations of Arabic and Malay works date from the 17th century. Now Indonesian is the official language. For further details see C. Snouck Hurgronje, Studies over Achehskiene blanken schriftesten, in TBG, xxxv (1892), 346-442, also Achehskhe Taaldwistien, ibid., xlii (1900), 144-262; K. F. H. van Langen, Handleiding voor de beoefening der Achehskhe Taal, The Hague, 1889; H. Djajadiningrat, Achehskhe-Nederlandsch Woordenboek, Batavia 1933-1934; P. Voorhoeve, Three old Achehskhe MSS., in BSOS 14 (1953), 235-245; G. A. J. Hazen, Gayosch-Nederlandsch Woordenboek met Neder-Gayosch register, Batavia 1907.

Tribes and Families. There are still preserved traces of a division of the population of Atjeh into 4 tribes. The members of such a tribe or family—Achehnese: kaúm (from the Arabic khaum, people)—regard themselves as blood-relations in the male line, and have (especially in regard to blood-feud and the payment of blood-money) common rights and obligations. The members however of the various kaúms are scattered throughout the country; only where many kinsmen dwell together are they wont to choose a chief to represent their common interests. The Gayós are divided into families who dwell together under their chiefs (Rödijës). When Rödijës disagree decision rests with the Këdjërun.

Administration of the Villages. In Atjeh the Ketùjë (i.e. the elder) is the head of the Gampông—i.e. the village, also a quarter of a town (Mal. kampung); in case of necessity he consults the "elders" (i.e. the people who have had experience of life). The religious affairs and the legal questions of the Gampông, e.g. the leading community in the Šašt, are the concern of the Teungku meunasah. The title Teungku is borne in Atjeh both by people whose functions are connected with religion, and by those who have acquired some acquaintance with the sacred law. The Gampông-Teungkus or Teungku meunasah are not men of learning. Their rank has become hereditary, and in Snouck Hurgronje's time the ignorance of many Teungkus was so great that they were scarcely able to administer their office without the help of other people.

The Princes, Uleebalangs and Sagi-chiefs. In historical times Atjeh has always been divided into many small districts, whose hereditary chiefs—
the so-called Uleebalangs (i.e. commanders-in-chief)—lived in constant feud with each other. They paid homage however to the prince of the port of Atjeh as their common over-lord. The latter had the title of Sultan in official (Malay) documents, but was usually called by the Achehnese Radja or Pòteu (i.e. "our master"). Whilst the Sultans and their male relatives bore the title iowan, the male members of the Uleebalangs families bore the title teanka. The power and dignity of the Achehnese princes and the riches and splendour of their court, which are mentioned both in the earliest Malay and European accounts, depended on the tribute of the neighbouring regions on the coasts and the harbour-dues of the capital Atjeh. The bold Achehnese mariners were master of sea and harbours; if they demanded tribute few dared resist. The interior of the country possessed little interest for the princes. Even when the empire was flourishing (2nd half of the 16th cent. and particularly during the rst half of the 17th) the authority of the Sultan was confined to the immediate vicinity of the capital.

By the end of the 17th cent. the princes had become quite dependent on the Uleebalangs in Great-Atjeh. The latter had at that time apparently on the ground of common interests formed themselves into three federations, the so-called Sagi, "sides", i.e. of the triangular-shaped Great-Atjeh. Each Sagi had an overlord (Panjisma-Sagi), whose authority however did not extend beyond the common Sagi-interests. (In the Dependencies also such federations are found). The Sultan chosen by the three Sagi-chiefs used to pay to them a certain sum. He usually belonged to the family of the previous ruler, but strangers, e.g. Sayyids, who dwelt in Atjeh, were sometimes elected to the Sultanate. In the course of time other chiefs obtained a voice in the choice of a ruler; according to tradition at one period 12 chiefs (including the 3 Sagi-chiefs) formed a kind of electoral college.

The majority of the Uleebalangs in Great-Atjeh and the Dependencies later received their authority from the Sultan’s hand and in witness thereof were given a document bearing the ruler’s seal (a so-called Sarakata; on the Hindustani origin of this seal see G. P. Rouffaer, in BTJV, Series 7, v, 349-384; cf. C. Snouck Hurgronje, ibid., Series 7, vi, 52-55). Not all the Uleebalangs thought it worth while to go to the expense involved in the acquisition of a sarakata or deed of recognition; more important than the "tiab sikureueng" (the nine-fold seal of the sultan) was the "tiab limong" (the five-fold seal, i.e. signifying the hand as a symbol of power, meaning the ability to protect one's own interests).

The Kédjurus of the Gayô and Alas peoples on the other hand usually received a kind of dagger as symbol of their rank.

Division into Mukims. The Friday-service according to the Shi'ite doctrine is only valid if 40 Mukims are present. A Mukim is a person domiciled in the place and satisfying the stipulations of the law. Since the population of most of the Gampongs was not numerous enough to be able to hold a regular Friday-service with 40 participants, it became the custom to group together several Gampongs and as near as possible of such a district to construct a mosque for the Friday-service. The priors called Mukims (here glossed Munkim) acquired, not only in Atjeh but also in other Malay regions, the meaning: department, circle. Each Uleebalang was lord over several of these Mukims. Further the names of the 3 Sagi have been derived from the original number of their Mukims; i.e. they are called: the Sagi "of the 22 Mukims" (in the south), the Sagi "of the 25 Mukims" (in the west) and the Sagi "of the 26 Mukims" (in the east of the triangular-shaped Great-Atjeh). These ancient names were preserved even after the number of the Mukims in the Sagi of the 25 Mukims and especially in that of the 22 Mukims had mounted up owing to the increase in the population.

The chiefs of the Mukims bore the title of Imeum. This word denoted originally the leader of the Friday-service (Arab. Imām). The Imeums became however gradually hereditary, secular chiefs, who transferred the leadership of the Friday communal prayer to special officials.

Administration of Justice. Laws. As a general rule the chiefs themselves were wont to fulfill the functions of judges; they based their decisions on the unwritten law of custom ("Adat"). There are indeed some statutes (Sarakata), which tradition credits Meukuta Alam and other famous rulers with having issued, and the Achehnese, who know these laws only by name, ordinarily assume that they contain an exact statement of their law; they really consist however only of brief regulations regarding matters of court-ceremonial (including the homage to be rendered to the ruler by the uleebalangs), the division of the harbour-dues and the fulfillment of several religious obligations. These regulations date from the time when the princes attempted, without permanent result however, to centralise their imperial administration; Muslim scholars at the court also left their impress on these laws (for fuller information see C. Snouck Hurgronje, The Achehnese, i, 4-16; K. F. H. van Langen, De inrichting van het Achehsche staatsbestuur onder het sultanaat in BTJV, Series 5, iii, 381-471; Translations from the Majellis Ache [by T. Braddell] in Journal of the Indian Archipelago, V (1851), 26-32; an edition of the Malay text by G. W. J. Drewes and P. Voorhoeve is in the press). Further both the Sultan and the Panglimas had their Kali (= Ka'll), but the ecclesiastical judges only took a share in the administration of justice on certain special occasions (e.g. in the division of an inheritance, in some forms of divorce, in contracting marriages, and in other cases where the religious law was usually followed; on other occasions only if the chiefs expressly took them into council). The judge of the sultan bore the title Kali Malikun Adī = Kāli Maliku 'l-Adī; his hereditary office degenerated in course of time; he became the peculiar chief of several Gampongs within the sultan’s realms. Also the rank of the other Kalis became hereditary, and if those people who were Kali in virtue of their hereditary right possessed the knowledge requisite for this office it was by a rare chance.

Religion. From earliest times there existed trade relations between Atjeh and Hindustan. The civilisation and language of Atjeh and elsewhere in Indonesia has some peculiar features which are explained by its Indian origin. Such are, for instance, the existence of a heterodox
mysticism and some characteristics distinctively Shi'ite. The first month, e.g., is in Atjeh always called... some of his predecessors have been found after H. Djajadiningrat compiled his list from Malay chronicles and European scholars to the false opinion that the Achehnese Eeen... at that period were generally spread throughout Hindustan. The most famous representatives of this heterodox tendency in Atjeh were Shams al-Din al-Sama'tari (i.e. of Pasé; d. 1630) [q.v.] and his predecessor Hamza Fansuri [q.v.]. Its chief opponents were Rânîrî [q.v.] and 'Abd al-Ra'uf al-Sirkîl [q.v.]. Certain forms of the ancient heterodox mysticism which at that period were preserved till recent times, but such differences from the orthodox teaching, which are based on ignorance, are gradually disappearing before the increasing communication with the centre of Islam. (Fuller information in Snouck Hurgronje, *The Achehnese*, ii, 13 f.). Veneration of saints has still an importance as in many other parts of Indonesia. Formerly there were prevalent in Atjeh the forms of the diffusion of Islam in the Indian Archipelago. Its dynastic history may one day be reconstructed from the inscriptions on tomb-stones and coins, Malay chronicles (*Stéjarah Milayu* and *Hikayat Radja-radja Pasai*, ed. from the unique MS. R. A. S. Moffatt Mal. 67 by E. Dularier, *Chroniques Malayes*, 1849; romanised ed. J. P. Mead, in JMBRAS 26 (1924)), Chinese, Arabic (Ibn Battûta, see above) and European sources; until now, much material has been collected but a publication of the inscriptions is still lacking. (Reports on the work of the Archaeological Survey in: *Oudheidkundig verslag*, 1912 ff.; cf. *Encyclopaedie v. Ned. Indië*, i, 1917, s.v. Blang Mé). Many of the tomb-stones were imported from Cambay in Gudjarat (J. P. Moquette, J. MBRAS 20 (1912), 255-267; one tomb, dated 781 A.H., has inscriptions in Arabic and in Old-Malay (W. Stutterheim, *AO* 14 (1936), 268-279; cf. G. E. Marrisson, *JMBRAS* 24 (1950), pt. i, 162-165); another stone, dated 823 A.H., on the grave of an independent when Tomé Pires collected information for his *Suma Oriental* in Malacca, 1512-15 (ed. A. Cortésão, Hakluyt Soc. 2nd Ser. 89, 90 (1944)), and its trade profited greatly by the decline of Malacca after its capture by the Portuguese. This prosperity was not to last long. Though Pasé's traditional enemy Fedir (Ach. Pidé) was at that moment in decay owing to the death of its king Madafora (Muâaffar Shah?) and its being at war (apparently with Atjeh), the rising power was not Pasé but Atjeh. Pires describes its ruler as a pirate-king, 'a knightly man among his neighbours'. He had already subdued the adjoining country of Lambry (Lamuri, Lambri) and the land of Brâl, between Atjeh and Fedir (Ach. Bihue). This probably refers to Sultan 'Ach-Mughâyir Shah, the first sultan in Dja djadingrat's list, whose date of accession is uncertain. Tomb-stones of some of his predecessors have been found after H. Djadjingrat compiled his list from Malay chronicles and European
sources (BTJV 65 (1910), 135-265), but the exact relations between these predecessors are still unexplained, and Sultan 'Ali Mughayat Sháh, by conquering Daya to the west and Pidí and Pasè to the east, became the real founder of the empire of Atjeh. Leaving aside, for the time being, the data on the earlier sultans, we reproduce Djajadiningrat's list of the princes of Atjeh with only a few modifications in the dates:

II. Šaláh al-Dín (1530-†1537).
IV. 'Ali Ri'ayat Sháh or Husayn (1577-†1579).
V. Sulţán Muda (a child, reigned only some months in 1579).
VI. Sulţán Sri 'Aláam (1579).
VII. Sayn al-Ádidín (1579).
VIII. 'A Há al-Dín of Pera or Manşúr Sháh (1579-±1586).
IX. 'A Há Ri'ayat Sháh or Radjá Buyung (†1586-†1588).
X. 'A Há al-Dín Ri'ayat Sháh (±1588-1604).
XI. 'Ali Ri'ayat Sháh or Sulţán Muda (1604-†1607).
XII. Iskandár Muda (posthumous name: maráhán MakoTa 'Aláam) (1607-1636).
XIV. Tádí al-'Aláam Sañiyyat al-Dín Sháh (1641-†1675).
XV. Núr al-'Aláam Najjíyát al-Dín Sháh (1675-1678).
XVI. 'Ináyáh Sháh Zakiyyát al-Dín Sháh (1678-1688).
XVII. Kámálat Sháh (1688-1699).
XVIII. Badr al-'Aláam Sharíf Háshım Djamál al-Dín (1699-1700).
XX. Djamál al-'Aláam Badr al-Múnr (1703-1726).
XXI. Dijáwár al-'Álam Amá 'al-Dín Sháh (reigned only a few days).
XXII Shams al-'Álam or Wándi Tébíng (reigned only a few days).
XXIII. 'A Há al-Dín Ahmad Sháh or Mahrádsäh Léla Mèlyáu (1727-1735).
XXIV. 'A Há al-Dín Djióhán Sháh or Dójut Aúk (1735-1760).
XXV. Múhamád Sháh or Tutánk Radjá (1760-1781).
XXVI. Djamál al-Dín (1764-1765).
XXVII. Suláymán Sháh or Radjá Udahana Léla (1773).
XXVIII. 'A Há al-Dín Mu'hámad Sháh or Tutánk Muhammad (1781-1795).
XXIX. 'A Há al-Dín Dijáwár al-'Álam Sháh (1795-1824).
XXX. Sharíf Sayf al-'Aláam (1815-1820).
XXXI. Múhamád Sháh (1824-1836).
XXXII. Manşúr Sháh (1836-1870).
XXXIII. Múhamád Sháh (1870-1874).
XXXIV. Múhamád Dáwúd Sháh (1874-1903).

'Ali Mughayat Sháh's two sons Šaláh al-Dín and more especially 'A Há al-Dín Ri'ayat Sháh al-Káhhár increased the importance of the new kingdom. From Turkish archive documents we learn that the latter sent an embassy to Constantinople in 973/1563 asking for help against the Portuguese and saying that several of the heathen rulers of South East Asia had promised to embrace Islam if the Ottomans would save them. The arrival of the embassy coincided with the Szigetvar campaign and the death of Sulaymán. The embassy therefore waited two years in Constantinople and then a naval expedition was prepared under the command of the Admiral of Suez, Kurdoghli Khizir Reis, consisting of 19 galleys and some other ships with guns, supplies, etc. This expedition was however diverted to deal with an insurrection in the Yemen and instead two ships with supplies and military technicians were sent to Atjeh. It would seem that they entered the service of the Sultan of Atjeh and stayed there. (See Saffet, TOEM, 10, 604-614; 11, 678-683; I. H. Uzunçarşılı, Osmanlı Tarihi, ii, 1949, 388-389, and iii/1, 1951, 31-33). In the first half of the seventeenth century Atjeh reached its greatest prosperity, attaining its zenith during the reign of Iskandár Muda, honoured after his death by the title of Meukuta 'Aláam, i.e. Crown of the World (supra n. XII). The dominion of the Achehnese was extended far to the south during his reign. Iskandár's expedition with a great fleet against Pahang and Malacca forms the subject of an important Achehnese epic, the Hikayat Melaka Dagang (ed. H. K. J. Cowan, The Hague, 1937). In 1638, during the reign of his successor (Iskandár Thání, supra n. XIII) a Portuguese embassy came to Atjeh and tried in vain to win over the Sultan to their side in the war against the Dutch (see: Agostino di S. Teresa, Breve racconto del viaggio . . . del regno di Achien, Roma 1652; Ch. Bréard, Histoire de Pierre Berthelot, Paris 1886). The sultans of Atjeh, who during the second half of the seventeenth century (1641-1699) reigned in the period of feminine rule, were naturally much to the advantage of the Uláebalangs whose power and authority were thereby increased; but on the other hand many disapproved of this state of affairs and declared on the authority of a jídáu received from Mecca that it was forbidden by law for a woman to rule. Thereupon at the beginning of the eighteenth century arose a series of dynastic wars. Some of the princes who contended for the throne were Sayyids (i.e. descendants of Husayn) born in Atjeh. Amongst them were the Maydún or Radia Buyung, the Liitán or Radia Raif, the Xácu, the Aulá, the Támá, etc. The Achehnese, who had been the subject of a rich European trade, at this time against the later Sultans, amongst others against Ahmad (supra n. XXIII), a man of Bugis descent, ancestor of the last dynasty of Achehnese princes. Some of these princes were enfeoffed with hollandia, with the result that the power and authority of the Sultan of Atjeh diminished and the people of Atjeh were driven into the forest to rear their stockbreeding and fishing industries. The Achehnese nobility, as a rule, was an uneducated and superstitious aristocracy. The state (hukumá) of Atjeh was, however, capable of supporting a military élite which was able to maintain itself against the attacks of the Bugis and the Támás. The Atjeh War. In the 18th century the piracy and slave-trade of the Achehnese and their raids on neighbouring territories constituted a constant danger. The Dutch government were at first not in a position to put a stop to this evil as they had pledged themselves to England in 1824 not to extend their dominion in Sumatra to the north, but this obligation was removed by a new
treaty with England in 1871. The landing of Dutch troops in 1873 was the beginning of a war (the Atjeh War), which lasted— with several pauses—from 1873 until 1910, in which year the pacification was considered complete.

Broadly speaking the three components inspiring this unexpected opposition were the ulamas, the ulêebalangs, and the sultanate. Of these the ulamas were the strongest, and the sultanate the weakest component. This last fact is understandable, since—as we have seen above—the influence of the sultan was very limited. With the capture of Kutaradja, the sultan’s stronghold, the Dutch considered the sultan’s government as at an end, and the Dutch administration took over his position and rights. Meanwhile, after the death of Sultan Mamhûd Shâh, the six-year old Muhammad Dâwûd, grandson of Sultan Mansûr Shâh (supra No. XXXIII), was elected sultan. The “pretender-sultan” Muhammad Dâwûd, who had taken refuge with his court at Keumala in Pidiê, hunted by Dutch troops from hiding place to hiding place, finally made his submission in 1903. In 1917, because of underground activities, he was banished from Atjeh. The ulêebalangs, the secular authorities or “lords of the country” (The Achêmish, i, 88), so far as they were not willing to accept Dutch authority, had to be subdued one by one. One of the most influential of them was Teuku Panglima Polém Muhammad Dâwûd, the chief of the sagi of the XXII Muîms. Now that the sultan’s government had lapsed the Dutch recognised the ulêebalangs—with the exception of those in Great-Atjeh, which was regarded as the personal domain of the sultan—each as independent rulers in their own right, whose relationship with the Dutch government must be determined by treaty. On the advice of Snuck Hurgonje the form of treaty selected from 1898 onwards was the so-called korter verklaring [short contract]. In this the rulers recognised that their territories formed part of Netherlands India, and undertook not to have any kind of political contacts with foreign powers, to follow and maintain all the regulations, and to obey all the orders given them by the Civil and Military Governor of Atjeh. The ulamas, the spiritual leaders of the people, were the real inspirers of the struggle. Here we can mention only one well-known family, the Tirô-teungkus, of whom Tjhêj Saman (d. 1890) was the best known. They were named after the gamping Tirô in Pidiê, an important centre of Islamic scholarship. The ulamas went throughout the land preaching the holy war; their war-chest was the zakût-tax levied on the people. The native chiefstains were ignominiously thrust into the background. The long duration of the war and the fanaticism with which it was fought are explained by the character of a holy war which it assumed. From this period comes the Hikayat Prang Sabi (ed. H. T. Damsté, BTLV, 84, 1938, pp. 345 ff.), in which the faithful were called to a holy war. After the submission of the “pretender-sultan” the ulamas and some ulêebalangs conducted a guerilla warfare, though Panglima Polém also submitted a few months after the sultan. In 1911 Teungku Ma’âst, the last survivor of the Tirô-teungkus, was killed.

It was a long time before the Dutch government came to comprehend the full significance of these three fundamental components in the Atjeh War, and to adapt their policies and tactics accordingly. The investigations of Snuck Hurgonje were the first to provide the political insight upon which the military campaigns of Governors J. B. van Heutsz (1898-1904), G. C. E. van Daalen (1905-1908), and H. N. A. Swart (1908-1918), could be based (cf. K. van der Maaten, Snuck Hurgonje en de Atjeh-Oorlog, 2 vols., Oosters Instituut, Leiden 1948, and the literature listed therein). Governor Swart was the last governor to be charged both with the civil government and the military command in Atjeh.
